years after, but I mean of the works which Mileto has handed down. I defy him to do it for the simplest of all reasons. He can only quote to you by the process of using the works of writers considerably later. Then Mr. Roberts uses the name of Justin Martyr. I have taken the pains of looking up Justin Martyr, who I thought would be referred to, because I wanted to have something to say in my speech without referring to the very agreeable nonsense with which Mr. Roberts concluded. Justin Martyr is supposed to have lived from A.D. 130 to 140. Some put the date a trifle earlier and others a great deal later. Mr. Roberts says he was born A.D. 103, converted A.D. 130. Will you permit me to tell you that the whole of the dates which Mr. Roberts gives so glibly are all disputed dates—not disputed by infidels, but by religious men. There are disagreements on every one of those dates, and it is not fair and frank in a man calling witnesses to give you these as though they were undoubted dates. However I am contented to take it that Justin Martyr was converted in 130, and I will take it that his works existed in A.D. 140. Justin Martyr was a voluminous writer, but the truth of the works published in his name have since been abandoned as forgeries by Christians themselves. And then when Mr. Roberts was referring to Justin Martyr, why did he not tell you that the famous Paul, of whom he talks so much, is never once named by Justin Martyr in any one of his writings. Why did he not tell you that Matthew, Mark, Luke and John, as writers of gospels, are never once named by Justin Martyr in any one of his writings? Why did he not go on to tell you that Justin Martyr repeatedly uses language to show that whatever gospels he had, it was evident he did not have ours, for he talks of the father, or rather the husband of the mother of Jesus as putting up in a cave. He talks of fire kindled in Jordan at the baptism of Christ, which does not come out of the Four Gospels. He talks of Jesus whilst amongst men making works of carpentry, as ploughs and yokes, which clearly don't come out of the Four Gospels. But I won't weary you and waste your time by further referring to Justin Martyr. It is clear that whatever books Justin Martyr had, he does not mention the gospels. He does not, excepting in one passage, use the word interpreted "gospel," and that is an *interpolation*. He never mentions Matthew, Mark, Luke and John; and the famous *Paul is* not mentioned from first to last.

I will pass on to the next matter Mr. Roberts mentions. He says that a forgery is an attempt to imitate, and must be an attempt to imitate some valuable document. But if that be true, in what position is Mr. Roberts placed? I have here a list of fifty or sixty writings which have been abandoned as forgeries—books published as Acts; books published as Gospels; books published as Epistles. I may have time to read the list to you, but at present I only refer to it. But if Mr. Roberts's contention is true, the existence of a false gospel of Barnabas would be evidence of an imitation of a true gospel of Barnabas; and if the contention has not that value, then it has no value at all. I ask you to remember that Justin Martyr's silence is important, because he does, in his writings, mention a revelation to John, and he mentions it in a peculiar, curious fashion, which, no doubt, you are thoroughly acquainted with, and I say the fact that Justin Martyr mentions that so distinctly shows that he could not have had others to mention, or he would have mentioned them with equal distinctness. I pass on to the next witness, Tatian. Mr. Roberts said he would quote to you from Tatian. There is not a scrap of Tatian existing except in a quotation of Eusebius, and it is utter pretence to carry you back in this fashion without explaining it to you. But what is the evidence of Tatian? It is the evidence of four gospels. If evidence at all, it is evidence against the Four Gospels we have. I have carefully compared the evidence, and I know exactly what I am saying. I say that the evidence is distinctly against the books and not in favour of them. We are told that Matthew composed his history in the Hebrew dialect. Tatian's evidence is that what existed was only in Greek, and there is no evidence of there having been any translation at all or any sort of testimony as to the way it comes to us in the fashion it has done. Again he says of Mark, that Mark being the interpreter of Peter, whatever he recorded he wrote with great accuracy, not in the order in which things were spoken or done by our Lord, for he never heard of or saw our Lord. What becomes, then, of the Four Gospels in the earlier part of the history? But it is a history composed in a fashion which precludes the possibility of the evidence of Tatian applying to it at all.

I now come to the alleged epistle of Polycarp, and I don't want to use any unduly

Digitized by Google

strong language, but when people quote gospels and epistles as though they were not open to the slightest objection at all, they are dealing in a manner that is utterly unfair, and I urge that the evidence against the authenticity of the epistle of Polycarp has to be considered by anyone of those who take these things in hand for discussion at all, and I urge that the bulk of these epistles had to be abandoned as forgeries. A great German writer says the authenticity of this epistle has been called in question by a writer whom he names. The contents of them I will deal with presently. There is no evidence of anything about when Polycarp lived, and the authorised translators tell us that of Polycarp's life little was known. The whole story of his martyrdom is spurious and forged, and when you quote him, if I admit the evidence is true, I ask what have you got about Matthew? What have you got about Mark? What have you got about Luke? or what have you got about John? Not a solitary single word, and in order to show you this, I will take one of your witnesses, Clement of Rome. Would you believe that the writers and translators of the Ante-Nicene Fathers, the Rev. Dr. Donaldson and the Rev. F. Crombie, are obliged to tell you, in their introduction, that "who the Clement was to whom the writings are ascribed cannot, with absolute certainty, be determined." Mr. Roberts places Clement at A.D. 30 or A.D. 83. But taking Clement as presented to us, what does he prove? First, I submit to you if he proves anything, it is fatal to the Bible, for whatever he quoted was not in the Bible which we have, the authorised English translation, and I will give you my evidence; but before I do so, permit me to refer to Mr. Roberts's own case. He says Clement lived A.D. 30, and this epistle was written A.D. 83. Supposing that to be true, in the second chapter we have the passage: "Every timely honour and happiness were bestowed upon you, and my beloved did eat and drink, and waxed fat and wicked." This was said of a people which Mr. Roberts says were a persecuted race. Because honour and happiness were bestowed upon them they eat and grew fat—these followers of Christ, before there were any infidels to corrupt them at all. Again, he said, "I am but the smoke of a pit." Find me that within the cover of this book! Then, I say, the book he has proved is not the book we are discussing before this audience. But Mr. Roberts has given us the evidence of the resurrection. Let his own witness talk about the resurrection. In chapter 25 he says, "Let us consider the wonderful scenes of the resurrection which take place in eastern lands." There is a certain bird that is called the phœnix. There is only one of the kind, and it lives 500 years, and when the time of dissolution draws near, that it must die, it builds a nest of frankincense and myrrh, into which it enters and dies." He then describes the process of the bird rising from its ashes, and that is the kind of nonsense to prove the Bible true. But let us see what is the evidence of Clement, and I refer Mr. Roberts now to Eusebius's Ecclesiastical History—book 3, c. 38; book 2, c. 1—and I say he will find Eusebius there speaking with the same authority of the other writings of Clement, which have since been abandoned as forgeries. How dare Mr. Roberts pretend to talk of Clement, when he produces no witnesses; for those he quoted were not witnesses; they were only people who spoke from hearsay, like Tom who heard Dick say he knew William's grandmother 50 years ago. (Hisses). You do quite right to hiss, because the evidence can only be answered in that fashion. You do well to hiss, because you show that the sharp point of the blade has been thrust right through your advocate, and that you are afraid of hearing me. You do well to hiss, because it shows that your witnesses have been turned out by judge and jury with bad characters, and we cannot indict them for perjury, because they do not exist. Now we come to Hermas and Barnabas, but it would be dealing unfairly with two such reputable witnesses to waste the end of my speech upon them, and I shall occupy the few minutes that remain to me by commenting on the commencement of Mr. Roberts's speech this evening. He said the existence of the Jews was required on the hypothesis of the truth of the Bible. So I say is the existence of Mahomedans required on the hypothesis of the truth of the Koran. So the existence of the Mormons is required in confirmation of the truth of the story of Joseph Smith. So the existence of fire-worshippers proves the truth of the founder of their story, and the existence of the followers of Confucius to the truth of his works. And so I might go all through. These are simply the verbal phrases of nonsense which have been too much used. I don't deny the Jews. I don't deny that they had sacred books. Every people have their sacred books. The

Digitized by Google

question I have discussed is, does the Bible contain an authentic revelation to man? Mr. Roberts says that I have dealt entirely with the internal evidence, and that I have not dealt with the external—that I have not dealt with the existence of an ecclesiastical tyranny. I cannot distinguish much difference in this particular between the Church of England and the Church of Rome, and the Nonconformists persecuting the Quakers in New England. Our friends of the Church of Rome as well as of the Church of England have been found in opposition to progress and education. That is why I impeach the book; that is why I impeach Rome. But it is no question of taking an ecclesiastical tyranny alone, if you tell me it is the out-growth of the book. By their fruits ye shall know whether the book is the book of truth. You tell me of a tree planted 1,800 years ago, and you tell me to come under its branches. I show you wars and murders, anathematising and persecution. I shake your rotten tree, and I say, "Look at the fruit." (Hisses.)

The CHAIRMAN: You do quite wrong to hiss, and you do quite wrong to cheer. You would do quite right to remain quiet and listen to the arguments. Mr. Roberts will now have the option of speaking for a quarter of an hour, or of questioning Mr. Bradlaugh, who will subsequently have the same opportunity.

MR. ROBERTS QUESTIONS MR. BRADLAUGH.

Does the Koran foretel the existence of Mahomedanism at a period 3,000 years after its establishment?—I think not.

Then in what sense does the hypothesis of the Koran's truth require the existence of Mahomedanism at the end of a similar time?—At what time?

3,000 years after the writing of the Koran?—3,000 years have not elapsed since the date of Mahommed. Therefore I cannot answer the question.

Then I will change the date to 1876, and repeat my question?—If you will repeat it, I will try to answer.

In what way does the hypothesis of the truth of the Koran require that we should find Mahomedans in existence now?—The supposition may be equally devised for any religious system embraced by so many millions of people.

Does the Koran foretel that Mahomedanism should exist centuries after its production?—I cannot challenge my memory.

I must ask you to try and remember?—My copy of the Koran is at home. I will look by to-morrow night.

I have a copy here (handing the book to Mr. Bradlaugh. Mr. Bradlaugh sits down and turns over the book).—Go on with your questions.

No; I cannot while you are reading.—Oh, I can answer you quick enough.

Excuse me, Mr. Bradlangh: I must wait till we have disposed of the present question. Read and I will wait.—I will, and perhaps I may find some things useful to both of us. (Turns over the book). Go on with your questions.

I must wait till you find the place.—I said I was not aware of any text capable of being so construed in the Koran, but you can go on. (Keeps turning over the leaves).

Allow me to ask you to put down the book if I am to go on?—I will answer your questions. I was going to give you a text which I think will conflict with the other book a little. I think that you will find that the Koran, chapter 24, provides for the better treatment of slaves than the Bible does in Leviticus, chapter 25. There are other things I will find if you will give me time.

That is not to the point at present. I now ask you whether you are aware that the Bible foretells the existence of the Jews till the end of time?—I am not aware of it.

Will you allow me to present you with evidence?—You have a right to do what you please. You have a right to occupy a quarter of an hour.

I now quote from the 30th chapter of Jeremiah and the 10th and 11th verses:—"Fear thou not, O my servant Jacob; neither be dismayed, O Israel: for lo, I will save thee from afar, and thy seed from the land of their captivity; and Jacob shall return and shall be in rest, and be quiet, and none shall make him afraid. For I am

Digitized by Google

with thee, saith the Lord, to save thee : *though I make a full end of all nations whither I have scattered thee*, yet will I NOT MAKE A FULL END OF THEE : but I will correct thee in measure, and will not leave thee altogether unpunished." I ask upon that, whether the existence of the Jews does not bear out the hypothesis of that being a true prophecy ?—No, because in Genesis God made an equally kind promise which He did not keep, and I have no means of estimating one more than the other.

Give me a promise He did not keep.—More than one. In Genesis chap. xii., verse 7 : "And the Lord appeared unto Abraham and said, Unto thy seed will I give this land ; " and again, Gen. chap. xiii., verse 15 : Lift up now thine eyes, and look from the place where thou art, northward and southward and eastward. For all the land which thou seest to thee will I give it, and to thy seed for ever." I say the Jews have not had it for ever.

So you say ; but is that a proof that they won't ?—Yes it is, because it is said, "To thee will I give it, and to thy seed for ever," and, clearly, as some years must be taken off the "ever," it cannot be fulfilled.

You said you were going to give me a case of a promise not fulfilled ?—I will give you a dozen.

Let us keep to the one you have adduced at present. You think God has not fulfilled what he promised to Abraham. Is it not possible it may yet be fulfilled ?—No ; because the words are, "I will give it thee for ever," &c., and if the Jews are not in existence there, it is quite clear, according to your own contention, that they have not had it for "ever."

That is to say "for ever" when they get it under the promise ?—But it is said, "To thee (Abraham) will I give it." Abraham never had an inch of it.

Are you aware that he is to have it when Christ comes to establish his kingdom upon the earth ?—I don't know what will happen when Christ comes.

If you are not acquainted with what will happen when Christ comes, are you in a position to speak of an unfulfilled promise ?—Yes. The land was given to Abraham and his whole seed. Abraham did not get it, and several generations have not got it ; and it is clearly unfulfilled as far as they are concerned.

But if Abraham and his seed have it for ever at a future time, will not the promise be fulfilled ?—No ; because it won't be 'ever' after the promise.

It will be 'ever' after its fulfilment. The 'ever' begins with its fulfilment surely ?—It will be several ages short of ever.

Well, we will leave that. Do I understand you to deny that the Christians suffered persecution in the first century ?—I have no evidence of the existence of persecution. I only find your own witness saying they received "honour and happiness, did eat, drink, become fat and kicked."

Do you believe that Tacitus lived and wrote in the first century ?—I forget the exact date of Tacitus's writings. I have no doubt he lived and wrote about that date.

Are you aware that Gibbon admits the authenticity of the writings of Tacitus ?—Gibbon was a Christian, and I am not. I have read Gibbon and I have read Tacitus. Gibbon lived 1600 years after Tacitus. You have Gibbon on your side, but Gibbon was a Christian gentleman, and I am an Atheist gentleman. I may say I don't lay particular weight on the era of Tacitus' writings. I believe it was at the close of the first century.

Do you admit he wrote ?—No doubt.

Do you admit what Tacitus declares, that Nero, in order to stifle the rumours that he set Rome on fire, ascribed it to a people "called by the vulgar Christians," whom he persecuted greatly ? Do you admit that was in the first century ?—I don't think it was. It is not noticed by Eusebius, and he would not have circulated the turbid writings of Josephus if he had had to his hand the writings of Tacitus. That is only my opinion, and I am corroborated by knowing that our "Christian Evidence" people altered every book they could.

Do you endorse this : "The most sceptical "——What are you reading ?

I will tell you when I have read it :—"The most sceptical are obliged to respect the truth of this extraordinary fact, and the integrity of this passage" from Tacitus. Do you admit that Gibbon wrote that ?—I do.

Do you admit Gibbon to be a first-rate authority ?—It may be that Eusebius had

Digitized by Google

Tacitus to his hand. If so, it is most extraordinary that he missed that passage, if it existed, and circulated one which all intelligent men abandon as a forgery.

Supposing Gibbon says the Christians were persecuted in the first century, would you believe that they then existed?—I am inclined to think that the people whom you call persecuted Christians existed before that.

How far back would you take them?—I don't know how far back: Philo takes them back before the first century.

Do you take the name of Christ in connection with them back before that time?—At least 1,000 years before that time.

Do you mean to say that you find people called Christians before the first century?—That is not the question you asked me.

That is my question.—I don't know. I do find the name of Christ.

How came the name of Christ to be associated with the body of Christians?—I don't know.

Do you admit it has become so associated?—Yes.

And associated some time between A.D. 150 and A.D. 1?—I have no means of forming an opinion.

Then you deny this extract from Tacitus?—That is not the way of putting it. You asked me a question and I frankly answered it. You asked me the position of Tacitus. I answered by giving my reasons for what I think it was. But my reasons don't go any further than my own expression of disbelief, and don't go the length of absolute denial, but they put upon you the burden of proving it.

As a reasonable gentleman, I ask what have you reason to believe on the subject?—I find that the author Eusebius don't quote it. The whole of the early ages abounded in forgeries, and I cannot think so important a statement would have been missed.

Do you think Josephus wrote about the same time?—I should think about the same time or a little earlier.

Are you aware that Josephus quotes Tacitus?—Yes, but not for Christ, and he cannot have missed so important a corroboration. There was no need of putting the forged testimony of Josephus if the real evidence was to be found in Tacitus.

Are you aware that Josephus quotes that passage in Tacitus concerning Nero's destruction of Rome?—I am not aware that he quotes it as from Tacitus.

MR. BRADLAUGH QUESTIONS MR. ROBERTS.

Will you please find me the quotation in which Josephus speaks about Jesus?—Mr. R. (reading): "Now there was about this time Jesus, a wise man, if it is lawful to call him a man, for he was a great doer of miracles."

Do you find a word there about Tacitus?—No.

What do you mean by saying Josephus quoted Tacitus?—I did not say so as to this passage.

I quite misunderstood you, then. I certainly believed you to imply that a quotation from Tacitus was to be found in Josephus. If Mr. Roberts says I misunderstood him I only want it distinctly recorded. Will you please give your authority for saying that Clement of Rome was born A.D. 30?—I have only the authority of the ancient writers.

Of whom? Name him. (Mr. Roberts turns to a book). If you are going to quote from Eusebius I will find you the chapter.—I have the Apochryphal New Testament published by Hone.

I am afraid Hone is not an ancient writer. I want an ancient writer, not one of this century.—William Hone's statements are based upon his researches into ancient manuscripts, and are to be accepted as credible.

William Hone's statement is not ancient?—He is not my only authority.

Give me your other.—I give you Milner.

Is he an ancient writer. I want an ancient writer?—He is a gentleman——Mr. B., they are all gentlemen. I am not disputing that, I want an ancient writer. He is a gentleman who conducted his investigations in the light of ancient works in the most searching manner.

Digitized by Google

That is no categorical answer to my question. The rules of this debate say that questions must be answered categorically, and to answer me by explaining who Milner is, is not categorical. I don't want modern writers, because they only base their statements upon something else. If you tell me you have only read modern writers, I can understand. Have you read the ancient authority? If you have not read the original writings, have you read translations from books such as are prepared from the original language? I don't want your "Christian Evidence" mongering works of modern times. I want the original authorities. Tell me, have you any others you have taken the pains to refer to?—Not on the question of Clement's age.

Have you in relation to Barnabas?—My answer must be the same.

Hermas, Irenæus, Mileto?—My answer must be the same in all these cases.

Justin Martyr? Do you mean to say that you have formed your judgment upon ancient matters without taking the trouble to go back to the ancient writers?—I have gone through a number of ecclesiastical histories.

What ancient ones?—Ecclesiastical histories are not ancient.

Yes, there are some?—What do you mean by "ancient?"

I am asking questions. It is your duty to answer them. I mean by "ancient" relating to the period of the writers whose names you have used.—Precisely so. I have given an answer. In some cases, I have referred to the first authorities.

Name one to whom you have referred in relation to this discussion?—I have not referred to original documents.

Nor have I, but I have been to the best translations, and I want to know if you have taken the trouble to do that. Tell me what edition of Justin Martyr you have used?—I have already observed that I have in some cases referred to the first authorities, and others I have taken second-hand on the authority of credible gentlemen.

What do you mean by "some cases?"—I cannot be more explicit.

Have you a translation of Melito?—Having said "some cases," allow me to state the cases. There is the case of Barnabas; there is the case of Hermas; there is the case of Polycarp, of Clement, of Ignatius. You had better take my general answer, in the way I put it, viz., that I have not found it necessary to refer to original authorities for well-vouched statements.

I want an honest answer, and not a general answer which avoids it?—My answer is that. In the main my information is second-hand. I have read translations of the original authorities in the cases I have mentioned.

As you have mentioned translations, is every statement of Clement true within your knowledge?—Not recollecting the whole of them, I cannot answer. I may say in brief that I refer to them merely for a question of facts. Even an idiot can speak to facts.

Is there any one you can recollect which was not true?—I think I cannot say yes.

Can you say no?—I cannot say no at the moment.

You mean to say that in the speech I made three quarters of an hour ago, although I read Clement, you do not know whether it is true or not?—You read in so hurried and incoherent a fashion that I have a difficulty in making out what you do say.

I shall not ask any more questions (Mr. Bradlaugh sits down).

The CHAIRMAN: Mr. Roberts will now speak for a quarter of an hour.

Mr. ROBERTS: I said in my opening speech that I did not require the testimony of those men whom I have been compelled to produce, in order to be persuaded that the apostles wrote the New Testament at the time they professed to have done so. I think the internal evidence is so convincing that no man of clear, calm, patient, unbiassed intellect can fail, in the reading of it, to be persuaded of that fact. A good illustration of this just occurs to me. A certain sceptical gentleman some years ago, speaking with an infidel friend, said that if anybody wanted a cure for infidelity, he would be certain to find it in the reading of the Bible every day for one year. The prescriber of the advice was not consistent enough to carry it out in his own case; but

Digitized by Google

he has since done so, as the result of his attention having been called to a new, or at all events, non-orthodox interpretation of the Bible, and that gentleman is now a believer in the word of God. My anxiety is to bring to bear the argument leading to that result, to so present before you the internal characteristics of the Bible as a whole, as to show you that it is a divine book, and cannot be a human book. I can only do this in a brief form. I will lay before you examples of the Bible's uniform depreciation of human nature—a peculiarity which is characteristic of the Bible alone. We have in the 9th Psalm this enquiry made: "What is man that thou art mindful of him, and the son of man that thou visitest him?" In Psalm 144 a similar question is asked and answered in this way: "Man is like to vanity: his days are like a shadow which passeth away." In the 40th chapter of Isaiah we read: "The voice said Cry; and he said, What shall I cry? *All flesh is grass, and all the goodness thereof is as the flower of the field;* the grass withereth, the flower fadeth, because the Spirit of the Lord bloweth upon it; surely the people is grass." Isaiah ii. last verse: "*Cease ye from man*, whose breath is in his nostrils, for *wherein is he to be accounted of?*" Ezekiel xxxvi. 22nd verse: "*Not for your sakes*, O house of Israel," that is, not for their sakes would he bring them from all the nations among whom they were scattered. "I do not this for your sakes, O house of Israel, but *for my holy name's sake*, which ye have profaned among the heathen whither ye went." In the 17th of Jeremiah, at the 5th verse, we read: "*Cursed be the man that trusteth in man, and maketh flesh his arm . . . .* but blessed is the man that *putteth his trust in the Lord.*" In the 9th of Jeremiah, 23rd verse: "*Let not the wise man glory in his wisdom, neither let the mighty man glory in his might; let not the rich man glory in his riches;* but let him that glorieth glory in this, that he understandeth and knoweth me."

I mean to contend upon these quotations, which are but a specimen of the universal character of the Bible, that no book, pervaded by such sentiments of depreciation towards man, could have a merely human authorship. I base this contention on the tendency of all writers, whether ancient or modern, Jew or Gentile, to glorify human nature, and boast in human achievements. All human writers, without exception, run in the line of thought illustrated in Mr. Bradlaugh's *National Reformer*, which speaks of the dignity of manhood and the greatness of human nature.

Then we have no parallel in any human writing to the constant exaltation of God as the great object of all arrangements and operations. "This people," for instance, we read, referring to the Jews, "have I formed for myself: they shall show forth all my praise." Again, consider this: 1 Cor., 1st chapter 26th verse: "For ye see your calling, brethren, how that not many wise men after the flesh, not many mighty, not many noble are called; but *God hath chosen the foolish things of the world* to confound the wise; and *God hath chosen the weak things of the world* to confound the things which are mighty; and base things of the world and things which are despised hath God chosen, yea, and things which are not, to bring to nought things that are; THAT NO FLESH SHOULD GLORY IN HIS PRESENCE." This is not a sentiment native to human nature. Human sentiment always runs in a contrary direction. Man always chooses the powerful, the great, the rich, the mighty, the noble, for the accomplishment of any schemes he may conceive, as we see in all other religions throughout the whole world in every country and in every age. If the Bible were a human production, it would be characterised by human sentiments with regard to human nature; for it is an absolutely universal characteristic of man to glory in man and to boast in his own or somebody else's wisdom, riches, glory and might The Bible runs directly counter to human feelings and sentiments in this matter, throughout its entire contents. This is inexplicable if it is a human production: but if the Bible be the reflex of divine views communicated by the Spirit of God to the writers, there is an explanation, instant and entirely satisfactory.

Then we have the perfect modesty of all the men who took a part in the development of Bible things; that is, modesty as regards any credit for the part they performed. I will give you a few illustrations of this. In the 3rd chapter of the Acts of the Apostles and the 12th verse, Peter says: "Why look ye so earnestly upon us *as though by our own power or holiness we had made this man to walk?*" Is it not the tendency in human nature, acting by itself, to take the credit of any gift possessed and to glory

Digitized by Google

of it and make it the means of honour and personal consequence? No one with the history of mankind before him can deny this; but here are men who refuse the credit, as in the case recorded in the 14th of Acts: "Sirs, why do ye these things? *We also are men of like passions with you*, and preach unto you that ye should *turn from these vanities* UNTO THE LIVING GOD." Again, in the 10th of Acts and at the 25th verse we read: "And as Peter was coming in Cornelius met him" (Cornelius having sent for him by divine direction,) "and fell down at his feet and worshipped him; but Peter took him up, saying, *Stand up; I myself also am a man.*" In 1st Cor. xv. 9, we find Paul saying: "For I am the least of the Apostles that am not meet to be called an apostle, because I persecuted the church of God." In Exodus xvi. 8, Moses, speaking of the murmurings of the people says: "*What are we?* Your murmurings are not against us, but against the Lord." In Numbers xi. 29, Moses, when told deprecatingly by Joshua that somebody else had received the Spirit, replied: "Enviest thou for my sake? *Would* GOD *all the Lord's people were prophets* and that the Lord would put His Spirit upon them." In Daniel, ii. 30, Daniel, when cited before Nebuchadnezzar to explain a dream which had baffled the magicians, prefaced his explanation by these words: "As for me, this secret is not revealed to me for any wisdom I have more than any living, but for their sakes that shall make known the interpretation to the king, and that thou mightest know the thoughts of thy heart." Now, if Daniel had been an impostor, like all other impostors, he would have placed his own credit in the front rank; instead of that, he says the explanation he is about to give is not due to his superior wisdom, but to communication from God. That is the utterance of a true man, who knew that the information was not out of his own head, but that he had received it from external sources. If so, the divine character of what he said is proved. Then there is the case of Joseph in Gen. xii. 15, 16. Joseph was standing before Pharaoh under similar circumstances, and was called upon to explain an enigmatical dream. Pharaoh said to him: "I have heard say of thee that thou canst understand a dream to interpret it. And Joseph answered Pharaoh saying, *It is not in me;* GOD SHALL GIVE PHARAOH AN ANSWER OF PEACE." Coming down to Christ himself we see the same peculiarity. What does he say concerning the miracles he wrought and the wisdom he spake? "The words that I speak unto you, I speak not of myself; but the Father that dwelleth in me, He doeth the works."—(John xiv. 10.) "I am come in my Father's name."—(John v. 43.) And again: "Of mine ownself, I can do nothing."—(John v. 30.)

Now, although this argument may not tell in an excited public meeting, yet in the calm hours of anxious thought, I am certain its full weight will be felt by those who are capable of appreciating an argument. It goes more than anything to show that the men who had to do with the transactions involved in the Scriptures and the writing of them were true men, and not such men as Mr. Bradlaugh would represent them to be; though, by the way, he has not given us his idea very distinctly. I should like to hear him define what he thinks they were. He does not consider them designing or ignorant men. Were they honest and enlightened men, then? If so, is not the Bible an authentic and reliable record of divine revelation? The circumstances in which they were concerned were of that character that the men must either have been true or knowingly and deliberately false. They were not like questions of opinion, in which a man may be mistaken without being insincere. The matters to which they stood related were matters of fact, in which the transactors of them must have known positively whether their professions were true or false. And those professions were at the very time put, in many instances, to so severe a test, as to have dispelled any mist of doubt.

Let me give a single affecting illustration in the case of Jeremiah; and, by the way, this bears upon a point which it is well to notice. Mr. Bradlaugh tauntingly asked how he was to distinguish between the false prophet and the true. I answer they may both be distinguished by a simple test. In fact, they are to be distinguished the one from the other on the very principle by which I have sought to demonstrate the divine character of the Bible. The Bible speaks uncomplimentarily of human nature; all other books speak well of it. So the true prophets went against the popular current in denouncing popular sins, while the false prophets "spoke smooth things."—(Isa. xxx. 10.) This peculiarity of the false prophets is illustrated in the following citation: Jeremiah xxiii. 16: "Thus saith the Lord of

Digitized by Google

Hosts, Hearken not unto the words of the prophets that prophesy unto you; they make you vain; they speak a vision of their own heart, and not out of the mouth of the Lord. They say still unto them that despise me, *The Lord hath said, ye shall have peace;* and they say unto every one that walketh after the imagination of his own heart, No evil shall come upon you." The disagreeable result of a true testimony is illustrated even in Jeremiah's case on the occasion when he was inclined to hold his peace. He said: "The word of the Lord was made a reproach unto me and a derision daily. Then I said, *I will not make mention of Him, nor speak any more in His name.*" The thing he said was a disagreeable thing, and brought upon him an attempt, on the part of the rulers of Jerusalem, to destroy his life; and then he makes this pathetic appeal to the princes and the people, which we find in Jeremiah xxvi. 12, and in which the truthfulness of his profession is apparent: "The Lord sent me to prophesy against this house and against this city all the words that ye have heard. Now, therefore, amend your ways and your doings, and obey the voice of the Lord your God, and the Lord will repent Him of the evil that He hath pronounced against you. *As for me, behold I am in your hand; do with me as seemeth good and meet unto you.* But know ye for certain, that if ye put me to death, ye shall surely bring innocent blood upon yourselves and upon this city, and upon the inhabitants thereof: *for of a truth the Lord hath sent me unto you to speak all these words in your ears.*"—(Time called.)

Mr. BRADLAUGH: Mr. Roberts, in his first speech, said he had a large number of witnesses, and that he could read from them, chapter and verse. For I challenged him to do so—that will be in the memory of all of you. I challenged them in very explicit terms; and instead of venturing to read a line of any of them he has occupied himself by reading texts from the Bible. I went through the witnesses, and I put it to you, that although I could not possibly guess what his first speech would be, that I dealt with the majority of them there and then, and he has not ventured to pretend that any one of my statements was untrue. But the difficulty is that if mine were true, his were not accurate. He said to you, when he was talking about Tatian, Theophilus, Athenagoras and Mileto, that he had got these and would read them if Mr. Bradlaugh challenged him. Mr. Bradlaugh did challenge him, and he has not read them, and will never read them during this debate. I carefully distinguished between what he could read and what he could not I took one writer, Clement, whom he could have read. Clement I have read not at second-hand but in a translation. If he had read Clement, as I quoted Clement, does he mean to say I did not read the passages of Clement distinctly enough for him to know their truth or falsehood? Mr. Roberts ought to have known Clement and the others, or he ought not to have challenged me to debate. Mr. Roberts says he had taken his information from reliable writers. My objection is that the mass of writers who wrote on the side of Christianity is not reliable. We may take a few men and agree with Lardner as to their credibility. I believe that Lardner writes thoroughly, earnestly, and honestly, and although I don't agree with reference to his ancient authority when Lardner's opinion is distinct and complete with regard to it, he is entitled to some respect. But when I find a man like Paley convicted of receiving information at second and third hand, and making blunders, do you think somebody ought to pass muster whose information comes at third or fourth hand? It is not reasonable; it is fencing with an empty scabbard—not fencing at all. In his last speech, Mr. Roberts says he does not need external evidence; then he should not call it. If that was the case, our friend in his first speech should not have tried it. I have only found this that my opponent has offered to advance evidence with this curious result, that all through I have always been right and we have not heard Mr. Roberts right in one instance. Take Solomon in the writer Josephus, the Proverbs in the writer Josephus. When he got Josephus, although Mr. Roberts was ready with explanations, there was not a word about Solomon or the Proverbs in the quotation. Mr. Roberts says I misapprehended him about Josephus and Tacitus, and I am bound to accept what he said; but I cannot imagine what he meant by asking me about Josephus and Tacitus. The question was what Josephus had written about Tacitus? and if it was not put with that object, then it was an attempt at bewilderment on the part of the questioner.

Digitized by Google

At present I take it he has been misinformed. He did not quote Tatian to you. He has not read a line from Tatian, and he never will. In my speech I referred him to the only authors he could get references from. If he likes he can have my books, and I think I can supply him from my own little library with such English translations as exist of every one, not only of the people whose works are supposed to be whole, but of such extracts as are supposed to be prepared not from infidel sources—for I don't go to infidel sources—but from Christian sources.

Where are we about to go in this debate? Mr. Roberts first says there is external evidence. So there is. Now quote it and see what it is worth! But he cannot even do that. And, then, again I appeal to my friends, and I appeal to Mr. Roberts, whether he thinks the way to convince me that this book is God's authentic revelation, is by quoting to me writers I am better acquainted with than he is, and who don't say a word of what he thinks they say. It might do with somebody who never debated at all, but it don't do with me. Now what have we? We have a statement that we must account for Christianity, and in accounting for Christianity we may be very simple. Every religion in the world is the result of growth more than of fraud. There are some few cases, but very few, in the world, in which people have been utterly fraudulent. But the truth of cases in which men make headway, are cases in which they have had strong convictions—very often believe themselves to be thoroughly in the right, and although I may think them utterly wrong, it is not an impeachment so much of their *morale* as it is of their accuracy in dealing with these things. I do not regard Johanna Southcote as I would a woman not misled by enthusiasm. It does not follow because I do not regard a book as true, therefore I regard it as a directly fraudulent manufacture. The Pantheisms of the world, the religions of the world, the superstitions of the world—call them what you will—have not been the product of special men at a special moment. They have been the outcome of special organisations, and with different types of men we obtain different types of religion. It is only some men who have never been out of some Christian Evidence volume—with a large amount of "evidence" at fourpence a volume—it is only such men who put to you the conclusion of absolute fraud and forgery, or of absolute truth. All the religions of the world have some truth in them. I don't deny there have been good Christians; but when I am to have the apostles put to me for examples of perfect modesty, and Peter, of all people, quoted as "modest Peter," I must give you an illustration of Peter's modesty. Peter to whom God had revealed, "Blessed art thou, Simon Barjona, for flesh and blood hath not revealed it unto thee, but my Father which is in Heaven." How does "modest Peter" then get on when his master was being despitefully used? "Modest Peter" declared "I know not the man;" with an oath, "I know not the man." "But surely you were of the company," says a bystander: "Damn you, I don't know the man." That is your "modest Peter." If that was modesty, then Tatian was evidence. But let us, if you please, see what we are to do? External evidence—very inconvenient when it is to touch internal evidence. Very inconvenient! "Mr. Bradlaugh talks so quickly and incoherently." Then I will talk slowly about the internal evidence, and will remind you that this divine revelation says that John did know Jesus, and that he did not know him at one and the same moment of time; we have not been honoured with an explanation of that; nor of his own witness, Justin Martyr, saying that a fire was kindled in the river Jordan just at the moment of the baptism. He has not answered about three days happening between late on Thursday evening and before Saturday was over. He has not answered whether it was one woman, or two women, or more than two women, who went first to the grave. He has not answered the slight contradiction between Luke xxiv. and Acts i., as to 40 days Christ was said to be upon the earth after the resurrection. He has not answered any one of the mass contradictions which have been pointed out, and although I may talk quickly I t tolerably clearly; and if he imagines the Bible to be true, I can only say I wish l quicker wit when he challenges me another time. But we have had sneers at infide and references to the *National Reformer*—not a bad journal. I did not introduce Mr. Roberts did. It is a very good journal; there is a great deal of sensible writ in it to my taste. It happens to contain in the volume for 1867 the whole of evidence which Mr. Roberts has referred to to-night, all turned down. He could r it from there. He would do right to refer to it, and it would have saved him f

Digitized by Google

some blunders. Then he talked of infidelity. What is infidelity? The world calls me infidel, and I am not ashamed. What is an infidel? If it is to be unfaithful to my views, then I am not. If it is to be unfaithful to my convictions, then I am not. If it is to be unfaithful to my country, then I am not. If it is to be unfaithful to the redemption of the human race, then I am not. If it consists in disbelieving that God made a damnation trap to catch all the human race in, then I am an infidel. I have used no hard words against Mr. Roberts. The word infidel came several times from him. I am content to argue out this question without the slightest resort to verbal retaliation. But I carry two swords and it depends upon those who fight me which one I fight with. I am ready to fence with the rapier, and I can handle the two-handed broad-sword too, and if wielding the two-handed weapon is necessary, I wield it. At the last moment, before I sit down, I remind Mr. Roberts that he professed to have upon the platform the writings of Tatian, Theophilus and others. He has not quoted them, and cannot quote them, and never will quote them throughout this discussion.

Mr. ROBERTS: It suits Mr. Bradlaugh's purpose to make these statements, but it would not suit my purpose to do what he challenges me to do, because—and he knows that well—in pursuing these unimportant enquiries, I would be prevented from doing other things which I am more particularly intent upon doing, and which are of far more consequence, and that is the exhibition before you of positive evidences which establish my proposition. Nevertheless, I affirm that I have produced the authorities he asks for. They are on the platform now, and if Mr. Bradlaugh will consent to the appointment of a committee of gentlemen, they will investigate the truth of my statement

Mr. BRADLAUGH (pointing to the audience): Here is the committee.

Mr. ROBERTS: Meanwhile I shall do my part, and that part is to prove my case. It is no way of proving the case to combat difficulties in detail. Nevertheless I am prepared to combat all these difficulties. Let Mr. Bradlaugh give me the opportunity by accepting a challenge for another six nights, in which he will undertake to affirm that the Bible is a forgery, or a mass of sincere nonsense, or whatever else he likes to affirm it to be. In such a discussion I would be free to follow him in all his arguments. Meanwhile it is his part to follow me. I have to deal with positive evidence, and my dealing with it prevents me doing all he would like me to do.

Before I proceed further, I will fulfil the promise I made the last time we were together, that I would give evidence of the existence of the law of Moses at Shiloh for a period of centuries. The process of proof consists in reading certain texts out of the Bible. Mr. Bradlaugh does not like so much Bible reading. I can only say that more weight attaches to the contents of the Bible itself than to the ephemeral, worthless sayings of contemporary witnesses to the fact of the Bible's existence. The first I shall quote are the directions of Moses to the priests (Deuteronomy xxxi. 9), "And Moses wrote this law and delivered it unto the priests, the sons of Levi, which bare the ark of the covenant of the Lord, and unto all the elders of Israel." In the 25th verse of the same chapter, Moses gave these directions: "Take this book of the law, and put it in the side of the ark of the covenant of the Lord your God, that it may be there for a witness against thee." Not "in the ark," as Mr. Bradlaugh suggested the other night, making it an objection that the place would not be large enough; but near it—by the side of it, in a manner we should understand if we had an exact knowledge of its surroundings. Then we have the information that the ark followed Joshua and the Israelites. Joshua 3rd chap., 17th verse:—"And the priests that bare the ark of the covenant of the Lord, stood firm on dry ground in the midst of Jordan, and all the Israelites passed over on dry ground, until all the people were passed clean over Jordan." In the 18th chapter of Joshua and the 1st verse we have:—"And the whole congregation of the children of Israel assembled together at SHILOH, and *set up the tabernacle of the congregation there.*" The tabernacle of the congregation included all that constituted it, and one of those items was the ark and the law written by Moses. We find the tabernacle still at Shiloh in the days of Samuel (1 Sam. i. 3; iii. 15-21; iv. 4), which was at least four centuries after it was set up by Joshua. I now proceed to show that the law was in the custody of the priests, and that it was their duty to teach it. In the 33rd chapter of Deuteronomy, 10th verse, we read: "The Levites shall *teach* Jacob Thy judgments, and Israel

Digitized by Google

thy law; they shall put incense before thee and whole burnt sacrifice upon thine altar." In the reign of Jehoshaphat, we read (2 Chron. xvii. 8) that he sent Levites to teach in the cities of Judah. "And they taught in Judah, and *had the book of the law of the Lord with them*, and went about through all the cities of Judah, and taught the people." Again (Mal. ii. 7), "The priests' lips should keep knowledge, and they should *seek the law at his mouth.*" The conclusion deducible from these promises is that the priests had the law in their possession at Shiloh. I don't attach any importance to the point; but having promised to prove it, I have fulfilled my promise, and must now proceed to the further illustration of the argument which it is my duty to unfold.

Before I do so, I would notice the statement of Mr. Bradlaugh, that superstitions and religion—which he seems to regard as interchangeable terms—are the outgrowth of ages, the result of climate, and of natural peculiarities. He says that religion is not the product of particular men, or of particular circumstances. That may be true with regard to superstitions, which are not worth discussing, but it is not true with regard to the religion of the Bible. The religion of the Bible is, in a secondary sense of course, the work of particular men, and the offspring of particular circumstances of the most definite character. It is upon this, in fact, that I rely, as affording one of the most conclusive evidences of its truthfulness and divinity. It is very easy to talk of the "outgrowth of ages," but this will carry no weight with those who are acquainted with the facts of the case. My argument is that there is a method in the growth of Bible religion which, when critically investigated, will show that it was a designed affair, and not an accidental development of superstitious or any other kind of sentiment. The work of Moses in Egypt and the wilderness, for forty years with the Jews; the life and sayings of the prophets that arose in Israel; the appearance and doings of Christ and his apostles in the beginning of the Christian era, are all matters of a definite, palpable, and historic character, connected with statements of fact which, if sustained, prove the divinity of Bible religion beyond question: and the writings produced by all these men, giving an account of their proceedings, are also matters of palpable evidence; and my contention is that an examination of *all* these things in connection with the effects which are now visible in the world before our eyes, in true process of logic, will yield the result that the religion of the Bible is not like the religion of the Brahmin or any other superstition of unenlightened ages or nations, but is directly due to the initiative of Almighty wisdom, and therefore a coherent, and rational, and elevating, and glorious system of truth, which has already, despite of Mr. Bradlaugh's declaration to the contrary, immensely benefited the world, and given us a far higher civilisation than any other system is capable of doing, and which, in the hands of God, like the path of the just, will yet shine brighter and brighter unto the perfect day; for the world has not seen the last of the work of God on earth. The Bible informs us that Christ will re-appear and sweep away all the political nuisances which Mr. Bradlaugh tries in vain to reform, and establish a perfect system of government in the autocratic, infallible, and omnipotent despotism which Christ will give to the world. This, and not Republicanism, is the destined cure for the evils under which the world groans.

The incidents connected with the development of the work of Christ upon earth, to which Mr. Bradlaugh alluded, in my judgment, tell the other way from Mr. Bradlaugh's construction of them. I could not understand his logic about Peter. It seems to me that Peter's denial of Christ constitutes the greatest possible proof that Peter afterwards had good reason for preaching his resurrection. Not only so, but it is a positive evidence of the genuineness of the narrative. How came it to be recorded that Peter denied his Master? The very fact that we should have so distinct a record of Peter's denial of his Lord is a proof that the record is a Divine work; for if Christianity had been a human movement, the writers on its behalf would carefully have suppressed such a fact; and we have, in the very fact that such a man should be chosen as the principal apostle, another evidence of the Divine work; for men devising such a work would not have placed in the forefront the man who had disgraced himself most, but because there is a God, and because He so works that there is no room for human boasting, Peter, who had so humbled himself, was placed in a position where another man might have been uplifted. God's authority and God's honour are placed in the forefront, when the work is in the hands of a man who has

Digitized by Google

everything to be personally ashamed of and nothing to boast of. Therefore that Peter, the leader of the apostles, should be recorded as having denied Christ, to my mind, leads to an exactly opposite conclusion to that which Mr. Bradlaugh extracts from it. It is a peculiarity we find in other cases; for not only was Peter, who denied Christ, chosen as the mouthpiece of the apostles, but Paul who persecuted the Church, was used as the most influential and successful agent in the dissemination of the religion of Christ throughout the world. Mr. Bradlaugh is obliged to admit that the Christians were an extensive community at the end of the first century, and that they were persecuted for the name of Christ which they professed. This is established by the letter of Pliny to the Emperor Trajan, and however he may try to obscure the bearing of the fact, here comes a problem which Mr. Bradlaugh says he is not bound to explain. It is a problem, the historic reality of which rests upon unquestionable grounds. The evidence I produce is not Justin Martyr, nor any of those other men with whose writings he is so particularly familiar, and who, in my judgment, are trashy writers. I rely upon historic facts, which Mr. Bradlaugh cannot overturn, and which his class have never been able to explain in harmony with their theory of Christ's resurrection being a myth. We know that men will not sacrifice everything and go to prison and death for a myth; but men did this for Christ, and Christ was commended to them on personally attested and solid facts. Paul said, "I preach unto you Christ. I have seen him. I give proof of his working with me in these signs and wonders, and my reason for telling you of him is that he is coming back again, and to you personally if you believe in him and obey him." If that is accepted, there is a reasonable explanation of the circumstance that vast crowds believed and submitted to disadvantage for their belief. But Mr. Bradlaugh says there never was a Paul. I call upon him to explain how it comes to pass that the vast community, whose existence he cannot historically deny, came into being without a Paul; and how that community, in all the ages of its existence, came to believe in Paul? It is playing with the subject to go recklessly in the face of manifest truth. The New Testament explanation is a rational explanation. There is no other rational explanation. It shows the straits of unbelievers that Mr. Bradlaugh should have to suggest that the New Testament was a forgery, written A.D. 150. It cannot be. How could it be? There were then large communities who would have been witnesses to the imposition. How could they, in various parts of the world, have been brought for the first time to accept as Paul's letters documents professing to have been written a hundred years before, but of which they had never heard anything till then for the first time? It is utterly contrary to all reason.

I have but a minute and a half, and I conclude by saying that the general character of the gospel teaching of Christ is of itself evidence of its divinity. For what is it? That by submitting to present denial in a variety of ways, without any hope of compensation in this present life, we may afterwards attain to a higher benefit which nobody can confer but God. Would any man have invented a doctrine like that? Would any man have deferred the hope of advantage to a remote and subsequent time as the benefit of present sacrifice? We have only to examine the whole range of human philosophy to see how utterly non-human such a system is.—(Time called.)

Mr. BRADLAUGH: Mr. Roberts is good enough to tell you that I am extremely familiar with the early fathers. I am obliged to him for that admission. I wish I could return the compliment. He says they are "trashy," but he did not say so when he opened his first speech.

Mr. ROBERTS: I did.

Mr. BRADLAUGH: You did not. You said you had them, and I challenged you to read them off one after the other as if they were really good evidences. I say either you had not read anything whatever of the writings which you attribute to Tatian, to Theophilus, to Athenagoras, to Mileto, to Justin Martyr, and, in that case, you ought not to have mentioned them, or you represented them to this audience, knowing they did not say what you pretended they did. That is the plain and simple issue. You have said they gave evidence which an idiot could give. I admit that, but they are not evidence for me. It is you who call idiotic witnesses. And now I am told I don't give you texts. Why the complaint has been that I gave so many texts. My familiarity with the fathers should have been anticipated, or I should not have

Digitized by Google

deserved to have come to a debate of this kind. But now that I am familiar with them, they are trash. I agree they are trash, but they are your best evidence—your only evidence. If Mr. Roberts was not prepared to produce the writings of these fathers he should not have used their names. He says he cannot follow me. I took up everyone of them, one after another, and simply knocked each one of them to pieces. I think that was following them pretty closely. He says he cannot understand my logic about Peter, if the stories were forged. He knows I don't pretend that the whole of the stories were forged. I have said that I consider the Christian myths have grown like other myths, and Mr. Roberts has not refuted the assertion. At the close of the first century Christians existed, I admit, to a large extent; but at the close of the 19th century more Mormons exist than there were Christians at the close of the first century. What does that prove? By my friend's argument it proves Mormonism. But in that case he will say that the men were foolish who built up the Mormon system, and that the success of Mormonism is no proof that the Bible is not true. I account for Christianity in the same way; I account for sun worship in the same way, and for the worship of the general forces of the world, and for the entire myths and superstitions which embody themselves under the names of different religions throughout the world. The clear and precise duty of Mr. Roberts in this debate was to have steered clear of external evidences, and if he thought a public audience was not the proper place to have tested Mileto, Tatian, Theophilus, &c., he should not have brought them before you at all, and should not have come before a public excited audience, but challenged me to a written debate, where there can be no excitement. Does he expect to become more familiar with these witnesses, because of my familiarity with them? He says they are trash. He says they are idiotic, and none but an idiot would give that kind of evidence.

Then we have now an attempt in words but not in truth to perform a promise which Mr. Roberts undertook, namely to show that the Pentateuch was in a place called Shiloh in the time of Joshua. That was the proposition which Mr. Roberts undertook to prove. He has quoted to you some texts saying that Moses wrote the law, but he has not identified the law with those five books at all, though much of the five books certainly was not law, and much of the five books could not by possibility have been written by Moses. He tried to trick the question about the Pentateuch being in the ark, and he jumped out of the frying-pan into the fire by saying the Pentateuch was not put into the ark, but in a place beside it. If the Pentateuch was not in the ark, what was the good of tracing the ark? If the Pentateuch was in place beside the ark we have nothing at all to do with the ark. Then he says as evidence that the Pentateuch was in the ark, or near to it, or by the side of it, and that a number of things mentioned in the law ought to be there. No doubt it ought to be if God revealed it; it would have been there, if God ordered it to be put there, but it is not there. For a long while it was not known to exist, and in the 2nd of Kings 22nd chap. and 8th verse, we read about somebody finding it. We learn from Eusebius that, in the captivity of the people under Nebuchadnezzar, the Scriptures were destroyed, and God inspired Ezra to write them afresh. I want external evidence; Mr. Roberts says it is trash, yet he brought it. You cannot have external evidence except you read it. You say you want internal evidence; yet if I quote the immorality of the book, you pass that by. If I refer to flat contradictions in the book, oh, Mr. Bradlaugh is incoherent. You spin the Acts of the Apostles by the yard, and then say Mr. Bradlaugh is to disprove it. A debate of this kind might have been useful, but if I had known that my opponent knew no more of the common rudiments of the case than he has shown, I should have refused his challenge. I understood he was the representative of a respectable set of men. Some of those men I have come in contact with in America and England, and I have found to be honest men. I am not going to say hard things of them. I don't find idiots and shallow pates in those who have disagreed with me. My life has taught me that there are men not more shallow than myself (though I may not agree with them), and I have learned that the worst shallowness is to profess to be acquainted with learned authorities, relying upon the ignorance of untaught men who have taken the pains to know every scrap you can bring. Four nights of this debate have gone. If aught of proof has been given that this book is God's Divine message to man, I confess I have not heard it. I have only heard the speeches

Digitized by Google

of a man who varies and twists, and shifts and turns, and then, with all his evidence upon the platform—here where he might have read it to you, where he said he would read it to you if challenged to do it—says he won't take up good time with doing so, or that he hasn't time to do it. It was not true; it was not honest; it was not fair. He said he would and did not, because it would only have proved he was ignorant of the subject. Friends, is this the way to prove God's truth? Then he sneers at Republicanism. Was that meant as a sneer to me? I am not ashamed of my Republicanism, and if I only wanted reasons to be republican, it would be when I found an ordained king like David, "a man who kept God's commandments and walked in the way that was right in His eyes," trampling on His people, robbing His people, murdering and betraying His people, ruining is people. I say that is enough to make any man republican. You tell me republicanism won't succeed. I don't know the relevancy it has to the argument, but I do place it against the lustful, lying, cowardly Brunswicks, and the wicked and lustful Bourbons. I place it against kings living upon the people—and against a sham of a book which sanctions such a system, without which it could not otherwise be defended. I have nearly done. I know you have men who could better plead in this cause than myself, but at any rate you have one here who has never made fight against what he conceives to be true, and never degraded the platform by manufacturing an argument for the purpose of defeating an opponent.

The CHAIRMAN: The discussion will be continued to-morrow evening at the same hour.

Digitized by Google

Fifth Night,

WEDNESDAY, 21st JUNE, 1876,

IN THE TEMPERANCE HALL, BIRMINGHAM.

THE CHAIR WAS OCCUPIED BY MR. GEORGE H. ST. CLAIR

The CHAIRMAN: You will be familiar by this time with the order of discussion, which is the same each evening. Last night, I think we were less interrupted than on the previous occasion, and I trust, in this respect, you will apply the Christian exhortation, and go on to perfection. I have the pleasure to ask Mr. Roberts to open on the affirmative side.

Mr. ROBERTS: Mr. Chairman, Ladies and Gentlemen.—Last night Mr. Bradlaugh said some rather hard things. They did not hurt me, however: firstly, because I am accustomed to such things; secondly, because, they were not true; and thirdly, because I rather think they indicate, on the part of Mr. Bradlaugh, a conscious weakness in the argument. But there is one thing Mr. Bradlaugh said to which I feel called upon to make allusion, lest my silence should be misconstrued. I refer to his denial of the statement I made at the beginning of last night's meeting—that I was prepared with chapter and verse to all the authors whose names I mentioned as contemporary witnesses of the existence of the New Testament, at the end of the first and the beginning of the second century. He denied that I had these evidences or had access to these writers. I, therefore, produce them, one by one, to the chairman; and I ask the chairman as a scholar and a gentleman——

Mr. BRADLAUGH: I object.

Mr. ROBERTS: As a scholar and a gentleman, I ask him to say whether or not these books produced justify my assertion, and constitute the proof which I allege. The chairman shall act as umpire, on a matter of fact like this, affecting, as it does, the veracity of the speaker. I produce, first, the seven epistles of Ignatius—the very epistles themselves, and not extracts from them by other writers. I produce the epistle of Barnabas. I produce the epistle of Clement to the Corinthians. I produce the epistle of Polycarp to the Philippians. They are all bound together with those other writings which constitute the apocryphal New Testament. Next, I produce *Milner's Church History*, which was also on the platform last night, in which Milner quotes largely from all these men. I next produce Reid's edition of *Mosheim's Ecclesiastical History*, in which also are extensive allusions, particularly in Reid's footnotes, to those writers. I finally produce a compilation by Dr. Brewer, which brings the entire mass of the evidence to a focus, so to speak.

There is only one hypothesis on which I can imagine Mr. Bradlaugh can attempt to justify his assertion, or upon which I can understand it. He may have meant that I did not have in my possession the original books written by these men, that is, the actual manuscripts—the actual parchment on which they wrote. I never said I had. I don't suppose they are in existence, but this is no barrier to their reception. Mr. Bradlaugh has produced books. What if I said he did not produce them because he could not produce the actual caligraphic productions of the writers? He would say he had copies, which would be an answer. I claim equally the reception and use for the present argument of those books which I have produced. I have made no profession of learning in the matter. If there has been any profession of learning in the matter it has been on the other side of the platform entirely. The works I have alluded to, are such as are accessible to illiterate persons. Nevertheless, I contend

Digitized by Google

they are conclusive evidence on the question as to whether or not the New Testament existed in the first century. My argument is that the New Testament must have existed then or these writers could not have quoted from it. And the force of that argument is not weakened by the fact that some of the writers believed in the Phœnix or any other nonsense. Nor is it affected by the suggestion that these letters of Clement, Ignatius, Polycarp, &c., may be forgeries: for even if forgeries, their existence is traceable to the first century, and their evidence of the existence of the New Testament at that time is all the same.

Having alluded to these matters which, I am sorry to have taken up so much of my half hour with, I propose returning to my affirmative argument, and to show that the history of the Jewish nation, particularly as involving the character and career of Moses, cannot be explained on the Free-thinkers' hypothesis, but is, on the contrary, an irrefragable proof of the divine character and authorship of the Scriptures. In this we are dealing to a certain extent with a palpable contemporary fact. There is such a nation extant in the world as the Jews, as Mr. Bradlaugh himself is compelled to admit. That nation is not of yesterday: its records go farther back into the remote dim regions of antiquity than those of any other nation under heaven, with the exception of the inscriptions on Egyptian and Assyrian remains and monuments, which are childish affairs compared with the magnificent writings of Moses. I must of course refer to those writings in elaborating the argument of this evening. That they are the writings of Moses is proved in several ways. First, there is the tradition of the Jews in all generations. They have said that Moses is the author of that book, and that of itself is a weighty, and in fact, conclusive argument, for how could such a reputation come to exist apart from the fact that Moses at the beginning did write them?

But it is said the Mahommedans are witnesses to the Koran. So they are; I admit it. And it is said the Mormons are witness to the writings of Smith. I admit it. But what have we then? We have a book admittedly written by Mahomet, and a book admittedly written by Joe Smith; but when we come to examine the books in the light of facts, we find evidence that Mahomet and Joe Smith are impostors. The result is the same in a less degree in the works admitted to be the productions of Zoroaster, Confucius, and other ancient writers. The authenticity admitted, their undivine character is self-manifest. All I ask Mr. Bradlaugh is to concede a similar process of treatment to the writing of Moses. That is, admit its authenticity on the evidence on which he admits the authenticity of the Koran, and then examine the book. Let him admit that just as the authenticity of the Koran is proved by the universal consent of the Mahommedans, so the authenticity of Moses is proved by the universal consent of the Jews. And, then go to the investigation of the books and see whether or not the allegation that it is a divine revelation is proved by its very contents.

My next witness to the authenticity of the writings of Moses is Jesus of Nazareth, whom I have a right to call, because I have proved his resurrection by arguments which Mr. Bradlaugh has not attempted to upset. The testimony of a man proved to be the Son of God by resurrection from the dead, must be true. Jesus recognises Moses as the author of the Pentateuch. In John v. 46, He says:—"Had ye believed Moses, ye would have believed me: for HE WROTE of me. But if ye believe not HIS WRITINGS, how shall ye believe my words?" In Luke xvi. 29, he puts these words into the mouth of a parabolic character:—"They have MOSES *and the prophets;* let them hear them. If they hear not MOSES and the prophets, neither will they be persuaded, though one rose from the dead." In Luke xxiv. 27, it is recorded concerning Christ that, after his resurrection, that "beginning *at Moses* and all the prophets, he expounded unto them in all the Scriptures the things concerning himself." Logically this evidence is conclusive without anything else. But there is other evidence not so strong, which I produce, because Mr. Bradlaugh has a curious preference for the imperfect and blundering evidence of merely secondary writers, instead of going direct to the merits. I have already referred to Josephus. I have already shown that he (a careful, clear, and trustworthy writer) comes before us as a witness to the writings of Moses. It may be asked how did Josephus know? My answer is, Josephus was a man in office amongst the Jews, with access to all the means existing in the first century of forming a decision, and his writings show that he had the capacity for forming a just decision. The recognition of the writings of Moses by such a man, is of some weight in the scale. I have already referred to the

Digitized by Google

Septuagint as a collateral evidence of value. I might also mention the Samaritan version, which was made from the original ages before even the Septuagint, from a desire on the part of the Samaritans to have the books of Moses in their own possession. All these are valuable collateral evidences of the authenticity of the book now in question.

But let us now go to the book itself. I will affirm that, if you take God out of the five books of Moses, those five books fall to pieces. They cannot be understood on the hypothesis that they were written by a man to glorify himself, his name, or his nation; or to serve any sinister purpose whatever, or human purpose of any kind, minister or otherwise. Let us look at the evidence of this. If written by a man of his own notion, we know, from acquaintance with man universally, that the purpose would be to call attention to or create honour for somebody, or to serve some purpose congenial to human nature. Let us then test Moses by this hypothesis, by the hypothesis that his writings were merely a human production, and then you will see my meaning. If the object of Moses in the operation he conducted in connection with the Jewish nation was to make himself a great leader and make himself a great name, as Manetho says, it would have been necessary for him to conciliate the people by complimentary words, as all popular leaders in all ages have found it necessary to do and have done. He would speak to them pleasant things, and cheer them with prophecies of good. You will find that Moses did nothing of the sort, but indulged in language and assumed an attitude utterly inconsistent with any human object whatever. Let me draw attention to Deuteronomy ix., from the 4th to the 7th verses, and let me ask you to imagine either Moses or anyone else speaking thus while practising an imposture for the glorification of himself or the Jewish nation:—"Speak not thou in thine heart after that the Lord thy God hath cast them (the Canaanitish nations) out from before thee, saying, For my righteousness the Lord hath brought me in to possess this land: but for the wickedness of these nations the Lord doth drive them out from before thee. *Not for thy righteousness or for the uprightness of thy heart* dost thou go to possess their land; but for the wickedness of these nations the Lord thy God doth drive them from before thee, and that he may perform the word which the Lord sware unto thy fathers Abraham, Isaac, and Jacob. Understand, therefore, that the Lord thy God giveth thee not this good land to possess it *for thy righteousness*, FOR THOU ART A STIFF-NECKED PEOPLE. Remember, and forget not, how *thou provokedst the Lord thy God in the wilderness, from the day thou didst depart out from the land of Egypt; until ye came unto this place ye have been rebellious against the Lord.*" Is that the way a patriot speaks to the people whose suffrages he canvasses, or whose good opinion he aims to secure, that his name may be sent down with fame to posterity? Every man can answer that question for himself. We all know the language of men who aim at a personal object. They flatter and speak well of those whom they seek to use as instruments of their personal ambitions. Moses never did so. What I have read is only a mere sample of his style. Let any one read his writings, and they will find they are all in the same strain. If God sent and was with Moses, the style of his address is explained. If God did not appear to Moses, but Moses, out of his own head, sought to accomplish a personal object, such language is incomprehensible.

I must be content on that point and hurry on to something else. I will next ask: Did the people glorify Moses? Did they accept him as their leader? If this book was written in order to glorify Moses or to glorify the Jewish nation—if Jewish transactions in their beginnings were merely human performances, with which God had nothing to do, or if this book had been written afterwards to create confidence in a merely traditional Moses, without reference to truth, it would have been carefully shown that, at the beginning and during all his life, Moses was accepted by the people; certainly, every circumstance tending to show rebellious conduct on the part of the people during all the circumstances attending their exodus from Egypt, and their passage through the wilderness, would have been suppressed. Instead of this, what do we find? Why, the people are described as in a state of continual revolt. Let me illustrate this by Exodus xvi. 2nd verse:—"And they took their journey from Elim, and all the congregation of Israel came unto the Wilderness of Sin, which is between Elim and Sinai, on the fifteenth day of the second month after their departing out of the land of Egypt. And the whole congregation of the children of Israel *murmured against Moses* and Aaron in the wilderness; and the children of Israel said to them,

Digitized by Google

would to God we had died by the hand of the Lord in the land of Egypt, when we sat by the flesh-pots and when we did eat bread to the full; for ye have brought us forth into this wilderness to kill this whole assembly with hunger." Again, when the spies sent before to see the land to which they were journeying, took an evil report, we read (Num. xiv. 1-5; ii. 22, 23) "And all the congregation lifted up their voice and cried, and the people wept that night. And all the children of Israel murmured against Moses and against Aaron: and the whole congregation said unto them, would to God that we had died in the land of Egypt, or would to God we had died in this wilderness. . . . Were it not better for us to return into Egypt? And they said one to another, Let us make a captain and let us return into Egypt. Then Moses and Aaron fell on their faces before all the assembly of the congregation of the children of Israel. . . . And the Lord said unto Moses, how long will this people provoke me? and how long will it be ere they believe me for all the signs which I have showed among them? . . . Because all those men which have seen my glory and my miracles which I did in Egypt and in the wilderness, and have tempted me now these ten times and have not hearkened to my voice, surely they shall not see the land which I sware unto their fathers."

Then there is the account of the conspiracy of Korah, Dathan and Abiram, who rose against Moses with the support of the entire assembly, and whose rebellion was only quelled by miraculous destruction. Now, if God did truly send Moses, and if his statement to Korah, Dathan and Abiram be true, viz., "The Lord sent me to do all these works, for I have not done them of mine own mind,"—(Num. xvi. 28.)—then the putting on record such a history is intelligible. But if these things never happened, how came they to be invented? What purpose could be served by the invention? No man invents a lie without an object, and what object could there be in insulting the national character by placing in the national archives such an invention? It is impossible to conceive such a thing. The narrative bears the stamp of truth: If true, its record is explained; and in that case, God is proved, and the authenticity and reliability of the Scriptures in general. I am content with the illustration adduced, though there are many others of the same sort, and I pass to the next point of my argument.

If Moses acted as a man out of his own head as the deviser and inventor of the law, he would have taken good care to have contrived that his hand in it would always be visible, so that credit would come to him as the author of it. Instead of that what do we find? We find him always attributing the law to God. *e.g.* "These are the commandments, the statutes and the judgment *which the Lord your God commanded* to teach you."—(Deut vi. 1.) When expostulating with them for their rebellion, his language is, "*What are we?* Your murmurings are not against us but against the Lord."—(Deut. xvi. 8.) In Deut. iv. 20, this peculiarity comes out strongly in connection with an extraordinary instance of personal disparagement—incomprehensible on any other hypothesis but that of its truth. We find him saying: "*The Lord* hath taken you, and brought you forth out of the iron furnace, even out of Egypt, to be unto him a people of inheritance, as ye are this day. Furthermore, *the Lord was angry* WITH ME *for your sakes*, and sware that *I should not go over Jordan* . . . but I MUST DIE IN THIS LAND." (Time called.)

Mr. BRADLAUGH: I will dispose of a matter of fact first. Mr. Roberts has said that he had Tatian, Theophilus, Mileto, Athenagoras, Barnabas, Polycarp, Ignatius, and others giving evidence as to the existence of the New Testament gospels, before A.D. 150. I call for the writings of Tatian, and I sit down until they are produced. (Hear, hear.)

Mr. ROBERTS: I have handed the documents to the chairman.

Mr. BRADLAUGH: Producing them to the chairman won't do for me. Produce me extracts from Tatian. I have them all lying before me, and not one of them says what you pretend to say they do. If the book is there, I ask that it may be put into my hands. If not, Mr. Roberts has claimed credit for what he did not possess.

Mr. ROBERTS: I never admitted I possessed the book in the sense of which you speak.

Mr. BRADLAUGH: Give me the best reference you can. I don't want you to read it if you will give me the reference.

Digitized by Google

Mr. ROBERTS: I find in the case of Tatian it is the name of one of his books I rely upon as evidence of the existence of the New Testament, viz.: his *Harmony of the Four Gospels.*

Mr. BRADLAUGH: Don't take up my time. Give me the books. Then I will read you what it is. I ask what I am to say to a man who pretended to put into the hands of the chairman that which he has not got? The first reference to Tatian is in Eusebius's *Ecclesiastical History*, in the 29th chapter. I ask if it is not wretched audacity for anyone to pretend that Eusebius's history is any sort of testimony whatever? Having denied that testimony, I now ask for Theophilus.

Mr. ROBERTS: I say the book is not here. There is evidence of "three books to Autolycus."

Mr. BRADLAUGH: You cannot produce it to me. The man offers to put the books in the hands of the chairman and yet they are not produced. So that the debate is simply ended so far as concerns the evidence put into my hands. I have got it all here. I ask for the book, Mr. Chairman.

Mr. ROBERTS: I never said I had it.

Mr. BRADLAUGH: Then the matter is disposed of so far as regards Theophilus. I ask for Mileto, and if it is not produced I won't go on with the debate.

Mr. ROBERTS: I produce evidence of Mileto having written a work, in which—

Mr. BRADLAUGH: Give me the book and I will read it.

Mr. ROBERTS: I produce the evidence upon which I founded my argument last night.

Mr. BRADLAUGH: Mr. Roberts offered to leave in the hands of the chairman the evidence upon which the argument was based, and it is not produced. I say there is nothing in Mileto capable of the construction he put upon it, and I say he has no extract capable of the construction put upon it.

Mr. ROBERTS: I said he wrote a work in which he indirectly recognises the New Testament by speaking of the Old. I gave the title of it as my argument. The shorthand writer will bear me out in what I say.

Mr. BRADLAUGH: Mr. Roberts has made an appeal to the shorthand writer. I know that there is a trustworthy gentleman* employed by Mr. Roberts's friends, and I call upon him to read from Mr. Roberts's first speech. If my memory serves me rightly, I remember that, over and over again, I challenged him to produce the authorities upon which he relied, and he at last said he would. As we are not to have Mileto, I ask for Athenagoras. I will wait for Athenagoras. Are you going to produce it?

Mr. ROBERTS: I will give you the quotation from him on which I rely.

Mr. BRADLAUGH: I don't want you to occupy my time with quotations. I must decline to continue the debate if I am to be thus dealt with. I say it is the greatest pretence of evidence I ever heard in my life. I am ashamed of it.

Mr. ROBERTS: I have submitted the evidence to the Chairman.

Mr. BRADLAUGH: But evidence submitted to the Chairman I don't accept as produced evidence. Give it to me.

Mr. ROBERTS: Then I will read it.

Mr. BRADLAUGH: Give it to me.

Mr. ROBERTS: I will when I have read it.

Mr. BRADLAUGH: But why can't you give it me now?

Mr. ROBERTS: I have my own reasons. I will give you the book when I have read the quotation.

Mr. BRADLAUGH: It is manifestly unfair that this man should take up my half-hour.

Mr. ROBERTS: It is in answer to your own request.

Mr. BRADLAUGH: He is going to quote from Athenagoras.

Mr. ROBERTS: I read from his petition on behalf of the Christians.—(Page 11.) He said to the Emperor, in answer to the charge of Atheism: "To convince we are not mere Atheists, hear the maxims in which we are instructed: I say unto you, love your enemies, bless them that curse you, pray for them that persecute you, that ye may be the children of your Father in heaven, who maketh his sun to rise on the evil and on the good, and sendeth rain on the just and on the unjust." That is a quotation from Matthew made in the middle of the second century.

Mr. BRADLAUGH: Give me the book. [Mr. Roberts hands the book to Mr. Bradlaugh.] Now, friends, Mr. Roberts said he would read to you from Athenagoras to prove the

* Mr. Arthur Andrew, of London.

Digitized by Google

existence of the gospels in the middle of the second century, and he begins by referring to his charge to the Emperor, and says the quotation is from Matthew. I say there is nothing in any writings attributable to Athenagoras that refers to Matthew at all. I say that that is an addition by a man called Brewer, and has no existence in Athenagoras at all—(A VOICE IN THE AUDIENCE: "That is only your assertion.")—Thank you for saying that is my assertion. I have taken the trouble to become acquainted with the matter, and I am not like the man who says he is not obliged at all to produce his authorities. When you tell me a man challenges another with access to a library, he ought to be armed with the evidence itself, instead of bringing Brewer's paltry work. Now, I ask you to hear what Murchine says, and you will judge of how much or how little Mr. Roberts knows of these things when I come to read it to you. You will find that one of the epistles he quoted to you was the epistle of Barnabas. Murchine says that, whilst, in his opinion, the epistle was the production of some Jewish writer, it was clearly a different person from Barnabas; and we find him saying just before, with reference to a number of works which bear the name of Clement:—"The epistles of Clement were falsely ascribed to that eminent father, for the purpose of securing for them great authority; and we find, during these times, various histories full of imposition and fable were composed by persons addicted to pious frauds, and were palmed upon the world." That is the evidence of your own witness against you. Now I put to you this, and I beg you will bear your mind upon it. You have cited Ignatius, Barnabas, Hermas, Clement, and Polycarp, to prove the writings of the apostles, and my answer to that was that, so far as they were concerned, not one of the gospel authors was mentioned in one of them—not one. I read to you from Justin Martyr a statement showing that whatever documents they did quote were not the documents of our gospels. I told you last night that I was fully assured that the writings of Tatian did not exist. Why did you not come here to-night and frankly say, "It is perfectly true, they do not exist?" for you clearly ought not to have quoted that with which you were not acquainted. It is perfectly true Mr. Roberts only relied on the name of Mileto's book; but I ask whether this is the style in which a debate of this kind should be conducted, when a speaker cannot pretend to something more than mere names. Mr. Roberts has told you, with respect to the Septuagint and Samaritan versions of the Pentateuch, that he relies on the Septuagint version, which is the only version available for the Pentateuch, the Samaritan only extending to the letter of the law and not one line beyond that. I have put this in the *Free Thinkers' Text Book*, and had come prepared for hearing the strongest things about it. Dr. Haynes says about the Septuagint, or Greek version, that it is not the original Bible, but what the interpreters have made it. Strictly speaking it appears to be the growth of at least two generations, and we might expect this from the nature of the thing. Mr. Roberts quoted Josephus as an authority for the Septuagint version, but there is no evidence, even in Josephus, as to the whole Septuagint. The express language of Josephus limits the translation to the books of the law, whatever they may mean; and therefore it is utterly impossible he could mean the whole of the Old Testament book. Mr. Roberts quotes Eusebius, whose works he calls trashy—don't forget, "trashy"—and, if trashy, he should not have produced them. You can buy the work at any library for 5s. 6d. Then, as to the letters of Ignatius, if some editions of them are forgeries, the great question is, which edition is and which is not a forgery. But come, if you please, a little further, to Spinoza, who says, "of the author or authors we know almost nothing; we entertain great doubts if they were written by the persons whose names they bear." If with Mr. Roberts we are to take Josephus, then the Old Testament he referred to is clearly not the book we have to-day. Thousands of passages might be read to show that the book he refers to is not the book Mr. Roberts is here to defend; and when Mr. Roberts tells me these are mere trifling matters, I want to know where the trifles are to begin or end? I cannot understand. If Mr. Roberts had said that he relied on the New Testament to prove the Old, I could have understood him. But is there anything in the New Testament to prove the existence of the Old? There is no mention of the book, beginning with Genesis and ending with Malachi. The very Septuagint contains matters of fact which are entirely different from our Bible. I pass from this to refer to what has been said as to Paul. None of the authorities who have been quoted refer to Paul at all, though we certainly have the manufactured

Digitized by Google

Christian evidences, which are the most childish authority in the world. I make no concealment of the fact that I do come prepared with authoritative evidences to support my views. If I were not I should not be fit to take part in a debate of this kind. I may now refer you to Lord Amberley's new book, p. 254. I am not reading this as evidence. I am reading an expression of opinion from a book in which I find every research. [Here Mr. Bradlaugh read an extract from Lord Amberley's new work, which the shorthand writer has not supplied.]

Let us look at some more of the internal evidence. We have a statement that, before the baptism, John knew Jesus, and thought himself unworthy to baptise him, and we have a statement that he did not know him before, but knew him on the announcement, "This is my beloved Son." We have Matthew xi. 2, 3, and Luke vii. 19. John sending to enquire whether Jesus was the Christ or not? We should think if John heard the delaration, "This is my beloved Son in whom I am well pleased," he would not have thought it necessary to send messengers to ascertain whether Jesus was the Christ or not. And what answer did Jesus give? He does not remind John of the scene at the baptism, but he says, "Go and tell John you have seen me performing miracles, that the blind see, the lame walk, the leper is cleansed." I submit that one of these two statements is untrue, and that the entire part of the book which contains them cannot be otherwise. I would refer to the miracle of the loaves and fishes, where Jesus fed five thousand with five loaves and two small fishes; and I would refer to the worthy disciples, and to their forgetfulness of the miracles afterwards. In either case an authentic revelation of God would not be made in so ridiculous a fashion. Take the case of the miracle which is recited in three different ways in three of the evangelists—I mean the miracle of casting out the devils. Was it one man or two men? Was there one devil or two? or a legion? Is the story true or untrue, or is it divine revelation at all? If you took any other book with so many contradictions in so many pages you would resign or reject it. I come now to the alleged cursing of the fig tree. We are told that Jesus came to the fig tree, when the season was not in, and cursed it, because it had no fruit, which it could not have, not being the season. I ask, is that an authentic revelation? And take that declaration of Christ which is most important according to you—I mean the death and resurrection of Jesus. Take the gospels of Matthew and Mark; the last recorded words of Jesus, according to Matthew and to Mark, are, "Eli, Eli, lama sabachthani." If Jesus deemed God had forsaken him, when his death was to save the world, and he had so little confidence as to cry, in the bitterness of despair, "My God, my God, why hast thou forsaken me?" am I to be condemned because I cannot see such a thing divine? Is not this the language of an enthusiast who had deluded others, and a man who was himself deluded? It is not certainly the language of a man who believed in the truth of his mission, which was to redeem the world. I refer you again to Matt. ii. 5, 6, where there is a pretended quotation from Micah v. 2, making Bethlehem the place of the advent of the governor that shall rule my people Israel. This made Hosea (xi. 1) deliberately untrue, for it was there said, "Out of Egypt have I called my son." My time is gone, and gone in such a way with nothing to answer that I need not regret it.

The CHAIRMAN: I may say, in my position of referee on points of order, I should not consider myself as referee on a subject like that submitted by Mr. Roberts, unless at the request of both parties. If, when the discussion is fully over, the gentlemen choose to refer any point to me I will have no objection, as far as I am concerned, but nothing but a mutual request would induce me to act in this way. Mr. Roberts will now occupy a quarter of an hour, either by a speech or by questioning Mr. Bradlaugh, who will answer categorically.

MR. ROBERTS QUESTIONS MR. BRADLAUGH.

Mr. Bradlaugh, do you believe that the Jews are an ancient nation?—I believe the were an ancient race.

Do you believe they have always accepted Moses as the writer of the works bearin his name?—I don't think I have very clear evidence on the point. Some time a

Digitized by Google

an eminent Jew wrote a letter, and he gives a statement of the arguments used by the Rabbis themselves against it.

Do you know that these writings have been all along attributed by that race to Moses?—I believe there were writings current amongst the Jews which the popular voice attributed to different people. I am not able to fix that popular voice. From the Bible I learn that the law was lost and found suddenly. From outside writings I learn that during the captivity they lost all their books.

Have the Jews always regarded Moses as their principal leader?—I should think not, so far as I am able to judge.

Have you any good reason to think otherwise?—The question of Moses's existence, like that of Buddha and Zoroaster, is very mythical.

Then you doubt whether Moses was their leader in the beginning of their history?—The whole of the alleged exodus is so very doubtful, I can find nothing to verify it.

Can you verify a myth from records of an historic character?—Yes in the case of the Buddhists, I have carefully worked out the system, and the remark equally applies to Zoroaster. In every case there has been some person semi-miraculous, or who is believed to be miraculous.

Do you admit there was an historic beginning in all cases?—I don't.

Do you think there was any historic beginning to the career of Moses?—I don't. The whole of the story is so monstrous that it looks as if the name itself was mythic.

What part of the account given of Moses is monstrous?—I will tell you: "the killing of all the cattle by a storm."

Do you mean to say it is monstrous and abstractly impossible for a storm to result in the killing of cattle?—I do, if the cattle were dead already. I will read it from the book. Do you ask for the proof of what I have said?

I did not ask for it. Do you consider that all miracles are impossible?—Yes, especially the killing of cattle twice over.

Why do you say they are impossible?—You have asked me if I believed them. I don't believe them to be possible because my definition of a miracle is: that which never happened in the past, don't happen in the present, and won't happen in the future.

Is that not a begging of the question?—No. Logically, the word miracle to me is without meaning. In Scripture the word miracle is used to denote events which experience gives no record of their possibility of execution.

Are we to make our experience the measure of the possible?—I mean to make experience the measure of my possibility.

Do you mean to say you only believe in what you have seen?—I never said anything so intolerably stupid.

What do you mean, then, by forming a judgment of the possible on the basis of experience?—I don't limit experience to my own experience only. I mean the recorded experience of other men too.

Then you will admit the experience of others as a basis of belief in things you have not yourself experienced?—I have said so.

Why do you not admit the experience of the apostles in the matter of the resurrection of Christ?—I have already early in this debate admitted that evidence that applies directly to ordinary occurrences, and can be judged of by ordinary experience, cannot be so judged when it applies to extraordinary occurrences.

Then in the case of extraordinary occurrences, you would not be governed by what you have called "the best experience of the best men?"—If you appeal to me I must be allowed to be judge on such matters myself.

In such matters, you would not be guided by the experience of others?—Not if inconsistent with the operation of the senses.

You would not believe what others have seen unless you considered it possible?—I don't say that.

Then I ask you why you refuse to accept the testimony of the apostles who testified the performance of miracles, and evidenced the sincerity of their testimony in so many ways?—Just on the same principle that I should not believe that Mr. Bradlaugh turned three somersaults on the platform, and then stood on his head in the course of the discussion last night, because it is unreasonable.

Do you say it is unreasonable for a man to rise from the dead?—Yes. Because the

Digitized by Google

word life means organic function, and if he died and re-appeared, it would then be a new life.

Upon what philosophic ground do you hold it is impossible for a man that had once lived to be put together again?—I did not say once lived; I said a man that once died.

Of course; my question implies that. I ask on what ground you deny the possibility of a man who has once lived and died being re-organised and made to live again?—It is beyond the range of my experience, and I have no evidence that it is within the experience of other men.

Is it not possible that such a thing might occur without coming within the range of your experience or that of other men?—I don't know.

Do you admit that, many ages ago, there were no human beings on the globe?—I have reason to believe that, some millions of years ago, there was not a human being upon earth.

Would not your principle lead you, had you been alive then, to say it was impossible human beings could ever appear on earth?—Not being alive then, I cannot see how I could have formed an opinion one way or the other. I don't imagine a time when nobody lived.

Well, I will put it retrospectively. Would not your rule of belief lead to this conclusion, that at the same time no human being had as yet appeared upon earth, it was an impossibility that they ever could appear, because it was not within the experience of any living being upon earth?—It is not for me to say what might have been; I deal with experience, and here we are.

And may it not yet be a matter of experience that men will rise from the dead?—There are no known laws in the universe to warrant the idea.

Do you mean to say that your knowledge of the universe is sufficient to enable you to say that there may not be a latent power somewhere equal to the reproduction of dead men?—We don't know everything, of course.

MR. BRADLAUGH QUESTIONS MR. ROBERTS.

Will you kindly tell me whether you think a book could be Divine revelation which provided that a man might steal a woman, rob her of her virtue, and then turn her out in the world without any sort of recompence?—I decline to answer the question in that form.

Do you know that Deut. xxi. 11-14, does preach that?—No, it does not.

I will read it to you: "When thou goest forth to war against thine enemies, and the Lord thy God hath delivered them into thine hands, and thou has taken them captive, and seest among the captives a beautiful woman, and hast a desire unto her, that thou wouldst have her to thy wife, then shalt thou bring her home to thine house; and she shall shave her head, and pare her nails; and she shall put the raiment of her captivity off her, and shall remain in thine house, and bewail her father and her mother a full month; and after that thou shalt go in unto her, and be her husband, and she shall be thy wife; and it shall be, if thou have no delight in her, then thou shalt let her go whither she will; but thou shalt not sell her at all for money, thou shalt not make merchandise of her, because thou hast humbled her." Don't that say exactly what I say?—No.

Do you hold that to be divine revelation which provides that a man may buy a servant, keep him for seven years, and if he cannot buy himself off at the end of that time, to bore his ear with an awl. Do you hold that to be divine revelation?—Yes.

Do you hold it to be a divine revelation that of people who are not of the Jewish race, the Jews may buy bondmen and bondwomen, and take them as an inheritance and have them in possession for ever?—Yes.

Do you hold it to be divine revelation that a man might beat his slave, and if that his slave live for three days after the beating, then the master shall escape his punishment?—I object to the term "slave" with its modern associations.

Then I will substitute "servant." May a man buy a servant and beat him, and if

Digitized by Google

the servant does not die in two days the master shall escape punishment?—The law of Moses provided that, and I believe the law of Moses to be divine.

Do you believe that David never did anything that was wrong?—No I do not believe that.

Do you think that the text which says that he always did that which was right in God's eyes is divine revelation?—Allow me to read it to you. That is said with qualification.

What are you going to read?—1 Kings xv. 5. "David did that which was right in the eyes of the Lord, and turned not aside from anything that he commanded him all the days of his life, *save only in the matter of Uriah* the Hittite."

But it says in xiv. 8; "Yet thou hast not been as my servant David, who kept my commandments, and who followed me with all his heart to do that only which was right in mine eyes."—Yes, that is correct.

Do you think it is true?—I do.

Do you think it is true that David did keep all God's commandments and follow Him with all his heart?—Yes, with the exception mentioned in the 8th verse.

I ask you whether in the 14th of 1st of Kings, and 8th verse, there is any exception made?—No.

Then is the 8th verse true or not?—It is true of the general tenour of David's life.

Was David a liar?—David sometimes said that which was not true.

Was he a murderer?—No, except in the case in question.

In how many cases within a few hundred had David murdered?—Only in the one case of Uriah the Hittite.

Did not David murder many others?—There was a great difference in those cases. To kill is not to murder, if God commands.

Was not David a thief?—No.

Did he not take property which did not belong to him?—In a certain sense, yes; in a certain sense, no. I can explain the difference if you will allow me.

Then with these slight exceptions David did keep all God's commandments—murdering, stealing, lying and adultery—this being the description of a man after God's own heart? Is stealing a wife, while her husband is fighting for the thief, good or bad?—Bad.

Is murdering men good or bad?—Bad.

Is stealing property good or bad?—Bad.

Did David do all that?—No.

Do you mean to say that when he was sheltered by the king of Gath he did not commit murder and robbery?—I mean to say that the law of God in the case in question authorised what David did, and, therefore, it was neither murder nor robbery.

Will you kindly tell me who authorised David to kill the subjects of the king by whom he was sheltered?—There was a general law under which Israel took possession of Canaan, and that was that nothing should be left alive. The Canaanitish nations were sunk in wickedness, and God had given them over to destruction.

Do you think God sanctioned men seeking shelter and protection from people they meant to exterminate?—As they were only in the position of savages or animals, the action was not of the character you impute to it.

Then the killing of savages is not in your judgment immoral?—Not if commanded by God.

Do you think there could be a divine revelation which commanded people to kill other people against whom they had no cause of offence?—They had offended against God.

Do you think there could be a divine revelation which enjoined any people to kill all the males of the nation and all women who were mothers or wives?—I do.

Do you think there could be a divine revelation which alleges that when mercy was shown, God was angry with the merciful?—Give me the case you refer to.

Do you think there is such a case as that?—I decline to answer the question in that form.

Do you mean to deny that, more than once, there were cases in which the Jews spared the people they went against, and God's displeasure was kindled against them?—I admit there are such cases.

You admit they destroyed people they had no quarrel against?—Yes

Digitized by Google

And you think that is good?—Yes, under the circumstances.

Should you think it good for to-day?—If God commanded me I would do it.

You had better take care whom you try it on!—No fear; If God gives me a commission, I shall be able to execute it.

Don't you hold that under any circumstances war by a people against another with whom they have no cause of quarrel, is monstrous, cruel, and merciless?—If God has not commanded it, Yes.

Do you think God's commands can make a bad thing a good thing?—No.

Yet you deem all God's commandments good?—There is a difference between God and man as to what is good and what is bad. God has a right to do with his own property as he likes.

You hold that God may make a man good by torturing him?—I had not that thought.—(Time called.)

The CHAIRMAN: It is becoming necessary that I must ask you to maintain better order. That is to say, to do justice to the speakers, let them have the argument between themselves. You can judge, moreover, when you have the printed discussion if there has been any mistake. I am speaking to the few who occasionally interrupt. I judge the body of the meeting will be on my side during the remaining hour.

Mr. ROBERTS: You will have observed that Mr. Bradlaugh has not attempted to discuss the case of Moses from its internal peculiarities, upon which hangs a very powerful argument. I will not follow him in his remarks on what are called the Apostolic Fathers, because I do not attach any particular importance to them. I cited them merely because Mr. Bradlaugh took the unreasonable position of denying that there was evidence of the existence of the New Testament prior to A.D. 150. And now I have produced the evidence, he tries to make light of it. Mr. Bradlaugh's attempt to disprove the Bible has been to rehearse alleged difficulties and discrepancies, some of which, in cross-examination, I have endeavoured to explain. He has gone into the same course every night. He might have gone into the contradictions in the way the Socratic method allows, but he has not done so. He dwelt on them in long speeches; perhaps because he knew their force would disappear under the Socratic treatment, while they seem to show for something in a speech. Well, I will now notice some of them. I do so with reluctance, and only lest a false impression might remain if I were to ignore them, and at once resume the thread of my discourse about Moses. I take up, first, the alleged discrepancy between the 24th of Luke and the 1st of the Acts on the question of the forty days. Acts i. states that Christ was seen for forty days after his resurrection, and that his disciples, during that time, tested his reality by many infallible proofs. Mr. Bradlaugh says this is inconsistent with Luke xxiv. There is nothing whatever in the objection; for though the 1st of the Acts certainly specifies forty days, Luke mentions no time at all. Where can there be a contradiction in such a case? Remember that Luke is the writer of the Acts as well as of the gospel; and the fact that he mentions forty days in the Acts as the length of time Christ spent with his disciples is to be taken as a supplement in the one case of an omission in the other. Perhaps Mr. Bradlaugh may have something to say in reply to that. He did not develop his objection with the distinctness necessary to enable me to be more particular. I fancy the suggestion is that the whole of the 24th of Luke, including Christ's ascension, is crowded into one day, and that, according to Luke, Christ ascended on the day of his resurrection; but there is nothing to shew this. It was simply stated that he did this and that, without telling us of the time at all. The writer of the Acts of the Apostles tells us the time he lingered in the midst of the apostles, giving them proofs that they were dealing with a real person.

Then Mr. Bradlaugh says that to Abraham God made a promise which he has not fulfilled. If he had stopped there, he would have been within the bounds of truth. But when he argued that, because it is not fulfilled, therefore it will not be, he was illogical. It would not be difficult to show that it is the teaching of the New Testament that the promise will be fulfilled. But Mr. Bradlaugh said it never could be because there has been a gap, and that there can be no gap in "ever." It depends upon when "ever" begins. In this case the expression "for ever" goes back

Digitized by Google

to the time of the promise. It begins with the time of performance. There is evidence that Abraham himself recognised this. In Gen. xv. we read that this was addressed to him:—"And thou shalt go to thy fathers in peace; thou shalt be buried in a good old age. But in the fourth generation they shall come hither again." That shows the promise was not to take immediate effect. A promise does not involve immediate possession. If an interval elapses, and the promise has not been recalled, that is no reason for concluding the promise will never be fulfilled. We are expressly told in Hebrews xi. 13, "These all died in faith, *not having received the promises*, but having SEEN THEM AFAR OFF." Faith, of which Abraham was the type, is defined by Paul to be "believing in the promises of God." This of itself involves the conclusion that the promise to Abraham was not to be fulfilled at that time. The Bible affirms that Abraham has not received the promise, and yet Mr. Bradlaugh makes use of the fact that he has not received the promise as a proof that the Bible is telling lies. Extraordinary argument! which requires no further notice. The proof is entirely the other way. I am sorry Mr. Bradlaugh is sacrificing good time by forcing these trifles on my notice. He asks me to decide whether there were one, two, three, or more women at the sepulchre on the morning of Christ's resurrection. My answer is very brief. There was one, two, and three and more. When two or more narratives are proved to be true, they must be in harmony in their details, though they are apparently discrepant, and this discrepancy is a proof that the gospel is not a forgery; if it had been a forgery, the Four Gospels would have been made to tally precisely. Whereas, like all cases of true witnesses, three or four men speak to the same facts, but vary in their narrative of them, though consistent when all put together. I put them together in the following manner:—

The first fact to be noted is that there were a number of women, related to the transactions of the resurrection morning. We find (Matt. xxvii, 55; Mark xv. 40–41) that "many women" had followed Jesus from Galilee to Jerusalem, "among whom were Mary Magdalene, and Mary the mother of James and Joses, and the mother of Zebedee's children." These many women were witnesses of the crucifixion (*ibid*), and also of the deposit of the body of Christ in the tomb of Joseph (Luke xxiii. 55, also Mark xv. 47); after which they returned and prepared sweet spices and ointments, and rested on the Sabbath (Luke xxiii. 56), having arranged for an early visit to the sepulchre on the first day morning to embalm—(Mark xvi. 1). In the early visit, most of the "many women" appear to have taken part (Luke xxiv. 1), and at first in one band. The order of events seems to be this:

1.—Before the arrival of the women, there had been an earthquake and angelic manifestation attendant on the resurrection of Jesus, throwing the keepers of the tomb into a panic.—(Matt. xxviii. 2.)

2.—The women, who had wondered how they were to obtain access to the tomb, arrive and find the stone rolled to one side, and the sepulchre empty. They conclude the body had been taken away, and are perplexed.—(Luke xxiv. 4.)

3.—Mary Magdalene, leaving the other women at the sepulchre in their perplexity, returns and tells Peter (Jno. xx. 2), saying, "They have taken away the Lord out of the sepulchre, and WE know not where they have laid him."

4.—In Mary's absence, two angels appear at the sepulchre, in whose presence the remaining women stoop, affrighted, to the earth. The angels inform the women of the resurrection of Christ, and tell them to go and tell his disciples. They depart quickly with fear and great joy, and run to bring the disciples word.—(Matt. xxviii. 8.)

5.—Mary returns with Peter and John, who inspect the empty sepulchre, and see the left clothes of the dead. Not knowing the Scriptures that Jesus should rise again from the dead, sorrowing curiosity satisfied, they go away again to their own home.—(John xx. 2.–10.)

6.—Mary remains behind, and stands outside the sepulchre weeping. In a short time she takes another look into the sepulchre, and this time she sees the angels who had some time before appeared to the rest of the women. She does not know them to be angels, but probably supposes them to be visitors. They ask her why she weeps. She says, "Because they have taken away my Lord, and I know not where they have laid him." Having said this, she steps back to resume her position outside the sepulchre, and sees a third person, whom she supposes to be the gardener. She instantly

Digitized by Google

asks him where he has laid the body of Jesus. The response reveals to her the delightful fact that it was Jesus himself. Forbidding her to touch him, he tells her to go and tell his disciples that he is about to ascend. The interview terminated, Mary departs.—(John xx. 11–17.)

7.—The other women, yet on their way, having been angelically apprised of the resurrection, are met by Jesus, who salutes them, and tells them to go and ask his brethren to meet him in Galilee. They hold him by the feet and worship him. There is no interdiction against touching him, as in the case of Mary, the cause being removed.—(Matt. xxviii. 9-10.)

8.—Mary Magdalene arrives at the place of the disciples' stay, about the same time as "Joanna and Mary, the mother of James, and the other women that were with them."—(Luke xxiv. 10.)

9.—The women (all of them) tell what had happened; but their words seem to the apostles as idle tales.

10.—Two of their company afterwards (during the day) go on some business to Emmaus; and while on the way, are joined by the Lord, who converses with them, but holds their eyes, and reveals himself to them at the end of the journey and then disappears.—(Luke xxiv. 13–31.)

11.—Peter, being out by himself, is also visited by the Lord, and returns and declares the fact to the assembled disciples, who begin to believe it must be true.—(Luke xxiv. 33-34.)

12.—The two from Emmaus return and narrate their experience.

13.—While they are discussing the matter, Jesus himself appears, shows the nail marks on his hands and feet, submits to be handled, and eats before them in their midst, Thomas being absent.

14.—Thomas returns after the interview, but refuses to believe what he is told, unless he sees Christ for himself, and is allowed to put his fingers in the holes of the nails and spear.

15.—Eight days afterwards, the disciples being again assembled, and Thomas being with them, Jesus again appears in their midst, and addresses himself specially to Thomas, whose scepticism disappears before the evidence.

16.—Afterwards the disciples return to Galilee, where Christ appears to them several times, and finally, at the end of forty days, the disciples having returned to Jerusalem, he takes leave of them at Bethany.—(Time called.)

Mr. BRADLAUGH: Mr. Roberts says that I did not make my objection about Luke and the forty days of the Acts quite clear. I will try to do so now. I say the whole of the events following the resurrection are limited to one day by the 24th chapter of Luke. You will find the story as distinct as possible. First, the journey from Emmaus: they "rose up the same hour" and returned to Jerusalem, where they found the eleven gathered together; then Christ appears, and after talking to them, he led them out to Bethany. If that don't mean one day, language is not of much use. That is corroborated by Mark xvi., which says that, when Jesus was risen early the first day of the week, he appeared unto two of them, and afterwards to the eleven. "So then, after the Lord had spoken unto them, he was received up into heaven, and sat on the right hand of God." I say this chapter leaves no room for forty days. Then, as to the women, I say the discrepancy is equally proved. Mr. Roberts says, that if forged, there would have been no discrepancy. I never said the gospels were forged. I say, like the mythic books of all religion, they have germs of historic fact, with the gradual addition of traditions. We may admit that, as ordinary men telling a story they believe, they vary, but we ought not to be damned or saved for our belief or non-belief of that story. In the case of two reporters, one might leave out some words, and another might misunderstand others, and then some discrepancies might be expected; but in a narrative divinely commissioned by God to give the exact truth, we should not expect that sort of thing. Matthew gives two women—the two Marys; Mark mentions two Marys and Salome; Luke named Mary Magdalene, and Joanna, and Mary the mother of James, "and other women that were with them;" and John only specifies Mary Magdalene. Mr. Roberts says all this is true; to use his own phrase, it is a real discrepancy on the surface, but that the discrepancy may be

Digitized by Google

explained away. I must say that Mr. Roberts has a very different notion as to what is good evidence from myself; and I put my notions to you very strongly. When as to David, he says that, with the exception of the affair with Uriah the Hittite, David never did anything that was not good. I cannot help reminding him of what is recorded in Samuel xxvii. I find that David went to Achish, king of Gath, for shelter. "And David said unto Achish, if I have now found grace in thine eyes let them give me a place in some town in the country that I may dwell there: for why should thy servant dwell in the royal city with thee? Then Achish gave him Ziklag; wherefore Ziklag pertaineth unto the kings of Judah unto this day." In return for this, David smote the land and left neither man nor woman alive, and took away the sheep and the oxen, and the asses, and the camels, and the apparel, and returned to Achish. David saved neither man nor woman alive to bring tidings to Gath. I say that was the conduct of an ungrateful scoundrel, who knew he was doing wrong. He was a traitorous thief, who murdered the people and stole their cattle. If that is religion, save me from that religion. Then we come to another case. Mr. Roberts don't think that David robbed. In 1 Samuel xxv., two chapters before the one I have read from, we find that David asked Nabal to give things to him, the only justification being that he had not already taken them; and when Nabal in strong language said he would not do it, David prepared himself to take them by force, but Nabal's wife met him and he took her. Mr. Roberts said that David committed no offence except in the case of Uriah the Hittite, and that these people were savages. I don't wonder at the mischief done in Patagonia or Terra del Fuego of old. Why should they be killed because they are savages? Were they consulted by the God of high heaven before He made them? With such savage doctrines, such inhuman and damnable doctrines, instead of being an Atheist as I am, I would be an Anti-theist, if I thought it would avail—(A VOICE: "Shut up.") That is just what I am doing with your Bible. In the 9th of Exodus, you will find that all the cattle of Egypt died, and you will find, in the 19th verse, a caution was sent to those who believed, in order that they might escape with their cattle, so that they should not die; and we find that those that left their cattle in the field, discovered that they had become victims in the storm, although they had already been killed in the 6th verse. Mr. Roberts says that the promise of the land to Abraham is misunderstood by Mr. Bradlaugh. Of course, if you have a £5 note given to you, and have ten thousand promised to you that you shall have them for ever, and you never receive one of them, that is a promise, and it is broken. That is the case of Abraham. The words I have read to you: "Lift up now thine eyes, and look from the place where thou art, northward and southward, and eastward and westward; for all the land which thou seest, to thee will I give it and to thy seed for ever." He never did give it. Mr. Roberts says, "But he will when Christ comes; and, therefore, pray Mr. Bradlaugh, what will you say to Christ then?" I don't know. We shall see. Wait till it happens. Then Mr. Roberts says that the texts about cruelty are not capable of the construction I put upon them, because these people may have been ordered to be punished. I draw attention to Deut. xx. 10: "When thou comest nigh unto a city to fight against it, then proclaim peace unto it." If the nation will make peace, they shall all be slaves; but if they won't, "but will make war against thee, then thou shalt besiege it; and when the Lord thy God hath delivered it into thine hands, thou shalt smite every male thereof with the edge of the sword; but the women, and the little ones and the cattle, and all that is in the city shalt thou take unto thyself; and thou shalt eat the spoil of thine enemies which the Lord thy God hath given thee." I ask if that is not a horrible and terrible doctrine? I ask how can that be divine revelation which is so full of cruelty? I ask whether it is not savage? This was the language which justified negro slavery, and still supports the Coolie trade. It is said these slaves are inferior beings—"savages." Why, that is language which might have been uttered in some far-off corner of the globe? I never expected to hear it in Birmingham. I hold slavery is a damnable cruelty everywhere; but where we have the stronger intellect against the savage, it is ten times more cruel. How, then, shall we further proceed? Shall I follow Moses when conjuring with the magicians? Is that an authentic revelation from God which brought up the wicked frogs from the waters of Egypt to spread over the land? Is this believed which says that there was darkness over all the land of Egypt, but there was light in the dwellings of the children of Israel, though they might be living in

Digitized by Google

the same house or be immediate neighbours, there being thus for the time light and dark, patchwork fashion? Follow Moses through his zig-zag journey, during which the clothes of the people were not to wear out? Imagine, a Jewish baby two months old on leaving Egypt arriving at Palestine in the same clothes 40 years after! Follow Moses, when in the war between the Amalekites and the Jews, he, like some Duke of Cambridge, seeks a place of safety while the battle goes on. Shall I follow him while the drooping hands are being held up until the Amalekites are beaten? Shall I follow him through the absurdities of the quails and the manna? Shall I follow him up the Mount where God says to him, "Let me alone that my wrath may wax hot against them, that I may consume them?" Shall I follow him where he persuades God that he is wrong, and repenteth him of the evil which he thought to do to the people? Follow Moses! I have followed him a step too far. Is this Bible an authentic revelation, or is it a record of a hundred different myths linked together from the minds of a thousand different men? I have never, from the first speech I made in this debate, said that this work is the work of forgers; and no man, no honest man, would keep me to that which I don't advance.

Mr. ROBERTS: There are always two ways of looking at every case, and he pursues the best course who puts all the facts together harmoniously. I daresay I might appeal to the experience of every one as to mystery hanging over some particular incident, till one fact is ascertained which throws all the rest into beautiful harmony. So it is in this matter. Many things appear jumbled and inconsistent if they are looked at apart from the central fact. I don't wonder that Mr. Bradlaugh does not understand the Bible because he ignores its backbone, so to speak. As I said in my opening address, take God from the Bible and you take reason and all that is intelligible away from it, and lay it open to all the harsh unfriendly sayings in which Mr. Bradlaugh indulges as to its principles, its ordinances, and its history. Recognise the book as it stands in its completeness and it appears in a totally different aspect. In fact its divinity appears from itself. This will be seen if you try to apply to it Mr. Bradlaugh's hypothesis of its character. Mr. Bradlaugh's judgment of the book is that it is a human production. Now if that judgment of it be right, then its internal peculiarities ought to agree with it. We ought on such a theory of it to see human principles at work, the same as in everything else of human evolution. My argument is that there are facts in the case that defy explanation upon any human principles. I have rehearsed some of them. I show that some phases of the recorded attitude of Moses cannot be explained unless we accept the theory of his divine mission. On Moses, then, I propose to retain your attention during the short time at my disposal. It might please Mr. Bradlaugh better if I were to follow the assertions he has made this evening, but I must do my duty. I am here to affirm the truth of the Bible. To prove this affirmation requires argument and I would be precluded from entering upon this argument were I to do as Mr. Bradlaugh wishes, for it would take all the time at my disposal. But there is a way out of the dilemma. If Mr. Bradlaugh will affirm that the Bible is a myth, a human production, or undivine I will agree, as I have already said, to meet him for a similar period to this discussion, and it would then be my duty to follow him in all points and particulars, and to show that none of them were inconsistent with the fact that the book consists of reliable and authentic records of the proceedings of God in human affairs. Mr. Bradlaugh referred as a matter of animadversion to the fact that Moses took the Israelites into a sterile part of the world. This is one of those points that, in my judgment, tell in support of the professions of the Bible; for such a proceeding is unintelligible, if Moses was not directed to do it by God, who had power to sustain them there. If God directed him to do it, the proceeding is a perfectly rational one. But if Moses acted out of his own head, what possible explanation could be given of his taking the people into a region where it was impossible they could obtain sustenance? Manna was given. That Mr. Bradlaugh treated as an invention. Upon that I have to say that, if the manna had been an invention, something better would have been invented than that. For what are the facts concerning this manna? That the people murmured about it; that they chode with Moses; they re-called to mind the leeks and garlics of Egypt, and wished themselves back again. The fact of their murmuring is recorded; and if the

Digitized by Google

murmuring occurred, it is a proof the manna was given, and that God was working with Moses; for Moses could not bring down manna to feed so large an assembly. If the murmuring did not occur, what conceivable object could the inventor of the story have had in inventing the murmuring? It may be asked, why did not God provide the children of Israel with something better than manna? Why not roast beef and plum-pudding and wine? which certainly would have been the sort of thing invented if the story of Exodus was a Jewish invention for the glorification of the nation. They would then certainly have been represented as having received in the wilderness a plentiful supply of first-class articles. Instead of that, here is an article which the people did not relish and soon got tired of. What was the reason for feeding the people on this peculiar kind of food? Mark the reason! Deut. viii. 16:—"Who (God) fed thee in the wilderness with manna, which thy fathers knew not, *that He might humble thee*, and that He might prove thee, to do thee good at thy latter end." You will judge for yourselves whether it is possible to admit that this could have been an invention. Invention is always for a purpose, and that purpose the glorification of the people concerned. In this case, no such purpose is served, but the contrary. The theory of invention has no reasonable standing ground; while, on the other hand, if it is not invention, but a record of what actually occurred, the occurrence and the record of it have a reasonable explanation, and in that case the divinity of the Bible is proved. Just listen to the context, and imagine whether the language is possibly that of an inventor, or a man seeking to use the Jews for his own glorification: "When thou hast eaten and art full, then thou shalt bless the Lord thy God for the good land which He hath given thee. Beware that thou forget the Lord thy God in not keeping His commandments and His judgments and His statutes which I command thee this day. Lest when thou hast eaten and art full and hast built goodly houses and hast dwelt therein, and when thy herds and thy flocks multiply and thy silver and thy gold is multiplied, then thy heart be lifted up and thou forget the Lord thy God which brought thee out of the land of Egypt, from the house of bondage." You see Moses never takes the credit of the Egyptian deliverance to himself.—(Time called.)

Mr. BRADLAUGH: The remark has been made that if we take this book as a human production we cannot understand it. How useful that is. We have no other books of a similar character to which similar objections apply? Have we Lord Amberley's new book, in which he has two sub-divisions, one of which he applies to holy persons and the other to holy books:

"Under the title 'Holy Persons,' we have Confucius or Khung-fu-tsze, the founder of Confucianism; Laò-tsè, the founder of Taouism; Sakyamuni or Guatama Bhudda, the founder of Buddhism; Zarathustra or Zoroaster, the founder of Parseeism; Mahommed or Mahomet, the founder of Islamism."

Each of these has religious books, some more and some less ancient than ours, to which similar objections do apply. Then Mr. Roberts says, "I won't answer Mr. Bradlaugh's objections to the Bible now, because that is not now my business. I will do it in another discussion." Why, during three nights, we have diminished considerably as regards the number of the audience; and if we continue to diminish till the sixth night, there will be nobody left but the disputants and their committee. I am not so foolish as to incur a second infliction of this sort if I can help it. I accepted Mr. Roberts's challenge in this case because I knew he was regarded as a fair representative man of a body of religionists whom I had heard well spoken of here and in America. I have met with strong men and weak men among them, but all I believe reasonable and respectable men; but, as regards Mr. Roberts, I have done my whole duty in accepting this challenge. If Mr. Roberts has the victory, I shall be quite content, and if he thinks I am unwise enough to submit to another six nights, all I can say is he don't know me as well as I know myself. But I will tell you what I will do. If he can get half-a-dozen clergymen of the Church of England or ministers of other bodies to back him as their representative, then I am bound to meet him in a second debate; but I have accepted now his challenge, and my reason for not accepting a second is that I don't think he is competent to treat the subject he has undertaken to treat. I don't think it would be doing justice to

Digitized by Google

Christians to do it. And I will tell you why. I would not willingly have chosen a weak man, when I might have had a stronger man. I do not, therefore, fear; for I have occupied too many years upon the platform to be afraid. I call a weak man a man who pretends to quote works he is unacquainted with. You here, to-night, who have listened so far, especially ladies, will bear with me for a moment. I have not chosen to consider whether I have been speaking to believers or unbelievers, but I have here an extract from *A String of Pearls*, collected and strung together by my friend Mr. C. C. Cattell :—"A believer is one who takes for granted anything, sense or nonsense; while he who examines for himself into the truth or falsehood of any statement, and has the courage to avow his conclusion, is by the ignorant and prejudiced, designated an infidel. Such were, in their time, the great reformers, the philosophers, and the best men of past times, who were severely persecuted; as Aristotle, Descartes, Socrates, Virgilius, Trithemisis, Pythagoras, and others"—(A VOICE: "Has he got his portrait in the book?") Yes, and if yours had been beside it, it would have been the portrait of an indecent donkey who could not keep quiet. What I wanted to point out to you when that indecent interruption took place was that, if it be true that I shall suffer so severe a penalty as has been foreshadowed at some future time at the coming of Christ, the more reason you have for bearing with me and try to convince me and convert me now—the more reason because it is not alone for myself. You think my denials deserve a penalty, but there are thousands whom my voice influences—thousands of young men whom my voice is influencing. You may think I am not in earnest, but where is the inducement to be an infidel? An outlaw in early life from my country for my opinions, it is enough that they have stopped my way in many a walk in life. Say what you will, you will not deny me some powers of speech; you won't deny me the acquaintance necessary to deal with these subjects. If a desire to improve my home later in my life should draw me from public view to make my means of life, my advocacy would still continue amongst those with whom I lived. I find the whole of the religion of the world centred against myself, and those young men around me. You won't destroy my influence with hisses and such like demonstrations. You can only do so by meeting us man for man and woman for woman, and in the spirit of your book try and convert us, but not by taking up the first stone to smite us to the earth.

Sixth Night,

THURSDAY, 22nd JUNE, 1876,

IN THE TEMPERANCE HALL, BIRMINGHAM.

THE CHAIR WAS OCCUPIED BY MR. GEORGE H. ST. CLAIR.

THE CHAIRMAN: Ladies and gentlemen, this being the last night of the debate, time is of more consequence. I trust it is not necessary to make a single remark, and I shall sit down at once, asking Mr. Roberts to commence on the affirmative side as usual.

Mr. ROBERTS: Mr. Chairman, ladies, and gentlemen, on this, the last night of the debate, it is my duty to submit to you the strongest of the arguments which I have to bring forward in substantiation of the proposition that the Scriptures are the authentic and reliable records of Divine revelation. My contention to-night is that the prophecies of the Bible—so explicit, so sober, and so useful in their character, being in these respects so unlike the vague, incoherent, irrational predictions of the Greek augurs and other contemporary pretenders, are an evidence of the divinity of the authorship of the Bible—evidence which becomes simply overwhelming when we consider their fulfilment in the accomplished history of mankind. That you will perceive is a very large subject, but I shall have to treat it in a very small way on account of limited time.

If there is one feature more characteristic of the Bible than another, it is the peculiarity of prophecy—the foretelling of coming events. It runs—I will not say as a golden thread or vein, but rather as a broad belt or seam of precious metal—throughout the book, beginning at the very beginning, and only ending at the last chapter of Revelations. Genesis iii., for example, contains a comprehensive prediction of human redemption, "That the seed of the woman shall bruise the serpent's head," and that at last the seed of the woman shall triumph, into which in detail I do not now enter, having more palpable matter in hand. I will not enter minutely into the history of the fathers, Abraham, Isaac, and Jacob, whose history is replete with the element of prophecy; nor into the history of Israel, of which the same may be said. I will bring before you those prophecies which, both for their extensiveness and frequency, and the remarkable manner in which they have been fulfilled, are visible to the eyes of all the nations of the earth. I refer first to the predictions which have been realised in the history of the Jewish nation.

Mr. Bradlaugh's notions on the subject are somewhat indefinite, but he was bound to admit last night that the Jews were an ancient race, going back at least 3,000 years, and that they have, all that time, had documents which they have regarded as those of Moses, and which they have all that time regarded as divine. I shall quote from those documents, because their reception for so long a period is a proof that they are so entitled to be received. As I have said, the predictions are so frequent and extensive that I shall have to be content with a mere selection, at the same time premising that they are but a sample or two of hundreds.

We have in the 26th chapter of Leviticus, the 31st to the 36th verses, a statement which I will now read: "I will make your cities waste, and bring your sanctuaries into desolation, and I will not smell the savour of your sweet odours. And I will bring the land into desolation: and your enemies which dwell therein shall be astonished at it. And I will scatter you among the heathen, and will draw out a sword after you: and your land shall be desolate, and your cities waste. Then shall the

Digitized by Google

land enjoy her sabbaths, as long as it lieth desolate, and ye *be* in your enemies' land; *even* then shall the land rest, and enjoy her sabbaths. As long as it lieth desolate it shall rest; because it did not rest in your sabbaths when ye dwelt upon it. And upon them that are left *alive* of you I will send a faintness into their hearts in the lands of their enemies; and the sound of a shaken leaf shall chase them; and they shall flee, as fleeing from a sword; and they shall fall when none pursueth." I call attention to a similar statement in the book of Deuteronomy by the same speaker. In Deut. xxviii. 49, 50, 61, we read: "The Lord shall bring a nation against thee from afar, from the end of the earth, as swift as the eagle flieth; a nation whose tongue thou shalt not understand; a nation of fierce countenance, which shall not regard the person of the old nor show favour to the young . . . Also every sickness, and every plague, which is not written in the book of this law, them will the Lord bring upon thee until thou be destroyed." I should like to read other illustrations of the same thing, but I must be content to refer to one specimen from each of the prophets: Isaiah vi. 11-12; Jer. v. 15-20; Ezek. v. 5-17; Dan. xii. 7; Hosea ix. 17; Joel i. 1-6; Amos viii. 12; Micah. 5-16; Zeph. i. 12-18. &c., &c. I add to the list the prediction of Christ himself, who spoke upon the same subject in the following terms. In Luke xxi. 24, he was foretelling the destruction of Jerusalem, and the calamities which should befal the Jewish nation, and at verse 24 he says: "They shall fall by the edge of the sword, and shall be led away captive into all nations, and Jerusalem shall be trodden down of the Gentiles, until the times of the Gentiles be fulfilled." As a comment upon all these predictions, I simply point to the fact of the desolation of Jerusalem under the foot of the Gentiles for eighteen centuries, and the dispersion of the Jews among all the civilised nations under heaven. Here is the prophecy: there is its fulfilment. Can it be possible for prophecies to be fulfilled more completely than these? The Jews are the most valuable witnesses of the Bible's truth. Mr. Bradlaugh did not quite comprehend my argument as to their continuous existence being involved in the question of the truth of the Bible, and I will make the argument plainer now, since in itself it involves the fulfillment of prophecy in the most specific manner. The simple prophecy that the Jew would remain in all nations until a certain time, "until the times of the Gentiles be fulfilled," would alone require, if true, that the Jews must be in existence at the present time. But I will make the argument more manifest than that. In Jeremiah xxx. 11, we read: "Though I make a full end of all nations whither I have scattered thee, yet will *I not make a full end of thee;* but I will correct thee in measure, and will not leave thee altogether unpunished." Again, Amos ix. 8:—"Behold the eyes of the Lord God are upon the sinful kingdom, and I will destroy it from off the face of the earth; saving that *I will not utterly destroy the house of Jacob*, saith the Lord." In Deut. xxxii. 26, we have a memorial song—a prophetic song: prophetic of Israel's future experiences, which Moses committed to the custody of Joshua, the son of Nun; a very remarkable composition, certainly, if it was the production of a patriot who wished to ingratiate himself with the people. It is worthy to be read through; but I must confine myself to an extract, as bearing on the point in view:—"I said I would scatter them into corners; I would make the remembrance of them to cease among men, were it not that I feared the wrath of the enemy, lest their adversaries should behave themselves strangely, and lest they should say, Our hand is high; the Lord hath not done all this." Here you see is an express reservation of the Jews from destruction for a season; and, accordingly, here they are in our midst. God has preserved them from generation to generation. The arrangements of human affairs are at God's disposal and not in human hands, although men think they are the initiators in the case. Then I conclude this part of the argument by calling attention to this, that at the time spoken of when the promised Messiah shall be manifested in great glory, we read that "He shall assemble the outcasts of Israel, and gather together the dispersed of Israel from the four corners of the earth," whence it follows that, up to that period, they will be found in that position, and there they now are.

I will now allude to the second point which Mr. Bradlaugh equally failed to comprehend, which is that the truthfulness of the Scriptures requires that there should be at this day a dominant Christianity—political, tyrannical, and corrupt—a complete perversion of the original thing. I now call attention to the proofs of this. I begin

Digitized by Google

with Paul, who, in Acts xx. 28, says: "Take heed, therefore, unto yourselves, and unto all the flock, over which the Holy Ghost hath made you overseers; feed the flock of God which he hath purchased with his own blood. For I know this that, *after my departure*, shall grievous wolves enter in among you, not sparing the flock; also *of your own selves* shall men arise and SPEAK PERVERSE THINGS." In writing to Timothy (4th chapter 3rd verse) he says: "The time will come when *they will not endure sound doctrine:* but after their own lusts shall they heap to themselve teachers, having itching ears; and they shall turn away their ears from the truth, and shall be turned unto fables." There we have a prediction of departure from the truth as apostolically delivered. I now produce the evidence that this was to grow into a political shape, and give the world an ecclesiastical imposture, supported by the sword. Paul's brethren in Thessalonica had been agitated about the coming of Christ as an event which was about to happen, but he knew it could not happen until certain things occurred. In 2 Thess. ii. he tells us what these certain things are. He says: "Let no man deceive you by any means: for that day shall not come, except there come a falling away first, and that man of sin be revealed, the son of perdition; who opposeth and exalteth himself above all that is called God or that is worshipped; so that he as God sitteth in the temple of God, showing himself that he is God. . . . . And now ye know what withholdeth that he should be revealed in his time. Only he who hindereth will hinder till he be taken out of the way. And then shall that wicked be revealed whom the Lord shall consume with the spirit of his mouth, and shall destroy with *the brightness of his coming.*" Therefore, according to Paul's prophetical foresight, there ought to have been in our past times an extensive corruption of Christianity, resulting in the development of a pretender to divine authority, who, as one head over all, should exhibit himself as a prominent object of the highest homage upon earth. I ask if the whole of this great prophecy has not exactly been realised? What is the most conspicuous feature of the history of Europe but the spectacle of a man in the name of Christ claiming the highest authority, and lording it over the kings and governments of the earth? And what is the foundation upon which he rests but an extensive professedly Christian society in all the countries of Europe, which has nothing in common with the faith originally preached by the apostles? The mischief that led to this result had begun to work in the days of the apostles. Paul says to Timothy that a whole district had turned away from him (2 Timóthy i. 15):—"This thou knowest that *all they which are in Asia* be turned away from me, of whom are Phygellus and Hermogenes." According to John, the longest-lived disciple of Christ, the departure from apostolic principles had become so serious in his day that it was necessary to try every professor whether he was true or not. See 1 John iv. 1-7 for this. The history of European Christianity is not the history of a truly apostolic thing. Mr. Bradlaugh was not too fervid in his denunciations of the system which has cursed Europe for so many centuries. His mistake was to make the Bible responsible for that system, to the symbolic prediction of whose uprise and success I now call your attention. Revelation xvii. 1:—"And there came one of the seven angels which had the seven vials, and talked with me, saying unto me, 'Come hither; I will show unto thee the judgment of the great whore that sitteth upon many waters, with whom the kings of the earth have committed fornication and the inhabitants of the earth have been made drunk with the wine of her fornication. So he carried me away in the spirit into the wilderness, and I saw a woman sit upon a scarlet coloured beast, full of names of blasphemy, having seven heads and ten horns. And the woman was arrayed in purple and scarlet colour, and decked with gold and precious stones and pearls, having a golden cup in her hand, full of abominations and filthiness of her fornication; and upon her forehead was a name written Mystery, Babylon the Great, the Mother of Harlots, and Abominations of the Earth." We are told in the 6th verse that John "wondered with great admiration," at the spectacle, and the angel explains to him the meaning of what he has seen. It is to that explanation I now call attention as furnishing the prophecy in question. First of all what is the meaning of the woman? and before we seek the answer to that, I would remind you that the community of Christ—those who are true to him and keep his commandments, are likened to a bride, a chaste virgin, espoused to an absent husband for whom she is waiting. Here, in the symbol before us, we have a false woman riding upon a scarlet-coloured beast. It is important to notice

Digitized by Google

this in preparation for the explanation which identifies a false church with the symbol. I hope Mr. Bradlaugh won't make fun of the scarlet-coloured beast, for I presume he does not despise the British Lion. Symbolism is appropriate in its place. If we have a more hideous symbol than the British Lion to deal with here, it is because we have a more hideous system represented. In the 18th verse, we have the answer as to who the woman is: "And the which thou sawest is *that great city which reigneth over the kings of the earth.*" I am sure there will be no dispute between Mr. Bradlaugh and myself as to what city that was. Rome exercised imperial power over the whole world at that time.

Mr. BRADLAUGH: No.

Mr. ROBERTS: Over the whole civilised world. Rome is here represented as having ecclesiastical relations with the kings of the earth, which answers to history exactly. "The seven heads are seven mountains on which the woman sitteth"—Rome is on seven hills. "And there are seven kings: five *are fallen*, one is and the other is not yet come." The Roman symbol comprehended a representation of the seven forms of sovereignty that have been located on the seven hills of the topographical Rome. Up to the time of John's prophecy five forms of government had passed over those seven hills since the time of Romulus: the sixth (the imperial) existed at the time of the vision. The seventh prevailed for a short time, as the prophecy states, and the eighth, the Papal, is of the seven, for it is only another form for the Pagan; it is Paganism under a new name. I say that the history of Rome verifies in a marked manner these predictions of the apostles Paul and John. The complaint that the present system is a hideous system is well founded, but that complaint is an unwitting testimony to the truth of this great prediction. A religious apostacy, taking a political shape was to make all the nations of the earth drunk with false doctrine and sentiment; and the proof of its having accomplished this bemuddling mission is seen in the fact that when anyone attempts to present the sober truth of God, he is set down by religious people as an infidel or heretic.

Mr. BRADLAUGH: On the first night of the debate, and again to-night, Mr. Roberts said he would contend that the prophecies of the Bible were so explicit, so sober and so useful in their character, being, in this respect, so unlike the vague, incoherent and irrational predictions of the Greek augurs, as of themselves to prove the divinity of the Bible. Sober! Useful! Explicit! If you have heard one word that has been either sober, useful or explicit, all I can say is you are a great deal more clever at listening than I am. There is one pretence of explicitness, and that is the case of Luke xxi., in which there is an "explicit" reference to the destruction of Jerusalem. But Mr. Roberts must have forgotten that the gospel of Luke was not written before Jerusalem was destroyed; but, on the contrary, there is not a particle of evidence of the existence of the gospel before A.D. 150, and the earliest is much later than that. Although he has the coolness to tell you that with respect to the ancient fathers, he was content to call witnesses, he could do without them. I remember that the truth of the evidence came from my side and not his. He pretended to hand his evidence from the fathers to the chairman, and then when I came to question him about them, they vanished into thin mist. On my part, I called as a witness Clement, and was told an idiot could give evidence like that. I called Justin Martyr; Mr. Roberts said he was "trashy." I thought so, too, and so on, with the others. Then he has quoted a prophecy from Hosea, forgetting that, during the dispersion and captivity of the Jews, the whole of their records were swept away, and swept away, too, because they were in the way. Then we had a reference to 2 Thess. ii., which Mr. Roberts had a very curious way of reading. Turning to the chapter, you will find that Mr. Roberts stopped at the word "coming," at the end of the 8th verse, though not a completed sentence. If he had read on he would find that "for this cause, God shall send them strong delusion, that they should believe a lie." I don't know whether it struck him as remarkably inconvenient, or whether he thought it rather too expressive. Certainly the reading was vague enough. He next brought you to the 17th chapter of the Revelations, with its filthy, disgusting language, which he hoped I would not turn into fun, but whose extreme filth was revolting in reading. The 4th verse it requires the height

Digitized by Google

of human audacity to read. There is nothing more revolting to my way of thinking. Mr. Roberts it cannot shock apparently. The woman had "a golden cup in her hand, full of abomination and filthiness of her fornication." Is there abomination of language more filthy and disgusting in any book you ever read in the world? Mr. Roberts says that these prophecies of the Bible are explicit, are sober, are useful. Does this refer to such twaddle as women sitting upon waters and scarlet beasts, with so many heads and so many horns. I want Mr. Roberts to say if that revelation is explicit. It is simply not explicit; it is simply incoherent and irrational. Then he talks of John as the oldest living disciple of Christ. Where is there a particle of evidence of that? It is simply an impertinent assertion. He says that Mr. Bradlaugh is fond of figures of speech, or does not despise emblems, or something of that sort. I am fond of them, but I don't like filth, and the whole Bible is full of filth. In Hosea, Ezekiel, and Nehemiah it abounds, and the only way of regarding it is as the outcoming of an ignorant and barbarous age. Hosea seems to have entirely lost all sense of decency. Read, if you please, the second chapter. Mr. Roberts says they are not vague. If sober, they are irrelevant. "Plead with your mother, plead; for she is not my wife, neither am I her husband; let her, therefore, put away her whoredoms out of her sight, and her aldulteries from between her breasts; lest I strip her naked, and set her as in the day that she was born, and make her as a wilderness, and set her like a dry land, and slay her with her thirst. I will not have mercy upon her children, for they be the children of whoredoms." I might read you filthy passage after filthy passage, but I don't like, especially in the presence of ladies. I have not provoked this. These are not our books. You say they are not vague. Perhaps not, sometimes, but they are not sober; and when explicit not useful. If they appeared in any book but the Bible, they would have been suppressed by the society formed for the suppression of indecent publications and seized wherever they were placed. (A VOICE "Shakespere.") Shakespere! Yes, but Shakespere don't pretend to be a revelation from God to man. I will refrain from reading more of those texts. I should not have used the few I have at all, only I wanted to base what seemed to me an important argument upon them. From gross-minded people we get low figures; from degraded men we get degraded figures; from low people we get licentious arguments; from disgusting men we get disgusting figures. Such things could not have come from an all-wise God. I regretted for the sake of this meeting there was the slightest necessity for dealing with the subject. I can understand it must have been as painful to you as it is to me. But as you had brought before you an example of a horribly filthy passage, I was bound to show you to what such passages lead.

Let us, if you please, pass on to another part of the subject. The Assyrian slabs and Egyptian monuments we are told are not easily deciphered, and when deciphered are not useful. Mr. Roberts is of that opinion, and coming from him it is no doubt entitled to some weight, as my own knowledge is only second-hand, and I have no ability to translate the hieroglyphs of Egypt. Relying upon second-hand information, therefore, it is quite possible I may be misled, but as far as I have been able to follow these hieroglyphs, opinions upon them vary much, and there is no perfectly safe ground for their interpretation. Until I know something more about them than I do at present I should say it would be better not to introduce them at all. Mr. Roberts says that at the end of the first century Rome was a great city reigning over all kings, and when I corrected him he said civilized kings. First, there is nothing about civilized kings in the Bible, and next Mr. Roberts might have known, if he had been explicit enough, that China was as civilized as the bulk of Europe and a portion of Hindostan. To pretend that this city of Rome reigned over all the kings of the world was as perfect a piece of pretence as could be imagined. Early in this debate Mr. Roberts said he would show that there was historic harmony in the Bible not only with the facts, but in relation to the history and the measure of the duration of the world. I pointed to the Egyptian chronicles and to the Septuagint. Is there historic harmony with these? The Bible limits the face of the earth to 6,000 years, while these go back far longer than that. The other day they opened some caverns in a neighbouring county and they found buried there remains which in the silent and increasing march of events, must have been deposited there when England and France were

Digitized by Google

united together, which must have been hundreds of thousands of years ago. Talk of harmony in hieroglyphics 15,000 years old! let Panglos's discoveries speak—discoveries which show that Egypt existed 5,000 years before Eden's foolish story sounded in the world. There could be nothing more vague, nothing less sober, nothing more incoherent, nothing more irrational. What is the story? God makes one man and one woman, and places this man and woman in a garden, the fruit of one tree in which they were forbidden to eat. The tree was placed within reach and very tempting to the eye, and was, moreover, the tree of knowledge of good and evil. As long as man withstood the temptation all was well. But at length the serpent, wiser than the other beasts of the field, persuades the woman in her husband's absence to partake of the fruit. She does so, tempts her husband to do the same. He does so, and this caused the Almighty to turn round and curse the world. I am told that there is prophecy in it. The prophecy was contained in the curse pronounced upon the serpent:—"Because thou hast done this, thou art cursed above all cattle, and above every beast of the field; upon thy belly shalt thou go, and dust shalt thou eat all the days of thy life. And I will put enmity between thee and the woman, and between thy seed and her seed: it shall bruise thy head, and thou shalt bruise his heel." That is supposed to be sober, explicit, and useful prophecy. To me it seems as vague, incoherent, and irrational as any that ever appeared in any language. Again, Mr. Roberts, in his first speech, said there were apparent contradictions and discrepancies, but that, when examined by himself, they would melt away one by one. I have given 150 of these discrepancies and contradictions and absurdities. How many of them has he tried to answer? He has referred to the sentiments running through the Bible as evidence of its divinity. Why! they are sentiments of which the readers of the Bible are beginning to be ashamed of. I have produced sentiments as to the treatment of women and training of children—sentiments of giving to men of one nation power over the liberties and persons of their neighbours—sentiments with respect to doctrines which, as good and true men, they must regard as immoral and barbarous—sentiments regarding the actions of immoral men, particularly David, the man "after God's own heart," who never went astray, and, except in the case of Uriah the Hittite, did right in the eyes of the Lord, but still stole a little, robbed a little, was a liar, a thief, and a tenfold scoundrel; and these are anomalies which Mr. Roberts has not attempted to explain.

The CHAIRMAN: I had hoped, after the experience of our first meeting, that weak-minded people who could not command their feelings would have stayed at home, and that egotistical people would have sent challenges of their own to the disputants against whose sentiments they wished to protest. The troublers are so much in the minority that I trust to the general sense of the meeting to keep them quiet, and to see that they shall have respect for the meeting. Do let us maintain order during the rest of the debate. Mr. Roberts and Mr. Bradlaugh will each occupy a quarter of an hour with the option of making a speech or of asking questions. Mr. Roberts will begin.

MR. ROBERTS QUESTIONS MR. BRADLAUGH.

If I understood you correctly last night, you do not say the New Testament is a collection of forged writings?—I said I did not hold the doctrine that the Bible as a whole was the work of forgers; that I held that the Bible, like other books, amongst much that was mythical, had a basis of truth round which the myths were centred.

May not Paul have existed and written the epistles if the New Testament is not a collection of forgeries?—You have given me at present no authentication of the letters you call Paul's, and therefore can base no question upon them.

My question is based upon your statement that the New Testament is not composed of forgeries. I ask if the New Testament was not forged, is it not an honest production?—I have given you an answer. There may have been those who contributed their own amount of what was false and while other parts may have a basis of truth.

Do you not admit——I make no admission whatsoever. I said last night the onus of proof lies with you.

Digitized by Google

I ask you to say finally whether the New Testament, or any portion of it was according to your conception of it, forged for the purpose of deceiving the people?—I don't mean to say that there might not be contributions and interpretations which may not be deceptions,

Do I understand you to say that of the 2nd Epistle of Paul to Timothy?—It all depends upon the evidence.

Presumably you know the evidence, and I am asking whether your answer applies to Timothy?—You are wrongly putting my answer. I have not the slightest evidence to enable me to identify any person whom you designate as Paul, or the person Timothy, to whom the epistle is said to have been written, and therefore am not unwise enough to express an opinion without having sufficient evidence.

Have you sufficient evidence to form an opinion—yea or nay?—I reply that I have no evidence of the fact.

What is your opinion of the fact?—My opinion is not evidence, and I have no facts to found an opinion upon.

You have the fact of the epistle existing and circulating for centuries, and upon that fact I ask for your opinion as to its genuineness?—It is my opinion that I have no evidence.

Do you refuse then to say that the 2nd Epistle to Timothy is a forgery?—If you mean, is it probable that Paul wrote it, my answer is that, as I have no knowledge about Paul, I cannot speak about his epistles, and I am not so foolish as to be drawn into the position of saying that a forgery had been committed, when I have no evidence on the subject.

Do I understand then that you know nothing about it?—I know more about it than you may suppose.

Tell me, then, is it a forgery?—The bulk of the evidence for it, I have no doubt, has been forged evidence.

I ask you for your opinion, and you tell me about the evidence.—The bulk of the evidence, during the first eight centuries, was forgery without doubt.

I am asking you about the 2nd epistle of Paul to Timothy.—And I cannot give any opinion apart from the evidence which I say has been forged—the bulk of it.

You evade my question: I ask you as to the 2nd epistle of Paul to Timothy; and you refer me to other writings. My question is, whether, in your opinion, on whatever ground you have formed that opinion, Timothy is a forgery?—I am of opinion, if you have *bonâ fide* evidence that Paul wrote it, the evidence should be produced.

I have now been asking you for some time, Mr. Bradlaugh, whether you believe that the 2nd epistle to Timothy was written by Paul, or is a forgery, and you do not answer the question.—I answer I know nothing about Paul. I have answered the question satisfactorily to myself. The evidence of the epistles—I have read the bulk of what is alleged to be evidence—and I believe it to be a forgery. Beyond that which is strict evidence, you will get nothing from me.

Say yes or no. Is it in your opinion Paul's letter or not?—I won't say that. You won't get me to go into a trap—(laughter). I have a letter in my possession—how can I tell whether a letter has been forged or no, when I don't know who wrote it.

I should say in such a case, "I am in ignorance of the entire matter, and cannot form an opinion," but I most certainly thought Mr. Charles Bradlaugh had formed an opinion, and I merely ask what that opinion is.—Your question began with a statement about ignorant persons. I say that I have examined the Christian evidence as cited by the whole of the writers, and the presumption formed in my mind is against the professions of the epistles, but I decline to be entrapped into saying what might convey more than I might mean.

My question is based upon the examination you have made. I merely ask, have you formed a definite opinion? if so, what is it?—I have given you a definite opinion.

What is it?—My definite opinion is that I have not the slightest evidence.

I ask your opinion, and you tell me about the evidence.—Apart from the evidence I have no opinion.

But you can tell me what your opinion is on the evidence.—My opinion is I am giving answers to a man who does not comprehend them.

All I wish you to do, Mr. Bradlaugh, is to take positive ground one way or the other as to the character of the second epistle of Paul to Timothy.—My opinion was expressed six days ago. My opinion is that you cannot connect Paul with it.

Digitized by Google

I ask you do you discover anything in the epistles themselves to justify the supposition that they were forged?—Yes, I have clear evidence, and if you examine the Christian evidences you will find that the titles to the Old and New Testaments have been held to be forged.

I am not speaking as to the titles.—I have not finished. I was saying that the ecclesiastical writers of the earlier ages used the names of people not connected with the book at all. I refer to the the titles distinguishing between them and the contents of the letters. There is nothing in the contents to show the authorship.

I can understand that a work may not be Charles Bradlaugh's though it has "C. Bradlaugh" affixed to it; but here we have in the body of the letter a statement like this: "Paul, the apostle of Jesus Christ to Timothy," do you say that was not written by the writer of the letter?—I have not the slightest evidence connecting the writer of the prefix with the body of the letter,* and further than that I can give no answer.

MR. BRADLAUGH QUESTIONS MR. ROBERTS.

Do you admit my definition of life as applied to man?—I don't recollect what your definition was.

Do you mean seriously to tell me that you have forgotten my definition of life last night?—Yes, but if you will repeat it, I will tell you whether I agree with it.

Kindly tell me your ideas of life as applied to a man and as applied to an elephant. —I believe it is the same in both cases.

You have read Eccles. iii. 18?—Yes.

Mr. B., (reading:) "I have said in mine heart concerning the estate of the sons of men, that God might manifest them, and that they might see that they themselves are beasts. For that which befalleth the sons of men befalleth the beasts; even one thing befalleth them: as the one dieth, so dieth the other; yea, they have all one breath; so that a man hath no pre-eminence over a beast; for all is vanity."—Yes, those words are there.

Do you think those words are God's authentic revelation to man?—Yes.

Do you consider that a sheep which has been killed by your butcher, of which you have eaten part, will continue to live despite that eating?—No.

Do you consider that a man who has been dined on by the Patagonians will continue to live despite that dining?—No: not unless he is raised.

Have you sufficient memory to serve you as to the plagues of Egypt?—Perhaps.

Is it a fact that God afflicted the land with a plague of murrain, which killed the whole of the cattle in the land, excepting the cattle of the children of Israel? I refer you to the 9th chapter of Exodus and the 6th verse. Is it the fact that after the whole of the cattle of the land had been killed, God, in the 19th verse, sent a warning so that those that were left might be taken out of the field and not die?—I prefer you to read it as it is.

Does it say, in the 19th verse: "Send, therefore, now, and gather thy cattle, and all that thou hast in the field; for upon every man and beast which shall be found in the field, and shall not be brought home, the hail shall come down upon them and they shall die?—Yes.

Is it a fact that some of them regarded the word and fled?—Yes.

Do you consider it probable that they fled away after they had been killed. Don't you consider that an improbability though the book states it?—The book does not state that.

Read it. Read all relating to the cattle fleeing out of the field, and see if it doesn't.—There is no occasion to read anything besides what you have read.

Is it true that later than that, God destroyed the firstborn of man and beast throughout the whole of the land of Egypt?—Yes.

All the cattle having been previously dead?—All that did die.

The words are: "And all the cattle of Egypt died." Read from the 2nd to the 6th verse, and say if it don't mean all the cattle?—It means all the cattle that were meant.

* The body of most of Paul's letters contain the expression, "I, Paul," frequently, e.g.: 2 Cor, x. 1,

Digitized by Google

How much less than "all?" Is not all the money in my pocket all the money?—That is a trifling way of putting it.

Can anything be trifling that helps to clear up God's Word?—In the abstract, of course not.

Then please clear up how all the cattle can mean less than all the cattle.—If I knew all the circumstances which the writer had before his mind, in their details, I could do so.

Oh, that is your answer, is it?—My answer is that the book, being otherwise proved reliable, my ignorance of the details does not preclude my believing it to be a divine revelation.

You said, last night, you had enough of evidence of the divinity of the book in the establishment of Christianity by miracle: is it not a fact that all people who pretended to perform miracles pretended to perform them by supernatural power?—No doubt.

Most of those who claim to perform miracles claim to do so by supernatural power? Yes, but to claim a thing is not to prove it.

Did I understand you to say that slavery as the injunction of Leviticus was justifiable? I think your statement was that savage people might be dealt with as animals?—I don't recollect my precise words.

You said they were in the position of animals, and that the Jews had a right to kill them.—God's right transferred to the Jews.

Does the Bible say that the serpent was condemned to go on his belly as punishment?—Yes.

Do you think that, before his condemnation, he went on his head, his tail, or his back?—I don't know.

And I am sure I don't—(laughter). Do you hold that, at some time in the history of the world, there was an actual tree bearing fruit, the eating of which would give a man education?—I must know in what sense you use the word education.

If you ask me, it means knowledge: "The tree of knowledge of good and evil:" was there such a tree?—Yes.

Do you think there are similar trees existing to-day?—No.

In your opinion, what has become of the genus?—It was not a genus.

Then what has become of the individual specimen?—I fancy it must have gone long ago.

So do I—(laughter). Will you kindly tell me how you make three days and three nights between late on Friday night and early on Sunday morning?—I don't make it.

Is it true, as the gospels represent, that Joseph of Arimathea begged the body of Jesus on Friday evening?—No.

When was it?—Thursday.

Where shall I find that?—In Luke xxiv.

In the 24th of Luke I don't see anything about Thursday. I know where it is written, "We trusted it had been He. Besides all this, to-day is *the third day?*"—"The third day SINCE;" consequently Saturday was the second day "since," and Friday the first day "since," and Thursday the day itself.

When it says that Joseph of Arimathea begged the body, according to the 23rd of Luke 50-54, it was in the evening, as "the Sabbath drew on?"—That was the Sabbath connected with the Passover. Two Sabbaths came together.

Will you kindly give two Sabbaths.—You will find it in Matt. xxviii. 1.

(Looks.) There is only one Sabbath mentioned in Matt. xxviii. 1.—The word is plural in the Greek. There is my Greek Testament (producing a book).

I have nothing to do with the Greek. We have agreed to take the authorised English version throughout. I asked, as my first question, if we were to be bound by the authorised English version, and it is simply a trick to refer to the Greek Testament when we have debated on the authorised version all through.—(Time called.)

The CHAIRMAN: We have only one hour left. Let us listen with the utmost quietness. Mr. Roberts now speaks for a quarter of an hour.

Mr. ROBERTS: I am surprised that Mr. Bradlaugh should insist on an English translation when the original is presented to him illustrative of a point referred to.

Digitized by Google

When he asked me to be bound by the English version, I did not understand him to exclude the original from which it is made. I understood him to mean the English version and its original, as distinguished from the Septuagint and other versions which are different. A version is the same in all the languages it may be translated into: the original of course governs all. With regard to Mr. Bradlaugh's remarks upon my opening speech, I am not quite sure whether I am right in giving him credit for sincerity in the disgust he expressed at the chapter I quoted. Not that I wish to dispute his sincerity in any offensive sense. I have no doubt that in measure he is sincere to his cause, but I cannot conceive any really thoughtful man objecting to Rev. xvii. on the ground of delicacy; I cannot think of a better answer than the words of Paul, "to the pure all things are pure, but to the unbelieving and defiled nothing is clean." The Bible deals with facts; and its unvarnished delineations of them is one evidence of its divinity. It is unhampered by human delicacies. If it has a bad thing to speak of, it speaks of it. If it has a bad thing to symbolise, it symbolises it in a character befitting it. Then Mr. Bradlaugh asks, why was not the book of Revelation written plainly? I should like to ask him if even all human compositions are plain? Are there not problems in Euclid, allegorical pictures, in paintings and hieroglyphs on stone? Are there not emblems connected with the various secret orders? All these might be considered as open to the same remarks, if Mr. Bradlaugh's objection is reasonable. But in point of fact it is not reasonable. Advanced matters are treated in an advanced way. You would not speak to educated men as you would to those you wished to instruct. The book of Revelation was written for a particular class. They are described in the opening verses as "the servants of Jesus Christ." Now the servants of Jesus Christ are instructed in first principles, and the principles furnish the clue to an interpretation of this book which they have in their hands. To them the book is intelligible and interesting. The knowledge it communicates is valuable to them and accessible. Its symbolical character is a veil only to those for whom its contents were never intended. With regard to historical correspondences, I acknowledge that Mr. Bradlaugh is right when he says I have not done what I said I would do; I can only say my omission to do so is not from want of materials, but simply because it has been a matter of impossibility to introduce them during the time at our disposal. On some subsequent occasion I may take the opportunity of bringing them forward. To-night I have put forward some strong things, which so far Mr. Bradlaugh has entirely failed to answer. Perhaps, here, I may refer to his allusions to the discovery of human remains said to belong to times anterior to our own race. I would simply say that the discovery of such remains, even granting all that is claimed for them, would not be anything against the Bible because it is a teaching of the Bible that there was a race on the earth preceding the chaos which prevailed 6,000 years ago, at the time Adam appears on the scene. A disaster to the race occurred, probably resulting in the pre-Adamite chaos; and the remains found may go back to that time without invalidating the Bible account of our own race. Our own race cannot be carried farther back than the Bible puts it. It is a simple mathematical calculation. Population increases at a known rate. Reckon the rate backwards and you cannot carry the present farther back than the time of Noah.

With regard to prophecy, I have produced the case of the Jews, and the case of the corrupt ecclesiasticism of Europe. I now refer to Isaiah's prediction of the downfall of Babylon (Isaiah xiii. 19); Ezekiel's prediction of the downfall of Egypt (Ezekiel xxix. 12-15); also his prediction of the destruction of Tyre (Ezekiel xxviii. 6-18), a power at that time occupying a great commercial position in the world, answering the position in the present day of Great Britain. Then I produce Daniel's prophecy of the uprise of the four empires (Daniel ii. and vii.) I cannot, in a quarter of an hour, elaborate these; I ask you to refer to them at home and see whether or not these predictions are there. One particular illustration I will refer to, though involving the symbols which brings the jeer to Mr. Bradlaugh's lips. The date of the prophecy is B.C. 553, and the events to which it relates occurred about 300 years before Christ. Daniel saw in a vision a goat and ram with two horns, representing the empires of Persia and Greece, as the angel showing the vision told Daniel. The goat, representing Greece, had a great horn, which was broken in the encounter with the ram, and from the great horn there sprang up four smaller horns. This was explained to mean that, when the Greek empire should appear on the scene,

Digitized by Google

its first ruler would die, and his empire be divided into four parts outside his family. Now, we well know that, after Persia was conquered by Alexander, he died without issue, and his empire was divided among his four generals—a fact referred to in the 11th chapter of Daniel, thus :—"A mighty king shall stand up that shall rule with great dominion and do according to his will. And when he shall stand up, this kingdom shall be broken, and shall be divided toward the four winds of heaven ; and not to his posterity, nor according to his dominion which he ruled : for his kingdom shall be plucked up even for others beside those." I dare say Mr. Bradlaugh, with his usual adroitness, will say that this is a forgery ; but intelligent men are not to be scared away from truth by these reckless assertions. There are unquestionable matters of fact which lead logically to certain great conclusions, which may not possibly be apparent to every one, and which may be caricatured, but which are still undeniably true. Even in science this is the case. Some scientific experiments are so refined as to be only understood by few ; and yet, conducted in a calm and skilful manner, yield demonstrated truth upon which great public conveniences are founded. I might refer on the subject of prophecy to the history of Christ, in so far as it was unfolded during the thirty-three years and a half he sojourned on earth. The time of his appearing, the character of his ministry, and the nature of his death, were all foretold with a minuteness which cannot be accounted for on any other principle than that the prophets were guided by the Spirit of God.

Mr. BRADLAUGH : Mr. Roberts says he never meant it to be understood that we were to be bound, in this debate, by the ordinary English version. But I will remind him that, in my first speech, I said I should assume, for the purposes of this debate, that he meant the ordinary authorised English version, beginning with the Book of Genesis and ending with the Book of Revelation ; and supposing I might happen to be wrong, I asked him if that was his meaning, and he said "Yes." It was the very first question I asked him : "Do you mean by 'the Scriptures' or by 'these Scriptures' the authorised English version of the Bible, commencing with Genesis and ending with Revelations?" Mr. Roberts's answer was "Yes." If that is not explicit language, language can have no meaning. If Mr. Roberts does not remember it, he ought never to enter into another debate. Then what does he say? He says that which positively I confess I cannot understand : that some version other than the English would distinguish a Sabbath preceding the Passover from the ordinary Jewish Sabbath, and that in fact there were two Sabbaths. Does he suppose I will admit that? He does not suppose anything of the kind. He says there is a Greek version. I know that. I have thirty of them at home ; and I know that none of them I have yet seen speak of a second Sabbath or two Sabbaths. All the books I have seen speak of "the first day of the week." Then Mr. Roberts spoke about Mr. Bradlaugh's "class." I might mention Sir Charles Lyall as one of my class, Baron Bunsen, and there are a few more of my class ; and as we have, amongst others, the evidence of these men, it is rather unfair to talk of Mr. Bradlaugh's class, because Mr. Roberts knows nothing about them. But with respect to the remains I spoke of, Mr. Roberts suggests that they might have belonged to a pre-Adamite period. In that case, the Bible is disproved ; for it says Adam was the first man. We are told that the first man Adam was made a living soul. According to Mr. Roberts the first man was not the first man ; and if there was a pre-Adamite man there is no truth that Jesus Christ came into the world to save the descendants of the first man. Then take the case of the prophecy of Daniel, the date of which Mr. Roberts gives as 553 B.C., and which he says relates to something which happened after that. He has proved nothing about the date of 553 B.C., although challenged over and over again to produce proofs of the dates he specifies. How dare he pretend that 553 B.C. is an accurate date? He might just as well have said twenty or a million, or any other date, but simply it suited his own purpose. It is about as funny a way of conducting a debate as anyone could adopt. Oh, Mr. Roberts says, but of course, Mr. Bradlaugh will say that this is a forgery. This word forgery is a convenient word, when wanting to describe in the future time what has already taken place. I might, in describing what would be the result of another quarrel, give a warning as to how the quarrel would begin. Unless you can tell me when Daniel was written you have no right to

Digitized by Google

claim it as a prophecy. Mr. Roberts cannot even show that it was not written after the event, and it is a deliberate impertinence to assume that upon which the whole argument turns. If you please, let me draw your attention to the fact that Mr. Roberts changes the whole course of things, and brings about a revolution of religious sentiment. He says that "to the pure all things are pure," and thereby justifies those people who are prosecuted for selling things which we say are not pure. There is no justification for a man taking a coarse and filthy way of stating a thing, when he might have taken a pure way of stating it.

We have now got near the end of this debate. One point upon which our friend has complained is that he has not had time to elaborate his arguments, but this might have been obviated if he had not read so many texts. He says that I have dealt with these things in a way that he won't criticise as unfair. In this case I did not come here—I never have come to any place—to plead for a foregone conclusion, regardless of what could be said on the other side. I have always been ready to listen to the arguments of an adversary. You will admit that I have met every point with distinctness and as directly as possible. If Mr. Roberts has not heard my explanation it is not my fault. To prove that this book is a revelation from God it seems to me absurd that a debate should be conducted solely in reference to its internal contents, without respect to its history outside. To answer me with a pile of texts is no answer at all. It is an admission that the spokesman has undertaken a task which he ought not to have undertaken at all. The jury to whom he has submitted the case during the six nights of the debate, have no evidence outside the book for any of the books of the Bible. For the Old Testament none exist, so far as Mr. Roberts knows; for the New Testament, a number of names have been given to you, Mr. Roberts carefully refraining, until pressed by me, from giving those names. When still further pressed on the subject, he had nothing practically to produce beyond the book. He certainly did quote Athenagoras with a pretence upon which I do not congratulate him. He fixed the date of Athenagoras at A.D. 180, but his witness never mentions one of the gospels or the names of their writers. This cannot be said to have sprung, as a mine, upon Mr. Roberts, because he had been challenged by me to produce his witnesses. He did so, but then discovered that they were "trash." When we come to the book itself, we have the statement from Mr. Roberts that the people of the world, with the exception of a few descendants of Abraham, were as animals, and that God had, no doubt, in mercy, justice, and love transferred them to the Jews for ever as bondsmen, and as the sport of their cruelty, lust, and pride—a position so terrible as to make any man shudder. I shall only have one further opportunity of addressing you. I am obliged to you for having treated me as you have. I beg, during the few minutes I have to speak, at any rate, to say that we have no other object than the common object of truth. Don't look upon our class as if it was few or weak. It is a growing class. It is a class increasing in influence with respect to the education of the day. It consists of those who have been struggling for the education of the country during the last fifty years. It is a class worthy of a better advocate than he who stands before you at the present time.

The CHAIRMAN: Mr. Roberts will now deliver his concluding speech for which he is to be allowed the full time.

Mr. ROBERTS: And now, Mr. Chairman, ladies and gentlemen, we have reached the end of the discussion. It has not been so entirely satisfactory as might have been wished; but it has been as much so as was to be expected with the limited time at disposal and the broken form into which the discussion has necessarily been thrown. I, for one, am well content with the result. I have established a series of propositions which, in their combined force, place it beyond all reasonable doubt, that the Scriptures are the authentic and reliable records of divine revelation.

I have proved that, beginning where we stand, the state of the facts now existing in the world is such as ought to exist on the hypothesis that the Bible is true,

Digitized by Google

I have proved that there is in contemporary literature sufficient evidence of the fact of the Scriptures having existed at the time they profess to have begun to be in circulation, although admitting that such evidence is not necessary in the presence of the far weightier evidences of their divinity that exist.

I have proved that the unquestionable facts connected with the establishment of Christianity in the world in the first century, are incapable of being explained on any rational principle apart from the New Testament account that Christ rose from the dead, and that power to work miracles was bestowed on the apostles. I have proved that the single case of the apostle Paul, when all the facts of his unimpeachable history are distinctly realised and logically construed, is sufficient of itself to prove the divinity of Christ, and therefore of the entire Scriptures. I have proved that the literary and moral peculiarities of the Bible are at variance with the supposition of its being a human production, though this argument I have not had time to elaborate to the extent I should have liked. I have proved that the history of the Jewish nation, particularly as involving the character and career of Moses, cannot be explained on the Freethinker's hypothesis of the Bible; but on the contrary, is an irrefragable proof of its divine character and authorship.

And lastly, I have proved that the prophecies of the Bible—fulfilled in the past, and now fulfilling before our eyes—are an irresistible evidence of their divine character.

How have these arguments been met? Has there been any attempt to grapple with them on their merits? None whatever. Mr. Bradlaugh, instead of attempting to break the chain of my reasoning, has hurled at me, in his undiscriminating way, a number of detached features of Bible things, which he alleges to be contradictory of the professed character and teaching of the Bible. Even if his contention about them had been correct, their citation was no answer to the argument I have submitted. But what are we to say to them when they turn out to be mere points of *ex parte* declamation. Mr. Bradlaugh professes to find things in the Bible inconsistent with what he thinks God ought to be and to do; therefore these things are inconsistent with the God the Bible reveals. Extraordinary reasoning! I have disposed of some of his objections; and it will be on public record in this discussion that I offer at any time, in public contest with Mr. Bradlaugh, to answer or explain all that he can produce, when he will consent to affirm the Bible is an imposture, and so give me the opportunity of disproving the arguments he will advance in support of his affirmation.

Then he has endeavoured to embarrass me on the mere question of technical reference to writings whose existence is notorious to all the world. He knew that in one or two cases the name of a non-existent work was all that was relied upon as proving the existence of the New Testament at the date of that work's production; yet he insisted on the production of the work, while refusing to recognise the weight of those actually produced. It is immaterial to the purpose for which I used them whether they were really the works of their professed authors or not. They were written in the first and second centuries; it matters not by whom. They quote the New Testament many times over, which shows the New Testament existed at the time they were written, and this was all the use I sought to make of them. But I could have dispensed with them; the argument is irresistible without them. My reference to them only gave Mr. Bradlaugh an opportunity of appearing to advantage, which he would otherwise have lacked.

Well, I do not blame Mr. Bradlaugh for his tactics. They were the only tactics available to him in the discussion if he was to appear to show any fight at all. He could make

Digitized by Google

no headway against the overwhelming arguments in defence of the Bible. In the eyes of his friends he could not even appear to make a stand, except by giving to these irrelevant matters a prominence that does not logically belong to them. I will allow he has made a good handling of a very bad case.

But what does his contention amount to, even supposing we were for a moment to allow, for the sake of argument, that he had established what he has been contending for? Merely this, that he (Mr. B.), does not believe in the New Testament. It may be true for anything he knows to the contrary; he is inclined to think it is not true, but he cannot prove that is not so, and it is not his business! Is that a position with which a wise man ought to be content on a subject of such tremendous importance? Rather, will not the highest reason impel a man, in such a case, to seek for solid ground of conviction one way or other? A wise man will not be content with a "maybe" in such a matter as this. He will not rest till he is able to say with confidence, "I know this to be a forgery and a lie, for I can prove it," or "I know this to be the truth of God; for it is in my power to give conclusive evidence of it."

I have unfolded an argument during these six nights, imperfect and fragmentary though it be, which justifies a man in taking the second of these confident positions. I have shown by the facts accessible to all men, in connection with the Bible, that God exists, and that He has a glorious purpose with the earth and with man upon it, involving immortal life and perfect well-being to all who may become beneficially related in the way revealed by Christ. Is there no antecedent presumption in favour of such a conclusion, in our own constitution and in the spectacle of heaven and earth around us? Is it reasonable to suppose that the stupendous system of the universe exists for no higher end than the feeble gratification of an ephemeral and decaying race of animals? Is it reasonable to suppose that the aspirations of the noblest of mankind are without a counterpart in the region of the possible? Is it reasonable to suppose that the earnest uplifting of the human heart in agonising desire towards a Higher than man are without a meaning in the universe of being? The vibrations of the needle pointed to the pole long before the existence of such a point on the earth's surface was known. So, in true philosophy, do our fervent longings point to the Almighty Father and Disposer of all things, even if He had not chosen to reveal Himself.

The higher minds of the nation are on the side of my argument in an indirect way. Mr. Gladstone in his article on "Phases of Modern Thought," just published in the *Fortnightly Review*, has told us that in his judgment, the system of negation represented by Mr. Bradlaugh and his friends, is calculated, if generally received, to disintegrate society in the next generation, though its present advocates, through the bias of inherited principles, might continue subject to moral restraint. Professor Tyndall, in the preface to his published addresses, says that mankind require the lifting power of a noble ideal. Even John Stuart Mill, born and bred a sceptic, in his last days assumed an attitude indicative of something higher than his atheistic proclivities. The *Daily News* says "Mr. Mill was so far true to his early training that he tried hard to show how small was the intellectual warrant for the misty aspirations; but the 'Time-Spirit' led him again and again to the brink of the abyss after logic had made its final declaration; and his last book reveals him in the attitude of one looking across the ocean of eternity with wistful eyes and something of a fond expectancy. Thus he presents one of the most pathetic figures in all the literature of negation. His aspiration for *something to believe in beyond this petty life* will speak to doubting

Digitized by Google

intellects with intense force. He and such as he testify not that this age is sceptical, but that even sceptical minds *hunger for a religion in which they can believe.* The last century tried to feed the mind on the husks of dry and negative logic, but again has come that yearning for something higher, which has often before been the harvest of new faiths. When essentially scientific intellects like Mill and Tyndall link reverential hopes to strict deduction of the reason, the most careless observer may detect an immense transformation of opinion, and the most timid heart may take comfort."

All these utterances of the intellectual men of our day, point in the direction of a need which the Bible supplies. The Bible gives us the purifying and reforming restraint which Mr. Gladstone sees human society needs. It gives us a divine interdict of evil doing and a divine command of well-doing. The Bible gives us the uplifting ideal of professor Tyndall's declared want. It gives us an ideal glorified man—the manifestation of the Eternal invisible Father of all—a man who once lived in our weak and afflicted state, whose work has already filled the world with light compared with the darkness that reigned before his appearance; a man who now exists in an incorruptible, immortal, omnipotent nature; whose re-appearance in the world will take place at an appointed time for the abolition of every existing form of human government, and the establishment of a divine despotism for the blessing of all mankind, on the foundation of glory to God, to whom alone glory is reasonably due; with whose appearance there is associated this glorious prospect for every friend of his, that he will use the power God has given him to recall them from the oblivion of the grave, or transform them to an immortal state identical with his own, and associate them with himself, with every circumstance of honour and renown, in the perfect order of things he will establish and administer among men in that blessed day of promise, when there shall be no more curse and no more pain, and sorrow and sighing shall flee away. A more uplifting ideal it is impossible to conceive; and as for poor John Stuart Mill's wistful wonderment of the future, the gospel of Christ is the satisfactory and the only answer. There is no solution apart from it. There is no consolation to the intellectual mind apart from it. It gives the believer of it a permanent interest in the universe and its affairs. It takes away the blackness which darkens and shortens the Atheist's horizon; it dispels the fear, the *ennui*, and the gloom, which, at some time or other, invade every man's thought, and rescues him from that depressing companionship with fossils and death which Mr. Bradlaugh's faith compels him to accept; and gives him instead a fellowship with the Almighty through His Son, and a destiny as glorious and endless as the sun itself.

A knowledge of the truth puts its possessor in the privileged position of being able to explain the conflicts that distract the intellectual world, and to see his way through the labyrinth where others are lost. He turns his back on the priest and preacher, as the scientist does: but he grasps the Bible to his bosom, as the scientist does not, having in the understanding of it, attained to the possession of a religion that he can believe in, without closing his ear to science like the dogmatist, or to the voice of Jewish historic evidence like the scientist—a religion which solves the problem of human existence, mellowing the present with the tranquillity of faith, and gilding the future with the brightness of well-founded and rational hope. This is truly a great possession, the value of which is enhanced by the foregoing newspaper picture of intellectual unbelievers looking (vainly) across the ocean of eternity with wistful eyes. Christ is the solution of all anxiety in this direction, and he is to be obtained in the belief and obedience of the truth. "If ye believe not that I am he, ye shall die in your sins."

Digitized by Google

I admit the glory of it has been obscured by a false theology, whose hideousness is due to a mixture of the philosophical speculations of ancient Pagans with the fables of Romish priests, glossed by the thinnest varnish of Scripture phraseology. I admit that, for this reason, men like Mr. Bradlaugh are more to be pitied than blamed. I do pity him. In some respects I like him. And I would tell even him to hope; for the Creator of heaven and earth is gracious and forgiving, and will forgive even blasphemies equal to his, if he will turn and repent and submit himself as a dutiful child to the Everlasting Power, in whose hand his breath is, and whose are all his ways. But he may not hope if he does not repent. Though the reigning darkness of Christendom may excuse him, and his courage and manliness may extenuate the blacker features of his case, the truth compels every friend of it to regard him as a misleader of men to their utter ruin both now and hereafter. In this character I have, at the request of the truth's friends, accepted the present opportunity of strenuously opposing him, in the proof that the Scriptures are the authentic and reliable records of divine revelation.

Mr. BRADLAUGH: I have elected not to occupy your time beyond ten o'clock in allowing Mr. Roberts to proceed with his prepared speech, and shall, I think, be able to limit myself to eight minutes, if allowed to proceed free from interruption. First, I regret that Mr. Roberts, in his written *finale*, should have said that he has produced contemporary evidence. It is not true, as Mr. Roberts has said, that my tactics were directed to irrelevant matters, for had they been irrelevant, I should not have introduced them. I regret that he only relied upon titles and names; and the report will bear me out that he said he had the books here, and that I challenged their production. He says my position is that the New Testament may be true for anything I know to the contrary. On the contrary, I have given contradictions which show it cannot be true. I regret also that Mr. Roberts should have referred again to the challenge thrown out last night. I had been taught to regard him as the representative of an earnest body of men and women, but I must refuse to accept a second challenge from a man who is incompetent to make out the case he has undertaken to establish. Mr. Roberts says I ought to put it to you that this book is a forgery and a lie, or accept it. Surely I have taken pains to explain to you that I regard the Bible as I do the religious books of every people in the world—none of them entire forgeries, none of them entire lies; all of them the growth of different ages; all of them with a little truth. I have studied them, and if I cannot receive them, it is only because my reason does not permit of my doing so. I am not the best man that could be put forward against them; but I hope you will do me the justice of allowing that whatever may be our differences, I gave a full and a fair hearing to whatever is advanced in their favour, and as full an answer as I am able to give, and so it shall be every time a cause is entrusted to my charge.

I have now the pleasant duty to perform to ask you to pass a vote of thanks to the gentleman, who with so much good temper and so much firmness, has presided over these debates. With this I am sure Mr. Roberts will agree.

Mr. ROBERTS: I second the motion, only regretting that Mr. Bradlaugh and myself cannot agree on higher things. I feel pleasure in joining in this proposition because I

Digitized by Google

believe the good temper and impartial conduct of the chairman has greatly tended to the success and dignity of the debate. I might add as a reason for the vote what may not be known to all, that the chairman has postponed his summer holidays in order to attend to the unsummerlike duty he had undertaken, to preside over this debate.

The resolution was carried with acclamation.

The CHAIRMAN in responding to the vote, said he had listened with great interest to the debate, and had learnt some things from it. There had been some warmth on each side, but not more than might have been expected on such a subject with such earnestness of conviction on each side. He considered that the disputants were both wrong and both right, and if the audience would only come next Sunday to the Chapel where he preached (loud and prolonged laughter), he would try to show them the way in which these things should be looked at.

The meeting then separated.

A REVIEW

OF

THE DISCUSSION.

By Mr. Roberts.

Mr. Roberts has asked and obtained Mr. Bradlaugh's consent to the publication of this review of the discussion at the end of the published report. He has also offered to print along with it any rejoinder Mr. Bradlaugh may choose to write, but Mr. Bradlaugh has not chosen to write a rejoinder. The addition of a review of the discussion by one of the disputants will seem uncalled for and out of place to such as hold with Mr. Bradlaugh that the discussion should stand or fall on its own merits. If Mr. Roberts could limit his view to the discussion as a performance or trial of polemical skill between two men, he would be of the same mind. But this aspect of the case is to him of the least consequence. He cannot shut his eyes to the wider bearings of the affair, as affecting, in however small a degree, the convictions of those who may seek in the reading of this discussion, some acquaintance with the merits of the question debated. This to him is the only important phase of the reported discussion, and has led him to desire and to ask permission to supplement the discussion with a few things necessary to complete the consideration of the subject.

Six nights seems a long time, and long enough to exhaust the subject, or at all events to allow of a very adequate treatment of it. But in the practical working, the case was otherwise. Each disputant had only one hour and a quarter per night, and part of that devoted to interrogation. Even with a full and undisturbed occupation of that time, any one having any acquaintance with the subject will know how small an extent of ground could be covered in an hour. But when it is remembered that a half of that hour was broken into two separate speeches, in reply to speeches from the other side, it will at once be seen that half-an-hour was practically all that was at the disposal of the affirmative side for the elaboration of lines of thought involving really extensive treatment, if at all thoroughly done. The consequence was that the affirmative argument was imperfectly developed, while on the other hand, it was absolutely impossible to deal with a great portion of the hostile details marshalled so rapidly, and on the whole so skilfully (for a bad cause) on the other side.

To make good the deficiency arising from these causes, Mr. Roberts proposed to Mr. Bradlaugh a second discussion, in which Mr. Bradlaugh should affirm the mythical character of the Scriptures which would have given Mr. Roberts the opportunity of following all his objections, but this Mr. Bradlaugh declined. Consequently, Mr. Roberts's only other course is to add this review, which he thanks Mr. Bradlaugh for consenting to. For convenience sake, the review is divided into six parts, corresponding with the six nights of the debate; and each part into two sections.—1, the affirmative, and 2, the negative.

Digitized by Google

FIRST NIGHT.

MR. ROBERTS'S ARGUMENT.

The first night may be found somewhat ineffective on the affirmative side. This was due to a cause that could not be appreciated by listeners. It could only be known thoroughly to the speaker himself. A word or two will make it intelligible. Mr. Roberts is in the habit of speaking *extempore* in the absolute sense. But in meeting a man like Mr. Bradlaugh, he felt he must make some degree of preparation. Yet could not prepare to the extent of getting ready speeches verbatim. He had to limit himself to notes. The consequence was that, hampered by notes and not having speeches by heart, he had neither the advantage of complete preparation on the one hand nor the impromptu freshness on the other. This disadvantage was aggravated by the embarrassment natural to meeting an able man for the first time, of whom he had not yet taken the measure, and of commencing the discussion in a large strange hall. The result was that what preparation had taken place was not fully utilized, while the argument put forth lacked the completeness and force that an *extempore* effort would have had.

The importance of the first night's argument will only be appreciated by those with whom the question of the Bible's divinity is a matter of anxiety. By such the argument will be felt to be a vital one and satisfactory. It supposes a man anxious to satisfy himself as to the truth of the Bible. Such a man has it in his power to apply various tests; but obviously the first one is that which relates to what he actually sees and knows for himself. He is living in the world to which the prophecies of the Bible relate. He knows what are the leading features of the affairs of mankind as they now exist. Hence, he can apply an immediate and palpable test of a precise and crucial kind. If it could be shown that the state of things now existing is what ought not to exist according to the Bible, the inquirer would feel that it was needless to proceed another step in the investigation. On the other hand, if it can be shown that the state of things now existing is exactly what ought to exist, according to the Bible, every one instinctively feels that that is a powerful fact in its favour, and one in fact which almost of its own force proves its divinity. Hence this enquiry is of great consequence in the consideration in question. Mr. Bradlaugh made light of it, and tried as much as possible to conceal its importance from view. But the fact remains that the two great features of the present situation of human affairs are what the Bible requires—the existence and dispersion of the Jews, and the dominant existence in Roman Europe of a political ecclesiasticism, founded on a corruption of apostolic Christianity.

The following are portions of Mr. Roberts's notes, unused in the discussion. The substance of some of them may appear in certain parts of the discussion, but not in this form:—

"The proposition I have to maintain, joyful if true. It lights the horizon with the morning glow of hope, while Mr. Bradlaugh's position is the reverse. Mr. Bradlaugh would extinguish the historic light of Bethlehem. He asks us to believe there is no hope. He would overwhelm us with dreary despair. He would take from us God, and ask us to regard our being as the accidental development of callous force, undiscriminating, unknowing, unconscious, unloving, helpless law, which has brought us thus far, but will not and cannot take us farther. He inscribes the skull and crossbones on his banner, and holds up to us the coffin as our goal.

"I am here to maintain that, in the strict sense, the question is not an open one: not one admitting of a doubt, when the evidence in its entirety is realised. Doubts there always are in some minds; but this is no argument against the truth. Doubt may be the mere result of ignorance of the facts, or incapacity to discern the logical result of facts, or aversion to fairly open the mind to that result.

"The proposition I have to affirm stands on a very broad foundation. It is not a theory depending upon correctness in the process of induction. It is not the question of an isolated historical incident, depending for its credibility upon circumstances easily capable of distortion or suppression. It is not even a matter of creed in the ordinary

Digitized by Google

sense, depending upon modes of reading and argument. It is a great and broad historical matter, embracing in its foundations, current, existing facts; the attested history of mankind, and the known characteristics of human nature in a hundred generations.

"I will show that the truthfulness and divinity of the Bible are shown by every test that can be applied to it.—1. By the facts that ought to exist at the present moment on that hypothesis. 2. By external testimony to its existence in ancient times. 3. By its correspondence with the known history of mankind. 4. By its internal constitution and peculiarities. 5. By the nature of its histories, and 6, by the fulfilment of its prophecies.

"I am not unaware that much may be said against these propositions; but this fact is no disparagement of their truth. Where is the matter, person or thing against which ingenious hostility cannot say something? It is a true proverbial saying, that there are two sides to every question—not that there are two real sides, but two ways of arguing it. Cases in court every day furnish an example. But truth exists for all that.

"It is not an uncommon thing to assume a theory of a matter, and to hammer everything into harmony with that theory, with however much violence to truth. Somebody must have done this in the Tichborne Case. Somebody does it in the present question. You will judge on which side this process is resorted to. I know a gentleman of Mr. Bradlaugh's persuasion, who on board the *Aleppo*, being cornered on the evidences of Christ's resurrection, said he would not believe in that resurrection, though he could not dispose of the evidence, because the resurrection was contrary to his experience!

"The plan to work by is to lay hold of what is unquestionably true, and decide all doubtful points in accordance with these. We shall have doubtful matters urged against the Bible. I shall undertake to grapple with and explain these in harmony with the views I present, while, on the other hand, I know it is impossible for the opposing side fairly to dispose of the positive evidences in favour of the truthfulness of the Bible.

"The difficulties against which the argument for the Bible has to contend may be called artificial difficulties—not real, but easily raised with telling effect where ignorance exists, such as 1, the history of Papal Europe; 2, the nature of orthodox doctrines; 3, misconception of Bible teaching; 4, natural sympathy with unbelief.

I.—If the Bible is true, there ought to be Jews now in existence, because besides the evidence adduced in Mr. Roberts's first speech on the sixth night of the discussion, it is written (Jer. xxxi. 36): "If those ordinances (of heaven and earth) depart from before me, saith the Lord, then the seed of Israel also shall *cease from being a nation before me* for ever." The existence of the Jews is a fact which is known to all the world.

"If the Bible is true there ought to be extant in the earth a corrupt Christianity, as the basis of the political system of Roman Europe, maintained by the kings thereof; because such was foretold to be the final form into which the community established by the apostles would grow, and it was also foretold that the system so developed would continue in existence and power till the re-appearance of Christ. Proof as follows:—

I.—APOSTASY PREDICTED.

1.—Acts xx. 29: After my (Paul's) departing, shall grievous wolves enter in among you, not sparing the flock. Also of your own selves shall men arise, speaking perverse things, to draw away disciples after them.

2.—2 Tim. ii. 16: Shun (O, Timothy) profane and vain babblings; for they will increase unto more ungodliness, and their word will eat as doth a canker.

3.—2 Tim. iii. 13: Evil men and seducers shall wax worse and worse, deceiving and being deceived.

4.—2 Tim. iv. 3: The time will come when they (Christians—see context) will not endure sound doctrine, but after their own lusts shall they heap to themselves teachers, having itching ears. And they shall turn away their ears from the truth, and shall be turned unto fables.

Digitized by Google

5.—2 Peter ii. 1-2: There shall be false teachers *among you*, who privily shall bring in damnable heresies. . . . . And *many shall follow their pernicious ways* by reason of whom the way of truth shall be evil spoken of; and through covetousness shall they with feigned words make merchandise of you.

6.—2 Thess. ii. 3: That day shall not come except there come *a falling away first*, and that man of sin be revealed who opposeth and exalteth himself above all that is called God, or that is worshipped. . . . The Mystery of iniquity doth already work.

7.—1 John ii. 18: Antichrist shall come.

II.—THE PREDICTED APOSTASY BEGUN IN THE APOSTOLIC AGE.

1.—2 Thess. ii. 7: The mystery of iniquity *doth already work*.

2.—2 Tim. i. 15: This thou knowest that all they which are in Asia *be turned away from me*.

3.—1 John ii. 18: Even now are there many antichrists.

4.—1 John iv. 1-5: Many false prophets are gone out into the world . . . and the world heareth them.

III.—THE PREDICTED APOSTASY TO CORRUPT ALL NATIONS.

1.—Rev. xvii. 1-3: The inhabitants of the earth made drunk with the wine of her fornication.—(that is with the teaching of Rome—see last verse of the chapter.)

2.—Rev. xiv. 8: She made all nations drink of the wine of the wrath of her fornication.

3.—Rev. xviii. 3: All nations have drunk of the wine of the wrath of her fornication.

4.—Rev. xix. 2: She did corrupt the earth with her fornication.

IV.—THE PREDICTED APOSTASY TO BE IN EXISTENCE AT THE SECOND APPEARING OF CHRIST.

1.—2 Thess. ii. 8: Whom the Lord shall consume with the spirit of his mouth and destroy *with the brightness of* HIS COMING.

2.—Rev. xvi. 15-19: Behold I (Jesus) come as a thief. . . . And Great Babylon (that is Rome—see xvii. 18) came in remembrance before God to give unto her the cup of the wine of the fierceness of His wrath.

3.—Dan. vii. 9-11: The Ancient of Days did sit . . . and the judgment was set and the books were open. And I beheld then, because of the voice of the great words which the horn spake, I beheld even till the beast was slain, and his body destroyed and given to the burning flame.

Europe is Roman-ecclesiastical at the present moment—consequently the existent state of things is what the truthfulness of the Bible requires. If the world had been Pagan, as it was when the apostles died; or in a state of enlightened and faithful subjection to the teachings of Christ, this would have been an argument against the Bible.

External evidence of the authenticity of the New Testament.—The collateral testimony to the existence of the Bible at the time it professes to have been produced, is beyond reasonable dispute. As regards the New Testament, there is the uncontradicted tradition of the Christian community from the very beginning, which, on examination, will be found to carry more weight than even the express testimony of individual witnesses. The New Testament is mainly composed of the epistles of Paul, addressed not to persons but to churches. These letters were preserved and read habitually by the various churches to whom they were addressed, which is the best evidence of authenticity that could be produced. Besides being preserved and read by these, they were copied and circulated among all the Christian communities.

Digitized by Google

They were equally used in Alexandria, and Carthage, and Gaul. They are cited by the writers of the second century as commonly and familiarly as by preachers and writers in our own day. The uncontroverted writings of Justin Martyr, Irenæus, Tertullian, Clement, and Alexandrinus prove this; and the fact is conclusive evidence of their previous currency for a long time, and establishes their authenticity by proving them to have been received by the very communities to whom Paul's letters were severally addressed in the first instance. No demonstration could be more complete than this. It is not in the least affected by the fact that literary forgeries were abundantly perpetrated in the second and third centuries. These forgeries only go to show that there were genuine writings in existence, commanding the confidence and influencing the lives of the Christian community from the very commencement of its existence. The forgeries are, therefore, indirect evidence in support of the authenticity of the New Testament.

Being authentic, the nature of the contents is evidence of their divinity. The contents would be evidence of divinity, even if the authenticity were in doubt.

Mr. Bradlaugh's Argument.

Mr. Bradlaugh says, on page 6: "I do not pretend that at any particular date, some class of ignorant and designing men forged a whole book which they called the Bible, for the purpose of deceiving the people: such would simply be an absurd contention." He also says: "I have never contended . . . that the whole of this Bible is the work of ignorant and designing men." This concession is an indication of the strong position of the Bible with regard to the evidence of its being a genuine production. If Mr. Bradlaugh could have affirmed that the Bible was the work of ignorant and designing men, he would not have scrupled to do so. He says he does not do so, and has never done so. Consequently, on the testimony of its bitterest foe, the Bible is the work of enlightened and candid men, for that is the opposite of ignorant and designing. If the Bible is the work of enlightened and candid men, it is a reliable witness to the innumerable facts which it testifies. The facts are, therefore, true; and consequently, the Bible is the reliable record of divine revelation; because its record embraces the constant testimony of God having spoken the things recorded and done the things described; *e.g.*, the crossing of the Red Sea; communications to Moses on Sinai; the resurrection of Christ, &c.

Mr. Bradlaugh says a book in which there are "contradictions on the surface" and admitted "difficulties and obscurities," cannot be a record of divine revelation. This is plausible but not true. The logic of the argument is not apparent unless it be this: "I, Mr. Bradlaugh, have an idea what a divine revelation ought to be, and it is not possible that anything can be a divine revelation which differs from my idea of it. The Bible differs from my idea of what a revelation ought to be, therefore, it is not a divine revelation." This would be plain reasoning, but even Mr. Bradlaugh, with all his assurance, would not like to be guilty of it in this form. Yet this is what his argument amounts to. If this is not the argument, there is nothing in it. On what other principle can he contend that the existence of difficulties in the Bible is an evidence of its untruth? The fact of the difficulties in reality works the other way. The Bible does not profess that God has made His way as plain as the shining of the sun. On the contrary, He has concealed wisdom, and made it difficult of attainment, that the intellect of His creatures may be stimulated and developed. Thus we are told to "search for wisdom as for hidden treasure."—(Prov. ii. 4.) Further, that it is "the glory of God to conceal a thing, and the honour of kings to search out a matter."—(Prov. xxv. 2.) More than once we read, "Here is wisdom: let him that hath understanding" do so and so. The whole Mosaic economy was an enigma.—(Heb. ix. 9; x. 1.) The gospel contained a mystery hid from the beginning.—(Rom. xvi. 25.) Christ spoke in parables that the scornful ruling class might not understand.—(Mark iv. 11-12.) These things are testified in the Scriptures; if, therefore, we are to judge the Scriptures by their own professions, it is a circumstance in their favour that there are "difficulties and obscurities."

The same principle is observable in nature—the workmanship of the Being who revealed Himself to Moses. The precious metals are hidden: the earth has to be mined

Digitized by Google

to get at them. Valuable results are got at through difficulty. Coal, and gas, and drainage, and useful articles are not come at without skill and labour and patience. We have not obtained the convenience of rail and telegraph without a vast amount of patient application and difficulty. The Bible is in harmony with nature in this respect. We err if we judge it by any theory of our own as to what it ought to be. Our business is to take it as it stands, and adapt ourselves to it wisely as in natural things. To fall out with the Bible because it differs from our idea of what it ought to be, is foolish. We might as well fall out with our own existence because we have to take the trouble to eat, and in most cases to procure our food and do many other things with difficulty.

But Mr. Bradlaugh says the Bible contradicts itself. If this were really so in the serious sense required by Mr. Bradlaugh's argument, it would doubtless be fatal to the claims of the Bible as a whole. It would not prove that some things in it might not be of God, though contradicted by some things in it that might be of human addition. It would, however, prove that the Scriptures as originally delivered had been corrupted and might therefore raise a difficulty as to which part was to be received with confidence and which rejected. But in point of fact the contradictions alleged by Mr. Bradlaugh does not exist. They are appearances of contradiction merely, which disappear on close investigation. This is no unusual thing in truth. Everyday life makes us familiar with constant illustrations of two apparently opposite statements, being both true and reconcileable. Minds not careful to ascertain truth, can find in every day occurrences abundant materials for captious telling criticism: but it is possible, for the candid mind to steer a safe course through intricacies of an apparently conflicting character, and arrive at the possession of truth. This is the case with the Bible, where appearances of contradiction exist which Mr. Bradlaugh turned to the most advantage.

Mr. Bradlaugh referred to Numbers xxiii. 19; 1 Sam. xv. 29, and Matt. iii. 6, setting forth

GOD'S IMMUTABILITY.

I.—"God is not a man that He should lie, nor the Son of Man that he should repent." 2.—"The strength of Israel will not lie nor repent, for He is not a man that He should repent." 3.—"I am the Lord: I change not: therefore ye sons of Jacob are not consumed."

In juxtaposition with these, he placed 2 Kings xxi. 1-5; 2 Sam. xxiv. 16; Gen. vi. 6, and 1 Sam. xv. 11, which he contended were illustrations of

GOD'S CHANGEABLENESS.

1.—"Thus saith the Lord, set thine house in order; for thou shalt die and not live . . I have heard thy prayer. . . . I will add unto thy days fifteen years." 2.—"The Lord repented Him of the evil." 3.—"It repented the Lord that he had made man upon the earth." 4.—"It repenteth me that I have set up Saul to be king."

And upon these Mr. Bradlaugh argued there was a clear contradiction. But there is none to those who realise that there are two aspects in which God's actions, like man's actions, are to be considered, first in so far as they depend upon himself, and secondly in so far as they conditionally depend upon the actions of others. The first three texts affirm the steadfastness, in the sense of non-fickleness, of any purpose the Almighty may form, when the stability of that purpose depends upon Himself alone. The last three intimate a change of purpose consequent on a change of the conditions in others upon which the purpose was based. This distinction is actually affirmed Jer. xviii. 7, "At what instant I shall speak concerning a nation and concerning kingdom to pluck up and to pull down, and to destroy it, if that nation against whom I have pronounced turn from their evil, *I will repent of the evil that I thought to do unto them.*" There is no conflict between personal steadfastness of purpose and readiness of adaptation to changed circumstances. The difference between a stable and an unstable man illustrates the point in some degree. The one can always be relied upon under given circumstances; and the other not at all. But the steadiness of the stable man does not consist in a propensity to adhere with mulish pertinacity to plan

Digitized by Google

without reference to their propriety; but in the disposition to steadily follow a certain course of action, so long as that course of action is wise. To continue in the course when circumstances have so altered as to make that course unwise, would be evidence of stupidity and not of stability. To alter the course when the circumstances dictating it have altered, is no evidence of inconstancy or instability. The stability of a wise man shows itself in steadily pursuing one end, and adapting himself to every change in circumstances that might prevent him reaching his aim; like the captain of a vessel who has to shift his sails a hundred times in a voyage, and tack in many different directions to reach the port of destination. The contrast to this would be the man at sea who determined to keep his sails as they were, whatever wind should blow. The first man will be found in a certain port at last, weather permitting; but the other you will never know where to find.

Now, in effect, the declaration of the first three passages concerning God is, that He is more stable than any sea captain that ever put foot on a quarter deck; that His purposes, where they depend only upon Himself, are immovable and unchangeable absolutely; that anything resting on His word is more certain and secure than the everlasting hills; that He is, in His nature, the highest reason and most steadfast of purpose; that the principles upon which He acts are absolutely unchangeable; that nothing like wanton change or fickleness is possible in Him. But this is not inconsistent with the fact that He adapts Himself to circumstances as they arise in the evolution of His purpose. The human race, in the first instance, turned out differently from His desire. He intended them to be obedient, and was working with them on this basis. They became disobedient, and (after much patience) with the alteration in the conditions upon which the original intention was based, He alters His intention, and gives them up as hopeless. Saul is chosen on the understanding that obedience is the basis of favour. Saul disobeys, and God repents (or changes His mind) with reference to his selection as king. This is not inconsistent with the unchangeability of the principle on which He acts. What would be thought of a stable captain who should allow a mutinous officer to continue in his place? The captain would put him in irons, and would not, thereby, sacrifice his character for stability, but contrariwise would establish it.

When it is seen that the first set of passages have (as the context will show) reference to God's sovereign purpose, while the second set refers to intention dependent upon the condition of others, the appearance of "contradiction" disappears.

Next with regard to the character of God, Mr. Bradlaugh refers to Ex. xxxii. 7, 14, and asks whether we are there to find a divine representation of it: "Let me alone that my wrath may wax hot against them (Israel) that I may consume them." This is addressed to Moses, who was interceding with God for Israel, who had grievously offended in turning to idolatry while Moses was in Sinai. Mr. Bradlaugh would contrast it with the New Testament declaration, "God is love," and contend there was a contradiction; but there is no force in the argument, unless it can be shown that two qualities or attributes cannot co-exist in the same character. Mr. Bradlaugh himself would not pretend that this can be shewn. It is a matter of everyday experience that a benevolent man may be capable of great anger if circumstances call for it. Mr. Bradlaugh may say, "But God is not a man." True; but we can reason from the small to the great. If created man is capable of both love and anger without inconsistency, there can be no true objection to the Bible representation of God in both aspects. It is expressly testified (and in the New Testament too) not only that He is love, but that "He is a consuming fire" (Heb. xii. 29); where also (x. 31) it is said "It is a fearful thing to fall into the hands of the living God." If we are to judge of the consistency of the Bible revelation of God, we must take all parts of it, and not leave out one or elevate one at the expense of another. The philosopher (who after all is a very ignorant person as regards the primary force of the universe) may smile at the idea of God being capable of anger, but he can show no reason against it. Nature, of which he can give no account, except that it is, shows destructive forces and performs destructive operations, and what objection can there be to the analogue of this existing in the first cause? The creator of the eye can presumably see; and the creator of the impulse of anger can presumably show it in a higher form than we know it. There is no inconsistency in the revelation of the divine character. If anger is shown, it is never without a cause, and the cause is

Digitized by Google

always to be found in things that frustrate the objects of love. Divine love without divine energy to destroy things that would work against it, would be a weak and incomplete character. There is perfect symmetry in the divine character when all its parts are taken in. But, of course, if you disconnect manifested wrath from the circumstances that evoke it, and from the ultimate objects which its manifestation proposes, you exhibit an unintelligible and ugly thing. By a similar treatment of the modest man's anger, it would be possible to show him a tyrant. But this is neither a skilful nor a faithful treatment of the subject. God angry with sin is not an ugly but a beautiful picture, when seen in connection with the evil results of sin and the perfection of divine love, where the divine wisdom and authority are accepted as a law of action.

But there is another consideration to be taken into account in connection with the transaction at Sinai, which becomes specially appropriate in looking at another of the alleged contradictions, viz., the statement that Moses and the elders of Israel saw God (Ex. xxiv. 9-11), and the statement in John i. 18, that "No man hath seen God at any time." The consideration is that the term God does not always mean the Creator *in propria personæ*. While the Pentateuch tells us that God spoke to Moses at the bush, it explains that the medium of communication was an angel (Exodus iii. 2, 6), which is supported by the New Testament.—(Acts vii. 30.) It records that Jacob saw God face to face, yet the actual personage seen was an angel.—(Hosea xii. 4.) Jehovah, we are told, rained upon Sodom and Gomorrah brimstone and fire, yet the narrative shows the actual operators in the case were angels.—(See Gen. xix.; compare the following verses—1, 14, 22, 24.) The same thing appears many times; and the case of Moses on Sinai is no exception, for we are expressly informed, in Acts vii. 38, that it was an "angel which spoke to Him in the Mount Sinai;" and, in the 53rd verse, that the law was given "by the disposition (or ministration) of angels." In the light of this, there is nothing inconceivable in the proposition that seems to startle Mr. Bradlaugh; the difficulty exists in the want of information, and not in the subject itself. That the name of God should be identified with angels may, at first sight, appear a little confusing; but the difficulty vanishes when we recognise the fact illustrated in Ex. xxiii. 21 ("I send mine angel: obey his voice, for MY NAME is in him"), that angels engaged specially in the service of the Creator bear His name. "They do His commandments, hearkening to the voice of His word."—(Psalm ciii. 20.) They act as the instruments of His power; but the connection between their acts and His authority is maintained in the use of the singular verb, with (their) plural nominative—a grammatical anomaly, explained by the fact that one power operates through a plurality of agents.

It is another difficulty with those who think with Mr. Bradlaugh, that God should write with His finger (Ex. xxiv. 12; xxxii. 16); but, in view of the fact that angels are actually signified, there is no difficulty. The angels are spirit (Psalm civ. 4), and spirit is taught by the Bible to be the substratum of all substance, pervading all space.—(Psalm cxxxix. 7.) What difficulty would there be to an angel possessing control of this permeating energy in tracing with his finger on stone, characters which, in consequence, should be deeply graven there? The accomplishments of electric science should teach us that there are higher possibilities in heaven and earth than even philosophers dream of, and point to higher developments of power and intelligence than it is permitted frail mortals to experience.

Then stress is laid on the so-called discrepancies between the two versions of the Decalogue.—(Ex. xx.; Deut. v.) It is usual to speak as if the existence of the differences constituted a difficulty in the way of receiving either, but much attention to the matter is not needed to perceive the fallacy of the suggestion. If there were even serious differences between the two accounts, they would not, in the presence of all the evidence, disprove that God gave the law from Sinai; for while one account (that of Exodus) is, so to speak, the official and exact record of what transpired at Sinai, the other is part of an historical *résumé* orally delivered by Moses forty years afterwards, in which correctness of fact was of more concern than exactness of words. Verbal variations between such a rehearsal and the original deliverance are natural; but the variations are slight indeed; much more so than might have been expected. The language, in both cases, is nearly identical throughout, and

Digitized by Google

the meaning absolutely so, except that, in the rehearsal in the plains of Moab, Moses supplemented the fourth commandment with a retrospective explanation of its reasons, and omits the reference to the creation contained in the original. The variations are confirmatory of the historical reality of the matter, for the one is evidently no copy of the other, but both independent accounts, written at two different times; and that, under such circumstances, they should be so alike in substance is evidence that they both refer to a matter of historic occurrence. Those, therefore, speak otherwise than as scholars who talk of "perplexity (on the part of believers) in having to defend two opposing accounts." The two accounts are not "opposing," but mutually confirmatory; and there is no perplexity in the maintenance of both when this is done on Bible ground simply, apart from the theories of inspiration which belong to the clerical thought merely. The Spirit, doubtless, guided Moses in the record, but the guidance had reference more to substance than to form. The Scriptures never show us the preternatural brought to bear where the natural is sufficient.

It is put forward by the same class as an implied impossibility, that God should "issue a complete ethical code which contains nothing about the love of God or the love of man, nothing about public or private worship or prayer; nothing about trust in God or gratitude towards Him: nothing about such virtues as generosity, gratitude, prudence, temperance, fortitude, activity, nor thoughtfulness, which offers a reward to virtue, but not an eternal reward; and not the reward of God's blessing and a good conscience, but longevity in one narrative, and in the other, prolonged residence in Judea." This is very specious; but the fallacy of it is apparent when a demand is made for the authority for assuming that the Bible puts forth the Mosaic law or any part of it as "a complete ethical code." The Bible does the very opposite. It declares the law to have been provisional, partial and imperfect, adapted only to the transition period for which it was given. Paul, discussing this very point, discourses thus: "God gave the inheritance to Abraham by promise . . . Wherefore, then, serveth the law? It was added, because of transgression, till the seed should come . . . The law was our schoolmaster [a teacher of first lessons] unto Christ. . . . after that faith is come, we are no longer under a schoolmaster."—(Gal. iii. 19, 24, 25.) The law he further styles a "shadow of good things to come" (Heb. xi. 1); and that it made nothing perfect (vii. 19). There is a good deal of evidence on this point; but it is perhaps unnecessary to quote more than the following: "If the first covenant (the law) had been faultless, then had no place been sought for the second."—(Heb. viii. 7.) Mr. Bradlaugh may object to this teaching of Paul's, but he ought, at all events, to see that it is a false assumption that the law, or any part of it, is put forward by the Bible as "a complete ethical code."

It was a system of things which was never intended as a complete development of the divine will, but adapted to the special exigencies of a time of crudeness and transition. For these times its adaptation was admirable. Its immeasurable superiority is realised when contrasted with the contemporary morals of Egypt and Chaldea, or (later) of Greece and Rome. It is not doing justice to the subject to judge of the Mosaic system of things in the light of the larger illumination that has since come from the same source. Granted that it had nothing to do with "eternal rewards," a reason might be given for this which would startle sceptics, and that is, that eternal rewards of the clerical order are fictions of Paganism. This answer can be substantiated. Disembodied destinies are unknown to the teaching of Christ and Moses. The Bible treats immortality as a something extraneous to human nature, and to be realised (in a limited number of cases only) by resurrection at Christ's reappearance on the earth. The immortality of the soul is not mentioned in either the Old or New Testaments. It is foreign to the teaching of both, as much as it is opposed to philosophical truth of the Huxley order.

Then Mr. Bradlaugh said something about the Bible being opposed to science. He did not elaborate this objection. Presumably his reference was to the notion that the Bible "teaches that the universe was created in six days, six thousand years ago." This is not a correct representation of what is involved in a reception of the Mosaic account. "Heaven and earth" of Genesis is not synonymous with "the universe." Heaven is described as "the firmament," formed "to divide the waters that are

Digitized by Google

above the firmament from the waters that were under it." It is, therefore, the body of atmosphere encircling the globe, whose existence was thus Mosaically made known ages before it was philosophically ascertained. The testimony is, that heaven and earth, in this limited sense, were the subject, six thousand years ago, of a process called "create." But does this create *(bara)* express the theological idea of being "made out of nothing?" By no means, for such an idea is foreign to the Bible. The teaching on this point is, that all things were formed "out of God."—(Rom. xi. 36; Cor. viii. 6), and the Hebrew verb *bara*, translated "create," signifies to make, in the sense of constitute, arrange, set in order. It is used periphrastically with "*formed* the earth to be inhabited" in Isa. xlv. 18. It is translated "made" in the following instances: Psalm xlvii. 48; Num. xvi. 30; "done," in Ex. xxxiv. 10; "choose," in Ezekiel xxi. 17; "make fat," in Samuel ii. 29; in other places, "create." That Moses does not teach the *creation* of the earth in the ordinary sense, six thousand years ago, is proved by his recognition of a pre-"creation" existence. Before the six days' work began, he speaks of the earth as being "without form and void," and "darkness on the face of the deep."—(Gen. i. 2.) How long it had been in this state is not hinted; but the narrative leaves room for the measureless ages said to be required by geology. Neither was the human the first rational race on its surface, if we are to attach the same sense to the words addressed to Adam as they possessed when addressed to Noah: "Be fruitful and multiply, and *replenish* (fill again) the earth." There may have been a previous race, swept away after the manner of the flood, the catastrophe leaving the earth in the state in which the six days' work found it. Jude and Peter both refer to pre-Adamite occurrences in this direction.—(2 Peter ii. 4; Jude 6.) The work occupying the six days was the work of reclaiming the world from pre-Adamite chaos, with which there is nothing inconsistent in the "historical, critical, and scientific books," to which it is usual to make such reverential allusion.

"That because God then rested, the last day of the week is to be observed as a day of absolute idleness" is usually a difficulty brought forward by the sceptical objector. That he should stumble at it with orthodox views of divine operations, is no matter of marvel. The difficulty is not incidental to the subject itself. The "Elohim," the angels of Almighty power, carrying out the mandates of Omnipotence in the re-organisation of the world, must have expended vast energies in the enormous physical achievements of the six days; and although their endowment with these energies must be correspondingly vast, there is nothing inconceivable in their finding the seventh day's cessation a source of refreshment. The Creator only is unlimited in His power. The idea may be startling to clerical minds, but it belongs to the Bible, and is the explanation of what strikes him in this item as inexplicable.

In Genesis i. light appears on the scene before the sun. This is made a difficulty needlessly. If all light came from the sun, it might be a difficulty; but there are many sources of light besides the sun. Witness the phosphorescent glow of the ocean at night. There is light in the rocks. A blow with a steel instrument will manifest a spark of it. Light is latent everywhere. It requires but all-controlling Power to be brought to bear to make it manifest; and this was what took place in the present instance. The Spirit of God, which is in itself the light of all light, brooding on the face of the waters, illumined the darkness covering the face of the deep. But it is said, What need for this mode of light, seeing the sun was in the heavens, where it had been for countless ages? Answer: there are conditions of the atmosphere which prevent the light of the sun from coming through. An unusually dense storm-cloud will darken the air at noon. Now, it is evident that when the Mosaic six days' works of re-organisation began, the globe was enwrapped in watery vapours; for we read in verse 7 of a separation taking place between the light and the heavy elements of the vaporous mantle, the condensed water descending and the vapour ascending to the cloud region of the atmosphere. Before this took place, the vaporous covering of the earth would effectually prevent the light of the sun from reaching it, and cause that state of darkness which was first dispelled by Spirit-caused light.

Verses 16 and 17, speak as if the sun, moon and stars were then made for the first time. But the narrative was written for man as an inhabitant of the earth. We must therefore, read it from the terrestrial and not the astronomical stand-point.

Digitized by Google

From this point of view the sun, moon, and stars would come into existence at this time; for previous to the fourth day, they would not be visible from the earth, on account of the condition of the atmosphere previously referred to; and, therefore, practically, they did not exist in relation to the earth. It is not the modes of the divine procedure that are made the subject of narrative, but the practical results in relation to us. Yet the narrative is consistent with the modes, though the modes are not made visible. God made two great lights, &c.; true: in this there is nothing as to how long He took to make them. Having made them, He placed them (or caused them to appear) in the terrestrial firmament on the fourth day. Thus the narrative suits the proximate aspect of the case, as it would have appeared to a man witnessing the evolutions of the six days, and at the same time, is not in conflict with the mightier phase in which they are to be contemplated through the medium of astronomical science.

There is palpable fallacy in Mr. Bradlaugh's method of construing evidence when it bears on divine things. Called upon to define the principle upon which he believes in the existence and productions of ancient secular writers, he says: "On matters of ordinary occurrence, I accept the best experience of the best men, as I find it fairly recorded, and upon that canon of evidence, I can prove all reasonable historic events." But when matters of extraordinary occurrence are in question, then he says "the experience does not apply." The fallacy here is that Mr. Bradlaugh sets up ordinary experience as the standard of what is "reasonable" and possible. If we accept testimony to things we know to be possible, it is not because of the nature of the things testified, but because of the reliability of the testimony proved in various ways before we accept it. Therefore, we should act illogically if we rejected the same testimony to an event out of the channel of our experience, merely on the ground that the event is out of the channel of our experience, for that would be the mere opposition of ignorance to knowledge. For example: a European banished a hundred years ago, to a foreign island, cut off from all communication with the civilised world, has descendants who never heard of the electric telegraph. Mr. Bradlaugh visits them and tells them a message can be sent invisibly across three thousand miles of ocean in five minutes, and that when it arrives, it is not the paper written by the sender. They say he is fooling them. He earnestly declares it is true, and says he has witnessed the performance. They say it cannot be. Mr. Bradlaugh fetches men from the ship that has brought him to the island. They confirm his representation, and declare they also have seen the telegraph at work, and have themselves received messages from long distances in a few minutes, although the messages were invisible in the transmission. If they act on Mr. Bradlaugh's principle, the islanders will say the law of evidence does not apply in such a case, and those who give such evidence must be mistaken, because they declare a thing of "extraordinary occurrence," and inconsistent with their "experience." They would say, "If it had been a matter of ordinary occurrence," such as the sending of a letter under the wing of a bird, or shooting a message on an arrow, or darting a swift canoe across the water—anything in harmony with their "experience"—they could have received the testimony of Mr. Bradlaugh and his company; but "when you give us an extraordinary occurrence—of a message going and not going—seen when you get it, and not seen when it is coming—that crosses the ocean and yet does not take time to cross—it is then, say they, that the canon of evidence does not apply."

Mr. Bradlaugh would be amused at the simplicity and conceit of the islanders. Their presumption also would strike him, in setting up their limited island experience the measure of what is possible in the great world of civilisation. Yet this is the sition which he himself takes up in relation to the testimony of the apostles. He oes not deny that their testimony is given; he does not deny that it is honest and apable testimony; but he won't receive it because the testimony affirms the surrection of Christ, which is "contrary to his experience." By the ordinary canon of evidence" the authenticity of the Bible is proved; but because it testifies extraordinary occurrences," therefore, says Mr. Bradlaugh, "the ordinary canon does ot apply!" The reasoning is utterly fallacious and perverse. It ought to go the ther way round. Mr. Bradlaugh ought to say, "This testimony is authenticated in

Digitized by Google

too many ways for me to deny it. Therefore, although the testimony affirms something outside of the channel of my experience, it must be true ; and I am ignorant of many things that are possible."

"But," says Mr. Bradlaugh, "this book tells me of a man who had no father." In this Mr. Bradlaugh is mistaken. It tells us of Jesus, who had no human father, but who had a father in the Creator, whose son he thereby became.—(Luke i. 35.) Surely Mr. Bradlaugh would not deny the possibility of the Power that produced the first man without human instrumentality, producing a second without human instrumentality.

"It tells me," says Mr. Bradlaugh, "of a man who was in the grave when he was out of it, and who was seen by one woman, who is two women, who are more than three women." This is a misrepresentation. Jesus was in the grave three days and three nights, as was shown to Mr. Bradlaugh in his last questioning of Mr. Roberts: and he was seen by one, by two, by three, and by more women, on the morning he rose from the dead. The evidence on the point is perfectly consistent, though varied in the form of its presentation, as was fully shown on the fifth night of the discussion.

"*It tells me that Christ's mother's husband had two fathers.*" It does not, Mr. Bradlaugh. It gives you two genealogical lines—one Joseph's and the other Mary's, but both nominally terminating in Joseph, as the Jewish custom required ; because Mary, by marriage, had become one with him.

"*It tells me Christ lived at the same time in Judæa and Egypt.*" It does not, Mr. Bradlaugh. There is an omission of mention in Luke's narrative of the visit to Egypt, but that narrative is elliptical enough to allow of the insertion of Matthew's, though, at the first sight, the two are irreconcileable.

"*It tells me that Christ was known to John and not known to him at the same moment of time.*" This is not so. John the Baptist knew Jesus as his righteous cousin, but not as the Messiah. His ignorance of his Messiahship may appear marvellous in the light we now possess ; but it is otherwise when we remember the circumstances preceding Christ's baptism in the Jordan. John "was in the desert until the day of his showing to Israel."—(Luke i. 80.) He was brought up there from childhood. He was secluded from sources of information with regard to Jesus ; and those sources, even if they had been accessible, were very scanty. The knowledge of Christ's exact origin and character was known in an express form only to Joseph and Mary, who were reticent on the subject (Luke ii. 33, 51), and to Elizabeth, John's mother, who being old, must have died soon after John's birth. By the time John was come to discretion, the matter had quieted down. Christ's boyhood and manhood, till thirty, were undistinguished by the supernatural. There was nothing to manifest his Messiahship. His unblemished character was known to John, but not his identity with the coming one. It had been revealed to John, that on whomsoever, in the act of baptism, the Holy Spirit should descend, that same was the Messiah ; and on this his attention was fixed. Hence, his declaration, to which Mr. Bradlaugh's objection has reference : "I knew him not ; but He that sent me to baptize with water, the same said unto me, Upon whom thou shalt see the Spirit descending and remaining on him, the same is he that baptizeth with the Holy Spirit."—(John i. 33.)

Then Mr. Bradlaugh wants to know if the story of Sodom and Gomorrah is consistent with the omniscience or goodness of God. On the first point, he points out that "God is represented as saying that the report has reached Him about Sodom and Gomorrah, and that He is going down to enquire, and will know." The objection may be presumed to be expressed in the question, "If God is everywhere present, why did he want to come down to know ?" In answer to this, it is sufficient to refer to what is written a few pages back (page 128), on the subject of angels and the use of the term "God," in describing their instrumental relation to things done by them in obedience to the Creator's mandate. What is there written furnishes the explanation to this objection. God in the case was the angels, undoubtedly, as anyone will see who will take the trouble to peruse the narrative, *e.g.*, Gen. xix. 1 : "And there came two angels to Sodom at even." Though the Creator is omniscient, it does not

Digitized by Google

follow the angels are. Peter (1 Pet. i. 12) hints in a contrary direction in saying, "Which things the angels desire to look into." The fact that the angels "do the commandments" (Psalm ciii. 20) is evidence of their limitation. Consequently, Mr. Bradlaugh's objection is founded on misapprehension. These remarks apply in other cases where Mr. Bradlaugh raises a similar objection.

As to his objection to the destruction of Sodom on the score of goodness, remarks already written on page 127 supply the answer. The destruction of the wicked, so far from being inconsistent with goodness, is a part of it. The eternal toleration of evil would be the frustration of eternal goodness. The wicked are useful in their place, their existence supplying one of the conditions of the probation of the opposite class; but goodness requires their final destruction. Consequently, the destruction of the Sodomites proves the very thing that Mr. Bradlaugh quotes it to disprove. The same remark applies to the deluge.

Mr. Bradlaugh's allusion to the Garden of Eden as "a damnation trap in which to catch the whole human race, so that God might punish them," is mere clap trap, or a trap to catch the claps of his shallow and ribald supporters. Even with the Calvinistic theory of pre-destinated eternal hell-fire for tormented millions in view, such a description of a matter only possibly involving important truth, is utterly reprehensible. But when directed against the Bible account of the matter, it is the rave of insanity. Adam was simply placed under a higher will than his own, and taught that submission to that will was imperative, and that revolt against it was so serious that nothing short of death would be the consequence. Mr. Bradlaugh may deny the existence of that superior will, but he cannot deny that the Bible theory of the fall, to which only his criticism can apply, involves it, and that therefore the matter is to be considered and judged on the theory of its existence. Looking at it in this way, the transaction of Eden certainly appears in a different light from that in which Mr. Bradlaugh's coarse description would make it appear. Subjection to God is the highest condition of human well being. It is the necessity of his nature when his nature is fully developed in all its faculties. It is also an element in divine pleasure and a prerogative of the divine right. Consequently an arrangement that brought that subjection visibly and consciously to bear on Adam, so far from being "monstrous," appears in the light of kindness and wisdom, whether in relation to God or man. The representation of the appointment of such an arrangement is in fact one of many proofs of the divinity of the Scriptures. A human conception of the beginning of things would certainly have represented man as free to do what he liked and as he liked. God's authority to which the human mind is naturally averse would not have been brought to bear at the very start of human existence in a humanly-invented version of the facts. Adam did not submit implicitly to the law in which divine authority embodied itself: conseqnently, there came on him, and therefore on his descendants who inherit his being, the consequences belonging to rebellion. Even had the transaction stopped here, there would have been no room for Mr. Bradlaugh's objection: for surely if a military officer may in Mr. Bradlaugh's estimation, legitimately shoot an insubordinate soldier, he cannot deny the Creator's right to deal as he likes with a disobedient creature. But we have to take the sequel into account. That sequel shows God making use of the evil result of the fall, as a means of developing at last the highest good on earth. Doubtless, the understanding of the truth is necessary to qualify a man to see this; and as Mr. Bradlaugh does not possess this understanding, he is not competent to judge the matter which he so harshly condemns. In any system of truth, a man must understand the system as a whole before he is qualified to rightly estimate any part of it in detail. This is peculiarly and emphatically true of the Bible as a whole. With regard to the "story of the fall" in the way Mr. Bradlaugh puts it, Mr. Bradlaugh can only succeed with those who are ignorant of the Bible. He and his disciples may know something of the trashy writers of ecclesiastical antiquity, and perhaps something of the ever-changing speculations of crude superficial scientists; but a man must be ignorant of the Bible or morally incapable of appreciating its system of teaching, who speaks of the garden of Eden as a "damnation trap."

Mr. Bradlaugh made some smart observations on the case of Jacob and Esau; but the smartness was in the way of marshalling his words, rather than in justly or logically treating the facts as they stand. He declared Jacob to be a rascal, a liar, a

Digitized by Google

robber, a cheat, and asked whether God loved Jacob because of these things or in spite of them. He omitted to show that Jacob was all these. He referred to certain recorded incidents, but these do not prove his contention. A liar is a man who is in the habit of lying: a rascal is a man who is in the habit of defrauding. A man's character is not to be described by isolated acts or incidents. A man may in the main be very different from some act in particular he has committed. Jacob's character in the main was such as to please God. In certain transactions he acted with human weakness. The record of the weakness is evidence of the genuineness of the record, for an invented history of Jacob would have suppressed them. Jacob was "a plain man dwelling in tents." He was docile and God-fearing, while Esau was a wild roving man, cognising the facts of nature merely as an animal does, without any recognition of the contriver and proprietor of nature. This constitutes the difference between men whom God is pleased with and those He is not pleased with. So it is revealed: "To this man will I look, who is humble and of a contrite heart, and who trembleth at my word." Mr. Bradlaugh may despise the fact; but it is not in his power, either to show it is not the fact or why it should not be the fact. Wise men are content with facts, whatever speculative theory they may have formed as to what things ought to be. The fact in this case is that the God of the Bible has declared He is pleased with those men who appreciate him, and will forgive their iniquities. The case of Jacob is an illustration of this revealed fact, instead of being a contradiction to it. And so also is the case of David on which Mr. Bradlaugh harped so much. He was emphatically "a man after God's own heart." Mr. Bradlaugh asks how could this be when he was a murderer and adulterer, and died with vindictive words in his mouth towards Shimei, Joab, and others. A "man after God's own heart" is a man who answers to the definition given by God Himself: "To this man will I look, to him that is poor and of contrite spirit, and *trembleth at my word*."—(Isaiah lxvi. 2.) David answered exactly to this description. God's word in anything commanded his profoundest reverence and regard; and when convinced of wrong-doing, he was penitent to the utmost abasement. He would not sanction the killing of Saul by Abishai, because Saul was the Lord's anointed.—(1 Sam. xxvi. 9-11.) He made instant confession and reparation in the matter of Uriah the Hittite. Towards God he was "as a little child," while, towards man, he was "a mighty man of valour." When he sinned, he confessed and forsook his sins. Thus he was a man after God's own heart. In considering his directions to Solomon concerning Shimei, Joab, &c., it must be remembered that David sat in the seat of judgment for God, and that the men in question had sinned against God in the several matters of their offence. If David had been personally vindictive, he would not have spared them as he did. As absolute monarch of Israel, under God, he had the power to take away their lives, which he would have done if characterised by the disposition suggested in the objection. Instead of that, he allowed them to live so long as he himself was alive, but left the judicial punishment of their crimes to the wisdom of Solomon.

This exhausts the scriptural difficulties referred to by Mr. Bradlaugh on the first night. He referred to them several times during the other nights, so that there will be the less to answer in the review of those nights.

Two other points will conclude this notice of the first night. Mr. Bradlaugh expressed surprise that Mr. Roberts should have assumed the admissibility of certain evidence in the debate, instead of coming prepared to prove it, link by link. "His business is," said Mr. Bradlaugh, "to prove as he goes on," which, of course, sounded very reasonable, but which, as Mr. Bradlaugh applied the axiom was very unreasonable. The thing he asked Mr. Roberts to do would have taken all the time in the doing, and would have left the real argument out in the cold. And it was perfectly unnecessary to do it. Everybody knows of the existence and authenticity of the books he asked Mr. Roberts to prove. The abundance of early forgeries does not interfere with this fact. He might as well have asked proof of the fact that King James's English Version of the Bible was a translation of the original. But, of course, Mr. Bradlaugh's cue was to entangle the debate with extraneous matters, like a counsel in a bad case, who harasses his opponent with technical objections, and keeps as long away from the merit as possible. On this principle, doubtless, he also tried

Digitized by Google

to make the differences between the Hebrew Scriptures and the Septuagint to appear much more serious than they are. The mere alteration of numerals he put forward as indicating extensive and radical dissimilarity, which does not exist. The Septuagint is the substantial counterpart in Greek of the Hebrew Scriptures; but, of course, it was Mr. Bradlaugh's aim to hide this as much as possible.

SECOND NIGHT.

MR. ROBERTS'S ARGUMENT

THE argument on this evening, taking the three speeches and the questions together, was more complete than the argument on the first night. In brief it amounted to this: There is no question that Christ was crucified. There is no question that his disciples afterwards preached his resurrection. How came they to do so, and how came thousands of those who had crucified him to believe? If Christ rose, there is an explanation. If Christ did not rise, the apostles declared what they knew to be false, and must have had a motive in doing so. What motive could they have? It brought them into collision with Jew and Pagan, and exposed them to incessant disadvantage. The only other alternative is: they may have sincerely believed that Christ rose though he never did; but this alternative is inconsistent with the facts. They did not expect Christ to die. When he died, they did not expect him to rise. When he rose they did not believe it. All this shows there was no predisposition to entertain a fantasy on the subject. What, then, led them to believe and preach the resurrection of Christ? The reason given for the change is a reasonable account of the change: Christ appeared to them, spoke to them, ate with them, asked them to handle him, stayed with them six weeks, and finally sent power to work miracles upon them. If this *occurred* there is an explanation of all that transpired afterwards. If this did not occur, there is no explanation of the great fact that a few poor men, whose doctrine was that they should not resist their enemies, succeeded in subverting Judaism and Paganism in the teeth of the organised opposition of both, and the effect of whose work is a fact of the present moment, inwrought with the life of all civilised nations, evidenced in every legal document which has to state in what "year *of our Lord*" the matter originates. The New Testament account exhibits a cause adequate to the establishment of that system in the world. If that is denied, we have an effect for which no efficient cause is shown.

MR. BRADLAUGH'S ARGUMENT.

The only attempt Mr. Bradlaugh made to answer this was a loose allusion to the Mahommedans and Buddhists. "I do not dispute the existence of the Mahommedans, said he, but I should be very sorry to accept that as a proof of the authenticity and divinity of the Koran." The cases are not parallel; and Mr. Bradlaugh's assumption that they are, shows either that he did not understand, or that he chose to ignore his opponent's argument.

The existence of the Mahommedans is a proof of effectual means having been taken to establish Mahommedanism in the world. We examine the facts, and we see the nature and operation of these means at once. As has been truly said, Mahomet took the way to succeed. He gave his followers a commission to exterminate the infidel, and offered life and protection to everyone who should embrace Islamism. The system is embodied in the Koran. This Koran is in the hands of millions of Mahommedans in the present day, which proves it to be Mahomet's work, for no other than Mahomet's work could have obtained currency amongst them at the start, and none but the book current at the start could have obtained currency among their succeeding generations. Thus the existence of the Mahommedans with the Koran in their hands is a proof of the authenticity of the Koran; and an examination of their history and their documents explains their rise and success, and proves them not divine, for

Digitized by Google

Mahomet in the Koran admits the divinity of Abraham, the prophets and Christ, and thereby destroys his own claim, even if there were no other disproof; for the divinity of Christ excludes the divinity of any other "prophet, priest and king," which Mahomet was probably unaware of.

The argument of Mr. Bradlaugh's opponent was that when the history and literature of Christianity are examined in the same way, its divinity follows as a logical result. The present existence of professing Christians is only the first step in the argument. It is a great fact, calling for explanation. The explanation is contained in the book in the hands of Christians, the authenticity of which is proved exactly in the same way as the Koran (only that there is a large amount of collateral evidence, which is awanting in the case of the Koran). No other than the genuine writings of the apostles could have obtained universal currency among Christians at the start, and none but the writings universally current at the start could have obtained universal circulation among the succeeding generations, from which it follows that the book now in the hands of universal Christendom is the authentic work of the apostles. The testimony of early and doubtful Christian writers can be dispensed with in this argument. When, in the next place, we come to look at the facts connected with the rise and progress of the system established by them, we have no such explanation as exists in the case of Mohammedanism. While Mahomet took the way to succeed, Christ took the way to fail if no miracle was employed; for he prohibited his disciples from using the sword, and taught them to eschew in every form the physical resistance of their enemies. As a matter of fact, they did not resist, but fled from persecution, and suffered themselves, when caught, to be slain in large numbers. The State authorities employed their whole power against them; yet in spite of this, they finally planted Christianity in the world on the ruins of Paganism. Now, as a mere matter of common reason, there must have been a cause equal to this success. It cannot be found in the nature of the principles inculcated, for these are opposed to the natural tendencies of human nature. But it is found in that which they allege in their writings to have been the cause:—their testimony that Christ rose from the dead, and endowed them with supernatural gifts in attestation of their testimony. The first fact explains the constancy of the apostles, during years of suffering for their testimony. The second fact explains the great and widespread conviction produced by the testimony. Take away these facts, and there is no rational explanation of an undoubted historic fact, constituting the greatest revolution the world has ever seen.

Mr. Bradlaugh either did not see or evaded the force of this argument. He tried to pooh-pooh it by the general and absurd allusion to Mahommedanism already referred to. In quieter hours, the reader will, perhaps, be able to appreciate it at its true value.

Mr. Bradlaugh tried in the same way to reduce the evidence of Tacitus and Pliny to nothing. He said there was nothing in either of them to prove the authenticity and divinity of the Scriptures. They were not quoted to prove this by themselves, and, therefore, a statement like this does not get rid of them. They were quoted to prove the existence of a widely-scattered and persecuted community of Christians at the end of the first and beginning of the second centuries; and this they do prove most conclusively. And the proving of this establishes one step in the argument by which the authenticity and divinity of the Scriptures is proved. Therefore, the testimony of Tacitus and Pliny is of great importance in its place. Only an undiscriminating or a reckless opponent would assert it to be otherwise.

Mr. Bradlaugh asserted on the second night, and several times subsequently, that there is "tolerable evidence" "that the whole of the sacred books of the Jews were destroyed during the captivity, and had to be re-written." Mr. Bradlaugh made this statement with the view of casting discredit on the Old Testament part of the Bible; but the statement is not true. The testimony of Eusebius to this effect is a mere re-echo of a statement in the Book of Esdras; and though it might be valuable in proving Eusebius's acquaintance with Esdras, and, therefore, of the antiquity of Esdras, if that were called in question, just as his quotations from the New Testament are good evidence of the existence and authenticity of the New Testament, as against men like Mr. Bradlaugh, who find it necessary to deny that the New Testament was produced in the first century, it is of no weight

Digitized by Google

whatever in determining the truth of the statement of Esdras. We must consider that statement on its own merits. That the author of the Book of Esdras made the statement is without doubt; and it gives Mr. Bradlaugh a convenient peg on which to hang the theory that the Scriptures of the Old Testament are the production of Esdras, and not of Moses, and the other various writers to whom they are ascribed. But the merest comparison of any part of the Old Testament with the writings of Esdras is sufficient to convince minds of the most ordinary penetration, that the theory is without foundation. The author of the drivelling inanities of Esdras could never have written the lucid and majestic utterances of Deuteronomy. There is no more in common between Esdras and the Bible than there is between the doggerel rhymester of a village newspaper and the writings of Milton or Shakespear. If Esdras wrote the books of the Old Testament, Esdras would have imparted his own qualities to them, and Esdras and the Bible would have been manifestly from the same hand. Instead of this, they are as dissimilar as possible. It may be said that Esdras wrote the books of Moses, &c., from memory, and that this would account for the difference between his own productions and the Scriptures of Moses and the prophets. Granted the possibility of an extraordinary verbal memory equal to the feat of reproducing burnt books; but in that case, the proof for the prior existence and authenticity of the books so re-produced would be the same as if they had not been burnt. The only difference would be, that instead of existing with an unbroken continuity in a literary form, they existed, for a short time, in the brain of a man who was thoroughly familiar with them.

But there is positive evidence that the Scriptures were not destroyed at the destruction of Jerusalem by Nebuchadnezzar. That many copies were destroyed is highly probable, and that many Jewish persons may have supposed that these comprehended every copy is also possible, which may have given rise to the tradition reflected in the pages of Esdras. But there is evidence that this notion, if it existed, was a wrong notion. There were two deportations of captives from Jerusalem before the destruction of that city by Nebuchadnezzar.—(Jer. lii. 28-30.) Among them was Daniel, who *says* of himself: "In the first year of Darius (at the close of the seventy years' captivity), I, Daniel *understood by books* the number of the years, whereof the word of the Lord came to *Jeremiah the prophet, &c.*"—(Dan. ix. 2.) Here is Jeremiah at least in the possession of Daniel seventy years after the destruction of Jerusalem, and before Esdras was written; and if the book of Jeremiah was in his possession, the other Scriptures would be in his possession also; for the reason that would lead him to have one part would lead him to have all. The probability is that he took them with him when carried from Jerusalem amongst other notable captives to Babylon.

Then we have "The Book of the Law of Moses" in the custody of those who returned from the captivity at Babylon. It was read to the congregation on their return to Jerusalem (Nehemiah xiii. 1), which establishes the conclusion to be inferred from the case of Daniel, that the Scriptures were in safe preservation, in the custody of such as feared God among the captives in Babylon, notwithstanding the destruction that befel the temple and its contents. That such should be the case is most natural, in view of the special duty that devolved on the priests to take charge of and instruct the people in the holy writings, as has already been shown in the review of the first night.

If it is objected that the evidence is derived from the books said to have been destroyed and re-written by Esdras, it only shows the falsity of that idea all the more forcibly; for had the statement been true, the internal evidence of the books said to have been reproduced, and for such a reason, would have supported and not confuted it. Mr. Bradlaugh is very willing to believe Eusebius when he supposes his statements are damaging to the Scriptures; but, fortunately, there is evidence that Eusebius' borrowed information on this point is incorrect. Finally, even if true, it would not weaken the foundation on which the validity of the Scriptures rests; for Christ endorsed them; and if his resurrection is proved, his endorsement of them would be proof of the authenticity and divinity of the Scriptures, even if they had, at one time, been annihilated, and required to be reproduced by Esdras or anybody else.

The God Revealed in the Bible.

We next pass to Mr. Bradlaugh's remarks on the God revealed in the Bible. It is, doubtless, true that the Bible reveals "something much clearer than" that He is the "primal creative energy." The statement that he was the primal creative energy was an accommodation to those who ask for God from the merely scientific point of view. It was advanced as a definition at once the simplest and most unassailable by those who deny Him. It was not intended to express all that is revealed of Him; but it does express the primary fact that all things are *εξ αυτου*, out of Him (1 Cor. viii. 6; Rom. xi. 36); that they exist and subsist in Him (Acts xvii. 28), and that they are sustained by the word of His power, which is universal (Heb. i. 3; Ps. cxxxix. 7-12.) The definition, however, does not exclude nor conflict with other things that are revealed concerning Him; and those other things are not of the contradictory character which Mr. Bradlaugh's reckless allegation would make them appear. The Bible reveals "a God who is everywhere, and who lives somewhere above," without teaching an anomaly; for its teaching on the subject is that the universal "spirit" and the Father dwelling in heaven are one God (Ps. cxxxix. 1-12; 1 Cor. ii. 10-11; Matt. vi. 4, 9; x. 20.) Mr. Bradlaugh and his friends may not be able to comprehend this idea; but it is not altogether inconceivable to those who realise the unity subsisting between the sun and the light of the sun diffused through space—two things absolutely one in nature and connection, and yet capable of being spoken of as two things. If the sun can be in heaven, and people on earth can yet talk of letting the sun in at their windows, it is not necessarily a contradiction to teach that "God lives somewhere above," and is yet everywhere present. The one is a visible fact; the other is an attested fact, though invisible, and this is all the difference as regards their relation to our understanding. They are both equally inscrutable and both equally reasonable. There is something subtler than light. Scientific men call it "force;" and to this force they ascribe all manifestations of force, light itself included. What it is, they know not and cannot conceive; but its existence is none the less apparent to their understandings. Consequently the Bible, in teaching an universal inscrutable Spirit, teaches no more than we are compelled scientifically to receive; only it adds what science cannot know or find out—that this universal primal force has focal centre in a Supreme Personal Intelligence of tangible glory and form. Such as Mr. Bradlaugh can only say they don't believe it; they cannot disprove it, and they cannot show a reason why it should not be so. No reason can be given for the primary and the absolute. It may as well be one thing as another, so far as our conceptions or inductions are concerned. Our simple duty is to find out what it is and believe. It is for the earnest mind to decide whether the Bible does not reveal it. Mr. Bradlaugh's contradiction does not get rid of it. Its revealing that God is everywhere and yet in heaven, instead of proving the Bible undivine, is an evidence in the other direction; for human reason would not have conceived of a thing so apparently contradictory.

As to its revealing "a God who could be seen and who could not be seen," that is explained by the fact developed early in the review—that while angels, bearing the name of God as His representative to men, were often seen, the Eternal Father Himself is invisible to mortal eye, "dwelling in the light which no man can approach unto."—(1 Tim. vi. 16.) So also with its representations of "a God who knew everything and did not know some things:" the Eternal Father knows all things: but "the angels who do His commandments, hearkening to the voice of His word," (Psalm ciii. 20,) and who, bearing His name, are sent forth to execute His behests, they do not necessarily know all things. Even the Son of God was limited in his knowledge, (Mark xiii. 32,) though he could say "I and the Father *are one*."—(John x. 30.) Mr. Bradlaugh makes havoc of the general teaching of the Bible from ignorance of the details of what it reveals. He is like a child telling a professor of electrical science that he contradicts himself because he says electricity binds together and rends asunder. There is a well-known saying about certain who rush in where angels fear to tread. The saying is not inapplicable to those who criticise in Mr. Bradlaugh's ferocious and blundering style.

As to the Bible teaching "a God who is unchangeable, continually changing," the

Digitized by Google

charge is not true. It has already been dealt with and it is unnecessary to repeat; we notice it merely to make our review of the second night complete.

Mr. Bradlaugh makes great capital out of the slavery clauses of the Mosaic code. He does this by an illegitimate treatment of the subject only. He makes no allowance for the prerogative of God, as the proprietor of all things, to dispose of men as He chooses; nor of His right and ability to give laws adapted to such special ends as He might have in view at any particular time. No candid man could be guilty of this mistake. It is expressly declared in Ezekiel that the Mosaic statutes were designedly otherwise than good. Thus: "Because they had not executed my judgments, but had despised my statutes and polluted my sabbaths, and their eyes were after their fathers' idols, wherefore *I gave them also statutes* THAT WERE NOT GOOD and judgments whereby they should not live."—(Ezekiel xx. 24–25.) Peter also speaks of the Mosaic law as "a yoke which neither they nor their fathers were able to bear," (Acts xv. 10,) and Paul describes it as "a ministration of death."—(2 Cor. iii. 7.) Mr. Bradlaugh may say it was unreasonable that God should give a law of this defective and oppressive nature, (though such a criticism would be the height of presumption,) but he cannot say that the Bible puts it forward as an absolutely good thing in its entirety. Consequently, he is precluded from founding any argument against the Bible on its non-goodness in any particular. The Bible professes it was not good in some of its statutes, and perhaps these included the slave laws on which Mr. Bradlaugh founded his inuendo. The fact that it should declare some of them to be "not good" (and that because of Israel's sin) is another of the many indirect proofs of its divinity; for merely human writers would never have spoken thus of their own law, especially for such a reason.

Mr. Bradlaugh tries to make light of the Septuagint as a witness to the authenticity and reliability of the Hebrew Scriptures. This literary monument is self-evidently a witness of the most valuable kind, notwithstanding the doubts raised by learning. The opponents of the Bible would certainly feel themselves relieved of a great difficulty if the Septuagint ceased to exist. As Mr. Bradlaugh laid stress on the fact *that* Mr. Roberts did not read the extract from Josephus in support of it, the extract from Josephus is here set forth as follows:

"When Alexander had reigned twelve years, and after him Ptolemy Soter forty years, Philadelphus then took the kingdom of Egypt, and held it forty years within one. . . . Demetrius Phalerius, who was library keeper to the king, was now endeavouring, if it were possible, to gather together all the books that were in the habitable earth, and buying whatsoever was anywhere valuable, or agreeable to the king's inclination, (who was very earnestly set upon collecting of books,) to which inclination of his, Demetrius was zealously subservient. And when once Ptolemy asked him how many ten thousands of books he had collected, he replied, that he had already about twenty times ten thousand. But he said he had been informed that there were many books of laws among the Jews worthy of inquiring after, and worthy of the king's library, but which, being written in characters and in a dialect of their own, will cause no small pains in getting them translated into the Greek tongue: that the character in which they are written seems to be like that which is the proper character of the Syrians, and that its sound when pronounced, is like to theirs also; and that this sound appears to be peculiar to themselves. Wherefore, he said that nothing hindered why they might not get those books translated to be also; for while nothing is wanting that is necessary for that purpose, we may have their books also in this library. So the king thought that Demetrius was very zealous to procure him abundance of books, and that he suggested what was exceeding proper for him to do; and therefore he wrote to the Jewish high priest that he should act accordingly. . . . Ptolemy wrote, and that in the manner following:—'King Ptolemy to Eleazar the high priest, sendeth greeting . . . I have determined to procure an interpretation of your law, and to have it translated out of Hebrew into Greek, and to be deposited in my library. Thou wilt therefore do well to choose out and send to me men of a good character, who are now elders in age, and six in number out of every tribe. These by their age, must be skilful in the laws and of abilities to make accurate interpretation of them; and when this shall be finished, I shall think that I have done a

Digitized by Google

work glorious to myself; and I have sent to thee Andreas, the captain of my guard and Aristeus, men whom I have in very great esteem; by whom I have sent those first-fruits which I have dedicated to the temple, and to the sacrifices, and to other uses, to the value of a hundred talents; and if thou wilt send to us, to let us know what thou wouldest have further, thou wilt do a thing acceptable to me?

"When this epistle of the king was brought to Eleazar, he wrote an answer to it with all the respect possible:—'Eleazar the high priest to king Ptolemy, sendeth greeting. If thou and thy queen Arsinoe, and thy children, be well, we are entirely satisfied. When we received thy epistle, we greatly rejoiced at thy intentions; and when the multitude were gathered together we read it to them, and thereby made them sensible of the piety thou hast towards God. We also showed them the twenty vials of gold, and thirty of silver, and the five large basins, and the table for the shew-bread; as also the hundred talents for the sacrifices, and for making what shall be needful at the temple: which things Andreas and Aristeus, those most honourable friends of thine have brought us; and truly they are persons of an excellent character, and of great learning, and worthy of thy virtue. Know then, that we will gratify thee in what is for thy advantage, though we do what we used not to do before; for we ought to make a return for the numerous acts of kindness which thou hast done to our countrymen. We immediately, therefore, offered sacrifices for thee and for thy sister, with thy children and friends; and the multitude made prayers that thy affairs may be to thy mind; and that thy kingdom may be preserved in peace, and that the translation of our law may come to the conclusion thou desirest, and be for thy advantage. We have also chosen six elders out of every tribe, whom we have sent, and the law with them. It will be thy part out of thy piety and justice, to send back the law when it hath been translated; and to return those to us who bring it, in safety.—Farewell?

"This was the reply which the high priest made; but it does not seem to me to be necessary to set down the names of the seventy (two) elders who were sent by Eleazar, and carried the law, which yet were subjoined at the end of the epistle . . . And when they were come to Alexandria, and Ptolemy heard that they were come, and that the seventy elders were come also, he presently sent for Andreas and Aristeus, his ambassadors, who came to him, and delivered him the epistle which they brought him from the high priest, and made answers to all the questions he put to them by word of mouth. He then made haste to meet the elders that came from Jerusalem for the interpretation of the laws. . . . And when they had gone over the bridge he proceeded to the northern parts, and showed them where they should meet, which was in a house which was built near the shore, and was a quiet place, and fit for their discoursing together about their work. When he had brought them thither, he entreated them (now they had all things about them which they wanted for the interpretation of their law,) that they would suffer nothing to interrupt them in their work. Accordingly, they made an accurate interpretation, with great zeal and great pains; and this they continued to do till the ninth hour of the day; after which time they relaxed and took care of their body, while their food was provided for them in great plenty; besides, Dorotheus, at the king's command, brought them a great deal of what was provided for the king himself. But in the morning they came to the court, and saluted Ptolemy, and then went away to their former place, where, when they had washed their hands, and purified themselves, they betook themselves to the interpretation of the laws. Now when the law was transcribed, and the labour of interpretation was over, which came to its conclusion in seventy-two days, Demetrius gathered all the Jews together to the place where the laws were translated and where the interpreters were, and read them over. . . . So the king rejoiced when that his design of this nature was brought to perfection to so great advantage, and he was chiefly delighted with hearing the laws read to him and was astonished at the deep wisdom and meaning of the legislator."

So much for Josephus's intelligent account of the origin of the Septuagint.

Digitized by Google

Mr. Bradlaugh's allusion to the Darghestan roll is illustrative of his sense of the value of the Septuagint to the defenders of the Bible; and it also illustrates the facility with which he can lay hold of an utterly worthless argument when the case he is opposing fails to admit of reasonable objection. He says, "There is no Pentateuch roll which can be carried back earlier than the famous Darghestan roll, and that comes nearly 600 years on this side of the Christian era, by the contention of its best men—580 odd years." This has nothing to do with the question. The question is not as to the age of a particular document, in the antiquarian sense, but the age of the Septuagint as a literary production. Surely our confidence in the authorship of a book does not depend upon the possession of the manuscript he wrote, or any other MS. of a particular age. If it does, how comes Mr. Bradlaugh to receive so implicitly the writings of Philo, on which he founds his preposterous theory of Christianity originating with the Essenes? Philo wrote 1,800 years ago, and, probably, the oldest copy of his works is not a fourth of the age of "the famous Darghestan roll" of the Pentateuch. Yet Mr. Bradlaugh, who receives Philo in the absence of ancient copies, makes it an objection in the case of the Pentateuch, that the oldest copy is more than a thousand years old! This is mere child's play. The Darghestan roll, the oldest of ancient copies of the Pentateuch, is only the survivor of a family of similar documents, whose origin, in a literary sense, is traceable to the incident recorded by Josephus, who wrote 1,800 years ago.

Mr. Bradlaugh makes some proper remarks on the subject of martyrdom, without, however, weakening the force of the argument arising from the martyrdom of the apostles. "Martyrdom," he says, "is no voucher for the divinity" of the thing for which the martyr suffers death. "There have been martyrs for every heresy." True; but martyrdom is an evidence of sincerity; and this sincerity becomes an important affair to consider when the question involved is a question of fact, in which the sufferer was a personal witness of the fact alleged. If a man suffers death for an opinion, his death is no proof that his opinion was right, but it is a proof he sincerely held it, and may lead thoughtful people to investigate the grounds on *which* it was held. But the case is different in an instance like the apostles. They suffered persecution not for an opinion, but for declaring they had seen Christ alive after his crucifixion. This was a question of fact. Their suffering death for such a cause is proof that they believed the fact; and the only question left to be investigated is as to whether they were mistaken in their belief. An investigation of this question, conducted on the ordinary principles of evidence, leaves no room for doubt; and the only ground of opposition that can be taken to their testimony is the one that was taken by a gentleman on board the *Aleppo*, who being pressed on this point, admitted that he could not get rid of the evidence of Christ's resurrection, but that he could not receive it, because it testified to a thing that was out of the region of his experience. The absurd nature of this position has already been noticed.

The very circumstance which Mr. Bradlaugh cites in opposition to their testimony is a proof of its reliability. He says: "I will show you that when Jesus was in danger, his disciples ran away, and his most trusty disciple denied him over and over again." It is true that the disciples fled when the officers came to apprehend Jesus, and that Peter denied him three times. Yet all the disciples (and Peter in particular) afterwards bore witness to his resurrection, and suffered for their testimony, as the same account tells us. This leads to two questions, which cannot be reasonably answered without affording proof of the truth of Christ's resurrection. How came men who deserted Christ in the presence of danger, to afterwards brave death by their testimony to his resurrection? Such men must have had a good reason for taking a course which amounted to walking into the jaws of death itself. If Christ rose and appeared to them, there is a reason which explains all. If Christ did not rise, we have the inconceivable phenomena of proved cowards acting the part of heroes on behalf of a lie, and succeeding, without the use of force, in establishing the Christian faith, in the face of armed opposition on the part of the two great religious organizations of the age—Judaism and Paganism. The other question is, How comes the New Testament to record that "the disciples ran away and his most trusty disciple denied him over and over again?" If the apostolic work was not divine, it was a human work conceived with human objects and established by human means. In that case, the New Testament was written for the purpose of

Digitized by Google

establishing the credit of the apostles and the prestige of their work, from a human point of view. On such a supposition, it is impossible to understand the desertion of the disciples and the unfaithfulness of Peter being placed on record. It is an unknown thing in the history of imposture or fanaticism, that pretenders labouring to establish the credit of an imposture, should publish facts tending to throw discredit on it; least of all, that the leader of the movement should be held up, at one time, as a traitor to the cause, in the very documents intended to establish its reputation! But if Christ rose from the dead, all is explained. We then see that these things are placed on record, first because they happened, and, secondly, because their occurrence was wholesome to be known, both as regarded the apostles themselves, who were liable, in their privileged position to be exalted above measure, and believers in general who might be tempted to regard the apostles as free from human frailty.

Mr. Bradlaugh objects to the statement that both Jew and Gentile admit that the body of Christ could not be found after his crucifixion. He thinks such an assertion reckless, and illustrative of carelessness in the use of words. He challenges the production of any Rabbinical admission to the effect that the body of Christ could not be found. The answer is that this is one of many things which are obviously true without being capable of technical demonstration. There are demonstrations that are more conclusive than technical demonstrations. In this case, we have an illustration. The Jews, to this day, say the disciples of Christ stole the body of Christ, and then raised the report that he had risen. What is this but an admission that the body could not be found? If the body of Christ could have been found, would this story, which dates away back to the very beginning of the "Christian Era," have been invented? On the contrary, would not the body have been produced, to the utter confutation of the apostolic testimony in that and all subsequent times? This question acquires increased force, in view of the fact that the apostles were apprehended and imprisoned by the very council of priests that obtained the crucifixion of Jesus. When the apostles were brought before them as prisoners at the bar, what did the apostles say? "The God of our fathers raised up Jesus, whom YE SLEW AND HANGED ON A TREE. Him hath God exalted with *His* right hand to be a prince and a Saviour, for to give repentance to Israel and remission of sins. And *we are witnesses of these things*, and so is also the Holy Spirit, whom God hath given to them that obey Him." The apostles accused their judges of being the slayers of Jesus. Their judges, it is added, "were cut to the heart, and took counsel to slay them."—(Acts v. 33). Now, in such a state of mind, would not their judges have obtained possession of the body of Jesus had it been obtainable, and, by its production, have silenced for ever the intolerable testimony of the disciples, who fled from Christ in the hour of darkness, but were now so bold? The fact that they did not do so is in itself proof that the body of Christ could not be found, and that they admitted it. This is proof that will be conclusive to most minds, even if Mr. Bradlaugh requires the evidence of "Rabbinical writings" for it, which even if produced, would be scouted by him as freely as other more unimpeachable writings were.

THIRD NIGHT.

MR. ROBERTS'S ARGUMENT.

THE argument on Paul's case was fairly developed. It lacked entire fulness, however, owing to the absence of some things which time did not admit the introduction of. This applies to both arguments used and to arguments not used. As to the arguments used, they might be made fuller and richer and stronger: but the length to which the review has already gone compels us to be content to allow them to go as they are.

The arguments not used were those which go to show the impossibility of Paul's case being explained on any hypothesis except the one that he was a true man. And

Digitized by Google

these can only now be indicated in a brief manner. For their full elucidation, the reader is referred to Lord Lyttelton's treatise on the case of Paul. Mr. Roberts intended to submit had time admitted, that Paul was either,

1.—An impostor who declared what he knew to be untrue for selfish ends.

2.—A self-deceived enthusiast.

3.—An enthusiast deceived by others, or

4.—A true man undeceived by himself or others, who related what actually occurred, to whom Christ actually appeared, who really wrought miracles, and who is therefore a true witness of the resurrection of Christ, and therefore of the divinity of the Scriptures.

Paul must have been one of these four. Taking them one by one, it was intended to be argued—

1.—That he could not have been an impostor, aiming by falsehood at selfish ends, because, as a matter of fact, his testimony cost him everything dear to man: fortune, friends, reputation, and at last life itself (Phil. iii. 8, "For whom I have suffered the loss of all things, and do count them but dung that I may win Christ;" also see 1 Cor. iv. 9-13.) Also, because his demeanour is inconsistent with the character of an impostor, as illustrated by his life as recorded by Luke in the Acts, of which this is a fair specimen: "And as we tarried there (at Cæsarea) many days, there came down from Judea a certain prophet named Agabus. And when he was come unto us, he took Paul's girdle and bound his own hands and feet and said, Thus saith the Holy Spirit, so shall the Jews at Jerusalem bind the man that owneth this girdle, and shall deliver him into the hand of the Gentiles. And when we heard these things, both we and they of that place besought him not to go up to Jerusalem. Then Paul answered, What mean ye to weep and to break mine heart? For I am ready not to be bound only, but also to die at Jerusalem for the name of the Lord Jesus. And when he would not be persuaded, we ceased, saying, The will of the Lord be done."—(Acts xxi. 10-14.) Anyone who can imagine an impostor enacting this part has no acquaintance with human nature. Again, take the speech which Paul addressed to the elders of the Ephesian Church at Miletus, on the occasion of parting from them for the last time: "Ye know that from the first day I came into Asia, after what manner I have been with you at all seasons, serving the Lord with all humility of mind and many tears and temptations which befel me by lying in wait of the Jews. And how I kept back nothing that was profitable unto you, but showed you, and have taught you publicly, and from house to house, testifying both to the Jews and also to the Greeks, repentance towards God and faith towards our Lord Jesus Christ. And now, behold, I go bound in the Spirit unto Jerusalem, not knowing the things that shall befall me there, save that the Holy Spirit witnesseth in every city, saying that bonds and afflictions abide me. But none of these things move me, neither count I my life dear unto myself, so that I might finish my course with joy, and the ministry which I have received of the Lord Jesus to testify the gospel of the grace of God." . . . I have coveted no man's silver or gold or apparel. Yea; ye yourselves know that these hands have ministered unto my necessities, and to them that were with me. I have showed you all things how that so labouring, ye ought to support the weak, and to remember the words of the Lord Jesus: how he said, It is more blessed to give than to receive."—(Acts xx. 18-24; 33-35.) These are not the words of an impostor. Neither were Paul's doctrines by possibility the doctrines of an impostor. For a fair example of them, the 2nd chapter of his epistle to Titus may be read.

It was then intended to be argued that he could not have been a self-deceived enthusiast (that is, a man victimised by a feverish mental illusion, which impelled him, in a state of semi-madness to declare things that he thought true, but which were not true). 1, Because the convictions he entertained were not such as the laws of hallucination would have predisposed him to entertain, if he were of that temperament. The conviction that a crucified claimant of the Messiahship was really the Christ, was opposed to his education as a Jew and a Pharisee, and opposed to his natural bent as a combative and energetic upholder of the law of Moses. His education as a Jew would implant the view that the Messiah, when he appeared, would be immortal, and that therefore, Jesus, as having been crucified, could not be he; while, on the other hand, his conviction that the law of Moses was divine, and

Digitized by Google

his ardent desire to signalise himself in its defence, would incline him strongly to set himself against a doctrine that a crucified Christ was the end of the law. To oppose the apostles would naturally appear to such a man to be doing God service. Hallucination in a case like Paul's, according to the law of that disease, would have taken a form in harmony with these Judaic proclivities. The vision seen as the result of hallucination would have been a vision instructing him to extirpate the Christians and championize the cause of Judaism throughout the world. Instead of that he was arrested in the very act of giving effect to all his cherished convictions. On an expedition to destroy the Christians, he saw something which went directly in the teeth of his education —something that was in direct opposition to his purpose, and which diverted his whole energy into the very opposite channel, becoming a preacher of the faith which formerly he destroyed. 2. The nature of the work to which he set himself was not what a self-deceived enthusiast would have undertaken, and certainly one he would not have succeeded in. He sought to turn the pagans from idolatry, the Jews from their stereotyped and lifeless Judaism, and all men from sin, with the object in all cases "that they might receive forgiveness of sins and inheritance," in a kingdom to be set up by Christ at his return. In the execution of this work, he shewed none of the egotism of an enthusiast. He did not seek to bring attention to himself. On the contrary, he objected to those among the Corinthians who said "I am of Paul." His remark on this point was "Who is Paul, and who is Appolos, but ministers by whom ye believed?"—(1 Cor. iii. 5.) Then Paul's success is evidence that he was no mere enthusiast. That he was successful cannot be denied. The modern existence of Christendom is evidence of it. His success involved the bringing over of "a great company of the priests," of the temple (Acts vi. 7,) and the turning away of all the lesser Asia from idolatry.—(Acts xix. 26.) How could an enthusiast, with nothing else than ignorant heated words have achieved such results? But if Paul saw Christ and had a word of salvation from him, and if "God wrought special miracles by the hands of Paul," the success is accounted for; and in that case, Paul was no mere enthusiast. His words are not the words of heated enthusiasm in any case. We have them in his letters and speeches written and delivered under many circumstances, and they are all cool, sober, logical words, such as a man who had seen Christ, and who was endowed with the spirit of God would write, and never such as the victim of hallucination would write. 3. This introduces the next disproof of his having been a self-deceived enthusiast. His doings and sayings are those of a clear-headed, courteous, reasonable man, accommodating himself to circumstances as the interests of the object he had in view required, which is an entire contrast to the deportment of a self-deceived victim of a deranged imagination. Thus he is personally respectful to Felix, Festus and Agrippa, and temperate and coherent in the defence he was called upon to offer in answer to the accusation of the Jews. Let any one doubting this, read the 24th, 25th and 26th chapters of Acts. Thus also he adapted himself to the various classes with whom he came in contact in such a way as their several cases required, in regard to their acceptance of the gospel. His testimony on this point is this: "Though I be free from all men, yet have I made myself servant unto all, that I might gain the more. And unto the Jews I became as a Jew that I might gain the Jews, to them that are under the law as under the law, that I might gain them that are under the law. To them that are without the law as without law . . . that I might gain them that are without law. To the weak became I as weak that I might gain the weak. I am made all things to all men that I might by all means save some."—(1 Cor. ix. 19-22.) These are not the tactics of an illusionist, but of a sensible man with an important work in hand. Enthusiasts, who are so to the extent of being victims of self-deception, do not work in this rational way. The same feature of calm good sense is illustrated by his avoidance of the martyrdom which the Jews were prepared to bestow upon him. The Jews formed a plot for his destruction at the time he was a prisoner in the hands of the Romans.—(Acts xxiii. 12.) Paul got to know of it, and informed the Roman captain. The captain sent him to Cæsarea under guard, transferring him to the jurisdiction of Felix, and afterwards of Festus. Festus sent for the Jewish council to prefer their accusation against Paul at Cæsarea. When they came they asked Festus to try Paul's case at Jerusalem, intending to kill him on the way thither. Paul said he was not unwilling to die if he was proved worthy of death; but he objected to be given into the hands of the Jews, as

Digitized by Google

appealed to be reserved to the hearing of Cæsar at Rome. This was not the action of an enthusiast, who would have rushed with bravado into the jaws of death. It was the action of a reasonable man who felt and tried to avoid the calamities incident to his position as an apostle, but who, nevertheless, persevered in the testimony that brought them, because he knew it was true. The same remarks apply to the case in which he made use of his status as a Roman citizen to avoid examination by scourging.—(Acts xxii. 25.) It was the act of a cool and astute and sensible man and not of an enthusiast, who would simply have blundered himself into difficulties in a heated and irrational manner, and lacked capacity or desire to extricate himself in a sensible way. 4. Enthusiasts are usually vain, and have a conceit of their personal importance in relation to whatever hobby they have in hand. Paul's letters exhibit the reverse of this. He says of himself that he "was not meet to be called an apostle" (1 Cor. xv. 9), and this not in a mawkish spirit of self-depreciation, but for a reason which he immediately adds, "because I persecuted the church of God." For the same reason he styles himself "less than the least of all saints" (Eph. iii. 8), and also "the chief of sinners."—(1 Tim. i. 15.) In 1 Cor. xi. he apologises for having to indulge in self-vindication in defence against the slanders of traducers. These are not the expressions of a self-deceived and egotistic enthusiast: they are just the sort of expressions to be expected from a capable man who had committed a great mistake through ignorance, but who, with all his faculties about him, had seen his mistake, and, under a deep sense of humiliation, was striving to undo the mistake by a lifetime of exertion.

The facts of the case distinctly exclude the theory of Paul being a self-deceived enthusiast. Therefore the only enquiry remaining, is whether he was deceived by others, to which the answer is brief. This was perhaps sufficiently touched on the third night of the debate. It was shown that the occurrence which changed him from a persecutor into a defender of the Christian faith, was of such a nature as not to admit of the operation of third parties in the way of deception.—(Acts ix.; xxvi.) As Paul afterwards said to Agrippa, it was a thing "not done in a corner," but in the presence of a band of officers, and in the full blaze of the noon-day sun. Paul and the whole company were struck to the earth by a light "above the brightness of the sun." A communication was made to Paul in their presence, audible to them all, but intelligble only to Paul, as it was made in "the Hebrew tongue." They heard the voice, but saw no man. The attempt of Mr. Bradlaugh to make a contradiction between the account which says they heard the voice and the account which says they did not hear the voice, was disposed of in the debate. They heard the voice but could not make out the words. So may we dispose of Mr. Bradlaugh's attempt to make a difficulty of the fact that one account says they all fell to the earth and another that "they stood speechless." The two statements are perfectly reconcilable if we suppose the company were felled to the earth by the first burst of the brightness, and afterwards rose and stood speechless while Paul received the communication addressed to him. This is not a gratuitous supposition; for that they did rise to their feet after falling is certain, seeing they afterwards led Paul by the hand to Damascus. Two truthful accounts must be consistent one with another, even if they appear contradictory; and the lover of truth is not to be scared away from the endeavour to establish their consistency by the irrational dogmatism (unconcerned to find the truth), which says there ought to be nothing to reconcile. When the incident was at an end, Paul was found to be blind and remained blind for three days, and only had his sight restored by the healing interposition of one of the Christian disciples of Damascus whom he had come to destroy. This evidence of the reality of the revelation to Paul was left behind in a way that made doubt impossible. The whole event was of a character that did not admit of third parties interposing as deceivers of Paul. Consequently, the theory that he was an enthusiast deceived by others has no standing ground. Only the fourth hypothesis remains, that he was a true man, undeceived by himself or others, who relates what actually occurred, to whom Christ actually appeared, who really wrought miracles, and who is, therefore, a true witness of the resurrection of Christ, and, therefore, of the divinity of the Scriptures.

MR. BRADLAUGH'S ARGUMENT.

Mr. Bradlaugh made no attempt to explain Paul's case in harmony with the atheistic theory. He simply refused to look at it. He said he had no evidence that Paul ever existed, although, inconsistently enough, he refused to say, when pressed on the point, that Paul's letters were forgeries. He rightly defined literary forgery to be the writing of any document in another man's name: yet he would not commit himself to the affirmation that the epistles of Paul were forgeries. If he could have substantiated the notion that they are forgeries, he would have asserted it gladly, of course. His refusal to assert it is, therefore, evidence that he knows the notion that they are forged cannot be maintained (as indeed the whole world of critics, if not Mr. Bradlaugh, is well aware). Therefore, the fact that Paul wrote the epistles is proved by the very tactics of the man who professed to doubt that there ever was such a man. Consequently, the case of Paul is a fact. The nature of the case was pressed upon Mr. Bradlaugh's attention, and he was asked for an explanation of it on his hypothesis; but he did not advance an explanation. His not advancing an explanation is proof that he could not explain it, and his inability to explain it is a proof that the case is inexplicable on atheistic grounds, and that the only explanation of it that can be given is the explanation given many times by Paul himself, that Christ appeared to him and endowed him with power to execute a mission in his name to the nations of the earth—in which case, Christ rose from the dead, and the Scriptures are the authentic and reliable records of Divine revelation.

In default of dealing with Paul's case, Mr. Bradlaugh contented himself with repeating, in a rabid and offensive style, the alleged inconsistencies and contradictions in the Bible he had enumerated on the previous evenings. As these have been answered in the review of the first and second evenings, it is not necessary to notice them here. It is sufficient to supply the proof which he demanded, that the apostles were ignorant men. It is to be found in Acts iv. 13: "Now when they (the rulers) saw the boldness of Peter and John, *and perceiving that they were* UNLEARNED AND IGNORANT MEN, they marvelled."

The only other point really calling for notice is Mr. Bradlaugh's attempt to make the Bible responsible for the doctrine of eternal torments. For the full treatment of this subject, including a scriptural exegesis of the terms on which Mr. Bradlaugh relied as proving this, the reader had better refer to *Everlasting Punishment not Eternal Torment:* being an answer to the "Rev." Dr. Angus, by R. Roberts. It is to be had at the office mentioned on the cover of this pamphlet, price 8d.

FOURTH NIGHT.

MR. ROBERTS'S ARGUMENT.

MR. ROBERTS was somewhat diverted from the argument he had intended to elaborate this evening, by the stress laid by Mr. Bradlaugh on the absence (as he alleged) of contemporary witness to the currency of the apostolic writings in the first century and first half of the second century. The objection was of little weight even if well founded; because a book might exist from remote antiquity, and bear internal proof of its having done so, without our being able to find other books of a similar age in which it should be mentioned. The absence of such other books would be no disproof of the book we have. It would only prove that no other books had survived for the same number of ages, and this fact would not be wonderful in view of the now public character of the New Testament, and the private character of the books alleged to be absent. But though the point was of no great weight in true logic, Mr. Roberts felt it might seem weighty to some, and therefore occupied a considerable part of the time in showing that contrary to Mr. Bradlaugh's assertion, there were books, traceable back to the first and second centuries, in which the contemporary existence of the New Testament was distinctly recognised. The doing this, prevented him from saying all he intended to say

Digitized by Google

in support of the affirmation to which he had intended to devote the evening, viz: "That the literary and moral peculiarities of the Bible—the character of its sentiments, so entirely alien to the universal tendencies of human nature.—Jew and Gentile;—Its clear, chaste, vigorous and concise diction;—its agreement one part with another, notwithstanding the great intervals of time at which its different parts were produced; and its perfectly artless candour in the record of facts irrespective of their bearing for or against the interests involved—are totally at variance with the supposition that the book is the production of ignorant and designing men; and prove that its existence is due to that divine initiative and guidance in the writers to which both Paul and Peter attributed it."

In support of this proposition, Mr. Roberts intended a line of argument which was only partly carried out. The omitted parts may be briefly indicated.

The internal constitution of the Bible is the strongest evidence of its divinity. This argument is the least capable of being made palpable, especially to those unacquainted with the Bible and unaccustomed to the line of thought which it involves. The proposition falls at first with little weight on the ear; but its weight increases with increasing experience of human nature and human literature, until at last the thinking mind can dispense with all other evidence of the Bible's divinity. Its contents are found sufficient.

Some features of those contents were noticed in the debate. Its revelation concerning God is first in rank. This is distinguished from all human conceptions of Deity, as reflected in the polytheisms of confessedly unenlightened men. The gods imagined by men were limited like men. The God revealed in the Bible is declared *unsearchable*. The different powers of nature were, by the ignorant, attributed to different gods, which superficially seemed probable. The Bible attributed all to ONE GOD. Science has confirmed the Bible revelation of God to this extent, that it has shown all power to be ONE at the root, and that root "unknowable," which is only another word for the Bible term "unsearchable."

Then as to man: the philosophers taught that man was constitutionally an immaterial immortal being, underlying and distinct from the body, and capable of existence apart from it, a fallacy from which came their doctrine of *post-mortem* rewards and punishments in the elysian fields and tartarus, and a consequent rejection of the doctrine of the resurrection. This notion, succinctly defined as "the immortality of the soul," was, like their polytheism, a plausible deduction from appearances—universal among the ancients, beginning with the Egyptians, notwithstanding his association with whom, Moses, by the admission of Gibbon, is untainted with the notion. The prophets and apostles are likewise free of this philosophic speculation, and, on the contrary, teach human mortality as expounded by Tyndall and other scientists of the modern era. The doctrine of immortality which they teach is the hope of resurrection to a future existence on the earth. Science does not teach this, because science only deals with *what is*, and can throw no light on what is to be. With the doctrine of human mortality all Scripture agrees, as the reader may find proved in *Twelve Lectures*, by R. Roberts. Consequently, the Bible is in harmony with science on the subject of man as well as God: that is, as regards his present constitution. That the Bible should teach a doctrine in harmony with science in an age when all the world was dreaming about natural immortality of speculative induction, is another proof of the Bible's divinity. This arugment has been obscured by orthodox religion, which accepts the Pagan view, and, by consequence, teaches the eternal torment of the unrighteous—a doctrine which gives the argument for unbelief an advantage that does not belong to it.

The Bible's depreciation of human nature, and exaltation of God, were both noticed in the debate. These peculiarities stamp it as of Divine origin. The sentiments are foreign to human nature. Their prominence in the mouths of the prophets explain the Jewish treatment of the prophets; and that treatment reacts in confirmation of the Divine origin of the sayings of the prophets. Jesus refers to it thus: "O Jerusasalem, Jerusalem, *which killest the prophets, and stonest them that are sent unto thee, &c.*" (Luke xiii. 34). There was a class of prophet that received different treatment, to which Jesus also refers: "Woe unto you when all men speak well of you, for *so did their fathers to* THE FALSE PROPHETS."—(Luke vi. 26). The false prophets spoke smooth or pleasant things, which ensured popularity: the true prophets spoke things that

Digitized by Google

were disagreeable to human nature, and brought destruction on themselves. Yet the Scriptures of the disagreeable prophets, which testify against the wickedness of Israel, are preserved, while the Scriptures of the false prophets have perished: in which also there is evidence of God at work.

The aversion of Israel to the teaching of the true prophets, and their relish for those who led them to idolatry, is very effectually illustrated in the case of Elijah, who, on Mount Carmel single-handed, confronted four hundred prophets of Baal. This case may be taken as the history of the subject condensed into a single incident. The Jews have always been on the side of those who drew them aside from the One God, and against the few faithful men who in different ages have striven, under Divine command, to bring them back to the paths of Moses. This is in harmony with the work of the prophets being a Divine work; and inconsistent with the notion that they acted on their own uninspired volition; for a human volition merely would have led them in a human and popular direction.

Why did the Jews prefer idolatry to the Divine institutions? This brings us to another argument. The Mosaic worship was contrary to human inclinations. It called on them to serve *an invisible God:* it required faith at their hands. Other nations had gods they could see, and whose worship they made the occasion of licence and delight. To these foreign gods, Israel turned aside from the beginning of their history, as soon as Joshua and his contemporaries were dead (Judges ii. 11-13); which is proof that their God was no invention of their own; or the outcome of a national idiosyncrasy. Other nations have always been faithful to their invented gods, because they continued subject to the taste and fancy that led to the invention. Such a thing as a nation changing its gods is unknown. This very fact is made the basis of expostulation by God with Israel, through the prophet Jeremiah: "Pass over to the Isles of Chittim and see, and send unto Kedar and consider diligently, and see if there be such a thing: *hath a nation changed their gods*, which are yet no gods? But my people hath changed their glory for that which doth not profit."—(Jer. ii. 10). This fact of itself—that the Jews as a nation continually departed from the God of their fathers, while no other nation deviated from their traditional idolatries—goes a *long* way, in a logical process of treatment, to prove that the religion of the Jews was *not* a religion of Jewish origin, in the sense of its being the invention of the Jews; but was higher than they, namely, what it professes to be: a system Divinely communicated to them by the hand of Moses.

There is next the agreement of one part of the Bible with another throughout, notwithstanding the long intervals during which its different parts were produced. If it were a human production, each successive contributor would have imparted his own sentiments to it, and we should have that diversity of character which belongs to every human work in which many actors have been engaged during a series of ages. Instead of this, the book is absolutely one. Whether you take Moses, Malachi or Christ, there is the same depreciation of human nature; the same supreme exaltation of God; the same stern enunciation of duty; the same uncompromising rebuke of departure from the way of right. The spirit of the book in this respect is identical throughout, and this cannot be said of any literature under the sun, in which a variety of writers of different ages have been employed, nor is there any book under the sun characterised by the sentiments just enumerated. The Bible stands absolutely alone in this respect, like a majestic mountain among hillocks of rubbish.

Then there is the same hope, in all the books of the Bible, of a coming age in which Christ, as King of Israel, shall rule on earth universally, and mankind be blessed. A few illustrations of this must suffice. Genesis speaks of a promise to Abraham, that in him and his seed (a great personage who should possess the gate of his enemies), at a future time, should all the families of the earth be blessed.—(Gen. xxii. 17-18.) Moses speaks of a prophet like unto himself, whom God should raise up to Israel whom they should hear.—(Deut. xviii. 15-18.) Isaiah speaks of a king who should rise in the line of David, and reign over all nations, with the result of abolishing the art of war from the studies of mankind.—(Is. xi. 1-9; ii. 4; xxxii. 1-8.) Daniel speaks of one like the Son of Man who should appear, and whom all peoples, nations and languages should serve and obey.—(Dan. vii. 14.) Paul speaks of a day in which God should judge the world in righteousness by Christ (Acts xvii. 31), and when the people of Christ would reign and judge the world with him.—(1 Cor. vi. 2; 2 Tim. ii.

Digitized by Google

12.) Revelations speaks of the kingdoms of this world becoming the kingdoms of God and His Christ, who shall reign for ever and ever.—(Rev. ii. 26; xi. 15.)

If the Bible were a merely human production, there would not be this absolute identity of hope among writers, extending over three thousand years. The existence of this identity is a proof of the controlling presence of a common guidance in all the writers, even the guidance professed in the book itself: "Holy men of God spake as they were moved by the Holy Spirit."—(2 Pet. i. 21.) The force of this argument will be appreciated by those who realise the endless and contradictory diversities of human authorship of different ages. Its force is somewhat hidden by the corruptions of orthodox Christendom, which has long ago abandoned the one apostolic "hope of Israel," common to the whole Scriptures, and embraced the miserable substitute of an imagined *post mortem* beatification of an imaginary personal invisibility, in regions above the stars.

Then there is evidence of divinity in the Bible scheme of future life. This scheme defers all reward till an appointed era, to be inaugurated by the personal re-appearance of Christ in the earth, when many generations shall have yielded—first, to the grave and then to the resurrection—their quota of tried men—tried in necessary times of evil. The vastness and splendour of this scheme stamps it as divine. Man would never have invented such a scheme. This is not the place to prove that this is the scheme. The reader must be referred to *Twelve Lectures*, before mentioned for its full illustration.

Next there is the perfect candour of the Bible narratives, which is never characteristic of human histories. David's crime is chronicled in sober and merciless truth, although he was king when the record was written. So with the fathers before him. The naked truth is told. The very things which Mr. Bradlaugh makes use of against the Bible, are in this respect one of the highest evidences of its genuine character, for had the Bible been written by king-flatterers and sycophants, as his senseless tirades imply, there would have been a suppression of things that do not stand to the credit of those for whom they are supposed by him to have been written. Then the writers say things that never would have been said by men writing to prop up a pretended revelation. Matthew, for instance, records that at an interview with Christ after his resurrection, some of his disciples "doubted."—(Matt. xxviii. 17.) A bolsterer up of a pretended revelation would never have written this. It is written because it is true; and the fact that some doubted is an element in the self-evident truthfulness of the narrative, for it is just what would happen with real living men who, not expecting Christ to die, had seen Christ crucified and now saw him alive. In their partly-enlightened state, his death was a puzzle and his resurrection a puzzle also, and "doubt" the natural consequence. And had there been no farther evidence, the doubt of the "some" might have continued. But their doubt did not continue; all doubt vanished with the outpouring of the Spirit and display of miraculous gifts. The fact that they previously "doubted" made their subsequent confidence all the more reliable, because it showed the reason of their doubt had disappeared. Certainly, a forger, writing a fictitious narrative to obtain credit for Christ's resurrection, would never have represented any of the disciples in the act of doubting but rather in an ecstacy of adoring confidence, after the style of Roman Catholic fables.

Similar remarks apply to the statement of John that at a certain time, "many of his disciples went back and walked no more with him." This is a candid record of a fact which there could be no object in publishing, but rather in suppressing, as the fact itself was capable of yielding a damaging effect to some who might argue like Mr. Bradlaugh: "If men who saw his miracles deserted him, how can you expect me to believe, &c." Its record is an evidence of truth; and the occurrence of the fact recorded is in harmony with our acquaintance with human nature. Men get accustomed to anything. Marvels cease to be marvels when they are of common occurrence. It is easy to understand that men, drawn after Christ in the first instance by the sensational attraction of his miracles, would easily become disaffected when doctrines unpleasant to human nature were propounded for their acceptance. It is human nature to the life. A fictitious writer would never have imagined it possible for any human being to desert the Christ of his narrative: he would be certain to represent every one as awe-struck and spell-bound for ever.

Digitized by Google

And even if he could have imagined another possibility, he would have been careful to conceal it from a narrative intended to create confidence in a Christ that never existed. The record that many ceased to be his disciples is one among many strong proofs of the genuineness of the narrative.—There is a number of such candid statements. In fact, they abound throughout the Scriptures and constitute an evidence in the very opposite direction to that to which such as Mr. Bradlaugh make them point. We must be content with the two examples cited.

Then the literary character of the Bible is evidence of a more than human authorship. Its diction is chaste, dignified, vigorous, free of redundancy or irrelevant details. It is unlike all other books in the nature of its historic narratives. It never puts on record the kind of occurrences that come under the category of story and adventure. It never shows any regard for the curiosity of the reader. It never ministers to the taste that finds pleasure in the mere knowledge of what happens. It confines itself to matters having relation to the main purpose in hand. If it ever diverges from its condensed historical style, and enters into personal particulars, it is because those personal particulars have a bearing on some subsequent event of public importance, or to illustrate the operation of some truth important to be known. The story of Amon and Tamar is an example: it led up to the rebellion of Absalom. The story of David and Uriah is another: it led to a public revolution in the punishment of David. The story of the Ephraimite and his concubine is another: it led to the near extirpation of a tribe, and the slaughter of multitudes in Israel in punishment of their sins. In no case is a story told for its own sake. In this the Bible differs from all human books: and the difference is inexplicable if the Bible be a human book; because if a human book, it would show the universal taste for mere incident, in the liking for which, Jew and Gentile are alike, as shown by the writings of Josephus. The following is a good specimen of the Bible's historical conciseness: "Then were the people of Israel divided into two parts; half of the people followed Tibni, the son of Ginath, to make him king; and half followed Omri. But the people that followed Omri prevailed against the people that followed Tibni, the son of Ginath; so Tibni died, and Omri reigned."—(1 Kings xvi. 21.) A human account of this matter would have entered upon the intrigues and the fightings, and the adventures incident to the triumph of Omri, with a due admixture of trumpet blowings over this one's intrepidity, and that one's wonderful generalship, &c. This argument in its full force will only be appreciated by those who possess a thorough acquaintance with the Scriptures, and some acquaintance with human writings of all ages. With such it is of great weight. To others, it may be evident by a comparison between the Bible itself and all imitations that have been attempted, such as the Apocrypha and Apocryphal New Testament.

Finally, the character and precepts of Christ as displayed in the New Testament, are themselves conclusive evidence of the divinity of the Scriptures. No man could have imagined such a character; no man could have invented such precepts, least of all such men as those who wrote the gospel narrative—poor fishermen, "unlearned and ignorant men." The only way such a narrative could come to be written (even if men who are called "learned," had been the writers)—is by the appearance of such a man as Christ, and the presence with the writers of such a guidance in the writers as Christ promised he would send them after his departure—the guidance of the Holy Spirit which should "bring all things to their remembrance whatsoever he had said unto them."

MR. BRADLAUGH'S ARGUMENT.

There was little in Mr. Bradlaugh's argument on the fourth night calling for any further notice than what it received in Mr. Roberts's replies. It was in the nature of a feint to draw the other side from a strong position. He raised a great outcry against the ecclesiastical writers of the first, second and third centuries, whose works Mr. Roberts referred to merely to show that there was external evidence of the existence of the New Testament at the time it professes to have been produced. Many things he said that were misleading, and some that were positively untrue. Such, for instance, as his remark, "It is simple impertinence (for Mr. Roberts) to read

Digitized by Google

names to us and tell us he has got the books here when those books do not exist in the world." "Mr. Roberts said he would quote to you from Tatian. There is not a scrap of Tatian existing. . ." Mr. Roberts did not pretend to have books that do not exist. He did not pretend to have even all the books that do exist. When he said he produced "five witnesses" to a particular date, he meant in the sense of producing them in argument. Tatian's existence as an author is proved by quotations from him in Eusebius, who wrote shortly after the end of the third century. On the same authority we know that Tatian was born before A.D. 150, and that he wrote a book entitled *A Harmony of the Four Gospels.* The fact that we do not possess this *Harmony of the Four Gospels* does not weaken the evidence arising from the fact of Tatian writing such a work. His writing such a work shows that the four gospels existed in his day, and also that they had existed as a universally-accepted authority among Christians for a long time before, for men do not write harmonies of unknown and newly-produced books. But Mr. Bradlaugh sought to obscure the argument by making a great outcry about the absence of Tatian's books, and, no doubt, he succeeded with some lacking penetration, but the truth calmly remains for all that.

Mr. Bradlaugh also made a point of the dates adduced being "disputed dates." In the sense that they lack the definiteness and certainty of a registrar's certificate of birth, no doubt they may be disputed; but they are undisputed in the substantial sense. That is they are substantial approximations to truth, and even allowing for a few years' uncertainty, one side or another, the argument founded on the writings of the men remain untouched. The argument is that men living within a few years of the dates mentioned could not quote the New Testament familiarly, which they all do, if the New Testament had not existed as a widely-accepted authority. Mr. Bradlaugh's tactics merely amounted to throwing so much dust over this point. His reckless declarations will have no weight with those who are calmly in search of truth and reason.

Mr. Bradlaugh made great use of the literary forgeries that were undoubtedly common in the third and fourth centuries. He asked among so many forgeries, how was he to know the true? He might have been excused on the score of inability of discernment had he rested there: but when he went on to deny the existence of true apostolic writings, it had simply to be shown that he was going against all reason; for surely the very existence of forgeries prove that there must have been something originally true and valuable to imitate. Mr. Bradlaugh's answer to this was, "If Mr. Roberts's contention is true, the existence of a false gospel of Barnabas would be evidence of an imitation of a true gospel of Barnabas." The rejoinder is, first, perhaps there was a true gospel of Barnabas, for Luke testifies (Luke i. 1) that "many" had taken in hand to set forth an account of the things believed among the Christians, and perhaps Barnabas was among the number. But, secondly, it would at least prove the existence either of Barnabas or of the New Testament allusion to Barnabas. And it would prove that the writing of a gospel was according to the imitator's conception of what Barnabas was likely to do: and this conception must have been founded on the fact that the apostles and their companions did write gospels. So that even in this way, a false gospel of Barnabas, while perhaps not proving a true gospel of Barnabas, would prove that there were true gospels somewhere. We notice this point because it is one of the few arguments of Mr. Bradlaugh's which seemingly had something in them. Mr. Bradlaugh tried to make a great deal out of the fact that Mr. Roberts did not read extracts from the books of the early ecclesiastical writers, in support of his assertion that they quoted from the New Testament. He even said unjustifiable and untrue things on the subject; as for instance, that these writers "do not say a word of what Mr. Roberts thought they said." The best answer to this will be to quote a few samples of their sayings, with references to the works where they may be found. This is done by the aid of Dr. Brewer's compilation, which was produced at the discussion.

1.—Clement of Alexandria,

Who was born somewhere about the middle of the second century: died about A.D. 213.

He wrote several works in Greek, and among others *Pædagogus* (The Instructor),

Digitized by Google

and *Stromata* (Sundries). From these two the following are extracts: "This passage is not to be found in any of the FOUR GOSPELS, but is taken from the (spurious) gospel to the Egyptians."—(*Strom.* iii. 465. D.) "As Luke in *the Acts of the Apostles* records Paul to have said."—(*Strom.* v. 588. B.) "In like manner writes Paul in his *Epistle to the Romans*."—(*Strom.* iii. 457. B.) "The blessed Paul, in his First Epistle to the Corinthians, says, Brethren, be not children in understanding: howbeit in malice be ye children."—(*Pæd.* i. 96. D.)

2.—THEOPHILUS OF ANTIOCH,

Who was born early in the second century, and died A.D. 181.

He wrote three books, to "Autolychus," in defence of the Christian religion. The following are extracts: "These things the Holy Scriptures teach us: for JOHN says, In the beginning was the Word, and the Word was with God, and the Word was God." (Book ii. 100 C.) The gospel says "Love your enemies, and pray for them that despitefully use you, for if ye love them that love you, what reward have ye? Do not even publicans the same?"—(Book iii. 126, B.C.)

3.—ATHENAGORAS, THE ATHENIAN PHILOSOPHER,

Who flourished in the second half of the second century.

He wrote a petition to the Emperor on behalf of the Christians whom he had joined: also a treatise on the resurrection. The following are extracts: "To convince you we are not Atheists, hear the maxims in which we are instructed:" "I say unto you, love your enemies: bless them that curse you and pray for them that persecute you, that ye may be the children of your Father in heaven, who maketh His sun to rise on the evil and on the good, and sendeth rain on the just and on the unjust."—(*Petition*, page 11. B.C.) "The corruptible must put on incorruption" (*The Resurrection*, page 61 C).

4.—IRENÆUS, OF LYONS,

Who was born about A.D. 130, *and died A.D.* 202.

He wrote a work "against heresies" in five books. The following are extracts: "Matthew, among the Jews, wrote a gospel in their own language while Peter and Paul were preaching the gospel at Rome. After the death of the fore-named apostles, Mark, the disciple and interpreter of Peter, delivered to us in writing the things that Peter had preached. Next Luke, Paul's companion, put down in a book the gospel preached by Paul. Lastly John, the beloved disciple, published his gospel while he was dwelling at Ephesus" (*Adv. Hær.* iii. 1). "This same disciple (John) says in his epistle, little children, it is the last time"—(*Adv. Hær.* iii. 16). Irenæus also mentions by name thirteen of Paul's epistles, and quotes copiously from them in the course of his argument, and speaks of "The Revelation of John," the disciple of the Lord.

5.—MELITO OF SARDIS,

Who flourished in the second half of the second century.

He wrote several works in Greek, and among others, one entitled *Extracts of the Law and the Prophets*, in his preface to which he says: "When I went into the East, I procured an accurate account of the books of *The Old Testament*," which is, of course, an indirect recognition of the New Testament.

6.—TATIAN,

Who was born about A.D. 130, *and died about the close of the second century.*

He wrote several works, only one of which is now extant, viz., *Oration to the*

Digitized by Google

Greeks, in which he quotes from the epistles. Eusebius mentions the name of one of Tatian's other works, which furnishes evidence of the existence of the gospels in Tatian's day, viz., *A Harmony of the Four Gospels.*

7.—JUSTIN MARTYR,

Who was born about the beginning of the second century and died about A.D. 167.

He wrote three works, viz., an *Apology* to the Emperor Antoninus Pius, on behalf of the Christians; an *Apology* to the Emperor Marcus Aurelius with the same object, and a *Dialogue with Trypho.* His quotations from the New Testament are very numerous. The following are specimens:—"Christ said, Unless a man be born again, he cannot enter into the kingdom of heaven."—(*Apology*, 94A.) "Before the Lord was crucified, he said, 'The Son of Man must suffer many things and be rejected of the Scribes and Pharisees, and be crucified, and the third day he shall rise again.'"—(*Dialogue*, 327A.) "Paul, in his address to the Greeks, saith thus: 'Be you as I am, for I am as ye are.'"—(*Dialogue*, 40D.)

8.—PAPIAS,

Who was born early in the second century and died about A.D. 153.

He wrote *Five Books of Commentaries on the Sayings of our Lord.* In his preface he says: "If at any time I met with one who had conversed with the elders, I enquired of the sayings of those elders. I asked him what Andrew or Peter said, what Philip said, what Thomas or James had said, what John had said, what Matthew had said or any other of the Lord's apostles. What they told me by word of mouth have I here set down in writing, and nothing in these Commentaries has been taken from books." Of Matthew, he says: "It was written in Hebrew and was termed *the Lord's sayings*;" and of Mark: "Mark was the interpreter and follower of Peter, and the *gospel which bears his name* was composed from Peter's own words."—(Book iii. 31.)

9.—POLYCARP,

Who was born about A.D. 80, *and died A.D.* 167.

He wrote an epistle to the Philippians. The following are extracts recognising the existence of the New Testament: "Do we not know that the saints shall judge the world, as Paul teaches?" (cap. xi). "Neither I nor any one like me can come up to the wisdom of the blessed Paul, who wrote to you a letter, being absent in body but present in spirit."—(Cap. iii.) "Remember what the Lord said, Judge not that ye be not judged; forgive and ye shall be forgiven; be merciful that ye may obtain mercy."—(Cap. ii.)

10.—IGNATIUS,

Who was born about A.D. 35, *and died abaut A.D.* 107.

He wrote seven epistles in which the existence of the New Testament is recognised thus: "You are the companions of St. Paul, who *throughout his whole epistle to you* (the Ephesians), mentions you with praise."—(Epistle to the Ephesians, sec. 12.) He many times quotes, without acknowledgment, the words of the New Testament. Thus: "The tree is known by its fruits" (to the Eph. xiv.): "Be wise as serpents and harmless as doves" (to *Polycarp* 2.) "Christ was baptised of John to fulfil all righteousness (to Smyrna 1.)

11.—HERMAS,

Who flourished before the end of the first century.

He wrote a book entitled *The Shepherd*, in which there are some fifty quotations from

Digitized by Google

the New Testament, without naming the books from which the quotations are drawn. The following are specimens: "No man cometh unto the Father but through the Son."—(*Similitude* ix. 12.) "The body is the temple of the Holy Spirit: and if thou defile the temple of God thou shalt die."—(*Sim.* v. 7.) "If ye resist the devil he will flee from you."—(*Precept* xii. 5.)

12.—Clement of Rome,

Who was born about A.D. 30 *and died A.D.* 100.

He wrote an epistle to the Corinthians, in which the Epistle of Paul to the Corinthians is expressly referred to thus: "Take into your hands *the epistle of Paul the apostle, and see what he wrote to you.*"—(ch. xlvii.) He quotes many times from the New Testament, without referring to the source, thus: "With what measure ye mete, it shall be measured to you again"—(ch. xiii.) "Remember the words of the Lord Jesus, how he said, Woe to that man by whom offences come. It were better for that man if he had not been born."—(ch. xlvi.) "Whom the Lord loveth He chasteneth, and scourgeth every son whom He receiveth."—(ch. lvi.)

13.—Barnabas,

Who is supposed to have been born at the beginning of the first century, and to have died A.D. 61.

The epistle bearing his name, whether written by him or not, was extant in the first century, as proved by the allusions of other writers to it. He quotes from Matthew, Luke, Acts, Romans, Corinthians, Ephesians, Hebrews, 1 Pet. and Revelations. Examples: "Let us beware, lest it should happen unto us; many are called but few chosen"—(ch. iv.). "He came not to call the righteous but sinners to repentance."—(ch. v.) "Give to every one that asketh thee."—(ch. xix.)

FIFTH NIGHT.

MR. ROBERTS'S ARGUMENT.

The argument on the origin of the Jewish nation as involved in the writings of Moses, was fairly indicated, but only partly illustrated. It is capable of being worked out in great detail with convincing results. The authenticity of the writings is sufficiently established by the testimony of Christ and the voice of the Jewish nation, as pointed out and proved in the debate. We have therefore merely to consider the history set forth. This history, like the history of Christianity, is only intelligible with God in it. This will be seen by anyone fairly looking into it. With such a view only can we understand the entire absence of any endeavour in any part of it, to ascribe the law to Moses or any credit of any part of the transactions to him, or to the Jewish nation. So far from taking credit, Moses expressly said to the people, "I have not done these things of mine own mind" (Num. xvi. 8). It is a popular habit to ascribe the Jewish law to the wisdom of Moses as if he were the author of it. This habit is totally at variance with the scriptural representation. God is always kept in the foreground and Moses appears as His servant only. This peculiarity is not confined to the language of Moses, but belongs to the events connected with the organization of the nation. It is particularly manifest in the incident on which Moses based his claim to Israel's submission to the law. He did not, like an impostor, merely report that so and so had happened to him privately, and that the result was this law which they had to obey. He based his claim to their submission on an open and public event of which they were all witnesses. "He brought forth the people out of the camp *to meet with God*, and they stood at the

Digitized by Google

nether part of the mount. And Mount Sinai was altogether in a smoke because the Lord descended upon it in fire, and the smoke thereof went up as the smoke of a furnace, and the whole mount quaked greatly"—(Ex. xix. 17). The people were afraid at the manifestation. "And all the people saw the thunderings and the lightnings and the noise of the trumpet and the mountain smoking, and when the people saw it, they removed and stood afar off. And they said unto Moses, speak thou with us and we will hear, but let not God speak with us lest we die."—(Ex. xx. 18, 19.) Afterwards referring to this, Moses asks them to remember it: "Specially the day that thou stoodest before the Lord thy God in Horeb when the Lord said unto me, Gather me the people together and I will make them HEAR my word *that they may learn to fear* ME all the days that they shall live upon the earth . . . and the Lord spake unto you out of the midst of the fire. Ye heard the voice of the Lord, but saw no similitude: only ye heard a voice . . . Did ever people hear the voice of God as thou hast heard and live? . . . Out of heaven, He made Thee to hear His voice that He might instruct thee: and upon earth He shewed thee His great fire and thou heardest His voice out of the midst of the fire."—(Deut. iv. 10-12; 33, 36.) It was this public demonstration that laid the foundation of the authority over a rebellious nation like Israel, of Moses, whom they several times sought to destroy. This was the object of it. It is so stated: "The Lord said unto Moses, Lo, I come unto thee in a thick cloud, *that the people may hear when I speak with thee* AND BELIEVE THEE FOR EVER."—(Ex. xix. 9.) When the event was over, "The Lord said unto Moses, thus shalt thou say unto the children of Israel, *Ye have seen* that I have talked with you from heaven."—(Ex. xx. 22.)

Now for the present argument, it matters not whether these things really happened, or were invented by a writer who narrated them to establish the credit of Moses. The great fact connected with them lies here: *they base the authority of the law on the command of God and never on the wisdom of Moses.* And the argument arising from this fact is that such a thing is inexplicable on the hypothesis of the Mosaic writings being writings of a merely human origin, for written with a human origin, they would have been written with a human aim like all other human writings; and the aim would have been to show that the law was due to the superior sagacity of Moses, and to set forth the constant loyalty of the Israelites to it. Of course, the argument is strengthened a hundred fold when it is shown that Moses was the writer.

The nature of the sentiment pervading the law, is inconsistent with the idea of a human origin. We know what human nature is in the thousand instances of experience, history and political institutions. To glorify the leader or the nation, is the tendency of all men in every country and age; and the Jews, as we know them in their speeches and literature, are no exception. But the Mosaic institutions offer a complete contrast to this tendency. Instead of boasting in ancestry and the exploits of their armies, they were taught, for instance, to speak depreciatingly of their origin on the presentation of the first-fruits; and to refer their deliverance to God. They were taught to say, "A Syrian ready to perish was my father, and he went down into Egypt and sojourned there with a few, and became there a nation great, mighty and populous. And the Egyptians evilly entreated us and afflicted us, and laid upon us hard bondage. And when we cried unto the Lord God of our fathers, the Lord heard our voice, and looked on our affliction, and our labour and our oppression. And *the Lord brought us forth out of Egypt* with a mighty hand, and with an outstretched arm, and with great terribleness, and with signs and wonders. And He hath brought us into this place."—(Deut. xxvi. 5). The deliverance of Israel is never ascribed to Israelitish prowess. The style of allusion is well illustrated in Psalm xliv. 1-3: "We have heard with our ears, O God: our fathers have told us what work Thou didst in their days, in the times of old, how Thou didst drive out the heathen with Thy hand, and plantedst them: how Thou didst afflict the people and cast them out. For *they got not the land in possession by their own sword, neither did their own arm save them;* but THY RIGHT HAND AND THINE ARM and the light of Thy countenance, because Thou hadst a favour unto them."

This peculiarity is intelligible enough if God spake to Moses and did all the mighty works by which Israel was delivered from Egyptian thraldom. On any other principle, it is unintelligible. Particularly is this the case with certain matters of detail. There are features in the law which could not have originated with men

Digitized by Google

legislating out of their own heads. For instance, Israel was commanded to let the land lie untended and unsown every seventh year; and we read this in connection with it: "And if ye shall say, What shall we eat the seventh year? Behold, we shall not sow nor gather in our increase. Then I will command my blessing upon you in the sixth year, and *it shall bring forth fruit for* THREE YEARS."—(Lev. xxv. 2.) What man or men would have been mad enough to append to a public law a provision beyond all human control (affecting the weather and the crops), and subject to the test of experience once in every seven years? For inventors to have enacted such a law would have been to make the detection of their imposture inevitable; and that in a short time, for once in every seven years it would be found whether, as a matter of fact, the enhanced production took place. Take God out of this law, and its enactment is inexplicable; but if God spake by Moses, it is perfectly intelligible.

So with the attendance at the periodical feasts exacted of all Israel. Three times a year were they all to assemble at the chosen centre. In the natural order, obedience to this would expose their country to the danger of invasion, while they were absent, but this assurance was associated with the law. "Neither shall any man desire thy land when thou shalt go up thrice in the year to appear before the Lord thy God."—(Ex. xxxiv. 24.) If God gave the law, this is intelligible, because, as with the weather and the crops, so with the matter of human desires, it is in His power to regulate their operation; but if this law was a human invention, it is impossible to conceive how a promise came to be introduced as to affairs beyond human control, and the truthfulness of which was open to test every year.

There is a variety of incidents and other matters of detail to which the same general remarks apply, viz., that their record is inexplicable on any theory short of the narrative being a true one. The length to which the review has already extended forbids more than a brief reference to one or two of them. Prominent among them is the reason given for Moses, who led them out of Egypt, not being allowed to take the children of Israel over Jordan into the Land of Promise and not being allowed to enter there himself. Moses alluding to this reason in his rehearsal on the plains of Moab, says: "The Lord was *angry with me* for your sakes, saying, Thou also shalt not go in thither. But Joshua, the son of Nun, which standeth before thee, he shall go in thither; encourage him, for he shall cause Israel to inherit it."—(Deut. i. 37.) The incident to which Moses alludes is described in detail in Num. xx. 7-13; and expressly referred to in Num. xxvii. 12-14. On the reading of these parts, it will be found that the incident in brief was this: under the irritation caused by the continual discontent and insubordination of the people, Moses, when directed by God to bring water for them out of the rock, struck the rock twice with his rod, and took the credit of bringing out the water. "Hear now, ye rebels," he exclaimed, "*must* WE fetch you water out of this rock?" This was an offence to God in standing between Him and Israel, and is thus condemned by God: "Because ye believed Me not, to sanctify Me in the eyes of the children of Israel, therefore ye shall not bring this congregation into the land which I have given them."—(Num. xx. 12.) Let there be read in connection with this matter the account of the death of Moses in Deut. xxxii. 48-52 and xxxiv. 1-6: such a story is intelligible if true: but if not true, for what purpose could it have been invented? We must judge of the theory of invention in such a case by the history of invention universally. Invention is resorted to always with an object: and in a case like this (the leader of a nation), the object is to establish the credit and reputation of the man concerned. But here is an incident having the very opposite effect. Here is an account of the death of Moses, showing his career cut short in punishment for the unfaithful use of divine power in a certain matter. The man who can believe such a story to have been invented must either have a very poor acquaintance with mankind, or a poor capacity for judging of e simplest facts. Invention, in such a case, if required to account for the death f Moses before the completion of his work, would be likely to have taken the form f representing that God had told him he (Moses) was too good and great a man to e allowed to enter upon the hard and bloody work of conquering the Canaanitish natio ; and that, therefore, he would let him go to rest. The "patriotic" inventor wou l never have represented Moses an offender against the majesty of God, and still le , that he became so through the inveterate stubbornness of the people he was leadi ; from Egypt. Such a story is self-evidently a true one; it is evidence that God wroug t

Digitized by Google

with Israel, and that therefore the Scriptures are the authentic and reliable records of divine revelation.

Other incidents of a like nature are the death of Aaron's sons, Nadab and Abihu, by fire, for non-compliance with a divine command (Lev. x. 3); and the discouraging report of the spies sent to search the land; the people's endorsement of it; their proposal to stone Moses, and appoint another captain, under whom they might return to Egypt: the sentence that they must as a punishment wander forty years in the wilderness, till the whole of the adults should be worn out by death (Num. xiii and xiv. the whole of the chapters); the murmuring of the people for flesh, and the distress of Moses at the burden of his position over them (Num. xi. 1-15); the insurrection of Korah, Dathan and Abiram and the people's sympathy with them, even after their destruction (Num. xvi.)—all of these, and others which will occur to the reflective reader of the Scriptures, are passages in the history of Israel that are inexplicable as to how they came to be recorded, except on the one simple principle that they happened: for the tendency of them is to blacken the national character of Israel, and to take away all ground of even the commonest human satisfaction in the contemplation of their history. The invention of records having such a tendency is inconsistent with the universally known character of man, Jew and Gentile. Where invention is resorted to, it is to heighten the credit of a nation or its leaders. These things cannot have been invented. They are recorded because they happened; and in that case, God wrought with Israel in all their generations, from Moses to Christ, and, therefore, the Scriptures are the authentic and reliable records of divine revelation.

MR. BRADLAUGH'S ARGUMENT.

Mr. Bradlaugh made no attempt to meet his opponent's argument, but wasted his time with the technicalities of the evidence of the so-called "Christian fathers," whose writings are extraneous to the main subject. It was, perhaps, a clever diversion—an attempt to draw the enemy from a strong position; but not the course of an earnest man, persuaded of the truth of his argument, and prepared and anxious to grapple with all difficulties on their merits. Mr. Bradlaugh aims no higher than legal strategy. His tactics were well described by a friend of his who intended the description as a compliment, but which will hardly be regarded in that light by earnest men. The friend in question, signing himself "T. Evans," described Mr. Bradlaugh as "most skilful of fence," remarking that had he not been so, "he would have been 'cornered' several times."—*National Reformer*, July 2, 1876. "Fence" is all very well in the conduct of a law case in court, where the aim is to avoid by hook or by crook material damage; but when it is resorted to in a process which concerns the investigation of truth for its own sake, it becomes an illegitimate and contemptible art, which only men bent upon a personal triumph would use. It really means the art of obscuring as much as possible the facts which the other side may seek to exhibit, and of evading the logical results of facts that have to be admitted. The employment of such an art amounts to the intrusion of brute force upon the domain of reason, and the arrest of the process of evidence by mechanical obstruction—an art cultivated by a certain class of the legal profession, but not to be considered admissible in the field of candid polemics.

An illustration of it was furnished in the very instance on which Mr. Bradlaugh's friend in question particularly complimented him, in a letter appearing at the time of the discussion in the columns of the *National Reformer*. The instance concerned the extract from Athenagoras, which was cited by Mr. Roberts to show that the New Testament existed in the days of Athenagoras, inasmuch as Athenagoras cites one of the precepts of Christ, drawn from Matt. v. 44-45. Athenagoras does not give a reference to Matthew, he uses the words of Matthew, which is the material argument in the case. But in Dr. Brewer's compilation, from which Mr. Roberts quoted the extract, the reference is supplied, not as part of the quotation but as a mere guide to the student, by which he may prove whether the words quoted are Matthew's words or no. Mr. Bradlaugh holding the book in his hand, seized hold of this feature and declared with much vehemence that the reference to Matthew was not in Athenagoras at all, but had been added by Dr. Brewer; which, of course, was true, but did not dispose of the evidence of Athenagoras at all. The evidence

Digitized by Google

of Athenagoras consisted in *his using words that are in Matthew, in describing to the Emperor the precepts in which the Christians were taught.* But Mr. Bradlaugh concealed, or sought to conceal this evidence by declaiming about the reference which had never been put forward at all! His manner of doing it betrayed a consciousness that he was indulging in artifice; but of course the unthinking portion of the audience, unable on the spot to discern between the one thing and the other, could not see the wince either in the manner or the argument, but thought a strong point had been made, while the correspondent in the *National Reformer* spoke of Mr. Bradlaugh disposing of Athenagoras "as easily as an athlete would overthrow a child." "It was shown," said he, "that the *material words* of reference had been added." The writer of these words either did not comprehend "the material words" in the argument or he deliberately lent himself to a false note of triumph. This is a fair specimen of the kind of sophistry by which thousands are daily hoodwinked, and apparently glad to be so.

The instances in which Mr. Bradlaugh did touch on the merits of the argument were few. Referring to the statement in the Mosaic account of the exodus, that the clothes of the children of Israel did not wax old during the forty years' sojourn in the wilderness, he asked the audience to imagine a man at the end of the forty years wearing the clothes he had when a baby. Of course the audience laughed; but the folly at which they laughed was Mr. Bradlaugh's—not the Bible's. Babies' clothes might be of unwasting stuff without being used for those who had outgrown them. Sensible mothers would put bye the undecaying articles for the babies to come after; and it is only Mr. Bradlaugh's reckless logic that requires us to suppose that the Jewish mothers that came out of Egypt were less sensible than the Jewish mothers of to-day.

So when he points to John the Baptist sending disciples to Jesus to know whether he were the Christ or no, and asks how this is consistent with John having heard a voice from heaven at the Jordan, declaring at Christ's baptism that he was the Son of God, he only appears to strike a blow at the New Testament account. No better proof than this very circumstance could be given that the New Testament narrative is an unconcocted and true narrative. A concoctor of such a story would have imagined and represented John the Baptist as, of course, animated by a sublime and indomitable confidence that no circumstances could affect. But the narrative being true, we find John subject to the weakness of human nature. Shut up in prison at a time when, in common with all the disciples, he "thought the kingdom of God would immediately appear" (Luke xix. 11), the overpowering effect of confinement and hope inexplicably deferred, is seen in an embassage to Christ to re-assure himself. And Christ's answer, instead of being inconsistent with truth, must appear in the opposite light to every reflecting mind. Mr. Bradlaugh asks why he did not remind John of the heavenly voice at his baptism. Jesus did better than that. He did not appeal to faltering human memory of an event already doubted; he appealed to *what was actually transpiring.* "Go and tell John WHAT YE SEE: how that the dead are raised," &c. If the story had been concocted, no doubt the narrative which, in the first place, would never have represented John in doubt, would, in the case of that supposition, have made Christ appeal triumphantly to the events of the Jordan.

The same train of confirmatory thought is suggested in relation to that other and more painful scene in the history of Christ, which Mr. Bradlaugh desecrated with his blasphemous declamation: viz., the agony of his expiring moments, when he exclaimed: "My God, my God, why hast Thou forsaken me?" Mr. Bradlaugh asked how such an exclamation could come from the lips of a man who knew that his death was to be the salvation of the world; and whether the words are not a confutation of his professed character. The question derives its piquancy from the assumption that the tranquillity and mental composure of the Saviour ought to have been imperturbable. No doubt, in the case of an invented Christ, it would have been so represented. We should have had the sort of demeanour imputed to him that is alleged of the canonized "saints" of Roman Catholic fable. We should have had the spectacle of a transfixed man, looking placid and at ease, and delivering himself, in beatific trance, of an unnatural speech, calling upon heaven and earth to witness his confidence and submission without murmur or wince to a death which was necessary for the salvation of men. Instead of that, we have "the man Christ Jesus," showing all the suscepti-

Digitized by Google

bilities of a human being. We have him approaching death the day before with a fearful apprehension that caused him to "sweat as if it were great drops of blood." We have him praying earnestly that if it were possible, the cup might pass from him: "yet not my will but Thine be done." After this, we have him unresistingly submitting to apprehension and condemnation and crucifixion. And then we see him transfixed on the cross, suspended in the most agonizing position in which it is possible for a human being to be placed, with the whole weight of his body bearing upon his out-stretched and lacerated hands and feet. We see him endure for six hours the fierce agonies of crucifixion, and at the end of that time, it is no unnatural sound we hear when with a loud wail of agony, he exclaims "My God! my God! why hast Thou forsaken me?" Is such a wail inconsistent with his previous knowledge in hours of calmness that God required him to die? Nay, is it inconsistent even with the continuance of that knowledge? Was it not the fact that God had forsaken him in the sense of leaving him in the hands of his enemies, and in the sense, too, of withdrawing from him that overshadowing and immeasurable presence of the Spirit that had been with him during all the days of his ministry? The "why" may seem to express surprise where expectation ought to have excluded it, but we have to think that although the fact of his death was known to him beforehand, it may be that he did not realise to himself all the horrors of the ordeal till the dark cloud actually came upon him; and that in the weakness of the hour (for he was crucified through, in or out of weakness—2 Cor. xiii. 4), his mental vision may have become clouded with the shadow of death, and caused him to ask what he would not have asked in the calm prospect of the event itself. The whole picture is thoroughly unartificial. It is such as men depicting an imaginary or invented Christ would never have drawn. No stronger evidence exists of the truth of Christ's profession and mission than those very dying words which Mr. Bradlaugh made the subject of his coarse enquiries.

SIXTH NIGHT.

MR. ROBERTS'S ARGUMENT.

In nature, the argument was satisfactory, but not in extent. This was inevitable from a vast subject having to be crowded into a very small compass. Its vastness may be inferred from the fact that Bishop Newton, in attempting to illustrate the fulfilment of Bible prophecy, filled a volume of hundreds of pages.

However, its logical essence is not weakened by brevity. Its pith lies in the fact of the universal impossibility of prophecy. It is impossible to lay too much stress on this fact. The foretelling of an eclipse is not a prediction: it is merely an arithmetical deduction from known rates of progress. The predictions which belong to the Bible have to do with the state of countries, the fortunes of races, the destinies of individuals—all matters quite beyond human calculation. The results in these cases depend upon so many unknown contingencies that only a Power having control of those contingencies could say what will happen. It will convince anyone of this if they try to foretel the issues of the Eastern Question; the future of France; the fate of the Disraeli Ministry, or the destiny of the Prince Imperial.

The notion that Moses and the prophets were only astute men who by a large discernment of human affairs, were able to foretel what should happen centuries afterwards, is not only absolutely gratuitous, but it is opposed to all experience of men. There are probably as astute men living in our day as in any age, and where is the man that can tell us a day ahead what shall be? On the natural discernment theory, there ought to be better prophets now than at any time, because there is so much larger a stock of human experience to go by than at any former time. But in point of fact, there is not the least ability anywhere to fortel the future. The future is a dead wall to the human eye. No man can forecast even the markets for a day ahead, let alone political destines which are so peculiarly liable to unknown contingency. This inability to penetrate the future is appealed to in the Scriptures

Digitized by Google

as the evidence of imposture on the part of those in Israel who falsely pretended to be divine. The challenge is put in this form: "Let them bring forth and *show us what shall happen* . . . SHOW THE THINGS THAT ARE TO COME HEREAFTER that we may know that ye are gods."—(Isa. xli. 22-23.) In contrast to this, we have the following declaration from God: "I am God, and there is none like me, *declaring the end from the beginning* and from ancient times, *the things that are not yet done*, saying, my counsel shall stand and I will do all my pleasure." "Behold the former things are come to pass, and new things do I declare: BEFORE THEY SPRING FORTH, I TELL YOU OF THEM" (Isa. xlvi. 9; xlii. 9). Moses and the prophets foretold the fate of the Jews thousands of years ahead, and also the leading developments of Gentile power in their relation to God's further purpose on earth. It cannot be said that the ability to do this was a Jewish faculty: for the Jews are as helpless to-day as their Gentile neighbours. They have had no prophets among them since God forsook them for their iniquities, and dispersed them through the countries. There is only one possible explanation of the prophecies in the case, and that is the explanation given by the prophets themselves, when they represent that God spoke to them what they said and wrote, and in that case, the Scriptures are the authentic and reliable records of Divine revelation.

MR. BRADLAUGH'S ARGUMENT.

Mr. Bradlaugh simply evaded the issue, and sought to cover his retreat by a great outcry against the alleged prurient character of the Bible. This was sufficiently met in the debate. It is one of the proofs of the Bible's divinity that it speaks of things as they are without reference to human delicacies, which in most cases are a mere recoil from appearances not founded on an intrinsic aversion to wrong. Many minds easily shocked at a breach of human manners, are absolutely insensible to impressions of righteousness. The Bible deals with facts and truth; and if these may sometimes appear prurient, it is only because of the prurient fastidiousness of mankind, and not because of the use made of the facts. If the Bible ever makes delicate allusions, it is never in the spirit of lust, but always as a mere matter of literal and colourless fact. In this there is a vast difference between the Bible and other books with which Mr. Bradlaugh most unreasonably sought to class it. Shakespeare and Byron would have no fascination for prurient readers if their allusions were like the Bible's. Mr. Bradlaugh's inuendo would have more force against medical books than against the Bible: but the fact is, there is no reason in the objection whatever. It was one of several instances in which Mr. Bradlaugh's reckless logic allowed him to appear in the unnatural character of an indignant virtuoso against a book which, in spite of all his diatribes, teaches a virtue beyond the capacity of the majority of men to understand or appreciate.

The only other thing calling for notice is Mr. Bradlaugh's remark, that in the case of there having been a pre-Adamite race, Adam was not "the first man" which 1 Cor. xv. 44 calls him. The answer is, first, the pre-Adamite race are not spoken of as man but as "the angels which sinned" (2 Pet. ii. 4), and that, therefore, there is no inconsistency in describing Adam as "the first *man*." And, secondly, even if the pre-Adamite race had been human, Adam was "the first man" of the present race, and as this is the sense in which Paul uses the phrase, it is in no way inconsistent with the pre-Adamite existence of another race of which he was not then speaking.

CONCLUSION.

The Review is now at an end. Mr. Roberts thanks Mr. Bradlaugh for permitting him to add to it the report of the discussion. Mr. Roberts has offered Mr. Bradlaugh the opportunity of writing a rejoinder to it for appearance in the same pamphlet, but Mr. Bradlaugh has not accepted the offer; and, therefore, the report and the review go forth without the reply from him that he might be able to give; but Mr. Bradlaugh has other means of letting his friends know his mind, of which he

Digitized by Google

will, doubtless, avail himself should he consider it necessary to take notice of anything appearing herein.

It is only fair to Mr. Bradlaugh to add that as far as the report of the last three nights of the debate is concerned, he has not revised it, though offered the opportunity of doing so. He considers the reporting of that part of the debate badly done. In fact he stated this to be the reason for his declining the task of revision. The labour required, he said, would be too great to be accomplished within a reasonable time. It is right to say that the part of the debate in question was reported by a man appointed by Mr. Bradlaugh's own agent; and that the first half of the debate which Mr. Bradlaugh commended as well done, was reported for Mr. Hodgkinson, of Norman Cross, by Mr. Arthur Andrew, with Mr. Pulbrook, 28, Threadneedle Street, London.

TWELVE LECTURES

ON THE

TEACHING OF THE BIBLE IN RELATION TO THE FAITHS OF CHRISTENDOM:

Being a Fifth Edition, with Five Additional Lectures.

BY ROBERT ROBERTS,

OF BIRMINGHAM.

CONTENTS.

LECTURE I.—The Bible—what it is, and how to interpret it.

LECTURE II.—Human nature essentially mortal, as proved by nature and revelation.

LECTURE III.—The dead unconscious till the resurrection, and consequent error of popular belief in heaven and hell.

LECTURE IV.—Immortality a conditional gift to be bestowed at the resurrection.

LECTURE IV. (a.)—Judgment to come; the dispensation of divine awards to responsible classes, after account taken at the advent of Christ.

LECTURE V.—Bible teaching concerning God, angels, Jesus Christ, and the crucifixion shown to be subversive of "orthodox" views.

LECTURE V. (a.)—The devil not a personal agent or supernatural power of evil, but a Scriptural personification of sin in its several forms of manifestation.

LECTURE VI.—The kingdom of God not yet in existence, but to be established visibly on the earth at a future day.

LECTURE VI. (a.)—The promises made to the fathers (Abraham, Isaac, and Jacob), yet to be fulfilled in the setting up of the kingdom of God on the earth.

LECTURE VII.—The kingdom of God the final instrumentality in the great scheme of human redemption.

LECTURE VIII.—Christ the future king of the world.

LECTURE VIII. (a.)—The covenant made with David to be realised in the establishment of the kingdom of Israel under Christ.

LECTURE IX.—The second coming of Christ the only Christian hope.

LECTURE X.—The hope of Israel, or the restoration of the Jews, a part of the divine scheme and an element of the Gospel.

LECTURE XI.—Coming troubles and the second Advent.

LECTURE XI. (a.)—Times and signs; or the evidence that the end is near.

LECTURE XII.—The refuge from the storm, or, What shall we do to be saved?

BIRMINGHAM:

TO BE HAD OF R. ROBERTS, ATHENÆUM ROOMS, TEMPLE ROW.

Price Three Shillings, in leather; cloth, 2s.6d.

between the order, the method, and the plan of nature, and what we see when we watch a mechanician working according to a plan, to produce a designed result. The only real parallel would be our perception by sense of a world slowly evolving from chaos, according to a plan previously foreseen. From the product you are at liberty to infer a producer only after having seen a similar product formerly produced. But the product which supplies the basis of this argument is unique and unparalleled; 'a singular effect,' in the language of Hume, whose reasoning on this point has never been successfully assailed. And the main difficulty which confronts the Theist, and which Theism essays to remove, is precisely that which the consideration of design does not touch—viz., the origin, and not the arrangement, of the universe. The teleological analogy is, therefore, worthless. There is no parallel, we repeat, between the process of manufacture and product of creation, between the act of a carpenter working with his tools to construct a cabinet and the evolution of life in nature. On the contrary, there are many marked and sharply-defined contrasts between them. In the latter case there is fixed and ordered regularity, no deviation from law; in the former, contingency enters, and often alters and mars, the work. Again, the artificer simply uses the materials which he finds lying to hand in nature. He *detaches* them from their natural connections. He arranges them in a special fashion. But in nature, in the successive evolution of her organisms, there is no detachment, no displacement, no interference, or isolation. All things are linked together. Every atom is dependent on every other atom, while the organisms seem to grow and develop 'after their kind' by some vital force, but by no manipulation similar to the architect's or builder's work. And yet, again, in the one case the purpose is comprehensible. The end is foreseen from the beginning. We know what the mechanician desires to effect; but in the other case we have no clue to the 'thought' of the architect. Who will presume to say that he has adequately followed the purposes of nature in the adjustment of her phenomena to one another? But (3) the only valid inference from the phenomena of design would be that of a phenomenal first cause. The inference of a personal divine agent or substance, from the observation of the mechanism of the universe, is invalid. What link connects the traces of mind which are [said to be] discernible in nature with

an agent who produced them? There is no such like. And thus the divine personality remains unattested. The same may be said of the divine unity. Why should we rest in our inductive inference of one designer from the [alleged] phenomena of design, when these are [claimed to be] so varied and so complex? Or grant that in all we observe a subtle and pervading unity is found, and as a consequence all existing arrangements point to one designer, why may not that designer have been at some remote period himself designed? And so on *ad infinitum* (see on this 'Paley Refuted in his Own Words,' by George Jacob Holyoake; and, *per contrâ*, 'Theism,' by John Orr).

"But, in the second place, not only is the argument defective (admitting its validity as far as it goes), even partial validity cannot be conceded to it. The phenomena of design not only limit us to a finite designer, not only fail to lead us to the originator of the world, or to a personal first cause, but they confine us within the network of observed designs, and do not warrant faith in a being detached from, or independent of, these designs, and therefore able to modify them with a boundless reserve of power. These designs only suggest mechanical agency working in fixed forms according to prescribed law. In other words, the phenomena of the universe, which distantly resemble the operations of man, do not in the least suggest an agent exterior to themselves. We are not intellectually constrained to ascribe the arrangement of means to ends in nature to anything supra-mundane." Why may not the phenomena of the universe be the mere endless evolution of the universe itself? "But if the inference from design is valid at all, it must be valid everywhere; all the phenomena of the world must yield it equally. No part of the universe is better made than any other part. Every phenomenon is adjusted to every other phenomenon nearly, or remotely, as means to ends. Therefore, if the few phenomena, which our teleologists single out from the many, are a valid index to the character of the source whence they have proceeded, everything that exists must find its counterpart in the divine nature. If we are at liberty to infer an Archetype above, from the traces of mind beneath, must not the phenomena of moral evil and sin be on the same principle carried upwards by analogy? a procedure which would destroy the notion of Deity which the teleologists advocate. If we are at liberty to conclude that a few phenomena, which

seem to us designed, proceed from and find their counterpart in God, reason must be shown why we should select a few and pass over other phenomena of the universe. In other words, if the constructor of the universe designed one result from the agency which he has established, must he not have designed all the results that actually emerge? and if the character of the architect be legitimately deduced from one or a few designs, must we not take all the phenomena which exist to help out our idea of his character? Look, then, at these phenomena as a whole. Consider the elaborate contrivances for inflicting pain, and the apparatus so exquisitely adjusted to produce a wholesale carnage of the animal tribes. They have existed from the very dawn of geologic time. The whole world teems with the proofs of such intended carnage. Every organism has parasites which prey upon it; and not only do the superior tribes feed upon the inferior (the less yielding to the greater), but the inferior prey at the very same time no less remorselessly upon the superior. If, therefore, the inference of benevolence be valid, the inference of malevolence is at least equally valid: and as equal and opposite the one notion destroys the other" (*British Quarterly Review*, No. cvii., p. 52).

Victor Cousin, in his 25th Lecture ("History of Modern Philosophy," pp. 418 to 426), examining Locke's "Essay on the Human Understanding," takes occasion to sum up, from a Theistic point of view, the various arguments for the existence of God; but all his points having been already touched on here, it is unnecessary to do more than to refer the student to him.

We come now to the fourth division of our subject (see page 121). Sir William Hamilton says ("Discussions on Philosophy," p. 623): "The only valid arguments for the existence of a God and for the immortality of the human soul rest on the ground of man's moral nature." It is with a phase of this argument that Kant's name is especially associated. Immanuel Kant was born at Königsberg, 22nd April, 1724, died 12th February, 1804. Unquestionably one of the greatest thinkers of the eighteenth century, Kant is very differently judged by opposing readers. His words are difficult to comprehend, partly because of his special terminology, and partly because his style is extremely involved. Kant was a Theist, but his notions of future life seem occasionally to savour of the doctrine of

metempsychosis. Victor Cousin says that, "after having commenced by a little idealism, Kant ends in Scepticism" ("History of Modern Philosophy," vol. i., p. 132); and it is affirmed that, questioned towards the close of his life as to his ideas on a future state, the Prussian philosopher responded, "I have no notion of a future state" ("Biographie Universelle," vol. vii., p. 92). But see on this "Life and Works of Kant," by A. G. Henderson, p. liii., introduction to Victor Cousin's "Lectures on the Philosophy of Kant." De Quincey rather recklessly declares of Kant that "he exulted in the prospect of our absolute and ultimate annihilation; that he planted his glory in the grave, and was ambitious of rotting for ever."

Before stating the ethico-theological argument, it will be well to show how Kant deals with the first and second divisions of the Theistic evidences ("Philosophy of Kant," by Victor Cousin, translated by A. G. Henderson, p. 120):

"Speculative reason has but three species of arguments to demonstrate the existence of God; Kant calls them *physico-theological*, *cosmological*, and *ontological*.

"The two first set out from experience; in the *physico-theological* proof we examine the order and beauty of the world, and establish the existence of God as an explanation of this order and beauty." [We have already fully stated the objections both to the "order and beauty" assumed, and the conclusion sought to be deduced from this alleged order and beauty, and in restating, in Cousin's words, the three classes of arguments, we need only ask the reader to bear this in mind.] "In the *cosmological* proof we take no account of the harmony revealed to us by experience; it is sufficient that this experience should attest any contingent existence to enable us to pass from this contingent existence to that of an existence absolutely necessary Finally, in the third proof, the *ontological*, we throw aside all experience, and conclude from the *idea* of perfect being to its existence.

"Kant begins by discussing the *ontological* proof, because, according to him, the two others rest upon this one.

"This proof is no other than that of St. Anselm. It was introduced into modern philosophy by Descartes, and the last form under which it appears was given to it by Leibnitz. It is under this form that Kant considers it, and undertakes to refute it; perfect being contains all reality, and it is admitted that such a being is possible—that is to say, that

its existence implies no contradiction. Now, all reality supposes existence. There is therefore a thing possible, in the concept of which is comprised existence. If this thing be denied, the possibility of its existence is also denied, which is contradictory to the preceding. You see here Leibnitz's argument, viz., God is, if he is possible, since his possibility—that is to say, his very essence—carries with it his existence; and thus to admit it as possible, and not, at the same time, to admit it as existing, is a contradiction. Kant attacks this argument in the following manner:— First, we must carefully distinguish between logical necessity, or that species of necessity which connects together an attribute with its subject, with the real necessity of things, and guard ourselves from concluding the second from the first. When I say a triangle is a figure which has three angles, I indicate a necessary relation in such a way that, the subject once given, the attribute is inevitably linked with it. But, although it is contradictory to suppose a triangle after suppressing in thought the three angles, it involves no contradiction to suppress both one and the other, both subject and predicate. In like manner, though it is a contradiction to deny omnipotence when we suppose God, it is no contradiction to deny both; here all disappears, attribute and subject, and there is no longer any possible contradiction. If it be said that there is such a subject which cannot be suppressed, and should therefore remain, the answer is, that this is reaffirming an absolutely necessary subject, and is begging the question.

"Kant insists that there is no contradiction in the negation of God's existence. When we say of such and such a thing, whose existence we regard as possible, that such a thing exists, what species of proposition is employed? Do we employ an analytical or a synthetical proposition? If, in affirming the existence of anything, an analytical proposition be employed, we add nothing to the idea we have of it, and we consequently affirm this existence only because it is already in the idea which we have already of the thing itself, which is but a repetition. It proves nothing in reference to the *real* existence, for it is not already given as existent. On the other hand, is the proposition which affirms the existence of any certain thing synthetical? In that case there is no contradiction in suppressing the predicate of existence; for analytical propositions are the only ones in which, according to Kant, any contradiction is implied by a

denial of the predicate, the subject being once given. It is by this means that we recognise such propositions. It is thus a contradiction to suppose a triangle, if in thought we suppress the three angles—to suppose God, if we deny omnipotence; because these propositions, a triangle is a figure which has three angles, God is omnipotent, are analytical propositions. But if the proposition which affirms the existence of God be synthetical, how can it involve any contradiction to suppose the non-existence of God? The contradiction would only be possible on the supposition that the proposition is analytical, and this can only be on the condition of its proving nothing.

"Again, how can we conclude, from the mere conception of a perfect being, that it exists, so long as the existence itself is not an attribute, a predicate which determines the idea of the subject? Now, existence cannot be regarded as an attribute, whose idea, added to that which we have of the subject, developes it, completes it, determines it. When I say God is all powerful, the attribute all-powerful determines the idea of God; but when I conceive God as simply possible or real, the idea of him rests the same in both cases. Here it is certain that the real involves nothing more than the possible; if it were otherwise, the idea which we have of anything would not be complete until we had conceived it as possible. It follows that if I conceive a being as perfect, I may perplex myself as much as I please by trying to evolve from the idea the real existence. The question of existence always remains, and it is not from the conception of the object, conceived as possible, that we can draw the concept of its reality. We are, therefore, obliged to quit the concept of an object if we would accord to it any real existence. This conclusion, if just, upsets the ontological argument, since this argument pretends to conclude from the idea of a perfect being, conceived as possible, its reality. 'Thus,' says Kant, 'Leibnitz is far from having done what he intended, though he may have arrived at the knowledge *à priori* of the possibility of the existence of an ideal being so elevated. In this celebrated ontological proof for the existence of a supreme being, all labour is in vain; and a man no more augments his knowledge by ideas than a merchant augments his fortune by adding a few cyphers to the sum which expresses his capital.'

"But though the argument which has just been examined

may prove nothing, and may not establish the real existence of God, may we not hope to succeed by adopting a different mode of argument? No, according to Kant; and here reappears the difficulty, insoluble according to him, which the transcendental dialectic opposes to the validity of human knowledge. As the existence of God, or of the perfect being, is placed beyond the conditions of experience, we have no right either to deny or affirm it; to suppose it, is to make a supposition which may be useful, perhaps necessary to the development and perfection of intelligence, but which can in no other manner be justified, at least under the actual conditions of human existence."

Again (page 130): "The argument which Kant calls *cosmological* is that which Leibnitz has named *à contingentiâ mundi*. Kant thus presents it: 'If anything whatever exists, then there must exist an absolutly necessary being; now, something does exist, as, for example, myself, therefore an absolutely necessary being exists. The minor contains an experimental fact, and the major concludes from an experimental fact in general to the existence of a necessary being. The proof thus sets out from experience, and is not, therefore, *à priori* or ontological.

"Kant makes necessary being a sort of monstrosity. 'The absolute necessity,' he says, 'which we seem to consider so indispensable a thing as the last support of all things, is the veritable gulf of human reason. Eternity itself, however sublime and however terrible, as depicted by Haller, turns the brain less, for it but measures the duration of things, and does not attempt to sustain them. We can neither banish the thought, nor can we support it, that a being, which we represent to ourselves as the highest of all possible beings, might say to himself, 'I am from all eternity; out of me nothing exists but as I will. *But whence am I, then?* Here we are lost.'"

Dr. John Pye Smith says ("First Lines of Christian Theology," p. 170):

"It is one of the fundamental principles of the moral philosophy of Kant that we cannot but perceive a *connection*, constant and inseparable, between virtue and happiness; that this connection is totally *independent* of ourselves—we did not make it, it has a manifest existence (though debilitated and confined) under the most unfavourable circumstances, and we cannot abrogate it; and that, therefore, it is *communicated by God*, the Being of Supreme

Perfection, and to whom moral goodness must be necessarily and always agreeable."

"The sovereign good," says Kant ("Philosophy of Kant," p. liv.), "is not possible in the world unless we admit a Supreme Being, endowed with a causality conformable to moral intention. Now, a being which is capable of acting according to the representation of certain laws is an intelligence (a rational being), and the causality of such a being, as determined by this representation, is a will. Therefore, the supreme cause of nature, as a condition of the sovereign good, is a being who is the cause of nature, as intelligence and will (consequently the author of nature)—that is to say, *God*." This assumed "sovereign good" exists only in the imagination of Kant. We can only measure the goodness of any given act by its tendency to happiness. If a "supreme being" be assumed as "cause of nature," cause of "sovereign good," then no state should exist, which is not within those words. The existence of any "guilt" or "misery" is conclusive against a supreme cause sufficient for universal "sovereign good."

In a dialogue between a preceptor and scholar, Kant says (p. lxi.):

"P. Has reason any ground for believing it *as real*, any such supreme power, dealing out happiness and misery according to desert and guilt, having sway over the whole physical system, and governing the world with the most unerring wisdom—in other words, that God exists?

"S. Yes; for we discover in those works of nature that we can judge of, marks of wisdom so vast and profound that we can account for it only by ascribing it to the unsearchable will of a Creator, from whom we deem ourselves entitled to expect an equally admirable adjustment of the moral order of the world—that is, a harmony between virtue and happiness—and that we may hereafter hope to become partakers of this happiness, provided we do not, by a neglect of our duty, render ourselves unworthy of it." This is no more than saying that to account for uncomprehended phenomena we invent "the unsearchable will;" these words really meaning nothing whatever.

"The thinking subject," says Kant (p. 90), "is the object of psychology, the union of all phenomena (the world) is the object of cosmology; and that which contains the supreme condition of the possibility of all that can be thought, the being of all beings, is the object of theology.

Thus, the pure reason furnishes the ideas of a transcendental science of the soul *(rational psychology)*, a transcendental science of the world *(rational cosmology)*, and, lastly, a transcendental science of God *(transcendental theology)*."

"Let us add," says Victor Cousin (p. 177), "that Kant's God, or, at least, the God of his metaphysic, is not the God of humanity. What, indeed, is he? A pure ideal, at the summit of human knowledge, which allows the mind to raise it to the highest possible unity, but which can have no legitimate value. Is it this ideal, destitute of reality; is it this hypothetical object of a regulative idea, which all men look up to as the cause and primitive substance of all things, the Being of Beings, and the Father of the human race?"

Victor Cousin is right in his objection to Kant's God as "destitute of reality;" but the same objection is, we submit, equally potent against M. Cousin's "Being of Beings and Father of the human race." There is surely no more reality in the one "ideal" than in the other. There is no legitimate value in the phrase "Father of the human race," and we maintain that the words, if submitted to analysis, contain no truth. Kant presents us with an unsatisfactory array of subtle word-play; and it is sometimes difficult to imagine that he was earnestly enlisted on either side, so much do his reasonings tell for and against both positions. This is remarkably illustrated in his four antimonies.

The four antimonies of Kant are ("Philosophy of Kant," p. 106):—First, the *thesis* is: "The universe has had a beginning in time, and has a boundary in space." To establish this thesis, Kant shows that the contrary supposition is inadmissible, and that it is impossible to regard the universe as not having a beginning. In fact, if it never had a beginning, it follows that every moment is in eternity—in other words, that at each instant the successive state of things in the universe form an infinite series. Now, the characteristic of an infinite series is this, that it can never be completed by a successive synthesis. Consequently, this infinite series of successive states is impossible. Therefore, we have a right to conclude that the world has had a beginning. In the same manner, it may be established that space is limited, by showing the impossibility of its being unlimited. If the world fills space entirely, we can only conceive it as an infinite number of parts. If this composition (of parts), which can only be successive, requires a time

proportioned to it, viz., an infinite time, it supposes an infinite time already passed, and we thus admit the hypothesis that has already been rejected; therefore, the world is limited in space.

"Such are the arguments in favour of the thesis. Those in favour of the antithesis, that *the world has not had a beginning in time, and that it has no limits in space*, are as conclusive. To establish the thesis, Kant has previously shown the impossibility of admitting the antithesis; now, in order to establish the antithesis, he shows the impossibility of admitting the thesis. If the world has had a beginning, the time which preceded its existence must have been void. Now in such a time nothing can begin to be, because existence in such a case must be as unconditional as non-existence; and we are driven to the supposition of things either passing from nothing to existence of themselves, or by the action of a foreign cause. On the other hand, if the world be limited in space, there is an empty space which limits it, which empty space is impossible. In fact, space, as we have seen, is simply the form of external intuition; its existence vanishes the moment it is considered independently of objects; consequently, though there may exist a relation amongst things in space, there cannot exist a relation of things to space, which it would be necessary to admit, under the supposition that the world is limited. It is, therefore, infinite.

"Second Antimony.—*Thesis:* 'Every compound substance is made up of simple parts; and everything in the universe is either simple or composed of simple elements.' If we suppose that compound substances are not composed of simple elements, these substances once decomposed, there would exist neither compound nor simple—there would, in fact, be nothing; and, consequently, the existence of substance itself might be denied, which is absurd. It follows that all substances are simple, and that compound bodies must be composed of simple parts, which demonstrates the thesis. But here is the antithesis: 'No compound thing is made up of simple parts, and nowhere do any such parts exist.' Suppose a compound body to be composed of simple parts, all such parts, like the compound body itself, must exist in space. Now, space itself, not being composed of simple parts, everything which occupies a space must have elements external to each other, and must consequently be compound. The simple would, therefore, be compound,

which is a contradiction. Besides, we can have no intuition of an ultimate uncomposed object; a simple substance is, therefore, but an idea, to which, in the sensible world, nothing corresponds. It may, therefore, be affirmed that no simple bodies exist in the world.

"Third Antimony.—*Thesis:* 'Everything that happens in the world cannot depend upon natural laws alone; we must admit the action of a free cause.' If there be only physical and natural laws, every event succeeds some anterior state. But this anterior state must have had a beginning, and, therefore, it supposes a state anterior to itself, and we arrive at a series of successive states, each engendering the other; so that we can never arrive at a commencement, and thus the series remains without any absolute condition. Now, it is a law that nothing happens without an efficient cause; it is, therefore, a contradiction to admit only the causality of nature; we must also admit an absolute and primitive causality, producing a series of phenomena by its absolute spontaneity—that is to say, a free cause. *Antithesis:* 'There is no such thing as liberty; everything in the world submits blindly to the laws of nature.' In any given moment, a cause is operative only on condition of its being itself previously uncaused. Now, either these two states of action and inertia are related to each other, or they are not. If one engenders the other, it may be asked, whence comes the first in its turn? and in this infinite series of causes, which we are obliged to acknowledge, the liberty of the agent disappears. If, on the contrary, these two states are independent of each other, then an effect may take place without a cause, which is absurd. Therefore, everything in the world is governed by the fatality of natural laws.

"Fourth Antimony.—*Thesis:* 'A necessary condition for the existence of the world is, that there should exist at the same time, whether in the world as making part of it, or out of the world as its cause, a necessarily existent being.' The sensible world, considered as an assemblage of phenomena, contains at the same time a series of changes. Now every change, every contingent phenomenon, implies an anterior condition; and reason obliges us to ascend from condition to condition until we arrive at something which does not depend upon any other—that is to say, something necessary. But this necessary being belongs himself to the sensible world, otherwise he would not exist in time, and could not in any sense be said to be the cause of a series

of events. There is, therefore, in the world something absolutely necessary, which is either the totality of the phenomena or simply a part of them. *Antithesis:* 'There is nowhere, neither in the world nor out of it, as its cause an absolutely necessary being.' Suppose that the world should either be itself, or contain in itself, a necessary being; there is then in the series of changes a beginning absolutely necessary, which is freed from the law of causality, or the series itself is without any beginning; and although all the parts are contingent, the union is necessary, which is contradictory. And, again, we cannot suppose a being placed *out* of the world, whose action takes place in time, who is himself consequently in time—that is to say, *in* the world. There is, then, nowhere a necessary being."

As there is very much difference of opinion as to Kant, and as Victor Cousin is charged with "having flagrantly misunderstood him on certain points," the reader is referred to the splendid summary by Mr. G. H. Lewes, in his "Biographical History of Philosophy" (vol. ii., ninth epoch), from which the scope of this work allows only a limited quotation:

"From Spinoza to Kant," writes Mr. Lewes (Lewes's "Biographical History of Philosophy." vol. ii., pp. 441-445), "the great question we have seen to be this: Have we any ideas which can be accepted as objective truths, and which, removed from the possible illusions of the senses and the understanding, may be made the basis of a philosophy revealing the realities of existence?

"This question, variously answered, resolved itself into the more definite question: Have we any ideas independent of experience?

"It had become evident that, before we could determine the objective value of our knowledge, we were bound to investigate the nature and conditions of the knowing faculties. Ontology thus was, for a time, superseded by psychology. Locke, Hume, the Sensational School, the Scotch School, and Gall, all these proclaim experience the foundation of knowledge; and yet, inasmuch as experience led irresistibly to scepticism, this was a dilemma which seemed only to be avoided by seeking refuge in common sense, *i.e.*, a denial of philosophy. Kant declined this refuge. He said it was the notable invention of modern times, whereby the emptiest noodle could place himself on a level with the profoundest thinker (*'Prolegomena: Vorrede,'* werke iii.,

170). He saw two conceptions of the world to be logically tenable : Materialism and Scepticism. He rejected both, and strove to reconcile what was true in both with what was true in the *à priori* doctrine. He called his system a *Criticism*. His object was to examine into the nature of this experience which led into scepticism. While men were agreed that experience was the source of all knowledge, Kant asked himself, What is this experience ? what are its elements ?

"The problem he set himself to solve was but a new aspect of the problem of Locke's *Essay*. On this deep and intricate question of human knowledge two opposite parties nad been formed—the one declaring that all our knowledge was given in experience, and that all the materials were derived from sensation, and reflection upon those materials ; the other declaring that these only furnished a portion of our knowledge. This second part maintained that there were elements of knowledge which not only were never derived from sensation, but which absolutely *transcended* all sensation ; such, for instance, is the idea of substance. Experience only informs us of *qualities*. To these qualities we add a substratum, which we call substance ; and this idea of a substratum, which, we are *compelled* to add, Locke himself confesses we never gained through any sensation of matter. Other ideas, such as causality, infinity, eternity, &c., are also independent of experience ; *ergo*, said this school, antecedent to it.

"In the course of inquiry, the untenableness of the theory of innate ideas has become apparent. Descartes himself, when closely pressed by his adversaries, gave it up. Still, the fact of our possessing ideas apparently *not* derivable from experience remained, and this fact was to be explained. To explain it, Leibnitz asserted that, although all knowledge *begins with* sensation, it is not all *derived from* sensation—the mind furnishes its quota; and what it furnishes has the character of universality, necessity, consequently of truth, stamped on it. This doctrine, slightly modified, is popularly known as the doctrine of 'original instincts,' of 'fundamental laws of belief.'

"Kant also recognised the fact insisted on by the adversaries of the Sensational School ; and this fact he set himself carefully to examine. His first object was, therefore, a criticism of the operations of the mind.

"Kant considered that his conception of a purely critical

philosophy was entirely original. No one before him had thought of thus subjecting reason itself to a thoroughly critical investigation, in order to reach answers to such questions as: Are *à priori* synthetic judgments possible? Is a science of metaphysics possible? And here may be noted an illustration of what was said at the opening of this section respecting Kant's originality. Certainly, no one had isolated the *à priori* elements of knowledge from those given in experience, as Kant isolated them, to build a system thereon; nevertheless the whole tendency of speculative development, since Hobbes, has been, as we have seen, towards the investigation of the grounds of certitude, *i.e.*, towards a criticism of the knowing faculties.

"On interrogating his consciousness, Kant found that neither of the two ordinary explanations would account for the phenomena; certain ideas, such as time, space, causality, &c., could not be resolved into experience alone; nor, on the other hand, although *à priori*, could they be supposed absolutely *independent* of experience, being, as it were, only the *forms* (necessary conditions) of our experience.

"There are not *two* sources of knowledge, said he: on the one side external objects, and on the other human understanding. Knowledge has but *one* source, and that is the *union* of object and subject; it is the function of two co-efficients. Thus, water is the union of oxygen and hydrogen; but you cannot say that water has two causes, oxygen and hydrogen. These are its conditions *(Bedingungen)*, its co-efficients; it has only one cause, namely, the union of the two.

"In this conception the existence of the two distinct factors is assumed. 'That all our knowledge begins with experience,' he says, 'there can be no doubt. For how is it possible that the faculty of cognition should be awakened into exercise otherwise than by means of objects which affect our senses, and partly of themselves produce representations *(Vorstellungen)*, partly rouse our powers of understanding into activity, to compare, to connect, or to separate these, and so to convert the raw material of our sensuous impressions into a knowledge of objects which is called experience? In respect of time, therefore, no knowledge of ours is antecedent to experience, but begins with it. But although all our knowledge begins with experience, it by no means follows that it arises out of experience. For, on the contrary, it is quite possible that our empirical knowledge

(Erfahrungserkenntniss) is a compound of that which we receive through impressions, and that which the faculty of cognition supplies from itself (sensuous impressions giving merely the *occasion*), an addition which we cannot distinguish from the original element given by sense, till long practice has made us attentive to and skilful in separating it. It is, therefore, a question which requires close investigation, and is not to be answered at first sight: Whether there exists a knowledge altogether independent of experience, and even of all sensuous impressions?'"

Mr. Lewes says of Kant (Lewes's "Biographical History of Philosophy," vol. ii., pp. 461-462):

"His object was to give a theory of all the pure elements, *à priori*, which enter into knowledge as distinguished from the *à posteriori* elements. He advances four fundamental propositions:

"1. That experience does not furnish the whole of our knowledge.

"2. That what it does furnish has the character of contingency and variability.

"3. That the mind also furnishes an element, which element is an inseparable condition of all knowledge; without it knowledge could not be.

"4. That this element has the character of universality and necessity.

"5. And that the principle of all certitude is precisely this universality and necessity.

"He set himself to examine the nature of the mind, and to trace the distinctive characters of each element of knowledge, *i.e.*, the objective and the subjective. Instead of saying, with the Sensational School, all our knowledge is derived from the senses, Kant said, *Half* of our knowledge is derived from the senses, and the half which has another origin, is *indissolubly bound up with the former half.* Thus, instead of saying with the Cartesians, that, besides the ideas acquired through the sense, we have also certain ideas, which are innate and irrespective of sense, Kant said *all* our ideas have a double origin, and this two-fold co-operation of object and subject is *indispensable* to all knowledge."

"*First Result* (Lewes's "Biographical History of Philosophy," vol. ii., pp. 471-473).—A knowledge of things *per se (Dinge an sich)* is impossible, so long as knowledge remains composed as at present. Consequently ontology, as a

science, is impossible. But it may be asked, if we never knew noumena *(Dinge an sich)*, how do we know that they exist? The answer is simple: Their existence is a necessary postulate. Although we can only know the appearances of things, we are forced to conclude that the things exist. Thus, in the case of a rainbow, we discover that it is only the appearance of certain drops of water. These drops of water, again, although owing their shape, colour, &c., to our sensibility, nevertheless exist. They do not exist *as* drops of water, because drops of water are but phenomena; but there is an unknown something which, when affecting our sensibility, appears to us as drops of water. Of this unknown something we can affirm nothing, except that it necessarily exists because it affects us. We are conscious of being affected; we are conscious also that that which affects us must be something different from ourselves. This the law of causation reveals to us. A phenomenon, inasmuch as it is an appearance, pre-supposes a noumenon—a thing *which appears;* but this noumenon, which is a necessary postulate, is only a negation to us. It can never be positively known; it can only be known under the conditions of sense and understanding—*ergo*, as a phenomenon.

"*Second Result.*—The existence of an external world is a necessary postulate; but its existence is only logically affirmed. From the foregoing, it appears that we are unable to know anything respecting things *per se;* consequently, we can never predicate of our knowledge that it has objective truth. But our knowledge being purely subjective and relative, can we have no certainty? are we to embrace scepticism? No.

"*Third Result.*—Our knowledge, though relative, is *certain.* We have ideas independent of experience, and these ideas have the character of universality and necessity. Here we see the effect of confusing cognitions with conditions of cognition. It is not ideas that are independent of experience, but organic conditions on which ideas depend. Although we are not entitled to conclude that our subjective knowledge is completely true as an expression of an objective fact, yet we are forced to conclude that within its own sphere it is true.

"*Fourth Result.*—The veracity of consciousness is established.

"*Fifth Result.*—With the veracity of consciousness is

established the certainty of morals. It is here we see the importance of Kant's analysis of the mind. Those who reproach him with having ended, like Hume, in scepticism, can only have attended to his *Critique of the Pure Reason*, which certainly does, as we said before, furnish a scientific basis for scepticism. It proves that our knowledge is relative; that we cannot assume things external to us to be as we conceive them; in a word, that ontology is impossible.

"So far Kant goes with Hume. This is the goal they both attain; this is the limit they agree to set to the powers of the mind. But the different views they took of the nature of mind led to the difference we before noted respecting the certainty of knowledge. Kant having shown that consciousness, as far as it extended, was veracious, and having shown that in consciousness certain elements were given which were not derived from experience, but which were necessarily *true;* it followed that whatever was found in consciousness, independent of experience, was to be trusted without dispute.

"If in consciousness I find the ideas of God and Virtue, I cannot escape believing in God and Virtue. This belief of mine is, I admit, practical, not theoretical; it is founded on a *certainty*, not on a *demonstration;* it is an ultimate fact, from which I cannot escape—it is not a conclusion deduced by reason.

[The answer simply is, that you do not find in consciousness the ideas of "God" and "virtue," except as artificial results, each of the words varying in their significance in different individuals (see page 118); the word "God" generally being the equivalent for all uninvestigated cause, and the word "virtue" sometimes being the exact equivalent in the mind of one person for conduct for which the word "vice" is the equivalent in the mind of another.]

"The attempt to demonstrate the existence of God is an impossible attempt. Reason is utterly incompetent to the task. The attempt to penetrate the essence of things—to know things *per se*—to know noumena—is also an impossible attempt. And yet, that God exists, that the world exists, are irresistible convictions.

[Here the difficulty is, that "world" is used for the substance of all phenomena, and "God" is a sign of three letters, with no meaning attached.]

"There is another certitude, therefore, besides that

derived from demonstration, and this is moral certitude, which is grounded upon belief. I cannot say, 'It is morally certain that God exists;' but I must say, 'I am morally certain that God exists.'"

"After having shown (Lewes's 'Biographical History of Philosophy,' vol. ii., pp. 486-487), as he conceives, the vanity of all theology based on the intellect and Speculative Reason, Kant professes to restore what he had apparently destroyed, by means of the moral or Practical Reason. Relying upon this, he reintroduces to us the theological doctrine, that the world is governed by a Personal God, a righteous Judge, who awards to men after death the lot which they deserve; appropriate misery to the bad, and appropriate bliss to the good.

"But if the principles employed in the critique of the Speculative Reason are correct, how can judgments obtained by means of the Practical Reason possess any absolute truth? It is urged that they have a character of necessity or universality, and that judgments having this character should be regarded as absolutely true. If the critique is correct, it has been shown that the character in question may arise simply from the fact that our minds are constituted in a particular way; and that it does not authorise us to believe that other beings think or judge in like manner. If this be the case, the judgments in question, however useful they may be for the regulation of our conduct, cannot authorise us to affirm the existence of an unseen noumenon, wholly beyond the field of experience, and to affirm that this noumenon governs the universe according to our idea of justice.

"Further, it is evident that when Kant, in his moral theology, affirms God to exist, to be a righteous Governor of the Universe, rewarding the good and punishing the bad, he sets quite at nought the principle laid down in his critique; that categories and conceptions have no valid application, except to phenomena and to objects of experience. For it is uniformly assumed by Kant that God is a noumenon, not a phenomenon, and that he does not lie within the field of possible experience. Were this otherwise, all Kant's critique of rational theology would fall to the ground. If, then, we can legitimately predicate of God existence, goodness, righteousness, power, and the attributes of a moral governor, we can legitimately make application of categories and conceptions to a noumenon, and

that, too, not merely problematically, but assertorically."

To again use the acute Theistic writer in the *British Quarterly* (p. 74): "The Kantian argument is more intricate and much less satisfactory than the common evidence from the phenomena of conscience itself. It is founded on the moral law, with its 'categorical imperative,' asserting that certain actions are right and others wrong, in a world in which the right is often defrauded of its legitimate awards, and the wrong is temporarily successful. This, however, says Kant, points to a future, in which the irregularity will be redressed, and, *therefore*, to a Supreme Moral Power, able to effect it. The argument is altogether inferential. It is circuitous, its conclusion being, in a sense, an appendix to the doctrine of immortality, and it has only a secondary connection with the data of the moral law itself."

We do not feel sure that we have either fairly stated Kant's position, or efficiently replied to so much as we have stated. In condensing within the limits of this Text-Book the views of a writer so involved in his expressions as is Immanuel Kant, we may have failed both in exposition and answer, but have the consolation that we, at any rate, place before our readers the sources of completer knowledge.

We now arrive at the last division of the Theistic arguments, quoting here again the able anonymous writer to whose thoughts we have been so much indebted, and to whom specially we are now to attempt some reply (*British Quarterly Review*, No. CVII., p. 54).

The "evidence of intuition" is urged by the writer as "of greatest value," although he fairly states some of the arguments against it—viz., "that it is at best only valid for the individual who may happen to feel its force; that it is not a universal endowment (as it should be, if trustworthy), but often altogether wanting; and that it can never yield us certainty, because its root is a subjective feeling or conviction, which cannot be verified by external test. These charges," says the Theistic writer, "cannot be ignored or lightly passed over. And for the Theist merely to proclaim, as an ultimate fact, that the human soul has an intuition of God, that we are endowed with a faculty of apprehension of which the correlative object is divine, will carry no conviction to the Atheist. Suppose he replies: 'This intuition may be valid evidence for you, but I have no such irrepressible instinct; I see no evidence in favour of innate

ideas in the soul, or of a substance underneath the phenomena of nature of which we can have any adequate knowledge;' we may close the argument by simple re-assertion, and vindicate our procedure on the ground that, in the region of first principles, there can be no farther proof. [But, if the "argument" be thus closed, it is because the alleged intuition is only asserted, is not proved, and there is really no proof at all; see page 114.] We may also affirm that the instinct, being a sacred endowment, and delicate in proportion to the stupendous nature of the object it attests, it may, like every other function of the human spirit, collapse from mere disuse. [But, at least, then, this delicate sacred endowment should be found clear and complete in the child. Is it so found? and what is meant by a sacred intuition collapsing by disuse?] But if we are to succeed in even suggesting a doubt in the mind of our opponent as to the accuracy of his analysis, we must verify one primary belief, and exhibit its credentials so far as that is possible."

To the anticipated answer, that the Atheist has no such intuition, the answer is, that the mind starts with "gifts in embryo. They are not full-formed powers, so much as the capacities and potentialities of mental life. [But a capacity to think is not a thought, and may never be exercised.] Their growth to maturity is most gradual, and the difference between their adult and their rudimentary phases is as wide as the interval between a mature organisation and the egg from which it springs. It is, therefore," he contends, "no evidence against the reality or the trustworthiness of the intuition to which we appeal, that its manifestations are not uniform, or that it sometimes seems absent in the abnormal states of consciousness, or among the ruder civilisations of the world." An "intuition," which sometimes "seems absent," and the "manifestations" of which differ in the same individual at different stages, is, we submit, scarcely a very reliable witness.

Mrs. Besant, in her "True Basis of Morality," has sharply attacked the intuition theory, and we avail ourselves here of the argument she states:—"One fatal defect promptly disposes of the claims of intuition as a safe and reliable basis. Intuition, to be of any real value, must be fairly universal in its testimony: but it turns out to be as variable as the various nations of the earth. It depends on race civilisation, on custom, on habit; intuition does not speak *one*

language, it speaks in many tongues; it varies its dictates according to the use of the people. To say that intuition is God's voice in the soul of man, and then to exalt one set of intuitions as the rule for the world, is simply to juggle with words, and to set up a new *authority* on the pedestal whence the old has been taken down. If one intuition be pronounced to speak justly, then all other intuitions, speaking at variance with it, must be held to be false; and the reason and judgment of one man will choose differently from the reason and judgment of his neighbour; and so there will be many divine voices contradicting each other, a result not consonant either with reason or with reverence. Besides, if intuition deceives our fellow creatures on all sides, are we wise, or even safe, in trusting it in our own cases? Is there any particular reason why *our* intuition should be *the* intuition? The real truth is, that what is called intuition is only the result of transmitted tendencies; it is a conveniently vague word under which to group certain phenomena of the mind, which are governed by laws at present very imperfectly known to us. Instinct and intuition only denote the tendency to do certain actions, or to think certain thoughts, and this tendency, which may be easily nullified or modified by changed conditions, arises from our ancestors having done these actions for generation after generation, until the doing became a habit, the predisposition to which is transmitted from parent to child. Instinct is the accumulated experience of the race impressed upon the yet unborn creature, and, unless checked, moulding many of its habits before any personal thought or experience comes in. And so intuition represents the result of the cumulated experience of the race, transmitted to the individual."

"We admit," the Theistic writer says (p. 55), "that it is difficult for the uninitiated to trace any affinity between its normal and its abnormal manifestations, when it is modified by circumstances to any extent. We farther admit that, while never entirely absent, it may sometimes seem to slumber, not only in stray individuals, but in a race or an era, and be transmitted from generation to generation in a latent state. It may hibernate, and then awake as from the sleep of years, arising against the will of its possessor, and refusing to be silenced. Almost any phenomenon may call it forth, and no single phenomenon can quench it. It is the spontaneous utterance of the soul in presence of the object whose existence it attests, and as such it is necessarily prior to any act

of reflection upon its character, validity, or significance. Reflex thought, which is the product of experience, cannot in any case originate an intuition, or account for those phenomena which we may call by that name, supposing them to be delusive. Nothing in us, from the simplest instinct to the loftiest intuition, could in any sense create the object it attests, or after which it seeks and feels. And all our ultimate principles, irreducible by analysis, simply attest and assert.

"The very existence of the intuition of which we now speak is itself a revelation, because pointing to a Revealer within or behind itself. And, however crude in its elementary forms, it manifests itself in its highest and purest state at once as an act of intelligence and of faith. [On page 114 we have already quoted from Mr. George H. Lewes on intuition. We not only deny the possibility of intuition, independent of or preceding experience, but we urge that the writer, in saying that "any phenomenon may call it forth," really admits that what he calls intuition is a judgment on events.] It proclaims a supreme existence without and beyond the mind, which it apprehends in the act of revealing itself."

But the nature of the proclamation depends on the inherited thought-ability and predisposition, and on the conditions of thought-activity; and the "proclamation" varies with each individual variation. The acute writer seems to overlook that he alleges "God" revealing himself directly to the individual in the intuition, and yet speaks of abnormal manifestations of this revelation, and concedes that the revelation may seem to slumber in a race or an era. To ourselves—denying, as we do, the possibility of intuition, except as explained on page 114—the writer's own candid admissions are fatal to his case. Seeking to describe in some degree the character of the intuition to which he appeals as evidence, he says (p. 57): "It is one thing to create or evolve (even unconsciously) a mental image of ourselves, which we vainly attempt to magnify to infinity, and thereafter worship the image that our minds have framed; it is another to discern for a moment an august Presence *other than the human*, through a break in the clouds which usually veil him from our eyes. And it is to the inward recognition of this self-revealing object that the Theist makes appeal. What he discerns is at least not a 'form of his mind's own throwing;' while his know-

ledge is due not to the penetration of his own finite spirit, but to the condescension of the infinite."

This is an emotional declaration, not a reasonable argument; no reply can be given to it, for it advances no plea capable of analysis for the existence of God.

"Our knowledge," says the writer, p. 58, "of the object which intuition discloses is at first, in all cases, necessarily unreflective. In the presence of that object, the mind does not double back upon itself, to scrutinise the origin and test the accuracy of the report that has reached it. And thus the truth which it apprehends is at first only presumptive. It remains to be afterwards tested by reflection, that no allusion be mistaken for reality. What, then, are the tests of our intuitions? There are sundry elements in every intuition on which we do not here enlarge, as they are necessary features rather than criteria, characteristics rather than tests. Two of them may be merely stated: 1st., Every intuition is ultimate, and carries its own evidence within itself; it cannot appeal to any higher witness beyond itself: and, 2nd., The fact or facts which it proclaims, while irreducible by analysis, must be incapable of any other explanation."

Here there is no fact proclaimed, the words "supreme existence," "august presence," are not the counters for expressing concepts of fact; they are only fine sounds which avoid instead of proclaiming, which hide instead of making clear.

"The following seem sufficient criteria of their validity and trustworthiness: 1st. The persistence with which they appear and reappear after experimental reflection upon them, the obstinacy with which they reassert themselves when silenced, the tenacity with which they cling to us. 2nd. Their historical permanence; the confirmation of ages and of generations. The hold they have upon the general mind of the race is the sign of some 'root of endurance' planted firmly in the soil of human nature. If 'deep in the general heart of men, their power survives,' we may accept them as true, or interpret them as a phase of some deeper yet kindred truth, of which they are the popular distortion. [Unlike Schelling, who contended for an intellectual intuition not common to all men, but the endowment only of a few of the privileged (George H. Lewes' "History of Philosophy," vol. ii., p. 521), the Theistic writer we are quoting contends for an intuition "common

to all," but he fails to furnish an atom of evidence either of the existence or of the "historical permanence" of any such intuition.] 3rd. The interior harmony which they exhibit with each other, and with the rest of our psychological nature; each of the intuitions being in harmony with the entire circle, and with the whole realm of knowledge. If any alleged intuition should come into collision with any other and disturb it, there would be good reason for suspecting its genuineness; and in that case the lower and less authenticated must always yield to the higher and better attested. But if the critical intellect carrying our intuition (if we may so speak in a figure) round the circle of our nature, and in turn placing it in juxtaposition with the rest, finds that no collision ensues, we may safely conclude that the witness of that intuition is true. [No clear intuitions have even been alleged by the writer; it is, therefore, impossible to plead harmony between them. The Theistic writer even admits that the special intuition, which is his whole evidence, is on its first use "crude, dim, and inarticulate." Dim and inarticulate intuitions can hardly be expected to come into collision with each other.] 4th. If the results of its action and influence are such as to elevate and etherealise our nature, its validity may be assumed. This is no test by itself, for an erroneous belief might for a time even elevate the mind that held it; as the intellectual life evoked by many of the erroneous theories and exploded hypotheses of the past has been great. But no error could do so permanently. No illusion could survive as an educative and elevating power over humanity; and no alleged instinct could sustain its claim, and vindicate its presumptive title, if it could not stand the test we mention. [The answer here is that the "Theistic faith" has not been found "permanently educative and elevating." Its moral leverage is not denied, but is affirmed to have been injurious. Education and elevation have been in degree proportionate to the emancipation of the mind from Theistic faith.] A theoretic error is seen to be such when we attempt to reduce it to practice; as a hidden crack or fissure in a metal becomes visible when a strain is applied, or the folly of an ideal Utopia is seen in the actual life of a mixed commonwealth. Many of those scientific guesses which have served as good provisional hypotheses, have been abandoned in the actual working of them out; and so the flaw that lurks within an alleged intuition (if there be a flaw), will become apparent

when we try to apply it in actual life, and take it as a regulative principle in action. Thus, take the belief in the divine existence, attested, as we affirm, by intuition, and apply it in the act of worship or adoration. Does that belief (which fulfils the conditions of our previous tests, for it appears everywhere and clings tenaciously to man, and comes into collision with no other normal tendency of our nature, or defrauds any instinct of its due) does it elevate the nature of him who holds it? The reply of history is conclusive, and its attestation is abundantly clear. The power of the Theistic faith over the rest of human nature is such that it has quickened the other faculties into a more vigorous life. Its moral leverage has been vast, while it has sharpened the æsthetic sense to some of its more delicate perceptions, and in some instances brought a new accession of intellectual power."

Though we have stated the tests and criteria of the argument sought to be maintained in favour of intuition so fully that we believe the Theistic writer will be satisfied with our fairness, it will be seen that we utterly deny that any intuition has been shown to exist coming within those tests. Every fact alleged to be evidenced by intuition can be reduced and explained by analysis, unless the alleged fact be so vaguely stated that it is utterly useless and impracticable to attempt its examination.

The Theistic writer adds (p. 59):—"It is not only essential to the validity of the Theistic intuition that the human mind has a positive though imperfect knowledge of the infinite, but the assertion of this is involved in the very intuition itself. If we had no positive knowledge of the source it seeks to reach, the instinct, benumbed as by an intellectual frost, and unable to rise, would be fatally paralysed; or if it could move along its finite area, it would wander helplessly, feeling after its object, 'if haply it might find it.' And it will be found that all who deny the validity of our intuition, either limit us to the knowledge of phenomena, or, while admitting that we have a certain knowledge of finite substance, adopt the cold theory of nescience."

"Comte, Lewes, Mill, Mr. Bain, Herbert Spencer, and the majority of our best scientific guides (however they differ in its detail) agree in the common postulate that all that man can know, and intelligibly reason about, are phenomena, and the laws of these phenomena, 'that which doth appear.'"

On this the reader is especially referred to the chapter on "The Relativity of Human Knowledge," by J. S. Mill, in his Examination of Sir W. Hamilton.

"With us," says the *British Quarterly Review* writer (p. 62,) "the relativity of knowledge is a first principle in philosophy. But to affirm it, is merely to assert that all that is known occupies a fixed relation to the knower. It is to affirm nothing as to the character or contents of his knowledge. As regards the objects known, we further maintain that they are apprehended only in their differences and contrasts. We know self only in its contrast with what is not self, a particular portion of matter only in its relation to other portions which surround and transcend it. So also, and for the same reason, with the finite and infinite. The one is not a positive notion, and the other negative; the one clear, and the other obscure. Both are equally clear, both sharply defined, so far as they are given us in relation. If the one notion suffers, the other suffers with it. In short, if we discharge any notion from all relation with its opposite or contrary, it ceases to be a notion at all. The finite, if we take it alone, is as inconceivable as the infinite, if we take it alone; phenomena by themselves are as incogitable as substance by itself, and the relative as a notion cut off from the absolute which antithetically bounds it, is not more intelligible than the absolute as an essence absolved from all relations. And thus the entire fabric of our knowledge being founded on contrasts, and arising out of differences, involving in its every datum another element hidden in the background, may be said to be a vast double chain of relatives mutually complementary. It looks ever in two directions, without and within, above and beneath, before and after.

"We maintain, therefore, that we have positive knowledge of the infinite. Whosoever says that the infinite cannot be known contradicts himself. For he must possess a notion of it before he can deny that he has a positive knowledge of it, before he can predict aught regarding it. And so he says he cannot know what he says, though in another fashion, that he does know. It could never have come within the horizon of hypothetical knowledge, never have become the subject of discussion, unless positively (though inadequately) known; and thus the infinite stands as the antithetic background of the finite."

If by taking the finite "alone" is meant thinking any

phenomena as entirely sole and utterly out of relation to ourselves or any other phenomenon or phenomena, then undoubtedly "the finite if we take it alone is inconceivable;" but if it is meant that an ounce of lead taken alone is as inconceivable as an illimitable number of undefined quantities of undescribed material, then we deny the writer's position. Positive knowledge of the indefinable is a contradiction in terms.

"But," answers the *British Quarterly Review* writer (p. 64), "it is objected that as human knowledge is always finite, we can never have a positive apprehension of an infinite object; that as the subject of knowledge is necessarily finite, its object must be the same. Let us sift this objection.

"I may know an object in itself as related to me the knower, or I may know it in its relation to other objects also known to me the knower. But in both and all cases, knowledge is limited by the power of the knower; therefore, it is always finite knowledge. But it may be finite knowledge of an infinite object, incomplete knowledge of a complete object, partial knowledge of a transcendent object. The boundary or fence may be within the faculty of the knower, while the object he imperfectly grasps may not only be infinite, but be known to transcend his faculties in the very act of conscious knowledge. For example, I may know that a line is infinite, while I have only a finite knowledge of the points along which that line extends. And similarly my knowledge of the Infinite Mind is partial and incomplete, but it is clear and defined. It is a definite knowledge of an indefinite object. We may have a partial knowledge not only of a part, but of the whole. Thus I have a partial knowledge of a circle, because I know only a few of its properties; but it is not to a part of the circle that my partial knowledge extends, but to the whole which I know in part. In like manner, as the Infinite Object has no parts, it is not of a portion of his being that we possess a partial knowledge, but of the whole. We know him as we know the circle, inadequately yet directly, immediately, though in part."

Here again we have a trick of words. I cannot know more of a line than my knowledge "of the points along which that line extends." I may believe there is a beyond; I do not know it, because each point known is an addition to my finite line. Then there is no fair transition in thought from the line finite to the line infinite. The first is think-

able, the second is unthinkable, for one point of the line, being always in reach of the thinker, the line cannot accurately be termed infinite; the knowledge of the thinker limits it in one part, and a limitation of the infinite is, again, a contradiction in terms. Still less can this be urged as evidence of "knowledge of infinite mind," for the last two words are meaningless.

"Again," argues the writer in the *British Quarterly Review* (p. 64), "it is said that to know the infinite is to know the sum of all reality, and as that would include the universe and its source together, it must necessarily include, on the one hand, the knower along with his knowledge, and on the other, all the possibilities of existence. The possibility of our knowing the Infinite Being as distinct from the universe is denied, since infinite existence is said to be co-extensive with the whole universe of things. But that the source of the universe must necessarily exhaust existence, and contain within himself all actual being, is a mere theoretic assumption. The presence of the finite does not limit the infinite, as if the area of the latter were contracted by so much of the former as exists within it. For the relation of the infinite being to the finite is not similar to the relation between infinite space and a segment of it. It is true that so much of finite space is so much cut out of the whole area of infinite space—though, if the remainder is infinite, the portion removed will not really limit it. [First, space is only conceivable as the area of extension of some object, or the measure of distance between two or more objects, or as the area beyond some object. Infinite space is unthinkable, except as the area of extension of some unmeasured object. We cannot, except by a misuse of words, speak of cutting "so much" "out of the *whole* area of infinite space." The word "whole" is definite. The word "infinite" is the equivalent for inability to define.] But as our intuition of the infinite has no resemblance to our knowledge of space, we believe that the relations which their respective objects sustain have no affinity with each other. The intuition of God is a purely spiritual revelation, informing us not of the quantity, but of the quality, of the Supreme Being in the universe. And to affirm that the finite spirit of man standing in a fixed relation to the infinite spirit of God limits it, by virtue of that relation, is covertly to introduce a partial concept into a region to which it is utterly foreign, and which it has no right to enter." But if spiritual knowledge of

God deals with his quality only, and not with his quantity, why should a word be employed to describe him which is usable of quantity only and not of quality? To speak of a spirit as "infinite" does not tell us anything of its quality; it might be good, bad, or indifferent, loving or hating, holy or wicked, and yet, if boundless, would rightly be described as infinite. But, however admirable the quality, the spirit is not infinite unless boundless, not only in our ignorance of its bounds, but in reality. To employ the term *infinite* as though it were an equivalent of *perfect*, is a loose use of words which destroys all accuracy of thought.

"Similarly," continues the Theistic writer of the above *Review*, "with the action of the infinite and absolute *cause*. The creative energy of that cause is not inconsistent with its changelessness. To say so, is to introduce a quantitative notion into a sphere when quality is alone to be considered. A cause in action is the force which determines the changes which occur in time. But the *primum mobile*, the first cause, need not be itself changed by the forth-putting of its causal power.

"We therefore maintain, in opposition to the teachers of nescience, that a positive knowledge of the infinite is competent to man, because involved in his very consciousness of the finite. And when psychologically analysed, this intuition explains and vindicates itself."

Our answer is, that man has no conception whatever, either innate or acquired, of "infinite God." Thus Sir William Hamilton (in his "Discussions on Philosophy" page 12) says: "The unconditioned is incognisable and inconceivable, its notion being only the negative of the conditioned, which last can alone be positively known or conceived.....The unconditionally unlimited, or the infinite, cannot possibly be construed to the mind."

Mansel says: "To be conscious, we must be conscious of something; and that something can only be known, as that which it is, by being distinguished from that which it is not. But distinction is necessarily limitation; for, if one object is to be distinguished from another, it must possess some form of existence which the other has not, or it must not possess some form which the other has.....A consciousness of the Infinite as such thus necessarily involves a self-contradiction; for it implies the recognition, by limitation and difference, of that which can only be given as unlimited and indifferent. That a man can be conscious of the infi-

nite is thus a supposition which, in the very terms in which it is expressed, annihilates itself. Consciousness is essentially a limitation; for it is the determination of the mind to one actual out of many possible modifications. But the infinite, if it is to be conceived at all, must be conceived as potentially everything and actually nothing; for, if there is anything in general which it cannot become, it is thereby limited; and, if there is anything in particular which it actually is, it is thereby excluded from being any other thing. But, again, it must also be conceived as actually everything and potentially nothing; for an unrealised potentiality is likewise a limitation. If the infinite can be that which it is not, it is by that very possibility marked out as incomplete, and capable of a higher perfection. If it is actually everything, it possesses no characteristic feature by which it can be distinguished from anything else, and discerned as an object of consciousness. This contradiction, which is utterly inexplicable on the supposition that the infinite is a positive object of human thought, is at once accounted for when it is regarded as [or rather admitted to be] the mere negation of thought. If all thought is limitation—if whatever we conceive is, by the very act of conception, regarded as finite—the *infinite*, from a human point of view, is merely a name for the absence of those conditions under which thought is possible. To speak of a *conception of the infinite* is, therefore, at once to affirm those conditions and to deny them. The contradiction which we discover in such a conception is only that which we have ourselves placed there, by tacitly assuming the conceivability of the inconceivable. The condition of consciousness is distinction, and the condition of distinction is limitation. We can have no consciousness of Being in general which is not some Being in particular: a thing, in consciousness, is one thing out of many. In assuming the possibility of an infinite object of consciousness, I assume, therefore, that it is at the same time limited and unlimited—actually something, without which it could not be an object of consciousness, and actually nothing, without which it could not be infinite" (Bampton Lectures, by Dean Mansel, pp. 71—73).

The whole of the foregoing division of Theistic argument is based on the fallacy of innate ideas. Locke, in his "Essay on Understanding," took plain stand against this fallacy. "If it shall be demanded," he says, "when a man begins to have any ideas? I think the true answer is, when he first

has any sensation." Lewes, in his "Problems of Life and Mind," vol. i. p. 236, says: "Neither observation nor reflection warrants the supposition that the infant.....has on entering the world innate ideas.....What is i nate or connate, is the structure which will react under stimulus in certain definite ways, and these reactions will depend on the degree of development which the structure has acquired .....all perception, consequently all conception, is the product of the reaction of the organism stimulated by the cosmos, which is saying in other words that all ou knowledge had its origin in experience—the registration of such reactions. And this is further confirmed by the fact that on the one hand the development of the organism has its prescribed course, any interference with the series of successive stages causing another form of structure to result, while, on the other hand, any interference with the normal course of experience will correspondingly affect the result; so that even results, which have the fixed character of instincts, may be frustrated by an interruption of the prescribed course of evolution."

Leaving the pure Theistic argument, we take another phase of the pleading for religion.

Joseph Butler, Bishop of Durham, born 1692, died 1752, in his famous "Analogy of Religion," has some points which here require notice, rather from the reputation of the writer than for the real merit of his arguments. It must not be forgotten that Butler's "Analogy" is only available in the hands of the orthodox, and for use against persons already believing in a God, for he takes it "for proved that there is an intelligent author of nature and natural governor of the world" (Introduction, p. xxviii.).

Chapter 1 of Part I. of the "Analogy of Religion" treats of a future life, and professes to argue from the analogy of nature. Bishop Butler never says what he means by the word *nature*, and he sometimes uses it in senses inconsistent with the fashion which he gives to it at other times. By nature, as before explained (see page 112), we mean the totality of existence, including in this all actual and past phenomena, all possible phenomena, and all that is or has been necessary for the happening of phenomena. Bishop Butler says, section 1, that "we find it to be a general law of nature" that human beings "should exist in degrees of life, in one period of their being greatly different from those appointed them in another," and adds, "therefore that we

are to exist hereafter in a state as different (suppose from our present) as this is from our former, is but according to the analogy of nature." Here "law of nature" is not defined, but, most clearly, it is not meant to signify merely "observed order of event," which is the definition we should give to it, for Bishop Butler uses the word "appointed," which, read by the light of his assumption "that there is an intelligent author of nature and natural governor," would make "law of nature" equivalent to a commandment issued to nature by this author and governor. The argument fails; the analogy is rather that, as the human being commences, grows, arrives at his prime, decays and finishes, so the death or finish will be the end, as the generation was the beginning. To make any analogy, Bishop Butler ought to show the individual life before the body began, as a ground for presuming the individual life continuing after the body had finished.

In section 2 of the same chapter the Bishop writes: "We know that we are endowed with capacities of action, of happiness, and misery. Now that we have these powers and capacities before death is a presumption that we shall retain them through and after death; indeed a probability of it abundantly sufficient to act upon, unless there be some positive reason to think that death is the destruction of those living powers." This argument would be quite as valid if it ran: "that we have these powers and capacities after birth is a presumption that we possessed them before birth." The words "living powers," in this argument, are loosely substituted for "capacities of action," and two paragraphs later these living powers get changed into "living agents." Giving the Bishop credit for sincerity of intention, these changes of phraseology are most unfortunate, as they obscure the argument and confuse the reader. A bucket has a capacity for holding water; knocking out the bottom of the bucket finishes the capacity; no such capacity belongs to the bottomless pail, and no sane person would think of arguing that the holding capacity was a holding power, or holding agent, enduring after the pail had been knocked to pieces.

The Bishop says that "destruction of living powers is a manner of expression unavoidably ambiguous;" but that it is used in the sense of "the destruction of a living being, so as that the same living being shall be incapable of ever perceiving or acting again at all."

To prevent as far as possible the misapprehension likely

to arise from the repetition of undefined words, we deny any "living powers" other than "life;" and, excluding vegetable life, define life to mean the total normal organic functional activity of each animal—varying in different animals, and varying in the same animal at different dates between its generation and death. The separate individual life commences with the birth, and death is the cessation of life. Dr. Maudsley ("Body and Mind," p. 162), after arguing that vitality is not a special principle but a result, which will be ultimately explainable by operation of so-called molecular forces, says :—"It is desirable to examine into that which is generally deemed to constitute the specialty of life. Now it is certain, when we consider the vast range of vitality, from the simple life of a molecule or cell to the complex life of man, that valid objections may be made to any definition of life. If it be wide enough to comprise all forms, it will be too vague to have any value; if narrow enough to be exact, it will exclude the most lowly forms. The problem is, to investigate the conditions of the manifestation of life. A great fault in many attempted definitions has been the description of life as a resistance or complete contrast to the rest of nature, which was supposed to be continually striving to destroy it. But the elements of organic matter are not different from those of the inorganic, whence they are derived, and to which they return; and the chemical and mechanical forces of these elements cannot be suspended or removed within the organism. What is special is the manner of composition of the elements; there is a concurrence of manifold substances, and they are combined or grouped together in a very complex way. Such union or grouping is, however, only a further advance upon, and by no means a contrast to, the kind of combination which is met with in inorganic bodies. Life is not a contrast to non-living nature, but a further development of it. The more knowledge advances, the more plainly is it shown that there are physical and chemical processes upon which life depends. Heat is produced by combustion in the organism, as it is in the fire; starch is converted into sugar there, as it is in the chemical laboratory; urea, which is so constant a product of the body's chemistry, can be formed artificially by the chemist; and the process of excitation in a nerve, on the closure of a constant stream, appears to be analogous to the process of electrolysis, in which hydrogen is given off at the negative pole. The peculiarity of life is the complexity of combina-

tion in so small a space, the intimate operation of many simultaneously acting forces in the microcosm of the organic cell."

An anonymous writer says: "Life is that state of an organised body in which all the organs concerned perform their individual and collective functions. Health is that state of an organised body in which *all* the organs perform their individual and collective functions, and perform them well. Disease is that state of an organised body in which one or more of the organs fail to perform their functions, or to perform them well. Death is that state of an organised body in which all the organs of life cease to perform the functions of life" ("Biology *versus* Theology," No. 6).

Unfortunately, Bishop Butler not only refrains from any definition, but uses the words "living powers" and "living agents," without regard to accuracy. With him "living agent" is repeated, without any proof, as if it were an identifiable spiritual entity. On this point Dr. Maudsley well puts it: "The burden of proving that the *Deus ex machinâ* of a spiritual entity intervenes somewhere, and where it intervenes, clearly lies upon those who make the assertion, or who need the hypothesis. They are not justified in arbitrarily fabricating an hypothesis entirely inconsistent with experience of the orderly development of nature, which even postulates a domain of nature that human senses cannot take any cognisance of, and in then calling upon those who reject their assumption to disprove it" ("Body and Mind," p. 162).

A confusion more complete, arising from the loose use of words, is even found in the same section (2) of Butler's "Analogy," when the Bishop, arguing for the presumption of continuance, says: "It seems our only reason for believing that any one substance now existing will continue to exist a moment longer—the self-existent substance only excepted." This assumes, without any proof, that there are several substances, and that there is one substance distinguishable from the others as "the self-existent." Probably the Bishop used the words, "any one substance," relatively, of phenomena, but he says nothing to that effect; and his "self-existent substance" is either the "intelligent author of nature," or exists besides nature and its author.

The apprehension of death, as the end of living, "must arise," we are told, "either from the reason of the thing, or from the analogy of nature."

"But," says Bishop Butler, "we cannot argue, from the reason of the thing, that death is the destruction of living agents, because we know not at all what death is in itself, but only some of its effects, such as the dissolution of flesh, skin, and bones; and these effects do in nowise appear to imply the destruction of a living agent." A billiard ball rolls, a man lives; break the billiard ball perfectly in half, neither of the halves will roll; knock off the man's head, he cannot live. Just as there is no "rolling agent" other than the striker and his cue, so there is no living agent other than the food and necessary sustenance for the living man. As an argument from analogy, Bishop Butler's is worthless.

The Bishop further urges that "sleep, or a swoon, shows us that not only these (living) powers exist when they are not exercised, as the passive power of motion does in inanimate matter, but shows also that they exist when there is no present capacity of exercising them; or that the capacity of exercising them for the present, as well as the actual exercise of them, may be suspended, and yet the powers themselves remain undestroyed." Life is not suspended in sleep; and the analogy here is utterly wanting. In a perfect swoon there is no consciousness, but there is not suspended vitality; the person in the swoon continues to live, although the activity of some of the functions is suspended.

"Nor," says the Bishop, "can we find anything through the whole analogy of nature to afford us even the slightest presumption that animals ever lose their *living powers;* much less, if it were possible, that they lose them by death; for we have no faculties wherewith to trace any beyond or through it, so as to see what becomes of them." If for the two words italicised the word "life" be substituted, as it ought properly to be, for no living powers have been shown other than life, then the utter nonsense of the Bishop's position becomes apparent. Go into a slaughter-house, and watch the butcher. Is there no presumption that the oxen, calves, and sheep he slaughters lose their lives? Oh! answers Bishop Butler, death "destroys the sensible proof which we had before their death of their being possessed of living powers, but does not appear to afford the least reason to believe that they are then, or by that event, deprived of them. And our knowing that they were possessed of these powers up to the very period to which we have faculties

capable of tracing them is itself a probability of their retaining them beyond it."

"All presumption," says the Bishop, "of death's being the destruction of living beings must go upon the supposition that they are compounded, and so discerptible. But, since consciousness is a single and indivisible power, it should seem that the subject in which it resides must be so too." "Consciousness" is used by Bishop Butler as identical with "perception;" and "perceptive power" is used at meaning "the power of consciousness;" and "the subject in which it resides" is termed "the conscious being." In truth, consciousness is a varying quantity, being the sum of our remembered perceptions, and of our thinkings on such perceptions. On this question of consciousness Lewes says ("Biog. Hist. of Philosophy," vol. i., p. 369): "Perception is nothing more than a state of the percipient—*i.e.*, a state of consciousness. This state may be occasioned by some external cause, and may be as complex as the cause is complex; but it is still nothing more than a state of consciousness—an effect produced by an adequate cause. Of every change in our sensation we are conscious, and in time we learn to give definite names and forms to the causes of these changes. But in the fact of consciousness there is nothing beyond consciousness. In our perceptions we are conscious only of the changes which have taken place within us: we can never transcend the sphere of our own consciousness; we can never go out of ourselves, and become aware of the objects which caused these changes. All we can do is to identify certain external appearances with certain internal changes—*e.g.*, to identify the appearance we name 'fire' with certain sensations we have known to follow our being placed near it. Turn the fact of consciousness how we will, we can see nothing in it but the change of a sentient being operated by some external cause. Consciousness is no mirror of the world; it gives no faithful reflection of things as they are *per se;* it only gives a faithful report of its own modification as excited by external things."

Having thus affirmed "a single and indivisible power," and asserted that "it is as easy to conceive that we may exist out of bodies as in them," Bishop Butler goes on:—"We see by experience, that men may lose their limbs, their organs of sense, and even the greatest part of their bodies, and yet remain the same living agents. And persons can trace up the existence of themselves to a time

when the bulk of their bodies was extremely small, in comparison with what it is in mature age; and we cannot but think that they might then have lost a considerable part of that small body, and yet have remained the same living agents, as they may now lose great part of their present body and remain so." First, it is not true that the "life" continues, or has continued, the same. "Life" is increased with the growth from babyhood, and is diminished by every diminution of body. Although it may be difficult to estimate the change in thinking-ability consequent on the loss of "any organ of sense," yet, as perceptive ability is certainly the foundation of all consciousness, injury must necessarily result to consciousness from loss of organs of perception. It is not true that men lose their spines, their heads, or their hearts, and continue to live at all; yet Bishop Butler goes on to say, "We have already, several times over, lost a great part, or perhaps the whole, of our body, according to certain common established laws of nature, yet we remain the same living agents; when we shall lose as great a part, or the whole, by another common established law of nature, death, why may we not also remain the same." It will, of course, be replied that the Bishop does not mean a total sudden loss, but a gradual change. In truth, with his usual looseness of expression, the Bishop applies "lose" to a limb, meaning that the limb is totally and suddenly lost, while in the same sentence the word "lose" only expresses extremely slow and almost imperceptible change in the whole body. Dr. Maudsley says ("Body and Mind," page 127.): "When we are told that every part of the body is in a constant state of change, that within a certain period every particle of it is renewed, and yet that amidst these changes a man feels that he remains essentially the same, we perceive nothing inconsistent with the idea of the action of a material organ; for it is not absurd to suppose that in the brain the new series of particles take the pattern of those which they replace, as they do in other organs and tissues which are continually changing their substance yet preserve their identity. Even the scar of a wound on the finger is not often effaced, but grows as the body grows; why, then, assume the necessity of an immaterial principle to prevent the impression of an idea from being lost?"

In the second chapter Bishop Butler nominally deals with the government of God by rewards and punishments;

and he maintains that "the whole analogy of nature, the whole present course of things, most fully shows that there is nothing incredible in the general doctrine of religion, that God will reward and punish men for their actions hereafter; nothing incredible, I mean, arising out of the notion of rewarding and punishing, for the whole course of nature is a present instance of His exercising that government over us, which implies in it rewarding and punishing."

The argument on the Bishop's assumption "that there is an intelligent author of nature and natural governor of the world" is only maintainable by ignoring a whole series of contradictions. Punishment is only justifiable as a deterrent from future vicious conduct; but, according to the Bishop, the punishment is to come when there is no longer any possibility of continued vicious conduct. The punishment is not for "the government of the world," but is simply vengeance for past conduct. If God is "governor," either all acts result from his government, or there are some which occur in spite of it. In the last case he is not omnipotent, and in the first case the act is not one that ought to be punished. The Bishop strives to meet this and similar objections by urging (Part I., cap. 7) that analogy "makes it credible that his (God's) moral government must be a scheme quite beyond our comprehension." But, surely, the utter incomprehensibility of a scheme ought not to be urged as a ground for its acceptance. See on the question of punishment Emile de Girardin's "Droit de Punir," and Jeremy Bentham's works especially.

The theory of government by rewards and punishments is very vaguely stated by Bishop Butler. "Pain," as the "consequence" of certain actions, seems to be regarded by the Bishop as arranged by God; but pain may be incurred in doing a good action. A courageous man breaks his collar bone in rescuing some people from that which, without his interference, would have been almost certain death. According to the theory of Bishop Butler, the pain of the broken collar bone is a punishment knowingly inflicted by the intelligent author of nature on the brave rescuer. In chapter 6 the Bishop treats of "necessity as influencing practice," and as this seems inseparable from the problem of punishment, we here give, with slight modification, two extracts from John Stuart Mill—one on Freewill, the other on Punishment—first remarking that Necessitarianism and Fatalism are no co-equivalent terms. The Fatalist says what is, is,

and must be, could not have been otherwise, and cannot be altered. The Necessitarian says what is, is, and must have resulted from such and such conditions; but the conditions might have been varied, and the results would then have been different:—

"What experience makes known is the fact of an invariable sequence between every event and some special combination of antecedent conditions—in such sort that, wherever and whenever that union of antecedents exists, the event does not fail to occur. Any *must* in the case, any necessity, other than the unconditional universality of the fact we know nothing of.

"Now, the so-called Necessitarians demand the application of the same rule of judgment to our volitions. They maintain that there is the same evidence for it. They affirm, as a truth of experience, that volitions do, in point of fact, follow determinate antecedents with the same uniformity, and (when we have sufficient knowledge of the circumstances) with the same certainty as other effects follow their causes" ("Examination of Sir W. Hamilton," p. 561).

"The feeling of liability to punishment is of two kinds. It may mean expectation that, if we act in a certain manner, punishment will actually be inflicted upon us by our fellow-creatures or by a Supreme Power. Or it may only mean, knowing that we shall deserve that infliction.

"The first of these cannot, in any correct meaning of the term, be designated as a consciousness. If we believe that we shall be punished for doing wrong, it is because the belief has been taught to us by our parents and tutors, or by our religion, or is generally held by those who surround us, or because we have ourselves come to the conclusion by reasoning, or from the experience of life. This is not consciousness. And, by whatever name it is called, its evidence is not dependent on any theory of the spontaneousness of volition. The punishment of guilt in another world is believed with undoubting conviction by Turkish Fatalists and by professed Christians, who are not only Necessitarians, but believe that the majority of mankind were divinely predestined from all eternity to sin, and to be punished for sinning. It is not, therefore, the belief that we shall be *made* accountable, which can be deemed to require or presuppose the freewill hypothesis; it is the belief that we ought so to be; that we are justly accountable; that guilt deserves punishment" (p. 571).

"The real question is one of justice—the legitimacy of retribution or punishment. On the theory of necessity, we are told, a man cannot help acting as he does; and it cannot be just that he should be punished for what he cannot help. Not if the expectation of punishment enables him to help it, and is the only means by which he can be enabled to help it?

"To say that he cannot help it is true or false, according to the qualification with which the assertion is accompanied. Supposing him to be of a vicious disposition, he cannot help doing the criminal act, if he is allowed to believe that he will be able to commit it unpunished. If, on the contrary, the impression is strong on his mind that a heavy punishment will follow, he can, and in most cases does, help it.

"The question deemed to be so puzzling is, how punishment can be justified, if men's actions are determined by motives, among which motives punishment is one. A more difficult question would be, how it can be justified if they are not so determined? Punishment proceeds on the assumption that the will is governed by motives. If punishment had no power of acting on the will, it would be illegitimate, however natural might be the inclination to inflict it. Just so far as the will is supposed free—that is, capable of acting *against* motives—punishment is disappointed of its object and deprived of its justification.

"There are two ends which, on the Necessitarian theory, are sufficient to justify punishment: the benefit of the offender himself, and the protection of others. The first justifies it, because to benefit a person cannot be to do him an injury. To punish him for his own good, provided the inflictor has any proper title to constitute himself a judge, is no more unjust than to administer medicine. As far, indeed, as respects the criminal himself, the theory of punishment is that, by counterbalancing the influence of present temptations or acquired bad habits, it restores the mind to that normal preponderance of the love of right which many moralists and theologians consider to constitute the true definition of our freedom. In its other aspect, punishment is a precaution taken by society in self-defence. To make this just, the only condition required is, that the end which society is attempting to enforce by punishment should be a just one. Used as a means of aggression by society on the just rights of the individual, punishment is unjust. Used to protect the just rights of others against unjust aggression

by the offender, it is just. If it is possible to have just rights (which is the same thing as to have rights at all), it cannot be unjust to defend them. Freewill or no free-will, it is just to punish so far as is necessary for this purpose, as it is just to put a wild beast to death (without unnecessary suffering) for the same object" (p. 578).

A writer in the *Westminster Review* for April, 1876, p. 459, says:—"Punishment, as a human institution, is warranted by our very helplessness, by the inability in which we are of producing, otherwise than through the infliction of suffering, that mental change in an offender which alone can render him compatible with the existence of his fellow creatures. But what ground shall we assign for punishment when we suppose it inflicted by a Deity? Granting all the previous difficulties solved, putting aside the question of the origin of evil, putting aside the hypothesis of a creator, still more so of an omnipotent creator, and considering the Deity simply as a ruler, what reason would he have for instituting suffering? Does he institute it in his own defence, or solely in the interest of transgressors? On either supposition the end might be secured by better means. The infliction of punishment is regarded as a defect, even by our poor human educators; their business is to govern by developing the sympathies, by moral suasion, by the influence of high example, and in proportion as they fail in this, they give the measure of their incapacity. How much more, then, must severity be discreditable to a Deity? If our penal legislators find that it is possible to reform criminals, even when taken at maturity, if the progress of our civilisation has been marked by a progressive mildness in our codes, and if the duration of each penalty is being made, as far as possible, dependent on the offender's own behaviour, must we not expect a policy benigner still from God, who has the moulding of his charges from their earliest hour, and who can act directly on their minds? If, with such an expectation, we turn to Christianity, our disappointment will indeed be great. Not one of God's punishments is educational; all have the character of wanton ferocity. They are neither made to depend on the offender's subsequent behaviour, nor do they exhibit any proportionality to the transgression; the code of providence is infinitely worse than Draco's, since even death is not allowed to put an end to the transgressor's sufferings. Adam, having sinned once, is punished

for ever; and as the punishment is maximum, whatever subsequent disobedience Adam may commit, he cannot deserve worse than eternal damnation. We might at least imagine that if this first infliction is not intended as a check on Adam's conduct, it is intended as a check on his descendants. Not at all, the maximum penalty is pronounced for Adam's sin on his descendants also! We shall pursue no further; the exposition of such a scheme as this is an outrage on the reader's understanding."

In chapter 3 Bishop Butler says:—"When we speak of God's natural government of the world, it implies government of the very same kind with that which a master exercises over his servant, or a civil magistrate over his subjects." Surely there is no analogy here, the master does not create his servant, the civil magistrate is neither omniscient nor omnipotent. The subject may rebel to overthrow the civil governor; the servant may escape from the control of the master. Does Bishop Butler mean that any similar contingencies are conceivable of God and his creatures? But adds Bishop Butler:—"This alone does not appear, at first sight, to determine anything certainly concerning the moral character of the author of nature, considered in this relation of governor, does not ascertain his government to be moral, or to prove that he is the righteous judge of the world. Moral government consists, not barely in rewarding and punishing men for their actions, which the most tyrannical person may do; but in rewarding the righteous and punishing the wicked; in rendering to men according to their actions, considered as good or evil. And the perfection of moral government consists in doing this, with regard to all intelligent creatures, in an exact proportion to their personal merits or demerits.'

One answer alone is needed to this, viz., that in no sense can the award of "eternal torment" be considered as "in an exact proportion to the offence for which it is the punishment."

PART II.—CHRISTIANITY.

BY

ANNIE BESANT.

SECTION 1.—Its Evidences Unreliable.

SECTION 2.—Its Origin Pagan.

SECTION 3.—Its Morality Fallible.

SECTION 4.—Its History.

IT is proposed, in Section 1, to examine the Evidences of Christianity, weighing the value of the external evidences brought forward in its favour, and investigating the internal evidences as contained in its own documents; a special reply will thus be offered to the case presented by Paley. The worth of the "Messianic prophecies" will also be tested, and the possibility of miracles denied. The opening, contained in No. 5, will deal with the alleged testimonies of Roman writers and of Josephus; will challenge the value of the early patristic authorities; and will seek to prove that, before A.D. 180 at the earliest, no trace of Four Gospels is discoverable.

THE TWELVE APOSTLES

BY CHARLES BRADLAUGH.

ALL good Christians, indeed all Christians — for are there any who are not models of goodness? — will desire that their fellow-creatures who are unbelievers should have the fullest possible information, biographical or otherwise, as as to the twelve persons specially chosen by Jesus to be his immediate followers. The believer, of course, would be equally content with his faith in the absence of all historic vouchers. Indeed a pious worshipper would cling to his creed not only without testimony in its favor, but despite direct testimony against it. It is to those not within the pale of the church that I shall seek to demonstrate the credibility of the history of the twelve apostles. The short biographical sketch here presented is extracted from the first five books of the New Testament, two of which at least are attributed to two of the twelve. It is objected, by heretical men who go as far in their criticisms on the Gospels as Colenso does with the Pentateuch, that not one of the gospels is original or written by any of the apostles; that, on the contrary, they were preceded by numerous writings, since lost or rejected, these in their turn having for their basis the oral tradition which preceded them. It is alleged that the four gospels are utterly anonymous, and that the fourth gospel is subject to strong suspicions of spuriousness. To use on this part of the words of the author of "Supernatural Religion," applied by him to the Acts of the Apostles: "As a general rule, any documents so full of miraculous episodes and supernatural occurrences would, without hesitation, be characterized as fabulous and incredible, and would not, by any sober-minded reader, be for a moment accepted as historical. There is no other testimony." It would be useless to combat, and I therefore boldly ignore these attacks on the authenticity of the text, and proceed with my history. The names of the twelve are as follows — Simon, surnamed Peter; Andrew, his brother; James and John, the sons of Zebedee; Andrew, Philip; Bartholomew; Matthew; James, the son of Alphteus; Simon, the Canaanite; Judas Iscariot; and a twelfth, as to whose name there is some uncertainty; it was either Lebbæus, Thaddæus, or Judas. It is in Matthew alone (x, 3) that the name of Lebbæus is mentioned thus — "Lebbæus, whose surname was Thaddæus." We are told, on this point, by able Biblicists, that the early MSS have not the words "whose surname was Thaddæus," and that these words have probably been inserted to reconcile the gospel according to Matthew with that attributed to Mark. How good must have been the old fathers who sought to improve upon the Holy Ghost by making clear that which inspiration had left doubtful! In the English version of the Rheims Testament used in

this country by our Roman Catholic brethren, the reconciliation between Matthew and Mark is completed by omitting the words "Lebbæus whose surname was," leaving only the name "Thaddæus" in Matthew's text. This omission must be correct, being by the authority of an infallible church, and Dr. Newman shows us that when the church pronounces all doubt is damnable. If Matthew x, 3, and Mark iii, 18, be passed as reconciled, although the first calls the twelfth disciple Lebbæus, and the second gives him the name Thaddæus, there is yet the difficulty that in Luke vi, 16, corroborated by John xiv, 22, there is a disciple spoken of as "Judas, . . not Iscariot." "Judas, *the brother* of James." Commentators have endeavored to clear away this last difficulty by declaring that Thaddæus is a Syriac word, having much the same meaning as Judas. This has been answered by the objection that if Matthew's Gospel uses Thaddæus in lieu of Judas, then he ought to speak of Thaddæus Iscariot, which he does not; and it is further objected also that while there are some grounds for suggesting a Hebrew original for the gospel atttributed to Matthew, there is not the slightest pretence for alleging that Matthew wrote in Syriac. It is to be hoped that the unbelieving reader will not stumble on the threshold of his study because of a little uncertainty as to a name. What is in a name? The Jewish name which we read as Jesus is really Joshua, but the name to which we are most accustomed seems the one we should adhere to.

Simon Peter being the first named amongst the disciples of Jesus, deserves the first place in this notice. The word "Simon" may be rendered, if taken as a Greek name, *flat-nose* or *ugly*. Some of the ancient Greek and Hebrew names are characteristic of peculiarities in the individual, but no one now knows whether Peter's nose had anything to do with his name. Simon is rather a Hebrew name, but Peter is Greek, signifying a rock or stone. Peter is supposed to have the keys of the kingdom of heaven, and his second name may express his stony insensibility to all appeals by infidels for admittance to the celestial regions. Lord Byron's "Vision of Judgment" is the highest known authority as to Saint Peter's celestial duties, but this nobleman's poems are only fit for very pious readers. Peter, ere he became a parson, was by trade a fisher, and when Jesus first saw Peter, the latter was in a vessel fishing with his brother Andrew, casting a net into the sea of Galilee. The calling of Peter and Andrew to the apostleship was sudden, and apparently unexpected. Jesus walking by the sea said to them — "Follow me, and I will make you fishers of men." (Matthew iv, 18-22) The two brothers did so, and they became Christ's disciples. The successors of Peter have since reversed the apostle's early practice: instead of now casting their nets into the sea, the modern representatives of the disciples of Jesus draw the sees into their nets, and, it is believed, find the result much more

profitable. When Jesus called Peter no one was with him but his brother Andrew; a little further on the two sons of Zebedee were in a ship with their father mending nets. This is the account of Peter's call given in the gospel according to Matthew, and as according to the Church Matthew was inspired by the Holy Ghost, who is identical with God the Father, who is one with God the Son, who is Jesus, the account must be free from error. In the Gospel according to John, which is likewise inspired in the same manner, from the same source, and with similar infallibility, we learn that Andrew was originally a disciple of John the Baptist, and that when Andrew first saw Jesus Peter was not present, but Andrew went and found Peter who, if fishing, must have been angling on land, telling him "we have found the Messiah," and that Andrew then brought Peter to Jesus, who said: "Thou art Simon, the son of Jonas; thou shalt be called Cephas." There is no mention in this gospel narrative of the sons of Zebedee being a little further on, or of any fishing in the sea of Galilee. This call is clearly on land, whether or not near the sea of Galilee does not appear. In the Gospel according to Luke, which is as much inspired as either of the two before-mentioned gospels, and, therefore, equally authentic with each of them, we are told (Luke v, 1-11) that when the call took place Jesus and Peter were both at sea. Jesus had been preaching to the people, who, pressing upon him, he got into Simon's ship, from which he preached. After this he directed Simon to put out into the deep and let down the nets. Simon answered: "Master, we have toiled all night, and taken nothing; nevertheless, at thy word I will let down the net." No sooner was this done than the net was filled to breaking, and Simon's partners, the two sons of Zebedee, came to help, when, at the call of Jesus, they brought their ships to land, and followed him. From these accounts the unbeliever may learn that when Jesus called Peter either both Jesus and Peter were on the land, or one was on land and the other on the sea, or both of them were at sea. He may also learn that the sons of Zebedee were present at the time, having come to help to get in the great catch, and were called with Peter; or that they were further on, sitting mending nets with their father, and were called afterwards; or that they were neither present nor near at hand. He may also be assured that Simon was in his ship when Jesus came to call him, and that Jesus was on land when Andrew, Simon's brother, found Simon and brought him to Jesus to be called. The unbeliever must not hesitate because of any apparent incoherence or contradiction in the narrative. The greater the difficulty in believing, the more deserved the reward which only comes to belief. With faith it is easy to harmonise the three narratives above quoted, especially when you know that Jesus had visited Simon's house before the call of Simon, (Luke iv, 38) but did not go to Simon's house until after Simon had been

called (Matthew viii, 14). Jesus went to Simon's house and cured his wife's mother of a fever. Robert Taylor,[1] commenting on the fever-curing miracle, says — "St. Luke tells us that this fever had taken the woman, not that the woman had taken the fever, and not that the fever was a very bad fever, or a yellow fever, or a scarlet fever, but that it was a great fever — that is, I suppose, a fever six feet high at least; a personal fever, a rational and intelligent fever, that would yield to the power of Jesus's argument, but would never have given way to James's powder. So we are expressly told that Jesus rebuked the fever — that is, he gave it a good scolding; asked it, I dare say, how it could be so unreasonable as to plague the poor old woman so cruelly, and whether it wasn't ashamed of itself; and said, perhaps, *Get out, you naughty wicked fever, you*; and such like objurgatory language, which the fever, not being used to be rebuked in such a manner, and being a very sensible sort of fever, would not stand, but immediately left the old woman in high dudgeon." This Robert Taylor, although a clergyman of the Church of England, has been convicted of blasphemy and imprisoned for writing in such wicked language about the Bible. Simon Peter, as a disciple, performed many miracles, some when in company with Jesus, and more when separately by himself. These miracles, though themselves unvouched by any reliable testimony, and disbelieved by the people amongst whom they were worked, are strong evidence in favor of the apostolic character claimed for Peter.

On one occasion the whole of the disciples were sent away by Jesus in a ship, the Savior remaining behind to pray. About the fourth watch of the night, when the ship was in the midst of the sea, Jesus went unto his disciples, walking on the sea. Though Jesus went unto his disciples, and, as an expeditious way, I suppose, of arriving with them, he would have passed by them, but they saw him, and supposing him to be a spirit, cried out. Jesus bid them be of good cheer, to which Peter answered, (Matthew xiv, 23) "Lord, if it be thou, bid me come unto thee." Jesus said, "Come," and Peter walked on the water to go to Jesus. But the sea being wet and the wind boisterous, Peter became afraid, and instead of walking on the water began to sink into it, and cried out "Lord save me," and immediately Jesus stretched out his hand and caught Peter.

Some object that the two gospels according to John and Mark, which both record the feat of water-walking by Jesus, omit all mention of Peter's attempt. Probably the Holy Ghost had good reasons for omitting it. A profane mind might make a jest of an Apostle "half seas over," and ridicule an apostolic gatekeeper who could not keep his head above water.

Peter's partial failure in this instance should drive away all unbelief, as the text will show that it was only for lack of faith that

Peter lost his buoyancy. Simon is called Bar-Jonah, that is, son of Jonah, but I am not aware that he is any relation to the Jonah who lived under water in the belly of a fish three days and three nights.

It was Simon Peter who, having told Jesus he was the Son of God, was answered "Blessed art thou, Simon Bar-Jonah, flesh and blood hath not revealed it unto thee." (Matthew xvi, 17) We find a number of disciples shortly before this, and in Peter's presence, telling Jesus that he was the Son of God, (Matthew xiv, 33) but there is, of course, no real contradiction between the two texts. It was on this occasion that Jesus said to Simon, "Thou art Peter, and upon this rock I will build my Church, and the gates of hell shall not prevail against it, and I will give thee the keys of the kingdom of Heaven, and whatsoever thou shalt bind on earth shall be bound in Heaven, and whatsoever thou shalt loose on earth shall be loosed in Heaven." Under these extraordinary declarations from the mouth of God the Son, the Bishops of Rome have claimed, as successors of Peter, the same privileges, and their pretensions have been acceded to by some of the most powerful monarchs of Europe.

Under this claim the Bishops, or Popes of Rome, have at various times issued Papal Bulls, by which they have sought to bind the entire world. Many of these have been very successful; but in 1302, Philip the Fair, of France, publicly burned the Pope Boniface's Bull after an address in which the States-General had denounced, in words more expressive than polite, the right of the Popes of Rome to Saint Peter's keys on earth. Some deny that the occupiers of the episcopal seat in the seven-hilled city are really of the Church of Christ, and they point to the bloody quarrels which have raged between men, contending for the Papal dignity. They declare that those Vicars of Christ have more than once resorted to fraud, treachery, and murder, to secure the Papal dignity. They point to Stephen VII, the son of an unmarried priest, who cut off the head of his predecessor's corpse; to Sergius III, convicted of assassination; to John X, who was strangled in the bed of his paramor Theodora; to John XI, son of Pope Sergius III, famous only for his drunken debauchery; to John XII, found assassinated in the apartments of his mistress; to Benedict IX, who both purchased and sold the Pontificate; to Gregory VII, the pseudo lover of the Countess Matilda, and the author of centuries of war carried on by his successors. And if these suffice not, they point to Alexander Borgia, whose name is but the echo of crime, and whose infamy will be as lasting as history. It is answered: "By the fruit ye shall judge of the tree." It is useless to deny the vine's existence because the grapes are sour. Peter, the favored disciple, it is declared was a rascal, and why not his successors? They have only to repent, and there is more joy in heaven over one sinner that repenteth than over ninety and nine righteous men. Such language is

very terrible, and arises from allowing the carnal reason too much freedom.

All true believers will be familiar with the story of Peter's sudden readiness to deny his Lord and teacher in the hour of danger, and will easily draw the right moral from the mysterious lesson here taught; but unbelievers may be a little inclined to agree with the common infidel objections on this point. These objections, therefore, shall be first stated, and then refuted in the most orthodox fashion. It is objected that all the denials were to take place before the cock should crow, (Matthew xxvi, 34; Luke xxii, 34; John xiii, 38) but that only one denial actually took place before the cock crew (Mark xiv, 68). That the first denial by Peter that he knew Jesus, or was one of his disciples, was at the door to the damsel, (John xviii, 17) but was inside while sitting by the fire, (Luke xxii, 57) that the second denial was to a man, and apparently still sitting by the fire (Luke xvii, 58), but was to a maid when he was gone out into the porch. That these denials, or at any rate, the last denial, were all in the presence of Jesus (Luke xvii, 61), who turned and looked at Peter, but that the first denial was at the door, Jesus being inside the palace, the second denial out in the porch, Jesus being still inside (Mark xiv, 69), and the third denial also outside. The refutation of these paltry objections is so simple, that any little child could give it, and none but an infidel would need to hear it, we therefore refrain from penning it. None but a disciple of Paine, or follower of Voltaire, would permit himself to be drawn to the risk of damnation on the mere question as to when some cock happened to crow, or as to the particular spot on which a recreant apostle denied his master. It is the merest justice to Peter to add that his disloyalty to Jesus was shared by his co-apostles. When Jesus was arrested "all the disciples forsook him and fled" (Matthew xxvi, 56). The true believer may sometimes be puzzled that Peter should so deny Jesus after he, Peter, had seen (Matthew xvii, 3-5) Moses and Elias, who had been dead many centuries, talking with Jesus, and had heard "a voice out of the cloud which said, this is my beloved son, in whom I am well pleased." The unbeliever must not allow himself to be puzzled by this. Two of the twelve apostles, whose names are not given, saw Jesus after he was dead, on the road to Emmaus, but they did not know him; towards evening they knew him, and he vanished out of their sight. In broad daylight they did not know him, at evening time they knew him. While they did not know him they could see him, when they did know him they could not see him. Well may true believers declare that the ways of the Lord are wonderful. One of the apostles, Thomas, called Didymus, set the world an example of unbelief. He disbelieved the other disciples when they said to him, "we have seen the Lord," and required to see Jesus, though dead, alive in the flesh, and touch the body of his crucified

master. Thomas the apostle had his requirements complied with — he saw, he touched, and he believed. The great merit is to believe without any evidence — "He that believeth and is baptized shall be saved, he that believeth not shall be damned." How it was that Thomas the apostle did not know Jesus when he saw him shortly after near the sea of Tiberias, is another of the mysteries of the Holy Christian religion. The acts of the apostles after the death of Jesus deserve treatment in a separate paper; the present essay is issued to aid the members of the Church Congress in their endeavors to stem the rising tide of infidelity.

FRUITS OF PHILOSOPHY

A TREATISE ON THE POPULATION QUESTION

By Charles Knowlton

Edited by Charles Bradlaugh and Annie Besant

PUBLISHERS' PREFACE.

The pamphlet which we now present to the public is one which has been lately prosecuted under Lord Gampbell's Act, and which we republish, in order to test the right of publication. It was originally written by Charles Knowlton, M. D., whose degree entitles him to be heard with respect on a medical question. It was first published in England, about forty years ago, by James Watson, the gallant radical, who came to London and took up Richard Carlile's work, when Carlile was in jail. He sold it, unchallenged, for many years, approved it, and recommended it. It was printed and published by Messrs. Holyoake & Co., and found its place, with other works of a similar character, in their "Freethought Directory," of 1853, and was thus identified with freethought literature at the then leading freethought _depot_ Mr. Austin Holyoake, working in con-junction with Mr. Bradlaugh at the _National Reformer_ office, Johnson's Court, printed and published it in his turn, and this well-known freethought advocate, in his "Large or Small Families," selected this pamphlet, together with R. D. Owen's "Moral Physiology" and the "Elements of Social Science," for special recommendation. Mr. Charles Watts, succeeding to Mr. Austin Holyoake's business, continued

the sale, and, when Mr. Watson died, in 1875, he bought the plates of the work (with others) from Mrs. Watson, and continued to advertise and to sell it until December 23, 1876. For the last forty years the book has thus been identified with freethought, advertised by leading freethinkers, published under the sanction of their names, and sold in the headquarters of freethought literature. If, during this long period, the party has thus--without one word of protest--circulated an indecent work, the less we talk about freethought morality the better; the work has been largely sold, and, if leading freethinkers have sold it--profiting by the sale--through mere carelessness, few words could be strong enough to brand the indifference which thus scattered obscenity broadcast over the land. The pamphlet has been withdrawn from circulation in consequence of the prosecution instituted against Mr. Charles Watts, but the question of its legality or illegality has not been tried; a plea of "Guilty" was put in by the publisher, and the book, therefore, was not examined, nor was any judgment passed upon it; no jury registered a verdict, and the judge stated that he had not read the work.

We republish this pamphlet, honestly believing that on all questions affecting the happiness of the people, whether they be theological, political or social, fullest right of free discussion ought to be maintained at all hazards. We do not personally indorse all that Dr. Knowles says: his "Philosophical Proem" seems to us full of philosophical mistakes, and--as we are neither of us doctors--we are not prepared to indorse his medical views; but since progress can only be made through discussion, and no discussion is possible where differing opinions are suppressed, we claim the right to publish all opinions, so that the public, enabled to see all sides of a question, may have the materials for forming a sound judgment.

The alterations made are very slight, the book was badly printed, and errors of spelling and a few clumsy grammatical expressions have been corrected; the subtitle has been changed, and in one case four lines have been omitted, because they are repeated word for word further on. We have, however, made some additions to the pamphlet, which are in all cases kept distinct from the original text. Physiology has made great strides during the past forty years, and not considering it right to circulate erroneous physiology, we submitted the pamphlet to a doctor in whose accurate knowledge we have the fullest confidence, and who is widely known in all parts of the world as the author of the "Elements of Social Science;" the notes signed "G. B." are written by this gentleman. References to other works are given in foot-notes for the assistance of the reader, if he desires to study up the subject further.

Old Radicals will remember that Richard Carlile published a work entitled "Every Woman's Book," which deals with the same subject and advocates the same object as Dr. Knowlton's pamphlet R. D. Owen objected to the "style and tone" of Carlile's "Every Woman's Book," as not being in "good taste," and he wrote his "Moral Physiology" to do in America what Carlile's work was intended to do in England. This work of Carlile's was stigmatized as "indecent" and "immoral," because it advocated, as does Dr. Knowlton's, the use of preventive checks to population. In striving to carry on Carlile's work, we cannot expect to escape Carlile's reproach; but, whether applauded or condemned, we mean to carry it on, socially as well as politically and theologically.

We believe, with the Rev. Mr. Malthus, that population has a tendency to increase faster than the means of existence, and that _some_ checks must therefore exercise control over population. The checks now exercised are semi-starvation and preventable disease; the enormous mortality among the infants of the poor is one of the checks which now keep down the population. The checks that ought to control population are scientific, and it is these which we advocate. We think it more moral to prevent the

conception of children than, after they are born, to murder them by want of food, air and clothing. We advocate scientific checks to population, because, so long as poor men have large families, pauperism is a necessity, and from pauperism grow crime and disease. The wages which would support the parents and two or three children in comfort and decency, is utterly insufficient to maintain a family of twelve or fourteen, and we consider it a crime to bring into the world human beings doomed to misery or to premature death. It is not only the hard-working classes which are concerned in this question. The poor preacher, the struggling man of business, the young professional man, are often made wretched for life by their inordinately large families, and their years are passed in one long battle to live; meanwhile, the woman's health is sacrificed and her life embittered from the same cause. To all of these we point the way of relief and happiness; for the sake of these we publish what others fear to issue; and we do it confident that if we fail the first time, we shall succeed at last, and that the English public will not permit the authorities to stifle a discussion of the most important social question which can influence a nation's welfare.

Charles Bradlaugh.

Annie Besant.

PHILOSOPHICAL PROEM

Consciousness is not a "principle" or substance of any kind, nor is it, strictly speaking, a property of any substance or being. It is a peculiar action of the nervous system, and the system is said to be sensible, or to possess the property of sensibility, because those sentient actions which constitute our different consciousnesses may be excited in it. The nervous system includes not only the brain and spinal marrow, but numerous soft white cords, called nerves, which extend from the brain and spinal marrow to every part of the body in which a sensation can be excited.

A sensation is a sentient action of a nerve and the brain; a thought or idea (both the same thing) is a sentient action of the brain alone. A sensation or a thought is consciousness, and there is no consciousness but that which consists either in a sensation or a thought.

Agreeable consciousness constitutes what we call happiness, and disagreeable consciousness constitutes misery. As sensations are a higher degree of consciousness than mere thought, it follows that agreeable sensations constitute a more exquisite happiness than agreeable thoughts. That portion of happiness which consists in agreeable sensations is commonly called pleasure. No thoughts are agreeable except those which were originally excited by or have been associated with agreeable sensations. Hence, if a person never had experienced any agreeable sensations, he could have no agreeable thoughts, and would, of course, be an entire stranger to happiness.

There are five species of sensations--seeing, hearing, smelling, tasting and feeling. There are many varieties of feeling--as the feelings of hunger, thirst, cold, hardness, etc. Many of these feelings are excited by agents that act upon the exterior of the body, such as solid substances of every kind, heat, and various chemical irritants. These latter feelings are called _passions_.

Those passions which owe their existence chiefly to the state of the brain, or to causes acting directly upon the brain, are called the moral

passion. They are grief, anger, love, etc. They consist of sentient actions, which commence in the brain and extend to the nerves in the region of the stomach, etc. But when the cause of the internal feeling of passion is seated in some organ remote from the brain, as in the stomach, genital organs, etc., the sentient action which constitutes the passion commences in the nerves of such organ and extends to the brain, and the passion is called an _appetite, instinct, or desire_. Some of these passions are natural, as hunger, thirst, the reproductive instinct, the desire to urinate, etc. Others are gradually acquired by habit A _hankering_ for stimulants, as spirits, opium and tobacco, is one of these.

Such is the nature of things that our most vivid and agreeable sensations cannot be excited under all circumstances, nor beyond a certain extent under any circumstances, without giving rise in one way or another to an amount of disagreeable consciousness or misery, exceeding the amount of agreeable consciousness which attends such ill-timed or excessive gratification. To excite agreeable sensations to a degree not exceeding this certain extent is temperance; to excite them beyond this extent is intemperance; not to excite them at all is mortification or abstinence. This certain extent varies with different individuals, according to their several circumstances, so that what would be temperance in one person may be intemperance in another.

To be free from disagreeable consciousness is to be in a state which, compared with a state of misery, is a happy state; yet absolute happiness does not exist in the absence of misery, if it does, rocks are happy. It consists, as aforesaid, in agreeable consciousness. That which enables a person to excite or maintain agreeable consciousness is not happiness; but the _idea_ of having such in one's possession is agreeable, and of course is a portion of happiness. Health and wealth go far in enabling a person to excite and maintain agreeable consciousness. That which gives rise to agreeable consciousness is _good_, and we desire it. If we use it intemperately, such use is bad, but the thing itself is still good. Those acts (and intentions are acts of that part of man which intends) of human beings which tend to the promotion of happiness are good, but they are also called _virtuous_, to distinguish them from other things of the same tendency. There is nothing for the word _virtue_ to signify, but virtuous actions. Sin signifies nothing but sinful actions, and sinful, wicked, vicious, or bad actions are those which are productive of more misery than happiness.

When an individual gratifies any of his instincts in a _temperate_ degree, he adds an item to the sum total of human happiness, and causes the amount of human happiness to exceed the amount of misery farther than if he had not enjoyed himself, therefore it is virtuous, or, to say the least, it is not vicious or sinful for him to do so. But it must ever be remembered that this temperate degree depends on circumstances; that one person's health, pecuniary circumstances, or social relation may be such that it would cause more misery than happiness for him to do an act which being done by a person under different circumstances would cause more happiness than misery. Therefore, it would be right for the latter to perform such act, but not for the former.

Again: owing to his _ignorance_, a man may not be able to gratify a desire without causing misery (wherefore it would be wrong for him to do it), but with knowledge of means to prevent this misery, he may so gratify it that more pleasure than pain will be the result of the act, in which case the act, to say the least, is justifiable. Now, therefore, it is virtuous, nay, it is the _duty_, for him who has a knowledge of such means, to convey it to those who have it not, for by so doing he furthers the cause of human happiness.

Man by nature is endowed with the talent of devising means to remedy

or prevent the evils that are liable to arise from gratifying our appetites; and it is as much the duty of the physician to inform mankind of the means to prevent the evils that are liable to arise from gratifying the productive instinct as it is to inform them how to keep clear of the gout or dyspepsia. Let not the old ascetic say we ought not to gratify our appetites any further than is necessary to maintain health and to perpetuate the species. Mankind will not so abstain, and if any means to prevent the evils that may arise from a farther gratification can be devised, they _need not_. Heaven has not only given us the capacity of greater enjoyment, but the talent of devising means to prevent the evils that are liable to arise therefrom, and it becomes us, "with thanksgiving," to make the most of them.

FRUITS OF PHILOSOPHY.

CHAPTER I. TO LIMIT AT WILL THE NUMBER OF THEIR OFFSPRING

Showing how desirable it is, both in a political and a social point of view, for mankind to be able to limit at WILL THE NUMBER OF THEIR OFFSPRING, WITHOUT SACRIFICING THE PLEASURE THAT ATTENDS THE GRATIFICATION OF THE REPRODUCTIVE INSTINCT.

First.---_In a political point of view_.--If population be not restrained by some great physical calamity, such as we have reason to hope will not hereafter be visited upon the children of men, or by some _moral restraint_, the time will come when the earth cannot support its inhabitants. Population unrestrained will double three times in a century. Hence, computing the present population of the earth at 1,000 millions, there would be at the end of 100 years from the present time, 8,000 millions.

At the end of 200 years, 64,000 millions.

" " 300 " 512,000 "

And so on, multiplying by eight for every additional hundred years. So that in 500 years from the present time there would be thirty-two thousand seven hundred and sixty eight times as many inhabitants as at present. If the natural increase should go on without check for 1,500 years, one single pair would increase to more than _thirty-five thousand one hundred and eighty-four_ times as many as the present population of the whole earth!

Some check then there must be, or the time will come when millions will be born but to suffer and to perish for the necessaries of life. To what an inconceivable amount of human misery would such a state of things give rise! And must we say that vice, war, pestilence and famine are desirable to prevent it? Must the friends of temperance and domestic happiness stay their efforts? Must peace societies excite to war and bloodshed? Must the physician cease to investigate the nature of contagion, and to search for the means of destroying its baneful influence? Must he that becomes diseased be marked as a victim to die for public good, without the privilege of making an effort to restore him to health? And in case of a failure of crops in one part of the world, must the other parts withhold the means of supporting life that the far greater evil of excessive population throughout the world may be prevented? Can there be no effectual moral restraint, attended with far less human misery than such physical calamities as these? Most surely

there can. But what is it? Malthus, an English writer on the subject of population, gives us none but celibacy to a late age. But how foolish it is to suppose that men and women will become as monks and nuns during the very holiday of their existence, and abjure during the fairest years of life the nearest and dearest of social relations, to avert a catastrophe which they and perhaps their children will not live to witness. But, besides being ineffectual, or if effectual, requiring a great sacrifice of enjoyment, this restraint is highly objectionable on the score of its demoralizing tendency. It would give rise to a frightful increase of prostitution, of intemperance and onanism, and prove destructive to health and moral feelings. In spite of preaching, human nature will ever remain the same; and that restraint which forbids the gratification of the reproductive instinct will avail but little with the mass of mankind. The checks to be hereafter mentioned are the only moral restraints to population known to the writer that are unattended with serious objections.

Besides starvation, with all its accompanying evils, overpopulation is attended with other public evils, of which may be mentioned, ignorance and slavery. Where the mass of the people must toil incessantly to obtain support, they must remain ignorant; and where ignorance prevails, tyranny reigns.*

> * The scientific part of Malthus' Doctrine of Population is not very clearly or correctly given in the above passages. His great theory, now or generally held by the most eminent political economists, is that the increase of population is always powerfully checked in old countries by the difficulty in increasing the supply of food; that the existing evils of poverty and low wages are really at bottom caused by this check, and are brought about by the pressure of population on the soil, and the continual overstocking of the labor markets with laborers; and hence that the only way in which society can escape from poverty, with all its miseries, is by putting a strong restraint on their natural powers of multiplication. "It is not in the nature of things," he says, "that any permanent and general improvement in the condition of the poor can be effected without an increase in the preventive checks to population."--G. R.

Second--_In a social point of view_.--"Is it not notorious that the families of the married often increase beyond which a regard for the young beings coming into the world, and the happiness of those who give them birth, would dictate. In how many instances does the hard-working father, and more especially the mother, of a poor family remain slave throughout their lives, tugging at the oar of incessant labor, toiling to live, and living to toil; when, if their offspring had been limited to two or three only, they might have enjoyed comfort and comparative affluence? How often is the health of the mother, giving birth every year to an infant--happy if it be not twins--and compelled to toil on, even at those times when nature imperiously calls for some relief from daily drudgery,--how often is the mother's comfort, health, nay, even her life, thus sacrificed? Or if care and toil have weighed down the spirit, and at length broken the health of the father; how often is the widow left unable, with the most virtuous intentions, to save her fatherless offspring from becoming degraded objects of charity, or profligate votaries of vice!

"Nor is this all. Many women are so constituted that they cannot give birth to healthy, sometimes not to living children. Is it desirable, is it moral, that such women should become pregnant? Yet this is continually the case. Others there are who ought never to become parents; because, if they do, it is only to transmit to their offspring grievous hereditary diseases, which render such offspring mere subjects

of misery throughout their sickly existence. Yet such women will not lead a life of celibacy. They marry. They become parents, and the sum of human misery is increased by their doing so. But it is folly to expect that we can induce such persons to live the lives of Shakers. Nor is it necessary; all that duty requires of them is to refrain from becoming parents. Who can estimate the beneficial effect which a rational moral restraint may thus have on the health and beauty and physical improvement of our race throughout future generations?"

Let us now turn our attention to the case of unmarried youth.

"Almost all young persons, on reaching the age of maturity, desire to marry. That heart must be very cold, or very isolated, that does not find some object on which to bestow its affections. Thus, early marriage would be almost universal did not prudential consideration interfere. The young man thinks, 'I cannot marry yet; I cannot support a family. I must make money first, and think of a matrimonial settlement afterwards.'

"And so he goes to making money, fully and sincerely resolved in a few years to share it with her whom he now loves. But passions are strong and temptations great. Curiosity, perhaps, introduces him into the company of those poor creatures whom society first reduces to a dependence on the most miserable of mercenary trades, and then curses for being what she has made them. There his health and moral feelings are alike made shipwreck. The affections he had thought to treasure up for their first object are chilled by dissipation and blunted by excess. He scarcely retains a passion but avarice. Years pass on--years of profligacy and speculation--and his wish is accomplished, his fortune is made. Where now are the feelings and resolve of his youth?

> 'Like the dew on the mountain,
> Like the foam on the river,
> Like the bubbles on the fountain,
> They are gone--and forever.'

"He is a man of pleasure, a man of the world. He laughs at the romance of his youth, and marries a fortune. If gaudy equipage and gay parties confer happiness, he is happy. But if these be only the sunshine on the stormy sea below, he is a victim to that system of morality which forbids a reputable connection until the period when provision has been made for a large expected family. Had he married the first object of his choice, and simply delayed becoming a father until his prospects seemed to warrant it, how different might have been his lot. Until men and women are absolved from the fear of becoming parents, except when they themselves desire it, they will ever form mercenary and demoralizing connections, and seek in dissipation the happiness they might have found in domestic life.

"I know that this, however common, is not a universal case. Sometimes the heavy responsibilities of a family are incurred at all risks; and who shall say how often a life of unremitting toil and poverty is the consequence. Sometimes, if even rarely, the young mind does hold its first resolves. The youth plods through years of cold celibacy and solitary anxiety, happy if, before the best hours of his life are gone and its warmest feelings withered, he may return to claim the reward of his forbearance and his industry. But even in this comparatively happy case, shall we count for nothing the years of ascetic sacrifice at which after happiness is purchased? The days of youth are not too many, nor its affections too lasting. We may, indeed, if a great object require it, sacrifice the one and mortify the other. But is this, in itself, desirable? Does not wisdom tell us that such a sacrifice is a dead loss--to the warm-hearted often a grievous one? Does not wisdom bid us temperately enjoy the springtimes of life, 'while the evil day come not,

nor the years draw nigh, when we shall say we have no pleasure in them?'

"Let us say, then, if we will, that the youth who thus sacrifices the present for the future, chooses wisely between the two evils, profligacy and asceticism. This is true. But let us not imagine the lesser evil to be good. It is _not_ good for man to be alone. It is for no man or woman's happiness or benefit that they should be condemned to Shakerism. It is a violence done to the feelings and an injury to the character. A life of rigid celibacy, though infinitely preferable to a life of dissipation, is yet fraught with many evils. Peevishness, restlessness, vague longings and instability of character, are amongst the least of these. The mind is unsettled, and the judgment warped. Even the very instinct which is thus mortified assumes an undue importance, and occupies a portion of the thoughts which does not of right or nature belong to it, and which, during a life of satisfied affection, it would not obtain."

In many instances, the genital organs are rendered so irritable by the repletion to which unnatural continency gives rise, and by the much thinking caused by such repletion, as to induce a disease known to medical men by the name of _Gonorrhoea Dormientium_. It consists in an emission or discharge of the semen during sleep. This discharge is immediately excited in most instances by a lascivious dream, but such dream is caused by the repletion and irritability of the genital organs. It is truly astonishing to what a degree of mental anguish the disease gives rise in young men. They do not understand the nature, or rather, the cause of it. They think it depends on a weakness--indeed, the disease is often called a "seminal weakness"--and that the least gratification in a natural way would but serve to increase it. Their anxiety about it weakens the whole system. This weakness they erroneously attribute to the discharges; they think themselves totally disqualified for entering into or enjoying the married state. Finally, the genital and mental organs act and react upon each other so perniciously as to cause a degree of nervousness, debility, emaciation and melancholy--in a word, wretchedness that sets description at defiance. Nothing is so effectual in curing this diseased state of a body and mind in young men as marriage. All restraint, fear and solicitude should be removed.

"Inasmuch, then, as the scruples of incurring heavy responsibilities deter from forming moral connections and encourage intemperance and prostitution, the knowledge which enables man to limit the number of his offspring would, in the present state of things, save much unhappi-ness and prevent many crimes. Young persons sincerely attached to each other, and who might wish to marry, should marry early, merely resolving not to become parents until prudence permitted it. The young man, instead of solitary toil and vulgar dissipation, would enjoy the society and the assistance of her he has chosen as his companion; and the best years of life, whose pleasures never return, would not be squandered in riot, nor lost through mortification."*

> * The passages quoted are from Robert Dale Owen's "Moral Physiology."

CHAPTER II. ON GENERATION

I hold the following to be important and undeniable troths: That every man has a natural right both to receive and convey a knowledge of all the facts and discoveries of every art and science, excepting such only as may be secured to some particular person or persons by copyright or patent; that a physical truth in its general effect cannot be a moral

evil; that no fact in physics or in morals ought to be concealed from the inquiring mind.

Some may make a misuse of knowledge, but that is their fault; and it is not right that one person should be deprived of knowledge, of spirits, of razors, or of anything else which is harmless in itself and may be useful to him, because another may misuse it.

The subject on generation is not only interesting as a branch of science, but it is so connected with the happiness of mankind that it is highly important in a practical point of view. Such, to be sure, is the custom of the age, that it is not considered a proper subject to investigate before a popular assembly, nor is it proper to attend the calls of nature in a like place; yet they must and ought to be attended to, for the good, the happiness of mankind require it; so, too, for like reason, the subject of generation ought to be investigated until it be rightly understood by all people, but at such opportunities as the good sense of every individual will easily decide to be proper. This, I presume to say, not simply upon the abstract principle that all knowledge of Nature's workings is useful, and the want of it disadvantageous, but from the known moral fact that ignorance of this process has in many instances proved the cause of a lamentable "mishap," and more especially as it is essential to the attainment of the great advantage, which it is the chief object of this work to bestow upon mankind.

People generally, as it was the case with physicians until late years, entertain a very erroneous idea of what takes place in the conception. Agreeably to this idea the "check" which I consider far preferable to any other, would not be effectual, as would be obvious to all. Consequently, entertaining this idea, people would not have due confidence in it. Hence, it is necessary to correct a long-held and widely extended error. But this I cannot expect to do by simply saying it is an error. Deeply rooted and hitherto undisputed opinions are not so easily eradicated. If I would convince any one that the steps in one of the most recondite processes of nature are not such as he has always believed, it will greatly serve my purpose to show what these steps are. I must first prepare him to be reasoned with, and then reason the matter all over with him. I must point out the facts which disprove his opinion, and show that my own is unattended with difficulties.

But what can be more obvious than that it is absolutely impossible to explain any process or function of the animal economy, so as to be understood, before the names of the organs which perform this function have been defined, that is, before the organs themselves have been described. Now it is well known to every anatomist, and indeed it may be obvious to all, that in describing any organ or system of organs, we must always begin with some external and known parts, and proceed regularly, step by step, to the internal and unknown. As in arithmetic, "everything must be understood as you go along."*

> * This is an Americanism, which appears to us to convey a false idea. If it refers to the cases used as illustrations, Dr. Knowlton is more sparing in his use of them than either Dr. Bull or Dr. Chavasse.--Publishers' Note.

Fully to effect the objects of this work, it is, therefore, a matter of necessity that I give an anatomical description of certain parts--even external parts--which some, but imagine what I have just said, might think it useless to mention. It is not to gratify the idle curiosity of the light-minded that this book is written; it is for _utility_ in the broad and truly philosophical sense of the term; nay, farther, it shall with the exception of here and there a little spicing*, have confined to _practical utility_. I shall, therefore, endeaver to treat of the

subject in this chapter so as to be understood, without giving any description of the male organs of generation; though I hold it an accomplishment for one be able to speak of those organs, as diseases often put them under the necessity of doing, without being compelled use low and vulgar language. But I must briefly describe the female organs; in doing which I must, of course, speak as do other anatomists and physiologists; and whoever objects to this will discover more affectation and prudery than good sense and good will to mankind.

The adipose, or fatty matter, immediately over the share bone, forms a considerable prominence in females, which, at the age of puberty, is covered with hair, as in males. This prominence is called Mons Veneris.

The exterior orifice commences immediately below this. On each side of this orifice is a prominence continued from the mons veneris, which is largest above and gradually diminishes as it descends. These two prominences are called the Labia Externa, or external lips. Near the latter end of pregnancy they become somewhat enlarged and relaxed, so that they sustain little or no injury during parturition. Just within the upper or anterior commissure, formed by the junction of these lips, a little round oblong body is situated. The body is called the clitoris. Most of its length is bound down, as it were, pretty closely to the bone; and it is of very variable size in different females. Instances have occurred where it was so enlarged as to allow the female to have venereal commerce with others; and in Paris this fact was once made a public exhibition to the medical faculty. Women thus formed appear to partake in their general form of the male character, and are called hermaphrodites. The idea of human beings, called hermaphrodites, which could be either father or mother, is, doubtless, erroneous. The clitoris is analogous in its structure to the penis, and like it, is exquisitely sensitive, being, as it is supposed, the principal seat of pleasure. It is subject to erection or distension, like the penis, from like causes.

The skin which lines the internal surface of the external lips is folded in such manner as to form two flat bodies, the exterior edges of which are convex. They are called the nymphse. They extend downward, one on each side, from the clitoris to near the middle of the external orifice, somewhat diverging from each other. Their use is not very evident The orifice of the urethra (the canal, short in females, which leads to the bladder) is situated an inch or more farther inward than the clitoris, and is a little protuberant.

Passing by the external lips, the clitoris, the nymphse and the orifice of the urethra, we come to the membrane called the hymen. It is situated just at, or a trifle behind the orifice of the urethra. It is stretched across the passage, and were it a complete septum, it would close up the anterior extremity of that portion of the passage which is called the vagina. But the instances in which the septum or partition is complete are very rare, there being, in almost all cases, an aperture either in its center, or frequently in its anterior edge, giving the membrane the form of a crescent Through this aperture passes the menstrual fluid. Sometimes, however, this septum is complete, and the menstrual fluid is retained month after month, until appearances and symptoms much like those of pregnancy are produced, giving rise to perhaps unjust suspicions. Such cases require the simple operation of dividing the hymen. In many instances the hymen is very imperfect, insomuch that some have doubted whether it is to be found in the generality of virgins. Where it exists it is generally ruptured in the first intercourse of the sexes, and the female is said to lose her virginity. In some rare instances it is so very strong as not to be ruptured by such intercourse, and the nature of the difficulty not being understood, the husband has sued for a divorce. But everything may be put to rights by a slight surgical operation. The parts here described are among those called the external parts of generation.

The internal organs of generation consist in the female of the Vagina, the Uterus, the Ovaries and their appendages.

The Vagina is a membranous canal commencing at the hymen and extending to the uterus. It is a little curved, and extends backward and upward between the bladder, which lies before and above it, and that extreme portion of the bowels called the rectum, which lies behind it. The coat of membrane which lines the internal surface of the vagina forms a number of transverse ridges. These are to be found only in the lower or anterior half of the vagina, and they do not extend all round the vagina, but are situated on its anterior and posterior sides, while their lateral sides are smooth. I mention these ridges because a knowledge of them may lead to a more effectual use of one of the checks to be made known hereafter.

The uterus or womb is also situated between the bladder and the rectum, but above the vagina. Such is its shape that it has been compared to a pear with a long neck. There is, of course, considerable difference between the body and the neck, the first being twice as broad as the last. Each of these parts is somewhat flattened. In subjects of mature age, who have been pregnant, the whole of the uterus is about two inches and a half in length, and more than an inch and a half in breadth at the broadest part of the body. It is near an inch in thickness. The neck of the uterus is situated downward, and may be said to be inserted into the upper extremity of the vagina. It extends down into the vagina the better part of an inch. In the uterus is a cavity which approaches the triangular form, and from which a canal passes down through the neck of the uterus into the vagina. This cavity is so small that its sides are almost in contact So that the uterus is a thick, firm organ for so small a one. Comparing the cavity of the uterus to a triangle, we say the upper side or line of this triangle is transverse with respect to the body, and the other two lines pass downward and inward, so that they would form an angle below, did they not before they meet take a turn more directly downward to form the canal just mentioned. In each of the upper angles there is an orifice of such size as to admit of a hog's bristle. These little orifices are the mouths of two tubes, called the Fallopian tubes, of which more will be said presently. The canal which passes through the neck of the uterus, connecting the cavity of this organ with that of the vagina, is about a quarter of an inch in diameter. It is different from other ducts, for it seems to be a part of the cavity from which it extends, inasmuch as when the cavity of the uterus is enlarged in the progress of pregnancy, this canal is gradually converted into a part of that cavity.

The lower extremity of the neck of the uterus is irregularly convex and tumid. The orifice of the canal in it is oval, and so situated that it divides the convex surface of the lower extremity of the neck in two portions, which are called the lips of the uterus. The anterior is thicker than the posterior. The orifice itself is called _os tincæ_ or _os uteri_, or in English, the mouth of the womb. When the parts are in a weak, relaxed state, the mouth or neck of the uterus is quite low, and in almost all oases it may be reached by a finger introduced into the vagina, especially by a second person, who carries the hand behind.

The Ovaries are two bodies of a flattened or oval form, one of which is situated on each side of the uterus at a little distance from it, and about as high up as where the uterus becomes narrow to form its neck. The longest diameter of the ovarium is about an inch. Each ovarium has a firm coat of membrane. In those who have not been pregnant, it contains from ten to twenty _vesicles_, which are little round bodies, formed of a delicate membrane, and filled with a transparent fluid. Some of these vesicles are situated so near the surface of the ovarium as to be prominent on its surface. They are of different sizes, the largest

nearly a quarter of a inch in diameter.*

> * The vesicles here mentioned are the so-called Graafian vesicles, or ovisacs, each of which contains in its interior a little ovum or egg. In the human female the ovum is extremely minute, so as only to be visible with the aid of a lens. The Graafian vesicles are not limited to a certain small number, as was formerly thought, but continue to be formed in the ovaries, and to discharge at intervals mature ova during the whole of the fruitful period.--G. R.

In those in whom conception has ever taken place, some of these vesicles are removed, and in their place a cicatrix or scar is formed which continues through life. However, the number of cicatrices does not always correspond with the number of conceptions. They often exceed it, and are sometimes found where conception has not been known to take place. The Fallopian Tubes are two canals four or five inches in length, proceeding from the upper angles of the cavity of the uterus, in a transverse direction in respect to the body. Having so proceeded for some distance they turn downward toward the ovaries. At their commencement in the uterus they are very small, but they enlarge as much as they progress. The large ends, which hang loose, terminate in open mouths, the margins of which consist of fimbriated processes, and nearly touch the ovaria.

We are now prepared to treat of conception. Yet, as menstruation is closely connected with it, and as a knowledge of many things concerning menstruation may contribute much to the well-being of females, for whom this work is at least as much designed as for males, I shall first briefly treat of this subject.

Menstruation.--When females arrive at the age of puberty they begin to have a discharge once every month, by way of the vagina, of the color of blood. This discharge is termed the menses. To have it is to menstruate. The age at which menstruation commences varies with different individuals, and also in different climates. The warmer the climate the earlier it commences and ceases. In temperate climates it generally commences at the age of fourteen or fifteen, and it ceases at forty-four, or a little later. *

Whenever it commences the girl acquires a more womanly appearance. It is a secretion of the uterus, or, in other words, the minute vessels distributed to the inner coat of uterus, select as it were, from the blood, and pour out in a gradual manner the materials of this fluid. It has one of the properties, color, of blood, but it does not coagulate, or separate into different parts like blood, and cannot properly be called blood.**

> * Dr. Chavasse, on p. 94 of his "Advice to a Wife" published by W. H. Smith & Son gives instances of very early menstruation and consequent fecundity.--Publishers' note,

> ** "The menstrual discharge," says Dr. Kirkes, "consists of blood effused from the inner surface of the uterus, and mixed with mucus from the uterus, vagina, and the external parts of the generative apparatus. Being diluted by this admixture, the menstrual blood coagulates less perfectly than ordinary blood; and the frequent acidity of the vaginal mucus tends still further to diminish its coagulability."--Handbook of Physiology, 8th ed., p. 727, 1874.--G. R.

When this discharge is in all respects regular, it amounts in most females to six or eight ounces, and from two to four days' continuance.

During its continuance the women is said to be unwell, or out of order. Various unpleasant feelings are liable to attend it; but when it is attended with severe pain, as it not infrequently is, it becomes a disease, and the woman is not likely to conceive until it is cured. During the existence of the "turns," or "monthlies," as they are often called, indigestible food, dancing in warm rooms, sudden exposure to cold or wet, and mental agitations, should be avoided as much as possible. The "turns" do not continue during pregnancy, nor nursing, unless nursing be continued after the "turns" recommence. Some women, it is true, are subject to a slight hemorrhage that sometimes occurs with considerable regularity during pregnancy, and which has led them to suppose they have their turns at such times; but it is not so; the discharge at such times is real blood.*

* Consult on the whole of this Dr. Chavasse's book, pp. 91-101, where full details are given.--Publishers' note.

The use of the menstrual discharge seems to be to prepare the uterine system for conception. For females do not become pregnant before they commence, nor after they cease having turns; nor while they are suppressed by some disease, by cold or by nursing. Some credible women, however, have said that they become pregnant while nursing, without having had any turn since their last lying-in. It is believed that in these oases they had some discharge, colorless, perhaps, which they did not notice, but which answered the purposes of the common one. Women are not nearly so likely to conceive during the week before a monthly as during the week immediately after.* But although the use of this secretion seems to be to prepare for conception, it is not to be inferred that the reproductive instinct ceases at the "turn of life," or when the woman ceases to menstruate. On the contrary, it is said that this passion often increases at this period, and continues in a greater or less degree to an extreme age.

* See, however, Dr. Bull's "Hints to Mothers," pp. 31-58, and 127-129 (published by Longmans, Green & Co.)--Publishers' note.

Conception.--The part performed by the male in the reproduction of the species consists in exciting the organism of the female, and depositing the semen in the vagina. Before I inquire what takes place in the females I propose to speak of the semen.

This fluid, which is secreted by the testicles, may be said to possess three kinds of properties, physical, chemical, physiological. Its physical properties are known to every one--it is a thickish, nearly opaque fluid, of a peculiar odor, saltish taste, etc. As to its chemical properties, it is found by analysis to consist of 900 parts of water, 60 of animal muscilage, 10 of soda, 30 of phosphate of lime. Its physiological property is that of exciting the female genital organs in a peculiar manner.

When the semen is examined by microscope, there can be distinguished a multitude of small animalculæ, which appear to have a rounded head and a long tail. These animalculæ move with a certain degree of rapidity. They appear to avoid the light and to delight in the shade. Leeuwenhoek, if not the discoverer of the seminal animalculse, was the first who brought the fact of their existence fully before the public. With respect to their size, he remarked that ten thousand of them might exist in a space not larger than a grain of sand. They have a definite figure, and are obviously different from the animalculse found in any other fluid.*

* See Dr. Carpenter's "Animal Physiology," p. 558 (published by H. G. Bonn); Nichol's "Human Physiology," pp. 253-255 (published by Trubner & Co.)--Publishers' note.

Leeuwenhoek believed them to be the beginnings of future animals--that they are of different sexes, upon which depends the future sex of the foetus. Be this as it may, it appears to be admitted on all hands that the animalculæ are present in the semen of the various species of male animals, and that they cannot be detected when either from age or disease the animals are rendered sterile. "Hence," says Bostock, "we can scarcely refuse our assent to the position that these animalculæ are in some way or other instrumental to the production of the foetus." The secretion of the semen commences at the age of puberty. Before this period the testicles secrete a viscid, transparent fluid, which has never been analyzed, but which is doubtless essentially different from semen. The revolution which the whole economy undergoes at this period, such as the tone of the voice, and development of hairs, the beard, the increase of the muscles and bones, etc., is intimately connected with the testicles and the secretion of this fluid.* "Eunuchs preserve the same form as in childhood; their voice is effeminate, they have no beard, their disposition is timid; and finally their physical and moral character very nearly resembles that of females. Nevertheless, many of them take delight in venereal intercourse, and give themselves up with ardor to a connection which must always prove unfruitful."**

* Nichol's "Human Physiology," pp. 256-257.
--Publishers' note

** Magendic's Physiology.--Author's note.

The part performed by the female in the reproduction of the species is far more complicated than that performed by the male. It consists, in the first instance, in providing a substance which, in connection with the male secretion, is to constitute the foetus; in furnishing a suitable situation in which the foetus may be developed; in affording due nourishment for its growth; in bringing it forth, and afterward furnishing it with food especially adapted to the digestive organs of the young animal. Some parts of this process are not well understood, and such variety of hypotheses have been proposed to explain them that Drelincourt, who lived in the latter part of the seventeenth century, is said to have collected two hundred and sixty hypotheses of generation.

It ought to be known that women have conceived when the semen was merely applied to the parts anterior to the hymen, as the internal surface of the external lips, the nymphæ, etc. This is proved by the fact that several cases of pregnancy have occurred when the hymen was entire. The fact need not surprise us, for, agreeable to the theory of absorption, we have to account for it only to suppose that some of the absorbent vessels are situated anterior to the hymen--a supposition by no means unreasonable.

There are two peculiarities of the human species respecting conception which I will notice. First, unlike other animals they are liable, and for what has been proved to the contrary, equally liable--to conceive at all seasons of the year. Second, a woman rarely, if ever, conceives until after having several sexual connections; nor does one connection in fifty cause conception in the matrimonial state, where the husband and wife live together uninterruptedly. Public women rarely conceive, owing probably to a weakened state of the genital system, induced by too frequent and promiscuous intercourse.

It is universally agreed, that some time after a fruitful connection, a vesicle (two in case of twins) of one or the other ovary becomes so enlarged that it bursts forth from the ovary and takes the name of ovum, which is taken up, or rather received, as it bursts forth, by the fimbriated extremity of the Fallopian tube, and is then conducted along the tube into the uterus, to the inner surface of which it attaches

itself.*

> * Since Dr. Knowlton's work was written, the very important fact has been discovered that ova are periodically discharged from the ovaries in the human female and other animals, not in consequence of fruitful connection having taken place, as was formerly believed, but quite independently of intercourse with the male. Such a discharge of ova occurs in the lower animals at the time of heat or rut, and in women during menstruation. At each menstrual period, a Graafian vesicle becomes enlarged, bursts, and lets the ovum which it contains escape into the Fallopian tube, along which it passes to the uterus. "It has long been known," says Dr. Kirke, "that in the so-called oviparous animals, the separation of ova from the ovary may take place independently of impregnation by the male, or even of sexual union. And it is now established that a like maturation and discharge of ova, independently of coition, occurs in Mammalia, the periods at which the matured ova are separated from the ovaries and received into the Fallopian tubes being indicated in the lower Mammalia by the phenomena of _heat_ or _rut_; in the human female by the phenomena of _menstruation_. Sexual desire manifests itself in the human female to a greater degree at these periods, and in the female of mammiferous animals at no other time. If the union of the sexes takes place, the ovum may be fecundated, and if no union occur, it perishes. From what has been said it may therefore be concluded that the two states, heat and menstruation, are analogous, and that the essential accompaniment of both is the maturation and extrusion of ova."--"Handbook of Physiology," page 724.--G. R.

Here it becomes developed into a full grown foetus, and is brought forth about forty-two weeks from the time of conception by a process termed parturition. But one grand question is, how the semen operates itself, or any part thereof reaches the ovary, and if so, in what way it is conveyed to them. It was long the opinion that the semen was ejected into the uterus in the act of coition, and that it afterward, by some unknown means, found its way into and along the Fallopian tubes to the ovary. But there are several facts which weigh heavily against this opinion, and some that entirely forbid it. In the first place, there are several well attested instances in which impregnation took place while the hymen remained entire, where the vagina terminated in the rectum, where it was so contracted by a cicatrix as not to admit the penis. In all these cases the semen could not have been lodged anywhere near the mouth of the uterus, much less ejected into it. Secondly, it has followed a connection where from some defect in the male organs, as the urethra terminating some inches behind the end of the penis, and it is clear that the semen could not have been injected into the uterus, nor even near its mouth. Third, the neck of the unimpregnated uterus is so narrow as merely to admit a probe, and is filled with a thick tenacious fluid, which seemingly could not be forced away by any force which the male organ possesses of ejecting the semen, even if the mouth of the male urethra were in opposition with that of the uterus. But fourth, the mouth of the uterus is by no means fixed. By various causes it is made to assume various situations, and probably the mouth of the urethra rarely comes in contact with it.

Fifth. "The tenacity of the male semen is such as renders its passage through the small aperture in the neck of the uterus impossible, even by a power of force much superior to that which we may rationally suppose to reside in the male organs of generation."

Sixth. "Harvey and DeGraaf dissected animals at almost every period

after coition for the express purpose of discovering the semen, but were never able to detect the smallest vestige of it in the uterus in any one instance."*

* Dewees' Essay on Superfoetation.--Author's note.

Aware of the insurmountable objection to this view of the manner in which the semen reaches the ovary, it has been supposed by some physiologists that the semen is absorbed from the vagina into the great circulating system, where it is mixed, of course, with the blood, and goes the whole round of the circulation subject to the influence of those causes which produce great changes in the latter fluid.

To this hypothesis it may be objected, that while there is no direct evidence in support of it, it is exceedingly unreasonable, inasmuch as we can scarcely believe that the semen can go the whole round of circulation, and then find its way to the ovary in such a pure unaltered state as the experiments of Spallanzani prove it must be in, that it may impregnate.

A third set of theorists have maintained that an imperceptible something, which they have called _aura seminalis_, passes from the semen lodged in the vagina to the ovary, and excites those actions which are essential to the development of an ovum. Others, again, have told us that it is all done by sympathy. That neither the semen nor any volatile part of it finds its way to the ovary; but that the semen excites the parts with which it is in contact in a peculiar manner, and by the law of animal economy, termed sympathy, or consent of parts, a peculiar action commences in the ovary, by which an ovum is developed.

To both these conjectures it may be objected that they have no other foundation but the supposed necessity of adopting them, to account for the effect of impregnation; and, further, they "make no provision for the formation of mules; for the peculiarities of, and likeness to, parents, and for the propagation of predisposition to disease, from parent to child; for the production of mulattoes," etc.

A fifth, and to me far more satisfactory view of the subject than any other, is that advanced by our distinguished countryman, Dr. Dewees, of Philadelphia. It appears to harmonize with all known facts relating to the conception and something from analogy may also be drawn in its favor. It is this, that there is a set of absorbent vessels, leading directly from the inner surface of the _labia externa_ and the vagina, to the ovaries, the whole office of which vessels is to absorb the semen and convey it to the ovaries.* I do not know that these vessels have yet been fully discovered, but in a note on the sixteenth page of his "Essays on Various Subjects," the doctor says: "The existence of these vessels is now rendered almost certain, as Dr. Gartner, of Copenhagen, has discovered a duct leading from the ovary to the vagina."

* This view is not held at the present day. The commonly received doctrine now is that the seminal fluid enters the uterus, whether during the intercourse or after it, and passes along the Fallopian tubes to the ovaries; and that fecundation takes place at some point of this course, most frequently in the tubes, but also at times in the ovary itself, or even, perhaps, in the uterus. It is essentially necessary for fecundation that the spermatozoa should come into actual contact with the ovum. "That the spermatozoa make their way toward the ovarium, and fecundate the ovum either before it entirely quits the ovisac or very shortly afterward," says Dr. Carpenter, "appears to be the general rule in regard to the Mammalia; and their power of movement must obviously be both vigorous and long continued to enable

> them to traverse so great an extent of mucous membrane, especially when it is remembered that they ascend in opposition to the direction of the ciliary movement of the epithelial cells and to the downward peristaltic action of the Fallopian tubes. * * * There can be no doubt that it is the contact of the spermatozoa with the ovum, and in the changes which occur as the immediate consequence of that contact, that the act of fecundation essentially consists." --"Principles of Human Physiology," 8th ed., p. 961,1876.--G.R.

Another question of considerable moment relating to generation is from which parent are the first rudiments of the foetus derived.

The earliest hypothesis with which we are acquainted, and which has received the support of some of the most eminent of the moderns, ascribes the original formation of the foetus to the combination of particles of matter derived from each of the parents. This hypothesis naturally presents itself to the mind as the obvious method of explaining the necessity for the cooperation of the two sexes, and the resemblance in external form, and even in mind and character, which the offspring often bears to the male parent. "The principal objections," says Bostock, "to his hypothesis, independent of the want of any direct proof of a female seminal fluid, are of two descriptions, those which depend upon the supposed impossibility of unorganized matter forming an organized being, and those which are derived from observations and experiments of Haller and Spallanzani, which they brought forward in support of their theory of pre-existent germs."

In relation to these objections I remark, first those whose experience has been with hale females, I suspect, can have no doubt but that the female organism increases like that of the male, until an emission of fluid of some kind or other takes place. But whether this secretion may properly be called semen, whether any part of it unites with the male semen in forming the rudiments of the foetus, is another question. For my part I am inclined to the opinion that it does not.* I rather regard it as the result of exalted excitation, analogous to the increased secretion of other organs from increased stimulation; and if it may be for any object or use, as it probably is, it is that of affording nature a means of relieving herself; or, in other words, of quieting the venereal passion. If this passion, being once roused, could not by some means or other be calmed, it would command by far too great a portion of our thoughts, and with many constitutions the individuals, whether male or female, could not conduct themselves with due decorum. One fact which leads me to think that the female secretion in the act of coition is not essential to impregnation is, that many females have conceived, if their unbiased testimony may be relied on, when they experienced no pleasure. In these cases it is more than probable that there was no orgasm, nor any secretion or emission of fluid on the part of the female.

> * With regard to this secretion in the female, which has nothing of a seminal character, Dr. Carpenter observes: "Its admixture with the male semen has been supposed to have some connection with impregnation; but no proof whatever has been given that any such admixture is necessary."--"Human Physiology," p. 991.--G. R.

As to the objection of the supposed impossibility of unorganized matter forming an organized being, I do not believe such a thing takes place, even if we admit that "the original formation of the foetus is a combination of particles of matter derived from each of the parents." What do, or rather what ought we to mean by organized matter? Not, surely, that it exhibits some obvious physical structure, unlike what is to be found in inorganic matter, but that it exhibits phenomena, and of course may be said to possess properties unlike any kind of inorganic

matter. Matter unites with matter in three ways, mechanically, chemically and organically, and each mode of union gives rise to properties peculiar to itself. When matter unites organically, the substance or being so formed exhibits some phenomena essentially different from what inorganic bodies exhibit. It is on this account that we ascribe to organic bodies certain properties, which we call physiological properties, such as contractility, sensibility, life, etc. When, from any cause, these bodies have undergone such a change that they no longer exhibit the phenomena peculiar to them, they are said to have lost these properties, and to be dead. A substance need not possess all the physiological properties of an animal of the higher orders to entitle it to the name of an organized or living substance, nor need it possess the physical property of solidity. The blood, as well as many of the secretions, does several things, exhibits several phenomena, which no mechanical or mere chemical combinations of matter do exhibit. We must therefore ascribe to it certain physiological properties, and regard it as an organized, a living fluid, as was contended by the celebrated John Hunter. So with respect to the semen, it certainly possesses physiological properties, one in particular peculiar to itself, namely, the property of impregnating the female; and upon no sound principle can it be regarded in any other light than as an organized, and of course a living fluid. And if the female secretion or any part of it unite with the male secretion in the formation of the rudiments or the foetus in a different manner than any other substance would, then it certainly has the property of doing so, whether we give this property a name or not; and a regard to the soundest principles of physiology compels us to class this property with the physiological or vital, and of course to regard this secretion as an organized and living fluid So, then, unorganized matter does not form an organized being, admitting the hypothesis before us as correct.

That organized being should give rise to other organized beings under favorable circumstances as to nourishment, warmth, etc., is no more wonderful than that fire should give rise to fire when air and fuel are present. To be sure, there are some minute steps in the processes which are not fully known to us; still, if they ever should be known, we should unquestionably see that there is a natural cause for every one of them; and that they are all consonant with certain laws of the animal economy. We should see no necessity of attempting to explain the process of generation by bringing to our aid, or rather to the darkening of the subject, any imaginary principle, as the _visus formaticus_ of Blumenbach.

As to the "observations and experiments of Haller and Spallanzani," I think, with Dr. Bostock, that they weigh but little, if any, against the theory before us. I shall not be at the labor of bringing them forward and showing their futility as objections to this theory, for I am far from insisting on the correctness of it; that is, I do not insist that any part of the female secretion, during coition, unites with the male semen in the formation of the rudiments of the foetus.

The second hypothesis or theory, I shall notice, as to the rudiments of the foetus, is that of Leeuwenhoek, who regarded the seminal animalculse of the male semen as the proper rudiments of the foetus, and thought that the office of the female is to afford them a suitable receptacle where they may be supported and nourished until they are able to exist by the exercise of their own functions. This is essentially the view of the subject which I intend to give more particularly presently.

I know of no serious objections to this hypothesis, nothing but the "extreme improbability," as its opponents say, "that these animalculæ should be the rudiments of being so totally dissimilar to them." But I wish to know if there is more difference between a foetus and a seminal animalcule than there is between a foetus and a few material particles

in some other form than that of such animalcule?

The third hypothesis, or that of pre-existing germs, proceeded upon a precisely opposite view of the subject to that of Leeuwenhoek, namely, that the foetus is properly the production of the female; that it exists previous to the sexual congress, with all its organs, in some parts of the uterine system; and that it receives no proper addition from the male, but that the seminal fluid acts merely by exciting the powers of the foetus, or endowing it with vitality.

It is not known who first proposed this hypothesis; but strange as it may appear, it has had the support of such names as Bonnet, Haller and Spallanzani, and met with a favorable reception in the middle of the last century. Agreeable to this hypothesis, our common mother, Eve, contained a number of homuncules (little men) one within another, like a nest of boxes, and all within her ovaries, equal to all the number of births that have ever been, or ever will be, not to reckon abortions. Were I to bring forward all the facts and arguments that have been advanced in support of this idea, it seems to me I should fail to convince sound minds of its correctness; as to arguments against it, they surely seem uncalled for. Having now presented several hypotheses of generation, some as to the manner in which the semen reaches or influences the ovary, and others as to the rudiments of the foetus, I shall now bring together those views which, upon the whole, appear to me the most satisfactory.

I believe, with Dr. Dewees, that a set of absorbent vessels extend from the innermost surface of the _labia externa_, and from the vagina to the ovary, the whole office of which is to take up the semen or some part thereof, and convey it to the ovary. I believe, with Leeuwenhoek, that the seminal animalculæ are the proper rudiments of the foetus, and are perhaps of different sexes; that in cases of impregnation one of them is carried not only to, but into a vesicle of an ovary, which is in a condition to receive and be duly affected by it.* It is here surrounded by the albuminous fluid which the vesicle contains. This fluid being somewhat changed in its qualities by its new-comer, stimulates the minute vessels of the parts which surround it, and thus causes more of this fluid to be formed; and while it affords the animalcule material for its development, it puts the delicate membrane of the ovary which retains it in its place upon the stretch, and finally bursts forth surrounded probably by an exceedingly delicate membrane of its own. This membrane, with the albuminous fluid it contains and the animalcule in the center of it, constitutes the ovum or egg. It is received by the fimbriated extremity of the Fallopian tube, which by this time has grasped the ovary, and is by this tube slowly conveyed into the uterus, to the inner surface of which it attaches itself, through the medium of the membrane, which is formed by the uterus itself in the interim between impregnation and the arriving of the ovum in the way I have just mentioned.

> * The opinion that the spermatozoa of seminal filaments are real animalculæ is now abandoned, but it is held by Dr. Carpenter and other authorities that they actually, as here stated, penetrate into the interior of the ovum. "The nature of impregnation," says Dr. Hermann, "is as yet unknown. In all probability it is, above all, essential, in order that it should occur, that one or more spermatozoa should penetrate the ovum. At any rate, spermatozoa have been found within the fecundated eggs of the most diverse species of animals."--Elements of "Human Physiology," translated from the 5th ed., by Dr. Gamgee, p. 534, 1875.--G. R.

The idea that a seminal animalcule enters an ovum while it remains in the ovary, was never before advanced to my knowledge; hence I consider

it incumbent upon me to advance some reason for the opinion.

First, it is admitted on all hands that the seminal animalculæ are essential to impregnation, since "they cannot be detected when either from age or disease the animal is rendered sterile."

Second, the ovum is impregnated while it remains in the ovary. True, those who never met with Dr. Dewees' theory, and who, consequently, have adopted the idea that the semen is ejected into the uterus, as the least improbable of any with which they were acquainted, have found it very difficult to dispose of the fact that the ovum is impregnated in the ovary, and have consequently presumed this is not generally the case. They admit it is certainly so sometimes, and that it is difficult to reject the conclusion that it is always so. Dr. Bostock--who, doubtless, had not met with Dewees' theory at the time he wrote, and who admits it impossible to conceive how the semen can find its way along the Fallopian tubes, how it can find its way toward the ovary, farther, at most, than into the uterus, and, consequently, cannot see how the ovum can be impregnated into the ovary--says, "Perhaps the most rational supposition may be that the ovum is transmitted to the uterus in the unimpregnated state; but there are certain facts which seem almost incompatible with this idea, especially the cases which not infrequently occur of perfect foetuses having been found in the tubes, or where they escaped them into the cavity of the abdomen. Hence it is demonstrated the ovum is occasionally impregnated in the tubes (why did he not say ovaria?), and we can scarcely resist the conclusion that it must always be the case."..."Haller discusses this hypothesis (Bostock's 'most natural supposition, perhaps') and decides against it."..."The experiments of Cruikshank, which were very numerous, and appear to have been made with the requisite degree of skill and correctness, led to the conclusion that the rudiment of the young animal is perfected in the ovarium."... "A case is detailed by Dr. Granville, of a foetus which appears to have been lodged in the body of the ovarium itself, and is considered by its author as a proof that conception always takes place in this organ."

The above quotations are from the third volume of Bostock's Physiology.

Now, as the seminal animalculæ are essential to impregnation, and as the ovum is impregnated in the ovarium, what more probable conjecture can we form than that an animalcule, as the real proper rudiment of the foetus, enters the ovum, where, being surrounded with albuminous fluid with which it is nourished, it gradually becomes developed? It may be noticed that Leeuwenhoek estimates that ten thousand animalculæ of the human semen may exist in a space not larger than a grain of sand. There can, therefore, be no difficulty in admitting that they may find their way along exceedingly minute vessels from the vagina, not only to, but into the ovum while situated in the ovarium.

I think no one can be disposed to maintain that the animalculæ merely reaches the surface of the ovum and thus impregnates it. But possibly some may contend that its sole office is to stimulate the ovum, and in this way set going that train of actions which are essential to impregnation. But there is no evidence in favor of this last idea, and certainly it does not so well harmonize with the fact that the offspring generally partakes more or less of the character of its male parent. As Dr. Dewees says of the doctrine of sympathy, "It makes no provision for the formation of mules; for the peculiarities of and likeness of parents; and for the propagation of predisposition to disease from parent to child; for the production of mulattoes," etc.

Considering it important to do away with the popular and mischievous error that the semen must enter the uterus to effect impregnation, I shall, in addition to what has been already advanced, here notice the

experiments of Dr. Haighton. He divided the Fallopian tubes in numerous instances, and that after the operation a foetus is never produced, but that _corpora lutea_ were formed. The obvious conclusions from these facts are that the semen does not traverse the Fallopian tubes to reach the ovaria; yet, that the ovum becomes impregnated while in the ovarium and, consequently, that the semen reaches the ovum in some way, except by the uterus and Fallopian tubes. I may remark, however, that a _corpus luteum_ is not positive proof that impregnation at some time or other has taken place; yet they are so rarely found in virgins that they were regarded as such proofs until the time of Blumenbach, a writer of the present century.*

> * A _corpus luteum_ is a little yellowish body, formed in the ovary by changes that take place in the Graafian vesicle after it has burst and discharged its contents. _Corpora lutea_ were formerly considered a sure sign of impregnation, as they were thought to be developed only or chiefly in cases of pregnancy, but it is now known that they occur in all cases where a vesicle has been ruptured and an ovum discharged; though they attain a larger, size and are longer visible in the ovary when pregnancy takes place than when it does not.--G. R.

"Harvey and DeGraaf dissected animals at most every period after coition for the express purpose of discovering the semen, but were never able to detect the smallest vestige of it in the uterus in any one instance."--Dewells Essay on Superfoetation. The fact of superfoetation furnishes a very strong argument against the idea that the semen enters the uterus in impregnation.

A woman being impregnated while she is already impregnated constitutes superfoetation. It is established beyond a doubt that such instances have occurred, yet those who have supposed that it is necessary for the semen to pass through the mouth of the uterus to produce conception have urged that superfoetation could not take place, because, say they--and they say correctly--"so soon as impregnation shall have taken place, the _os uteri_ closes and becomes impervious to the semen ejected in subsequent acts of coition."

Dr. Dewees related two cases, evidently cases of superfoetation, that occurred to his own personal knowledge. The first shows that, agreeable to the old theory, the semen must have met with other difficulties than a closed month of the uterus,--it must have passed through several membranes, as well as the waters surrounding the foetus, to have reached even the uterine extremity of a Fallopian tube. The second case I will give in his own words:

"A white woman, servant to Mr. H., of Abington township, Montgomery county, was delivered about five and twenty years since of twins, one of which was perfectly white, the other perfectly black. When I resided in that neighborhood I was in the habit of seeing them almost daily and also had frequent conversations with Mrs. H. respecting them. She was present at their birth, so that no possible deception could have been practiced respecting them. The white girl is delicate, fair-skinned, light-haired and blue eyed, and is said very much to resemble the mother. The other has all the characteristic marks of the African; short of stature, flat, broad-nosed, thick-lipped, woolly-headed, flat-footed, and projecting heels; she is said to resemble a negro they had on the farm, but with whom the woman would never acknowledge an intimacy; but of this there was no doubt, as both he and the white man, with whom her connection was detected, ran from the neighborhood as soon as it was known the girl was with child."

I am aware that some have thought that they had actually discovered

semen in the uterus, while Ruysch, an anatomist of considerable eminence, who flourished at the close of the seventeenth century, asserted in the most unequivocal manner that he found the semen in its gross white state in one of the Fallopian tubes of a woman, who died very soon after, or during the act of coition; but says Dewees, "the semen, after it has escaped from the penis, quickly loses its albuminous appearance and becomes as thin and transparent as water. And we are certain that Ruysch was mistaken. Some alteration in the natural secretion of the parts was mistaken for semen. This was nowise difficult for him to do, as he had a particular theory to support, and more especially as this supposed discovery made so much for it. It is not merely speculative when we say that some change in the natural secretion of the parts may be mistaken for semen, for we have the testimony of Morgani on our side. He tells us he has seen similar appearances in several instances in virgins and others, who have been subject during their lives to leucorrhæ, and that it has been mistaken by some for male semen."

On the whole I would say, that in some instances, where the mouth of the uterus is uncommonly relaxed, the semen may, as it were, accidentally have found its way into it; but that is not generally the case, nor is it essential to impregnation; and further, that whatever semen may at any time be lodged in the uterus, has nothing to do with conception. It is not consistent with analogy to suppose that the uterus has vessels for absorbing the semen and conveying it to the ovaria, considering the other important functions which we know it performs.

The circumstances under which a female is most likely to conceive are, first, when she is in health; second, between the ages of twenty-six and thirty; third, after she has for a season been deprived of those intercourses she had previously enjoyed; fourth, soon after menstruating. Respect-ing this latter circumstance, Dr. Dewees remarks, "Perhaps it is not erring greatly to say, that the woman is liable to conceive at any part of the menstrual interval. It is generally supposed, however, that the most favorable instant is immediately after the catamenia have ceased." Perhaps this is so as a general rule, but it is certainly liable to exceptions,* and he relates the following case which occurred to his own notice:

> * This view, which concerns a question of the utmost practical importance, is held at the present day by the great physiologists. It is believed that although conception may occur at other times, it is much more likely to happen from intercourse a few days before or after the menstrual periods; that is to say, during the time when ova are in process of being ripened and detached from the ovaries, and before they perish and are conveyed out of the body. "There is good reason to believe," says Dr. Carpenter, "that in the human female the sexual feeling becomes stronger at the period of menstruation; and it is quite certain that there is a greater aptitude for conception immediately before and after that epoch, than there is at any immediate period. This question has been made the subject of special inquiry by M. Raciborski, who affirms that the exceptions to the rule--that conception occurs immediately before or after or during menstruation--are not more than six or seven per cent. Indeed, in his latest work on the subject, he gives the details of fifteen cases, in which the date of conception could be accurately fixed, and the time of the last appearance of the catamenia was also known, and in all but one of them the correspondence between the periods was very close."--"Human Physiology," p. 959. So, too, Dr. Kirkes remarks, that "although conception is not confined to the periods of menstruation, yet it is more likely to occur

within a few days after cessation of the menstrual flux than at other times."--"Handbook of Physiology," p. 725.

"The husband of a lady who was obliged to absent himself many months in consequence of the embarrassment of his affairs, returned one night clandestinely, his visit being only known to his wife, his mother, and myself. The consequence of this visit was the impregnation of his wife. The lady was at that time within a week of her menstrual period; but as this did not fail to take place, she was led to hope that she had not suffered by the visit of her husband. But her catamenia not appearing at the next period, gave rise to a fear that she had not escaped! and the birth of a child nine months and thirteen days from the night of the clandestine visit proved her apprehensions too well grounded."

I think this case is an exception to a general rule; and, furthermore, favors an idea which reason and a limited observation, rather than positive knowledge, has led me to advance, the above, namely, that a woman is more likely to conceive, other things being the same, after being deprived for a season of those intercourses she had previously enjoyed. Had this lady's husband remained constantly at home, she would probably either not have conceived at all, or have done so a fortnight sooner than she did.

This case is also remarkable for two other facts: one, "that a woman in perfect health, and pregnant with a healthy child, may exceed the period of nine months by several days; the other, that a check is not always immediately given to the catamenial flow by an ovum being impregnated." Probably it is not so generally so as many suppose.

The term of utero-gestation, or the length of time from conception to the commencement of labor, is not precisely determined by physiologists. "It seems, however," says Dr. Dewees, "from the best calculations that can be made, that nine calendar months, or forty weeks, approaches the truth so nearly that we can scarcely need or desire more accuracy, could it be obtained." Unquestionably, however, some cases exceed this period by many days, or even weeks, and it has been a question much agitated, how far this period is ever exceeded. It is a question of some moment in a legal point of view. Cases are reported where the usual period was exceeded by five or six months; cases, too, where the circumstances attending them and the respectability of their reporters are such as to command our belief. Dr. Dewees has paid much attention to this subject, and he declares himself entirely convinced "that the commonly fixed period may be extended from thirteen days to six weeks, under the influence of certain causes or peculiarities of constitution."*

* See tables in Dr. Bull's "Hints to Mothers," pp. 130-141. --Publishers' note.

These occasional departures from the general rule will, perhaps, be the more readily admitted when we consider that they are not confined to the human species. From the experiments of Tessier, it appears that the term of utero-gestation varies greatly with the cow, sheep, horse, swine and other animals to which his attention was directed.

Properly connected with the subject of generation are the signs of pregnancy. Dr. Dewees remarks that "our experience furnishes no certain mark by which the moment conception takes place is to be distinguished. All appeals by the women to particular sensations experienced at the instant should be very guardedly received, for we are certain they cannot be relied upon; for enjoyment and indifference are alike fallacious. Nor are certain nervous tremblings, nausea, palpitation of the heart, the sensation of something flowing from them during coition, etc, more to be relied upon." Burns, however, says, "Some women feel, immediately after conception, a peculiar sensation, which apprises them

of their situation, but such instances are not frequent, and generally the first circumstances which lead a woman to suppose herself pregnant are the suppression of the menses;" a fickle appetite, some sickness, perhaps vomiting, especially in the morning; returning qualms, or languor in the afternoon; she is liable to heartburn, and to disturbed sleep. The breasts at first often become smaller and sometimes tender; but about the third month they enlarge, and occasionally become painful. The nipple is surrounded with an aureole or circle of a brown color, or at least of a color sensibly deeper or darker than before. She loses her looks, becomes paler, and the under part of the lower eyelid is often somewhat of a leaden hue. The features become sharper, and sometimes the whole body begins to emaciate, while the pulse quickens. In many instances particular sympathies take place, causing salivation, toothache, jaundice, etc. In other cases very little disturbance is produced, and the woman is not certain of her condition until the time of quickening, which is generally about four months from conception. It is possible for a woman to mistake the effects of wind for the motion of the child, especially if they have never borne children, and be anxious for a family; but the sensation produced by wind in the bowels is not confined to one spot, but is often felt at a part of the abdomen where the motion of a child could not possibly be felt. Quite as frequently, perhaps, do fleshy women think themselves dropsical, and mistake motions of the child for movements of water within the abdominal cavity. The motion of the child is not to be confounded with the sensation sometimes produced by the uterus rising out of the pelvis, which produces the feeling of fluttering. At the end of the fourth month, the uterus becomes so large that it is obliged to rise out of the pelvis, and if this elevation takes place suddenly, the sensation accompanying it is pretty strong, and the woman at the time feels sick or faint, and in irritable habits; even a hysterical fit may accompany it After this the morning sickness and other sympathetic effects of pregnancy generally abate, and the health improves.

Very soon after impregnation, if blood be drawn and suffered to stand a short time undisturbed, it will become sizy, of a yellowish or bluish color, and somewhat of an oily appearance. But we cannot from such appearances of the blood alone pronounce a woman pregnant, for a suppression of the menses, accompanied with a febrile state, may give the blood a like appearance as pregnancy, so also may some local disease. Of the above-mentioned symptoms, perhaps there is no _one_ on which we can place more reliance than the increased color of the circle around the nipple.*

> * See "Advice to a Wife," P. H. Chavasse, pp. 115-124, where many details are given.--Publishers' note.

Six or eight weeks after conception, the most sure way of ascertaining pregnancy is to examine the mouth and neck of the uterus, by way of the vagina. The uterus will be found lower down than formerly, its mouth is not directed so much forward as before impregnation, and is more completely closed, and the neck is felt to be thicker, or increased in circumference. When raised on the finger it is found to be heavier or more resisting. Whoever makes this examination must have examined the same uterus in an unimpregnated state, and retained a tolerably correct idea of its feeling at that time, or he will be liable to uncertainty, because the uterus of one woman is naturally different in magnitude from another, and the uterus is frequently lower down than natural from other causes than pregnancy.*

> * No one but a doctor, or one trained in physiology could, of course, make any such examination with safety and utility.--Publishers' note.

It has not been fully ascertained how long it is after a fruitful

connection before an effect is produced upon the ovaria, that is before any alteration could be discovered, were the female to be dissected. But Brighton's experiments have established the fact, that with rabbits, whose term of utero-gestation is but thirty days, no effect is propagated to the ovaria until nearly fifty hours after coition; we should judge, therefore, that with the human species it must be several days, and it is generally estimated by physiologists that the ovum does not reach the uterus until the expiration of twenty days from the time of connection.*

> * "The time occupied in the passage of the ovum from the ovary to the uterus," says Dr. Kirkes, "occupies probably eight or ten days in the human female."--"Handbook of Physiology," p. 741.--G. R.

It is probable that in all cases in which any matter is absorbed from any part of the animal system, some little time is required for such matter, after its application, to stimulate and arouse the absorbent vessels to action; hence it is probable that after the semen is lodged in the vagina, it is many minutes, possibly some hours, before any part of it is absorbed.

CHAPTER III. OF PROMOTING AND CHECKING CONCEPTION

Sterility depends either on imperfect organization, or imperfect action of the organs of generation. In the former cases, which are rare, the menses do not generally appear, the breasts are not developed, and the sexual desire is inconsiderable. There is no remedy in these cases.

The action may be imperfect in several respects. The menses may be obstructed or sparing, or they may be too profuse or frequent. It is extremely rare for a woman to conceive who does not menstruate regularly. Hence where this is the case the first step is to regulate this periodical discharge. For this purpose the advice of a physician will generally be required, for these irregularities depend upon such various causes and require such a variety of treatment that it would be inconsistent with the plan of this work to give instructions for remedying them. A state of exhaustion or weakness of the uterine system, occasioned by too frequent intercourse, is a frequent cause of sterility. The sterility of prostitutes is attributed to this cause, but I doubt it being the only one. With females who are apparently healthy, the most frequent cause is a torpor, rather than weakness of the genital organs.

For the removal of sterility from this cause, I shall give some instructions, and this I do the more readily because the requisite means are such as will regulate the menses in many cases, where they do not appear so early in life, so freely or so frequently as they ought.

In the first place, it will generally be necessary to do something toward invigorating the system by exercise in the open air, by nourishing food of easy digestion, by sufficient dress, particularly flannel, and especially by strict temperance in all things. With this view, also, some scales which fall from the blacksmith's anvil, or some steel filings may be put into old cider or wine (cider the best), and after standing a week or so, as much may be taken two or three times a day as can be borne without disturbing the stomach.

All the while the bowels are to be kept rather open by taking from one to three of _Pill rufi_ every night on going to bed. These pills consist of four parts of aloes, two parts of myrrh, and one of saffron, by

weight.

These measures having been regularly pursued until the system be brought into a vigorous state, medicines which are more particularly calculated to arouse the genital organs from a state of torpor may be commenced, and continued for months if necessary. The cheapest, most simple (and I am not prepared to say it is not the most effectual in many cases) is cayenne. All the virtues of this article are not generally known even to physicians. I know it does not have the effect upon the coats of the stomach that many have conjectured. It may be taken in the quantity of from one to two rising teaspoonsful, or even more, everyday up on food or on any liquid vehicle. Another medicine of much efficacy is Dewees' Volatile Tincture of Guaiac. It is generally kept by apothecaries, and is prepared as follows:

Take of Gum Guaicum, in powder, eight ounces; carbonate of Potash, or of Soda, or (what will answer) Saleratus, three drachms; Allspice, in powder, two ounces; any common spirits of good strength, two pounds, or what is about the same two pints and a gill. Put all into a bottle, which may be shaken now and then, and use of it may be commenced in a few days. To every gill of this, at least a large teaspoon-ful of Spirits of Ammonia is to be added. A teaspoonful is to be taken for a dose, three times a day, in a glass of milk, cider or wine. It is usually given before eating; but if it should chance to offend the stomach when taken before breakfast, it may in this case be taken an hour after.

Dr. Dewees found this tincture, taken perhaps for months, the most effectual remedy for painful menstruation, which is an obstinate complaint. If there be frequent strong pulse, heat, thirst, florid countenance, etc., it is not to be taken until these symptoms be removed by low diet, a few doses of salts, and bleeding, if required.

A third medicine for arousing the genital organs, is tincture of Spanish Flies. But I doubt its being equal, in sterility, to the above mentioned medicines, though it may exceed them in some cases, and may be tried if these fail. A drachm of them may be put to two gills of spirits. Dose, 25 drops, in water, three times a day, increasing each one by two or three drops, until some degree of stranguary occurs, then omit until this pass off, as it will in a day or two. Should the stranguary be severe, drink freely of milk and water, slippery elm, or flaxseed tea.

In many cases of sterility, where the general health is considerably in fault, and especially when the digestive organs are torpid, I should have much faith in a Thomsonian course. It is calculated to arouse the capillary vessels throughout the whole system, and thus to open the secretions, to remove obstructions, and free the blood of those effete and phlegmy materials which nature requires to be thrown off. The views of the Thomsonian as to heat and cold appear to me unphilosophical. But this has nothing to do with the efficiency of their measures.

In relation to sterility, I would here bring to mind, what has before been stated, that a woman is most likely to conceive immediately after a menstrual turn. And now, also, let me suggest the idea that Nature's delicate beginnings may be frustrated by the same means that put her a going. This idea is certainly important when the woman is known to have miscarried a number of times. Sterility is sometimes to be attributed to the male, though he apparently be in perfect health. It would be an interesting fact to ascertain if there be no seminal animalculæ in these cases; and whether medicines of any kind are available.

It has been ascertained that a male and female may be sterile in relation to each other, though neither of them be so with others.

The foregoing measures for sterility are also suitable in cases of impotency. This term, I believe, is generally con-lined to, and defined as a want of desire or ability, or both on the part of the male; but I see no good reason why it should not comprehend the case in which there is neither desire nor pleasure with the female. Such females, it is true, may be fruitful; but so, on the other hand, the semen may not have lost its fecundating property. Impotency, at a young or middle age, and in some situations in life especially, is certainly a serious misfortune, to say the least of it. The whole evil by no means consists, in every case, in the loss of a source of pleasure. All young people ought to be apprised of the causes of it--causes which, in many instances, greatly lessen one's ability of giving and receiving that pleasure which is the root of domestic happiness. I shall allude to one cause, that of premature, and especially solitary gratification, in another place. Intemperance in the use of spirits is another powerful cause. Even a moderate use of spirits, and also of tobacco, in any form, have some effect It is a law of animal economy, that no one part of the system can be stimulated or excited, without an expense of vitality, as it is termed. The part which is stimulated draws the energy from other parts. And hence it is, that close and deep study, as well as all the mental passions when excessive, impair the venereal appetite. All excesses, all diseases and modes of life which impair the general health, impair this appetite, but some things more directly and powerfully than others.

As to the remedies for impotency, they are much the same as for sterility. It is of the first importance that the mind be relieved from all care and anxiety. The general health is to be improved by temperance, proper exercise in the open air, cheerful company, change of scenery, or some occupation to divert the mind without requiring much exercise of it; nourishing food of easy digestion; flannel worn next to the skin. The cold bath may be tried, and if it be followed by agreeable feelings, it will do good. The bowels may be gently stimulated by the pills before mentioned; and the preparation of iron also, already mentioned, should be taken.

To stimulate the genital organs more directly, cayenne, Dewees' tincture of guaiac, or tincture of flies, may be taken. I have given directions for making and taking the tincture of flies, chiefly because it is esteemed one of the best remedies for impotency caused by or connected with nocturnal emissions, to which I have before alluded.

It is in cases where little or no pleasure, nor erection, attend these emissions--cases brought on by debauchery, or in elderly persons--that I would recommend tincture of flies, and the other measures above mentioned. In some bad cases, enormous doses of this tincture are required, say two or three hundred drops. Yet the best rule for taking it is that already given, namely, begin with small doses, and gradually increase until some stranguary be felt, or some benefit be received. In this affection, as well as in all cases of impaired virility, the means I have mentioned are to be pursued for a long time, unless relief be obtained. These have cured after having been taken for a year or more without the result. In all cases of impotency not evidently depending upon disease of some part besides the genital organs, I should have much confidence in blisters applied to the lower part of the spine.

Occasional nocturnal emissions, accompanied with erection and pleasure, are by no means to be considered a disease, though they have given many a one such uneasiness. Even if they be frequent, and the system considerably debilitated, if not caused by debauch, and the person be young, marriage is the proper measure.

There have been several means proposed and practiced for checking conception. I shall briefly notice them, though a knowledge of the best

is what most concerns us. That of withdrawal immediately before emission is certainly effectual, if practiced with sufficient care. But if (as I believe) Dr. Dewees' theory of conception be correct, and as Spallanzani's experiments show that only a trifle of semen, even largely diluted with water, may impregnate by being injected into the vagina, it is clear that nothing short of entire withdrawal is to be depended upon. But the old notion that the semen must enter the uterus to cause conception, has led many to believe that a partial withdrawal is sufficient, and it is on this account that this error has proved mischievous, as all important errors generally do. It is said by those who speak from experience that the practice of withdrawal has an effect upon the health similar to intemperance in eating. As the subsequent exhaustion is probably mainly owing to the shock the nervous system sustains in the act of coition, this opinion may be correct. It is further said that this practice serves to keep alive those fine feelings with which married people first come together. Still, I leave it for every one to decide for himself whether this check be so far from satisfactory as not to render some other very desirable.

As to the baudruche, which consists in a covering used by the male, made of very delicate skin, it is by no means calculated to come into general use. It has been used to secure immunity from syphilitic affections.

Another check which the old idea of conception has led some to recommend with considerable confidence, consists in introducing into the vagina, previous to connection, a very delicate piece of sponge, moistened with water, to be immediately afterward withdrawn by means of a very narrow ribbon attached to it, But, as our views would lead us to expect, this check has not proved a sure preventive. As there are many little ridges or folds in the vagina, we cannot suppose the withdrawal of the sponge would dislodge all the semen in every instance. If, however, it were well moistened with some liquid which acted chemically upon the semen, it would be pretty likely to destroy the fecundating property of what might remain. But if this check were ever so sure, it would, in my opinion, fall short of being equal, all things considered, to the one I am about to mention--one which not only dislodges the semen pretty effectually, but at the same time destroys the fecundating property of the whole of it.

It consists in syringing the vagina immediately after connection with a solution of sulphate of zinc, of alum, pearl-ash, or any salt that acts chemically on the semen, and at the same time produces no unfavorable effect on the female.

In all probability a vegetable astringent would answer--as an infusion of white oak bark, of red rose leaves, of nut-galls, and the like. A lump of either of the above-mentioned salts, of the size of a chestnut, may be dissolved in a pint of water, making the solution weaker or stronger, as it may be borne without any irritation of the parts to which it is applied. These solutions will not lose their virtues by age. A female syringe, which will be required in the use of the check, may be had at the shop of an apothecary for a shilling or less. If preferred, the semen may be dislodged as far as it can be, by syringing with simple water, after which some of the solution is to be injected, to destroy the fecundating property of what may remain lodged between the ridges of the vagina, etc.

I know the use of this check requires the woman to leave her bed for a few moments, but this is its only objection; and it would be unreasonable to suppose that any check can ever be devised entirely free of objections. In its favor it may be said, it costs nearly nothing; it is sure; it requires no sacrifice of pleasure; it is in the hand of the female; it is to be used after, instead of before the connection, a weighty consideration in its favor, as a moment's reflection

will convince any one; and last, but not least, it is conducive to cleanliness, and preserves the parts from relaxation and disease. The vagina may be very much contracted by a persevering use of astringent injections, and they are constantly used for this purpose in cases of _procidentia uteri_, or a sinking down of the womb; subject as women are to _fluor albus_, and other diseases of the genital organs, it is rather a matter of wonder that they are not more so, considering the prevailing practices. Those who have used this check (and some have used it, to my certain knowledge with entire success for nine or ten years, and under such circumstances as leave no room to doubt its efficacy) affirm that they would be at the trouble of using injections merely for the purposes of health and cleanliness.

By actual experiment it has been rendered highly probable that pregnancy may, in many instances, be prevented by injections of simple water, applied with a tolerable degree of care. But simple water has failed, and its occasional failure is what we should expect, considering the anatomy of the parts, and the results of Spallanzani's experiments heretofore alluded to.

This much did I say respecting this check in the first edition of this work. That is what I call the chemical check. The idea of destroying the fecundating property of the semen was original, if it did not originate with me. My attention was drawn to the subject by the perusal of "Moral Physiology." Such was my confidence in the chemical idea that I sat down and wrote this work in July, 1831. But the reflection that I did not know that this check would never fail, and that if it should, I might do someone an injury in recommending it, caused the manuscript to lie on hand until the following December. Some time in November I fell in with an old acquaintance, who agreeably surprised me by stating that to his personal knowledge this last check had been used as above stated. I have since conversed with a gentleman with whom I was acquainted, who stated that, being in Baltimore some few years ago, he was there informed of this check by those who have no doubt of its efficacy. From what has as yet fell under my observation, I am not warranted in drawing any conclusion. I can only say that I have never known it to fail. Such are my views on the whole subject, that it would require many instances of its reputed failure to satisfy me that such failures were not owing to an insufficient use of it. I even believe that quite cold water alone, if thoroughly used, would be sufficient. In Spallanzani's experiments warm water was unquestionably used. As the seminal animalcule are essential to impregnation, all we have to do is to change the condition of, or, if you will, to kill them; and as they are so exceedingly small and delicate, this is doubtless easily done, and hence cold water may be sufficient.

What has now been advanced in this work will enable the reader to judge for himself or herself of the efficacy of the chemical or syringe check, and time will probably determine whether I am correct in this matter. I do know that those married females who have much desire to escape will not stand for the little trouble of using this check, especially when they consider that on the score of cleanliness and health alone it is worth the trouble.

A great part of the time no check is necessary, and women of experience and observation, with the information conveyed by this work, will be able to judge pretty correctly when it is and when it is not. They may rest assured that none of the salts mentioned will have any deleterious effect. The sulphate of zinc is commonly known by the name of white vitriol. This, as well as alum, have been extensively used for leucorrhæ. Acetate of lead would doubtless be effectual--indeed, it has proven to be so; but I do not recommend it, because I conceive it possible that a long continued use of it might impair the instinct.

I hope that no failures will be charged of efficacy of this check which ought to be attributed to negligence or insufficient use of it. I will therefore recommend at least two applications of the syringe, the sooner the surer, yet it is my opinion that five minutes' delay would not prove mischievous--perhaps not ten.

CHAPTER IV. REMARKS ON THE REPRODUCTIVE INSTINCT

I scarcely need observe that by this instinct is meant the desire for sexual intercourse. Blumenbach speaks of this instinct as "superior to all others in universality and violence." Perhaps hunger is an exception. But surely no instinct commands a greater proportion of our thoughts or has a greater influence upon happiness for better or for worse. "Controlled by reason and chastened by good feelings, it gives to social intercourse much of its charm and zest, but directed by selfishness or governed by force, it is prolific of misery and degradation. In itself it appears to be the most social and least selfish of all instincts. It fits us to give even while we receive pleasure, and among cultivated beings the former power is even more highly valued than the latter. Not one of our instincts perhaps affords larger scope for the exercise of disinterestedness, or fitter play for the best moral feelings of our race. Not one gives birth to relations more gentle, more humanizing and endearing; not one lies more immediately at the root of the kindliest charities and most generous impulses that honor and bless human nature. It is a much more noble, because less purely selfish, instinct than hunger or thirst. It is an instinct that entwines itself around the warmest feelings and best affections of the heart"--_Moral Physiology_. But too frequently its strength, together with a want of moral culture, is such that it is not "controlled by reason;" and consequently, from time immemorial, it has been gratified, either in a mischievous manner, or to such an intemperate degree, or under such improper circumstances, as to give rise to an incalculable amount of human misery. For this reason it has, by some, been regarded as a low, degrading and "carnal" passion, with which family life must be ever at war. But in the instinct itself the philosopher sees nothing deserving of degrading epithets. He sees not that nature should war against herself. He believes that in savage life it _is_, and in wisely organized society of duly enlightened and civilized beings it should be the source of ten-fold more happiness than misery.

A part of the evil consequences to which this instinct is daily giving rise under the present state of things, it belongs more particularly to the moralist to point out; whilst of others it falls within the province of the physician to treat. But let me first remark that physicians have hitherto fallen far short of giving those instructions concerning this instinct which its importance demands. In books, pamphlets, journals, etc., they have laid much before the public respecting eating, drinking, bathing, lacing, air, exercise, etc., but have passed by the still more important subject now before us, giving only here and there spine faint allusion to it This, it is true, the customs, not to say pruderies, of the age have compelled them to do, in publications designed for the public eye, yet, in some small work, indicated by its title to be for private perusal, they might, with the utmost propriety, have embodied much highly useful instruction in relation to this instinct.

This instinct is liable to be gratified at improper times, to an intemperate degree, and in a mischievous manner.

True philosophy dictates that this and all other appetites be so gratified as will most conduce to human happiness--not merely the

happiness attending the gratification of one of the senses, but all the senses--not merely sensual happiness, but intellectual--not merely the happiness of the individual, but of the human family.

First.--Of the times at which this instinct ought not to be gratified. With females it ought not to be gratified until they are seventeen or eighteen years of age, and with males not until they are a year or two older. The reason is, if they refrain until these ages, the passion will hold out the longer, and they will be able to derive much more pleasure from it in after life, than if earlier gratified, especially to any great extent A due regard to health also enjoins with most persons some restraint on this instinct--indeed, at all times, but especially for a few years after the above-mentioned ages. It ought not to be rashly gratified at first. Begin temperately, and as the system becomes more mature, and habituated to the effects naturally produced by the gratification of this instinct, it will bear more without injury. Many young married people, ignorant of the consequences, have debilitated the whole system--the genital system in particular; have impaired their mental energies; have induced consumptive and other diseases; have rendered themselves irritable, unsocial, melancholy and finally much impaired, perhaps destroyed their affection for each other by an undue gratification of the reproductive instinct. In almost all diseases, if gratified at all, it should be very temperately. It ought not to be gratified during menstruation, as it might prove productive to the man of symptoms similar to those of syphilis, but more probably to the woman of a weakening disease called _fluor albus_. In case of pregnancy a temperate gratification for the first two or three months may be of no injury to the woman or the coming offspring. But it ought to be known that the growth of the foetus in utero may be impaired, and the seeds of future bodily infirmity and mental imbecility of the offspring may be sown by much indulgence during utero-gestation or pregnancy, especially when the woman experiences much pleasure in such indulgences.

Having already glanced at some of the bad effects of an undue gratification of this instinct, I have but little more to offer under the head of Intemperate Degree. It will be borne in mind that intemperance in this thing is not to be decided by numbers, but that it depends on circumstances; and what would be temperance in one, may be intemperance in another. And with respect to an individual, too, what he might enjoy with impunity, were he a laboring man, or a man whose business requires but little mental exercise, would, were he a student, unfit him for the successful prosecution of his studies. Intemperance in the gratification of this instinct has a tendency to lead to intemperance in the use of ardent spirits. The languor, depression of spirits, in some instances faintness and want of appetite, induced by intemperate gratification, call loudly for some stimulus, and give a relish to spirits. Thus the individual is led to drink. This inflames the blood, the passions, and leads to further indulgence. This again calls for more spirits; and thus two vicious habits are commenced, which mutually increase each other. Strange as it may appear to those unacquainted with the animal economy, an intemperate indulgence sometimes gives rise to the same disease--so far as the name makes it so--that is frequently cured by a temperate indulgence; viz, nocturnal emissions.

Every young married woman ought to know that the male system is exhausted in a far greater degree than the female by gratification. It seems, indeed, to have but little effect, comparatively, upon some females. But with respect to the male, it has been estimated by Tissot that the loss of one ounce of semen is equal in its effects upon the system of forty ounces of blood. As it respects the immediate effects, this estimation, generally speaking, may not be too great. But a man living on a full meat diet might, doubtless, part with fifty ounces of semen in the course of a year, with far less detriment to the system

than with 2,000 ounces of blood. It is a fact, that mode of living, independent of occupation, makes a great difference with respect to what the system will bear. A full meat diet, turtles, oysters, eggs, spirits, wine, etc., certainly promote the secretion of semen, and enable the system to bear its emission. But a cool vegetable and milk diet calms all the passions, the venereal especially. Most men adopting such a diet as this will suffer no inconvenience in extending the intervals of their gratification to three or four weeks; on the contrary, they will enjoy clear intellect, and a fine flow of spirits. This is the diet for men of literary pursuits, especially the unmarried.

As to the mischievous manner, it consists in the unnatural habit of onanism, or solitary gratification; it is an antisocial and demoralizing habit, which, while it proves no quietus to the mind, impairs the bodily powers as well as mental, and not infrequently leads to insanity.

While the gratification of the reproductive instinct in such manner as mentioned leads to bad consequences, a temperate and natural gratification, under proper circumstances, is attended with good, besides the mere attendant pleasure, which alone is enough to recommend such gratification. I admit that human beings might be so constituted that if they had no reproductive instinct to gratify, they might enjoy health; but being constituted as they are, this instinct cannot be mortified with impunity. It is a fact universally admitted, that unmarried females do not enjoy so much good health and attain to so great an age as the married; notwithstanding that the latter are subject to the diseases and pains incident to child-bearing. A temperate gratification promotes the secretions, and the appetite for food; calms the restless passions; induces pleasant sleep; awakens social feeling; and adds a zest to life which makes one conscious that life is worth preserving.

APPENDIX

> [I here connect with this work, by way of Appendix, the following extract from an article which appeared in the Boston Investigator, a paper which, _mirabile dictu_, is so "crazy" as to be open to the investigation of all subjects which mightily concern mankind.]

The only seeming objection of much weight that can be brought against diffusing a knowledge of checks is, that it will serve to increase illegal connections. Now, this is exactly the contrary effect of that which those who have diffused such knowledge most confidently believe will arise from it. To diminish such connections is indeed one of the grand objects of this publication,--an object which laws and prisons cannot, or, at least, do not, accomplish. Why is there so much prostitution in the land? The true answer to the question is not, and never will be, Because the people have become acquainted with certain facts in physiology; it is because there are so many unmarried men and women,--men of dissipation and profligacy, owing to their not having married in their younger days and settled down in life. But why are there so many unmarried people in the country? Not because young hearts when they arrive at the age of maturity do not desire to marry; but because prudential considerations interfere. The young man thinks: I cannot marry yet; I cannot support a family; I must make money first, and think of a matrimonial settlement afterward. And so it is, that through fear of having a family, before they have made a little headway in the world, and of being thereby compelled to "tug at the oar of incessant labor throughout their lives," thousands of young men do not marry, but go abroad into the world and form vicious acquaintances

and practices. The truth, then, is this,--there is so much illegal connection in the land, because the people had not, twenty years ago, that very information which, it would seem, some, doubtless through want of due reflection, are apprehensive will increase this evil. I might quote pages to the point from "Every Woman's Book," but I fear my communication would be too lengthy. I content myself with a few lines. "But when it has become the custom here as elsewhere to limit the number of children, so that none need have more than they wish, no man will fear to take a wife; all will marry while young; debauchery will diminish; while good morals and religious duties will be promoted."

It has been asked if a general knowledge of checks would not diminish the general increase of population? I think that such would not be the result in this country until such result would be desirable. In my opinion the effect would be a good many more families (and, on the whole, as many births), but not so many overgrown and poverty-stricken ones. It has been said, It is better to let Nature take her course. Now, in the broadest sense of the word "Nature," I say so too. In this sense there is nothing unnatural in the universe. But if we limit the sense of the word Nature so as not to include what we mean by art, then is civilized life one continued warfare against Nature. It is by art that we subdue the forest; by art we contend against the elements; by art we combat the natural tendency of disease, etc.

As to the outrageous slander which here and there one has been heard to utter against the fair sex, in saying that fear of conception is the foundation of their chastity, it must be the sentiment of a "carnal heart," which has been peculiarly unfortunate in its acquaintances. "To the pure, all things are pure." Chastity, as well as its opposite, is in a great degree constitutional; and ought, in a like degree, to be regarded as a physical property, if I may so say, rather than a moral quality. Where the constitution is favorable a very indifferent degree of moral training is sufficient to secure the virgin without the influence of the above-mentioned fear; but where it is the reverse you may coop up the individual in the narrow dark cage of ignorance and fear, as you will, but still you must watch. An eminent moralist has said, "That chastity which will not bear the light [of physiology] is scarcely worth preserving." But verily, I believe there is very little such in the market. What there be is naturally short-lived, and, after its demise, the unhappily constituted individual stands in great need of this light to save her from ignominy. What might it not have prevented in the Fall River affair? And if one of two things must happen--either the destruction of fecundity or the destruction of life--which of the two is the greater evil? In these cases alone this light is calculated to do sufficient good to counterbalance all the evil that would arise from it; so that we should have its important advantages to the married in a political, a domestic and a medical point of view, as so much clear gain. This, of course, is my opinion; but since I have probably reflected more upon the subject than all the persons concerned in my imprisonment put together, until it can be shown that I have not as clear a head and as pure a heart as any of them, I think it entitled to some weight.

End of Project Gutenberg's Fruits of Philosophy, by Charles Knowlton

*** END OF THIS PROJECT GUTENBERG EBOOK FRUITS OF PHILOSOPHY ***

***** This file should be named 38185-8.txt or 38185-8.zip *****

Produced by David Widger

Updated editions will replace the previous one--the old editions
will be renamed.

Creating the works from public domain print editions means that no
one owns a United States copyright in these works, so the Foundation
(and you!) can copy and distribute it in the United States without
permission and without paying copyright royalties. Special rules,
set forth in the General Terms of Use part of this license, apply to
copying and distributing Project Gutenberg-tm electronic works to
protect the PROJECT GUTENBERG-tm concept and trademark. Project
Gutenberg is a registered trademark, and may not be used if you
charge for the eBooks, unless you receive specific permission. If you
do not charge anything for copies of this eBook, complying with the
rules is very easy. You may use this eBook for nearly any purpose
such as creation of derivative works, reports, performances and
research. They may be modified and printed and given away--you may do
practically ANYTHING with public domain eBooks. Redistribution is
subject to the trademark license, especially commercial
redistribution.

*** START: FULL LICENSE ***

THE FULL PROJECT GUTENBERG LICENSE
PLEASE READ THIS BEFORE YOU DISTRIBUTE OR USE THIS WORK

To protect the Project Gutenberg-tm mission of promoting the free
distribution of electronic works, by using or distributing this work
(or any other work associated in any way with the phrase "Project
Gutenberg"), you agree to comply with all the terms of the Full Project
Gutenberg-tm License (available with this file or online at
http://gutenberg.org/license).

Section 1. General Terms of Use and Redistributing Project Gutenberg-tm
electronic works

1.A. By reading or using any part of this Project Gutenberg-tm
electronic work, you indicate that you have read, understand, agree to
and accept all the terms of this license and intellectual property
(trademark/copyright) agreement. If you do not agree to abide by all
the terms of this agreement, you must cease using and return or destroy
all copies of Project Gutenberg-tm electronic works in your possession.
If you paid a fee for obtaining a copy of or access to a Project
Gutenberg-tm electronic work and you do not agree to be bound by the
terms of this agreement, you may obtain a refund from the person or
entity to whom you paid the fee as set forth in paragraph 1.E.8.

1.B. "Project Gutenberg" is a registered trademark. It may only be
used on or associated in any way with an electronic work by people who
agree to be bound by the terms of this agreement. There are a few
things that you can do with most Project Gutenberg-tm electronic works
even without complying with the full terms of this agreement. See
paragraph 1.C below. There are a lot of things you can do with Project
Gutenberg-tm electronic works if you follow the terms of this agreement
and help preserve free future access to Project Gutenberg-tm electronic
works. See paragraph 1.E below.

1.C. The Project Gutenberg Literary Archive Foundation ("the Foundation" or PGLAF), owns a compilation copyright in the collection of Project Gutenberg-tm electronic works. Nearly all the individual works in the collection are in the public domain in the United States. If an individual work is in the public domain in the United States and you are located in the United States, we do not claim a right to prevent you from copying, distributing, performing, displaying or creating derivative works based on the work as long as all references to Project Gutenberg are removed. Of course, we hope that you will support the Project Gutenberg-tm mission of promoting free access to electronic works by freely sharing Project Gutenberg-tm works in compliance with the terms of this agreement for keeping the Project Gutenberg-tm name associated with the work. You can easily comply with the terms of this agreement by keeping this work in the same format with its attached full Project Gutenberg-tm License when you share it without charge with others.

1.D. The copyright laws of the place where you are located also govern what you can do with this work. Copyright laws in most countries are in a constant state of change. If you are outside the United States, check the laws of your country in addition to the terms of this agreement before downloading, copying, displaying, performing, distributing or creating derivative works based on this work or any other Project Gutenberg-tm work. The Foundation makes no representations concerning the copyright status of any work in any country outside the United States.

1.E. Unless you have removed all references to Project Gutenberg:

1.E.1. The following sentence, with active links to, or other immediate access to, the full Project Gutenberg-tm License must appear prominently whenever any copy of a Project Gutenberg-tm work (any work on which the phrase "Project Gutenberg" appears, or with which the phrase "Project Gutenberg" is associated) is accessed, displayed, performed, viewed, copied or distributed:

This eBook is for the use of anyone anywhere at no cost and with almost no restrictions whatsoever. You may copy it, give it away or re-use it under the terms of the Project Gutenberg License included with this eBook or online at www.gutenberg.org

1.E.2. If an individual Project Gutenberg-tm electronic work is derived from the public domain (does not contain a notice indicating that it is posted with permission of the copyright holder), the work can be copied and distributed to anyone in the United States without paying any fees or charges. If you are redistributing or providing access to a work with the phrase "Project Gutenberg" associated with or appearing on the work, you must comply either with the requirements of paragraphs 1.E.1 through 1.E.7 or obtain permission for the use of the work and the Project Gutenberg-tm trademark as set forth in paragraphs 1.E.8 or 1.E.9.

1.E.3. If an individual Project Gutenberg-tm electronic work is posted with the permission of the copyright holder, your use and distribution must comply with both paragraphs 1.E.1 through 1.E.7 and any additional terms imposed by the copyright holder. Additional terms will be linked to the Project Gutenberg-tm License for all works posted with the permission of the copyright holder found at the beginning of this work.

1.E.4. Do not unlink or detach or remove the full Project Gutenberg-tm License terms from this work, or any files containing a part of this work or any other work associated with Project Gutenberg-tm.

1.E.5. Do not copy, display, perform, distribute or redistribute this electronic work, or any part of this electronic work, without

prominently displaying the sentence set forth in paragraph 1.E.1 with active links or immediate access to the full terms of the Project Gutenberg-tm License.

1.E.6. You may convert to and distribute this work in any binary, compressed, marked up, nonproprietary or proprietary form, including any word processing or hypertext form. However, if you provide access to or distribute copies of a Project Gutenberg-tm work in a format other than "Plain Vanilla ASCII" or other format used in the official version posted on the official Project Gutenberg-tm web site (www.gutenberg.org), you must, at no additional cost, fee or expense to the user, provide a copy, a means of exporting a copy, or a means of obtaining a copy upon request, of the work in its original "Plain Vanilla ASCII" or other form. Any alternate format must include the full Project Gutenberg-tm License as specified in paragraph 1.E.1.

1.E.7. Do not charge a fee for access to, viewing, displaying, performing, copying or distributing any Project Gutenberg-tm works unless you comply with paragraph 1.E.8 or 1.E.9.

1.E.8. You may charge a reasonable fee for copies of or providing access to or distributing Project Gutenberg-tm electronic works provided that

- You pay a royalty fee of 20% of the gross profits you derive from the use of Project Gutenberg-tm works calculated using the method you already use to calculate your applicable taxes. The fee is owed to the owner of the Project Gutenberg-tm trademark, but he has agreed to donate royalties under this paragraph to the Project Gutenberg Literary Archive Foundation. Royalty payments must be paid within 60 days following each date on which you prepare (or are legally required to prepare) your periodic tax returns. Royalty payments should be clearly marked as such and sent to the Project Gutenberg Literary Archive Foundation at the address specified in Section 4, "Information about donations to the Project Gutenberg Literary Archive Foundation."

- You provide a full refund of any money paid by a user who notifies you in writing (or by e-mail) within 30 days of receipt that s/he does not agree to the terms of the full Project Gutenberg-tm License. You must require such a user to return or destroy all copies of the works possessed in a physical medium and discontinue all use of and all access to other copies of Project Gutenberg-tm works.

- You provide, in accordance with paragraph 1.F.3, a full refund of any money paid for a work or a replacement copy, if a defect in the electronic work is discovered and reported to you within 90 days of receipt of the work.

- You comply with all other terms of this agreement for free distribution of Project Gutenberg-tm works.

1.E.9. If you wish to charge a fee or distribute a Project Gutenberg-tm electronic work or group of works on different terms than are set forth in this agreement, you must obtain permission in writing from both the Project Gutenberg Literary Archive Foundation and Michael Hart, the owner of the Project Gutenberg-tm trademark. Contact the Foundation as set forth in Section 3 below.

1.F.

1.F.1. Project Gutenberg volunteers and employees expend considerable effort to identify, do copyright research on, transcribe and proofread

public domain works in creating the Project Gutenberg-tm collection. Despite these efforts, Project Gutenberg-tm electronic works, and the medium on which they may be stored, may contain "Defects," such as, but not limited to, incomplete, inaccurate or corrupt data, transcription errors, a copyright or other intellectual property infringement, a defective or damaged disk or other medium, a computer virus, or computer codes that damage or cannot be read by your equipment.

1.F.2. LIMITED WARRANTY, DISCLAIMER OF DAMAGES - Except for the "Right of Replacement or Refund" described in paragraph 1.F.3, the Project Gutenberg Literary Archive Foundation, the owner of the Project Gutenberg-tm trademark, and any other party distributing a Project Gutenberg-tm electronic work under this agreement, disclaim all liability to you for damages, costs and expenses, including legal fees. YOU AGREE THAT YOU HAVE NO REMEDIES FOR NEGLIGENCE, STRICT LIABILITY, BREACH OF WARRANTY OR BREACH OF CONTRACT EXCEPT THOSE PROVIDED IN PARAGRAPH 1.F.3. YOU AGREE THAT THE FOUNDATION, THE TRADEMARK OWNER, AND ANY DISTRIBUTOR UNDER THIS AGREEMENT WILL NOT BE LIABLE TO YOU FOR ACTUAL, DIRECT, INDIRECT, CONSEQUENTIAL, PUNITIVE OR INCIDENTAL DAMAGES EVEN IF YOU GIVE NOTICE OF THE POSSIBILITY OF SUCH DAMAGE.

1.F.3. LIMITED RIGHT OF REPLACEMENT OR REFUND - If you discover a defect in this electronic work within 90 days of receiving it, you can receive a refund of the money (if any) you paid for it by sending a written explanation to the person you received the work from. If you received the work on a physical medium, you must return the medium with your written explanation. The person or entity that provided you with the defective work may elect to provide a replacement copy in lieu of a refund. If you received the work electronically, the person or entity providing it to you may choose to give you a second opportunity to receive the work electronically in lieu of a refund. If the second copy is also defective, you may demand a refund in writing without further opportunities to fix the problem.

1.F.4. Except for the limited right of replacement or refund set forth in paragraph 1.F.3, this work is provided to you 'AS-IS' WITH NO OTHER WARRANTIES OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTIBILITY OR FITNESS FOR ANY PURPOSE.

1.F.5. Some states do not allow disclaimers of certain implied warranties or the exclusion or limitation of certain types of damages. If any disclaimer or limitation set forth in this agreement violates the law of the state applicable to this agreement, the agreement shall be interpreted to make the maximum disclaimer or limitation permitted by the applicable state law. The invalidity or unenforceability of any provision of this agreement shall not void the remaining provisions.

1.F.6. INDEMNITY - You agree to indemnify and hold the Foundation, the trademark owner, any agent or employee of the Foundation, anyone providing copies of Project Gutenberg-tm electronic works in accordance with this agreement, and any volunteers associated with the production, promotion and distribution of Project Gutenberg-tm electronic works, harmless from all liability, costs and expenses, including legal fees, that arise directly or indirectly from any of the following which you do or cause to occur: (a) distribution of this or any Project Gutenberg-tm work, (b) alteration, modification, or additions or deletions to any Project Gutenberg-tm work, and (c) any Defect you cause.

Section 2. Information about the Mission of Project Gutenberg-tm

Project Gutenberg-tm is synonymous with the free distribution of

electronic works in formats readable by the widest variety of computers including obsolete, old, middle-aged and new computers. It exists because of the efforts of hundreds of volunteers and donations from people in all walks of life.

Volunteers and financial support to provide volunteers with the assistance they need, are critical to reaching Project Gutenberg-tm's goals and ensuring that the Project Gutenberg-tm collection will remain freely available for generations to come. In 2001, the Project Gutenberg Literary Archive Foundation was created to provide a secure and permanent future for Project Gutenberg-tm and future generations. To learn more about the Project Gutenberg Literary Archive Foundation and how your efforts and donations can help, see Sections 3 and 4 and the Foundation web page at http://www.pglaf.org.

Section 3. Information about the Project Gutenberg Literary Archive Foundation

The Project Gutenberg Literary Archive Foundation is a non profit 501(c)(3) educational corporation organized under the laws of the state of Mississippi and granted tax exempt status by the Internal Revenue Service. The Foundation's EIN or federal tax identification number is 64-6221541. Its 501(c)(3) letter is posted at http://pglaf.org/fundraising. Contributions to the Project Gutenberg Literary Archive Foundation are tax deductible to the full extent permitted by U.S. federal laws and your state's laws.

The Foundation's principal office is located at 4557 Melan Dr. S. Fairbanks, AK, 99712., but its volunteers and employees are scattered throughout numerous locations. Its business office is located at 809 North 1500 West, Salt Lake City, UT 84116, (801) 596-1887, email business@pglaf.org. Email contact links and up to date contact information can be found at the Foundation's web site and official page at http://pglaf.org

For additional contact information:
Dr. Gregory B. Newby
Chief Executive and Director
gbnewby@pglaf.org

Section 4. Information about Donations to the Project Gutenberg Literary Archive Foundation

Project Gutenberg-tm depends upon and cannot survive without wide spread public support and donations to carry out its mission of increasing the number of public domain and licensed works that can be freely distributed in machine readable form accessible by the widest array of equipment including outdated equipment. Many small donations ($1 to $5,000) are particularly important to maintaining tax exempt status with the IRS.

The Foundation is committed to complying with the laws regulating charities and charitable donations in all 50 states of the United States. Compliance requirements are not uniform and it takes a considerable effort, much paperwork and many fees to meet and keep up with these requirements. We do not solicit donations in locations where we have not received written confirmation of compliance. To SEND DONATIONS or determine the status of compliance for any particular state visit http://pglaf.org

While we cannot and do not solicit contributions from states where we have not met the solicitation requirements, we know of no prohibition

against accepting unsolicited donations from donors in such states who approach us with offers to donate.

International donations are gratefully accepted, but we cannot make any statements concerning tax treatment of donations received from outside the United States. U.S. laws alone swamp our small staff.

Please check the Project Gutenberg Web pages for current donation methods and addresses. Donations are accepted in a number of other ways including checks, online payments and credit card donations. To donate, please visit: http://pglaf.org/donate

Section 5. General Information About Project Gutenberg-tm electronic works.

Professor Michael S. Hart is the originator of the Project Gutenberg-tm concept of a library of electronic works that could be freely shared with anyone. For thirty years, he produced and distributed Project Gutenberg-tm eBooks with only a loose network of volunteer support.

Project Gutenberg-tm eBooks are often created from several printed editions, all of which are confirmed as Public Domain in the U.S. unless a copyright notice is included. Thus, we do not necessarily keep eBooks in compliance with any particular paper edition.

Most people start at our Web site which has the main PG search facility:

http://www.gutenberg.org

This Web site includes information about Project Gutenberg-tm, including how to make donations to the Project Gutenberg Literary Archive Foundation, how to help produce our new eBooks, and how to subscribe to our email newsletter to hear about new eBooks.

Project Gutenberg's Heresy: Its Utility And Morality, by Charles Bradlaugh

This eBook is for the use of anyone anywhere at no cost and with
almost no restrictions whatsoever. You may copy it, give it away or
re-use it under the terms of the Project Gutenberg License included
with this eBook or online at www.gutenberg.org

HERESY: ITS UTILITY AND MORALITY

A PLEA AND A JUSTIFICATION

By Charles Bradlaugh

London: Austin & Co., 17, Johnson's Court, Fleet Street, E.C.

Price Ninepence.

HERESY: ITS MORALITY & UTILITY

A PLEA and A JUSTIFICATION.

CHAPTER I. INTRODUCTION

What is heresy that it should be so heavily punished? Why is it that society will condone many offences, pardon many vicious practices, and yet have such scant mercy for the open heretic, who is treated as though he were some horrid monster to be feared and hated? Most religionists, instead of endeavouring with kindly thought to provide some solution for the difficulties propounded by their heretical brethren, indiscriminately confound all inquirers "in one common category of censure; their views are dismissed with ridicule as sophistical and fallacious, abused as infinitely dangerous, themselves denounced as heretics and infidels, and libelled as scoffers and Atheists." With some religonists all heretics are Atheists. With the Pope of Rome, Garibaldi

and Mazzini are Atheists. With the Religious Tract Society, Voltaire and Paine were Atheists. Yet in neither of the above-named cases is the allegation true. Voltaire and Paine were heretics, but both were Theists. Garibaldi and Mazzini are heretics, but neither of them is an Atheist. With few exceptions, the heretics of one generation become the revered saints of a period less than twenty generations later. Lord Bacon, in his own age, was charged with Atheism, Sir Isaac Newton with Socinianism, the famous Tillotson was actually charged with Atheism, and Dr. Burnet wrote against the commonly received traditions of the fall and deluge. There are but few men of the past of whom the church boasts to-day, who have not at some time been pointed at as heretics by orthodox antagonists excited by party rancour. Heresy is in itself neither Atheism nor Theism, neither the rejection of the Church of Rome, nor of Canterbury, nor of Constantinople; heresy is not necessarily of any ist or ism. The heretic is one who has selected his own opinions, or whose opinions are the result of some mental effort; and he differs from others who are orthodox in this:--they hold opinions which are often only the bequest of an earlier generation unquestioningly accepted; he has escaped from the customary grooves of conventional acquiescence, and sought truth outside the channels sanctified by habit.

Men and women who are orthodox are generally so for the same reason that they are English or French--they were born in England or France, and cannot help the good or ill fortune of their birth-place. Their orthodoxy is no higher virtue than their nationality. Men are good and true of every nation and of every faith; but there are more good and true men in nations where civilisation has made progress, and amongst faiths which have been modified by high humanising influences. Men are good not because of their orthodoxy, but in spite of it; their goodness is the outgrowth of their humanity, not of their orthodoxy. Heresy is necessary to progress; heresy in religion always precedes an endeavour for political freedom. You cannot have effectual political progress without wide-spread heretical thought. Every grand political change in which the people have played an important part, has been preceded by the popularisation of heresy in the immediately earlier generations.

Fortunately, ignorant men cannot be real heretics, so that education must be the hand-maiden to heresy. Ignorance and superstition are twin sisters. Belief too often means nothing more than prostration of the intellect on the threshold of the unknown. Heresy is the pioneer, erect and manly, striding over the forbidden line in his search for truth. Heterodoxy develops the intellect, orthodoxy smothers it. Heresy is the star twinkle in the night, orthodoxy the cloud which hides this faint gleam of light from the weary travellers on life's encumbered pathway. Orthodoxy is well exemplified in the dark middle ages, when the mass of men and women believed much and knew little, when miracles were common and schools were rare, and when the monasteries on the hill tops held the literature of Europe. Heresy speaks for itself in this nineteenth century, with the gas and electric light, with cheap newspapers, with a thousand lecture rooms, with innumerable libraries, and at least a majority of the people able to read the thoughts the dead have left, as well as to listen to the words the living utter.

The word heretic ought to be a term of honour; for honest, clearly uttered heresy is always virtuous, and this whether truth or error; yet it is not difficult to understand how the charge of heresy has been generally used as a means of exciting bad feeling. The Greek word [------] which is in fact our word heresy, signifies simply, selection or choice. The he etiq philosopher was the one who had searched and found, who, not content with the beaten paths, had selected a new road, chosen a new fashion of travelling in the inarch for that happiness all humankind are seeking.

Heretics are usually called "infidels," but no word could be more

unfairly applied, if by it is meant anything more than that the heretic does not conform to the State Faith. If it meant those who do not profess the faith, then there would be no objection, but it is more often used of those who are unfaithful, and then it is generally a libel. Mahomedans and Christians both call Jews infidels, and Mahomedans and Christians call each other infidels. Each religionist is thus an infidel to all sects but his own; there is but one degree of heresy between him and the heretic who rejects all churches. Each ordinary orthodox man is a heretic to every religion in the world except one, but he is heretic from the accident of birth without the virtue of true heresy.

In our own country heresy is not confined to the extreme platform adopted as a standing point by such a man as myself. It is rife even in the state-sustained Church of England, and to show this one does not need to be content with such illustrations as are afforded by the Essayists and Reviewers, who discover the sources of the world's education rather in Greece and Italy than in Judea, who reject the alleged prophecies as evidence of the Messianic character of Jesus; who admit that in nature and from nature, by science and by reason, we neither have, nor can possibly have any evidence of a deity working miracles; but declare that for that we must go out of nature and beyond science, and in effect avow that Gospel miracles are always _objects_, not _evidences_, of faith; who deny the necessity of faith in Jesus as saviour to peoples Who could never have such faith; and who reject the notion that all mankind are individually involved in the curse and perdition of Adam's sin; or even by the Rev. Charles Voysey, who declines to preach "the God of the Bible," and who will not teach that every word of the Old and New Testament is the word of God; or by the Rev. Dunbar Heath, who in defiance of the Bible doctrine, that man has only existed on the earth about 6,000 years, teaches that unnumbered chiliads have passed away since the human family commenced to play at nations on our earth; or by Bishop Colenso, who in his impeachment of the Pentateuch, his denial of the literal truth of the narratives of the creation, fall, and deluge, actually impugns the whole scheme of Christianity (if the foundation be false, the superstructure cannot be true); or by the Rev. Baden Powell, who declared "that the whole tenor of geology is in entire contradiction to the cosmogony delivered from Mount Sinai," and who denied a "local heaven above and a local hell beneath the earth;" or by the Rev. Dr. Giles, who, not content with preceding Dr. Colenso in his assaults on the text of the Pentateuch, also wrote as vigorously against the text of the New Testament; or by the Rev. Dr. Wall, who, unsatisfied with arguments against the admittedly incorrect authorised translation of the Bible, actually wrote to prove that a new and corrected Hebrew text was necessary, the Hebrew itself being corrupt; or by the Rev. Dr. Irons, who teaches that not only are the Gospel writers unknown, but that the very language in which Jesus taught is yet to be discovered, who declares that prior to the Esraic period the literal history of the Old Testament is lost, who does not find the Trinity taught in Scripture, and who declares that the Gospel dees not teach the doctrine of the Atonement; or by the late Archbishop Whately, to whom is attributed a Latin pamphlet raising strong objections against the truth of the alleged confusion of tongues at Babel.

We may fairly allege, that amongst thinking clergymen of the Church of England, heresy is the rule and not the exception. So soon as a minister begins to preach sermons which he does not buy ready lithographed--sermons which are the work of his brain--so soon heresy more or less buds out, now in the rejection of some church doctrine or article of minor importance, now in some bold declaration at variance with major and more essential tenets. Even Bishop Watson's so famous for his Bible Apology, declared that the church articles and creeds were not binding on any man. "They may be true, they may be false," he wrote.

Today scores of Church of England clergymen openly protest against, or groan in silence under the enforced subscription of Thirty-nine unbelievable Articles. Sir William Hamilton declares that the heads of Colleges at Oxford well knew that the man preparing for the Church "will subscribe Thirty-nine Articles which he cannot believe, who swears to do and to have done a hundred articles which he cannot or does not perform."

In scientific circles the heresy of the most efficient members is startlingly apparent. Against members of the Anthropological Society charges of Atheism are freely levelled, and although such a charge does not seem to be justified by any reports of their meetings, or by their printed publications, it is clear that not only out of doors, but even amongst their own circle it is felt that their researches conflict seriously with the Hebrew writ. The Society has been preached against and prayed against, and yet it is simply a society for discovering everything possible about man, prehistoric as well as modern. It has, however, an unpardonable vice in the eyes of the orthodox--it encourages the utterance of facts without regard to their effect on faiths.

The Ethnological Society is kindred to the last named in many of its objects, and hence some of its most active members have been direct assailants of the Hebrew Chronology, which, limits man's existence to the short space of 6,000 years; they have been deniers(sp.) of the origin of the human race from one pair, of the confusion of tongues at Babel, and of the reduction of the human race to one family by the Noachian deluge.

Geological science has a crowd of heretics amongst its professors, men who deny the sudden origin of fauna and flora; who trace the gradual development of the vegetable and animal kingdoms through vast periods of time; and who find no resting place in a beginning of existence, but are obliged to halt in face of a measureless past, inconceivable in its grandeur. Geology, to quote the words of Dr. Kalisch, declares "the utter impossibility of a creation of even the earth alone in six days." Mr. Goodwin says in the "Essays and Reviews:" "The school-books of the present day, while they teach the child that the earth moves, yet assure him that it is a little less than six thousand years old, and that it was made in six days. On the other hand, geologists of all religious creeds are agreed that the earth has existed for an immense series of years--to be counted by millions rather than by thousands; and that indubitably more than six days elapsed from its first creation to the appearance of man upon its surface."

Astronomy has in the ranks of its professors many of its most able minds who do not believe in the sun and moon as two great lights, who cannot accept the myriad stars as fixed in the firmament solely to give light upon the earth, who refuse to believe in the heaven as a fixed firmament to divide the waters above from the waters beneath, who cannot by their telescopes discover the local heaven above or the local hell beneath, although their science marks each faint nebulosity crossing, or crossed by the range of the watcher's vision. To quote again from Mr. Goodwin:--"On the revival of science in the sixteenth century, some of the earliest conclusions at which philosophers arrived, were found to be at variance with popular and long established belief. The Ptolemaic system of astronomy, which had then full possession of the minds of men, contemplated the whole visible universe from the earth as the immovable centre of things. Copernicus changed the point of view, and placing the beholder in the sun, at once reduced the earth to an inconspicuous globule, a merely subordinate member of a family of planets; which the terrestrials had, until then, fondly imagined to be but pendants and ornaments of their own habitation. The Church, naturally, took a lively interest in the disputes which arose between the philosophers ot the new school, and those who adhered to the old doctrines, inasmuch as the

Hebrew records, the basis of religious faith, manifestly countenanced the opinion of the earth's immobility, and certain other views of the universe, very incompatible with those propounded by Copernicus. Hence arose the official proceedings against Galileo, in consequence of which he submitted to sign his celebrated recantation, acknowledging that 'the proposition that the sun is the centre of the world and immovable from its place, is absurd, philosophically false, and formally heretical, because it is expressly contrary to the Scripture;' and that 'the proposition that the earth is not the centre of the world, nor immovable, but that it moves, and also with a diurnal motion, is absurd, philosophically false, and at least erroneous in faith.'"

Why is it that society is so severe on heresy? Three hundred years ago it burned heretics, till thirty years ago it sent them to jail; even in England and America to-day it is content to harass, annoy, and slander them. In the United States a candidate for the Governorship of a State, although otherwise admittedly eligible, was assailed bitterly for his suspected Socinianism. Sir Sidney Waterlow, standing for a Scotch seat, was sharply catechised as to when he had last been inside the Unitarian Chapel, and only saved his seat by not too boldly avowing his opinions. Lord Amberley, who was "unwise" enough to be honest in some of his answers, did not obtain his seat for South Devon in consequence of the suspicion of heresy excited against him. It is chiefly to the _odium theologicum_ that Mr. Mill may attribute his rejection at Westminster; and it is supposed to have also damaged Sir John Lubbock in West Kent. I only refrain from enlarging on my own case, because I learn from the Press that it is chiefly the vulgarity and coarseness of my heresy with which they are indignant. To reply that I have sought to avoid being coarse and vulgar is worse than useless, I am judged untried, condemned unheard; evidence is unnecessary in the case of a man who thus puts himself outside the pale.

Sir William Drummond says, "Early associations are generally the strongest in the human mind, and what we have been taught to credit as children we are seldom, disposed to question as men. Called away from speculative inquiries by the common business of life, men in general possess neither the inclination, nor the leisure to examine _what_ they believe or _why_ they believe. A powerful prejudice remains in the mind; ensures conviction without the trouble of thinking; and repels doubt without the aid or authority of reason. The multitude then is not very likely to applaud an author, who calls upon it to consider what it had hitherto neglected, and to stop where it had been accustomed to pass on. It may also happen that there is a learned and formidable body, which, having given its general sanction to the literal interpretation of the Holy Scriptures, may be offended at the presumption of an unhallowed layman, who ventures to hold, that the language of those Scriptures is often symbolical and allegorical, even in passages which both the Church and the Synagogue consider as nothing else than a plain statement of fact. A writer who had sufficient boldness to encounter such obstacles, and to make an appeal to the public, would only expose himself to the invectives of offended bigotry, and to the misrepresentations of interested malice. The press would be made to ring with declamations against him, and neither learning, nor argument, nor reason, nor moderation on his side, would protect him from the literary assassination which awaited him. In vain would he put on the heaven-tempered panoply of truth. The weapons which could neither pierce his buckler nor break his casque, might be made to pass with envenomed points through the joints of his armour. Every trivial error which he might commit, would be magnified into a flagrant fault; and every insignificant mistake into which he might fall, would be represented by the bigotted, or by the hireling critics of the day as an ignorant, or as a perverse deviation from the truth." Both by the Statute Law and Common Law, heresy is punishable, and many are punished for it even in the second half of the nineteenth century. A man who has been educated

in, or made profession of Christianity, and who shall then deny any of the Thirty-nine Articles, is liable to indictment and imprisonment, but this course is seldom pursued; the more common practice is for the Christian to avail himself of the heretic's want of belief in order to object to his competency as a witness. Repeated instances have occurred recently in which the proposed witness has been rejected as untrustworthy, because he was too honest to pretend to hold a faith he in truth denied. Besides such open persecution, there is the constant, unceasing, paltry, petty persecuting spirit which refuses to trade with the heretic; which declines to eat with him; which will not employ him; which feels justified in slandering him, which seeks to set his wife's mind against him, and to take away the affection of his children from him.

For those who do not believe this, I will instance two clergymen of the Church of England: one (who as my teacher when a boy) set a kind father's heart against me, and drove me further in heresy than I then dreamed of marching; and the other, who in cruel wickedness tried to wound me as a man through the feelings of my wife and children, whom he most vilely and basely slandered. The first is yet unpunished, the second escaped condign punishment only by writing himself down libeller, and praying pardon for the slanderous coinage of his brain. And yet this latter Church of England clergyman, who had written a strong letter thanking me for my generous forbearance, and who from his own pulpit pretended to express his sorrow, is actually the first and only man in my neighbourhood to cry "Atheist" against me, when I mingle in political life, and he thinks the phrase may wound and injure me.

CHAPTER II. THE SIXTEENTH CENTURY

It requires a more practised pen than mine to even faintly sketch the progress of heresy during the past three centuries, but I trust to say enough to give the reader an idea of its rapid growth and wide extension. I say of the past three centuries, because it is only during the past three hundred years that heresy has made the majority of its converts amongst the mass of the people. In earlier times heretics were not only few, but they talked to the few, and wrote to the few, in the language of the few; and indeed it may be fairly said, that it is only during the last hundred years that the greatest men have sought to make heresy "vulgar;" that is, to make it common. One of our leading scientific men admitted recently that he had been reproved by some of his more orthodox friends, for not confining to the Latin language such of his geological opinions as were supposed to be most dangerous to the Hebrew records. The starting-point of the real era of popular heresy may be placed at the early part of the sixteenth century, when the memories of Huss and Ziska (who had really inoculated the mass with some spirit of heretical resistance a century before) aided Luther in resisting Rome.

Martin Luther, born at Eisleben in Saxony, in 1483, was one of the heretics who sought popular endorsement for his heresy, and who following the example of the Ulrich Zuingle, of Zurich, preached to the people in rough plain words. While others were limited to Latin, he rang out in plain German his opposition to Tetzel and his protectors. I know that to-day, Martin Luther is spoken of by orthodox Protestants as if he were a saint without blemish, and indeed I do not want to deprive the Christian Church of the honour of his adherence; he is hardly good enough and true enough for a first-class heretic. Yet in justification of my ranking him even so temporarily amongst the heretics of the sixteenth century, it will be sufficient to mention that he regarded "the books of the Kings as more worthy of credit than the books of the

Chronicles," that he wrote as follows:--"The book of Esdras I toss into the Elbe." "I am so an enemy to the book of Esther I would it did not exist." "Job spake not therefore as it stands written in his book." "It is a sheer _argumentum fabulæ_" "The book of the Proverbs of Solomon has been pieced together by others," of Ecclesiastes "there is too much of broken matter in it; it has neither boots nor spurs, but rides only in socks." "Isaiah hath borrowed his whole art and knowledge from David." "The history of Jonah is so monstrous that it is absolutely incredible." "The Epistle to the Hebrews is not by St. Paul, nor indeed by any Apostle." "The Epistle of James 1 account the writing of no Apostle," and "is truly an Epistle of sham." The Epistle of Jude "allegeth sayings or stories which have no place in Scripture," "of Revelation I can discover no trace that it is established by the Holy Spirit." If Martin Luther were alive to-day, the Established Church of England, which pretends to revere him, would prosecute him in the English Ecclesiastical Courts if he ventured to repeat the foregoing phrases from her pulpits. What would the writers who attack me for coarseness, say of the following passage, which occurs with reference to Melancthon, whom Luther boasts that he raised miraculously from the dead? "Melancthon," says Sir William Hamilton, to whose essay I am indebted for the extracts here given, "had fallen ill at Weimar from contrition and fear for the part he had been led to take in the Landgrave's polygamy: his life was even in danger." "Then and there," said Luther, "I made our Lord God to smart for it. For I threw down the sack before the door, and rubbed his ears with all his promises of hearing prayer, which I knew how to recapitulate from Holy Writ, so that he could not but hearken to me, should I ever again place any reliance on his promises." Martin Luther, with his absolute denial of free-will, and with his double code of morality for princes and peasants--easy for one and harsh for the other--may be fairly left now with those who desire to vaunt his orthodoxy; here his name is used only to illustrate the popular impetus given to nonconformity by his quarrel with the papal authorities. Luther protested against the Romish Church, but established by the very fact the right for some more advanced man than Doctor Martin to protest in turn against the Lutheran Church. The only consistent church in Christendom is the Romish Church, for it claims the right to think for all its followers. The whole of the Protestant Churches are inconsistent, for they claim the right to think and judge against Rome, but deny extremer Nonconformists the right to think and judge against themselves. Goethe, says Froude, declares that Luther threw back the intellectual progress of mankind by using the passions of the multitude to decide subjects which should have been left to the learned. I do not believe this to be wholly true, for the multitude once having their ears fairly opened, listened to more than the appeal to their passions, and examined for themselves propositions which otherwise they would have accepted or rejected from habit and without inquiry. Martin Luther's public discussions with pen and tongue, in Wittemberg, Augsburg, Liebenwerd, and Lichtenberg, and the protest he encouraged against Rome, were the commencement of a vigorous controversy, in which the public (who heard for the first time sharp controversial sermons preached publicly in the various pulpits by Lutheran preachers on free-will and necessity, election and predestination, &c.) began to take real part and interest; and which is still going on, and will in fact never end until the unholy alliance of Church and State is everywhere annulled, and each religion is left to sustain itself by its own truth, or to fall from its own weakness, no man being molested under the law on account of his opinions on religious matters. While Luther undoubtedly gave an impetus to the growth of Rationalism by his own appeal to reason and his reliance on reason for himself, it is not true that he contended for the right of general freedom of inquiry, nor would he have left unlimited the privileges of individual judgment for others. He could be furious in his denunciations of reason when a freer thinker than himself dared to use it against his superstitions. It is somewhat remarkable that while on the one hand one man, Luther, was detaching from the Church of Rome

a large number of minds, another man, Loyola, was about the same time engaged in founding that powerful society (the Society of Jesuits), which has done so much to check free inquiry and maintain the priestly domination over the human intellect. That which Luther commenced in Germany roughly, inefficiently, and perhaps more from personal feeling for the privileges of the special order to which he belonged than from desire for popular progress, was aided in its permanent effect by Descartes, in England by Bacon, in France by Montaigne, and in Italy by Bruno.

Francis Bacon, Lord Verulam, was born on the 22nd January, 1561, and died 1626. His mother, Anne, daughter of Sir Anthony Cooke, was a woman of high education, and certainly with some inclinations favourable to Freethought, for she had herself translated into English some of the sermons on fate and free-will of Bernard Ochino, or Bernardin Ochinus, an Italian Reforming Heretic, alike repudiated by the powers at Rome, Geneva, Wittemberg, and Zurich. Ochino, in his famous disquisition "touching the freedom or bondage of the human will, and the foreknowledge, predestination, and liberty of God," after discussing, with great acuteness, and from different points of view, these important topics, comes to the conclusion that there is no outlet to the mazes of thought in which the honest speculator plunges in the endeavour to solve these problems. Although, like other writers of that and earlier periods, many of Bacon's works were published in Latin, he wrote and published also in English, and if I am right in numbering him as one of the heretics of the sixteenth century, he must be also counted a vulgar heretic--i.e., one who wrote in the vulgar tongue, who preached his heresy in the language which the mass understood. Lewes says, "Bacon and Descartes are generally recognised as the Fathers of Modern Philosophy, although they themselves were carried along by the rapidly-swelling current of their age, then decisively setting in the direction of science. It is their glory to have seen visions of the coming greatness, to have expressed in terms of splendid power, the thoughts which were dimly stirring the age, and to have sanctioned the new movement by their authoritative genius." Bacon was the populariser of that method of reasoning known as the inductive, that method which seeks to trace back from the phenomena of the moment to the eternal noumenon or noumena--from the conditioned to the absolute. Nearly two thousand years before, the same method had been taught by Aristotle in opposition to Plato, and probably long thousands of years before the grand Greek, pre-historic schoolmen had used the method; it is natural to the human mind. The Stagirite was the founder of a school, Bacon the teacher and populariser for a nation. Aristotle's Greek was known to few, Bacon's eloquent English opened out the subject to the many whom he impregnated with his own confidence in the grand progressiveness of human thought. Lewes says; "The spirit of his philosophy was antagonistic to Theology, for it was a spirit of doubt and search; and its search was for visible and tangible results." Bacon himself, in his essay on Superstition, says: "Atheism leaves a man to sense, to philosophy, to natural piety, to laws, to reputation, all which may be guides to an outward moral virtue, though religion were not; but superstition dismounts all these, and erecteth an absolute monarchy in the minds of men: therefore Atheism did never perturb states; for it makes men wary of themselves, as looking no further; and we see the times inclined to Atheism, as the time of Augustus Caesar were civil times; but superstition hath been the confusion of many states, and bringeth in a new _primum mobile_ (the first motive cause), that ravisheth all the spheres of government." It is true that he also wrote against Atheism, and this in strong language, but his philosophy was not used for the purpose of proving theological propositions. He said: "True philosophy is that which is the faithful echo of the voice of the world, which is written in some sort under the dictation of things, which adds nothing of itself, which is only the rebound, the reflection of reality." It has been well said that the words "Utility and Progress" give the keynotes of Bacon's teachings.

With one other extract we leave his writings. "Crafty men," he says, "contemn studies, simple men admire them, and wise men use them; for they teach not their own use; but that is a wisdom without them, and above them, won by observation. Read not to contradict and confute, nor to believe and take for granted, nor to find talk and discourse; but to weigh and consider. Some books are to be tasted, others to be swallowed, and some few to be chewed and digested. Reading maketh a full man; conference a ready man; and writing an exact man; and therefore, if a man write little, he need have a great memory; if he confer little, he need have a present wit; and if he read little, he had need have much cunning, to seem to know that he doth not. Histories make men wise; poets witty; the mathematics subtle; natural philosophy deep; moral, grave; logic and rhetoric, able to contend." He was the father of experimental philosophy. In one of his suggestions as to the force of attraction of gravitation may be found the first aid to Sir Isaac Newton's later demonstrations on this head; another of his suggestions, worked out by Torricelli, ended in demonstrating the gravity of the atmosphere. But to the method he so popularised may be attributed the grandest discoveries of modern times. It is to be deplored that the memory of his moral weakness should remain to spoil the praise of his grand intellect.

Lord Macaulay, in the _Edinburgh Review_, after contrasting at some length the philosophy of Plato with that of Bacon, said;--"To sum up the whole: we should say that the aim of the Platonic philosophy was to exalt man into a god. The aim of the Baconian philosophy was to provide man with what he requires while he continues to be man. The aim of the Platonic philosophy was to raise us far above vulgar wants. The aim of the Baconian philosophy was to supply our vulgar wants. The former aim was noble; but the latter was attainable. Plato drew a good bow; but, like Acestes in Virgil, he aimed at the stars; and therefore, though there was no want of strength or skill, the shot was thrown away. His arrow was indeed followed by a track of dazzling radiance, but it struck nothing. Bacon fixed his eye on a mark which was placed on the earth and within bowshot, and hit it in the white. The philosophy of Plato began in words and ended in words--noble words in deed-words such as were to be expected from the finest of human intellects exercising boundless dominion over the finest of human languages. The philosophy of Bacon began in observations and ended in arts."

In France the political heresy of Jean Bodin--who challenged the divine right of rulers; who proclaimed the right of resistance against oppressive decrees of monarchs; who had words of laudation for tyrannicide, and yet had no conception that the multitude were entitled to use political power, but on the contrary wrote against them--was very imperfect, the conception of individual right was confounded in the habit of obedience to monarchical authority. Bodin is classed by Mosheim amongst the writers who sowed the seeds of scepticism in France; but although he was far from an orthodox man, it is doubtful if Bodin ever intended his views to be shared beyond the class to which he belonged. To the partial glimpse of individual right in the works of Bodin add the doctrine of political fraternity taught by La Boetie, and then this political heresy becomes dangerous in becoming popular.

The most decided heretic and doubter of the sixteenth century was one Sanchez, by birth a Portuguese, and practising as a physician at Toulouse; but the impetus which ultimately led to the spread and popularity of sceptical opinions in relation to politics and theology, is chiefly due to the satirical romances of Rabelais and the essays of Montaigne. "What Rabelais was to the supporters of theology," says Buckle, "that was Montaigne to the theology itself. The writings of Rabelais were only directed against the clergy, but the writings of Montaigne were directed against the system of which the clergy were the offspring."

Montaigne was born at Bordeaux 1533, died 1592. Louis Blanc says of his words, "Et ce ne sont pas simples discours d'un philosophe à des philosophes. Montaigne s'addresse à tous." Montaigne's words were not those of a philosopher talking only to his own order, he addressed himself to mankind at large, and he wrote in language the majority could easily comprehend. Voltaire points out that Montaigne as a philosopher was the exception in France to his class; he having succeeded in escaping that persecution which fell so heavily on others. Montaigne's thoughts were like sharp instruments scattered broadcast, and intended for the destruction of many of the old social and conventional bonds; he was the advocate of individualism, and placed each man as above society, rather than society as more important than each man. Montaigne mocked the reasoners who contradicted each other, and derided that fallibility of mind which regarded the opinion of the moment as infallibly true, and which was yet always temporarily changed by an attack of fever or a draught of strong drink, and often permanently modified by some new discovery. Less fortunate than Montaigne, Godfrey a Valle was burned for heresy in Paris in 1572, his chief offence having been that of issuing a work entitled "De Arte Nihil Credendi."

Heresy thus championed in France, Germany, and England, had in Italy its sixteenth century soldiers in Pomponatius of Mantua, Giordano Bruno, and Telesio, both of Naples, and in Campanella of Calabria, a gallant band, who were nearly all met with the cry of "Atheist," and were either answered with exile, the prison, or the faggot.

Pomponatius, who was born 1486 and died 1525, wrote a treatise on the Soul, which was so much deemed an attack on the doctrine of immortality despite a profession of reverence for the dogmas of the Church, that the work was publicly burned at Venice, a special bull of Leo X. being directed against the doctrine.

Bernard Telesio was born at Naples in 1508, and founded there a school in which mathematics and philosophy were given the first place. During his lifetime he had the good fortune to escape persecution, but sites his death his works were proscribed by the Church; Telesio was chiefly useful in educating the minds of some of the Neapolitans for more advanced thinking than his own.

This was well illustrated in the case of Thomas Campanella, born 1568, who, attracted by the teachings of Telesio, wrote vigorously against the old schoolmen and in favor of the new philosophy. Despite an affected reverence for the Church of Rome, Campanella spent twenty-seven years of his life in prison. Campanella has been, as is usually the case with eminent writers, charged with atheism, but there seems to be no fair foundation for the charges He was a true heretic, for he not only opposed Aristotle; but even his own teacher Telesio. None of these men, however, yet strove to reach the people, they wrote to and of one another, not to or of the masses. It is said that Campanella was fifty times arrested and seven times tortured for his heresy.

One Andrew de Bena, a profound scholar and eminent preacher of the Church of Rome, carried away by the spirit of the time, came out into the reformed party; but his mind once set free from the old trammels, found no rest in Luther's narrow church, and a poetic Pantheism was the result.

Jerome Cardan, a mathematician of considerable ability, born at Pavia 1601, has been fiercely accused of atheism. His chief offence seems to have been rather in an opposite direction; astrology was with him a favourite subject. While the strange views put forward in some of his works served good purpose by provoking inquiry, we can hardly class Cardan otherwise than as a man whose undoubted genius and erudition were

more than counterbalanced by his excessively superstitious folly.

Giordano Bruno was born near Naples about 1550. He was burned at Rome for heresy on the 17th February, 1600. Bruno was burned for alleged atheism, but appears rather, to have been a Pantheist. His most prominent avowal of heresy was the disbelief in eternal torment and rejection, of the common orthodox ideas of the devil. He wrote chiefly in Italian, his vulgar tongue, and thus effectively aided the grand march of heresy by familiarising the eyes of the people with newer and truer forms of thought. Bruno used the tongue as fluently as the pen. He spoke in Italy until he had roused an opposition rendering flight the only possibly escape from death. At Geneva he found no resting place, the fierce spirit of Zuingle and Calvin was there too mighty; at Paris he might have found favour, with the King, and at the Sorbonne, but he refused to attend mass, and delivered a series of popular lectures, which won many admirers; from Paris he went to England, where we find him publicly debating at Oxford and lecturing on theology, until he excited an antagonism which induced his return to Paris, where he actually publicly discussed for three days some of the grand problems of existence. Paris orthodoxy could not permit his onslaughts on established opinions, and this time it was to Germany Bruno turned for hospitality; where, after visiting many of the different states, lecturing freely but with general success, he drew upon himself a sentence of excommunication at Helmstadt. At last he returned to Italy and spoke at Padua, but had at once to fly thence from the Inquisition; at Venice he found a resting place in prison, whence after six years of dungeon, and after the tender mercy of the rack, he was led out to receive the final refutation of the faggot. There is a grand heroism in the manner in which he received his sentence and bore his fiery punishment. No cry of despair, no prayer for escape, no flinching at the moment of death. Bruno's martyrdom may favourably contrast with the highest example Christianity gives us.

It was in the latter half of the sixteenth century, that Unitarianism or Socinianism assumed a front rank position in Europe, having its chief strength in Poland, with considerable force in Holland and England. In 1524, one Lewis Hetzer had been publicly burned at Constance, for denying the divinity of Jesus; but Hetzer was more connected with the Anabaptists than with the Unitarians. About the same time a man named Claudius openly argued amongst the Swiss people, against the doctrine of the trinity, and one John Campanus contended at Wittemberg, and other places, against the usually inculcated doctrines of the Church, as to the Father, Son, and Holy Ghost.

In 1566, Valentine Gentilis, a Neapolitan, was put to death at Rome, for teaching the superiority of God the Father, over the Son and the Holy Ghost. Modern Unitarianism appears to have had as its founders or chief promoters, Lælius Socinus, and his nephew Faustus Socinus; the first having the better brain and higher genius, but marred by a timid and irresolute character; the second having a more active nature and bolder temperament. From Cracow and Racow, during the latter half of this century, the Unitarians (who drew into their ranks many men of advanced minds.) issued a large number of books and pamphlets, which were circulated amongst the people with considerable zeal and industry. Unitarianism was carried from Poland into Transylvania by a physician, George Blandrata, and a preacher Francis David, or Davides, who obtained the support and countenance of the then ruler of the country. Davides, unfortunately for himself, became too unitarian for the Unitarians; he adopted the extreme views of one Simon Budnffius, who, in Lithuania, entirely repudiated any sort, of religious worship in reference to Jesus. Budnæus was excommunicated by the Unitarians themselves, and Davides was imprisoned for the rest of his life. As the Unitarians were persecuted by the old Romish and new Lutheran Churches, so they in turn persecuted seceders from and opposers of their own movement. Each

man's history involved the widening out of public thought; each act of persecution illustrated a vain endeavour to check the progress of heresy; each new sect marked a step towards the destruction of the old obstructive faiths.

About the close of the sixteenth century, Ernestius Sonerus, of Nuremberg, wrote against the doctrine of eternal torment, and also against the divinity of Jesus, but his works were never very widely circulated. Amongst the distinguished Europeans of the sixteenth century whom Dr. J. F. Smith mentions as either atheists or favouring atheism, were Paul Jovius, Peter Aretin, and Muretus. Rumour has even enrolled Leo X. himself in the atheistical ranks. How far some of these men had warranted the charge other than by being promoters of literature and lovers of philosophy, it is now difficult to say. A determined resistance was offered to the spread of heretical opinions in the South of Europe by the Roman Church, and it is alleged that some thousands of persons were burned or otherwise punished in Spain, Portugal, and Naples during the sixteenth century. The Inquisition or Holy Office was in Spain and Portugal the most prominent and active persecutor, but persecution was carried on vigorously in other parts of Europe by the seceders from Rome. Zuingle, Luther, and Calvin, were as harsh as the Pope towards those with whom they differed.

Michael Servetus, or Servede, was a native of Arragon, by profession a physician; he wrote against the ordinary doctrines of the Trinity, but was far from ordinary Unitarianism.

He was burned at Geneva, at the instance of Calvin. Calvin was rather fond of burning heretical opponents; to the name of Servetus might be added that of Gruet, who also was burned at the instance of Calvin, for denying the divinity of the Christian religion, and for arguing against the immortality of the soul.

It is worth notice that while heresy in this sixteenth century began to branch out openly, and to strike its roots down firmly amongst the people, ecclesiastical historians are compelled to record improvement in the condition of society. Mosheim says, "In this century the arts and sciences were carried to a pitch unknown to preceding ages, and from this happy renovation of learning, the European churches derived the most signal and inestimable advantages." "The benign influence of true science, and its tendency to improve both the form of religion and the institutions of civil policy, were perceived by many of the states." The love of literature is the most remarkable and characteristic form of advancing civilisation. Instead of being the absorbing passion of the learned few, it becomes gradually the delight and occupation of increasing numbers. This cultivation of literary pursuits by the mass is only possible when enough of heresy has been obtained to render their scope of study wide enough to be useful. Rotterdam gave life to the polished Erasmus, Valentia to Ludovico Vivez, Picardy to Le Fevre, and France to Rabelais.

In the latter half of this century, giants in literature grew out, giants who wrote for the people. William Shakespeare wrote even for those who could not read, but who might learn while looking and listening. His comedies and tragedies are at the same time pictures for the people of diverse phases of English life and character, with a thereunto added universality of pourtrayal and breadth in philosophy, which it is hardly too much to say, that no other dramatist has ever equalled. Italy boasts its Torquato Tasso, whose "Jerusalem Delivered," the grand work of a great poet, marks, like a mighty monument, the age capable of finding even in a priest-ridden country, an audience amongst the lowest as well as the highest, ready to read and sing, and finally permeated with the poet's outpourings. In astronomy, the name of Tycho Brahé stands out in the sixteenth century like one of the first

magnitude stars whose existence he catalogued.

CHAPTER III. THE SEVENTEENTH CENTURY

The seeds of inquiry sown in the sixteenth century resulted in a fruitful display of advanced opinions during the next age. In the page of seventeenth century history, more names of men, either avowedly heretics, or charged by the orthodox with heresy, or whose labours can be shown to have tended to the growth of heresy, may probably be recorded than can be found during the whole of the previously long period during which the Christian Church assumed to dominate and control European thought. The seventeenth century muster-roll of heresy is indeed a grand one, and gloriously filled. One of its early martyrs was Julius Caesar Vanini, who was burned at Toulouse, in the year 1619, aged 34, as "an impious and obstinate Atheist." Was he Atheist, or was he not? This is a question, in answering which the few remains of his works give little ground for sharing the opinion of his persecutors. Yet many writers agree in writing as if his Atheism were of indisputable notoriety. He was a poor Neapolitan priest, he preached a sort of Pantheism; unfortunately for himself, he believed in the utility of public discussion on theological questions, and thus brought upon his head the charge of seeking to convert the world to Atheism.

In 1611, two men, named Legat and Whitman, were burned in England for heresy. "But," says Buckle, "this was the last gasp of expiring bigotry; and since that memorable day, the soil of England has never been stained by the blood of a man who has suffered for his religious creed."

Peter Charron, of Paris, ought perhaps to have been included in the sixteenth century list, for he died in 1603, but his only known work, "La Sagesse," belongs to the seventeenth century, in which it circulated and obtained reputation.

He urged that religion is the accidental result of birth and education, and that therefore variety of creed should not be cause of quarrel between men, as such variety is the result of circumstances over which the men themselves have had no control; and he urges that as each sect claims to be the only true one, we ought to rise superior to all sects, and without being terrified by the fear of future punishment, or allured by the hope of future happiness, "be content with such practical religion as consists in performing the duties of life." Buckle, who speaks in high terms of Charron, says, "The Sorbonne went so far as to condemn Charron's great work, but could not succeed in having it prohibited."

René Descartes Duperron, a few years later than Bacon (he was born in 1596, at La Haye, in Touraine, died 1650, at Stockholm) established the foundations of the deductive method of reasoning, and applied it in a manner which Bacon had apparently carefully avoided. Both Descartes and Bacon addressed themselves to the task of substituting for the old systems, a more comprehensive and useful spirit of philosophy; but while Bacon sought to accomplish this by persuading men to experiment and observation, Descartes commenced with the search for a first and self-evident ground of all knowledge. This, to him, is found in consciousness. The existence of Deity was a point which Bacon left untouched by reason, yet with Descartes it was the first proposition he sought to prove. He says, "I have always thought that the two questions of the existence of God and the nature of the soul, were the chief of those which ought to be demonstrated rather by philosophy than by theology, for although it is sufficient for us, the faithful, to believe in God, and that the soul does not perish with the body, it does not

seem possible ever to persuade the infidels to any religion unless we first prove to them these two things by natural reason." To prove this existence of God and the immortality of the soul, Descartes needed a firm starting point, one which no doubt could touch, one which no argument could shake. He found this point in the fact of his own existence. He could doubt everything else, but he could not doubt that he, the thinking doubter, existed. His own existence was the primal fact, the indubitable certainty, which served as the base for all other reasonings, hence his famous "Cogito ergo sum:" I think, therefore I am. And although it has been fairly objected that Descartes did not exist because he thought, but existed and thought; it is nevertheless clear that it is only in the thinking that Descartes had the consciousness of his existence. The fact of Descartes' existence was, to him, one above and beyond all logic, Evidence could not add to the certitude, no scepticism could impeach it. Whether or not we agree with the Cartesian philosophy, or the reasonings used to sustain it, we must admire the following four rules which he has given us, and which, with the view of consciousness in which we do not entirely concur, are the essential features of the basis of a considerable portion of Descartes' system;--

"1. Never to accept anything as true but what is evidently so; to admit nothing but what so clearly and distinctly presents itself as true, that there can be no reason to doubt it.

"2. To divide every question into as many separate parts as possible, that each part being more easily conceived, the whole may be more intelligible.

"3. To conduct the examination with order, beginning by that of objects the most simple, and therefore the easiest to be known, and ascending little by little up to knowledge of the most complex.

"4. To make such exact calculations, and such circumspections as to be confident that nothing essential has been omitted."

"Consciousness being the basis of all certitude, everything of which you are clearly and distinctly conscious must be true: everything which you clearly and distinctly conceive, exists, if the idea involve existence."

It should be remarked that consciousness being a state of condition of the mind, is by no means an infallible guide? Men may fancy they have clear ideas, when their consciousness, if carefully examined, would prove to have been treacherous. Descartes argued for three classes of ideas--acquired, compounded, and innate. It is in his assumption of innate ideas that you have one of the radical weaknesses of his system. Sir William Hamilton points out that the use of the word idea by Descartes, to express the object of memory, imagination, and sense, was quite a new usage, only one other writer, David Buchanan, having previously used the word idea with this signification.

Descartes did not write for the mass, and his philosophy would have been limited to a much narrower circle had its spread rested on his own efforts. But the age was one for new thought, and the contemporaries and successors of Descartes carried the Cartesian logic to extremes he had perhaps avoided, and they taught the new philosophy to the world in a fearless spirit, with a boldness for which Descartes could have given them no example. Descartes, who in early life had travelled much more than was then the custom, had probably made the personal acquaintance of most of the leading thinkers of Europe then living; it would be otherwise difficult to account for the very ready reception given by them to his first work. Fortunately for Descartes, he was born with a fair fortune, and escaped such difficulties as poorer philosophers must needs submit to. There is perhaps a _per contra_ side. It is more than possible that if the needs of life had compelled him, Descartes'

scientific predilections might have resulted in more immediate advantage to society. His philosophy is often pedantic to weariness, and his scientific theories are often sterile. The fear of poverty might have quickened some of his speculations into a more practical utterance. Buckle reminds us that Descartes "was the first who successfully applied algebra to geometry; that he pointed out the important law of the sines; that in an age in which optical instruments were extremely imperfect, he discovered the changes to which light is subjected in the eye by the crystalline lens; that he directed attention to the consequences resulting from the weight of the atmosphere, and that he detected the causes of the rainbow." "Descartes," says Saintes, "throwing off the swaddling clothes of scholasticism, resolved to owe to himself alone the acquisition of the truth which he so earnestly desired to possess. For what else is the methodical doubt which he established as the starting point in his philosophy, than an energetic protest of the human mind against all external authority? Having thus placed all science on a philosophical basis, no matter what, he freed philosophy herself from her long servitude, and proclaimed her queen of the intellect. Hence every one who has wished to account to himself for his existence, every one who has desired to know himself to know nature, and to rise to its author; in a word, all who have wished to make a wise use of their intellectual faculties, to apply them, not to hollow speculations which border on nonentity, but to sensible and practical inquiries, have taken and followed some direction from Descartes." It is almost amusing when philosophers criticise their predecessors. Mons. Henri Bitter denies to Descartes any originality of method or even of illustration, while Hegel describes him as the founder of modern philosophy, whose influence upon his own age and on modern times it is impossible to exaggerate. To attempt to deal fully and truly with Descartes in the few lines which can be spared here, is impossible; all that is sought is to as it were catalogue his name in the seventeenth century list. Whether originator or imitator, whether founder or disciple, it is certain that Descartes gave a sharp spur to European thought, and mightily hastened the progress of heresy. It is not the object or duty of the present writer to examine or refute any of the extraordinary views entertained by Descartes as to vortices. Descartes himself is reported to have said "my theory of vortices is a philosophical romance." Science in the last three centuries has travelled even more rapidly than philosophy; and most of the physical speculations of Descartes are relegated to the region of grandly curious blunderings. There is one point of error held by Descartes sufficiently entertained even to-day--although most often without a distinct appreciation of the position--to justify a few words upon it. Descartes denied mental faculties to all the animal kingdom except mankind. All the brute kingdom he regarded as machines without intelligence. In this he was logical, even in error, for he accorded a soul to man which he denied to the brute. Soul and mind with him are identified, and thought is the fundamental attribute of mind. To admit that a dog, horse, or elephant can think, that it can remember what happened yesterday, that it can reason ever so incompletely, would be to admit that that dog, horse, or elephant, has some kind of soul; to avoid this he reduces all animals outside the human family to the position of machines. To-day science admits in animals, more or less according to their organisation, perception, memory, judgment, and even some sort of reason. Yet orthodoxy still claims a soul for man even if he be a madman from his birth, and denies it to the sagacious elephant, the intelligent horse, the faithful dog, and the cunning monkey. His proof of the existence of Deity is thus stated by Lewes:--"Interrogating his consciousness, he found that he had the idea of God, understanding by God, a substance infinite, eternal, immutable, independent, omniscient, omnipotent. This, to him, was as certain a truth as the truth of his own existence. I exist: not only do I exist, but exist as a miserably imperfect finite being, subject to change, greatly ignorant, and incapable of creating anything. In this, my consciousness, I find by my finitude that I am not the All; by my imperfection, that I am not

perfect. Yet an infinite and perfect being must exist, because infinity and perfection are implied as correlatives in my ideas of imperfection and finitude. God therefore exists: his existence is clearly proclaimed in my consciousness, and can no more be a matter of doubt, when fairly considered, than my own existence. The conception of an infinite being proves his real existence; for if there is not really such a being, I must have made the conception; but if I could make it, I can also unmake it, which evidently is not true; therefore there must be, externally to myself an archetype from which the conception was derived. All that we clearly and distinctly conceive as contained in anything, is true of that thing. Now we conceive, clearly and distinctly, that the existence of God is contained in the idea we have of him--_Ergo_, God exists." It may not be out of place to note at this demonstration, that the Jesuit writer, Father Hardouin, in his "Atheists Unmasked," as a recompense for this demonstration of the existence of Deity, places Descartes and his disciples, le Grand and Regis, in the first rank of atheistical teachers. Voltaire, commenting on this, remarks, "The man who had devoted all the acuteness of his extraordinary intellect to the discovery of new proofs of the existence of a God, was most absurdly charged with denying him altogether." Speaking of the proof of the existence of Deity, "Demonstrations of this kind," says Froude, "were the characteristics of the period. Descartes had set the example of constructing them, and was followed by Cudworth, Clarke, Berkeley, and many others besides Spinoza. The inconclusiveness of the method may perhaps be observed most readily in the strangely opposite conceptions formed by all these writers of the nature of that Being whose existence they nevertheless agreed, by the same process, to gather each out of their ideas. It is important, however, to examine it carefully, for it is the very keystone of the Pantheistic system. As stated by Descartes, the argument stands something as follows:--God is an all-perfect Being, perfection is the idea which we form of Him, existence is a mode of perfection, and therefore God exists. The sophism, we are told, is only apparent, existence is part of the idea--as much involved in it as the equality of all lines drawn from the centre to the circumference of a circle is involved in the idea of a circle. A non-existent all-perfect Being is as inconceivable as a quadrilateral triangle. It is sometimes answered that in this way we may prove the existence of anything, Titans, Chimaeras, or the Olympian gods; we have but to define them as existing, and the proof is complete. But this objection is summarily set aside; none of these beings are by hypothesis absolutely perfect, and, therefore, of their existence we can conclude nothing. With greater justice, however, we may say, that of such terms as perfection and existence we know too little to speculate. Existence may be an imperfection for all we can tell, we know nothing about the matter. Such arguments are but endless _petitiones principii_--like the self-devouring serpent, resolving themselves into nothing. We wander round and round them, in the hope of finding some tangible point at which we can seize their meaning; but we are presented everywhere with the same impracticable surface, from which our grasp glides off ineffectual."

Thomas Hobbes, of Malmesbury, is one of those men more often freely abused than carefully read; he was born April 5th, 1588, died 1679. He was "the subtlest dialectician of his time," and one of the earliest English advocates of the materialistic limitation of mind; he denies the possibility of any knowledge other than as resulting from sensation; his doctrine is in direct negation of Descartes' theory of innate ideas, and would be fatal to the orthodox dogma of mind as spiritual. "Whatever we imagine," he says, "is finite. Therefore, there is no idea, no conception of anything we call infinite." In a brief pamphlet on his own views, published in 1680, in reply to attacks upon him, he writes, "Besides the creation of the world there is no argument to prove a Deity," and "that it cannot be decided by any argument that the world had a beginning;" but he professes to admit the authority of the

Magistrate and the Scriptures to override argument. He says that he does not "believe that the safety of the state depends upon the safety of the church." Some of Hobbes' pieces were only in Latin, others were issued in English. In one of those on Heresy, he mentions that by the statute of 1 Edward VI. cap 12, there is provision for the repeal of all former acts of parliament "made to punish any manner of doctrine concerning religion."

In the following extracts the reader will find the prominent features of that sensationalism which to-day has so many adherents:--"Concerning the thoughts of man, I will consider them first singly, and afterwards in a train or dependence upon one another. Singly they are every one a representation or appearance of some quality or other accident of a body without us, which is commonly called an object. Which object worketh on the eyes, ears, and other parts of a man's body, and by diversity of working, produceth diversity of appearances. The original of them all is that which we call sense, for there is no conception in a man's mind which hath not at first totally or by parts been begotten upon the organs of sense. The rest are derived from that original." The effect of this is to deny any possible knowledge other than as results from the activity of the sensative faculties, and is also fatal to the doctrine of a soul. "According," says Hobbes, "to the two principal parts of man, I divide his faculties into two sorts--faculties of the body, and faculties of the mind. Since the minute and distinct anatomy of the powers of the body is nothing necessary to the present purpose, I will only sum them up in these three heads--power nutritive, power generative, and power motive, Of the powers of the mind there be two sorts--cognitive, imaginative, or conceptive, and motive. For the understanding of what I mean by the power cognitive, we must remember and acknowledge that there be in our minds continually certain images or conceptions of the things without us. This imagery and representation of the qualities of the things without, is that which we call our conception, imagination, ideas, notice, or knowledge of them; and the faculty, or power by which we are capable of such knowledge, is that I here call cognitive power, or conceptive, the power of knowing or conceiving." All the qualities called sensible are, in the object that causeth them, but so many several motions of the matter by which it presseth on our organs diversely. Neither in us that are pressed are they anything else but divers motions; for motion produceth nothing but motion. Because the image in vision, consisting of colour and shape, is the knowledge we have of the qualities of the objects of that sense; it is no hard matter for a man to fall into this opinion that the same colour and shape are the very qualities themselves, and for the same cause that sound and noise are the qualities of the bell or of the air. And this opinion hath been so long received that the contrary must needs appear a great paradox, and yet the introduction of species visible and intelligible (which is necessary for the maintenance of that opinion) passing to and fro from the object is worse than any paradox, as being a plain impossibility. I shall therefore endeavour to make plain these points. That the subject wherein colour and image are inherent, is not the object or thing seen. That there is nothing without us (really) which we call an image or colour. That the said image or colour is but an apparition unto us of the motion, agitation, or alteration which the object worketh in the brain, or spirits, or some internal substance of the head. That as in visions, so also in conceptions that arise from the other senses, the subject of their inference is not the object but the sentient. Strange to say Hobbes was protected from his clerical antagonists by the favour of Charles II., who had the portrait of the philosopher of Malmesbury hung on the walls of his private room at Whitehall.

Lord Herbert, of Cherbury (one of the friends of Hobbes) born 1581, died 1648, is remarkable for having written a book "De Veritate," in favour of natural--and against any necessity for revealed--religion; and yet at

the same time pleading a sort of special sign or revelation to himself in favour of its publication.

Peter Gassendi, a native of Provence, born 1592, died 1655, was one of the opponents of Descartes and of Lord Herbert, and was an admirer of Hobbes; he advocated the old philosophy of Epicurus, professing to reject "from it everything contrary to Christianity." "But," asks Cousin, "how could he succeed in this? Principles, processes, results, everything in Epicurus is sensualism, materialism, atheism." Gassendi's works were characterised by great learning and ability, but being confined to the Latin tongue, and written avowedly with the intent of avoiding any conflict with the church, they gave but little immediate impetus to the great heretical movement. Arnauld charges Gassendi with overturning the doctrine of the immortality of the soul, in his discussion with Descartes, and Leibnitz charges Gassendi with corrupting and injuring the whole system of natural religion by the wavering nature of his opinions. Buckle says, "The rapid increase of heresy in the middle of the seventeenth century is very remarkable, and it greatly aided civilisation in England by encouraging habits of independent thought." In February 1646, Boyle writes from London, "There are few days pass here, that may not justly be accused of the brewing or broaching of some new opinion. If any man have lost his religion, let him repair to London, and I'll warrant him he shall find it: I had almost said too, and if any man has a religion, let him but come hither now and he shall go near to lose it."

About 1655, one Isaac La Peyrere wrote two small treatises to prove that the world was peopled before Adam, but being arrested at Brussels, and threatened with the stake, he, to escape the fiery refutation, made a full recantation of his views, and restored to the world its dearly prized stain of natural depravity, and to Adam his position as the first man. La Peyrere's forced recantation is almost forgotten, the opinions he recanted are now amongst common truths.

Baruch D'Espinoza or Benedict Spinoza, was born Nov. 24,1632, in Amsterdam; an apt scholar, he, at the early age of fourteen, had mastered the ordinary tasks set him by his teacher, the Babbi Morteira, and at fifteen puzzled and affrighted the grave heads of the synagogue, by attempting the solution of problems which they themselves were well content to pass by. As he grew older his reason took more daring flights, and after attempts had been made to bribe him into submissive silence, when threats had failed to check or modify him, and when even the knife had no effect, then the fury of disappointed fanaticism found vent in the bitter curse of excommunication, and when about twenty-four years of age, Spinoza found himself outcast and anathematised. Having no private means or rich patrons, and differing in this from nearly every one whose name we have yet given our hero subsisted as a polisher of glasses, microscopes, &c., devoting his leisure to the study of languages and philosophy. There are few men as to whom modern writers have so widely differed in the description of their views, few who have been so thoroughly misrepresented. Bayle speaks of him as a systematic Atheist. Saintes says that he laid the foundations of a Pantheism as destructive to scholastic philosophy as to all revealed religion. Voltaire repeatedly writes of Spinoza as an Atheist and teacher of Atheism. Samuel Taylor Coleridge speaks of Spinoza as an Atheist, and prefaces this opinion with the following passage, which we commend to more orthodox, and less acute writers:--"Little do these men know what Atheism is. Not one man in a thousand has either strength of mind, or goodness of heart to be an Atheist. I repeat it--Not one man in a thousand has either goodness of heart, or strength of mind, to be, an Atheist." "And yet," says Froude, "both in friend and enemy alike, there has been a reluctance to see Spinoza as he really was. The Herder and Schleiermacher school have claimed him as a Christian, a position which no little disguise was necessary to make tenable; the orthodox

Protestants and Catholics have called him an Atheist, which is still more extravagant; and even a man like Novalis, who, it might have been expected, would have said something reasonable, could find no better name for him than a 'Gott trunkener mann,' a God intoxicated man; an expression which has been quoted by everybody who has since written on the subject, and which is about as inapplicable as those laboriously pregnant sayings usually are. With due allowance for exaggeration, such a name would describe tolerably the transcendental mystics, a Toler, a Boehmen, or a Swedenborg; but with what justice can it be applied to the cautious, methodical Spinoza, who carried his thoughts about with him for twenty years, deliberately shaping them, and who gave them at last to the world in a form more severe than with such subjects had ever been so much as attempted before? With him, as with all great men, there was no effort after sublime emotions. He was a plain, practical person; his object in philosophy, was only to find a rule by which to govern his own actions and his own judgment; and his treatises contain no more than the conclusions at which he arrived in this purely personal search, with the grounds on which he rested them." Spinoza, who was wise enough to know that it was utterly useless to expect an unfettered examination of philosophical problems by men who are bound to accept as an infallible arbiter any particular book, and who knew that reasonings must be of a very limited character which took the alleged Hebrew Revelation as the centre and starting point for all inquiry, and also as the circling, limitation line for all investigation--devoted himself to the task of examining how far the ordinary orthodox doctrines as to the infallibility of the Old Testament were fairly maintainable. It was for this reason he penned his "Tractatus Theologico-Politicus," wherein he says--"We see that they who are most under the influence of superstitious feelings, and who covet uncertainties without stint or measure, more especially when they fall into difficulty or danger, cannot help themselves, are the persons, who, with vows and prayers and womanly tears, implore the Divine assistance; who call reason, blind, and human wisdom vain; and all, forsooth, because they cannot find an assured way to the vanities they desire." "The mainspring of superstition is fear; by fear too is superstition sustained and nourished." "Men are chiefly assailed by superstition When suffering from fear, and all they then do in the name of a vain religion is, in fact, but the vaporous product of a sorrowful spirit, the delirium of a mind overpowered by terror." He proceeds, "I have often wondered that men who boast of the great advantage they enjoy under the Christian dispensation--the peace, the joy they experience, the brotherly love they feel towards all in its exercise--should nevertheless contend with so much acrimony, and show such intolerance and unappeasable hatred towards one another. If faith had to be inferred from action rather than profession, it would indeed be impossible to say to what sect or creed the majority of mankind belong." He laid down that "No one is bound by natural law to live according to the pleasure of another, but that every one is by natural title the rightful asserter of his own independence," and that "he or they govern best who concede to every one the privilege of thinking as he pleases, and of saying what he thinks." Criticising the Hebrew prophets, he points out that "God used no particular style in making his communications; but in the same measure as the prophet possessed learning and ability, his communications were either concise and clear, or on the contrary, they were rude, prolix, and obscure." The representations of Zechariah, as we learn from the accounts themselves, were so obscure that without an explanation they could not be understood by himself; and those of Daniel were so dark, that even when explained, they were still unintelligible, not to others only, but also to the prophet himself. He argues entirely against miracles, as either contrary to nature or above nature, declaring any such to be "a sheer absurdity," "_merum esse absurdum_" Of the Scriptures themselves he points out that the ancient Hebrew is entirely lost. "Of the authors, or, if you please, writers, of many books, we either know almost nothing, or we entertain grave doubts as to the correctness with which the several books are

ascribed to the parties whose names they bear." "Then we neither know on what occasion, nor at what time those books were indited, the writers of which are unknown to us. Further, we know nothing of the hands into which the books fell; nor of the codices which have furnished such a variety of readings, nor whether, perchance, there were not many other variations in other copies." Voltaire says of Spinoza, "Not only in the character of a Jew he attacks the New Testament, but in the character of a scholar he ruins the Old." The logic of Spinoza was directed to the demonstration of one substance with infinite attributes, for which one substance with infinite attributes he had as equivalent the name "God." Some who have since followed Spinoza, have agreed in his one substance, but have denied the possibility of infinite attributes. Attributes or qualities, they urge, are attributes of the finite or conditioned, and that you cannot have attributes of substance except as attributes of its modes. You have in this distinction the division line between Spinozism and Atheism. Spinoza recognises infinite intelligence, but Atheism cannot conceive intelligence except in relation as quality of the conditioned, and not as the essence of the absolute. Spinoza denied the doctrine of freewill, as with him all phenomena are of God, so he rejects the ordinary notions of good and evil. The popular views of Spinoza in the seventeenth and eighteenth centuries were chiefly derived from the volumes of his antagonists; men learned his name because priests abused him, few had perused his works for themselves. To-day we may fairly say that Spinoza's logic and his biblical criticisms gave a vigour and force to the heresy of the latter half of the seventeenth and beginning of the eighteenth century; a directness and effectiveness theretofore wanting.

As for the Bible, there was no longer an affected reverence for every yod or comma, church traditions were ignored wherever inconsistent with reason, and the law itself was boldly challenged when its letter was against the spirit of human progress.

One of the greatest promoters of heresy in England was Ralph Cudworth, born 1617, died 1688. He wrote to combat the atheistical tenets which were then commencing to obtain popularity in England, and was a controversialist so fair and candid in the statement of the opinions of his antagonists, that he was actually charged with heresy himself, and the epithets of Arian, Socinian, Deist, and even Atheist were freely levelled against him. "He has raised," says Dryden, "such strong objections against the being of a God and Providence, that many think he has not answered them." The clamour of bigotry seems to have discouraged Cudworth, and he left many of his works unprinted. Cousin describes him as "a Platonist, of a firm and profound mind, who bends somewhat under the weight of his erudition."

Thomas Burnet, born 1635, died 1715, a clergyman of the Church of England, who, though high in favour with King William and the famous Archbishop Tillotson, is said to have been shut out from preferment in the church chiefly, if not entirely, on account of his many heterodox views. He did not accept the orthodox notions on the Mosaic account of the creation, fall, and deluge. Regarding the account of the fall as allegorical, he argued for the ultimate salvation of everyone, and of course denied the doctrine of eternal torment.

In a curious passage relating to the equivocations of a large number of the clergy in openly taking the oath of allegiance to William III., while secretly supporting James as King, Burnet says, "the prevarication of too many in so sacred a matter contributed not a little to fortify the growing atheism of the time."

As Descartes and Spinoza had been foremost on the continent, so was Locke in England, and no sketch of the progress of heresy during the seventeenth century would be deserving serious regard which did not

accord a prominent place to John Locke, whom G. H. Lewes calls "one of the wisest of Englishmen," and of whom Buckle speaks as "an innovator in his philosophy, and an Unitarian in his creed." He was born in 1632, and died 1704. Locke, according to his own fashion, was a sincere and earnest Christian; but this has not saved him from being furiously assailed for the materialistic character of his philosophy, and many have been ready to assert that Locke's principles "lead to Atheism." In politics Locke laid down, that unjust and unlawful force on the part of the government might and ought to be resisted by force on the part of the citizens. He urged that on questions of theology there ought to be no penalties consequent upon the reception or rejection of any particular religious opinion. How far those were right who regarded Locke's metaphysical reasoning as; dangerous to orthodoxy may be, judged by the following extract on the origin of ideas:--: "Follow a child from its birth and observe the alterations that time makes, and you shall find, as the mind by the senses comes more and more to be furnished with ideas, it comes to be more and more awake; thinks more, the more it has matter to think on. After some time, it begins to know the objects, which being most familiar with it, have made lasting impressions. Thus it comes, by degrees, to know the persons it daily converses with, and distinguish them from strangers; which are instances and effects of its coming to retain and distinguish the ideas the senses convey to it; and so we may observe, how the mind, by degrees improves in these, and advances to the exercise of those other faculties of enlarging, compounding, and abstracting its ideas, and of reasoning about them, and reflecting upon all these.

"If it shall be demanded then, when a man begins to have any ideas? I think the true answer is, when he first has any sensation. For since there appear not to be any ideas in the mind, before the senses have conveyed any in, I conceive that ideas in the understanding are coeval with sensation; which is such an impression or emotion, made in some part of the body, as produces some perception in the understanding. It is about these impressions made on our senses by outward objects, that the mind seems first to employ itself in such operations as we call perception, remembering, consideration, reasoning, &c.

"In time, the mind comes to reflect on its own operations, about the ideas got by sensation, and thereby stores itself with a new set of ideas, which I call ideas of reflection. These are the impressions that are made on our senses by outward objects, that are extrinsical to the mind; and its own operations, proceeding from powers intrinsical and proper to itself, which, when reflected on by itself, becoming also objects of its contemplation, are, as I have said, the original of all knowledge. Thus the first capacity of human intellect is, that the mind is fitted to receive the impressions made on it, either through the senses, by outward objects, or by its own operations, when it reflects on them. This is the first step a man makes towards the discovery of anything, and the groundwork whereon to build all those notions which ever he shall have naturally in this world. All those sublime thoughts which tower above the clouds, and reach as high as heaven itself, take their rise and footing here: in all that good extent wherein the mind wanders, in those remote speculations, it may seem to be elevated with, it stirs not one jot beyond those ideas which sense or reflection have offered for its contemplation.

"In this part, the understanding is merely passive; and whether or no it will have these beginnings, and, as it were, materials of knowledge, is not in its own power. For the objects of our senses do, many of them, obtrude their particular ideas upon our minds, whether we will or no; and the operations of our minds will not let us be without, at least, some obscure notions of them. No man can be wholly ignorant of what he does when he thinks. These simple ideas, when offered to the mind, the understanding can no more refuse to have, nor alter, when they are

imprinted, nor blot them out and make new ones itself, than a mirror can refuse, alter, or obliterate the images or ideas which the objects set before it do therein produce. As the bodies that surround us do diversely affect our organs, the mind is forced to receive the impressions, and cannot avoid the perception of those ideas that are annexed to them."

The distinction pointed out by Lewes between Locke and Hobbes and Gassendi, is that the two latter taught that all our ideas were derived from sensations, while Locke said there were two sources, not one source, and these two were sensation and reflection. Locke was in style a more popular writer than Hobbes, and the heretical effect of the doctrines on the mind not being so immediately perceived in consequence of Locke's repeated declarations in favour of Christianity, his metaphysical productions were more widely read than those of Hobbes; but Locke really teaches the same doctrine as that laid down by Robert Owen in his views on the formation of character; and his views on sensation, as the primary source of ideas, are fatal to all notions of innate ideas and of freewill. Voltaire, speaking of Locke, says:--"'We shall, perhaps, never be capable of knowing whether a being purely material thinks or not.' This judicious and guarded observation was considered by more than one divine, as neither more nor less than a scandalous and impious declaration, that the soul is material and mortal. Some English devotees, after their usual manner, sounded the alarm. The superstitious are in society what poltroons are in an army--they both feel and excite causeless terror. The cry was, that Mr. Locke wished to overturn religion; the subject, however, had nothing to do with religion at all; it was purely a philosophical question, and perfectly independent of faith and revelation."

One clergyman, the Rev. William Carrol, wrote, charging Atheism as the result of Locke's teachings. The famous Sir Isaac Newton even grew so alarmed with the materialistic tendency of Locke's philosophy, that when John Locke was reported sick and unlikely to live, it is credibly stated that Newton went so far as to say that it would be well if the author of the essay on the Understanding were already dead. In 1689, one Cassimer Leszynski, a Polish knight, was burned at Warsaw for denying the being and providence of a God; but there are no easy means of learning whether the charge arose from prejudice on the part of his accusers, or whether this unfortunate gentleman really held Atheistic views.

Peter Bayle, born at Carlat, in Foix, 1647, died in Holland, 1706, was a writer of great power and brilliancy and wide learning. Without standing avowedly on the side of scepticism, he did much to promote sceptical views amongst the rapidly growing class of men of letters. He declared that it was better to be an Atheist, than to have a false or unworthy idea of God; that a man can be at the same time an Atheist and an honest man, and that a people without a religion is capable of good order. Bayle's writings grew more heretical towards the latter part of his career, and he suffered considerable persecution at the hands of the Church, for having spoken too plainly of the character of David. He said that "if David was the man after God's own heart, it must have been by his penitence, not by his crimes." Bayle might have added, that the record ot David's penitence is not easily discoverable in any part of the narrative of his life.

Matthew Tindal, born 1656, died 1733, was, though the son of a clergyman of the Established Church, one of the first amongst the school of Deistical writers who became so prominent in the beginning of the eighteenth century. Dr. Pye Smith catalogues him as "an Atheist," but we know no ground for this. He was a zealous controversialist, and commencing by attacking priests, he continued his attack against the revelation they preached. He was a frequent writer, but his "Christianity as old as the Creation" is his chief work, and the one

which has provoked the greatest amount of discussion. It was published nearly at the close of his life, and after he had seen others of his writings burned by the common hangman. Dr. Matthew Tindal helped much to shake belief in the Bible, those who wrote against him did much more; if no one had replied to Tindal, his attacks on; revelation would have been read by few, but in answering the heretic, Bishop Waterland and his _confreres_ gave wider circulation to Tindal's heresy.

John Toland was born Nov. 30,1670, at Londonderry, but was educated in Scotland. He died 1722. His publications were all about the close of the seventeenth and commencement of the eighteenth centuries, and the ability of his contributions to popular instruction may be judged by the abusive epithets heaped upon him by his opponents. While severely attacking the bulk of the clergy as misleaders of the people, and while also assailing some of the chief orthodox notions, he yet, either in order to escape the law, or from the effect of his religious education, professed a respect for what he was pleased to call true Christianity, but which we should be inclined to consider, at the least, somewhat advanced Unitarianism. At last, however, his works were ordered to be burned by the common hangman, and to escape arrest and prosecution he had to flee to the Continent. Dr. J. Pye Smith describes Toland as a Pantheist, and calls his Pantheisticon "an Atheistic Liturgy." In one of Toland's essays he laments "how hard it is to come to a truth yourself, and how dangerous a thing to publish to others." The publications ot Toland were none of them very bulky although numerous, and as most of them were fiercely assailed by the orthodox clergy, they helped to excite popular interest in England, in the critical examination of the Scriptures and the doctrines therein taught.

Besides the few authors to whom attention is here drawn, there were numerous men who--each for a little while, and often coming out from the lower ranks of the people themselves--stirred the hitherto almost stagnant pool of popular thought with some daring utterance or extravagant statement. Fanatics some, mystics some, alchemists some, materialists some, but all crude and imperfect in their grasp of the subject they advocated, they nevertheless all helped to agitate the human mind, to render it more restless and inquiring, and thus they all promoted the march of heresy.

One feature of the history of the seventeenth century shows how much philosophy had gained ground, and how deep its roots were striking throughout the European world--viz., that nearly all the writers wrote in the vulgar tongue of their country, or there were published editions of their works in that tongue. A century earlier, and but few escaped from the narrow bonds of learned Latin: two centuries before, and none got outside the Latin folios; but in this century theology, metaphysics, philosophy, and politics are discussed in French, German, English, and Italian. The commonest reader may peruse the most learned author, for the writing is in a language which he cannot help knowing.

There were in this century a large number of writers in England and throughout Europe, who, taking the Bible as a starting-point and limitation for their philosophy, broached wonderful theories as to creation, &c, in which reason and revelation were sought to be made harmonious. Enfield, a most orthodox writer, in his "History of Philosophy" says, "Who does not perceive, from the particulars which have been related concerning these Scriptural philosophers, that their labours, however well intended, have been of little benefit to philosophy? Their fundamental error has consisted in supposing that the sacred Scriptures were intended, not only to instruct men in all things necessary to their salvation, but to teach the true principles of physical and metaphysical science." How pregnant the admission that revelation and science cannot be expected to accord--an admission which in truth declares that in all philosophical research it is necessary

to go beyond the Bible, if not to go against it--an admission which involves the declaration, that so long as men are bound by the letter of the Bible, so long all philosophical progress is impossible.

In this century the English Church lost much of the political power it had hitherto wielded. It was in 1625, that William, Bishop of Lincoln, was dismissed from the office of Lord Keeper, and since his day no ecclesiastic has held the great seal of England, and to-day who even in the Church itself would dream of trying to make a bishop Lord Chancellor? The church lost ground in the conflict with Charles, but this it might perhaps have recovered, but it suffered irretrievably loss of prestige in its struggle with William.

CHAPTER IV. THE EIGHTEENTH CENTURY

The eighteenth century deserves that the penman who touches its records shall have some virility; for these records contain, not only the narrative of the rapid growth of the new philosophy in France, England, and Germany, where its roots had been firmly struck in the previous century, but they also give the history of a glorious endeavour on the part of a down-trodden and long-suffering people, weakened and degraded by generations of starvation and oppression, to break the yoke of tyranny and superstition. Eighteenth century historians can write how the men of France, after having been cursed by a long race of kings, who never dreamed of identifying their interests with those of the people; after enduring centuries of tyranny from priests, whose only Gods were power, pleasure, and Mammon, and at the hands of nobles, who denied civil rights to their serfs; at last, could endure no longer, but electrified into life by eighteenth century heresy, "spurned under foot the idols of tyranny and superstition," and sought "by the influence of reason to erect on the ruins of arbitrary power the glorious edifice of civil and religious liberty." Why Frenchmen then failed in giving permanent success to their heroic endeavour, and why France, despite the wonderful recent progress in thought, is even yet cursed with corrupt imperialism and state superstition, is not difficult to explain, when we consider that every tyranny in Europe united against that young republic to which the monarchy had bequeathed a legacy of a wretched pauper people, a people whose minds had been hitherto wholly in the hands of the priests, whose passions had revolted against wrong, but whose brains were yet too weak for the permanent enjoyment of the freedom temporarily resulting from physical effort. Eighteenth century heresy is especially noticeable for its immediate connection with political change. For the first time in European history, the great mass commenced to yearn for the assertion in government of democratic principles. The French Republican Revolution which overthrew Louis XVI. and the Bastile, was only possible because the heretical teachers who preceded it, had weakened the divine right of kingcraft; and it was ultimately unsuccessful, only because an overwhelming majority of the people were as yet not sufficiently released from the thraldom of the church, and therefore fell before the allied despotisms of Europe, who were aided by the Catholic priests, who naturally plotted against the spirit which seemed likely to make men too independent to be pious.

In Germany the liberation of the masses from the dominion of the Church of Rome was effected with the, at first, active believing concurrence of the nation; in England this was not so, Protestantism here was the result rather of the influence and interests of the King and Court, and of the indifference of the great body of the people. The Reformed Church of England, sustained by the crown and aristocracy, has generally left the people to find their own way to heaven or hell, and has only required abstinence from avowed denial of, or active opposition to, its

tenets. Its ministers have usually preached with the same force to a few worshippers scattered over their grand cathedrals and numerous churches as to a thronging crowd, but in each these there has been a lack of vitality in the sermon. It is only when the material interests of the church have been apparently threatened that vigour has been shown on the part of its teachers.

It is a curious fact, and one for comment hereafter, that while in the modern struggle for the progress of heresy, its sixteenth century pages present many most prominent Italian names, when we come to the eighteenth century, there are but few such names worthy special notice; it is no longer from the extreme South, but from France, Germany, and England that you have the great array of Freethinking warriors. Those whom Italy boasts too are now nearly all in the Idealistic ranks.

We commenced the list by a brief reference to Bernard Mandeville, a Dutch physician, born at Dordrecht in 1670 and who died in 1733; a writer with great power as a satirist, whose fable of the "Bees, or Private Vices made Public Benefits," not only served as source for much of Helvetius, but had the double honour of an indictment at the Middlesex session, and an answer from the pen of Bishop Berkeley.

One of the early, and perhaps one of the most important promoters of heresy in the United Kingdom, was George Berkeley, an Irishman by birth. He was born on the 12th of March, 1684, at Kilcrin, and died at Oxford in 1753. It was this writer to whom Pope assigned "every virtue under heaven," and of whom Byron wrote:--

> "When Bishop Berkeley said 'there was no matter,'
> And proved it--'twas no matter what he said:
> They say his system 'tis in vain to batter,
> Too subtle for the airiest human head;
> And yet who can believe it?"

A writer in the _Encyclopedia Metropolitana_ describes him as "the one, perhaps, whose heart was most free from scepticism, and whose understanding was most prone to it." Berkeley is here dealt with as one specially contributing to the growth of sceptical thought, and not as an Idealist only. Arthur Collier published, about the same time as Berkeley, several works in which absolute Idealim is advocated. Collier and Berkeley were mouthpieces for the expression of an effort at resistance against the growing Spinozistic school. They wrote against substance assumed as the "noumenon lying underneath all phenomena--the substratum supporting all qualities--the something in which all accidents inhere." Collier and his writings are almost unknown; Berkeley's name has become famous, and his arguments have served to excite far wider scepticism than have those of any other Englishman of his age. Most religious men who read him misunderstand him, and nearly all misrepresent his theory. Hume, speaking of Berkeley, says, "Most of the writings of that very ingenious philosopher form the best lessons of scepticism which are to be found, either among the ancient or modern philosophers, Bayle not excepted. He professes, however, in his title page (and undoubtedly with great truth) to have composed his book against the sceptics, as well as against the Atheists and Freethinkers. But that all his arguments, though otherwise intended, are in reality merely sceptical, appears from this, that they admit of no answer, and produce no conviction," Berkeley wrote for those who "want a demonstration of the existence and immateriality of God, or the natural immortality of the soul," and his philosophy was intended to check materialism. The key-note ot his works may be found in his declaration, "The only thing whose existence I deny, is that which philosophers call Matter or corporeal substance." The definition given by Berkeley of matter is one which no materialist will be ready to accept, i.e.f "an inert, senseless substance in which extension, figure, and motion do

actually exist." The "Principles of Human Knowledge" is the work in which Berkeley's Idealism is chiefly set forth, and many have been the volumes and pamphlets written in reply. Whatever might have been Berkeley's intention as to refuting scepticism, the result of his labours was to increase it in no ordinary degree; Dr. Pye Smith thug summarises Berkeley's views:--"He denied the existence of matter as a cause of our perceptions, but firmly maintained the existence of created and dependent spirits, of which every man is one; that to suppose the existence of sensible qualities and of a material world, is an erroneous deduction from the fact of our perceptions; that those perceptions are-nothing but ideas and thoughts in our minds; that these are produced in perfect uniformity, order, and consistency in all minds, so that their occurrence is according to fixed rules which may be called the laws of nature; that that Deity is either the immediate or the mediate cause of these perceptions, by his universal operation on created minds; and that the created mind has a power of managing these perceptions, so that volitions arise, and all the phenomena of moral action and responsibility. The great reply to this is, that it is a hypothesis which cannot be proved, which is highly improbable, and which seems to put upon the Deity the inflicting on man a perpetual delusion."

The weakness of Berkeley's system as a mere question of logic is, that while he requires the most rigorous demonstration of the existence of what he defines as matter, he assumes an eternal spirit with various attributes, and also creates spirits of various sorts. He creates the states of mind resulting from the sensation of surrounding phenomena into ideas, existing independent of the _ego_, when in truth, man's ideas are not in addition to man's mind; but the aggregate of sensative ability, and the result of its exercise is the mind, just as the aggregate of functional ability and activity is life. The foundation of Berkeley's faith in the invisible "eternal spirit" in angels as "created spirits," is difficult to discover, when you accept his argument for the rejection of visible phenomena. He in truth should have rejected everything save his own mind, for the mental processes are clearly not always reliable. In dreams, in delirium, in insanity, in temporary disease of particular nerves of sensation, in some phases of magnetic influence, the ideas which Berkeley sustains so forcibly are admittedly delusions. As in George Berkeley, so we have in Bishop Butler, an illustration of the endeavour to check the rapidly enlarging scepticism of this century. Joseph Butler was born in 1692, died 1752, and will be long known by his famous work on the "Analogy of Religion" to the course of nature. In this place it is not our duty to do more than point out a few features of the argument, observing that this elaborate piece of special pleading for natural and revealed religion, is evidence that danger was apprehended by the clergy, from the spread of Freethought views amongst the masses. A popular reply was written to provide against the growing popular objection; Bishop Butler argues that "we know that we are endued with certain capacities of action, of happiness and misery; for we are conscious of acting, of enjoying pleasure, and of suffering pain. Now that we have these powers and capacities before death, is a presumption that we shall retain them through, and after death; indeed a probability of it abundantly sufficient to act upon, unless there be some positive reason to think that death is the destruction of those living powers." It may be fairly submitted in reply, that here the argument from analogy is as utterly faulty, as if in the spring season a traveller should say of a wayside pool, it is here before the summer sun shines upon it, and will be here during and after the summer drought, when ordinary experience would teach him that as the pool is only gathered during the rainy season in the hollow ground, so in the dry hot summer days, it will be gradually evaporated under the blazing rays of the July sun. As to the human capacities, experience teaches us that they have changed with the condition of the body; emotional feelings and animal passions, the gratification of which ensured temporary pleasure or pain, have varied, have been newly felt,

and have died out in different periods and conditions of our lives, and the presumption is against the complete endurance of all these "capacities for action," &c., even during the whole life, and much more strongly, therefore, against their endurance after death. Besides which--continuing the argument from analogy--my "capacities" having only been manifested since my body has existed, and in proportion to my physical ability, the presumption is rather that the manifestation which commenced with the body, will finish as the body finishes. Further, it is fair to presume that "death is the destruction of those living powers," for death is the cessation of organic functional activity; a cessation consequent on some change or destruction of organisation. Of course, the word "destruction" is not here used in any sense of annihilation of substance, but as meaning such a change of condition that vital phenomena are no longer manifested. But, says Butler, "we know not at all what death is in itself, but only some of its effects, such as the dissolution of flesh, skin, and bones, and these effects do in nowise appear to imply the destruction of a living agent." Here, perhaps, there is an unjustifiable assumption in the words "living agent," for if by living agent is only meant the animal which dies, then the destruction of flesh, skin, and bones does fairly imply the destruction of the living agent, but if by living agent is intended more than this, then the argument is speciously and unfairly worded. But beyond this, if Bishop Butler's argument has any value, it proves too much. He says--"Nor can we find anything throughout the whole analogy of nature, to afford us even the slightest presumption that animals ever lose their living powers.... by death." That is, Bishop Butler applies his argument for a future state of existence, not only to man, but to the whole animal kingdom; and it may be fairly conceded that there is as much ground to presume that man will live again, as there is that the worm will live again, which, being impaled upon a hook, is eaten by the gudgeon, or that the gudgeon will live again which, threaded as a bait, is torn and mangled to death by a ravenous pike, or that the pike will live again after it has been kept out of water till rigid, then gutted, scaled, stuffed with savoury condiments, broiled, and ultimately eaten by Piscator and his family. Bishop Butler's argument, that because pleasure or pain is uniformly found to follow the acting or not acting in some particular manner, there is presumptive analogy in favour of future rewards and punishments by Deity, appears weak in the extreme. According to Butler, God is the author of nature. Nature's laws are such, that punishment, immediate or remote, follows non-observance, and reward, more or less immediate, is the result of observance; and because God is by Butler's argument, assumed as the author of nature, and has therefore already punished or rewarded once; we are following Butler, to presume that he will after death punish or reward again for an action upon which he has already adjudicated. In his chapter on the Moral Government of God, Butler says, "As the manifold appearances of design and of final causes in the constitution of the world, prove it to be the work of an intelligent mind, so the particular final causes of pleasure and pain distributed amongst his creatures, prove that they are under his government--what may be called his natural government of creatures endowed with sense and reason." But taking Bishop Butler's own position, what sort of government is demonstrated by this argument from analogy? God, according to Bishop Butler's reasoning, designed the whale to swallow the Clio Borealis, which latter he designed to be so swallowed, but which he nevertheless invested with some 300,000 suckers, to enable it in its turn to seize the minute animalcule on which it lives. God designed Brutus to kill Caesar, Orsini to be beheaded by Louis Napoleon. These, according to Butler, would be all under the special control of God's government. Deity would guide the Clio Borealis into the mouth of the whale, guide the dagger of Brutus, and arrange for the enjoyment of the cancan by princes of the blood royal. Bishop Butler's theory that our present life is a state of trial and probation, is met by the difficulty, that while he assumes the justice and benevolence of God as moral governor, he has the fact, that many exist with organisations and

capacities so originally different, that it is manifestly most unfair to put one and the same reward, or one and this same publishment for all. The Esquimaux or Negro is not on a level at the outset of life with the Caucasian races. How from analogy can any one argue in favour of the doctrine that an impartial judge who had started them in the race of life unfairly matched, would put the same prize before all, none of the starters being handicapped? Bishop Butler's argument on the doctrine of necessity, is that which one might expect to find from a hired _nisi prius_ advocate, but which is read with regret coming from the pen of a gentleman, who ought to be striving to convince his erring brethren by the words of truth alone. He says, suppose a child to be educated from his earliest youth in the principles of "fatalism," what then? The reply is, that a necessitarian knowing that a certain education of the human mind was most conducive to human happiness, would strive to impart to his children education of that character. That a worse "fatalism" is inculcated in the doctrine of a fore-ordaining and ever-directing providence, planning and controlling every one of the child's actions, than ever was taught in necessitarian essays. That the child would be taught the laws of existence, and would be shown how certain conduct resulted in pleasure, and certain other conduct was during life attended with pain, and that the result of such teaching would be far more efficacious in its moral results, than the inculcation of a present responsibility, and an ultimate heaven and hell, in which latter doctrine, nearly all Christians profess to believe, but nearly all act as if it were not of the slightest consequence whether any such paradise or infernal region exists.

Henry St. John, Lord Bolingbroke, born October 1,1672, died November 15,1751, may be taken as one of the school of polished deistical writers, who, though comparatively few, fairly enough represent the religious opinions of the large majority of the journalists of the present day. In the course of Bolingbroke's "Letters on the Study of History," a strong sceptical spirit is manifested, and he speaks in one of "the share which the divines of all religions have taken in the corruption of history." In another he thus deals with the question of the Bible:--"It has been said by Abbadie, and others, 'that the accidents which have happened to alter the texts of the Bible, and to disfigure, if I may say so, the scriptures in many respects, could not have been prevented without a perpetual standing miracle, and that a perpetual standing miracle is not in the order of providence.' Now I can by no means subscribe to this opinion. It seems evident to my reason that the very contrary must be true; if we suppose that God acts towards men according to the moral fitness of things; and if we suppose that he acts arbitrarily, we can form no opinion at all. I think these accidents would not have happened, or that the scriptures would have been preserved entirely in their genuine purity notwithstanding these accidents, if they had been entirely dictated by the Holy Ghost: and the proof of this probable proposition, according to our clearest and most distinct ideas of wisdom and moral fitness, is obvious and easy. But these scriptures are not so come down to us: they are come down broken and confused, full of additions, interpolations; and transpositions, made we neither know when, nor by whom; and such, in short, as never appeared on the face of any other book, on whose authority men have agreed to rely. This being so, my lord, what hypothesis shall we follow? Shall we adhere to some such distinction as I have mentioned? Shall we say, for instance, that the scriptures were originally written by the authors to whom they are vulgarly ascribed, but that these authors writ nothing by inspiration, except the legal, the doctrinal, and the prophetical parts, and that in every other respect their authority is purely human, and therefore fallible? Or shall we say that these histories are nothing more than compilations of old traditions, and abridgements of old records, made in later times, as they appear to every one who reads them without prepossession and with attention?"

It has been alleged that Pope's verse is but another rendering of Bolingbroke's views without his "aristocratic nonchalance," and that some passages of Pope regarded as hostile to revealed religion, were specially due to the influence of Bolingbroke; and more than one critic has professed to trace identities of thought and expression in order to show that Pope was largely indebted to the published works of St. John.

David Hume was born at Edinburgh, 26th April, 1711, and died 1776. He created a new school of Freethinkers, and is to-day one of the most esteemed amongst sceptical authors. He was a profound thinker, and an easy, elegant writer, who did much to give a force and solidity to extreme heretical reasonings, which they had hitherto been regarded as lacking. His heretical essays have had a far wider circulation since his death, than they enjoyed during his life. Many volumes have been issued in the fruitless endeavour to refute him, and all these have contributed to widen the circle of his readers. He adopted and advocated the utilitarian and necessitarian theory of morals, and wrote of ordinary theism and religion, as arising from personification of unknown causes, for general or special phenomena. He held and advanced the idea, which Buckle so fully states, and endeavours to prove in his "History of Civilisation"--viz., that general laws operate amongst peoples, and influence and determine their so-called moral conduct, much as other laws do the orbits of planets, the occurrences of eclipses, &c. His arguments against miracles, as evidences for revealed religion, remain unrefuted, although they have been made the subject of many attacks. He contends, in effect, that in each account of a miraculous occurrence, there is always more _prima facie_ probability of error, or bad faith on the part of the narrator, than of interference with those invariable sequences known as natural laws, and there was really no reply in the conclusion of Dr. Campbell, to the effect that we have equally to trust human testimony for an account of the laws of nature and for the narratives of miracles, for in truth you never have the same character of human testimony for the latter as for the former. And, further, while in the case of human testimony as to natural events, it is evidence which you may test and compare with your own experience. This is not so as to miracles, declared at once to be out of the range of all ordinary experience. "Men," he says, "are carried by a natural instinct or prepossession to repose faith in their senses. When they follow this blind and powerful instinct of nature, they always suppose the very images presented to the senses to be the external objects, and never entertain any suspicion that the one are nothing but representatives of the other. But this universal and primary opinion of all men is soon destroyed by the slightest philosophy, which teaches us that nothing can ever be present to the mind but an image or perception. So far, then, we are necessitated by reasoning to contradict the primary instincts of nature, and to embrace a new system with regard to the evidence of our senses. But here philosophy finds herself extremely embarrassed, when she would obviate the cavils and objections of the sceptics. She can no longer plead the infallible and irresistible instinct of nature, for that led us to quite a different system, which is acknowledged fallible, and even erroneous, and to justify this pretended philosophical system by a chain of clear and convincing argument, or even any appearance of argument, exceeds the power of all human capacity. Do you follow the instinct and propensities of nature in assenting to the veracity of the senses? But these lead you to believe that the very perception or sensible image is the external object--(Idealism.) Do you disclaim this principle in order to embrace a more rational opinion, that the perceptions are only representations of something external? You here depart from your natural propensities, and more obvious sentiments; and yet are not able to satisfy your reason, which can never find any convincing argument from experience to prove that the perceptions are connected with external objects--(Scepticism.)"

Charles de Secondat Baron de Montesquieu, born in 1689 near Bordeaux,

died at Paris 1755, who earned considerable fame by his "Lettres Persanes," is more famous for his oft-referred to work "L'Esprit des Lois." Victor Cousin describes him as "the man of our country who has best comprehended history, and who first gave an example of true historic method." In the publication of certain of his ideas on history, Montesquieu was the layer of the foundation-stone for an edifice which Buckle would probably have gloriously crowned had his life been longer. Voltaire, who sharply criticises Montesquieu, declares that he has earned the eternal gratitude of Europe by his grand views and his bold attacks on tyranny, superstition, and grinding taxation. Montesquieu urged that virtue is the true essence of republicanism, but misled by the mistaken notions of honour held by his predecessors and contemporaries, he declared honour to be the principle of monarchical institutions. Voltaire reminds him that "it is in courts that men, devoid of honour, often attain to the highest dignities; and it is in republics that a known dishonourable citizen is seldom trusted by the people with public concerns." Montesquieu wrote in favour of a constitutional monarchy such as then existed in England, and his work shadowed forth a future for the middle class in France.

Francois Marie Arouet Voltaire, born 20th February, 1694, at Chatenay, died 30th May, 1778, may be fairly written of as the man to whose fertile brain and active pen, to whose great genius, fierce irony, and thorough humanity, we owe much more of the rapid change of popular thought in Europe during the last century than to any other man. His wit, like the electric flash, spared nothing; his love for his kind would have made him the protector of everything weak, his desire to protect himself from the consequences of his truest utterances, often dims the hero-halo with which his name is surrounded. Born and trained amongst a corrupt and selfish class, it is not wonderful that we find some of their pernicious habits clinging to parts of his career. On the contrary, it is more wonderful to find that he has shaken off so much of the consequences of his education. Neither in politics nor in theology was he so very extreme in his utterances as many deemed him, for while he occasionally severely handled individual monarchs, we do not find him the preacher of republicanism. On the contrary, he is often severe against some of the advanced political views of Jean Jacques Rousseau. He nevertheless suggests that it might have been "the art of working metals which originally made kings, and the art of casting cannons which now maintains them," and as a commentary on kingly conduct in the matter of taxation, declares that "a shepherd ought to shear his sheep, and not to flay them." In theological controversy he wrote as a Theist, and declares "Atheism and Fanaticism" to be "two monsters which may tear society in pieces, but the Atheist preserves his reason, which checks his propensity to mischief, while the fanatic is under the influence of a madness constantly urging him on." For the ancient Jews, and for the Hebrew records, Voltaire entertained so thorough a feeling of contemptuous detestation, that in his "Defense de mon Oncle," and his articles and letters on the Jews, we find utter disbelief in them as a chosen people, and the strongest abhorrence of their brutal habits, heightened in expression by the scathing satire of his phrases. To the more modern descendants of Abraham he said: "We have repeatedly driven you away through avarice; we have recalled you through avarice and stupidity; we still, in more towns than one, make you pay for liberty to breathe the air; we have, in more kingdoms than one, sacrificed you to God; we have burned you as holocausts--for I will not follow your example, and dissemble that we have offered up sacrifices of human blood; all the difference is, that our priests, content with applying your money to their own use, have had you burned by laymen; while your priests always immolated their human victims with their own sacred hands. You were monsters of cruelty and fanaticism in Palestine; we have been so in Europe."

Writing on miracles, Voltaire asks: "For what purpose would God perform

a miracle? To accomplish some particular design upon living beings? He would then, in reality, be supposed to say--I have not been able to effect by my construction of the universe, by my divine decrees, by my eternal laws, a particular object; I am now going to change my eternal ideas and immutable laws, to endeavour to accomplish what I have not been able to do by means of them. This would be an avowal of his weakness, not of his power; it would appear in such a being an inconceivable contradiction. Accordingly, therefore, to dare to ascribe miracles to God is, if man can in reality insult God, actually offering him that insult. It is saying to him--You are a weak and inconsistent being. It is therefore absurd to believe in miracles; it is, in fact, dishonouring the divinity."

Those who are inclined to attack the character of Voltaire, should read the account of his endeavours for the Calas family. How, when old Calas had been broken alive on the wheel at Toulouse, and his family were ruined, Voltaire took up their case, aided them with means, spared no effort of his pen or brain, and ultimately achieved the great victory of reversing the unjust sentence, and obtaining compensation for the family. It, then, these Voltaire-haters have not learned to love this great heretic, let them study the narrative of his even more successful endeavours on behalf of the Sirvens; more successful, because in this case he took up the fight before an unjust judgment could be delivered, and thus prevented the repetition of such an iniquitous execution as had taken place in the Galas case. The cowardly slanders as to his conduct when dying are not worth notice; those spit on the grave of the dead who would not have dared to look in the face of the living.

Claud Adrian Helvetius was born at Paris 1715, and died December 1771. His best known works are "De l'Esprit," published 1758; "Essai sur l'Origine des Connaissances Humaines," 1746; "Traite des Systemes," 1749; "Traite des Sensations," 1758. Rousseau wrote in reply to Helvetius, but when the Parliament of Paris condemned the work "De l'Esprit," and it was in consequence burned by the common hangman, Rousseau withdrew his refutatory volume. Helvetius argues that any religion, of which the chiefs are intolerant, and the conduct of which is expensive to the state, "cannot long be the religion of an enlightened and well governed nation. The people that submit to it will labour only to maintain the ease and luxury of the priesthood; each of its inhabitants will be nothing more than a slave to the sacerdotal power. A religion to be good should be tolerant and little expensive. Its clergy should have no authority over the people. A dread of the priest debases the mind and the soul, makes the one brutish and the other slavish. Must the ministers of the altar always be armed with the sword of the state? Can the barbarities committed by their intolerance ever be forgotten? The earth is yet drenched with the blood they have spilled. Civil tolerance alone is not sufficient to secure the peace of nations. Every dogma is a seed of discord and injustice sown amongst mankind."

"Why do you make the Supreme Being resemble an eastern tyrant? Why make him punish slight faults with eternal torment? Why thus put the name of the Divinity at the bottom of the portrait of the devil? Why oppress the soul with a load of fear, break its springs, and of a worshipper of Jesus make a vile, pusillanimous slave? It is the malignant who paint a malignant G-od. What is their devotion? A veil for their crimes."

"Let not the rewards of heaven be made the price of trifling religious operations, which convey a diminutive idea of the Eternal and a false conception of virtue; its rewards should never be assigned to fasting, haircloth, a blind submission, and self-castigation. The man who places these operations among the virtues, might as well place those of leaping, dancing, and tumbling on the rope." "Humility may be held in veneration by the dwellers in a monastery or a convent, it favours the

meanness and idleness of a monastic life. But ought the humility to be regarded as the virtue of the people? No." Speaking of the Pagan systems, Helvetius says, "All the fables of mythology were mere emblems of certain principles of nature."

Baron d'Holbach, a native of the Palatinate, born January 1723, died 21st January, 1789, deserves special notice, as being the man whose house was the gathering place of the knot of writers and thinkers, who struck light and life into the dark and deadened brain of France. He is generally reputed to have been the author of that well-known work, the "System of Nature," which was issued as if by Mirabaud. This work, although it was fiercely assailed at the time, by the pen of Voltaire, and by the _plaidorie_ of the prosecuting Avocat-General, and has since been attacked by hundreds who have never read it, yet remains a wonderfully popular exposition of the power-gathering heresy of the century, and, as far as we are aware, has never received efficient reply. Probably next to Paine's works, it had in England during the second quarter of this century, the widest circulation of any anti-theological book, and this circulation extending through the manufacturing ranks. In the eighteenth century Mirabaud could, in England, only be found in the hands of the few, but fifty years had wondrously multiplied the number of readers.

Joseph Priestley was born near Leeds, 13th March, 1733, and being towards the latter part of his life driven out of England, by the persecuting spirit evinced towards him, and which had been specially excited by his republican tendencies, he died at Northumberland, Pennsylvania, on the 6th Feb., 1804. Originally a Church of England clergyman, his first notable inclination to heterodoxy manifested itself in hesitation as to the doctrine of the atonement. He ultimately rejected the immortality and immateriality of the soul, argued for necessitarianism, and earned considerable unpopularity by the boldness of some of his sentiments on political as well as theological matters. Priestley was one of the rapidly multiplying instances of heresy alike in religion and politics, but he provoked the most bitter antagonism. His works were burned by the common hangman, his house, library, and scientific instruments were destroyed by an infuriate and pious mob. Despite all this, his heresy, according to his own view of it, was not of a very outrageous character, for he believed in Deity, in revealed religion, and in Christianity, rather putting the blame on misconduct of alleged Christians. He said: "The wretched forms under which Christianity has long been generally exhibited, and its degrading alliance with, or rather its subjection to a power wholly heterogeneous to it, and which has employed it for the most unworthy purposes, has made it contemptible and odious in the eyes of all sensible men, who are now everywhere casting off the very profession and every badge of it. Enlightened Christians must themselves, in some measure, join with unbelievers in exposing whatever will not bear examination in or about religion." His writings on scientific topics were most voluminous; his most heretical volumes are those on "Matter and Spirit."

Edward Gibbon was born at Putney, the 27th April, 1737, and died 16th January, 1794. He was a polished and painstaking writer, aristocratic in his tendencies and associations, who had educated himself into a disbelief in the principal dogmas of Christianity, but who loved the peace and quietude of an easy life too much to enter the lists as an active antagonist of the Church. His works, especially the fifteenth and sixteenth chapters of "The Decline and Fall of the Roman Empire," have been regarded as infidel in their tendency, rather from what has been left unsaid than from the direct statements against Christianity. The sneer at the evidence of prophecy, or the doubt of the reality of miraculous evidences, is guardedly expressed. It is only when Gibbon can couch his lance against some reckless and impudent forger of Christian Evidences, such as Eusebius, that you have anything like a bold

condemnation. A prophecy or a miracle is treated tenderly, and if killed, it is rather with over-affectionate courtesy than by rough handling. In some parts of his vindications of the attacked passages, Gibbon's scepticism finds vent in the collection and quotation of unpleasantly heretical views of others, but he carefully avoids committing himself to very distinct personal declarations of disbelief; he claims to be the unbiassed historian recording fact, and leaving others to form their own conclusions. It would perhaps be most appropriate to express his convictions as to the religions of the world, in nearly the same words as he used to characterise the various modes of worship at Rome, "all considered by the people as equally true, by the philosopher as equally false, and by the magistrate as equally useful."

Pierre John George Cabanis, born at Conac, near Breves, 6th June, 1757, died 6th May, 1808, following Condillac in many respects, was one of those whose physiological investigations have opened out wide fields of knowledge in psychology, and who did much to promote the establishment in France, America, and England, of a new school of Freethinkers. "Subject to the action of external bodies," he says, "man finds in the impressions these bodies make on his organs, at once his knowledge and the causes of his continued existence, for to live is to feel; and in that admirable chain of phenomena which constitute his existence, every want depends on the development of some faculty; every faculty by its very development satisfies some want, and the faculties grow by exercise, as the wants extend with the facility of satisfying them. By the continual action of external bodies on the senses of man, results the most remarkable part of his existence. But is it true that the nervous centres only receive and combine the impressions which reach them from the bodies? Is it true that no image or idea is formed in the brain, and that no determination of the sensitive organ takes place, other than by virtue of these same impressions on the senses strictly so-called? The faculty of feeling and of spontaneous movement forms the character of animal nature. The faculty of feeling consists in the property possessed by the nervous system of being warned by the impressions produced on its different parts, and notably on its extremities. These impressions are internal or external. External impressions, when perception is distinct, are called sensations. Internal impressions are very often vague and confused, and the animal is then only warned by their effects, and does not clearly distinguish their connection with the causes. The former result from the application of external objects to the organs of sense, and on them ideas depend. The latter result from the development of the regular functions, or from the maladies to which each organ is subject; and from these issue those determinations which bear the name of instincts. Feeling and movement are linked together. Every movement is determined by an impression, and the nerves, as the organs of feeling, animate and direct the motor organs. In feeling, the nervous organ reacts on itself. In movement it reacts on other parts, to which it communicates the contractile faculty, the simple and fecund principle of all animal movement. Finally, the vital functions can exercise themselves by the influence of some nervous ramifications, isolated from the system--the distinctive faculties can develope themselves, even when the brain is almost wholly destroyed, and when it seems wholly inactive. But for the formation of thoughts, it is necessary that the brain should exist, and be in a healthy condition; it is the special organ of thought." Thomas Paine, the most famous Deist of modern times, was born at Thetford on the 29th January, 1737, and died 8th June, 1809. It will hardly be untrue to say that the famous "rebellious needleman" has been the most popular writer in Great Britain and America against revealed religion, and that his works, from their plain, clear language, have in those countries had, and still have, a far wider circulation than those of any other modern sceptical author. His anti-theology was allied to his republicanism; he warred alike against church and throne, and his impeachment of each was couched in the plainest Anglo-Saxon. His name became at the same time a word

of terror to the aristocracy and to the clergy. In England numerous prosecutions were commenced against the vendors of his political and theological works, and against persons suspected of giving currency to his views. The peace-officers searched poor men's houses to discover his dreaded works. Lancashire and Yorkshire artisans read him by stealth, and assembled in corners of fields that they might discuss the "Age of Reason," and yet be safe from surprise by the authorities. Heavy sentences were passed upon men convicted of promulgating his opinions; but all without effect, the forbidden fruit found eager gatherers. Paine appears to have been tinged with scepticism from his early boyhood, but it was as a democratic writer that he first achieved literary fame. His "Age of Reason" was the culminating blow which the dying eighteenth century aimed at the Hebrew and Christian records. Theretofore scholarly philosophers, metaphysicians, and critics had written for their fellows, and whether or not any of the mass read and understood, the authors cared but little. Now the people were addressed by one of themselves in language startling in its plainness. Paine was not a deep examiner of metaphysical problems, but he was terribly in earnest in his rejection of an impossible creed.

Charles Prangois Dupuis was born near Chaumont, in France, the 16th Oct., 1742, died 29th Sept., 1809. He played a prominent part in the great revolutionary movement, and was Secretary to the National Convention. His famous work, "L'Origine de tous les Cultes," is one of the grand heresy marks of the eighteenth century. Himself a Pantheist, he searched through the mythic traditions of the Greeks, the Egyptians, the Hindoos, and the Hebrews, and as a result, sought to demonstrate a common origin for all religions. Dr. John Pye Smith classes Dupuis as an Atheist, but this is most certainly an incorrect classification. He did not believe in creation, nor could he go outside the universe to search for its cause, but he regarded God as "la force universelle et eternellement active" and which permeated and animated everything. Dupuis was an example of a new and rapidly increasing class of Freethinking writers--i.e., those who, not content with doubting the divine origin of the religions they attacked, sought to explain the source and progress of the various systems. He urges that all religions find their base in the attempts at personification of some one or other, or of the whole of the forces of the universe, and shows what an important part the sun and moon have been made to play in the Egyptian, Greek, and Hindoo Mythologies. He argues that the fabulous biographies of Hercules, Bacchus, Osiris, Mithra, and Jesus, find their common origin in the sun-worship, thus cloaked and hidden from the vulgar in each country. He does not attack the Hebrew Records as simply inaccurate, but endeavours to show clear Sabaistic foundation for many of the most important narratives. The works of Dupuis and Dulaure should be read together; they contain the most complete amongst the many attempts to trace out the common origins of the various mythologies of the world. In the ninth chapter of Dupuis' great work, he deals with the "fable made upon the sun adored under the name of Christ," "_un dieu qui ait mange autrefois sur la terre, et qu'on y mange aujourd'hui,_" and unquestionably urges strange points of coincidence. It is only astrologically that the 25th of December can be fixed, he argues, as the birthday of Mithra and of Jesus, then born of the celestial Virgin. Our Easter festivities for the resurrection of Jesus, are but another form of the more ancient rejoicings at that season for Adonis, the sun-God, restored to the world after his descent into the lower regions. He recalls that the ancient Druidic worship recognised the Virgin suckling the child, and gathers together many illustrations favourable to his theory. Here we do no more than point out that while reason was rapidly releasing itself from priestly thraldom, heretics were not content to deny the divine origin of Christianity, but sought to trace its mundane or celestial source, and strip it of its fabulous plumage.

Constantine Francis Chassebeuuf Count Volney, born at Craon in Anjou,

February 3rd, 1757, died 1820. He was a Deist. In his two great works, "The Ruins of Empires," and "New Researches on Ancient History," he advances many of the views brought forward by Dupuis, from whom he quotes, but his volumes are much more readable than those of the author of the "Origin of all Religions." Volney appears to have been one of the first to popularise many of Spinoza's Biblical criticisms. He denied the Mosaic authorship of the Pentateuch. He wrote most vigorously against kingcraft as well as priestcraft, regarding all systems of monarchy and religion as founded on the ignorance and servility, the superstition and weakness of the people. He puts the following into the mouth of Ma-hommedan priests replying to Christian preachers: "We maintain that your gospel morality is by no means characterised by the perfection you ascribe to it. It is not true that it has introduced into the world new and unknown virtues; for example, the equality of mankind in the eyes of God, and the fraternity and benevolence which are the consequence of this equality, were tenets formerly professed by the sect of Hermetics and Samaneans, from whom you have your descent. As to forgiveness of injuries, it had been taught by the Pagans themselves; but in the latitude you give to it, it ceases to be a virtue, and becomes an immorality and a crime. Your boasted precept, to him that strikes thee on thy right cheek turn the other also, is not only contrary to the feelings of man, but a flagrant violation of every principle of justice; it emboldens the wicked by impunity, degrades the virtuous by the servility to which it subjects them; delivers up the world to disorder and tyranny, and dissolves the bands of society--such is the true spirit of your doctrine. The precepts and parables of your Gospel also never represent God other than as a despot, acting by no rule of equity; than as a partial father treating a debauched and prodigal son with greater favour than his obedient and virtuous children; than as a capricious master giving the same wages to him who has wrought but one hour, as to those who have borne the burthen and heat of the day, and preferring the last comers to the first. In short, your morality throughout is unfriendly to human intercourse; a code of misanthropy calculated to give men a disgust for life and society, and attach them to solitude and celibacy. With respect to the manner in which you have practised your boasted doctrine, we in our turn appeal to the testimony of fact, and ask, was it your evangelical meekness and forbearance which excited those endless wars among your sectaries, those atrocious persecutions of what you call heretics, those crusades against the Arians, the Manichseans, and the Protestants, not to mention those which you have committed against us, nor the sacrilegious associations still subsisting among you, formed of men who have sworn to perpetuate them?* Was it the charity of your Gospel that led you to exterminate whole nations in America, and to destroy the empires of Mexico and Peru; that makes you still desolate Africa, the inhabitants of which you sell like cattle, notwithstanding the abolition of slavery that you pretend your religion has effected; that makes you ravage India whose domain you usurp; in short, is it charity that has prompted you for three centuries past to disturb the peaceful inhabitants of three continents, the most prudent of whom, those of Japan and China, have been constrained to banish you from their country, that they might escape your chains and recover their domestic tranquillity?"

> * The oath taken by the Knights of the Order of Malta is to kill, or make the Mahometans prisoners, for the glory of God.

During the early part of the eighteenth century, magazines and other periodicals began to grow apace, and pamphlets multiplied exceedingly in this country. Addison, Steele, Defoe, and Dean Swift all helped in the work of popular education, and often in a manner probably unanticipated by themselves. Dean Swifts satire against scepticism was fiercely powerful; but his onslaughts against Roman Catholics and Presbyterians made far more sceptics than his other writings had made churchmen.

During the latter portion of the eighteenth century, a new phase of popular progress was exhibited in the comparatively lively interest taken in political questions by the great body of the people inhabiting large towns. In America, France, and England, this was strongly marked; it is however in this country that we find special evidences of the connection between heresy and progress, as contradistinguished from orthodoxy and obstructiveness manifested in the struggle for the liberty of the press and platform; a struggle in which some of the boldest efforts were made by poor and heretical self-taught men. The dying eighteenth century witnessed, in England, repeated instances of State prosecutions, in which the charge of entertaining or advocating the views of the Republican heretic, Paine, formed a prominent feature, and there is little doubt that the efforts of the London Corresponding Society (which the Government of the day made strenuous endeavours to repress) to give circulation to some of Paine's political opinions in Yorkshire, Lancashire, and the North, had for result the familiarising many men with views they would have otherwise feared to investigate. The step from the "Rights of Man" to the "Age of Reason" was but a short stride for an advancing inquirer. In France the end of the eighteenth century was marked by a frightful convulsion. A people starved and degraded for generations, rose in the very desperation of despair, and with a mighty force broke the yoke of traditional feudalism and habitual monarchic reverence; but in the case of France, the revolution was too sudden to be immediately beneficial or enduring, the people were as a mass too poor, and therefore too ignorant to wield the power so rapidly wrested from the class who had so long monopolised it. It is far better to grow out of a creed by the sure and gradual consciousness of the truths of existence, than to dash off a religious garb simply from abhorrence of the shameful practices of its professors, or sudden conviction of the falsity of many of the testimonies in its favour. So it is a more permanent and more complete revolution which is effectuated by educating men to a sense of the majesty and worth of true manhood, than is any mere sudden overturning a rotten or cruel usurpation. Monarchies are most thoroughly and entirely destroyed--not by pulling down the throne, or by decapitating the king, but by educating and building up with a knowledge of political duty, each individual citizen amongst the people.

It is here that heresy has its great advantage. Christianity says, "the powers that be are ordained of God, he that resisteth the power resisteth the ordinance of God." Heresy challenges the divine right of the governor, and declares that government should be the best contrivance of national wisdom to promote the national weal, to provide against national want, and alleviate-national suffering--that government which is only a costly machinery for conserving class privileges, and preventing popular freedom, is a tyrannical usurpation of power,which it is the duty of true men to destroy.

I have briefly and imperfectly alluded to a few of the men who stand out as the sign-posts of heretical progress during the sixteenth, seventeenth, and eighteenth centuries; in some future publication of wider scope fairer tribute may be paid to the memories of some of these mighty warriors in the Freethought army. My object is to show that the civilisation of the masses is in proportion to the spread of heresy amongst them, that its effect is seen in an exhibition of manly dignity and self-reliant effort which is utterly unattainable amongst a superstitious people. Look at the lazzaroni of the Neapolitan States, or the peasant of the Campagna, and you have at once the fearful illustration of demoralisation by faith in the beggar, brigand, and believer.

It is sometimes pretended that such advantages of education and position as the people may boast in England, their civil rights and social

advancement, are owing to their Christianity, but in point of fact the reverse is the case. For centuries Christianity had done little but fetter tightly the masses to Church and Crown, to Priest and Baron; the enfranchisement is comparatively modern. Even in this very day, in the districts where the people are entirely in the hands of the clergy of the Established Church, there they are as a mass the most depraved. Take the agricultural counties and the agricultural labourers: there are no heretical books or papers to be seen in their cottages, no heretical speakers come amongst them to disturb their contentment; the deputy-lieutenant, the squire, and the rector wield supreme authority--the parish church has no rival. But what are the people as a mass? They are not men, they are not women, they lack men's and women's thoughts and aspirations: they are diggers and weeders, hedgers and ditchers, ploughmen and carters; they are taught to be content with the state of life, in which it has pleased God to place them.

My plea is, that modern heresy, from Spinoza to Mill, has given brain-strength and dignity to every one it has permeated--that the popular propagandists of this heresy, from Bruno to Carlile, have been the true redeemers and saviours, the true educators of the people. The redemption is yet only at its commencement, the education only lately begun, but the change is traceable already; as witness the power to speak and write, and the ability to listen and read, which have grown amongst the masses during the last 100 years. And if to-day we write with higher hope, it is because the right to speak and the right to print has been partly freed from the fetters forged through long generations of intellect-prostration, and almost entirely freed from the statutory limitations which, under pretence of checking blasphemy and sedition, have really gagged honest speech against Pope and Emperor, against Church and Throne.

THE FULL PROJECT GUTENBERG LICENSE
PLEASE READ THIS BEFORE YOU DISTRIBUTE OR USE THIS WORK

To protect the Project Gutenberg-tm mission of promoting the free distribution of electronic works, by using or distributing this work (or any other work associated in any way with the phrase "Project Gutenberg"), you agree to comply with all the terms of the Full Project Gutenberg-tm License (available with this file or online at http://gutenberg.org/license).

Section 1. General Terms of Use and Redistributing Project Gutenberg-tm electronic works

1.A. By reading or using any part of this Project Gutenberg-tm electronic work, you indicate that you have read, understand, agree to and accept all the terms of this license and intellectual property (trademark/copyright) agreement. If you do not agree to abide by all the terms of this agreement, you must cease using and return or destroy all copies of Project Gutenberg-tm electronic works in your possession. If you paid a fee for obtaining a copy of or access to a Project Gutenberg-tm electronic work and you do not agree to be bound by the terms of this agreement, you may obtain a refund from the person or entity to whom you paid the fee as set forth in paragraph 1.E.8.

1.B. "Project Gutenberg" is a registered trademark. It may only be used on or associated in any way with an electronic work by people who agree to be bound by the terms of this agreement. There are a few things that you can do with most Project Gutenberg-tm electronic works even without complying with the full terms of this agreement. See paragraph 1.C below. There are a lot of things you can do with Project Gutenberg-tm electronic works if you follow the terms of this agreement and help preserve free future access to Project Gutenberg-tm electronic works. See paragraph 1.E below.

1.C. The Project Gutenberg Literary Archive Foundation ("the Foundation" or PGLAF), owns a compilation copyright in the collection of Project Gutenberg-tm electronic works. Nearly all the individual works in the collection are in the public domain in the United States. If an individual work is in the public domain in the United States and you are located in the United States, we do not claim a right to prevent you from copying, distributing, performing, displaying or creating derivative works based on the work as long as all references to Project Gutenberg are removed. Of course, we hope that you will support the Project Gutenberg-tm mission of promoting free access to electronic works by freely sharing Project Gutenberg-tm works in compliance with the terms of this agreement for keeping the Project Gutenberg-tm name associated with the work. You can easily comply with the terms of this agreement by keeping this work in the same format with its attached full Project Gutenberg-tm License when you share it without charge with others.

1.D. The copyright laws of the place where you are located also govern what you can do with this work. Copyright laws in most countries are in a constant state of change. If you are outside the United States, check the laws of your country in addition to the terms of this agreement

before downloading, copying, displaying, performing, distributing or creating derivative works based on this work or any other Project Gutenberg-tm work. The Foundation makes no representations concerning the copyright status of any work in any country outside the United States.

1.E. Unless you have removed all references to Project Gutenberg:

1.E.1. The following sentence, with active links to, or other immediate access to, the full Project Gutenberg-tm License must appear prominently whenever any copy of a Project Gutenberg-tm work (any work on which the phrase "Project Gutenberg" appears, or with which the phrase "Project Gutenberg" is associated) is accessed, displayed, performed, viewed, copied or distributed:

This eBook is for the use of anyone anywhere at no cost and with almost no restrictions whatsoever. You may copy it, give it away or re-use it under the terms of the Project Gutenberg License included with this eBook or online at www.gutenberg.org

1.E.2. If an individual Project Gutenberg-tm electronic work is derived from the public domain (does not contain a notice indicating that it is posted with permission of the copyright holder), the work can be copied and distributed to anyone in the United States without paying any fees or charges. If you are redistributing or providing access to a work with the phrase "Project Gutenberg" associated with or appearing on the work, you must comply either with the requirements of paragraphs 1.E.1 through 1.E.7 or obtain permission for the use of the work and the Project Gutenberg-tm trademark as set forth in paragraphs 1.E.8 or 1.E.9.

1.E.3. If an individual Project Gutenberg-tm electronic work is posted with the permission of the copyright holder, your use and distribution must comply with both paragraphs 1.E.1 through 1.E.7 and any additional terms imposed by the copyright holder. Additional terms will be linked to the Project Gutenberg-tm License for all works posted with the permission of the copyright holder found at the beginning of this work.

1.E.4. Do not unlink or detach or remove the full Project Gutenberg-tm License terms from this work, or any files containing a part of this work or any other work associated with Project Gutenberg-tm.

1.E.5. Do not copy, display, perform, distribute or redistribute this electronic work, or any part of this electronic work, without prominently displaying the sentence set forth in paragraph 1.E.1 with active links or immediate access to the full terms of the Project Gutenberg-tm License.

1.E.6. You may convert to and distribute this work in any binary, compressed, marked up, nonproprietary or proprietary form, including any word processing or hypertext form. However, if you provide access to or distribute copies of a Project Gutenberg-tm work in a format other than "Plain Vanilla ASCII" or other format used in the official version posted on the official Project Gutenberg-tm web site (www.gutenberg.org), you must, at no additional cost, fee or expense to the user, provide a copy, a means of exporting a copy, or a means of obtaining a copy upon request, of the work in its original "Plain Vanilla ASCII" or other form. Any alternate format must include the full Project Gutenberg-tm License as specified in paragraph 1.E.1.

1.E.7. Do not charge a fee for access to, viewing, displaying, performing, copying or distributing any Project Gutenberg-tm works unless you comply with paragraph 1.E.8 or 1.E.9.

1.E.8. You may charge a reasonable fee for copies of or providing access to or distributing Project Gutenberg-tm electronic works provided that

- You pay a royalty fee of 20% of the gross profits you derive from the use of Project Gutenberg-tm works calculated using the method you already use to calculate your applicable taxes. The fee is owed to the owner of the Project Gutenberg-tm trademark, but he has agreed to donate royalties under this paragraph to the Project Gutenberg Literary Archive Foundation. Royalty payments must be paid within 60 days following each date on which you prepare (or are legally required to prepare) your periodic tax returns. Royalty payments should be clearly marked as such and sent to the Project Gutenberg Literary Archive Foundation at the address specified in Section 4, "Information about donations to the Project Gutenberg Literary Archive Foundation."

- You provide a full refund of any money paid by a user who notifies you in writing (or by e-mail) within 30 days of receipt that s/he does not agree to the terms of the full Project Gutenberg-tm License. You must require such a user to return or destroy all copies of the works possessed in a physical medium and discontinue all use of and all access to other copies of Project Gutenberg-tm works.

- You provide, in accordance with paragraph 1.F.3, a full refund of any money paid for a work or a replacement copy, if a defect in the electronic work is discovered and reported to you within 90 days of receipt of the work.

- You comply with all other terms of this agreement for free distribution of Project Gutenberg-tm works.

1.E.9. If you wish to charge a fee or distribute a Project Gutenberg-tm electronic work or group of works on different terms than are set forth in this agreement, you must obtain permission in writing from both the Project Gutenberg Literary Archive Foundation and Michael Hart, the owner of the Project Gutenberg-tm trademark. Contact the Foundation as set forth in Section 3 below.

1.F.

1.F.1. Project Gutenberg volunteers and employees expend considerable effort to identify, do copyright research on, transcribe and proofread public domain works in creating the Project Gutenberg-tm collection. Despite these efforts, Project Gutenberg-tm electronic works, and the medium on which they may be stored, may contain "Defects," such as, but not limited to, incomplete, inaccurate or corrupt data, transcription errors, a copyright or other intellectual property infringement, a defective or damaged disk or other medium, a computer virus, or computer codes that damage or cannot be read by your equipment.

1.F.2. LIMITED WARRANTY, DISCLAIMER OF DAMAGES - Except for the "Right of Replacement or Refund" described in paragraph 1.F.3, the Project Gutenberg Literary Archive Foundation, the owner of the Project Gutenberg-tm trademark, and any other party distributing a Project Gutenberg-tm electronic work under this agreement, disclaim all liability to you for damages, costs and expenses, including legal fees. YOU AGREE THAT YOU HAVE NO REMEDIES FOR NEGLIGENCE, STRICT LIABILITY, BREACH OF WARRANTY OR BREACH OF CONTRACT EXCEPT THOSE PROVIDED IN PARAGRAPH 1.F.3. YOU AGREE THAT THE FOUNDATION, THE TRADEMARK OWNER, AND ANY DISTRIBUTOR UNDER THIS AGREEMENT WILL NOT BE LIABLE TO YOU FOR ACTUAL, DIRECT, INDIRECT, CONSEQUENTIAL, PUNITIVE OR

INCIDENTAL DAMAGES EVEN IF YOU GIVE NOTICE OF THE POSSIBILITY OF SUCH DAMAGE.

1.F.3. LIMITED RIGHT OF REPLACEMENT OR REFUND - If you discover a defect in this electronic work within 90 days of receiving it, you can receive a refund of the money (if any) you paid for it by sending a written explanation to the person you received the work from. If you received the work on a physical medium, you must return the medium with your written explanation. The person or entity that provided you with the defective work may elect to provide a replacement copy in lieu of a refund. If you received the work electronically, the person or entity providing it to you may choose to give you a second opportunity to receive the work electronically in lieu of a refund. If the second copy is also defective, you may demand a refund in writing without further opportunities to fix the problem.

1.F.4. Except for the limited right of replacement or refund set forth in paragraph 1.F.3, this work is provided to you 'AS-IS' WITH NO OTHER WARRANTIES OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTIBILITY OR FITNESS FOR ANY PURPOSE.

1.F.5. Some states do not allow disclaimers of certain implied warranties or the exclusion or limitation of certain types of damages. If any disclaimer or limitation set forth in this agreement violates the law of the state applicable to this agreement, the agreement shall be interpreted to make the maximum disclaimer or limitation permitted by the applicable state law. The invalidity or unenforceability of any provision of this agreement shall not void the remaining provisions.

1.F.6. INDEMNITY - You agree to indemnify and hold the Foundation, the trademark owner, any agent or employee of the Foundation, anyone providing copies of Project Gutenberg-tm electronic works in accordance with this agreement, and any volunteers associated with the production, promotion and distribution of Project Gutenberg-tm electronic works, harmless from all liability, costs and expenses, including legal fees, that arise directly or indirectly from any of the following which you do or cause to occur: (a) distribution of this or any Project Gutenberg-tm work, (b) alteration, modification, or additions or deletions to any Project Gutenberg-tm work, and (c) any Defect you cause.

Section 2. Information about the Mission of Project Gutenberg-tm

Project Gutenberg-tm is synonymous with the free distribution of electronic works in formats readable by the widest variety of computers including obsolete, old, middle-aged and new computers. It exists because of the efforts of hundreds of volunteers and donations from people in all walks of life.

Volunteers and financial support to provide volunteers with the assistance they need, are critical to reaching Project Gutenberg-tm's goals and ensuring that the Project Gutenberg-tm collection will remain freely available for generations to come. In 2001, the Project Gutenberg Literary Archive Foundation was created to provide a secure and permanent future for Project Gutenberg-tm and future generations. To learn more about the Project Gutenberg Literary Archive Foundation and how your efforts and donations can help, see Sections 3 and 4 and the Foundation web page at http://www.pglaf.org.

Section 3. Information about the Project Gutenberg Literary Archive Foundation

The Project Gutenberg Literary Archive Foundation is a non profit

501(c)(3) educational corporation organized under the laws of the state of Mississippi and granted tax exempt status by the Internal Revenue Service. The Foundation's EIN or federal tax identification number is 64-6221541. Its 501(c)(3) letter is posted at http://pglaf.org/fundraising. Contributions to the Project Gutenberg Literary Archive Foundation are tax deductible to the full extent permitted by U.S. federal laws and your state's laws.

The Foundation's principal office is located at 4557 Melan Dr. S. Fairbanks, AK, 99712., but its volunteers and employees are scattered throughout numerous locations. Its business office is located at 809 North 1500 West, Salt Lake City, UT 84116, (801) 596-1887, email business@pglaf.org. Email contact links and up to date contact information can be found at the Foundation's web site and official page at http://pglaf.org

For additional contact information:
Dr. Gregory B. Newby
Chief Executive and Director
gbnewby@pglaf.org

Section 4. Information about Donations to the Project Gutenberg Literary Archive Foundation

Project Gutenberg-tm depends upon and cannot survive without wide spread public support and donations to carry out its mission of increasing the number of public domain and licensed works that can be freely distributed in machine readable form accessible by the widest array of equipment including outdated equipment. Many small donations ($1 to $5,000) are particularly important to maintaining tax exempt status with the IRS.

The Foundation is committed to complying with the laws regulating charities and charitable donations in all 50 states of the United States. Compliance requirements are not uniform and it takes a considerable effort, much paperwork and many fees to meet and keep up with these requirements. We do not solicit donations in locations where we have not received written confirmation of compliance. To SEND DONATIONS or determine the status of compliance for any particular state visit http://pglaf.org

While we cannot and do not solicit contributions from states where we have not met the solicitation requirements, we know of no prohibition against accepting unsolicited donations from donors in such states who approach us with offers to donate.

International donations are gratefully accepted, but we cannot make any statements concerning tax treatment of donations received from outside the United States. U.S. laws alone swamp our small staff.

Please check the Project Gutenberg Web pages for current donation methods and addresses. Donations are accepted in a number of other ways including checks, online payments and credit card donations. To donate, please visit: http://pglaf.org/donate

Section 5. General Information About Project Gutenberg-tm electronic works.

Professor Michael S. Hart is the originator of the Project Gutenberg-tm concept of a library of electronic works that could be freely shared with anyone. For thirty years, he produced and distributed Project Gutenberg-tm eBooks with only a loose network of volunteer support.

Project Gutenberg-tm eBooks are often created from several printed editions, all of which are confirmed as Public Domain in the U.S. unless a copyright notice is included. Thus, we do not necessarily keep eBooks in compliance with any particular paper edition.

Most people start at our Web site which has the main PG search facility:

http://www.gutenberg.org

This Web site includes information about Project Gutenberg-tm, including how to make donations to the Project Gutenberg Literary Archive Foundation, how to help produce our new eBooks, and how to subscribe to our email newsletter to hear about new eBooks.

Project Gutenberg's When Were Our Gospels Written?, by Charles Bradlaugh

This eBook is for the use of anyone anywhere at no cost and with
almost no restrictions whatsoever. You may copy it, give it away or
re-use it under the terms of the Project Gutenberg License included
with this eBook or online at www.gutenberg.org

Title: When Were Our Gospels Written?

Author: Charles Bradlaugh

Release Date: May 29, 2011 [EBook #36267]

Language: English

Character set encoding: ISO-8859-1

WHEN WERE OUR GOSPELS WRITTEN?

By Charles Bradlaugh

[Fourth Edition]

London: Freethought Publishing Company, 28, Stonecutter Street E.C.

1881.

London:

Printed By Annie Besant And Charles Bradlaugh,

28, Stonecutter Street, E.C.

PREFATORY NOTE TO FOURTH EDITION.

> Since this pamphlet was originally penned in 1867, the author of "Supernatural Religion" has in his three volumes placed a very storehouse of information within the easy reach of every student, and many of Dr. Teschendorf's reckless statements have been effectively dealt with in that masterly work. In the present brief pamphlet there is only the very merest index to matters which in "Supernatural Religion" are exhaustively treated. Part II. of "The Freethinkers' Text-Book," by Mrs Besant, has travelled over the same ground with much care, and has given exact reference to authorities on each point.

The Religious Tract Society, some time since, issued, prefaced with their high commendation, a translation of a pamphlet by Dr. Constantine

Tischendorf, entitled "When were our Gospels Written?" In the introductory preface we are not unfairly told that "on the credibility of the four Gospels the whole of Christianity rests, as a building on its foundations." It is proposed in this brief essay to deal with the character of Dr. Tischendorf's advocacy, then to examine the genuineness of the four Gospels, as affirmed by the Religious Tract Society's pamphlet, and at the same time to ascertain, so far as is possible in the space, how far the Gospel narrative is credible.

The Religious Tract Society state that Dr. Tischendorf's _brochure_ is a repetition of "arguments for the genuineness and authenticity of the four Gospels," which the erudite Doctor had previously published for the learned classes, "with explanations" now given in addition, to render the arguments "intelligible" to meaner capacities; and as the "Infidel" and "Deist" are especially referred to as likely to be overthrown by this pamphlet, we may presume that the society considers that in the 119 pages--which the translated essay occupies--they have presented the best paper that can be issued on their behalf for popular reading on this question. The praise accorded by the society, and sundry laudations appropriated with much modesty in his own preface by Dr. Constantine Tischendorf to himself, compel one at the outset to regard the Christian manifesto as a most formidable production. The Society's translator impressively tells us that the pamphlet has been three times printed in German and twice in France; that it has been issued in Dutch and Russian, and is done into Italian by an Archbishop with the actual approbation of the Pope. The author's preface adds an account of his great journeyings and heavy travelling expenses incurred out of an original capital of a "few unpaid bills," ending in the discovery of a basketful of old parchments destined for the flames by the Christian monks in charge, but which from the hands of Dr. Teschendorf are used by the Religious Tract Society to neutralise all doubts, and to "blow to pieces" the Rationalistic criticism of Germany and the coarser Infidelity of England. Doubtless Dr. Teschendorf and the Society consider it some evidence in favor of the genuineness and authenticity of the four Gospels that the learned Doctor was enabled to spend 5,000 dollars out of less than nothing, and that the Pope regards his pamphlet with favor, or they would not trouble to print such statements. We frankly accord them the full advantage of any argument which may fairly be based on such facts. An autograph letter of endorsement by the Pope is certainly a matter which a Protestant Tract Society--who regard "the scarlet whore at Babylon" with horror--may well be proud of.

Dr. Tischendorf states that he has since 1839 devoted himself to the textual study of the New Testament, and it ought to be interesting to the orthodox to know that, as a result of twenty-seven years' labor, he now declares that "it has been placed beyond doubt that the original text.... had in many places undergone such serious modifications of meaning, as to leave us in painful uncertainty as to what the apostles had actually written," and that "the right course to take" "is to set aside the received text altogether and to construct a fresh text."

This is pleasant news for the true believer, promulgated by authority of the managers of the great Christian depot in Paternoster Row, from whence many scores of thousands of copies of this incorrect received text have nevertheless been issued without comment to the public, even since the society have published in English Dr. Tischendorf s declaration of its unreliable character.

With the modesty and honorable reticence peculiar to-great men, Dr. Tischendorf records his successes in reading hitherto unreadable parchments, and we learn that he has received approval from "several learned bodies, and even from crowned heads," for his wonderful performances. As a consistent Christian, who knows that the "powers that be are ordained of God," our "critic without rival," for so he prints

himself, regards the praise of crowned heads as higher in degree than that of learned bodies.

The Doctor discovered in 1844 the MS. on which he now relies to confute audacious Infidelity, in the Convent of St. Catherine at Sinai; he brought away a portion, and handed! that portion, on his return, to the Saxon Government--they paying all expenses. The Doctor, however, did not then divulge where he had found the MS. It was for the advantage of humankind that the place should be known at once, for, at least, two reasons. First, because by aid of the remainder of this MS.--"the most precious Bible treasure in existence"--the faulty text of the New Testament was to be reconstructed; and the sooner the work was done the better for believers in Christianity. And, secondly, the whole story of the discovery might then have been more easily confirmed in every particular.

For fifteen years, at least, Dr. Tischendorf hid from the world the precise locality in which his treasure had been discovered. Nay, he was even fearful when he knew that other Christians were trying to find the true text, and he experienced "peculiar satisfaction" when he ascertained that his silence had misled some pious searchers after reliable copies of God's message to all humankind; although all this time he was well aware that our received copies of God's revelation had undergone "serious modifications" since the message had been delivered from the Holy Ghost by means of the Evangelists.

In 1853, "nine years after the original discovery," Dr. Tischendorf again visited the Sinai convent, but although he had "enjoined on the monks to take religious care" of the remains of which they, on the former occasion, would not yield up possession, he, on this second occasion, and apparently after careful search, discovered "eleven short lines," which convinced him that the greater part of the MS. had been destroyed. He still, however, kept the place secret, although he had no longer any known reason for so doing; and, having obtained an advance of funds from the Russian Government, he, in 1859, tried a third time for his "pearl of St. Catherine," which, in 1853, he felt convinced had been destroyed, and as to which he had nevertheless, in the meantime, been troubled by fears that the good cause might be aided by some other than Dr. Teschendorf discovering and publishing the "priceless treasure," which, according to his previous statements, he must have felt convinced did not longer exist. On this third journey the Doctor discovered "the very fragments which, fifteen years before, he had taken out of the basket," "and also other parts of the Old Testament, the New Testament complete, and, in addition, Barnabas and part of Hermas."

With wonderful preciseness, and with great audacity, Dr. Tischendorf _refers_ the transcription of the discovered Bible to the first half of the fourth century. Have Dr. Tischendorf's patrons here ever read of MSS. discovered in the same Convent of St. Catherine, at Sinai, of which an account was published by Dr. Constantine Simonides, and concerning which the _Westminster Review_ said, "We share the suspicions, to use the gentlest word which occurs to us, entertained, we believe, by all competent critics and antiquarians."

In 1863 Dr. Tischendorf published, at the cost of the Russian Emperor, a splendid but very costly edition of his Sinaitic MS. in columns, with a Latin introduction. The book is an expensive one, and copies of it are not very plentiful in England. Perhaps the Religious Tract Society have not contributed to its circulation so liberally as did the pious Emperor of all the Russias. Surely a text on which our own is to be re-constructed ought to be in the hands at least of every English clergyman and Young Men's Christian Association.

"Christianity," writes Dr. Tischendorf, "does not, strictly speaking,

rest on the moral teaching of Jesus;" "it rests on his person only." "If we are in error in believing in the person of Christ as taught in the Gospels, then the Church herself is in error, and must be given up as a deception." "All the world knows that our Gospels are nothing else than biographies of Christ." "We have no other source of information with respect to the life of Jesus." So that, according to the Religious Tract Society and its advocate, if the credibility of the Gospel biography be successfully impugned, then the foundations of Christianity are destroyed.

It becomes, therefore, of the highest importance to show that the biography of Jesus, as given in the four Gospels, is absolutely incredible and self-contradictory.

It is alleged in the Society's preface that all the objections of infidelity have been hitherto unavailing. This is, however, not true. It is rather the fact that the advocates of Christianity when defeated on one point have shuffled to another, either quietly passing the topic without further debate, or loudly declaring that the point abandoned was really so utterly unimportant that it was extremely foolish in the assailant to regard it as worthy attack, and that, in any case, all the arguments had been repeatedly refuted by previous writers.

To the following objections to the Gospel narrative the writer refuses to accept as answer, that they have been previously discussed and disposed of.

The Gospels which are yet mentioned by the names popularly associated with each do not tell us the hour, or the day, or the month, or--save Luke--the year, in which Jesus was born. The only point on which the critical divines, who have preceded Dr. Teschendorf, generally agree is, that Jesus was not born on Christmas day. The Oxford Chronology, collated with a full score of recognised authorities, gives us a period of more than seven years within which to place the dale. So confused is the story as to the time of the birth, that while Matthew would make Jesus born in the lifetime of Herod, Luke would fix the period of Jesus's birth as after Herod's death.

Christmas itself is a day surrounded with curious ceremonies of pagan origin, and in no way serving to fix the 25th December as the natal day. Yet the exact period at which Almighty God, as a baby boy, entered the world to redeem long-suffering humanity from the consequences of Adam's ancient sin, should be of some importance.

Nor is there any great certainty as to the place of birth of Christ. The Jews, apparently in the very presence of Jesus, reproached him that he ought to have been born at Bethlehem. Nathaniel regarded him as of Nazareth. Jesus never appears to have said to either, "I was born at Bethlehem." In Matthew ii., 6, we find a quotation from the prophet: "And thou Bethlehem, in the land of Judah, art not the least amongst the princes of Juda, for out of thee shall come a Governor that shall rule my people Israel." Matthew lays the scene of the birth in Bethlehem, and Luke adopts the same place, especially bringing the child to Bethlehem for that purpose, and Matthew tells us it is done to fulfil a prophecy. Micah v., 2, the only place in which similar words occur, is not a prophecy referring to Jesus at all. The words are: "But thou Beth-lehem Ephratah, though thou be little among the thousands of Judah, yet out of thee shall he come forth unto me that is to be ruler in Israel, whose goings forth have been from of old, from everlasting." This is not quoted correctly in Matthew, and can hardly be said by any straining of language to apply to Jesus. The credibility of a story on which Christianity rests is bolstered up by prophecy in default of contemporary corroboration. The difficulties are not lessened in tracing the parentage. In Matthew i., 17, it is stated that "the generations

from Abraham to David are fourteen generations, and from David until the carrying away into Babylon are fourteen generations, and from the carrying away into Babylon unto Christ are fourteen generations." Why has Matthew made such a mistake in his computation of the genealogies--in the last division we have only thirteen names instead of fourteen, even including the name of Jesus? Is this one of the cases of "painful uncertainty" which has induced the Religious Tract Society and Dr. Tischendorf to wish to set aside the _textus receptus_ altogether?

From David to Zorobabel there are in the Old Testament twenty generations; in Matthew, seventeen generations; and in Luke, twenty-three generations. In Matthew from David to Christ there are twenty-eight generations, and in Luke from David to Christ forty-three generations. Yet, according to the Religious Tract Society, it is on the credibility of these genealogies as part of the Gospel history that the foundation of Christianity rests. The genealogy in the first Gospel arriving at David traces to Jesus through Solomon; the third Gospel from David traces through Nathan. In Matthew the names from David are Solomon, Roboam, Abia, Asa, Josaphat, Joram, Ozias; and in the Old Testament we trace the same names from David to Ahaziah, whom I presume to be the same as Ozias. But in 2nd Chronicles xxii., 11, we find one Joash, who is not mentioned in Matthew at all. If the genealogy in Matthew is correct, why is the name not mentioned? Amaziah is mentioned in chap, xxiv., v. 27, and in chap, xxvi., v. 1, Uzziah, neither of whom are mentioned in Matthew, where Ozias is named as begetting Jotham, when in fact three generations of men have come in between. In Matthew and Luke, Zorobabel is represented as the son of Salathiel, while in 1 Chronicles iii., 17--19, Zerubbabel is stated to be the son of Pedaiah, the brother of Salathiel. Matthew says Abind was the son of Zorobabel (chap, i., v. 13). Luke iii., 27, says Zorobabel's son was Rhesa. The Old Testament contradicts both, and gives Meshollam, and Hananiah, and Shelomith, their sister (1 Chronicles iii, 19), as the names of Zorobabel's children. Is this another piece of evidence in favor of Dr. Tischendorf's admirable doctrine, that it is necessary to reconstruct the text?

In the genealogies of Matthew and Luke there are only three names agreeing after that of David, viz., Salathiel, Zorobabel, and Joseph--all the rest are utterly different. The attempts at explanation which have been hitherto offered, in order to reconcile these genealogies, are scarcely creditable to the intellects of the Christian apologists. They allege that "Joseph, who by nature was the son of Jacob, in the account of the law was the son of Heli. For Heli and Jacob were brothers by the same mother, and Heli, who was the elder, dying without issue, Jacob, as the law directed, married his widow; in consequence of such marriage, his son Joseph was reputed in the law the son of Heli." This is pure invention to get over a difficulty--an invention not making the matter one whit more clear. For if you suppose that these two persons were brothers, then unless you invent a death of the mother's last husband and the widow's remarriage Jacob and Heli would be the sons of the same father, and the list of the ancestors should be identical in each genealogy. But to get over the difficulty the pious do this. They say, although brothers, they were only half-brothers; although sons of the same mother, they were not sons of the same father, but had different fathers. If so, how is it that Salathiel and Zorobabel occur as father and son in both genealogies? Another fashion of accounting for the contradiction is to give one as the genealogy of Joseph and the other as the genealogy of Mary. "Which?"

"Luke," it is said. Why Luke? what are Luke's words? Luke speaks of Jesus being, "as was supposed, the son of Joseph, which was the son of Heli." When Luke says Joseph, the son of Heli, did he mean Mary, the daughter of Heli? Does the Gospel say one thing and mean another? because if that argument is worth anything, then in every case where

a man has a theory which disagrees with the text, he may say the text means something else. If this argument be permitted we must abandon in Scriptural criticism the meaning which we should ordinarily intend to convey by any given word. If you believe Luke meant daughter, why does the same word mean son in every other case all through the remainder of the genealogy? And if the genealogy of Matthew be that of Joseph, and the genealogy of Luke be that of Mary, they ought not to have any point of agreement at all until brought to David. They, nevertheless, do agree and contradict each other in several places, destroying the probability of their being intended as distinct genealogies. There is some evidence that Luke does not give the genealogy of Mary in the Gospel itself. We are told that Joseph went to Bethlehem to be numbered because he was of the house of David: if it had been Mary it would have surely said so. As according to the Christian theory, Joseph was not the father of Jesus, it is not unfair to ask how it can be credible that Jesus's genealogy could be traced to David in any fashion through Joseph?

So far from Mary being clearly of the tribe of Judah (to which the genealogy relates) her cousinship to Elisabeth would make her rather appear to belong to the tribe of Levi.

To discuss the credibility of the miraculous conception and birth would be to insult the human understanding. The mythologies of Greece, Italy, and India, give many precedents of sons of Gods miraculously born. Italy, Greece, and India, must, however, yield the palm to Judea. The incarnate Chrishna must give way to the incarnate Christ. A miraculous birth would be scouted to-day as monstrous; antedate it 2,000 years and we worship it as miracle.

Matt, i., 22, 23, says: "Now all this was done, that it might be fulfilled which was spoken of the Lord by the prophet, saying, Behold, a virgin shall be with child, and shall bring forth a son, and they shall call his name Emmanuel, which being interpreted is, God with us." This is supposed to be a quotation from Isaiah vii., 14--16: "Therefore the Lord himself shall give you a sign; Behold a virgin shall conceive, and bear a son, and shall call his name Immanuel. Butter and honey shall he eat, that he may know to refuse the evil, and choose the good. For before the child shall know to refuse the evil and choose the good, the land that thou abhorrest shall be forsaken of both her kings."

But in this, as indeed in most other cases of inaccurate quotation, the very words are omitted which would show its utter inapplicability to Jesus. Even in those which are given, the agreement is not complete. Jesus was not called Emmanuel. And even if his mother Mary were a virgin, this does not help the identity, as the word [----] OLME in Isaiah, rendered "virgin" in our version, does not convey the notion of virginity, for which the proper word is [------] BeThULE; OLME is used of a youthful spouse recently married. The allusion to the land being forsaken of both her kings, omitted in Matthew, shows how little the passage is prophetic of Jesus.

The story of the annunciation made to Joseph in one Gospel, to Mary in the other, is hardly credible on any explanation. If you assume the annunciations as made by a God of all-wise purpose, the purpose should, at least, have been to prevent doubt of Mary's chastity; but the annunciation is made to Joseph only after Mary is suspected by Joseph. Two annunciations are made, one of them in a dream to Joseph, when he is suspicious as to the state of his betrothed wife; the other made by the angel Gabriel (whoever that angel may be) to Mary herself, who apparently conceals the fact, and is content to be married, although with child not by her intended husband. The statement--that Mary being found with child by the Holy Ghost, her husband, not willing to make her a public example, was minded to put her away privily--is quite incredible. If Joseph found her with child _by the Holy Ghost_, how

could he even think of making a public example of her shame when there was nothing of which she could be ashamed--nothing, if he believed in the Holy Ghost, of which he need have been ashamed himself, nothing which need have induced him to wish to put her away privily. It is clear--according to Matthew--that Mary was found with child, and that the Holy Ghost parentage was not even imagined by Joseph until after he had dreamed about the matter.

Although the birth of Jesus was specially announced by an angel, and although Mary sang a joyful song consequent on the annunciation, corroborated by her cousin's greeting, yet when Simeon speaks of the child, in terms less extraordinary, Joseph and Mary are surprised at it and do not understand it. Why were they surprised? Is it credible that so little regard was paid to the miraculous annunciation? Or is this another case of the "painful uncertainty" alluded to by Dr. Teschendorf?

Again, when Joseph and Mary found the child Jesus in the temple, and he says, "Wist ye not that I must be about my father's business?" they do not know what he means, so that either what the angel had said had been of little effect, or the annunciations did not occur at all. Can any reliance be placed on a narrative so contradictory? An angel was specially sent to acquaint a mother that her son about to be born is the Son of God, and yet that mother is astonished when her son says, "Wist ye not I must be about my father's business?"

The birth of Jesus was, according to Matthew, made publicly known by means of certain wise men. These men saw his star in the East, but it did not tell them much, for they were obliged to come and ask information from Herod the King. Is astrology credible? Herod inquired of the chief priests and scribes; and it is evident Jeremiah was right, if he said, "The prophets prophecy falsely and the priests bear rule by their means," for these chief priests misquoted to suit their purposes, and invented a false prophecy by omitting a few words from, and adding a few words to, a text until it suited their purpose. The star, after they knew where to go, and no longer required its aid, went before them, until it came and stood over where the young child was. The credibility of this will be better understood if the reader notice some star, and then see how many houses it will be over. Luke does not seem to have been aware of the star story, and he relates about an angel who tells some shepherds the good tidings, but this last-named adventure does not appear to have happened in the reign of Herod at all. Is it credible that Jesus was born twice? After the wise men had left Jesus, an angel warned Joseph to flee with him and Mary into Egypt, and Joseph did fly, and remained there with the young child and his mother until the death of Herod; and this, it is alleged, was done to fulfil a prophecy. On referring to Hosea xi., 1, we find the words have no reference whatever to Jesus, and that, therefore, either the tale of the flight is invented as a fulfilment of the prophecy, or the prophecy manufactured to support the tale of the flight. The Jesus of Luke never went into Egypt at all in his childhood. Directly after the birth of the child his parents instead of flying away because of persecution into Egypt, went peacefully up to Jerusalem to fulfil all things according to the law, returned thence to Nazareth, and apparently dwelt there, going up to Jerusalem every year until Jesus was twelve years of age.

In Matthew ii., 15, we are told that Jesus remained in Egypt, "That it might be fulfilled which was spoken of the Lord by the prophet saying, Out of Egypt have I called my son." In Hosea ii., 1, we read, "When Israel was a child, then I loved him, and called my son out of Egypt." In no other prophet is there any similar text. This not only is not a prophecy of Jesus, but is, on the contrary, a reference to the Jewish Exodus from Egypt. Is the prophecy manufactured to give an air of credibility to the Gospel history, or how will the Religions Tract Society explain it? The Gospel writings betray either a want of good

faith, or great incapacity on the part of their authors in the mode adopted of distorting quotations from the Old Testament?

When Jesus began to be about thirty years of age he was baptised by John in the river Jordan. John, who, according to Matthew, knew him, forbade him directly he saw him; but, acccording to the writer of the fourth Gospel, he knew him not, and had, therefore, no occasion to forbid him. God is an "invisible" "spirit," whom no man hath seen (John i., 18), or can see (Exodus xxxiii., 20); but the man John saw the spirit of God descending like a dove. God is everywhere, but at that time was in heaven, from whence he said, "This is my beloved son, in whom I am well pleased." Although John heard this from God's own mouth, he some time after sent two of his disciples to Jesus to inquire if he were really the Christ (Matthew xi., 2, 3). Yet it is upon the credibility of this story, says Dr. Teschendorf, that Christianity rests like a building on its foundations.

It is utterly impossible John could have known and not have known Jesus at the same time. And if, as the New Testament states, God is infinite and invisible, it is incredible that as Jesus stood in the river to be baptised, the Holy Ghost was seen as it descended on his head as a dove, and that God from heaven said, "This is my beloved son, in whom I am well pleased." Was the indivisible and invisible spirit of God separated in three distinct and two separately visible persons? How do the Religious Tract Society reconcile this with the Athanasian Creed?

The baptism narrative is rendered doubtful by the language used as to John, who baptised Jesus. It is said, "This is he that was spoken of by the prophet Esaias, saying, The voice of one crying in the wilderness, prepare ye the way of the Lord, make his paths straight." Isaiah xl., 1--5, is, "Comfort ye, comfort ye my people, saith your God. Speak ye comfortably to Jerusalem, and cry unto her that her warfare is accomplished, that her iniquity is pardoned; for she hath received of the Lord's hand double for all her sins. The voice of him that crieth in the wilderness, Prepare ye the way of the Lord, make straight in the desert a highway for our God. Every valley shall be exalted, and every mountain and hill shall be made low: and the crooked shall be made straight, and the rough places plain: and the glory of the Lord shall be revealed." These verses have not the most remote relation to John? And this manufacture of prophecies for the purpose of bolstering up a tale, serves to prove that the writer of the Gospel tries by these to impart an air of credibility to an otherwise incredible story.

Immediately after the baptism, Jesus is led up of the Spirit into the wilderness to be tempted of the Devil. There he fasts forty days and forty nights.

John says, in chapter i., 35, "Again, the next day after, John stood and two of his disciples; and looking upon Jesus as he walked, he said, behold the Lamb of God. And the two disciples heard him speak, and they followed Jesus." Then, at the 43rd verse, he says, "The day following Jesus would go forth into Galilee, and findeth Philip, and saith unto him, follow me." And in chapter ii., 1, he says, "And the third day there was a marriage in Cana of Galilee, and the mother of Jesus was there; and both Jesus was called and his disciples unto the marriage." According to Matthew, there can be no doubt that immediately after the baptism Jesus went into the wilderness to be tempted of the Devil. And we are to believe that Jesus was tempted of the Devil and fasting in the wilderness, and at the same time feasting at marriage in Cana of Galilee? Is it possible to believe that Jesus actually did fast forty days and forty nights? If Jesus did not fast in his capacity as man, in what capacity did he fast? And if Jesus fasted, being God, the fast would be a mockery; and the account that he became a hungered must be wrong. It is barely possible that in some very abnormal condition or

cataleptic state, or state of trance, a man might exist, with very slight nourishment or without food, but that a man could walk about, speak, and act, and, doing this, live forty days and nights without food is simply an impossibility.

Is the story that the Devil tempted Jesus credible? If Jesus be God, can the Devil tempt God? A clergyman of the Church of England writing on this says: "That the Devil should appear personally to the Son of God is certainly not more wonderful than that he should, in a more remote age, have appeared among the sons of God, in the presence of God himself, to torment the righteous Job. But that Satan should carry Jesus bodily and literally through the air, first to the top of a high mountain, and then to the topmost pinnacle of the temple, is wholly inadmissable, it is an insult to our understanding, and an affront to our great creator and redeemer." Supposing, despite the monstrosity of such a supposition, an actual Devil--and this involves the dilemma that the Devil must either be God-created, or God's co-eternal rival; the first supposition being inconsistent with God's goodness, and the second being inconsistent with his power; but supposing such a Devil, is it credible that the Devil should tempt the Almighty maker of the universe with "all these will I give thee if thou wilt fall down and worship me?"

In the very names of the twelve Apostles there is an uncertainty as to one, whose name was either Lebbæus, Thaddæus, or Judas. It is in Matthew x., 3, alone that the name of Lebbæus is mentioned, thus--"Lebbæus, whose surname was Thaddæus." We are told, on this point, by certain: Biblicists, that some early MSS. have not the words "whose surname was Thaddæus," and that these words have probably been inserted to reconcile the Gospel according to Matthew with that attributed to Mark. In the English version of the Rheims Testament used in this country by our Roman Catholic brethren, the reconciliation between Matthew and Mark is completed by omitting the words-"Lebbæus whose surname was," leaving only the name "Thaddæus" in Matthew's text. The revised version of the New Testament now agrees with the Rheims version, and the omission will probably meet with the entire concurrence of Dr. Tischendorf and the Religious Tract Society, now they boast autograph letters of approval from the infallible head of the Catholic Church. If Matthew x., 3, and Mark hi., 18, be passed as reconciled, although the first calls the twelfth disciple Lebbæus, and the second gives him the name Thaddæus; there is yet the difficulty that in Luke vi., 16, corroborated by John xiv., 22, there is a disciple spoken of as "Judas, not Iscariot," "Judas, _the brother_ of James." Commentators have endeavored to clear away this last difficulty by declaring that Thaddæus is a Syriac word, having much the same meaning as Judas. This has been answered by the objection that if Matthew's Gospel uses Thaddæus in lieu of Judas, then he ought to speak of Thaddæus Iscariot, which he does not; and it is further objected also that while there are some grounds for suggesting a Hebrew original for the Gospel attributed to Matthew, there is not the slightest pretence for alleging that Matthew wrote in Syriac. The Gospels also leave us in some doubt as to whether Matthew is Levi, or whether Matthew and Levi are two different persons.

The account of the calling of Peter is replete with contradictions. According to Matthew, when Jesus first saw Peter, the latter was in a vessel fishing with his brother Andrew, casting a net into the sea of Galilee. Jesus walking by the sea said to them--"Follow me, and I will make you fishers of men." The two brothers did so, and they became Christ's disciples. When Jesus called Peter no one was with him but his brother Andrew. A little further on, the two sons of Zebedee were in a ship with their father mending nets, and these latter were separately called. From John, we learn that Andrew was originally a disciple of John the Baptist, and that when Andrew first saw Jesus, Peter was not present, but Andrew went and found Peter who, if fishing, must have been

angling on land, telling him "we have found the Messiah," and that Andrew then brought Peter to Jesus, who said, "Thou art Simon, the son of Jonas; thou shalt be called Cephas." There is no mention in John of the sons of Zebedee being a little further on, or of any fishing in the sea of Galilee. This call is clearly on land. Luke's Gospel states that when the call took place, Jesus and Peter were both at sea. Jesus had been preaching to the people, who pressing upon him, he got into Simon's ship, from which he preached. After this he directed Simon to put out into the deep and let down the nets. Simon answered, "Master, we have toiled all night and taken nothing; nevertheless at thy word I will let down the net." No sooner was this done, than the net was filled to breaking, and Simon's partners, the two sons of Zebedee, came to help, when at the call of Jesus, they brought their ships to land, and followed him.

Is it credible that there were three several calls, or that the Gospels being inspired, you could have three contradictory versions of the same event? Has the story been here "painfully modified," or how do Dr. Tischendorf and the Religious Tract Society clear up the matter? Is it credible that, as stated in Luke, Jesus had visited Simon's house, and cured Simon's wife's mother, before the call of Simon, but did not go to Simon's house for that purpose, until after the call of Simon, as related in Matthew? It is useless to reply that the date of Jesus's visit is utterly unimportant, when we are told that it is upon the credibility of the complete narrative that Christianity must rest. Each stone is important to the building, and it is not competent for the Christian advocate to regard as useless any word which the Holy Ghost has considered important enough to reveal.

Are the miracle stories credible? Every ancient nation has had its miracle workers, but modern science has relegated all miracle history to realms of fable, myth, illusion, delusion, or fraud. Can Christian miracles be made the exceptions? Is it likely that the nations amongst whom the dead were restored to life would have persistently ignored the author of such miracles? Were the miracles purposeless, or if intended to convince the Jews, was God unable to render his intentions effective? That five thousand persons should be fed with five loaves and two fishes, and that an apparent excess should remain beyond the original stock, is difficult to believe; but that shortly after this--Jesus having to again perform a similar miracle for four thousand persons--his own disciples should ignore his recent feat, and wonder from whence the food was to be derived, is certainly startlingly incredible. If this exhibition of incredulity were pardonable on the part of the twelve apostles, living witnesses of greater wonders, how much more pardonable the unbelief of the sceptic of to-day, which the Religious Tract Society seek to overcome by a faint echo of asserted events all contrary to probability, and with nineteen centuries intervening.

The casting out the devils presents phenomena requiring considerable credulity, especially the story of the devils and the swine. To-day insanity is never referable to demoniacal possession, but eighteen hundred years ago the subject of lunacy had not been so patiently investigated as it has been since. That one man could now be tenanted by several devils is a proposition for which the maintainer would in the present generation incur almost universal contempt; yet the repudiation of its present possibility can hardly be consistent with implicit credence in its ancient history. That the devils and God should hold converse together, although not without parallel in the book of Job, is inconsistent with the theory of an infinitely good Deity; that the devils should address Jesus as son of the most high God, and beg to be allowed to enter a herd of swine, is at least ludicrous; yet all this helps to make up the narrative on which Dr. Tischendorf relies. That Jesus being God should pray to his Father that "the cup might pass" from him is so incredible that even the faithful ask us to regard it as

mystery. That an angel from heaven could strengthen Jesus, the almighty God, is equally mysterious. That where Jesus had so prominently preached to thousands, the priests should need any one like Judas to betray the founder of Christianity with a kiss, is absurd; his escapade in flogging the dealers, his wonderful cures, and his raising Lazarus and Jairus's daughter should have secured him, if not the nation's love, faith, and admiration, at least a national reputation and notoriety. It is not credible if Judas betrayed Jesus by a kiss that the latter should have been arrested upon his own statement that he was Jesus. That Peter should have had so little faith as to deny his divine leader three times in a few hours is only reconcilable with the notion that he had remained unconvinced by his personal intercourse with the incarnate Deity. The mere blunders in the story of the denial sink into insignificance in face of this major difficulty. Whether the cock did or did not crow before the third denial, whether Peter was or was not in the same apartment with Jesus at the time of the last denial, are comparatively trifling questions, and the contradictions on which they are based may be the consequence of the errors which Dr. Tischendorf says have crept into the sacred writings.

Jesus said, "as Jonah was three days and three nights in the belly of the whale, so shall the son of man be three days and three nights in the heart of the earth." Jesus was crucified on Friday, was buried on Friday evening, and yet the first who went to the grave on the night of Saturday as it began to dawn towards Sunday, found the body of Jesus already gone. Did Jesus mean he should be three days and three nights in the grave? Is there any proof that his body remained in the grave for three hours? Who went first to the grave? was it Mary Magdalene alone, as in John, or two Maries as in Matthew, or the two Maries and Salome as in Mark, or the two Maries, Joanna, and several unnamed women as in Luke? To whom did did Jesus first appear? Was it, as in Mark, to Mary Magdalene, or to two disciples going to Emmaus, as in Luke, or to the two Maries near the sepulchre, as in Matthew? Is the eating boiled fish and honeycomb by a dead God credible? Did Jesus ascend to heaven the very day of his resurrection, or did an interval of nearly six weeks intervene?

Is this history credible, contained as it is in four contradictory biographies, outside which biographies we have, as Dr. Tischendorf admits, "no other source of information with respect to the life of Jesus"? This history of an earth-born Deity, descended through a crime-tainted ancestry, and whose genealogical tree is traced through one who was not his father; this history of an infinite God nursed as a baby, growing through childhood to manhood like any frail specimen of humanity; this history, garnished with bedevilled men, enchanted fig tree, myriads of ghosts, and scores of miracles, and by such garnishment made more akin to an oriental romance than to a sober history; this picture of the infinite invisible spirit incarnate visible as man; immutability subject to human passions and infirmities; the creator come to die, yet wishing to escape the death which shall bring peace to his God-tormented creatures; God praying to himself and rejecting his own prayer; God betrayed by a divinely-appointed traitor; God the immortal dying, and in the agony of the death-throes--stronger than the strong man's will--crying with almost the last effort of his dying breath, that he being God, is God forsaken!

If all this be credible, what story is there any man need hesitate to believe? Dr. Teschendorf asks how it has been possible to impugn the credibility of the four Gospels, and replies that this has been done by denying that the Gospels were written by the men whose names they bear. In the preceding pages it has been shown that the credibility of the Gospel narrative is impugned because it is uncorroborated by contemporary history, because it is self-contradictory, and because many of its incidents are _prima facie_ most improbable, and some of them

utterly impossible. Even English Infidels are quite prepared to admit that the four Gospels may be quite anonymous; and yet, that their anonymous character need be of no weight as an argument against their truth. All that is urged on this head is that the advocates of the Gospel history have sought to endorse and give value to the otherwise unreliable narratives by a pretence that some of the Evangelists, at least, were eyewitnesses of the events they refer to. Dr. Teschendorf says: "The credibility of a writer clearly depends on the interval of time which lies between him and the events which he describes. The farther the narrator is removed from the facts which he lays before us the more his claims to credibility are reduced in value." Presuming truthfulness in intention for any writer, and his ability to comprehend the facts he is narrating, and his freedom from a prejudice which may distort the picture he intends to paint correctly with his pen: we might admit the correctness of the passage we have quoted; but can these always be pre-turned in the case of the authors of the Gospels? On the contrary, a presumption in an exactly opposite direction may be fairly raised from the fact that immediately after the Apostolic age the Christian world was flooded with forged testimonies in favor of the biography of Jesus, or in favor of his disciples.

A writer in the _Edinburgh Review_ observes: "To say nothing of such acknowledged forgeries as the Apostolic constitutions and liturgies, and the several spurious Gospels, the question of the genuineness of the alleged remains of the Apostolic fathers, though often overlooked, is very material. Any genuine remains of the 'Apostle' Barnabas, of Hermas, the contemporary (Romans xvi., 14), and Clement, the highly commended and gifted fellow laborer of St. Paul (Phil, iv., 3), could scarcely be regarded as less sacred than those of Mark and Luke, of whom personally we know less. It is purely a question of criticism. At the present day, the critics best competent to determine it, have agreed in opinion, that the extant writings ascribed to Barnabas and Hermas are wholly spurious--the frauds of a later age. How much suspicion attaches to the 1st Epistle of Clement (for the fragment of the second is also generally rejected) is manifest from the fact, that in modern times it has never been allowed the place expressly assigned to it among the canonical books prefixed to the celebrated Alexandrian MS., in which the only known copy of it is included. It must not be forgotten that Ignatius expressly lays claim to inspiration, that Irenasus quotes Hermas as Scripture, and Origen speaks of him as inspired, while Polycarp, in modestly disclaiming to be put on a level with the Apostles, clearly implies there would have been no essential distinction in the way of his being ranked in the same order. But the question is, how are these pretensions substantiated?" So far the _Edinburgh Review_, certainly not an Infidel publication.

Eusebius, in his "Ecclesiastical History," admits the existence of many spurious gospels and epistles, and some writings put forward by him as genuine, such as the correspondence between Jesus and Agbaras, have since been rejected as fictitious. It is not an unfair presumption from this that many of the most early Christians considered the then existing testimonies insufficient to prove the history of Jesus, and good reason is certainly afforded for carefully examining the whole of the evidences they have bequeathed us. On p. 48, Dr. Teschendorf quotes Irenæus, whose writings-belong to the extreme end of the second century, as though that Bishop must be taken as vouching the four Gospels as we now have them. Yet, if the testimony of Irenaeus be-reliable ("Against Heresies," Book III., cap. i.) the Gospel attributed to Matthew was believed to have been composed in Hebrew, and Irenæus says that as the Jews desired a Messiah of the royal line of David, Matthew having the same desire to a yet greater degree, strove to give them full satisfaction. This may account for some of the genealogical curiosities to which we have drawn attention, but hardly renders Matthew's Gospel more reliable; and how can the suggestion that Matthew wrote in Hebrew prove that Matthew

penned the first Gospel, which has only existed in Greek? Irenæus, too, flatly contradicts the Gospels by declaring that the ministry of Jesus extended over ten years and that Jesus lived to be fifty years of age ("Against Heresies," Book II., cap. 22).

If the statement of Irenæus ("Against Heresies," Book III., cap. 11) that the fourth Gospel was written to refute the errors of Cerinthus and Nicolaus, have any value, then the actual date of issue of the fourth Gospel will be considerably after the others. Dr. Tischendorf's statement that Polycarp has borne testimony to the Gospel of John is not even supported by the quotation on which he relies. All that is said in the passage quoted (Eusebius, "Ecc. Hist.," Book V., cap. 20) is that Irenæus when he was a child heard Polycarp repeat from memory the discourses of John and others concerning Jesus. If the Gospels had existed in the time of Polycarp it would have been at least as easy to have read them from the MS. as to repeat them from memory. Dr. Tischendorf might also have added that the letter to Florinus, whence he takes the passage on which he relies, exists only in the writings of Eusebius, to whom we are indebted for many pieces of Christian evidence since abandoned as forgeries. Dr. Tischendorf says: "Any testimony of Polycarp in favor of the Gospel refers us back to the Evangelist himself, for Polycarp, in speaking to Irenæus of this Gospel as the work of his master, St. John, must have learned from the lips of the apostle himself, whether he was its author or not." Now, what evidence is there that Polycarp ever said a single word as to the authorship of the fourth Gospel, or of any Gospel, or that he even said that John had penned a single word? In the Epistle to the Philippians (the only writing attributed to Polycarp for which any genuine character is even pretended), the Gospel of John is never mentioned, nor is there even a single passage in the Epistle which can be identified with any passage in the Gospel of John.

Surely Dr. Tischendorf forgot, in the eager desire to make his witnesses bear good testimony, that the highest duty of an advocate is to make the truth clear, not to put forward a pleasantly colored falsehood to deceive the ignorant. It is not even true that Irenæus ever pretends that Polycarp in any way vouched our fourth Gospel as having been written by John, and yet Dr. Tischendorf had the cool audacity to say "there is nothing more damaging to the doubters of the authenticity of St John's Gospel than this testimony of St. Polycarp." Do the Religious Tract Society regard English Infidels as so utterly ignorant that they thus intentionally seek to suggest a falsehood, or are the Council of the Religious Tract Society themselves unable to test the accuracy of the statements put forward on their behalf by the able decipherer of illegible parchments? It is too much to suspect the renowned Dr. Constantino Tischendorf of ignorance, yet even the coarse English sceptic regrets that the only other alternative will be to denounce him as a theological charlatan.

Dr. Mosheim, writing on behalf of Christianity, says that the Epistle of Polycarp to the Philippians is by some treated as genuine and by others as spurious, and that it is no easy matter to decide. Many critics, of no mean order, class it amongst the apostolic Christian forgeries, but whether the Epistle be genuine or spurious, it contains no quotation from, it makes no reference to, the Gospel of John.

To what is said of Irenæus, Tertullian, and Clement of Alexandria, it is enough to note that all these are after a.d. 150. Irenæus may be put 177 to 200, Tertullian about 193, and Clement of Alexandria as commencing the third century.

One of Dr. Tischendorf's most audacious flourishes is that (p. 49) with reference to the Canon of Muratori, which we are told "enumerates the books of the New Testament which, from the first, were considered

canonical and sacred," and which "was written a little after the age of Pius I, about a.d; 170."

First the anonymous fragment contains books which were never accepted as canonical; next, it is quite impossible to say when or by whom it was written or what was its original language. Muratori, who discovered the fragment in 1740, conjectured that it was written about the end of the second or beginning of the third century, but it is noteworthy that neither Eusebius nor any other of the ecclesiastical advocates of the third, fourth, or fifth centuries, ever refers to it. It may be the compilation of any monk at any date prior to 1740, and is utterly valueless as evidence.

Dr. Teschendorf's style is well exemplified by the positive manner in which he fixes the date a.d. 139 to the first apology of Justin, although a critic so "learned" as the unrivalled Dr. Teschendorf could not fail to be aware that more than one writer has supported the view that the date of the first apology was not earlier than a.d. 145, and others have contended for a.d. 150. The Benedictine editors of Justin's works support the latter date. Dr. Kenn argues for a.d. 155--160. On page 63, the Religious Tract Society's champion appeals to the testimony of Justin Martyr, but in order not to shock the devout while convincing the profane, he omits to mention that more than half the writings once attributed to Justin Martyr are now abandoned, as either of doubtful character or actual forgeries, and that Justin's value as a witness is considerably weakened by the fact that he quotes the acts of Pilate and the Sybilline Oracles as though they were reliable evidence, when in fact they are both admitted specimens of "a Christian forgery." But what does Justin testify as to the Gospels? Does he say that Matthew, Mark, Luke, and John were their writers? On the contrary, not only do the names of Matthew,-Mark, Luke, and John never occur as Evangelists in the writings of Justin, but he actually mentions facts and sayings as to Jesus, which are not found in either of the four Gospels. The very words rendered Gospels only occur where they are strongly suspected to be interpolated, Justin usually speaking of some writings which he calls "memorials" or "memoirs of the Apostles."

Dr. Tischendorf urges that in the writings of Justin the Gospels are placed side by side with the prophets, and that "this undoubtedly places the Gospels in the list of canonical books." If this means that there is any statement in Justin capable of being so construed, then Dr. Tischendorf was untruthful. Justin does quote specifically the Sybilline oracles, but never Matthew, Mark, Luke, or John. He quotes statements as to Jesus, which may be found in the apocryphal Gospels, and which are not found in ours, so that if the evidence of Justin Martyr be taken, it certainly does not tend to prove, even in the smallest degree, that four Gospels were specially regarded with reverence in his day. The Rev. W. Sanday thinks that Justin did not assign an exclusive authority to our Gospels, and that he made use also of other documents no longer extant. ("Gospels in 2nd Century," p. 117.)

On p. 94 it is stated that "as early as the time of Justin the expression 'the Evangel' was applied to the four Gospels." This statement by Dr. Tischendorf and its publication by the Religious Tract Society call for the strongest condemnation. Nowhere in the writings of Justin are the words "the Evangel" applied to the four Gospels.

Lardner only professes to discover two instances in which the word anglicised by Tischendorf as "Evangel," occurs; [_____ _____], the second being expressly pointed out by Schleiermacher as an interpolation, and as an instance in which a marginal note has been incorporated with the text; nor would one occurrence of such a word prove that any book or books were so known by Justin, as the word is merely a compound of good and message; nor is there the slightest

foundation for the statement that in the time of Justin the word Evangel was ever applied to designate the four Gospels now attributed to Matthew, Mark, Luke, and John.

Dr. Tischendorf (p. 46) admits that the "faith of the Church.... would be seriously compromised" if we do not find references to the Gospels in writings between a.d. 100 and a.d. 150; and--while he does not directly assert--he insinuates that in such writings the Gospels were "treated with the greatest respect," or "even already treated as canonical and sacred writings;" and he distinctly affirms that the Gospels "did see the light" during the "Apostolic age," "and before the middle of the second century our Gospels were held in the highest respect by the-Church," although for the affirmation, he neither has nor advances the shadow of evidence.

The phrases, "Apostolic age" and "Apostolic fathers" denote the first century of the Christian era, and those-fathers who are supposed to have flourished during that period, and who are supposed to have seen or heard, or had the opportunity of seeing or hearing, either Jesus or someone or more of the twelve Apostles. Barnabas, Clement, Hermas, Ignatius, and Polycarp, are those whose names figure most familiarly in Christian evidences as Apostolic fathers. But the evidence from these Apostolic fathers is of a most unreliable character. Mosheim ("Ecclesiastical History," cent. 1, cap. 2, sec. 3,17) says that "the Apostolic history is loaded with doubts, fables, and difficulties," and that not long after Christ's ascension several histories were current of his life and doctrines, full of "pious frauds and fabulous wonders." Amongst these were "The Acts of Paul," "The Revelation of Peter," "The Gospel of Peter," "The Gospel of Andrew," "The Gospel of John," "The Gospel of James," "The Gospel of the Egyptians," etc. The attempts often made to prove from the writings of Barnabas, Ignatius, etc., the prior existence of the four Gospels, though specifically unnamed, by similarity of phraseology in quotations, is a failure, even admitting for the moment the genuineness of the Apostolic Scriptures, if the proof is intended to carry the matter higher than that such and such statements were current in some form or other, at the date the fathers wrote. As good an argument might be made that some of the Gospel passages were adopted from the fathers. The fathers occasionally quote, as from the mouth of Jesus, words which are not found in any of our four Gospels, and make reference to events not included in the Gospel narratives, clearly evidencing that even if the four documents ascribed to Matthew, Mark, Luke, and John, were in existence, they were not the only sources of information from which some of the Apostolic fathers derived' their knowledge of Christianity, and evidencing also that the four Gospels had attained no such specific superiority as to entitle them to special mention by name.

Of the epistle attributed to Barnabas, which is supposed by its supporters to have been written in the latter part of the first century, which, Paley says, is _probably_ genuine, which is classed by Eusebius as spurious ("Ecclesiastical History," book iii., cap. 25), and which Dr. Donaldson does not hesitate for one moment in refusing to ascribe to Barnabas the Apostle ("Ante-Nicene Fathers," vol. i., p. 100), it is only necessary to say that so far from speaking of the Gospels with the greatest respect, it does not mention by name any one of the four Gospels. There are some passages in Barnabas which are nearly identical in phraseology with some Gospel passages, and which it has been argued are quotations from one or other of the four Gospels, but which may equally be quotations from other Gospels, or from writings not in the character of Gospels. There are also passages which are nearly identical with several of the New Testament epistles, but even the great framer of Christian evidences, Lardner, declares his conviction that none of these last-mentioned passages are quotations, or even allusions, to the Pauline or other epistolary writings. Barnabas makes many quotations

which clearly demonstrate that the four Gospels, if then in existence and if he had access to them, could not have been his only source of information as to the teachings of Jesus (E. G., cap. 7).

"The Lord enjoined that whosoever did not keep the fast should be put to death." "He required the goats to be of goodly aspect and similar, that when they see him coming they may be amazed by the likeness to the goat." Says he, "those who wish to behold me and lay hold of my kingdom, must through tribulation and suffering obtain me" (cap. 12). And the Lord saith, "When a tree shall be bent down and again rise, and when blood shall flow out of the wound." Will the Religious Tract Society point out from which of the Gospels these are quoted?

Barnabas (cap. 10) says that Moses forbade the Jews to eat weasel flesh, "because that animal conceives with the mouth," and forbad them to eat the hyena because that animal annually changes its sex. This father seems to have made a sort of _melange_ of some of the Pentateuchal ordinances. He says (cap. 8) that the Heifer (mentioned in Numbers) was a type of Jesus, that the _three_ (?) young men appointed to sprinkle, denote Abraham, Isaac, and Jacob, that _wool was put upon a stick_ because the kingdom of Jesus was founded upon the cross, and (cap. 9) that the 818 men _circumcised_ by Abraham stood for Jesus crucified. Barnabas also declared that the world was to come to an end in 6,000 years ("Freethinkers' Text Book" part ii., p. 268). In the Sinaitic Bible, the Epistle of St. Barnabas has now, happily for misguided Christians, been discovered in the original Greek. To quote the inimitable style of Dr. Tischendorf, "while so much has been lost in the course of centuries by the-tooth of time and the carelessness of ignorant monks, an invisible eye had watched over this treasure, and when it was on the point of perishing in the fire, the Lord had decreed its-deliverance;" "while critics have generally been divided between assigning it to the first or second decade of the second century, the Sinaitic Bible, which has for the first time cleared up this question, has led us to throw its composition as far back as the last decade of the first century." A fine specimen of Christian evidence writing, cool assertion without a particle of proof and without the slightest reason-given. How does the Siniatic MS., even if it be genuine, clear up the question of the date of St. Barnabas's Epistle? Dr. Tischendorf does not condescend to tell us what has led the Christian advocate to throw back the date of its composition? We are left entirely in the dark: in fact, what Dr. Tischendorf calls a "throw back," is if you look at Lardner just the reverse. What does the epistle of Barnabas prove, even if it be genuine? Barnabas quotes, by name, Moses and Daniel, but never Matthew, Mark, Luke or John. Barnabas specifically refers to Deuteronomy and the prophets, but never to either of the four Gospels.

There is an epistle attributed to Clement of Rome, which has been preserved in a single MS. only where it is coupled with another epistle rejected as spurious. Dr. Donaldson ("Ante-Nicene Fathers," vol. i., p. 3) declares that who the Clement was to whom these writings are ascribed cannot with absolute certainty be determined. Both epistles stand on equal authority; one is rejected by Christians, the other is received. In this epistle while there is a distinct reference to an Epistle by Paul to the Corinthians, there is no mention-by name of the four Gospels, nor do any of the words attributed by Clement to Jesus agree for any complete quotation with anyone of the Gospels as we have them. The Rev. W. Sanday is frank enough to concede "that Clement is not quoting directly from our Gospels."

Is it probable that Clement would have mentioned a writing by Paul, and yet have entirely ignored the four Gospels, if he had known that they had then existed? And could they have easily existed in the Christian world in his day without his knowledge? If anyone takes cap. xxv. ef this epistle and sees the phoenix given as a historic fact, and as

evidence for the reality of the resurrection, he will be better able to appreciate the value of this so-called epistle of Clement.

The letters of Ignatius referred to by Dr. Teschendorf are regarded by Mosheim as laboring under many difficulties, and embarrassed with much obscurity. Even Lardner, doing his best for such evidences, says, that if we find matters in the Epistles inconsistent with the notion that Ignatius was the writer, it is better to regard such passages as interpolations, than to reject the Epistles entirely, especially in the "_scarcity_" of such testimonies.

There are fifteen epistles of which eight are undisputedly forgeries. Of the remaining seven there are two versions, a long and a short version, one of which must be corrupt, both of which may be. These seven epistles, however, are in no case to be accepted with certainty as those of Ignatius. Dr. Cureton contends that only three still shorter epistles are genuine ("Ante-Nicene Fathers," vol. i., pp. 137 to 143). The Rev. W. Sanday treats the three short ones as probably genuine, waiving the question as to the others ("Gospels in Second Century," p. 77, and see preface to sixth edition "Supernatural Religion"). Ignatius, however, even if he be the writer of the epistles attributed to him, never mentions either of the four Gospels. In the nineteenth chapter of the Epistles to the Ephesians, there is a statement made as to the birth and death of Jesus, not to be found in either Matthew, Mark, Luke, or John.

If the testimony of the Ignatian Epistles is reliable, then it vouches that in that early age there were actually Christians who denied the death of Jesus. A statement as to Mary in cap. nineteen of the Epistle to the Ephesians is not to be found in any portion of the Gospels. In his Epistle to the Trallians, Ignatius, attacking those who denied the real existence of Jesus, would have surely been glad to quote the evidence of eye witnesses like Matthew and John, if such evidence had existed in his day. In cap. eight of the Epistles to the Philadelphians, Ignatius says, "I have heard of some who say: Unless I find it in the archives I will not believe the Gospel. And when I said it is written, they answered that remains to be proved." This is the most distinct reference to any Christian writings, and how little does this support Dr. Tischendorf s position. From which of our four Gospels could Ignatius have taken the words, "I am not an incorporeal demon," which he puts into the mouth of Jesus in cap. iii., the epistle to the Smyrnaeans? Dr. Tischendorf does admit that the evidence of the Ignatian Epistles is not of decisive value; might he not go farther and say, that as proof of the four Gospels it is of no value at all?

On page 70, Dr. Tischendorf quotes Hippolytus without any qualification. Surely the English Religious Tract Society might have remembered that Dodwell says, that the name of Hippolytus had been so abused by impostors, that it was not easy to distinguish any of his writings. That Mill declares that, with one exception, the pieces extant under his name are all spurious. That, except fragments in the writings of opponents, the works of Hippolytus are entirely lost. Yet the Religious Tract Society permit testimony so tainted to be put forward under their authority, to prove the truth of Christian history. The very work which Dr. Tischendorf pretends to quote is not even mentioned by Eusebius, in the list he gives of the writings of Hippolytus.

On page 94, Dr. Tischendorf states that Basilides, before a.d. 138, and Valentinus, about a.d. 140, make use of three out of four Gospels, the first using John and Luke, the second, Matthew, Luke, and John. What words of either Basilides or Valentinus exist anywhere to justify this reckless assertion? Was Dr. Tischendorf again presuming on the utter ignorance of those who are likely to read his pamphlet? The Religious Tract Society are responsible for Dr. Tischendorfs allegations, which it is impossible to support with evidence.

The issue raised is not whether the followers of Basilides or the followers of Valentinus may have used these gospels, but whether there is a particle of evidence to justify Dr. Tischendorf s declaration, that Basilides and Valentinus themselves used the above-named gospels. That the four Gospels were well known during the second half of the first century is what Dr. Tischendorf undertook to prove, and statements attributed to Basilides and Valentin us, but which ought to be attributed to their followers, will go but little way as such proof (see "Supernatural Religion" vol. ii., pp. 41 to 63).

It is pleasant to find a grain of wheat in the bushel of Tischendorf chaff. On page 98, and following pages, the erudite author applies himself to get rid of the testimony of Papias, which was falsified and put forward by Paley as of great importance. Paley says the authority of Papias is complete; Tischendorf declares that Papias is in error. Paley says Papias was a hearer of John, Tischendorf says he was not. We leave the champions of the two great Christian evidence-mongers to settle the matter as best they can. If, however, we are to accept Dr. Tischendorf's declaration that the testimony of Papias is worthless, we get rid of the chief link between Justin Martyr and the apostolic age. It pleases Dr. Tischendorf to damage Papias, because that father is silent as to the gospel of John; but the Religious Tract Society must not forget that in thus clearing away the second-hand evidence of Papias, they have cut away their only pretence for saying that any of the Gospels are mentioned by name within 150 years of the date clfor the birth of Jesus. In referring to the lost work of Theophilus of Antioch, which Dr. Tischendorf tells us was a kind of harmony of the Gospels, in which the four narratives are moulded and fused into one, the learned Doctor forgets to tell us that Jerome, whom he quotes as giving some account of Theophilus, actually doubted whether the so-called commentary was really from the pen of that writer. Lardner says: "Whether those commentaries which St. Jerome quotes were really composed by Theophilus may be doubted, since they were unknown to Eusebius, and were observed by Jerome to differ in style and expression from his other works. However, if they were not his, they were the work of some anonymous ancient." But if they were the work of an anonymous ancient after Eusebius, what becomes of Dr. Tischendorf's "as early as a.d. 170?"

Eusebius, who refers to Theophilus, and who speaks of his using the Apocalypse, would have certainly gladly quoted the Bishop of Antioch's "Commentary on the Four Gospels," if it had existed in his day. Nor is it true that the references we have in Jerome to the work attributed to Theophilus, justify the description given by Dr. Teschendorf, or even the phrase of Jerome, "_qui quatuor Evangelist arum in unum opus dicta compingens_." Theophilus seems, so far as it is possible to judge, to have occupied himself not with a connected history of Jesus, or a continuous discourse as to his doctrines, but rather with mystical and allegorical elucidations of occasional passages, which ended, like many pious commentaries on the Old or New Testament, in leaving the point dealt with a little less clear with the Theophillian commentary than without it. Dr. Tischendorf says that Theodoret and Eusebius speak of Tatian in the same way--that is, as though he had, like his Syrian contemporary, composed a harmony of the four Gospels. This is also inaccurate. Eusebius talks of Tatianus having found a certain body and collection of Gospels, "I know not how," which collection Eusebius does not appear even to have ever seen; and so far from the phrase in Theodoret justifying Dr. Tischendorf's explanation, it would appear from Theodoret that Tatian's Diatessaron was, in fact, a sort of spurious gospel, "The Gospel of the Four" differing materially from our four Gospels of Matthew, Mark, Luke, and John. Neither Irenaeus, Clement of Alexandria, or Jerome, who refer to other works of Tatian, make any mention of this. Dr. Tischendorf might have added that Diapente, or "the Gospel of the Five," has also been a title applied to this work of

Tatian.

In the third chapter of his essay, Dr. Tischendorf refers to apocryphal writings "which bear on their front the names of Apostles" "used by obscure writers to palm off" their forgeries. Dr. Tischendorf says that these spurious books were composed "partly to embellish" scripture narratives, and "partly to support false doctrine;" and he states that in early times, the Church was not so well able to distinguish true gospels from false ones, and that consequently some of the apocryphal writings "were given a place they did not deserve." This statement of the inability of the Church to judge correctly, tells as much against the whole, as against any one or more of the early Christian writings, and as it may be as fatal to the now received gospels as to those now rejected, it deserves the most careful consideration. According to Dr. Tischendorf, Justin Martyr falls into the category of those of the Church who were "not so critical in distinguishing the true from the false;" for Justin, says Tischendorf, treats the Gospel of St. James and the Acts of Pilate, each as a fit source whence to derive materials for the life of Jesus, and therefore must have regarded the Gospel of St. James and the Acts of Pilate, as genuine and authentic writings; while Dr. Tischendorf, wiser, and a greater critic than Justin, condemns the Gospel of St. James as spurious, and calls the Acts of Pilate "a pious fraud;" but if Dr. Tischendorf be correct in his statement that "Justin made use of this Gospel" and quotes the "Acts of Pontius Pilate," then, according to his own words, Justin did not know how to distinguish the true from the false, and the whole force of his evidence previously used by Dr. Tischendorf in aid of the four Gospels would have been seriously diminished, even if it had been true, which it is not, that Justin Martyr had borne any testimony on the subject.

Such, then, are the weapons, say the Religious Tract Society, by their champion, "which we employ against unbelieving criticism." And what are these weapons? We have shown in the preceding pages, the _suppressio veri_ and the _suggestio falsi_ are amongst the weapons used. The Religious Tract Society directors are parties to fabrication of evidence, and they permit a learned charlatan to forward the cause of Christ with craft and chicane. But even this is not enough; they need, according to their pamphlet, "a new weapon;" they want "to find out the very words the Apostles used." True believers have been in a state of delusion; they were credulous enough to fancy that the authorised version of the Scriptures tolerably faithfully represented God's revelation to humankind. But no, says Dr. Tischendorf, it has been so seriously modified in the copying and re-copying that it ought to be set aside altogether, and a fresh text constructed. Glorious news this for the Bible Society. Listen to it, Exeter Hall! Glad tidings to be issued by the Paternoster Row saints! After spending hundreds of thousands of pounds in giving away Bibles to soldiers, in placing them in hotels and lodging-houses, and shipping them off to negroes and savages, it appears that the wrong text has been sent through the world, the true version being all the time in a waste-paper heap at Mount Sinai, watched over by an "invisible eye." But, adds Dr. Tischendorf, "if you ask me whether any popular version contains the original text, my answer is Yes and No. I say Yes as far as concerns your soul's salvation." If these are enough for the soul's salvation, why try to improve the matter? If we really need the "full and clear light" of the Sinaitic Bible to show us "what is the Word written by God," then most certainly our present Bible is not believed by the Religious Tract Society to be the Word written by God. The Christian advocates are in this dilemma: either the received, text is insufficient, or the proposed improvement is unnecessary. Dr. Tischendorf says that "The Gospels, like the only begotten of the Father, will endure as long as human nature itself," yet he says "there is a great diversity among the texts," and that the Gospel in use amongst the Ebionites and that used amongst the Nazarenes have been "disfigured here and there with certain arbitrary changes." He admits,

moreover, that "in early times, when the Church was not so critical in distinguishing the true from the false," spurious Gospels obtained a credit which they did not deserve. And while arguing for the enduring character of the Gospel, he requests you to set aside the received text altogether, and to try to construct a new revelation by the aid of Dr. Tischendorf's patent Sinaitic invention.

We congratulate the Religious Tract Society upon their manifesto, and on the victory it secures them over German Rationalism and English Infidelity. The Society's translator, in his introductory remarks, declares that "circumstantial evidence when complete, and when every link in the chain has been thoroughly tested, is as strong as direct testimony;" and, adds the Society's penman, "This is the kind of evidence which Dr. Tischendorf brings for the genuineness of our Gospels." It would be difficult to imagine a more inaccurate description of Dr. Tischendorf's work. Do we find the circumstantial evidence carefully tested in the Doctor's boasting and curious narrative of his journeys commenced on a pecuniary deficiency and culminating in much cash? Do we find it in Dr. Tischendorf s concealment for fifteen years of the place, watched over by an invisible eye, in which was hidden the greatest biblical treasure in the world? Is the circumstantial evidence shown in the sneers at Renan? or is each link in the chain tested by the strange jumbling together of names and conjectures in the first chapter? What tests are used in the cases of Valentinus and Basilides in the second chapter? How is the circumstantial testimony aided by the references in the third chapter to the Apocryphal Gospels? Is there a pretence even of critical testing in the chapter devoted to the apostolic fathers? All that Dr. Tischendorf has done is in effect to declare that our authorised version of the New Testament is so unreliable, that it ought to be got rid of altogether, and a new text constructed. And this declaration is circulated by the Religious Tract Society, which sends the sixpenny edition of the Gospel with one hand, and in the other the shilling Tischendorf pamphlet, declaring that many passages of the Religious Tract Society's New Testament have undergone such serious modifications of meaning as to leave us in painful uncertainty as to what was originally written.

The very latest contribution from orthodox sources to the study of the Gospels, as contained in the authorised version, is to be found in the very candid preface to the recently-issued revised version of the New Testament, where the ordinary Bible receives a condemnation of the most sweeping description. Here, on the high authority of the revisers, we are told that, with regard to the Greek text, the translators of the authorised version had for their guides "manuscripts of late date, few in number and used with little critical skill." The revisers add what Freethinkers have long maintained, and have been denounced from pulpits for maintaining, viz., "that the commonly received text needed thorough revision," and, what is even more important, they candidly avow that "it is but recently that materials have been acquired for executing such a work with even approximate completeness." So that not only "God's Word" has admittedly for generations not been "God's Word" at all, but even now, and with materials not formerly known, it has only been revised with "approximate completeness," whatever those two words may mean. If they have any significance at all, they must convey the belief of the new and at present final revisers of the Gospel, that, even after all their toil, they are not quite sure that god's revelation is quite exactly rendered into English. So far as the ordinary authorised version of the New Testament goes--and it is this, the law-recognised, version which is still used in administering oaths--we are told that the old translators "used considerable freedom," and "studiously adopted a variety of expressions which would now be deemed hardly consistent with the requirements of faithful translation." This is a pleasant euphemism, but a real and direct charge of dishonest translation by the authorised translators. The new revisers add, with sadness, that "it cannot be

doubted that they (the translators of the authorised version) carried this liberty too far, and that the studied avoidance of uniformity in the rendering of the same words, even when occurring in the same context, is one of the blemishes of their work." These blemishes the new revisers think were increased by the fact that the translation of the authorised version of the New Testament was assigned to two separate companies, who never sat together, which "was beyond doubt the cause of many inconsistencies," and, although there was a final supervision, the new revisers add, most mournfully: "When it is remembered that the supervision was completed in nine months, we may wonder that the incongruities which remain-are not more numerous."

Nor are the revisers by any means free from doubt and misgiving on their own work. They had the "laborious task" of "deciding between the rival claims of various readings which might properly affect the translation," and, as they tell us, "Textual criticism, as applied to the Greek New Testament, forms a special study of much intricacy and difficulty, and even now leaves room for considerable variety of opinion among competent critics." Next they say: "the frequent inconsistencies in the authorised version have caused us much embarrassment," and that there are "numerous passages in the authorised version in which.... the studied variety adopted by the Translators of 1611 has produced a degree of inconsistency that cannot be reconciled with the principle of faithfulness." So little are the new revisers always certain as to what god means that they provide "alternative readings in difficult or debateable passages," and say "the notes of this last group are numerous and largely in excess of those which were admitted by our predecessors." And with reference to the pronouns and other words in italics we are told that "some of these cases.... are of singular intricacy, and make it impossible to maintain rigid uniformity." The new revisers conclude by declaring that "through our manifold experience of its abounding difficulties we have felt more and more as we went onward that such a work can never be accomplished by organised efforts of scholarship and criticism unless assisted by divine help." Apparently the new revisers are conscious that they did not receive this divine help in their attempt at revision, for they go on: "We know full well that defects must have their place in a work so long and so arduous as this which has now come to an end. Blemishes and imperfections there are in the noble translation which we have been called upon to revise; blemishes and imperfections will assuredly be found in our own revision;... we cannot forget how often we have failed in expressing some finer shade of meaning which we recognised in the original, how often idiom has stood in the way of a perfect rendering, and how often the attempt to preserve a familiar form of words, or even a familiar cadence, has only added another perplexity to those which have already beset us."

THE END.

End of the Project Gutenberg EBook of When Were Our Gospels Written?, by Charles Bradlaugh

*** END OF THIS PROJECT GUTENBERG EBOOK WHEN WERE OUR GOSPELS WRITTEN? ***

Produced by David Widger

Updated editions will replace the previous one--the old editions
will be renamed.

Creating the works from public domain print editions means that no
one owns a United States copyright in these works, so the Foundation
(and you!) can copy and distribute it in the United States without
permission and without paying copyright royalties. Special rules,
set forth in the General Terms of Use part of this license, apply to
copying and distributing Project Gutenberg-tm electronic works to
protect the PROJECT GUTENBERG-tm concept and trademark. Project
Gutenberg is a registered trademark, and may not be used if you
charge for the eBooks, unless you receive specific permission. If you
do not charge anything for copies of this eBook, complying with the
rules is very easy. You may use this eBook for nearly any purpose
such as creation of derivative works, reports, performances and
research. They may be modified and printed and given away--you may do
practically ANYTHING with public domain eBooks. Redistribution is
subject to the trademark license, especially commercial
redistribution.

*** START: FULL LICENSE ***

THE FULL PROJECT GUTENBERG LICENSE
PLEASE READ THIS BEFORE YOU DISTRIBUTE OR USE THIS WORK

To protect the Project Gutenberg-tm mission of promoting the free
distribution of electronic works, by using or distributing this work
(or any other work associated in any way with the phrase "Project
Gutenberg"), you agree to comply with all the terms of the Full Project
Gutenberg-tm License (available with this file or online at
http://gutenberg.org/license).

Section 1. General Terms of Use and Redistributing Project Gutenberg-tm
electronic works

1.A. By reading or using any part of this Project Gutenberg-tm
electronic work, you indicate that you have read, understand, agree to
and accept all the terms of this license and intellectual property
(trademark/copyright) agreement. If you do not agree to abide by all
the terms of this agreement, you must cease using and return or destroy
all copies of Project Gutenberg-tm electronic works in your possession.
If you paid a fee for obtaining a copy of or access to a Project
Gutenberg-tm electronic work and you do not agree to be bound by the
terms of this agreement, you may obtain a refund from the person or
entity to whom you paid the fee as set forth in paragraph 1.E.8.

1.B. "Project Gutenberg" is a registered trademark. It may only be
used on or associated in any way with an electronic work by people who
agree to be bound by the terms of this agreement. There are a few
things that you can do with most Project Gutenberg-tm electronic works
even without complying with the full terms of this agreement. See
paragraph 1.C below. There are a lot of things you can do with Project
Gutenberg-tm electronic works if you follow the terms of this agreement
and help preserve free future access to Project Gutenberg-tm electronic
works. See paragraph 1.E below.

1.C. The Project Gutenberg Literary Archive Foundation ("the Foundation"
or PGLAF), owns a compilation copyright in the collection of Project
Gutenberg-tm electronic works. Nearly all the individual works in the
collection are in the public domain in the United States. If an
individual work is in the public domain in the United States and you are

located in the United States, we do not claim a right to prevent you from copying, distributing, performing, displaying or creating derivative works based on the work as long as all references to Project Gutenberg are removed. Of course, we hope that you will support the Project Gutenberg-tm mission of promoting free access to electronic works by freely sharing Project Gutenberg-tm works in compliance with the terms of this agreement for keeping the Project Gutenberg-tm name associated with the work. You can easily comply with the terms of this agreement by keeping this work in the same format with its attached full Project Gutenberg-tm License when you share it without charge with others.

1.D. The copyright laws of the place where you are located also govern what you can do with this work. Copyright laws in most countries are in a constant state of change. If you are outside the United States, check the laws of your country in addition to the terms of this agreement before downloading, copying, displaying, performing, distributing or creating derivative works based on this work or any other Project Gutenberg-tm work. The Foundation makes no representations concerning the copyright status of any work in any country outside the United States.

1.E. Unless you have removed all references to Project Gutenberg:

1.E.1. The following sentence, with active links to, or other immediate access to, the full Project Gutenberg-tm License must appear prominently whenever any copy of a Project Gutenberg-tm work (any work on which the phrase "Project Gutenberg" appears, or with which the phrase "Project Gutenberg" is associated) is accessed, displayed, performed, viewed, copied or distributed:

This eBook is for the use of anyone anywhere at no cost and with almost no restrictions whatsoever. You may copy it, give it away or re-use it under the terms of the Project Gutenberg License included with this eBook or online at www.gutenberg.org

1.E.2. If an individual Project Gutenberg-tm electronic work is derived from the public domain (does not contain a notice indicating that it is posted with permission of the copyright holder), the work can be copied and distributed to anyone in the United States without paying any fees or charges. If you are redistributing or providing access to a work with the phrase "Project Gutenberg" associated with or appearing on the work, you must comply either with the requirements of paragraphs 1.E.1 through 1.E.7 or obtain permission for the use of the work and the Project Gutenberg-tm trademark as set forth in paragraphs 1.E.8 or 1.E.9.

1.E.3. If an individual Project Gutenberg-tm electronic work is posted with the permission of the copyright holder, your use and distribution must comply with both paragraphs 1.E.1 through 1.E.7 and any additional terms imposed by the copyright holder. Additional terms will be linked to the Project Gutenberg-tm License for all works posted with the permission of the copyright holder found at the beginning of this work.

1.E.4. Do not unlink or detach or remove the full Project Gutenberg-tm License terms from this work, or any files containing a part of this work or any other work associated with Project Gutenberg-tm.

1.E.5. Do not copy, display, perform, distribute or redistribute this electronic work, or any part of this electronic work, without prominently displaying the sentence set forth in paragraph 1.E.1 with active links or immediate access to the full terms of the Project Gutenberg-tm License.

1.E.6. You may convert to and distribute this work in any binary,

compressed, marked up, nonproprietary or proprietary form, including any word processing or hypertext form. However, if you provide access to or distribute copies of a Project Gutenberg-tm work in a format other than "Plain Vanilla ASCII" or other format used in the official version posted on the official Project Gutenberg-tm web site (www.gutenberg.org), you must, at no additional cost, fee or expense to the user, provide a copy, a means of exporting a copy, or a means of obtaining a copy upon request, of the work in its original "Plain Vanilla ASCII" or other form. Any alternate format must include the full Project Gutenberg-tm License as specified in paragraph 1.E.1.

1.E.7. Do not charge a fee for access to, viewing, displaying, performing, copying or distributing any Project Gutenberg-tm works unless you comply with paragraph 1.E.8 or 1.E.9.

1.E.8. You may charge a reasonable fee for copies of or providing access to or distributing Project Gutenberg-tm electronic works provided that

- You pay a royalty fee of 20% of the gross profits you derive from the use of Project Gutenberg-tm works calculated using the method you already use to calculate your applicable taxes. The fee is owed to the owner of the Project Gutenberg-tm trademark, but he has agreed to donate royalties under this paragraph to the Project Gutenberg Literary Archive Foundation. Royalty payments must be paid within 60 days following each date on which you prepare (or are legally required to prepare) your periodic tax returns. Royalty payments should be clearly marked as such and sent to the Project Gutenberg Literary Archive Foundation at the address specified in Section 4, "Information about donations to the Project Gutenberg Literary Archive Foundation."

- You provide a full refund of any money paid by a user who notifies you in writing (or by e-mail) within 30 days of receipt that s/he does not agree to the terms of the full Project Gutenberg-tm License. You must require such a user to return or destroy all copies of the works possessed in a physical medium and discontinue all use of and all access to other copies of Project Gutenberg-tm works.

- You provide, in accordance with paragraph 1.F.3, a full refund of any money paid for a work or a replacement copy, if a defect in the electronic work is discovered and reported to you within 90 days of receipt of the work.

- You comply with all other terms of this agreement for free distribution of Project Gutenberg-tm works.

1.E.9. If you wish to charge a fee or distribute a Project Gutenberg-tm electronic work or group of works on different terms than are set forth in this agreement, you must obtain permission in writing from both the Project Gutenberg Literary Archive Foundation and Michael Hart, the owner of the Project Gutenberg-tm trademark. Contact the Foundation as set forth in Section 3 below.

1.F.

1.F.1. Project Gutenberg volunteers and employees expend considerable effort to identify, do copyright research on, transcribe and proofread public domain works in creating the Project Gutenberg-tm collection. Despite these efforts, Project Gutenberg-tm electronic works, and the medium on which they may be stored, may contain "Defects," such as, but not limited to, incomplete, inaccurate or corrupt data, transcription errors, a copyright or other intellectual

property infringement, a defective or damaged disk or other medium, a computer virus, or computer codes that damage or cannot be read by your equipment.

1.F.2. LIMITED WARRANTY, DISCLAIMER OF DAMAGES - Except for the "Right of Replacement or Refund" described in paragraph 1.F.3, the Project Gutenberg Literary Archive Foundation, the owner of the Project Gutenberg-tm trademark, and any other party distributing a Project Gutenberg-tm electronic work under this agreement, disclaim all liability to you for damages, costs and expenses, including legal fees. YOU AGREE THAT YOU HAVE NO REMEDIES FOR NEGLIGENCE, STRICT LIABILITY, BREACH OF WARRANTY OR BREACH OF CONTRACT EXCEPT THOSE PROVIDED IN PARAGRAPH 1.F.3. YOU AGREE THAT THE FOUNDATION, THE TRADEMARK OWNER, AND ANY DISTRIBUTOR UNDER THIS AGREEMENT WILL NOT BE LIABLE TO YOU FOR ACTUAL, DIRECT, INDIRECT, CONSEQUENTIAL, PUNITIVE OR INCIDENTAL DAMAGES EVEN IF YOU GIVE NOTICE OF THE POSSIBILITY OF SUCH DAMAGE.

1.F.3. LIMITED RIGHT OF REPLACEMENT OR REFUND - If you discover a defect in this electronic work within 90 days of receiving it, you can receive a refund of the money (if any) you paid for it by sending a written explanation to the person you received the work from. If you received the work on a physical medium, you must return the medium with your written explanation. The person or entity that provided you with the defective work may elect to provide a replacement copy in lieu of a refund. If you received the work electronically, the person or entity providing it to you may choose to give you a second opportunity to receive the work electronically in lieu of a refund. If the second copy is also defective, you may demand a refund in writing without further opportunities to fix the problem.

1.F.4. Except for the limited right of replacement or refund set forth in paragraph 1.F.3, this work is provided to you 'AS-IS' WITH NO OTHER WARRANTIES OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTIBILITY OR FITNESS FOR ANY PURPOSE.

1.F.5. Some states do not allow disclaimers of certain implied warranties or the exclusion or limitation of certain types of damages. If any disclaimer or limitation set forth in this agreement violates the law of the state applicable to this agreement, the agreement shall be interpreted to make the maximum disclaimer or limitation permitted by the applicable state law. The invalidity or unenforceability of any provision of this agreement shall not void the remaining provisions.

1.F.6. INDEMNITY - You agree to indemnify and hold the Foundation, the trademark owner, any agent or employee of the Foundation, anyone providing copies of Project Gutenberg-tm electronic works in accordance with this agreement, and any volunteers associated with the production, promotion and distribution of Project Gutenberg-tm electronic works, harmless from all liability, costs and expenses, including legal fees, that arise directly or indirectly from any of the following which you do or cause to occur: (a) distribution of this or any Project Gutenberg-tm work, (b) alteration, modification, or additions or deletions to any Project Gutenberg-tm work, and (c) any Defect you cause.

Section 2. Information about the Mission of Project Gutenberg-tm

Project Gutenberg-tm is synonymous with the free distribution of electronic works in formats readable by the widest variety of computers including obsolete, old, middle-aged and new computers. It exists because of the efforts of hundreds of volunteers and donations from people in all walks of life.

Volunteers and financial support to provide volunteers with the assistance they need, are critical to reaching Project Gutenberg-tm's goals and ensuring that the Project Gutenberg-tm collection will remain freely available for generations to come. In 2001, the Project Gutenberg Literary Archive Foundation was created to provide a secure and permanent future for Project Gutenberg-tm and future generations. To learn more about the Project Gutenberg Literary Archive Foundation and how your efforts and donations can help, see Sections 3 and 4 and the Foundation web page at http://www.pglaf.org.

Section 3. Information about the Project Gutenberg Literary Archive Foundation

The Project Gutenberg Literary Archive Foundation is a non profit 501(c)(3) educational corporation organized under the laws of the state of Mississippi and granted tax exempt status by the Internal Revenue Service. The Foundation's EIN or federal tax identification number is 64-6221541. Its 501(c)(3) letter is posted at http://pglaf.org/fundraising. Contributions to the Project Gutenberg Literary Archive Foundation are tax deductible to the full extent permitted by U.S. federal laws and your state's laws.

The Foundation's principal office is located at 4557 Melan Dr. S. Fairbanks, AK, 99712., but its volunteers and employees are scattered throughout numerous locations. Its business office is located at 809 North 1500 West, Salt Lake City, UT 84116, (801) 596-1887, email business@pglaf.org. Email contact links and up to date contact information can be found at the Foundation's web site and official page at http://pglaf.org

For additional contact information:
Dr. Gregory B. Newby
Chief Executive and Director
gbnewby@pglaf.org

Section 4. Information about Donations to the Project Gutenberg Literary Archive Foundation

Project Gutenberg-tm depends upon and cannot survive without wide spread public support and donations to carry out its mission of increasing the number of public domain and licensed works that can be freely distributed in machine readable form accessible by the widest array of equipment including outdated equipment. Many small donations ($1 to $5,000) are particularly important to maintaining tax exempt status with the IRS.

The Foundation is committed to complying with the laws regulating charities and charitable donations in all 50 states of the United States. Compliance requirements are not uniform and it takes a considerable effort, much paperwork and many fees to meet and keep up with these requirements. We do not solicit donations in locations where we have not received written confirmation of compliance. To SEND DONATIONS or determine the status of compliance for any particular state visit http://pglaf.org

While we cannot and do not solicit contributions from states where we have not met the solicitation requirements, we know of no prohibition against accepting unsolicited donations from donors in such states who approach us with offers to donate.

International donations are gratefully accepted, but we cannot make any statements concerning tax treatment of donations received from

outside the United States. U.S. laws alone swamp our small staff.

Please check the Project Gutenberg Web pages for current donation methods and addresses. Donations are accepted in a number of other ways including checks, online payments and credit card donations. To donate, please visit: http://pglaf.org/donate

Section 5. General Information About Project Gutenberg-tm electronic works.

Professor Michael S. Hart is the originator of the Project Gutenberg-tm concept of a library of electronic works that could be freely shared with anyone. For thirty years, he produced and distributed Project Gutenberg-tm eBooks with only a loose network of volunteer support.

Project Gutenberg-tm eBooks are often created from several printed editions, all of which are confirmed as Public Domain in the U.S. unless a copyright notice is included. Thus, we do not necessarily keep eBooks in compliance with any particular paper edition.

Most people start at our Web site which has the main PG search facility:

    http://www.gutenberg.org

This Web site includes information about Project Gutenberg-tm, including how to make donations to the Project Gutenberg Literary Archive Foundation, how to help produce our new eBooks, and how to subscribe to our email newsletter to hear about new eBooks.

WERE ADAM AND EVE OUR FIRST PARENTS?

WERE ADAM AND EVE OUR FIRST PARENTS?

BY CHARLES BRADLAUGH

THIS question, Were Adam and Eve our first parents? is indeed one of vital importance. A negative answer is a denial of the whole Christian scheme. The Christian theory is that Adam, the common father of the whole human race, sinned, and by his sin dragged down all his posterity to a state from which redemption was needed, and that Jesus is, and was, the Redeemer, by whom all mankind are, and were, saved from the consequences of the fall of Adam. If Adam therefore be not the first man, if it is not to Adam the various races of mankind are indebted for their origin, then the whole hypothesis of fall and redemption fails.

It is impossible in the space of this pamphlet to give any statement and analysis of the various hypotheses as to the origin of the human race; that I have done at some length in my volume on "Genesis: its Authorship and Authenticity." Personally I incline to favor the doctrine of a plurality of sources for the various types of the human race. That wherever the conditions for life have been, there also has been the degree of life resultant on those conditions. My purpose here is not to demonstrate the correctness of my own thinking, but rather to illustrate the incorrectness of the Genesaical teaching. Were Adam and Eve our first parents? On the one hand, an affirmative answer can be obtained from the Bible, which, though in Genesis v, 2, using Adam as a race-name, specifically asserts (ii, 22) Adam and Eve to be the first man and woman made by God, and in the authorised version fixes the date of their making about 6,000 years, little more or less, from the present time. On the other hand, science emphatically declares man to have existed on the earth for a far more extended period, affirms that as far as we can trace man historically, we find him in isolated groups, diverse in type, till we lose him in the ante-historic period; and with nearly equal distinctness denies that the various existing races find their common parentage in one pair. It is only on the first point that I attack the Bible chronology of man's existence. I am aware that calculations based upon the authorised version of the Old Testament Scriptures are open to objection, and that while from the Hebrew 1,656 years represent the period from Adam to the Deluge generally acknowledged, the Samaritan Pentateuch only yields for the same period 1,307 years, while the Septuagint version furnishes 2,242 years; but a most erudite Egyptologist, states a fatal objection to the Septuagint chronology — *i.e.,* that it makes Methuselah outlive the Flood.[1] The Deluge occurred, according to the Septuagint, in the year of the world 2,242, and by adding up the generations previous to his (Methuselah's) birth — Adam, 230; Seth, 205; Enos, 190; Cainan, 170; Mahaleel,

165; Jared, 162; Enoch, 165; = 1,287 — Methuselah was born in the year of the world 1287. He lived 969 years, and therefore died in 2256. But this is fourteen years after the Deluge.

The Rev. Dr. Lightfoot, who wrote about 1644, fixes the month of creation at September, 5,572 years preceding the date of his book, and says that Adam was expelled from Eden on the day on which he was created.[2] In my volume on Genesis (pp. 29-36) the reader will find the chronology of Genesis carefully examined. For our immediate purpose we will take the ordinary English Bible, which gives the following result: From Adam to Abraham (Genesis v and xi), 2,008; Abraham to Isaac (Genesis xxi, 5), 100; Isaac to Jacob (Genesis xxv, 26), 60; Jacob going into Egypt (Genesis xlvii, 9), 130; Sojourn in Egypt (Exodus xii, 41), 430; Duration of Moses' leadership (Exodus vii, 7; xxxi, 2), 40; thence to David, about 400; from David to Captivity, 14 generations (27), about 22 reigns, 473; Captivity to Jesus, 14 generations, about 5,934 = 234; less disputed 230 years of sojourn in Egypt, 230 = 4,004.

These dates follow the Bible statement, and there is no portion of the orthodox text, except the period of the Judges, which will admit any considerable extension of the ordinary Oxford chronology.

The Book of Judges is not a book of history. Everything in it is recounted without chronological order. It will suffice to say that the cyphers which we find in the Book of Judges and in the First Book of Samuel yield us, from the death of Joshua to the commencement of the reign of Saul, the sum-total of 500 years, which would make, since the exodus from Egypt, 565 years; whereas the First Book of Kings counts but 480 years, from the going out of Egypt down to the foundation of the temple under Solomon. According to this we must suppose that several of the judges governed simultaneously.[3]

Alfred Maury, in his profound essay on the classification of tongues, traces back some of the ancient Greek mythologies to a Sanscrit source. He has the following remark, worthy of earnest attention: "The God of heaven, or the sky, is called by the Greek *Zeus Pater*; and let us have notice that the pronunciation of Z resembles very much that of D, inasmuch as the word Zeus becomes in the genitive *Dios*. The Latins termed the same God, *Dies-piter*, or Jupiter. Now in the Veda, the God of heaven is called Dyashpitai." What is this but the original of our own Christian God the father, the יהוה (*Jeue*) *pater* of the Old Testament? The Hebrew Records, whether or not God-inspired, are certainly not the most antique. Neither is it true that the Hebrew mythology is the most ancient, nor the Hebrew language the most primitive; on the contrary, the mythology is clearly derived, and the language in a secondary or tertiary state.

The word Adam is first written as a proper name in Genesis ii, 19, but the word written Adam is אדם and this is found in Genesis i, 26, and in several other verses. In i, 27, the word is used as if it meant not one man only, but "male and female;" indeed v. 2, says, "male and female created he them and blessed them and called their name Adam." Genesis ii, 18, treats the man as alone, and 19 his name as Adam.

What is the value of this Book of Genesis, the sole authority for the hypothesis that Adam and Eve, about 6,000 years ago, were the sole founders of the peoples now living on the face of the earth? Written we know not by whom, we know not when, and we know not in what language. Eusebius, Chrysostom, and Clemens Alexandrinus alike agree that the name of Moses should not stand at the head of Genesis as the author of the book. Origen did not hesitate to declare the contents of the first and second chapters of Genesis to be purely figurative. Our translation of it has been severely criticised by the learned and pious Bellamy, and by the more learned and less pious Sir William Drummond. It has been amended and revised in our own day. Errors almost innumerable have been pointed out, the correctness of the Hebrew text itself questioned, and yet this book is claimed as an unerring guide to the students of ethnology. They may do anything, everything, except stray out of the beaten track. We have, on the one hand, an anonymous book, which, for the development of the diversities of the human family, does not even take us back so much as 6,000 years. At least 1,600 years must be deducted for the alleged Noachian deluge, when the world's inhabitants were again reduced to one family, one race, one type. On the other hand, we have now existing Esquimaux men, of the Arctic realm — Chinamen, of the Asiatic realm — Englishmen, of the European realm — Sahara negroes, of the African realm — Fuegians, of the American realm — New Zealanders, of the Polynesian realm — the Malay, representative of the realm which bears his name — the Tasmanian, of the Australian realm — with other families of each realm, too numerous for mention here; dark and fair; black-skinned and 'white-skinned; woolly-haired and straight-haired; low forehead, high forehead; Hottentot limb, Negro limb, Caucasian limb. Do all these different and differing structures and colors trace their origin to one pair? To Adam and Eve, or rather to Noah and his family? Or are they (the various races) indigenous to their native soils, and climates? And are these various types naturally resultant, with all their differences, from the differing conditions for life persistent to and consistent with them?

The question is really this — Have the different races of man all found their common parent in Noah, about 4,300 years ago? Assuming the unity of the races or species of men now existing,

there are but three suppositions on which the diversity now seen can be accounted for: —

"1st. A miracle or direct act of the Almighty, in changing one type into another.

"2nd. The gradual action of physical causes, such as climate, food, mode of life, etc.

"3rd. Congenital or accidental varieties."[4]

We may fairly dismiss entirely the question of miracle. Such a miracle is nowhere recorded in the Bible, and it lies upon anyone hardy enough to assert that the present diversity has a miraculous origin, to show some kind of reasons for his faith, some kind of evidence to warrant our conviction. Until this is done we need not dwell on the first hypothesis.

Of the durability of type under its own life conditions we have overwhelming proof in the statue of an ancient Egyptian scribe, taken from a tomb of the fifth dynasty, 5,000 years old, and precisely corresponding to the Fellah of the present day.[5] The sand had preserved the color of the statuette, which, from its portrait-like beauty, marks a long era of art-progress preceding its production. It antedates the orthodox era of the Flood, carries us back to a time when, if the Bible were true, Adam was yet alive, and still we find before it kings reigning and ruling in mighty Egypt. Can the reader wonder that these facts are held to impeach the orthodox faith?

On the second point Dr. Nott writes: "It is a commonly received error that the influence of a hot climate is gradually exerted on successive generations, until one species of mankind is completely changed into another This idea is proven to be false. . . . A sunburnt cheek is never handed down to succeeding generations. The exposed parts of the body are alone tanned by the sun, and the children of the white-skinned Europeans in New Orleans, Mobile, and the West Indies are born as fair as their ancestors, and would remain so if carried back to a colder climate.[6]

Pure negroes and negresses, transported from Central Africa to England, and marrying among themselves, would never acquire the characteristics of the Caucasian races; nor would pure Englishmen and Englishwomen, emigrating to Central Africa, and in like manner intermarrying, ever become negroes or negresses. The fact is, that while you don't bleach the color out of the dark-skinned African by placing him in London, you bleach the life out of him; and *vice versa* with the Englishman.[7] For a long time there has been ascribed to man the faculty of adapting himself to every climate. The following facts will show the ascription a most erroneous one, though human adaptability is very great: "In Egypt the austral negroes are, and the Caucasian Memlooks were, unable to raise up even a third generation; in Corsica French families vanish beneath Italian summers. Where are the descendants of the Ro-

mans, the Vandals, or the Greeks in Africa? In Modern Arabia, after Mahomed Ali had got clear of the Morea War, 18,000 Arnaots (Albanians) were soon reduced to some 400 men. At Gibraltar, in 1817, a negro regiment was almost annihilated by consumption. In 1814, during the three weeks on the Niger, 130 Europeans out of 145 caught African fever, and 40 died; out of 158 negro sailors only eleven were affected, and not one died. In 1809 the British expedition to Welchereen failed in the Netherlands through marsh fever. About the same time, in St. Domingo, about 15,000 French soldiers died from malaria. Of 30,000 Frenchmen, only 8,000 survived exposure to that Antillian island; while the Dominicanised African negro, Toussaint l'Overture, retransported to Europe, was perishing from the chill of his prison in France."

On the third point, again quoting Dr. Nott: —

"The only argument left, then, is that of congenital varieties or peculiarities, which are said to spring up and be transmitted from parent to child, so as to form new races. Let us pause for a moment to illustrate this fanciful idea. The negroes of Africa, for example, are admitted not to be offsets from some other race which have been gradually blackened and changed in a moral and physical type by the action of climate; but it is asserted that 'once, in the flight of ages' some genuine little negro, or rather many such, were born of Caucasian, Mongol, or other light-skinned parents, and then have turned about and changed the type of the inhabitants of a whole continent. So in America, the countless aborigines found on this continent, who we have reason to believe were building mounds before the time of Abraham, are the offspring of a race changed by accidental or congenital varieties. Thus, too, old China, India, Australia, Oceana, etc., all owe their types, physical and mental, to congenital and accidental varieties, and are descended from Adam and Eve! Can human credulity go farther, or human ingenuity invent any argument more absurd?"

But even supposing these objections to the second and third suppositions set aside, there are two other propositions which, if affirmed, as I believe they may be, entirely overthrow the orthodox assertion: "That Adam and Eve, six thousand years ago, were the first pair; and that all diversities now existing must find their common source in Noah — less than four thousand three hundred years from the present time." These two are as follows:

1. That man may be traced back on the earth long prior to the alleged Adamic era.

2. That there are diversities traceable as existing amongst the human race four thousand five hundred years ago, as marked as in the present day.

To illustrate the position that man may be traced back to a period long prior to the Adamic era, we refer our readers to the

chronology of the late Baron Bunsen, who, while allowing about 22,000 years for man's existence on earth, fixes the following dates after a patient examination of the Nilotic antiquities: —

Egyptians under a republican form	10,000 B.C.
Ascension of Bytis, the Theban, 1st Priest King	9,085
Elective Kings in Egypt	7,230
Hereditary Kings in Upper and Lower Egypt, a double empire form	5,143[1] [8]

The assertion of such an antiquity for Egypt is no modern hypothesis. Plato puts language into the mouth of an Egyptian, first claiming in that day an antecedent of 10,000 years for painting and sculpture in Egypt. This has long been regarded as fabulous, because it was contrary to the Hebrew chronology.

There are few who now pretend that the whole *creation* (?) took place 6,000 years ago, although, if it be true that God made all in six days, and man on the sixth, then the universe would only be more ancient than Adam by some five days. To state the age of the earth at 6,000 years is simply preposterous when it is estimated that it would require about 4,000,000 of years for the formation of the fossiliferous rocks alone, and 15,000,000 of years have been stated as a moderate estimate for the antiquity of our globe. The deltas of the great rivers of Hindustan afford corroboration as to man's antiquity. In Egypt the delta of the Nile, formed by immense quantities of sedimentary matter, which in like manner is still carried down and deposited, has not perceptibly increased during the last 3,000 years. "In the days of the earliest Pharaohs, the delta, as it now exists, was covered with ancient cities and filled with a dense population, whose civilisation must have required a period going back far beyond any date that has yet been assigned to the deluge of Noah, or even to the creation of the world."[9]

From borings which have been made at New Orleans to the depth of 600 feet, from excavations for public works, and from examinations in parts of Louisiana, where the range between high and low water is much greater than it is at New Orleans, no less than ten distinct cypress forests, divided from each other by eras of aquatic plants, etc., have been traced, arranged vertically above each other, and from these and other data it is estimated by Dr. Benet Dowler that the age of the delta is at least about 158,000 years, and in the excavations above referred to, human remains, have been found below the further forest level, making it appear that the human race existed in the delta of the Mississippi more than 57,000 years ago.[10]

It is further urged by the same competent writer that human bones discovered on the coast of Brazil, near Santas, and on the borders of a lake called Lagoa Santa, by Captain Elliott and Dr. Lund, thoroughly incorporated with a very hard breccia, every one in a fossil state, demonstrate that aboriginal man in America ante-

dates the Mississippi alluvia, and that he can even boast a geological antiquity, because numerous species of animals have become extinct since American humanity's first appearance.[11]

With reference to the possibility of tracing back the diversities of the human race to an antediluvian date, it is amply sufficient to point on the one side to the remains of the American Indian disentombed from the Mississippi forests, and on the other to the Egyptian monuments, tombs, pyramids, and stuccoes, revealing to us Caucasian men and Negro men, their diversities as marked as in the present day. Sir William Jones in his day, claimed for Sanscrit literature a vast antiquity, and asserted the existence of the religions of Egypt, Greece, India, and Italy, prior to the Mosaic Era. So far as Egypt is concerned the researches of Lepsius, Bunsen, Champollion, Lenormant, Gliddon, and others have fully verified the position of the learned president of the Asiatic Society. In "Genesis: its Authorship and Authenticity," pp. 88-21, I have collected other testimony on this point.

We have Egyptian statues of the third dynasty, going back far beyond the 4,300 years which would give the orthodox era of the deluge, and taking us over the 4,500 years fixed by our second proposition. The fourth dynasty is rich in pyramids, tombs, and statues; and according to Lepsius, this dynasty commenced 3,426 B.C., or about 5,287 years from the present date.

Works on the orthodox side constantly assume that the long chronologists must be in error, because their views do not coincide with orthodox teachings. Orthodox authors treat their heterodox brethren as unworthy of credit, because of their heterodoxy. One writer asserts,[12] that the earliest reference to Negro tribes is in the era of the 12th dynasty. Supposing for a moment this to be correct, what even then will be the state of the argument? The 12th dynasty, according to Lepsius ends about 4,000 years ago. The orthodox chronology fixes the deluge about 300 years earlier. Will any sane man argue that there was sufficient lapse of time in three centuries for the development of Caucasian and Negro man from one family?

We trace back the various types of man now known, not to one centre, not to one country, not to one family, not to one pair, but we trace them to different centres, to distinct countries, to separate families, probably to many pairs. Wherever the conditions for life are found, there are living beings also. The conditions of climate, soil, etc., of Central Africa differ from those of Europe. The indigenous races of Central Africa differ from those of Europe. Geology has helped us very little as to the prehistoric types of man, but its aid has nevertheless been sufficient to far outdate the one man Adam of 6,000 years ago.

I challenge the ordinary orthodox assertion of Adamic unity of origin accompanied as it is by threats of pains and penalties if re-

jected; I am yet ready to examine it, if it can be presented to me associated with facts, and divested of those future hell-fire torments and present societarian persecutions which now form its chief, if not sole, supports.

The rejection of the Bible account of the peopling of the world involves also the rejection of the entire scheme of Christianity. According to the orthodox rendering of both New and Old Testament teaching, all men are involved in the curse which followed Adam's sin. But if the account of the Fall be mythical, not historical; if Adam and Eve — supposing them to have ever existed — were preceded on the earth by many nations and empires, what becomes of the doctrine that Jesus came to redeem mankind from a sin committed by one who was not the common father of all humanity?

Reject Adam, and you cannot accept Jesus. Refuse to believe Genesis, and you cannot give credence to Matthew, Mark, Luke, John, and Paul. The Old and New Testaments are so connected together, that to dissolve the union is to destroy the system. The account of the Creation and Fall of Man is the foundation-stone of the Christian Church — if this stone be rotten, the superstructure cannot be stable.

NEW LIFE OF ABRAHAM

MOST undoubtedly father Abraham is a personage whose history should command attention, if only because he figures as the founder of the Jewish race — a race which, having been promised protection and favor by Deity, appear in the large majority of cases to have experienced little else besides the sufferance of misfortune and misery themselves, or its infliction upon others. Men are taught to believe that God, following out a solemn covenant made with Abraham, suspended the course of nature to aggrandise the Jews; that he promised always to bless and favor them if they adhered to his worship and obeyed the priests. The promised blessings were usually: political authority, individual happiness and sexual power, long life, and great wealth; the threatened curses for idolatry or disobedience: disease, loss of property and children, mutilation, death. Amongst the blessings: the right to kill, plunder, and ravish their enemies, with protection, whilst pious, against any subjection to retaliatory measures. And all this because they were Abraham's children!

Abraham is especially an important personage to the orthodox Church-going Christian. Without Abraham, no Jesus, no Christianity, no Church of England, no bishops, no tithes, no church-rates. But for Abraham, England would have lost all these blessings. Abraham was the great-grandfather of Judah, the head of the tribe to which God's mother's husband, Joseph, belonged.

In gathering materials for a short biographical sketch, we are at once comforted and dismayed by the fact that the only reliable account of Abraham's career is that furnished by the book of Genesis, supplemented by a few brief references in other parts of the Bible, and that, outside "God's perfect and infallible revelation to man," there is no reliable account of Abraham's existence at all. We are comforted by the thought that, despite the new edition of the "Encyclopædia Britannica," Genesis is unquestioned by the faithful, and is at present protected by Church and State against heretic assaults; but we are dismayed when we think that, if Infidelity, encouraged by Colenso, Kalisch, Professor Robertson Smith, and Professor Wellhausen, upsets Genesis, Abraham will have little historical support. The Talmudical notices of Abraham are too wonderful for irreverent criticism. Some philologists have asserted that Brama and Abraham are alike corruptions of Abba Rama, or Abrama, and that Sarah is identical with Sarasvati. אברם, Abram, is a Chaldean compound, meaning father of the elevated, or exalted father. אברהם is a compound of Chaldee and Arabic, signifying father of a multitude. In part v. of his work, Colenso mentions that Adonis was formerly identified with Abram, "high father," Adonis being the personified sun.

Leaving incomprehensible problems in philology for the ordinary authorised version of our Bibles, we find that Abraham was the son of Terah. The Talmud[1] says that Abraham's mother was Amathlai, the daughter of Karnebo (Bava Bathra, fol. 1, col. 1.) The text does not expressly state where Abraham was born, and I cannot therefore describe his birth-place with that accuracy of detail which a true believer might desire, but he "dwelt in old time on the other side of the flood" (Joshua xxiv, 2 and 3). Abraham was born when Terah, his father, was seventy years of age; and, according to Genesis, Terah and his family came forth out of Ur of the Chaldees, and went to Haran and dwelt there. We turn to the map to look for Ur of the Chaldees, anxious to discover it as possibly Abraham's place of nativity, but find that the translators of God's inspired word have taken a slight liberty with the text by substituting "Ur of the Chaldees" for "Aur Kasdim," the latter being, in plain English, *the light of the magi, or conjurors, or astrologers.* אורכשדים is stated by Kalisch to have been made the basis for many extraordinary legends, as to Abraham's rescue from the flames. In the Talmud P'sachim, fol. 118, col. 1, it is written that "At the time when Nimrod the wicked had cast our Father Abraham into the fiery furnace, Gabriel stood forth in the presence of the Holy one — blessed be He! — and said, 'Lord of the universe, let me, I pray thee, go down and cool the furnace, and deliver that righteous one from it.'"

Abraham, being born — according to Hebrew chronology, 2,083 years after the creation, and according to the Septuagint 3,549 years after that event — when his father was seventy, grew so slowly that when his father reached the good old age of 205 years, Abraham had only arrived at 75 years, having, apparently, lost no less than 60 years' growth during his father's fife-time. St. Augustine and St. Jerome gave this up as a difficulty inexplicable. Calmet endeavors to explain it, and makes it worse. It is surely impossible Abraham could have lived 135 years, and yet be only 75 years of age?

"The Lord" spoke to Abraham, and promised to make of him a great nation, to bless those who blessed Abraham, and to curse those who cursed him. I do not know precisely which Lord it was that spake unto Abraham, the Hebrew says it was יהוה, Jeue, or, as our translators call it, Jehovah, but as God said (Exodus vi, 2) that by the name "Jehovah was I not known" to either Abraham, Isaac, or Jacob, either the omniscient Deity had forgotten the matter, or a counterfeit Lord had assumed the name. The word Jehovah, which the book of Exodus says Abraham did not know, is nearly always the name by which Abraham addresses, or speaks of, the Jewish Deity.

Abraham having been promised protection by the God of Truth, initiated his public career with a diplomacy of statement

worthy Talleyrand. He represented his wife Sarah as his sister, which, if true, is a sad reproach to the marriage. The Talmud, when Abram came into Egypt, asks: "Where was Sarah? He confined her in a chest, into which he locked her, lest anyone should gaze on her beauty. When he came to the receipt of custom, he was summoned to open the chest, but declined, and offered payment of the duty. The officers said: 'Thou carryest garments;' and he offered duty for garments. 'Nay, it is gold thou carriest;' and he offered the impost laid on gold. Then they said: 'It is costly silks, belike pearls, thou concealest;' and he offered the custom on such articles. At length the Egyptian officers insisted, and he opened the box. And when he did so, all the land of Egypt was illumined by her beauty"(Bereshith Rabba, chap. 40). The ruling Pharaoh, hearing the beauty of Sarah commended, took her into his house, she being at that time a fair Jewish dame, between 60 and 70 years of age, and he entreated Abraham well for her sake, and he had sheep and oxen, asses and servants, and camels. We do not read that Abraham objected in any way to the loss of his wife. The Lord, who is all-just, finding out that Pharaoh had done wrong, not only punished the king, but also punished the king's household, who could hardly have interfered with his misdoings. Abraham got his wife back, and went away much richer by the transaction. Whether the conduct of father Abraham in pocketing quietly the price of the insult — or honor — offered to his wife, is worthy modern imitation, is a question only within the competence of episcopal authority. After this Abraham was very rich in "silver and gold." So was the Duke of Marlborough after the Duke of York had taken his sister in similar manner into his house. In Gen. xii, 19, there is a curious mistranslation in our version. The text is: "It is for that I had taken her for my wife;" our version has: "I *might have taken* her." The Douay so translates as to take a middle phrase, leaving it doubtful whether or not Pharaoh actually took Sarah as his wife. In any case, the Egyptian king acted far the better of the twain. Abraham plays the part of a timorous, contemptible hypocrite. Strong enough to have fought for his wife, he sold her. Yet Abraham is blessed, and his conduct is our pattern!

Despite his timorousness in the matter of his wife, Abraham was a man of wonderful courage and warlike ability. To rescue his relative, Lot — with whom he could not live on the same land without quarrelling, both being religious — he armed 318 servants, and fought with four powerful kings, defeating them and recovering the spoil. Abraham's victory was so decisive, that the King of Sodom, who fled and fell (xiv, 10) in a previous encounter, now met Abraham alive (see verse 17), to congratulate him on his victory. Abraham was also offered bread and wine by Melchisedek, King of Salem, priest of the Most High God. Where

was Salem? Some identify it with Jerusalem, which it cannot be, as Jebus was not so named until after the time of the Judges (Judges xix, 10). How does this King of this unknown Salem, never heard of before or after, come to be priest of the Most High God? These are queries for divines — orthodox disciples believe without inquiring. Melchisedek was most unique as far as genealogy is concerned. He had no father. He was without mother also; he had no beginning of days or end of life, and must be therefore at the present time an extremely old gentleman, who would be an invaluable acquisition to any antiquarian Bible Evidence Association fortunate enough to cultivate his acquaintance. God having promised. Abraham a numerous family, and the promise not having been in any part fulfilled, the patriarch grew uneasy, and remonstrated with the Lord, who explained the matter thoroughly to Abraham when the latter was in a deep sleep, and a dense darkness prevailed. Religious explanations come with greater force under these or similar conditions. Natural or artificial light and clear-sightedness are always detrimental to spiritual manifestations.

Abraham's wife had a maid named Hagar, and she bore to Abraham a child named Ishmael; at the time Ishmael was born, Abraham was 86 years of age. Just before Ishmael's birth Hagar was so badly treated that she ran away. As she was only a slave, God persuaded Hagar to return and humble herself to her mistress. Thirteen years afterwards God appeared to Abraham, and instituted the rite of circumcision — which rite had been practised long before by other nations — and again renewed the promise. The rite of circumcision was not only practised by nations long anterior to that of the Jews, but appears in many cases not even to have been pretended as a religious rite. (See Kalisch, Genesis, p. 386; Cahen, Genese, p. 43.) After God had "left off talking with him, God went up from Abraham." As God is infinite, he did not, of course, go up; but still the Bible says God went up, and it is the duty of the people to believe that he did so, especially as the infinite Deity then and now resides habitually in "heaven" wherever that may be. Again the Lord appeared to Abraham, either as three men or angels or as one of the three, and Abraham, hospitably inclined, invited the three to wash their feet and to rest under the tree, and gave butter and milk and dressed calf, tender and good, to them, and they did eat; and after the enquiry as to where Sarah then was, the promise of a son is repeated. Sarah — then by her own admission an old woman, stricken in years — laughed when she heard this, and the Lord said: "Wherefore did Sarah laugh?" and Sarah denied it; but the Lord said: "Nay, but thou didst laugh." The three men then went toward Sodom, and Abraham with them as a guide; and the Lord explained to Abraham that some sad reports had reached him about Sodom and Gomorrah, and that he was then going to find out whether the report was

reliable. God is omnipresent, and was always therefore at Sodom and Gomorrah, but had apparently been temporarily absent; he is omniscient, and therefore knew everything which was happening at Sodom and Gomorrah, but he did not know whether or not the people were as wicked they had been represented to him. God, Job tells us, "put no trust in his servants, and his angels he charged with folly." Between the rogues and the fools, therefore, the all-wise and all-powerful God seems to be liable to be misled by the reports made to him. Two of the three men or angels went on to Sodom, and left the Lord with Abraham, who began to remonstrate with Deity on the wholesale destruction contemplated, and asked him to spare the city if fifty righteous should be found within it. God said: "If I find fifty righteous within the city, then will I spare the place for their sakes." God, being all-wise, knew there were not fifty in Sodom, and was deceiving Abraham. By dint of hard bargaining in thorough Hebrew fashion Abraham, whose faith seemed to be tempered by distrust, got the stipulated number reduced to ten, and then "the Lord went his way."

Jacob Ben Chajim, in his introduction to the Rabbinical Bible (p. 28), tells us that the Hebrew text used to read in verse 22: "And Jehovah still stood before Abraham;" but the scribes altered it, and made Abraham stand before the Lord, thinking the original text offensive to Deity.

Genesis xviii has given plenty of work to the divines. Augustine contended that God can take food, though he does not require it. Justin compared "the eating of God with the devouring power of the fire." Kalisch sorrows over the holy fathers "who have taxed all their ingenuity to make the act of eating compatible with the attributes of Deity."

In the Epistle to the Romans Abraham's faith is greatly praised. We are told (iv, 19 and 20) that: "Being not weak in faith, he considered not his own body now dead, when he was about an hundred years old, neither yet the deadness of Sarah's womb. He staggered not at the promise of God through unbelief; but was strong in faith, giving glory to God." Yet, so far from Abraham giving God glory, Genesis xvii, 17, says that: "Abraham fell upon his face and laughed, and said in his heart, Shall a child be born unto him that is an hundred years old? and shall Sarah, that is ninety years old, bear?" The Rev. Mr. Boutell says that "the declaration which caused Sarah to 'laugh' shows the wonderful familiarity which was then permitted to Abraham in his communications with God."

After the destruction of Sodom and Gomorrah, Abraham journeyed south and sojourned in Gerar, and, either untaught or too well taught by his previous experience, again represented his wife as his sister, and Abimelech, king of Gerar, sent and took Sarah. As before, we find neither remonstrance nor resistance re-

corded on the part of Abraham. This time God punished the women in Abimelech's house for an offence they did not commit, and Sarah was again restored to her husband, with sheep, oxen, men-servants, women-servants, and money. Infidels object that the Bible says Sarah "was old and well stricken in age;" that "it had ceased to be with her after the manner of women;" that she was more than 90 years of age; and that it is not likely King Abimelech would fall in love with an ugly old woman; but if Genesis be true, it is clear that Sarah had not ceased to be attractive, as God resorted to especial means to protect her from Abimelech. At length Isaac was born, and his mother Sarah urged Abraham to expel Hagar and her son, "and the thing was very grievous in Abraham's sight because of his son;" the mother being only a bondwoman does not seem to have troubled him. God, however, approving Sarah's notion, Hagar was expelled, "and she departed and wandered in the wilderness, and the water was spent in the bottle, and she cast the child under one of the shrubs." She had apparently carried the child, who — being at least more than 14, and according to some calculations as much as 17 years of age — must have been a heavy child to carry in a warm climate.

The Talmud says: "On the day when Isaac was weaned Abraham made a great feast, to which he invited all the people of the land. Not all of those who came to enjoy the feast believed in the alleged occasion of its celebration, for some said contemptuously, 'This old couple have adopted a foundling, and provided a feast to persuade us to believe that the child is their own offspring.' What did Abraham do? He invited all the great men of the day, and Sarah invited their wives, who brought their infants, but not their nurses, along with them. On this occasion Sarah's breasts became like two fountains, for she supplied, of her own body, nourishment to all the children. Still some were unconvinced, and said, 'Shall a child be born to one that is a hundred years old, and shall Sarah, who is ninety years old, bear?' (Gen. xvii, 17). Whereupon, to silence this objection, Isaac's face was changed, so that it became the very picture of Abraham's; then one and all exclaimed, 'Abraham begat Isaac'" (Bara Metzia, fol. 87, col. 1).

God never did tempt any man at any time, but he "did tempt Abraham" to kill Isaac by offering him as a burnt offering. The doctrine of human sacrifice is one of the holy mysteries of Christianity, as taught in the Old and New Testament. Of course, judged from a religious or Biblical stand-point, it cannot be wrong, as, if it were, God would not have permitted Jephtha to sacrifice his daughter by offering her as a burnt offering, nor have tempted Abraham to sacrifice his son, nor have said in Leviticus, "None devoted, which shall be devoted of men, shall be redeemed; but shall surely be put to death" (xxvii, 29), nor have in the New

Testament worked out the monstrous sacrifice of his only son Jesus, at the same time son and begetting father.

Abraham did not seem to be entirely satisfied with his own conduct when about to kill Isaac, for he not only concealed from his servants his intent, but positively stated that which was not true, saying, "I and the lad will go yonder and worship, and come again to you." If he meant that he and Isaac would come again to them, then he knew that the sacrifice would not take place. Nay, Abraham even deceived his own son, who asked him where was the lamb for the burnt offering? But we learn from the New Testament that Abraham acted in this and other matters "by faith," so his falsehoods and evasions, being results and aids of faith, must be dealt with in an entirely different manner from transactions of every day life. Just as Abraham stretched forth his hand to slay his son, the angel of the Lord called to him from heaven, and prevented the murder, saying, "Now I know that thou fearest God, seeing thou hast not withheld thy son." This conveys the impression that up to that moment the angel of the Lord was not quite certain upon the subject.

In Genesis xiii God says to Abraham, "Lift up now thine eyes, and look from the place where thou art northward, and southward, and eastward, and westward. For all the land which thou seest, to thee will I give it, and to thy seed for ever. Arise, walk through the land, in the length of it, and in the breadth of it, for I will give it unto thee." Yet, as is admitted by the Rev. Charles Boutell, in his "Bible Dictionary," "The only portion of territory in that land of promise, of which Abraham became possessed," was a graveyard, which he had bought and paid for. Although Abraham was too old to have children *before* the birth of Isaac, he had many children after Isaac [was] born. He lived to "a good old age" and died "full of years," but was yet younger than any of those who preceded him, and whose ages are given in the Bible history, except Nahor.

According to the Talmud, as Abraham was very pious so were his very camels, for they would not enter into a place where there were idols (Avoth d' Rabbi Nathan, chap. 8).

Abraham gave "all that he had to Isaac," but appears to have distributed the rest of the property amongst his other children, who were sent to enjoy it somewhere down East.

According to the New Testament, Abraham is now in Paradise, but Abraham in heaven is scarcely an improvement upon Abraham on earth. When he was entreated by an unfortunate in hell for a drop of water to cool his tongue, father Abraham replied: "Son, remember that in thy lifetime thou receivedst thy good things, and now thou art tormented," as if the reminiscence of past good would alleviate present and future continuity of evil.

Rabbi Levi says that Abraham sits at the gate of hell and does not permit any circumcised Israelite to enter (Yalkut Shimoni, fol. 33, col. 2, sec. 18).

The Talmud declares that "Abraham was a giant of giants; his height was as that of *seventy-four* men put together. His food, his drink, and his strength were in the proportion of seventy-four men's to one man's. He built an iron city for the abode of his seventeen children by Keturah, the walls of which were so lofty that the sun never penetrated them; he gave them a bowl full of precious stones, the brilliancy of which supplied them with light in the absence of the sun "(Sophrim, chap. 21).

A PLEA FOR ATHEISM.

BY C. BRADLAUGH.

GILLESPIE says that "an Atheist propagandist seems a nondescript monster created by nature in a moment of madness." Despite this opinion, it is as the propagandist of Atheism that I pen the following lines, in the hope that I may succeed in removing some few of the many prejudices which have been created against not only the actual holders of Atheistic opinions, but also against those wrongfully suspected of entertaining such ideas. Men who have been famous for depth of thought, for excellent wit, or great genius, have been recklessly assailed as Atheists, by those who lacked the high qualifications against which the spleen of the calumniators was directed. Thus, not only has Voltaire been without ground accused of Atheism, but Bacon, Locke, and Bishop Berkeley himself, have, amongst others, been denounced by thoughtless or unscrupulous pietists as inclining to Atheism, the ground for the accusation being that they manifested an inclination to improve human thought.

It is too often the fashion with persons of pious reputation to speak in unmeasured language of Atheism as favouring immorality, and of Atheists as men whose conduct is necessarily vicious, and who have adopted atheistic views as a desperate defiance against a Deity justly offended by the badness of their lives. Such persons urge that amongst the proximate causes of Atheism are vicious training, immoral and profligate companions, licentious living, and the like. Dr. John Pye Smith, in his "Instructions on Christian Theology," goes so far as to declare that "nearly all the Atheists upon record have been men of extremely debauched and vile conduct." Such language from the Christian advocate is not surprising, but there are others who, professing great desire for the spread of Freethought,

89

and with pretensions to rank amongst acute and liberal thinkers, declare Atheism impracticable, and its teachings cold, barren, and negative. In this brief essay I shall except to each of the above allegations, and shall endeavour to demonstrate that Atheism affords greater possibility for human happiness than any system yet based on Theism, or possible to be founded thereon, and that the lives of true Atheists must be more virtuous, because more human, than those of the believers in Deity, the humanity of the devout believer often finding itself neutralised by a faith with which it is necessarily in constant collision. The devotee piling the faggots at the *auto da fé* of an heretic, and that heretic his son, might, notwithstanding, be a good father in every respect but this. Heresy, in the eyes of the believer, is highest criminality, and outweighs all claims of family or affection.

Atheism, properly understood, is in nowise a cold, barren negative; it is, on the contrary, a hearty, fruitful affirmation of all truth, and involves the positive assertion and action of highest humanity.

Let Atheism be fairly examined, and neither condemned —its defence unheard—on the *ex parte* slanders of the professional preachers of fashionable orthodoxy, whose courage is bold enough while the pulpit protects the sermon, but whose valour becomes tempered with discretion when a free platform is afforded and discussion claimed; nor misjudged because it has been the custom to regard Atheism as so unpopular as to render its advocacy impolitic. The best policy against all prejudice is to assert firmly the verity. The Atheist does not say "There is no God," but he says, "I know not what you mean by God; I am without idea of God; the word 'God' is to me a sound conveying no clear or distinct affirmation. I do not deny God, because I cannot deny that of which I have no conception, and the conception of which, by its affirmer, is so imperfect that he is unable to define it to me." If you speak to the Atheist of God as creator, he answers that the conception of creation is impossible. We are utterly unable to construe it in thought as possible that the complement of existence has been either increased or diminished, much less can we conceive an absolute origination of substance. We cannot conceive either, on the one hand, nothing becoming something,

90

or on the other, something becoming nothing. The Theist who speaks of God creating the universe, must either suppose that Deity evolved it out of himself, or that he produced it from nothing. But the Theist cannot regard the universe as evolution of Deity, because this would identify Universe and Deity, and be Pantheism rather than Theism. There would be no distinction of substance—in fact no creation. Nor can the Theist regard the universe as created out of nothing, because Deity is, according to him, necessarily eternal and infinite. His existence being eternal and infinite, precludes the possibility of the conception of vacuum to be filled by the universe if created. No one can even think of any point of existence in extent or duration and say, here is the point of separation between the creator and the created. Indeed, it is not possible for the Theist to imagine a beginning to the universe. It is not possible to conceive either an absolute commencement, or an absolute termination of existence; that is, it is impossible to conceive beginning before which you have a period when the universe has yet to be; or to conceive an end, after which the universe, having been, no longer exists. It is impossible in thought to originate or annihilate the universe. The Atheist affirms that he cognises to-day effects, that these are at the same time causes and effects—causes to the effects they precede, effects to the causes they follow. Cause is simply everything without which the effect would not result, and with which it must result. Cause is the means to an end, consummating itself in that end. The Theist who argues for creation must assert a point of time, that is, of duration, when the created did not yet exist. At this point of time either something existed or nothing; but something must have existed, for out of nothing nothing can come. Something must have existed, because the point fixed upon is that of the duration of something. This something must have been either finite or infinite; if finite, it could not have been God, and if the something were infinite, then creation was impossible, as it is impossible to add to infinite existence.

If you leave the question of creation and deal with the government of the universe, the difficulties of Theism are by no means lessened. The existence of evil is then a terrible stumbling-block to the Theist. Pain, misery,

9.1

crime, poverty, confront the advocate of eternal goodness, and challenge with unanswerable potency his declaration of Deity as all-good, all-wise, and all-powerful. Evil is either caused by God, or exists independently; but it cannot be caused by God, as in that case he would not be all-good; nor can it exist independently, as in that case he would not be all-powerful. Evil must either have had a beginning, or it must be eternal; but, according to the Theist, it cannot be eternal, because God alone is eternal. Nor can it have had a beginning, for if it had it must either have originated in God, or outside God; but, according to the Theist, it cannot have originated in God, for he is all-good, and out of all-goodness evil cannot originate; nor can evil have originated outside God, for, according to the Theist, God is infinite, and it is impossible to go outside of or beyond infinity.

To the Atheist this question of evil assumes an entirely different aspect. He declares that evil is a result, but not a result from God or Devil. He affirms that by conduct founded on knowledge of the laws of existence it is possible to ameliorate and avoid present evil, and, as our knowledge increases, to prevent its future recurrence.

Some declare that the belief in God is necessary as a check to crime. They allege that the Atheist may commit murder, lie, or steal without fear of any consequences. To try the actual value of this argument, it is not unfair to ask—Do Theists ever steal? If yes, then in each such theft, the belief in God and his power to punish has been inefficient as a preventive of the crime. Do Theists ever lie or murder? If yes, the same remark has further force—hell-fire failing against the lesser as against the greater crime. The fact is that those who use such an argument overlook a great truth—*i.e.*, that all men seek happiness, though in very diverse fashions. Ignorant and miseducated men often mistake the true path to happiness, and commit crime in the endeavour to obtain it. Atheists hold that by teaching mankind the real road to human happiness, it is possible to keep them from the by-ways of criminality and error. Atheists would teach men to be moral now, not because God offers as an inducement reward by and by, but because in the virtuous act itself immediate good is ensured to the doer and the circle surrounding him. Atheism would preserve

92

man from lying, stealing, murdering now, not from fear of an eternal agony after death, but because these crimes make this life itself a course of misery.

While Theism, asserting God as the creator and governor of the universe, hinders and checks man's efforts by declaring God's will to be the sole directing and controlling power, Atheism, by declaring all events to be in accordance with natural laws—that is, happening in certain ascertainable sequences—stimulates man to discover the best conditions of life, and offers him the most powerful inducements to morality. While the Theist provides future happiness for a scoundrel repentant on his death-bed, Atheism affirms present and certain happiness for the man who does his best to live here so well as to have little cause for repenting hereafter.

Theism declares that God dispenses health and inflicts disease, and sickness and illness are regarded by the Theist as visitations from an angered Deity, to be borne with meekness and content. Atheism declares that physiological knowledge may preserve us from disease by preventing our infringing the law of health, and that sickness results not as the ordinance of offended Deity, but from ill-ventilated dwellings and workshops, bad and insufficient food, excessive toil, mental suffering, exposure to inclement weather, and the like—all these finding root in poverty, the chief source ot crime and disease; that prayers and piety afford no protection against fever, and that if the human being be kept without food he will starve as quickly whether he be Theist or Atheist, theology being no substitute for bread.

When the Theist ventures to affirm that his God is an existence other than and separate from the so-called material universe, and when he invests this separate, hypothetical existence with the several attributes of omniscience, omnipresence, omnipotence, eternity, infinity, immutability, and perfect goodness, then the Atheist, in reply, says—"I deny the existence of such a being."

It becomes very important, in order that injustice may not be done to the Theistic argument, that we should have —in lieu of a clear definition, which it seems useless to ask for—the best possible clue to the meaning intended to be conveyed by the word God. If it were not that the word is an arbitrary term, invented for the ignorant, and the

95

notions suggested by which are vague and entirely contingent upon individual fancies, such a clue could be probably most easily and satisfactorily obtained by tracing back the word "God," and ascertaining the sense in which it was used by the uneducated worshippers who have gone before us; collating this with the more modern Theism, qualified as it is by the superior knowledge of to-day. Dupuis says—"Le mot *Dieu* parâit destiné à exprimer l'idée de la force universelle et eternellement active qui imprime le mouvement à tout dans la Nature, suivant les lois d'une harmonie constant et admirable, qui se developpe dans les diverses formes que prend la matière organisée, qui se mêle à tout, anime tout, et qui semble être une dans ses modifications infiniment variées, et n'appartenir qu'à elle-même." "The word God appears intended to express the force universal, and eternally active, which endows all nature with motion according to the laws of a constant and admirable harmony; which develops itself in the diverse forms of organised matter, which mingles with all, gives life to all; which seems to be one through all its infinitely varied modifications, and inheres in itself alone."

In the "Bon Sens" of Curé Meslier, it is asked, "Qu'est-ce que Dieu?" and the answer is "C'est un mot abstrait fait pour designer la force cachée de la nature; ou c'est un point mathematique qui n'a ni longueur, ni largeur, ni profundeur." "It is an abstract word coined to designate the hidden force of nature, or rather it is a mathematical point having neither length, breadth, nor thickness."

The orthodox fringe of the Theism of to-day is Hebraistic in its origin—that is, it finds its root in the superstition and ignorance of a petty and barbarous people nearly destitute of literature, poor in language, and almost entirely wanting in high conceptions of humanity. It might, as Judaism is the foundation of Christianity, be fairly expected that the ancient Jewish Records would aid us in our search after the meaning to be attached to the word "God." The most prominent words in Hebrew rendered God or Lord in English are יהוה *Jeue*, and אלהים *Aleim*. The first word Jeue, called by our orthodox Jehovah, is equivalent to "that which exists," and indeed embodies in itself the only possible trinity in unity—*i.e.*, past, present, and future. There is nothing in this Hebrew word to help you to any such defini-

tion as is required for the sustenance of modern Theism. The most you can make of it by any stretch of imagination is equivalent to the declaration "I am, I have been, I shall be." The word יהוה is hardly ever spoken by the religious Jews who actually in reading substitute for it, Adonai, an entirely different word. Dr. Wall notices the close resemblance in sound between the word *Yehova* or *Yeue*, or Jehovah, and Jove. In fact Ζεύς πατὴρ Jupiter and Jeue—pater (God the father) present still closer resemblance in sound. Jove is also Ζεύς or Θεὸς or Δεύς, whence the word Deus and our Deity. The Greek mythology, far more ancient than that of the Hebrews, has probably found for Christianity many other and more important features of coincidence than that of a similarly sounding name. The word Θεὸς traced back affords us no help beyond that it identifies Deity with the universe. Plato says that the early Greeks thought that the only Gods (ΘΕΟΎΣ) were the sun, moon, earth, stars, and heaven. The word אֱלֹהִים, Aleim, assists us still less in defining the word God, for Parkhurst translates it as a plural noun signifying "the curser," deriving it from the verb אָלָה (Ale) *to curse*. Finding that philology aids us but little, we must endeavour to arrive at the meaning of the word "God" by another rule. It is utterly impossible to fix the period of the rise of Theism amongst any particular people, but it is notwithstanding comparatively easy, if not to trace out the development of Theistic ideas, at any rate to point to their probable course of growth amongst all peoples.

Keightley, in his "Origin of Mythology," says—"Supposing, for the sake of hypothesis, a race of men in a state of total or partial ignorance of Deity, their belief in many gods may have thus commenced. They saw around them various changes brought about by human agency, and hence they knew the power of intelligence to produce effects. When they beheld other and greater effects, they ascribed them to some unseen being, similar but superior to man." They associated particular events with special unknown beings (gods), to each of whom they ascribed either a peculiarity of power, or a sphere of action not common to other gods. Thus one was god of the sea, another god of war, another god of love, another ruled the thunder and lightning;

and thus through the various elements of the universe and passions of humankind, so far as they were then known.

This mythology became modified with the advancement of human knowledge. The ability to think has proved itself oppugnant to and destructive of the desire to worship. Science has razed altar after altar heretofore erected to the unknown gods, and pulled down deity after deity from the pedestals on which ignorance and superstition had erected them. The priest who had formerly spoken the oracle of God lost his sway, just in proportion as the scientific teacher succeeded in impressing mankind with a knowledge of the facts around them. The ignorant who had hitherto listened unquestioning during centuries of abject submission to their spiritual preceptors, at last commenced to search and examine for themselves, and were guided by experience rather than by church doctrine. To-day it is that advancing intellect challenges the reserve guard of the old armies of superstition, and compels a conflict in which humankind must in the end have great gain by the forced enunciation of the truth.

From the word "God" the Theist derives no argument in his favour; it teaches nothing, defines nothing, demonstrates nothing, explains nothing. The Theist answers that this is no sufficient objection, that there are many words which are in common use to which the same objection applies. Even admitting that this were true, it does not answer the Atheist's objection. Alleging a difficulty on the one side, is not a removal of the obstacle already pointed out on the other.

The Theist declares his God to be not only immutable, but also infinitely intelligent, and says:—"Matter is either essentially intelligent, or essentially non-intelligent; if matter were essentially intelligent, no matter could be without intelligence; but matter cannot be essentially intelligent, because some matter is not intelligent, therefore matter is essentially non-intelligent: but there is intelligence, therefore there must be a cause for the intelligence, independent of matter—this must be an intelligent being—*i.e.*, God." The Atheist answers, I do not know what is meant, in the mouth of the Theist, by "matter." "Matter," "substance," "existence," are three words having the

96

same signification in the Atheist's vocabulary. It is not certain that the Theist expresses any very clear idea when he uses the words "matter" and "intelligence.' Reason and understanding are sometimes treated as separate faculties, yet it is not unfair to presume that the Theist would include them both under the word intelligence. Perception is the foundation of the intellect. The perceptive faculty, or perceptive faculties, differs or differ in each animal: yet in speaking of matter the Theist uses the word "intelligence" as though the same meaning were to be understood in every case. The recollection of the perceptions is the exercise of a different faculty from the perceptive faculty, and occasionally varies disproportionately; thus an individual may have great perceptive faculties, and very little memory, or the reverse—yet memory, as well as perception, is included in intelligence. So also the faculty for comparing between two or more perceptions; the faculty of judging and the faculty of reflecting—all these are subject to the same remarks, and all these and other faculties are included in the word intelligence. We answer, then, that "God" (whatever that word may mean) cannot be intelligent. He can never perceive; the act of perception results in the obtaining a new idea, but if God be omniscient, his ideas have been eternally the same. He has either been always, and always will be perceiving, or he has never perceived at all. But God cannot have been always perceiving, because if he had he would always have been obtaining fresh knowledge, in which case he must have some time had less knowledge than now, that is, he would have been less perfect; that is—he would not have been God: he can never recollect or forget, he can never compare, reflect, nor judge. There cannot be perfect intelligence without understanding; but following Coleridge, "understanding is the faculty of judging according to sense." The faculty of whom? Of some person, judging according to that person's senses? But has "God" senses? Is there anything beyond "God" for "God" to sensate? There cannot be perfect intelligence without reason. By reason we mean that faculty or aggregation of faculties which avails itself of past experience to predetermine, more or less accurately, experience in the future, and to affirm truths which sense perceives, experiment verifies, and experience

97

confirms. To God there can be neither past nor future, therefore to him reason is impossible. There cannot be perfect intelligence without will, but has God will? If God wills, the will of the all-powerful must be irresistible; the will of the infinite must exclude all other wills.

God can never perceive. Perception and sensation are identical. Every sensation is accompanied by pleasure or pain. But God, if immutable, can neither be pleased nor pained. Every fresh sensation involves a change in mental and perhaps in physical condition. God, if immutable, cannot change. Sensation is the source of all ideas, but it is only objects external to the mind which can be sensated. If God be infinite there can be no objects external to him, and therefore sensation must be to him impossible. Yet without perception where is intelligence?

God cannot have memory or reason—memory is of the past, reason for the future, but to God immutable there can be no past, no future. The words past, present, and future imply change; they assert progression of duration. If God be immutable, to him change is impossible. Can you have intelligence destitute of perception, memory, and reason? God cannot have the faculty of judgment—judgment implies in the act of judging a conjoining or disjoining of two or more thoughts, but this involves change of mental condition. To God the immutable, change is impossible. Can you have intelligence, yet no perception, no memory, no reason, no judgment? God cannot think. The law of the thinkable is, that the thing thought must be separated from the thing which is not thought. To think otherwise would be to think of nothing—to have an impression with no distinguishing mark, would be to have no impression. Yet this separation implies change, and to God, immutable, change is impossible. Can you have intelligence without thought? If the Theist replies to this, that he does not mean by infinite intelligence as an attribute of Deity, an infinity of the intelligence found in a finite degree in humankind, then he is bound to explain, clearly and distinctly, what other "intelligence" he means, and until this be done the foregoing statements require answer.

The Atheist does not regard "substance" as either essentially intelligent or the reverse. Intelligence is the result of

98

certain conditions of existence. Burnished steel is bright—that is, brightness is the necessity of a certain condition of existence. Alter the condition, and the characteristic of the condition no longer exists. The only essential of substance is its existence. Alter the wording of the Theist's objection. Matter is either essentially bright, or essentially non-bright. If matter were essentially bright, brightness should be the essence of all matter; but matter cannot be essentially bright, because some matter is not bright, therefore matter is essentially non-bright; but there is brightness, therefore there must be a cause for this brightness independent of matter—that is, there must be an essentially bright being—*i.e.*, God.

Another Theistic proposition is thus stated:—"Every effect must have a cause; the first cause universal must be eternal: *ergo*, the first cause universal must be God." This is equivalent to saying that "God" is "first cause." But what is to be understood by cause? Defined in the absolute, the word has no real value. "Cause," therefore, cannot be eternal. What can be understood by "first cause?" To us the two words convey no meaning greater than would be conveyed by the phrase "round triangle." Cause and effect are correlative terms—each cause is the effect of some precedent; each effect the cause of its consequent. It is impossible to conceive existence terminated by a primal or initial cause. The "beginning," as it is phrased, of the universe, is not thought out by the Theist, but conceded without thought. To adopt the language of Montaigne, "Men make themselves believe that they believe." The so-called belief in Creation is nothing more than the prostration of the intellect on the threshold of the unknown. We can only cognise the ever-succeeding phenomena of existence as a line in continuous and eternal evolution. This line has to us no beginning; we trace it back into the misty regions of the past but a little way, and however far we may be able to journey, there is still the great beyond. Then what is meant by "universal cause?" Spinoza gives the following definition of cause, as used in its absolute signification, "By cause of itself I understand that, the essence of which involves existence, or that, the nature of which can only be considered as existent." That is, Spinoza treats "cause" absolute and "existence" as two words having the same meaning. If his mode of defining the word

99

be contested, then it has no meaning other than its relative signification of a means to an end. "Every effect must have a cause." Every effect implies the plurality of effects, and necessarily that each effect must be finite; but how is it possible from a finite effect to logically deduce an universal—*i.e.*, infinite cause?

There are two modes of argument presented by Theists, and by which, separately or combined, they seek to demonstrate the being of a God. These are familiarly known as the arguments *a priori* and *a posteriori*.

The *a posteriori* argument has been popularised in England by Paley, who has ably endeavoured to hide the weakness of his demonstration under an abundance of irrelevant illustrations. The reasoning of Paley is very deficient in the essential points where it most needed strength. It is utterly impossible to prove by it the eternity or infinity of Deity. As an argument founded on analogy, the design argument, at the best, could only entitle its propounder to infer the existence of a finite cause, or rather of a multitude of finite causes. It ought not to be forgotten that the illustrations of the eye, the watch, and the man, even if admitted as instances of design, or rather of adaptation, are instances of eyes, watches, and men, designed or adapted out of pre-existing substance, by a being of the same kind of substance, and afford, therefore, no demonstration in favour of a designer, alleged to have actually created substance out of nothing, and also alleged to have created a substance entirely different from himself.

The *a posteriori* argument can never demonstrate infinity for Deity. Arguing from an effect finite in extent, the most it could afford would be a cause sufficient for that effect, such cause being possibly finite in extent and duration. And as the argument does not demonstrate God's infinity, neither can it, for the same reason, make out his omniscience, as it is clearly impossible to logically claim infinite wisdom for a God possibly only finite. God's omnipotence remains unproved for the same reason, and because it is clearly absurd to argue that God exercises power where he may not be. Nor can the *a posteriori* argument show God's absolute freedom, for as it does nothing more than seek to prove a finite God, it is quite consistent with the argument

100

that God's existence is limited and controlled in a thousand ways. Nor does this argument show that God always existed; at the best the proof is only that some cause, enough for the effect, existed before it, but there is no evidence that this cause differs from any other causes, which are often as transient as the effect itself. And as it does not demonstrate that God has always existed, neither does it demonstrate that he will always exist, or even that he now exists. It is perfectly in accordance with the argument, and with the analogy of cause and effect, that the effect may remain after the cause has ceased to exist. Nor does the argument from design demonstrate one God. It is quite consistent with this argument that a separate cause existed for each effect, or mark of design discovered, or that several causes contributed to some or one of such effects. So that if the argument be true, it might result in a multitude of petty deities, limited in knowledge, extent, duration, and power; and still worse, each one of this multitude of gods may have had a cause which would also be finite in extent and duration, and would require another, and so on, until the design argument loses the reasoner amongst an innumerable crowd of deities, none of whom can have the attributes claimed for God.

The design argument is defective as an argument from analogy, because it seeks to prove a Creator God who designed, but does not explain whether this God has been eternally designing, which would be absurd; or, if he at some time commenced to design, what then induced him so to commence. It is illogical, for it seeks to prove an immutable Deity, by demonstrating a mutation on the part of Deity.

It is unnecessary to deal specially with each of the many writers who have used from different stand-points the *a posteriori* form of argument in order to prove the existence of Deity. The objections already stated apply to the whole class; and, although probably each illustration used by the theistic advocate is capable of an elucidation entirely at variance with his argument, the main features of objection are the same. The argument *a posteriori* is a method of proof in which the premises are composed of some position of existing facts, and the conclusion asserts a position antecedent to those facts. The argument is from given effects

1.0.1

to their causes. It is one form of this argument which asserts that man has a moral nature, and from this seeks to deduce the existence of a moral governor. This form has the disadvantage that its premises are illusory. In alleging a moral nature for man, the theist overlooks the fact that the moral nature of man differs somewhat in each individual, differs considerably in each nation, and differs entirely in some peoples. It is dependent on organisation and education: these are influenced by climate, food, and mode of life. If the argument from man's nature could demonstrate anything, it would prove a murdering God for the murderer, a lascivious God for the licentious man, a dishonest God for the thief, and so through the various phases of human inclination. The *a priori* arguments are methods of proof in which the matter of the premises exists in the order of conception antecedently to that of the conclusion. The argument is from cause to effect. Amongst the prominent theistic advocates relying upon the *à priori* argument in England are Dr. Samuel Clarke, the Rev. Moses Lowman, and William Gillespie. As this last gentleman condemns his predecessors for having utterly failed to demonstrate God's existence, and, as his own treatise on the "Necessary Existence of God" comes to us certified by the praise of Lord Brougham and the approval of Sir William Hamilton, it is to Mr. William Gillespie that the reader shall be directed.

The propositions are first stated entirely, so that Mr. Gillespie may not complain of misrepresentation:—

1. Infinity of extension is necessarily existing.

2. Infinity of extension is necessarily indivisible.

Corollary.—Infinity of extension is necessarily immovable.

3. There is necessarily a being of infinity of extension.

4. The being of infinity of extension is necessarily of unity and simplicity.

Sub-proposition.—The material universe is finite in extension.

5. There is necessarily but one being of infinity of expansion.

Part 2, *Proposition* 1.—Infinity of duration is necessarily existing.

2. Infinity of duration is necessarily indivisible.

1.0.2

Corollary.—Infinity of duration is necessarily immovable.

3. There is necessarily a being of infinity of duration.

4. The being of infinity of duration is necessarily of unity and simplicity.

Sub-proposition.—The material universe is finite in duration.

Corollary.—Every succession of substances is finite in duration.

5. There is necessarily but one being of infinity of duration.

Part 3, *Proposition* 1.—There is necessarily a being of infinity of expansion and infinity of duration.

2. The being of infinity of expansion and infinity of duration is necessarily of unity and simplicity.

Division 2, *Part* 1.—The simple sole being of infinity of expansion and of duration is necessarily intelligent and all-knowing.

Part 2.—The simple sole being of infinity of expansion and of duration, who is all-knowing, is necessarily all-powerful.

Part 3.—The simple sole being of infinity of expansion and of duration, who is all-knowing and all-powerful, is necessarily entirely free.

Division 3.—The simple sole being of infinity of expansion and of duration, who is all-knowing, all-powerful, and entirely free, is necessarily completely happy.

Sub-proposition.—The simple sole being of infinity of expansion and of duration, who is all-knowing, all-powerful, entirely free, and completely happy, is necessarily perfectly good.

The first objection against the foregoing argument is, that it seeks to prove too much. It affirms one existence (God) infinite in extent and duration, and another entirely different and distinct existence (the material universe) finite in extent and duration. It therefore seeks to substantiate everything and something more. The first proposition is curiously worded, and the argument to demonstrate it is undoubtedly open to more than one objection.

Mr. Gillespie has not defined infinity, and it is possible therefore his argument may be misapprehended in this paper. Infinite signifies nothing more than indefinite. When a person speaks of infinite extension he can only

1.0.3

mean to refer to the extension of something to which he has been unable to set limits. The mind cannot conceive extension *per se*, either absolute or finite. It can only conceive something extended. It might be impossible mentally to define the extension of some substance. In such a case its extension would be indefinite; or, as Mr. Gillespie uses the word, infinite. No one can therefore possibly have any idea of infinity of extension. Yet it is upon the existence of such an idea, and on the impossibility of getting rid of it, that Mr. Gillespie grounds his first proposition. If the idea does not exist, the argument is destroyed at the first step.

Mr. Gillespie argues that it is utterly beyond the power of the human mind to conceive infinity of extension non-existent. He would have been more correct in asserting that it is utterly beyond the power of the human mind to conceive infinity of extension at all, either existent or non-existent. Extension can only be conceived as quality of substance. It is possible to conceive substance extended. It is impossible in thought to limit the possible extension of substance. Mr. Gillespie having asserted that we cannot but believe that infinity of extension exists, proceeds to declare that it exists necessarily. For, he says, everything the existence of which we cannot but believe, exists necessarily. It is not necessary at present to examine what Mr. Gillespie means by existing necessarily; it is sufficient to have shown that we do not believe in the existence of infinity of extension, although we may and do believe in the existence of substance, to the extension of which we may be unable to set limits. But, says Mr. Gillespie, "everything the existence of which we cannot but believe is necessarily existing." Then as we cannot but believe in the existence of the universe (or, to adopt Mr. Gillespie's phrase, the material universe), the material universe exists necessarily. If by "anything necessarily existing," he means anything the essence of which involves existence, or the nature of which can only be considered as existent, then Mr. Gillespie, by demonstrating the necessary existence of the universe, refutes his own later argument, that God is its creator. Mr. Gillespie's argument, as before remarked, is open to misconception, because he has left us without any definition of some of the most important words he uses. To avoid the

104

same objection, it is necessary to state that by substance or existence I mean that which is in itself and is conceived *per se*—that is, the conception of which does not involve the conception of anything else as antecedent to it. By quality, that by which I cognise any mode of existence. By mode, each cognised condition of existence. Regarding extension as quality of mode of substance, and not as substance itself, it appears absurd to argue that the quality exists otherwise than as quality of mode.

The whole of the propositions following the first are so built upon it, that if it fails they are baseless. The second proposition is, that infinity of extension is necessarily indivisible. In dealing with this proposition, Mr. Gillespie talks of the *parts* of infinity of extension, and winds up by saying that he means parts in the sense of partial consideration only. Now not only is it denied that you can have any idea of infinity of extension, but it is also denied that infinity can be the subject of partial consideration. Mr. Gillespie's whole proof of this proposition is intended to affirm that the parts of infinity of extension are necessarily indivisible from each other. I have already denied the possibility of conceiving infinity in parts; and, indeed, if it were possible to conceive infinity in parts, then that infinity could not be indivisible, for Mr. Gillespie says that, by indivisible, he means indivisible, either really or mentally. Now each part of anything conceived is, in the act of conceiving, mentally separated from, either other parts of, or from the remainder of, the whole of which it is part. It is clearly impossible to have a partial consideration of infinity, because the part considered must be mentally distinguished from the unconsidered remainder, and, in that case, you have, in thought, the part considered finite, and the residue certainly limited, at least, by the extent of the part under consideration.

If any of the foregoing objections are well-founded, they are fatal to Mr. Gillespie's argument.

The argument in favour of the corollary to the second proposition is, that the parts of infinity of extension are necessarily immovable amongst themselves; but if there be no such thing as infinity of extension—that is, if extension be only a quality and not necessarily infinite; if infinite mean only indefiniteness or illimitability, and if infinity cannot have parts, this argument goes for very little. The acceptance of the

104

argument that the parts of infinity of extension are immovable, is rendered difficult when the reader considers Mr. Gillespie's sub-proposition (4), that the parts of the material universe are movable and divisible from each other. He urges that a part of the infinity of extension or of its substratum must penetrate the material universe and every atom of it. But if infinity can have no parts, no part of it can penetrate the material universe. If infinity have parts (which is absurd), and if some part penetrate every atom of the material universe, and if the part so penetrating be immovable, how can the material universe be considered as movable, and yet as penetrated in every atom by immovability? If penetrated be a proper phrase, then, at the moment when the part of infinity was penetrating the material universe, the part of infinity so penetrating must have been in motion. Mr. Gillespie's logic is faulty. Use his own language, and there is either no penetration, or there is no immovability.

In his argument for the fourth proposition, Mr. Gillespie —having by his previous proposition demonstrated (?) what he calls a substratum for the before demonstrated (?) infinity of extension—says, "it is intuitively evident that the substratum of infinity of extension can be no more divisible than infinity of extension." Is this so? Might not a complex and divisible substratum be conceived by us as possible to underlie a (to us) simple and indivisible indefinite extension, if the conception of the latter were possible to us? There cannot be any intuition. It is mere assumption, as, indeed, is the assumption of extension at all, other than as the extension of substance. In his argument for proposition 5, Gillespie says that "any one who asserts that he can suppose two or more necessarily existing beings, each of infinity of expansion, is no more to be argued with than one who denies, Whatever is, is. Why is it more difficult to suppose this than to suppose one being of infinity, and, in addition to this infinity, a material universe? Is it impossible to suppose a necessary being of heat, one of light, and one of electricity, all occupying the same indefinite expansion? If it be replied that you cannot conceive two distinct and different beings occupying the same point at the same moment, then it must be equally impossible to conceive the material universe and God existing together.

The second division of Mr. Gillespie's argument is also open

L.D.S.

to grave objection. Having demonstrated to his own satisfaction an infinite substance, and also having assumed in addition a finite substance, and having called the first, infinite "being;" perhaps from a devout objection to speak of God as substance, Mr. Gillespie seeks to prove that the infinite being is intelligent. He says, "Intelligence either began to be, or it never began to be. That it never began to be is evident in this, that if it began to be, it must have had a cause; for whatever begins to be must have a cause. And the cause of intelligence must be of intelligence; for what is not of intelligence cannot make intelligence begin to be. Now intelligence being before intelligence began to be, is a contradiction. And this absurdity following from the supposition, that intelligence began to be, it is proved that intelligence never began to be: to wit, is of infinity of duration." Mr. Gillespie does not condescend to tell us why "what is not of intelligence cannot make intelligence begin to be;" but it is not unfair to suppose that he means that of things which have nothing in common one cannot be the cause of the other. Let us apply Mr. Gillespie's argument to the material universe, the existence of which is to him so certain that he has treated it as a self-evident proposition.

The material universe—that is, matter, either began to be, or it never began to be. That it never began to be, is evident in this, that if it began to be, it must have had a cause; for whatever begins to be must have a cause. And the cause of matter, must be of matter; for what is not of matter, cannot make matter begin to be. Now matter being before matter began to be, is a contradiction. And this absurdity following from the supposition that matter—*i.e.*, the material universe, began to be, it is proved that the material universe never began to be—to wit, is of indefinite duration.

The argument as to the eternity of matter is at least as logical as the argument for the eternity of intelligence. Mr. Gillespie may reply, that he affirms the material universe to be finite in duration, and that by the argument for his proposition, part 2, he proves that the one infinite being (God) is the creator of matter. His words are, "As the material universe is finite in duration, or began to be, it must have had a cause; for, whatever begins to be must have

106

a cause. And this cause must be [Mr. Gillespie does not explain why], in one respect or other, the simple sole being of infinity of expansion and duration, who is all-knowing [the all-knowing or intelligence rests on the argument which has just been shown to be equally applicable to matter] inasmuch as what being, or cause independent of that being, could there be? And therefore, that being made matter begin to be." Taking Mr. Gillespie's own argument, that which made matter begin to be, must be of matter, for what is not matter, cannot make matter begin to be; then Mr. Gillespie's infinite being (God) must be matter. But there is yet another exception to the proposition, which is, that the infinite being (God) is all-powerful. Having as above argued that the being made matter, he proceeds, "and this being shown, it must be granted that the being is, necessarily, all-powerful." Nothing of the kind need be granted. If it were true that it was demonstrated that the infinite being (God) made matter, it would not prove him able to make anything else; it might show the being cause enough for that effect, but does not demonstrate him cause for all effects. So that if no better argument can be found to prove God all-powerful, his omnipotence remains unproved.

Mr. Gillespie's last proposition is that the being (God) whose existence he has so satisfactorily (?) made out, is necessarily completely happy. In dealing with this proposition, Mr. Gillespie talks of unhappiness as existing in various kinds and degrees. But, to adopt his own style of argument, Unhappiness either began to be, or it never began to be. That it never began to be is evident in this, that whatever began to be must have had a cause; for whatever begins to be must have a cause. And the cause of unhappiness must be of unhappiness, for what is not of unhappiness cannot make unhappiness begin to be. But unhappiness being before unhappiness began to be, is a contradiction; therefore unhappiness is of infinity of duration. But proposition 5, part 2, says there is but one being of infinity of duration. The one being of infinity of duration is therefore necessarily unhappy. Mr. Gillespie's arguments recoil on himself, and are destructive of his own affirmations.

In his argument for the sub-proposition, Mr. Gillespie says that God's motive, or one of his motives to create, must be believed to have been a desire to make happiness, besides

his own consummate happiness, begin to be. That is God, who is consummate happiness everywhere for ever, *desired* something. That is, he wanted more than then existed. That is, his happiness was not complete. That is, Mr. Gillespie refutes himself. But what did infinite and eternal complete happiness desire? It desired (says Mr. Gillespie) to make more happiness—that is, to make more than an infinity of complete happiness. Mr. Gillespie's proof, on the whole, is at most that there exists necessarily substance, the extension and duration of which we cannot limit. Part of his argument involves the use of the very *a posteriori* reasoning justly considered regarded by himself as utterly worthless for the demonstration of the existence of a being with such attributes as orthodox Theism tries to assert.

If Sir William Hamilton meant no flattery in writing that Mr. Gillespie's work was one of the "very ablest" on the Theistic side, how wretched indeed must, in his opinion, have been the logic of the less able advocates for Theism. Every Theist must admit that if a God exists, he could have so convinced all men of the fact of his existence that doubt, disagreement, or disbelief would be impossible. If he could not do this, he would not be omnipotent, or he would not be omniscient—that is, he would not be God. Every Theist must also agree that if a God exists, he would wish all men to have such a clear consciousness of his existence and attributes that doubt, disagreement, or belief on this subject would be impossible. And this, if for no other reason, because that out of doubts and disagreements on religion have too often resulted centuries of persecution, strife, and misery, which a good God would desire to prevent. If God would not desire this, then he is not all-good—that is, he is not God. But as many men have doubts, a large majority of mankind have disagreements, and some men have disbeliefs as to God's existence and attributes; it follows either that God does not exist, or that he is not all-wise, or that he is not all-powerful, or that he is not all-good.

Every child is born into the world an Atheist; and if he grows into a Theist, his Deity differs with the country in which the believer may happen to be born, or the people amongst whom he may happen to be educated. The belief is the result of education or organisation. Religious

108

belief is powerful in proportion to the want of scientific knowledge on the part of the believer. The more ignorant, the more credulous. In the mind of the Theist "God" is equivalent to the sphere of the unknown; by the use of the word he answers without thought problems which might otherwise obtain scientific solution. The more ignorant the Theist, the greater his God. Belief in God is not a faith founded on reason; but a prostration of the reasoning faculties on the threshold of the unknown. Theism is worse than illogical; its teachings are not only without utility, but of itself it has nothing to teach. Separated from Christianity with its almost innumerable sects, from Mahomedanism with its numerous divisions, and separated also from every other preached system, Theism is a Will-o'-the-wisp, without reality. Apart from othodoxy, Theism is a boneless skeleton; the various mythologies give it alike flesh and bone, otherwise coherence it hath none. What does Christian Theism teach? That the first man made perfect by the all-powerful, all-wise, all-good God, was nevertheless imperfect, and by his imperfection brought misery into the world, where the all-good God must have intended misery should never come. That this God made men to share this misery, men whose fault was their being what he made them. That this God begets a son, who is nevertheless his unbegotten self, and that by belief in the birth of God's eternal son, and in the death of the undying who died to satisfy God's vengeance, man may escape the consequences of the first man's error. Christian Theism declares that belief alone can save man, and yet recognises the fact that man's belief results from teaching, by establishing missionary societies to spread the faith. Christian Theism teaches that God, though no respector of persons, selected as his favourites one nation in preference to all others; that man can do no good of himself or without God's aid, but yet that each man has a free will; that God is all-powerful, but that few go to heaven and the majority to hell; that all are to love God, who has predestined from eternity that by far the largest number of human beings are to be burning in hell for ever. Yet the advocates for Theism venture to upraid those who argue against such a faith.

It is not pretended that this inefficient Plea for Atheism contains either a refutation of all or even the majority of

109

Theistic arguments, or that it offers an explanation of every objection against Atheism; but it is hoped that enough is here stated to induce some one of ability on the Theistic side to write for the better instruction of such as entertain the views here advocated—views held sincerely, views propagated actively, and views which are permeating more widely than is generally supposed.

Either Theism is true or false. If true, discussion must help to spread its influence; if false, the sooner it ceases to influence human conduct the better for human kind. It will be useless for the clergy to urge that such a pamphlet deserves no reply. It is true the writer is unimportant, and the language in which his thoughts find expression lacks the polish of a Macaulay, and the fervour of a Burke; but they are nevertheless his thoughts, uttered because it is not only his right, but his duty to give them utterance. And this Plea for Atheism is put forth challenging the Theists to battle for their cause, and in the hope that the strugglers being sincere, truth may give laurels to the victor and the vanquished; laurels to the victor in that he has upheld the truth; laurels still welcome to the vanquished, whose defeat crowns him with a truth he knew not of before.

The Atheistic Platform.

VII.

SOME OBJECTIONS TO SOCIALISM.

BY

CHARLES BRADLAUGH.

LONDON:
FREETHOUGHT PUBLISHING COMPANY,
63 FLEET STREET, E.C.
1884

PRICE ONE PENNY

THE ATHEISTIC PLATFORM.

Under this title is being issued a fortnightly publication, each number of which consists of a lecture delivered by a well-known Freethought advocate. Any question may be selected, provided that it has formed the subject of a lecture delivered from the platform by an Atheist. It is desired to show that the Atheistic platform is used for the service of humanity, and that Atheists war against tyranny of every kind, tyranny of king and god, political, social, and theological.

Each issue consists of sixteen pages, and is published at one penny. Each writer is responsible only for his or her own views.

I. "What is the use of Prayer?" Second Edition. By ANNIE BESANT.

II. "Mind Considered as a Bodily Function." By ALICE BRADLAUGH.

III. "The Gospel of Evolution." By EDWARD AVELING, D.Sc.

IV. "England's Balance Sheet." By CHARLES BRADLAUGH.

V. "The Story of the Soudan." By ANNIE BESANT.

VI. "Nature and the Gods." By A. B. MOSS.

These six in wrapper, sixpence. Post free, sevenpence.

SOME OBJECTIONS TO SOCIALISM.

By CHARLES BRADLAUGH.

THE great evils connected with and resulting from poverty—evils which are so prominent and so terrible in old countries, and especially in populous cities—have, in our own land compelled the attention, and excited the sympathy, of persons in every rank of society. Many remedies have been suggested and attempted, and from time to time, during the present century, there have been men who, believing that the abolition of individual private property would cure the misery abounding, have advocated Socialism. Some pure-hearted and well-meaning men and women, as Robert Owen, Abram Combe, and Frances Wright, have spent large fortunes, and devoted much of their lives in the essay to test their theories by experiments. As communities, none of these attempts have been permanently successful, though they have doubtless, by encouraging and suggesting co-operative effort in England, done something to modify the fierceness of the life struggle, in which too often the strongest and most unscrupulous succeeded by destroying his weaker brother. Some Socialistic associations in the United States,[1] as the Shakers and the Oneida community, have been held together in limited numbers as religious societies, but only even apparently successful, while the numbers of each community remained comparatively few. Some communities have for many years bravely endured the burden of debt, penury, and discomfort, to be loyal to the memory of their founder, as in the case at Icaria of the followers of Cabet. But

[1] Particulars of all existing Socialistic communities in the United States are given in the works of Mr. Hinds and Mr. Nordhoff.

in none of these was the sense of private property entirely lost; the numbers were relatively so small that all increase of comfort was appreciable, and in nearly all the communities there was option of the withdrawal of the individual, and with him of a proportion of the property he had helped to create or increase.

During the past generation, Socialistic theory has been specially urged in Germany, and the Socialist leaders there have acquired greater influence because of the poverty of the people, and because too of the cruel persecution to which Social Reformers, as well as Socialists, have been subjected by Prince Bismarck's despotic government.

A difficulty arising from the repressive measures resorted to in Germany has been that German emigrants to the United States and to Great Britain, speak and write as if precisely the same wrongs had to be assailed in the lands of their adoption as in the land of their birth.

Very recently in England—and largely at the instance of foreigners—there has been a revival of Socialist propaganda, though only on a small scale compared with fifty years ago, by persons claiming to be "Scientific Socialists," who declare that such Socialists as Robert Owen and his friends were utopian in thinking that any communities could be successfully founded while ordinary society exists. These Scientific Socialists—mostly middle-class men—declare their intense hatred of the *bourgeoisie*, and affirm that the Social State they desire to create can only be established on the ruins of the present society, by a revolution which they say must come in any event, but which they strive to accelerate. These Scientific Socialists deny that they ought to be required to propound any social scheme, and they contemptuously refuse to discuss any of the details connected with the future of the new Social State, to make way for which the present is to be cleared away. Most of the points touched on in this lecture were raised in the discussion on Socialism between myself and Mr. Hyndman recently held in St. James's Hall. Others of the questions have been raised in my articles in *Our Corner*, and in the reply there by Mr. Joynes.

The Socialists of the Democratic Federation say that "Socialism is an endeavor to substitute an organised co-operation for existence" for the present strife, but they refuse to be precise as to the method or character of the organisation, or the lines upon which it is to be carried out. Their reason is, probably, that they have not even made the slightest effort to frame any plan, but would be content to try first to destroy all existing government. I suggest that this want and avoidance of foresight is, in the honest, folly, and in the wise, criminality. They mix up some desirable objects which are not all Socialistic with others that are not necessarily Socialistic, and add to these declarations which are either so vague as to be meaningless, or else in the highest degree Socialistic and revolutionary.

Whilst Mr. Hyndman, one of the prominent members of the Democratic Federation, thus speaks of Socialism as endeavoring "to substitute an organised co-operation," Mr. E. Belfort Bax, another prominent member and co-signatory of the manifesto, emphatically says, "no 'scientific' socialist pretends to have any 'scheme' or detailed plan of organisation." When organisation can be spoken of as possible without any scheme or detailed plan, it shows that words are used without regard to serious meaning.

These Socialists declare that there must be "organisation of agricultural and industrial armies under State control," and that the exchange of all production must be controlled by the workers; but they decline to explain how this control is to be exercised, and on what principles. We agree that there are often too many concerned in the distribution of the necessaries of life, and that the cost to the consumer is often outrageously augmented; but we suggest that this may be reformed gradually and in detail by individual effort through local societies, and that it ought not to be any part of the work of the State. We point to the fact that there are now in Great Britain—all established during the present reign—nearly one thousand distributive co-operative societies, with more than half a million members, with over seventeen and three-quarter millions of pounds of yearly sales, with two and a half

millions of stock-in-trade, with five and a quarter millions of working capital, and dividing one and a half millions of annual profit ; and that these societies, each keeping its own property, still further co-operate with one another to reduce loss in exchange by having a wholesale co-operative society in England, with sales in 1882 exceeding three and a half millions sterling, and another similar wholesale society in Scotland, with transactions in the same year to nearly one million sterling. We say the way to render the cost of exchange of products less onerous to the laborer is by the extension and perfection of this organisation of co-operative distribution, and that this may be and is being done successfully and usefully, ameliorating gradually the condition and developing the self-reliance of the individual workers who take part in such co-operative stores, and thus inciting and inducing other individuals to join the societies already founded, or to establish others, and so educating individual after individual to better habits of exchange. We say that this is more useful than to denounce as idlers and robbers "the shopkeepers and their hangers on," as is done by the present teachers of Socialism. We object that the organisation of all industry under State control must paralyse industrial energy and discourage and neutralise individual effort.

The Socialists claim that there shall be "collective ownership of land, capital, machinery and credit by the complete ownership of the people," and yet they object that they are misrepresented when told that they want to take the private economies of millions of industrious wage-earners in this kingdom for the benefit of those who may have neither been thrifty nor industrious. The truth is that, if language is to have any meaning, the definitions must stand given by me and unchallenged by my opponent in the St. James's Hall debate, viz. : (1) "Socialism denies all individual private property, and affirms that society, organised as the state, should own all wealth, direct all labor, and compel the equal distribution of all produce." (2) "A Socialistic State would be a State in which everything would be held in common, in which the labor of each individual would be directed and controlled by the

State, to which would belong all results of such labor." The realisation of a Socialistic State in this country would, as I then urged, require (1) a physical force revolution, in which all the present property owners unwilling to surrender their private properties to the common fund would be forcibly dispossessed. This revolution would be in the highest degree difficult, if not impossible, for property holders are the enormous majority.

Mr. Joynes, in an article published in *Our Corner*, does challenge my definition, and says that the immediate aim of Socialism "is not the abolition of private property, but its establishment by means of the emancipation of labor on the only sound basis. It is private capital we attack, the power to hire laborers at starvation wages, and not the independent enjoyment of the fruits of labor by the individual who produces them." And he refers me to a paragraph previously dealt with by me as an illustration of contradictory statement, in which he and his cosignatories write: "Do any say we attack private property? We deny it. We only attack that private property for a few thousand loiterers and slave-drivers, which renders all property in the fruits of their own labor impossible for millions. We challenge that private property which renders poverty at once a necessity and a crime." But surely this flatly contradicts the declaration by Mr. Hyndman in the debate, of "the collective ownership of land, capital, machinery, and credit." I am afraid that Mr. Joynes has in his mind some other unexplained meaning for the words "capital" and "property." To me it seems impossible that if everything be owned collectively, anything can be owned individually, separately, and privately.

Mr. Joynes, however, apparently concedes that it is true that the private property of "a few thousand loiterers and slave-drivers" is attacked. Though he does not in his reply explain who these "few thousand" are, I find in "The Summary of the Principles of Socialism," signed by Mr. Joynes, that they are "the capitalist class, the factory owners, the farmers, the bankers, the brokers, the shopkeepers, and their hangers-on, the landlords." But these make much

more than a "few thousand." The census returns for England and Wales alone show under the headings professional classes, 647,075 ; commercial classes, 980,128 (and these do not include the ordinary shopkeepers) ; farmers and graziers, 249,907 ; and unoccupied males over twenty, 182,282. Add to these proportional figures for Scotland and Ireland, and it is at once seen how misleading it is to speak of these as a "few thousand." Mr. Joynes disapproves of my "small army of statistics." I object that he and his friends never examine or verify the figures on which they found their allegations. Mr. Joynes says that it is not private property, the fruits of labor, that is attacked by the Socialists, but "private capital, the power to hire laborers." Does that mean that £30 saved by an artisan would not be attacked so long as he kept it useless, but that if he deposited it with a banker who used it in industrial enterprise, or if he invested it in railway shares, it would be forfeited ? If an artisan may, out of the fruits of his labor, buy for £3 and keep as his own a silver watch, why is the £3 to be confiscated when it gets into the hands of the Cheapside or Cornhill watch dealer ?

A property owner is not only a Rothschild, a Baring, or an Overstone, he is that person who has anything whatever beyond that which is necessary for actual existence at the moment. Thus, all savings however moderate ; all household furniture, books, indeed everything but the simplest clothing are property, and the property owners belong to all classes. The wage-earning classes, being largely property owners, viz., not only by their household goods, but by their investments, building societies, their small deposits in savings banks, their periodical payments to their trade societies and friendly societies, they would naturally and wisely defend these against confiscation. If the physical force revolution were possible, because of the desperate energy of those owning nothing, its success would be achieved with serious immediate crime, and would be attended with consequent social mischief and terrible demoralisation extending over a long period.

Mr. Hyndman has written that "force, or fear of force, is, unfortunately, the only reasoning which can

appeal to a dominant estate, or will ever induce them to surrender any portion of their property." I read these words to him in the debate, and he made no reply to them. I object that a Socialistic State to be realised by force can only be so realised after a period of civil war shocking to contemplate, and one in which the wisest would go near madness.

But a Socialistic State, even if achieved, could not be maintained without a second (mental) revolution, in which the present ideas and forms of expression concerning property would have to be effaced, and the habit of life (resulting from long-continued teachings and long-enduring traditions) would have to be broken. The words "my house," "my coat," "my horse," "my watch," "my book," are all affirmations of private property which would have to be unlearned. The whole current of human thought would have to be changed.

In a Socialistic State there would be no inducement to thrift, no encouragement to individual saving, no protection for individual accumulation, no check upon, no discouragement to waste.

Nor, if such a Socialistic State be established, is it easy to conceive how free expression of individual opinion, either by press or platform, can be preserved and maintained. All means of publicity will belong to, and be controlled by, the State. But what will this mean? Will a Socialistic government furnish halls to its adversaries, print books for its opponents, organise costly journals for those who are hostile to it? If not, there must come utter stagnation of opinion.

And what could the organisation and controlling of all labor by the State mean? In what could it end? By whom, and in what manner, would the selection of each individual for the pursuit, profession, or handicraft for which he was fittest be determined?

I object that the Socialistic advocates exaggerate and distort real evils, and thus do mischief to those who are seeking to effect social reforms. For example, they declare that the whole of the land of the country is held by "a handful of marauders," who ought to be dispossessed, and when told that there are 852,438 persons owning on an average less than one fifth of an acre each, holding probably in the neighborhood of

towns, and that more than half a million of these persons are members of building societies, paying for their small properties out of their wage-earnings, they only say: "Do you suppose those who hold building allotments will be dispossessed?" But if they are not dispossessed, if their private property is left to them, then "collective ownership" must have a new meaning. Pressed with the fact that there are 205,358 owning on an average fifteen acres each, they make no other answer. Yet this 1,037,896, representing with their families more than four millions of human beings, are clearly not a "handful," nor is there any evidence offered that they are "marauders." My complaint is that the possibility of early Land Law Reform is injured and retarded by such rashness. It is an undoubted evil that in this crowded kingdom so few as 2,238 persons should own 39,924,232 acres of land, and that the enormous holdings should be inadequately taxed, but we need the influence of the one million small landowners to enable us legally to reform and modify those obnoxious land laws which have facilitated the accumulation of such vast estates in so few hands. In the debate with myself, Mr. Hyndman spoke very contemptuously of the "small ownerships" and "paltry building allotments," yet he ought to know that the holders of these houses are law-abiding, peace-promoting citizens, who are encouraged by these slight possessions, which give promise of comfort in life, to strive so that the comfort shall be extended and secured.

A sample of the wild and extraordinary exaggeration indulged in by the Democratic Federation may be found on p. 48 of the "Summary of the Principles of Socialism," where it is gravely declared that the "idlers who eat enormously and produce not at all form the majority of the population," and this may be fairly contrasted with another statement by the same persons that the present conditions of labor have "brought luxury for the few, misery and degradation for the many." If the latter be accurate, the former must be a perversion.

The Socialists say that there are a few thousand persons who own the National Debt, and they recommend

its extinction ; usually leaving it in doubt as to whether this is to be by wholesale or by partial repudiation. When reminded that there are an enormous number of small depositors (at least 4,500,000 accounts in one year) owning through the ordinary savings banks £45,403,569, and through the Post Office Savings Bank, £36,194,495, they neither explain the allegation as to the few thousands, nor do they condescend to offer the slightest explanation as to how any savings have been possible if all the wealth created by labor has been "devoured only by the rich and their hangers-on." Repudiation of the National Debt would ruin the whole of these. The Socialist leader says that the small ownership of land and these small savings do not really benefit the working classes, for that in times of depression the savings are soon used up. That may often be true, but if there were no savings, then it must be starvation, pauperism, or crime ; at least the saving mitigates the suffering. When told that there are 2,300,000 members of friendly societies, who must represent at least 9,000,000 of the inhabitants of this country, and that these, amongst other investments, have £1,397,730 in the National Debt, we are answered that these are mere details. On this point I think Mr. Joynes a little fails in candor. He takes one set of my figures, and says "the share of each individual is on the average a little more than £3 3s., and the dividend which annually accrues to each of these propertied persons is slightly over 2s. It does not require a very high standard of intelligence to enable a man to perceive that Socialists who intend to deprive him of these 2s., and at the same time to secure him the full value of his work, are proposing not to diminish his income, but to raise it in a very high degree." Let me first say that the friendly society represents to each artisan investor, not the 2s. per year, but his possible sick money, gratuity on disablement, allowance whilst unemployed, etc.; next, that here Mr. Joynes does in this actually admit an attack on the private property of the laborer, and does propose to take away the accumulated "fruits of labor" from the independent enjoyment of the individual who earned it. And the working-man's house ? and his savings in the savings-

bank, or in the co-operative store? Are these to be taken too? If not, why not? and if yes, of how much of the fruits of his labor is the laborer to be left by the Socialists in "independent enjoyment"? When pressed that the confiscation of the railways "without compensation," would bankrupt every life assurance company, and thus destroy the provision made for hundreds of thousands of families, because in addition to about £5,262,000 in the Funds, and about £75,000,000 invested on mortgages of houses and land, the life insurance companies are extensive holders of railway securities—the advocates of Socialism only condescend to say: "Who are the shareholders in the railways? Do they ever do any good in the world? They are simply using the labor of the dead in order to get the labor of the living." But is this true? The shareholders originally found the means to plan, legalise, and construct the railway, to buy the land, to pay the laborer day by day his wage, whilst yet the railway could bring no profit, to buy the materials for the permanent way, to purchase and maintain the rolling stock. Many hundreds of shareholders in unsuccessful lines have never received back one farthing of what they paid to the laborer. No laborer worked on those unsuccessful lines without wage. Some railway shareholders have got too much, but there are thousands of comparatively poor shareholders who are to be ruined by the seizure of their shares without compensation. It is not at all true that railway shareholders use "the labor of the dead in order to get the labor of the living." On the contrary, during the last few years the tendency on lines like the Midland, has been to afford the widest facilities, and the greatest possible comfort consistent with cheapness, to working-folk travelling for need or pleasure. That all railway managers are not equally far-seeing is true, that much more might be done in this direction is certain, that some managing directors are over-greedy is clear, but that the change has been for the better during the past twenty years none would deny who had any regard for truth. That railway porters, pointsmen, guards, firemen, and drivers are, as Mr. Joynes well urges, often badly paid, and nearly always overworked, is true, but

making the railways State property would not necessarily improve this. The Post Office is controlled by the State for the State, and the letter-carriers and sorters are as a body disgracefully remunerated.

Mr. Joynes complains that I have not met the question of the "surplus value" of labor, which he says "is the keystone of the Socialistic argument." He does not explain upon what basis the alleged surplus value is calculated, but shelters himself behind a vague, and I submit incorrect, reference to a declaration by Mr. Hoyle, the well-known earnest temperance advocate. Mr. Joynes says that in one and a-half hours the laborer earns enough for subsistence. Mr. Hoyle's often-repeated declaration is in substance to the effect, that if the whole drink traffic of the country were abolished, and neither wines, beers, nor spirits drunk by any of the industrial classes, then that the working men could earn enough for comfort in very much less time than they now do. Mr. Joynes here entirely overlooks the substance of Mr. Hoyle's declaration, which is, in effect, that the working men do now receive, and then spend wastefully, what would keep them. I have always contended that in nearly every department of industry labor has been insufficiently paid, in some cases horribly paid, and I have claimed for the laborer higher wages, and tried to help to teach him, through trades' unions and otherwise, how to get these higher wages; but if Mr. Joynes and his friends mean anything, wages are to disappear altogether, and the State is to apportion to each a sort of equal subsistence, without regard to the skill or industry of the individual laborer, so that the skilled engineer, the unskilled hod-carrier, the street sweeper, the ploughman, and the physician, would each, in the Socialistic State, have neither less nor more than the other.

The Socialists say "the laborers on the average replace the value of their wages for the capitalist class in the first few hours of their day's work; the exchange value of the goods produced in the remaining hours of the day's work constitutes so much embodied labor which is unpaid; and this unpaid labor so embodied in articles of utility, the capitalist class, the factory owners, the farmers, the bankers, the brokers,

the shopkeepers, and their hangers-on, the landlords, divide amongst themselves in the shape of profits, interests, discounts, commissions, rent, etc." But without the capitalist where would be the workshop, the plant, or the raw material? It would be better if in co-operative production workmen would be their own capitalists, but surely the owner of capital is entitled to some reward? If not how is he to be persuaded to put it into fixed capital as factory and plant? Why should he beforehand purchase raw material on which labor may be employed, subsist labor while so employed, and take the risk of loss as well as profit in exchanging the article produced? And why is not the farmer to be sustained by the laborers if that farmer grows the food the laborer requires? Why should not the shopkeeper be rewarded for bringing ready to the laborer articles which would be otherwise in the highest degree difficult to procure? If the laborer procured his own raw material, fashioned it into an exchangeable commodity, and then went and exchanged it, there are many to whom the raw material would be inaccessible, and more who would lose much of the profits of their labor in fruitless efforts to exchange. The vague declarations by the Socialist that production and exchange are to be organised are delusive without clear statement of the methods and principles of the organisation. Robert Owen is called "Utopian" by these Democratic Federation Socialists, but at least he did try to reduce to practice his theories of production and exchange. The Democratic Federation say that "surplus value" is produced by "labor applied to natural objects under the control of the capitalist class." I object that but for capital, fixed and circulating, there are many natural objects which would be utterly inaccessible to labor; many more which could only be reached and dealt with on a very limited scale. That but for capital the laborer would often be unable to exist until the object had exchangeable value, or until some one was found with an equivalent article ready to exchange, and I submit that the banker, the shopkeeper, the broker may and do facilitate the progress of labor, and would and could not do so without the incentive of profit.

We agree that "wage" is often much too low, and we urge the workers in each trade to join the unions already existing, and to form new unions, so that the combined knowledge and protection of the general body of workers as to the demand for, and value of, the labor, may be at the service of the weakest and most ignorant. We would advocate the establishment of labor bureaux, as in Massachusetts, so that careful and reliable statistics of the value of labor and cost of life may be easily accessible. We would urge the more thorough experiment on, and establishment of, co-operative productive societies in every branch of manufacture, so that the laborers furnishing their own capital and their own industry, may not only increase the profit result of labor to the laborer, but also afford at least a reasonable indication as to the possible profit realised by capitalists engaged in the same industries. We would increase wage (if not in amount, at any rate in its purchasing power), by diminishing the national and local expenditure, and thus also decreasing the cost of the necessaries of life. We would try to shift the pressing burden of taxation more on to land, and to the very large accumulation of wealth.

We contend that he or she who lives by the sale of labor should, with the purchase money, be able to buy life, not only for the worker, but for those for whom that worker is fairly bread-winner. And life means not only healthy food, reasonable clothing, cleanly, healthy shelter, education for the children until they are so sufficiently grown that labor shall not mean the crippling of after life—but also leisure. Leisure for some enjoyment, leisure for some stroll in the green fields, leisure for some look into the galleries of paintings and sculpture, leisure for some listening to the singer, the actor, the teacher; leisure that the sunshine of beauty may now and then gild the dull round of work-a-day life; and we assert that in any country where the price of honest earnest industry will not buy this, then that if there are any in that country who are very wealthy, there is social wrong to be reformed. But this is the distinction between those with whom I stand and the Socialists.

We want reform, gradual, sure, and helpful. They ask for revolution, and know not its morrow.

Revolution may be the only remedy in a country where there is no free press, no free speech, no association of workers, no representative institutions, and where the limits of despotic outrage are only marked by the personal fear of the despot. But in a country like our own, where the political power is gradually passing into the hands of the whole people, where, if the press is not entirely free it is in advance of almost every European country, and every shade of opinion may find its exponent, here revolution which required physical force to effect it would be a blunder as well as a crime. Here, where our workmen can organise and meet, we can claim reforms and win them. The wage-winners of Durham and Northumberland, under the guidance of able and earnest leaders, have won many ameliorations during the past twenty years. Each year the workers' Parliament meets in Trades Union Congress, to discuss and plan more complete success, and to note the gains of the year. Every twelve months, in the Co-operative Congresses, working men and women delegates gather together to consult and advise. Each annual period shows some progress, some advantage secured, and though there is much sore evil yet, much misery yet, much crime yet, much—far too much—poverty yet, to-day's progress from yesterday shows day-gleam for the people's morrow.

SECULARISM:

UNPHILOSOPHICAL, IMMORAL, AND ANTI-SOCIAL.

Verbatim Report of a Three Nights' Debate between the REV. DR. MCCANN *and* CHARLES BRADLAUGH, *on December 7th, 14th, and 21st*, 1881.

FIRST NIGHT.—W. BARNARD, ESQ., in the Chair.

The Chairman having read the conditions of Debate, the Rev. Dr. MCCANN said:—Another debate on Secularism! And why another? Surely there have been enough, and more than enough, on that subject already, without adding to their number. Can anything be urged on either side that has not been urged before? Such may be the thoughts of many; and I grant, not unreasonable ones; still, though I may not have much that is fresh to bring before you, I may arrange the old materials in such form that it will be readily seen whether my opponent is following my lead, as he is bound to do, or whether he is chalking out a new course for himself, and leaving my reasonings to take care of themselves. In such a discussion as this, it is of the utmost importance that the audience should be able to see at a glance whether the disputants are sticking to the point, or whether they are fighting shy of it. I have therefore arranged what I have to say in a series of propositions which are simple of apprehension and consecutive in thought, but the importance of which must be patent to all who read them. In order that the debate might be as thorough as possible, I sent a copy of them to Mr. Bradlaugh about a month ago, so that he is perfectly aware of the line of argument I propose adopting. (Cheers.) I base my views regarding Secularism on what I believe to be sufficient reasons. Mr. Bradlaugh doubtless does the same; we have now to show whose are the superior reasons, and in doing this I

hope that each will personally respect the other as a searcher for truth (cheers); but while doing this, I may state so far as our reasonings are concerned, I give no quarter and I ask none.

To proceed then to our subject. My first proposition is that Secularism is Atheism. This, I fancy, Mr. Bradlaugh will not dispute, still it is important that I should have it acknowledged. Understand that I am not discussing whether Atheism be true or false, with that we have no concern at present, my only contention is that Secularism is Atheism. In reference to this Mr. Bradlaugh said in his debate with Mr. Harrison (p. 13): "there is another point that I do not think I need trouble to discuss, whether Secularism is Atheism or not, because I think it is. I have always said so, I believe, for the last thirteen years of my life, whenever I have had an opportunity of doing so." That Mr. Bradlaugh has not changed his opinion is shown by the *National Reformer* for October 16th, 1881, in which he writes: "I am, too, an Atheist, and I hold that the logical and ultimate consequence of adopting Secularism must be Atheism," and I perfectly agree with him, for the principles of the British Secular Union seem to me to be logically absurd. To say, as they do, that outside the concerns of "the present life, Secularist members are free to hold any opinions, and to promulgate such opinions on their own responsibility," seems to me to be very like quiet banter, for what opinions can be outside the concerns of this present life on any possible subject, philosophical or scientific? I therefore hold most thoroughly that the position of Mr. Bradlaugh is the only logical one, that is to say, that Secularism is Atheism.

My next proposition is that Secularism is Necessitarianism. Necessitarianism denies that we have freedom to will, and consequently affirms that our actions are not within our own control. The doctrine as stated by Mr. Mill (Examination, 562) is that "A volition is a moral effect, which follows the corresponding moral causes as certainly and invariably as physical effects follow their physical causes. Whether it must do so, I acknowledge myself to be entirely ignorant, be the phænomena moral or physical: and I condemn accordingly the word necessity as applied to either case." You will observe that he places mental acts and

physical in the same category of invariable sequence; that is, that there is no more freedom in the volition of a man than in the growth of a flower. He condemns the word necessity, as do all his school, but why? Because he does not know that any happening must happen; he does not know that if a cannon ball strike a wall with any amount of force the wall must fall; he only knows it does fall. Indeed Professor Bain states this explicitly when he says that ("Mental and Moral Science," 406), "To express causation we need only name one thing, the antecedent or cause, and another thing the effect; a flying cannon shot is a cause, the tumbling down of a wall is the effect." Messrs. Mill and Bain would tell us that they do not know that the wall must fall, they only know that it does fall; it is not knocked down, it tumbles down. This being their only reason for objecting to the term necessity, I shall continue to use it, as I have a very strong conviction that the wall is under the necessity of falling.

Necessitarianism then denies that we can in any degree originate our own actions. It affirms that these are the invariable effects of certain unavoidable causes. It denies that we are in any true sense of the term, agents, or have any self-determination, or any self-control. There is none in the flower, there is none in the wall, and Necessitarianism holds equal sway in all such cases. We are merely links in the chain of happenings, as much the creatures of circumstances as the links of any cable of a ship. We are told that circumstances, over which we have no control, originate our motives, and our motives produce our actions; we being only the channels through which flows the stream of antecedents and consequents; we are as helpless in the matter, and have as little to do with their nature, as has a river bed with the water that flows through it. In perfect harmony with this is the teaching of Mr. Bradlaugh, as it is bound to be. His words are (Cooper debate, p. 43): "He (Mr. Cooper) says that man is a free agent, for he can sin against his own conscience. I say he cannot sin. Man cannot resist the circumstances that result in volition." Understand this clearly as it is of the utmost importance, and it shall give direction to all I may hereafter say. I am not now attempting to disprove Necessitarianism. My present purpose is to explain it, and I hope

not unfairly. Mr. Bradlaugh has put the whole question as concisely as possible—that man cannot resist the circumstances that result in volition. In other words, man has no power of resistance ; not only can he not overcome them, he cannot even resist them. I would not press this word "resist" so strongly were it merely a word used incautiously in the heat of debate ; but as it is the exact expression of the views of that school, I am justified in making what use of it I choose. We certainly fancy we sometimes resist, and resist pretty steadily too—so steadily as eventually to overcome the temptation. It is all a mistake, say our friends ; there is no resisting the circumstances that result in volition! You see a man coming out of a public house perfectly drunk. There was no help for it ; he could not resist. Poor fellow, he was the victim of antecedents and consequents. Don't blame him. Blame him! You cannot blame him if your antecedents do not produce blame. You cannot help it if they do. Your judgment of his drunkenness is no affair of yours or his ; it is the necessary effect of the circumstances that have resulted in volition! Mr. Bradlaugh is here a Secularist leader and a defender of their cause. But why here? Not because he has thought out the matter carefully for himself, and has determined to cast in his lot with theirs. Not so ; it has been all determined, not by himself, but for him, in the chain of causation. According to my friend's teaching, he has no more power to be aught but an Atheist than I have to be aught but a Theist. No praise to him, no blame to me. We are what we are, because by no personal possibility could we have been otherwise. I do not fancy it can be a pleasant thought for Mr. Bradlaugh that he never does, but is always done. But that is the fundamental principal of Necessitarianism ; and as he must be a Necessitarian, being an Atheist, he has no help for it.

Necessitarians, however, acknowledge a difference between physical and mental causation. Professor Bain writes, "Mental and Moral Science," p. 399 :—"The speciality of voluntary action as compared with the powers of the inanimate world is, that the antecedent and the consequent are conscious or mental states (coupled, of course, with bodily states)." According to this, voluntary action means that you know what you are doing. If a man

compels me to drink a cup of poison, Bain would tell me I do it voluntarily, because I know I am drinking it! The only volitional difference, then, between the actions of a rose and those of a man is, that the one knows what is being done and the other does not. So far, I think, the rose has the best of it, for the rose, when blooming but poorly, does not know what a poor-looking wretch it is, but the drunkard is perfectly aware he is making a fool of himself, yet has no power to resist it. It will not do for Mr. Bradlaugh to say that this is not his teaching, but that of Professor Bain, and therefore he is not responsible for it. The words may not be his, but the thought is an integral part of his system. He affirms we are not free in any degree to self-determine our own course in life—that we are not agents but instruments; of course he will acknowledge that we are conscious of what we are doing, while the flower is not; consequently, whatever may be said of the teaching of Mr. Bain on this subject, applies to the teaching of Mr. Bradlaugh and of all logical Secularists. If there be any difference between Mr. Bradlaugh and Mr. Bain on this point, it will be regarding the consciousness of the flower, as Mr. Bradlaugh seems a little in doubt on that subject. When asked by Dr. Baylee (page 50) the question, "Is a cabbage stalk non-intelligent?" his answer was, "If you mean has a cabbage the power of thinking, I have no evidence." Still, I have a strong impression that, in spite of this answer, he will agree with Professor Bain.

We must not, however, imagine that while Necessitarians deny all freedom in volition, they deny it everywhere; that would be impolitic, because the word freedom, and the thought freedom exist, and so a place must be found for them somewhere, consequently a place has been found, and a very queer place it is. It is not within our mental life at all, but altogether outside of it. It is thus explained by Bain (p. 398): "The capital objection to free-will is the unsuitability, irrevalence, or unpropriety of the metaphor 'freedom' in the question of the sequence of motive and act in volition. The proper meaning of 'free' is the absence of external compulsion; every sentient being, under a motive to act, and not interfered with by any other being, is to all intents free; the fox impelled by hunger, and proceeding unmolested to a poultry yard, is a free agent." This is significant, and

somewhat racy. You will observe in the first place that freedom in the selection of action is a "metaphor." The fox is not free to decline paying the hens a visit, he is only free to go on till he is stopped; if he be caught in a trap he is free no longer. Most decidedly not. And this is Secularist freedom, the freedom of Necessitarians, mere absence of PHYSICAL restraint! Take another illustration, perhaps more to the point. The man compelled by circumstances which he could not resist goes for drink, goes home drunk. Compelled by circumstances which he could not resist—by hunger—he demands his supper. There being none for him, compelled by circumstances which he could not resist, he raises his fist to strike his wife. So far there is no freedom in the case. Now, however, he is free, for there is no external obstacle in the way of his arm; at least there was not, till his wife caught it with one of her hands, and, compelled by circumstances which she could not resist, gave him a stunner with the other. Poor fellow! he soon lost the little freedom he had; first floored by whiskey, and then by his wife, without the power to resist either.

But this aspect of the question has another application. If freedom means absence of external compulsion, and if no man in England is externally compelled to think in one way rather than in another, then every man in England is a freethinker. So let our friends, the Secularists, be consistent, and give the right hand of fellowship to every thinker in England as a brother freethinker.

But if Secularism be Necessitarianism, then it must be also Fatalism, for to my mind they are exactly the same. I know that Mr. Bradlaugh denies this. He writes ("Freethinker's Text Book"): "The Fatalist says what is, is, and must be, could not have been otherwise, and cannot be altered. The Necessitarian says what is, is, and must have resulted from such and such conditions, but the conditions might have been varied, and the results would then have been different." The only difference, then, even according to Mr. Bradlaugh, is that the conditions might have been varied in the past. So far as the present life is concerned they are identical, but how could the conditions have been varied in the past? If our volitions spring from our conditions, which we have no power to alter, neither could our ancestors have altered theirs, and so could not have

altered ours. Consequently, Fatalism and Necessitarianism are the same thing. The application of all this—that is, of Secularism, to the affairs of life, will occupy our next evenings. Meantime, I claim to have shown what Necessitarianism is; also that Secularism is Atheism, that Atheism involves Necessitarianism or Fatalism, and that consequently all logical Secularists must be Atheists; being Atheists, must be Necessitarians or Fatalists. Mr. Bradlaugh will shortly have the opportunity of showing whether I have in any way misrepresented the theory or whether my illustrations have been in any degree unfair. It will not do to say they have been, the fallacies or the unfairness must be clearly exposed, and until they are, I hold that I have proved my first and second propositions.

My next proposition is, that Secularism, in so far as it is Necessitarianism, is unphilosophical and therefore untrue. It is evident that if there be any ultimate standard of truth, whatever contradicts that must be false, and by the fact of contradiction is proved false. Is there such a standard? I hold there is, and that it is found in Consciousness. In other words, whatever consciousness affirms is, and must be, true, because its authority is unquestionable. On this subject Sir William Hamilton (Lectures I., 265) writes: "Now, it is at once evident that philosophy, as it affirms its own possibility, must affirm the veracity of consciousness, for as philosophy is only a scientific development of the facts which consciousness reveals, it follows that philosophy, in denying or doubting the testimony of consciousness, would deny or doubt its own existence. So far there is, and can be, no dispute; if philosophy be possible, the evidence of consciousness is authentic." This position is so self-evident that it is not easy to imagine the possibility of anyone attempting to deny it. Yet the feat has been attempted by Mr. Bradlaugh, who apparently saw very clearly that he must either invalidate the testimony of consciousness or give up his Necessitarianism and his Secularism. In his discussion with Mr. Lawson (p. 25) he writes: "A maniac peasant deems himself a prince; to himself he is a prince; his consciousness does it not deceive him?" Surely the fact that he has to go to a maniac for an illustration ought to have aroused his suspicions regarding its worth. Mr. Buckle, whom he quotes in confirmation of his views, goes to a man in delirium tremens

for his illustration, and states that he is conscious of seeing spectres and phantoms that do not exist. Just fancy anyone being conscious of seeing the non-existent! We may believe in that which has no existence, or imagine it, but to be conscious of it is inherently absurd. A peasant conscious that he is a prince! Surely Mr. Bradlaugh is too acute to believe anything so foolish. He is apparently confounding consciousness with the interpretation of consciousness. We are conscious of our own mental states, but the inference from that state is not given in consciousness. It is perfectly true that the peasant is conscious of the belief that he is a prince, but that is a very different matter from being conscious that he is one. Consciousness is not responsible for false judgments, or for variety of dispositions, or for disturbance of brain. But it seems useless to dwell upon this point, because we must either admit the truthfulness of consciousness or give up all reasoning as useless, or impossible, in a word, we commit philosophical suicide.

Next to the consciousness of our own existence is the consciousness that we are intelligent agents capable of a certain amount of self-determination. I do not say that I am convinced that I am free, but that I know that I am. The conviction is a later thing than the knowledge, and must be founded on evidence. But where is this evidence? Only in the preceding knowledge, for it could be found nowhere else, it never could be found outside myself, but always in my own processes. Each one knows himself in some degree the author of his own actions. I say in some degree, because no one contends that any human being is perfectly unwarped by his inherited tendencies, his education, and his surroundings; but I do contend that every one knows that all these things still leave him a certain amount of freedom of self-control, that amount may not be alike in any two individuals, but in all sane persons it is found in some degree. Bearing this in mind I say that we know as a fact that when we are deciding between alternative courses, we are deciding the matter ourselves, and it is not decided for us by some remote antecedence. I know that my being here to night is in part my action, and not wholly the action of my ancestors. I am conscious I am not a mere force driven helplessly to and fro by the winds of circumstances,

without any power to control myself. I know in certain cases that I am controlling myself. If there be one fact in my life more clearly apprehended by me than another, it is this, that I am the cause of my own actions; that, in spite of Mr. Bradlaugh's assertion, I can sin if I will, or I can struggle against it if I will—that if another tempt me to wrong, I may yield, or I may reject the suggestion; but if I yield, I yield, and have myself to blame, and must not throw that blame on some remote event, and console myself by saying what is, is, and could not have been otherwise. I feel assured that whatever Mr. Bradlaugh may feel himself compelled to say on this platform, by the exigencies of theory, in practical life if he saw any man steal, for example, he would not say to him, "it is all right, you could not help it, you are only the victim of your antecedents." Because he would be perfectly aware that the thief would consider he was being laughed at, as he would know better than this. Of course we have reasons and motives for our conduct, we do not act irrationally, but the will is not by them constrained, the strongest motive does not determine the will, but the will determines what motives shall be allowed to gain strength, by its control of intelligence and attention. Reason as we may on this matter, we must ultimately refer the results to consciousness, and if they be inconsistent with its facts, they must be rejected as untrue. That Mr. Bradlaugh feels his reasonings on this subject to be inconsistent with it, is pretty evident from the fact that he tries to shake our belief in the authority of consciousness, or rather tries to shake our knowledge of ourselves, a task no one would attempt unless compelled by a dire necessity.

But this theory of the constrained action of the will is easily tested by experiment and its fallacy exposed. Suppose I were to ask you all to raise your right hand, and in response to my appeal a certain number of arms arose, would you not laugh at me if I told you that it was not you who raised them or who kept them from rising, that they were raised but not by you? Would you not know the action was your own? If you knock a man down purposely, what does your consciousness tell you? Why it seems useless to argue the point; it is too palpable to admit of dispute. Do we not know we are not talking nonsense when we say "I will," "I shall," "I choose," "I determine," and other words in the vocabu-

lary of freedom? Yet, if my friend be correct, they must be nonsense, and the whole language of volition had better be abolished, and not allowed to remain any longer to puzzle and deceive us. In the name of honesty let us be thorough in this matter, and either acknowledge Necessitarianism to be nonsense, or banish all the words that contradict it, and construct a vocabulary applicable to animated machines. In other words form a new language altogether, for most assuredly our own present language, as are all languages, is in harmony with consciousness, and not in antagonism to it. And as language is the prôduct of the convictions and needs of those who construct it, this fact is of the utmost significance, and greatly strengthens my position, if it need strengthening, which I do not think it does; for I think that, apart from the testimony of language altogether, I have abundantly proved that Necessitarianism is in direct antagonism to the facts of consciousness, and is consequently unphilosophical and false. I have now given what appear to me sufficient reasons for affirming that Secularism is Atheism, that Secularism or Atheism is Necessitarianism, and that Necessitarianism is unphilosophical. I now give place to Mr. Bradlaugh, with the very earnest wish that our discussion may do something to aid the cause of truth, may do something to help our brother men to fight nobly the battle of life, may do something to help them onwards, upwards, manwards. (Cheers.)

Mr. Bradlaugh, who was received with cheers, said:—It is perfectly correct that about a month ago the Rev. Dr. McCann was good enough to write me with the proposition that Secularism was Unphilosophical, Atheistic, Necessitarian, and Anti-social, but he did no more; and therefore although I do not say that I am in any degree unprepared for the debate, the notice that he was good enough to give me did not enlighten me any more than those words would enlighten anybody else. I am quite sure that Dr. McCann will bear in mind that when he wrote, I had, some weeks previously to that—when he was good enough to invite me to consider this question—told him that I should define Secularism as it was defined by the National Secular Society (and as you will find it in the Society's Almanack). I shall, to-night, so define it and explain it. I shall then follow Dr. McCann in some of the number of points—which

are well worthy of consideration—which he put before us. I may say that the view of Secularism which I shall give you is not altogether my own view, but is a view which has been carefully considered by a committee of Secularists appointed at a national meeting of Freethinkers, a committee which considered the matter for about twelve months and which carefully drew up the propositions I shall read you. Their report was endorsed by a conference of Secularists—many of them holding very different opinions upon Secularism—held at Nottingham, who ultimately voted that which I shall put before you. I shall, in reading, call them Nos. 1, 2, 3, 4 and 5, so as to distinguish them for identification.

"1. "The National Secular Society has been formed to maintain the principles and rights of Freethought, and to direct their application to the secular improvement of this life. By the principle of Freethought is meant the exercise of the understanding upon relevant facts independently of penal or priestly intimidation."

Now what we mean by that is, that there are constantly recurring instances of penal and priestly intimidation, instances in which we think that the exercise of the understanding ought not to be made amenable in the way it is. For example, Richard Vesey came before one of our Metropolitan Coroners to give evidence on an inquiry held on the death of his wife, and happened to say that he did not know anything about god or immortality; he was insulted by the coroner, although he claimed the right to affirm, and although in this case he happened to have the legal right to affirm—for a person with no religious belief now clearly has that right; the coroner probably was so used to insulting Secularists who came before him as jurymen, that he confused the claim of witness-affirmation because he knew jurymen could not exercise that right. We have similar cases as to jurymen happening every day. It is only a week or two ago that one of our Norwich members (Mr. R. A. Cooper) found himself in the same position. I need not give you a long record of these cases, but that is one illustration of what we mean by penal and priestly intimidation. There was a case only the other day in which Mr. Richard Roe was refused by the Recorder of York to be allowed to affirm. At Edmonton two freethought witnesses were in-

sulted by Mr. Alderman Abbiss, on the ground that nothing could bind them, and yet the right of an Atheist witness to affirm under the Evidence Amendments Acts of 1869 and 1870 is clear and indisputable, and has been so held by the Court of Queen's Bench, in a case, in 1875, of a man named Lennard, who said he was an Atheist and sought to affirm but was refused. The National Secular Society fought the case for this poor man, and a mandamus was issued, directing the magistrate to receive the Atheist's evidence. This principle of the National Secular Society urges full scope to the judgment, and claims that it shall be unwarped by penal and priestly intimidation. We hear this week of the case of a poor man who has been called as a witness at Cardiff, who happens to be a Secularist, and who, having claimed the right to affirm, at the present moment is in hourly expectation of being discharged from his occupation under a great company because of his Secularism. We say in this No. 1 principle that we ought to be free from the possibility of penalty for the expression of our views. As Dr. McCann is well aware —Dr. McCann is thoroughly well informed on all these points—by 9 and 10 William III., cap. 32, and by the common law on the matter, I am prosecutable for even the position I am taking and shall take in this debate; and although it is perfectly true that no prosecution for that offence has taken place in England since that of Thomas Pooley, at Bodmin, it has been held to be law by the Court of Exchequer in the case of Cowan *v.* Milburn, where Baron Bramwell held that it might vitiate contracts. We have a case at Bakewell, in Derbyshire, of a man who has been sought to be dismissed from his position as workhouse master simply because it is alleged he held Secularistic views. We have still more of these penal intimidations. I might refer you to the case of the lady beside me, who was deprived of her daughter in consequence of her opinions on religion. At the present moment there is a notice on the Order Book of the House of Commons for the purpose of preventing Dr. E. B. Aveling, for the purpose of preventing Mrs. Besant, for the purpose of preventing my daughters from teaching, as they are entitled to teach, in this Hall—nay, for the purpose of preventing the building itself from being utilised for educational purposes. ("Shame!") I

should have thought that those who cannot agree with us in religious matters would have been glad to see us endeavoring to educate ourselves. I am sure Dr. McCann won't concur in any such intimidation. But our Secularism exists as a militant society for the purpose of relieving Freethinkers from these pains and penalties. Dr. E. B. Aveling has been deprived of his lectureship on Comparative Anatomy at London Hospital because he has publicly identified himself with us. I won't weary you with any further instances, otherwise I might refer to my own case, in which I am kept from my seat in Parliament, and it is actually sought at the present moment, by the aid of a common informer, to ruin me in order to prove that the Secularism which I teach is wrongful and immoral, and some are at present trying to make me bankrupt for penalties for not taking an oath which they compelled me not to take. Now the second proposition I shall read—still from the National Secular Society's principles—is that—

"2. By the rights of Freethought are meant the liberty of free criticism for the security of truth, and the liberty of free publicity for the extension of truth."

On this I put it that there are only two logical positions, one that of absolute submission to authority, or the assertion of the right and duty of private judgment, whatever may be the result of that judgment. In theology the logical extremes are on the one side the Roman Catholic Church, and on the other Atheism. (Cheers.) Now the third proposition is that

"3. Secularism relates to the present existence of man and to actions the issue of which can be tested by experience."

It declares that

"The promotion of human improvements and happiness is the highest duty, and that morality is to be tested by utility."

In this Secularism is guided by, and must be guided by, Anthropology. To know man, it is necessary to learn not only what you are, what the men with whom you come in contact are, but to learn in what they differ; to learn in what, if anything, those differences have been softened down or have been encouraged, or have been productive of benefit or the reverse; to learn what has

been man's history—that is, what have been the histories of the various types and races of mankind—that, so becoming aware of the result of type in consciousness, of type in will, we may see what determines the happiness or misery of man's existence in the place in which he is living. From these researches Secularism learns what events have tended to human improvement and what have not. It examines and compares the various languages and the various religions of the world. And here let me say that I do not accept the definition of language hurriedly given by my friend, and I shall have something more to say about that in its place. Secularism also says:

"4. That, in order to promote effectually the improvement and happiness of mankind, every individual of the human family ought to be well placed and well instructed, and that all who are of a suitable age ought to be usefully employed for their own and the general good."

Secularists cannot help noticing that, until lately, an enormous mass of the people of the world were left almost absolutely without education. Secularism cannot help noticing how the bulk of those who urge that we are immoral and wicked are all the while spending thousands of millions of pounds on killing one another, and until lately were spending, comparatively, only a few pounds on education. Secularism cannot help noticing, whether it be right or wrong, that, while efforts on behalf of infant education, and co-operative effort so far as this nation is concerned, have been limited to the present century in their establishment, they have been associated with men who, on account of their speculative heresies, have been denounced for their immorality. And, finally, the Secularist affirms:

"5. That human improvement and happiness cannot be effectually promoted without civil and religious liberty, and that, therefore, it is the duty of every individual to actively attack all barriers to equal freedom of thought and utterance upon all political, theological and social subjects. The Secularist is one who deduces his moral duties from considerations which pertain to this life, and who, practically recognising the above duties, devotes himself to the promotion of the general good. The object of the National Secular Society is to disseminate the above principles by every legitimate means in its power."

The Secularist, as such, is, politically, neither Imperialist,

Monarchist, nor Republican. I happen to be a Republican, but Secularists claim the right to discuss and examine every form of Government. Theologically, the Secularist claims the same freedom for discussing all creeds, so that if political power should happen to fall into the hands of a Secularist, he would not impose any disability on any sect or creed. (Cheers.) What is true of these political and theological topics is true also of social topics. I happen to be a Republican, but there is nothing in the principles of the society requiring the recognition of Republicanism. There is nothing in the declarations obliging the Secularist to prefer one form of Government to another, unless he happens in his convictions to be of the opinion that a Republican Government tends to the general good and happiness. I happen to be an Atheist, and believe that the free and normal exercise of the understanding on so-called religious problems must tend to Atheism. There are many Secularists who disagree with me. There is no Atheistic pledge in the principles of this Society. If you tell me that every scientific pledge, in result, is an Atheistic pledge, I should be ready to admit it, because I think so. In political economy I happen to be opposed to Socialism, but there is no word in the principles of the Society making any declaration on this head either in its favor or against it. Now I shall, as far as possible, follow the lead which was set me in the opening speech, and although I can travel pretty quickly I shall have to gallop if I catch up my friend. I do not complain of that, because we are not only talking to the crowd assembled in this room (which, I believe, will be a good and well-behaved one), but we are also talking to the people who will read this debate after its conclusion. The first proposition put is that Secularism is Atheism. I happen to think that the consequence of Secularism is Atheism, and I have always said so. Clearly all Secularists are not Atheists. Clearly many people who believe themselves to be sincere Theists can sign the declarations and principles which I have read to you without doing any violation to their honest declaration, but so far as I am concerned personally, and probably many will agree with me, I contend that the result of Secularism is Atheism, and I have no wish to avoid it in this debate. Only do not put it on all. Do not put it on the Society. There are many Atheists in the

Society, and some who are not. I try to make more every day (cheers), and I have some satisfaction in believing that my efforts are not entirely unsuccessful. The second proposition is, that Secularism is Necessitarianism. Well, suppose that be so. I do not know whether our friend means that all Necessitarianism is immoral. I think he does. Then Jonathan Edwards was immoral. I am not saying he was. I am only drawing the conclusion from Dr. McCann's proposition. There have been people Necessitarians who were not Secularists. I think they were sensible people, because I hold the doctrine of Necessitarianism must to all, who really think on the matter, be the ultimate conclusion. I do not mean by that there are not many who honestly and thoughtfully hold the opposite view. I do not mean to imply any sort of contempt for their view. On all those questions, on which the world learns more and more every day, there is a continual fluctuation in opinion as the tide goes backwards and forwards, but still, in reality, ever onwards. Every day there must be some who hold to an opinion which others more accurately discard. The only difference between myself and the Rev. Dr. McCann will be that what he means by Necessitarianism I do not mean. With that exception we are quite at one let me say. I possibly may save some trouble to the Doctor by at once conceding that I draw no distinction between what he calls mental acts and physical acts. I know no mental act that is not a physical act, but I do not, therefore, say that the physical act of a cabbage is the same as that which is now manifesting itself in my speech, any more than I say that a stone of a quarter of a pound weight which is rolled by the sea is exactly the same weight and size as the glacier slowly moving upon the top of Mont Blanc. Things are different, and when different they are not the same. (Cheers.) That is the distinction which was omitted to be drawn in the excellently able speech (one which was carefully prepared) which has just been delivered to us. Now Dr. McCann says that Necessitarianism denies that we can in any degree originate our own actions. No! It does not say "in any degree." So little does it teach you that, that we are now in another part of this building in some small degree trying to help originate the actions of next year. What we do say is this, that a man who is too fat to

get through a small hole cannot get through it, but we do not say that if he undergoes the process of Banting he cannot do so. That is, that what happens must accord with the precedent conditions. Man is one of the precedent conditions and is certainly not passive in originating and determining resultant action. We make only the difference of degree in the case of many animals, we do not locate man alone. I am pleased that considerable attention has been paid by my very talented antagonist to what I have written and said at different times. I am pleased that he thought it worth reading, and I hope others will imitate him, but I must ask him not to take for granted that a few words taken by themselves out of a debate will fairly represent the opinion I was maintaining. I am not at all complaining of the accuracy of any quotations. I am not complaining that it was unfair towards me to quote any words I may have used. I am not seeking to dissociate myself from the distinct obligation which rests on me either to maintain what I have said, or to abandon what I have said on some other occasion. I am only pointing out to you that a skilled speaker might easily take some phrase from a sermon and build a very strong argument upon it, while totally misrepresenting the sermon. I will show you one as an illustration which was quoted from the Cooper debate. "Man cannot resist the circumstances which result in volition." With a less acute person than my able antagonist I should have thought he must have misunderstood it. I know it was not intentional, but I will show you that he has misapprehended it or misappreciated it, and that he has given you an incorrect view, because he says we fancy we had resisted, and sometimes resisted so that we overcame, the temptation. Ah, then, you do not resist the volition. It is some other volition that results. You have not overcome the volition. You have not got the volition, and what is it happens if we resist? Let us take a case. The drunken man has been used to-night over and over again, and I will take that drunken man. Take the case of a man born of fairly healthy parents, and the case of a man unfortunately coming into the world with the blood poison of drink in his veins. Any medical man will tell you that science now verifies thousands of such instances, and I am sorry to say in this land. Blood poison from drink is transmitted through

more than one generation. Take the case of one so tainted from birth, who has around him associations of crime and of filth, of misery and of degradation, and take the other who has healthy organisation to start with, and who has some better knowledge of what is bright in the world than the one I have put to you, surrounded by all that is dark, and with the inherited blackness inside, and I ask you to try the resistance of those men. In some degree it is admitted the action is governed. In what degree? By the degree of the poisoned organisation given to the child at its birth; by the degree of crime that went on for generations before it was born; by the degree of the filthy atmosphere in which it breathes; by the degree of disease and wretchedness which surrounds it up to the moment of volition. By these degrees is it necessitated? The Secularist says prayer does not clear the drain. We show men how, and we give to their brains the tonic of our knowledge. Some take it better than others, some worse than others, but to all it is a new spring, a new ingredient. Men are not helplessly driven to and fro in the sense of being merely passive victims. Each one is an active drop in the waves which make up the ocean of human life, not only making up the wave but making part of its activity, acting on as well as acted on, resisting and inspiring, not dashed "helplessly" but helping to dash. Our friend (and it is a pleasure to be opposed to a gentleman able to make points good-humoredly as our friend does), our friend raised a laugh, in which I was pleased to share, about the intelligence of the cabbage-stalk, and perhaps he will talk of the admission I am now going to make. Between the cabbage and the man I know no break. Between the highest of which I know and the lowest of which I know in the scale of life I know no break. I do not mean to say any difference, but any break. I trace step by step down the ladder until I come where it is impossible for me, for want of technical knowledge, to distinguish between animal and vegetable life. Not only impossible for me, but impossible for the most skilled specialist we have. But there is a large difference between the rose and the cabbage. Yes; as there is a large difference between the Englishman and the Negro; between the Andaman and the Caucasian; and you have no right to talk

of man as though man meant the same everywhere. You have no right to put it as though they were all on one level, on one plain. There are marked degrees of differing ability, and that which is possible in volition for the Negro on given conditions, and that which is possible in volition for me on like conditions, are possibilities which are not the same, are possibilities which differ largely from each other. I have not yet time to deal with the freedom of the will.

The CHAIRMAN here intimated that the time had expired, and Mr. Bradlaugh sat down amidst cheering.

DR. MCCANN: You have had, as you always do have from Mr. Bradlaugh, a very pointed, telling and eloquent speech, but one that has not much to do with the subject for debate. He has referred me to the principles of the National Secular Society for a definition of Secularism. But surely my friend does not fall into the error of supposing that Secularism is co-extensive with the cause of Secularists; that those laws comprehend and involve the whole subject of Secularism. It must be admitted that Secularism is something far wider and far more extensive than the laws of a society existing in this country called the National Secular Society. He has no right to take the laws instituted by the members of that society for their own guidance, and call them Secularism; as well might he call the laws of the Royal Astronomical Society astronomy. Those rules which Mr. Bradlaugh has reproduced are not at all a definition of Secularism. Many of those professed objects of Secularism are in common with other isms. But I want a definition of Secularism which will separate it from all other isms. Towards achieving many of those objects I would work with heart and soul in conjunction with Mr. Bradlaugh. He has alluded to the existence of priestly intimidations at the present time. He, however, only referred to the case of coroner's inquests and has given us no illustrations of priestly intimidations. I perfectly agree with him that the oath ought to be abolished, and with him I hope the time will come when the oath will be abolished both in the courts and in Parliament. But I must have a definition of Secularism which shall differentiate it from any other ism—between that ism and my ism. Mr. Bradlaugh wants civil and religious liberty; I equally hope that

civil and religious liberty will go on widening and increasing, and becoming more powerful the longer we live. Though we disagree in some things we agree in others, and he must not call these things Secularism which, rightly and peculiarly attach also to Christianism. He also stated that Secularism, supposing it came into power to-morrow—which I do not think it will—would not impose any disabilities on any creed or claim. I hope to show you on the next evening, the qualities inherent in Secularism; to show you, for example, that it teaches persecution. My friend has told you that he does not advocate Socialism. For this there was no necessity, for I did not introduce Socialism, either directly or indirectly. As regards the Negroes and their beliefs, we will confine our attention to ourselves and leave the Negroes to look after themselves and their own beliefs. (Hisses.) There are certain matters in our belief which are in common with all human beliefs —the same fundamental conceptions—and there is the same consciousness in the Negro as in the European. He has told you that there are many Secularists who are not Atheists, but this, according to his own statement, is because they have not sufficient brains. He acknowledges that Atheism is the logical consequence of Secularism, therefore all those who are logical Secularists are Atheists, and those who are not Atheists are illogical Secularists. He states that I said that Secularists as Necessitarians are immoral. "If so," he rejoins, "Jonathan Edwards was immoral, for he was a Necessitarian." I accuse no man of immorality. I am here to attack Secularism and not Secularists. I say that Secularism teaches Necessitarianism though a Secularist may be better than his creed. There are doubtless many of them as honest and as upright as their neighbors. I am here to cast no slur upon any human being. I am talking of systems, creeds, and beliefs, and not of the persons who hold those beliefs. Mr. Bradlaugh agrees with me that Secularism is Necessitarianism though, as I understand, he differs from me in my definition of Necessitarianism; but this is an important admission. I am accused of taking certain quotations from Mr. Bradlaugh's previous debates which do not adequately represent his line of teaching. I have not done anything so foolish as to attempt to misquote him, he being too

familiar with his writings to render such an act anything but futile. With regard to the influence of Necessitarianism on our actions, I acknowledge that man is in some degree necessitated, but is also in some degree free. He can so far determine his own actions, and exercise a certain self-control. I acknowledge that man is in some degree necessitated by the circumstances of his birth, his surroundings, and his education. We cannot, for instance, expect the same high tone from one born in vice, surrounded by vice, and inheriting a vicious temperament, as we have a right to expect from anyone situated as I am myself. But whatever may have been the circumstances of man's life, there is still some degree of freedom left, and he can resist up to that degree. In the same degree as he is necessitated is he guiltless. The drunkard may have a very corrupt nature, and very strong temptations, but still he has some power to resist. That there would be more strength, more holiness, more grandeur, in the world if the poor drunkard were cultured by education and training, we acknowledge; but what I do contend is that though possessed of a corrupt nature, there is still left in a man some will to resist. None say that any person is absolutely unbiassed by circumstances, but only that under all circumstances a certain amount of freedom remains. My friend overturns his reasoning by saying that between the cabbage and the man he knows no break; that we are only higher in degree than a cabbage, and not in kind. Now the cabbage cannot determine in the smallest degree its own culture, its own nature, its own growth. The cabbage is irresponsible either for its largeness or its smallness, its beauty or reverse. Consequently, if Mr. Bradlaugh be correct, man has no power of determining his own life; so that, according to him, a cabbage and a man stand on the same level so far as freedom of volition is concerned. Mr. Watts, affirming that freedom is denied both to man and to plants, writes: "Man is as much the consequence of all the causes and circumstances which have affected him in his development previous to and since his birth as any one tree or mountain." Thus it is stated clearly that there is no power in man to resist. The whole theory of Necessitarianism is this: We cannot resist the circumstances that result in volition. They produce our motives, our motives produce our volition, and volitions produce our actions. Will Mr. Bradlaugh explain

where, according to his principle, the freedom between the antecedent and the consequent comes in? Necessitarianism says that you do whatever you are doing because you cannot help it; you live in a certain manner because you have no alternative, no power to overcome circumstances. That man has no more merit than a cabbage is acknowledged by one whose name I do not care to give, as he is dead; but I will shew it to Mr. Bradlaugh afterwards. (Cries of "Name.")

Mr. BRADLAUGH: I am sure that I do not wish anything to be kept secret.

Dr. MCCANN: It was Mr. Austin Holyoake. (Cheers.) He said, when chairman once for Mr. Bradlaugh: "He did not consider any thanks were due to him for what he might have done in a public way during the last twenty years, as he could not help the impulses of his nature; they were beyond his control; but he trusted that what he might do in the future would merit the approbation of his fellow-men." Mr. Bradlaugh will require to point out where is the freedom of will between our antecedent impulses and our subsequent actions.

Mr. BRADLAUGH: If the Rev. Dr. McCann thought that I should travel out of the line by reading to you the principles of the National Secular Society, it was his duty to tell me that when he invited me to debate, and when I told him that those were the principles I should defend. If he wished to debate Atheism, he would not have found me reluctant. I am an Atheist, and I am not ashamed of my Atheism; but my duty here is to defend Secularism. My duty is not only to state my own views as clear as I can, but fairly to represent to you, as far as possible, the general consensus of opinion amongst Secularists. Now, Dr. McCann asks me for a definition which will separate Secularism from all other isms. I can separate it from some isms. It is unnecessary to-night that I should separate it from all. I separate it from Christianism by saying that it holds the opinion that the beliefs of Christians are not absolutely or at all necessary to morality. That is a definition which, I hope, will separate it, and if the definition is required to be explained I will endeavor to explain it; but I will not depart from what he has mapped out for debate unless he wishes it. Then the Rev. Dr. McCann said that we are conscious; and while he said he would leave the Negroes to look after

themselves, he also stated that the consciousness of man was alike in the Negro and the European. I demur to the statement that the consciousness of the Negro is the consciousness of the European; and I am ready to prove that there is no such identity, supposing that that is a point which my antagonist thinks ought to be examined in this debate. Then he says he does not talk about men, but the doctrines; but he objects to my giving you the doctrine. He won't defend the doctrine, and he won't talk about the men. Then he says, if I understood him correctly, that man has a certain degree of freedom of volition. I affirm that man has volitions, and I affirm that each volition of each individual is different from every other volition of that man; and if our friend will select two cases that he would like explained, I will endeavor, so far as I am able, to give the best explanation that occurs to me. The Rev. Dr. McCann has told us that the man born with a low nature is guiltless. I agree in that—that is, guiltless towards whatever gave him that low nature. (Cheers.) If he means anything different from this, I want to know what the word "guiltless" means. Let me say we have had the word sin used several times. Do you mean sin in the shape of disobedience to some regulation of society to which the individual belongs? If you mean more than that, what does it mean? It is of no use using language as sound-coin for concealment of ideas. It will be of still less use our each using language which has a different meaning in our different mouths. I am sure our friend would not use language to conceal ideas; but I am afraid that we are both using words attaching to them different meanings, and therefore we cannot arrive at any good result. Then he said the cabbage and man differ in kind. He did not explain what he meant by "in kind." Did he mean that we are not to judge the one as we should judge the other; that we should not judge them as being both phænomena of the same universe? If he did not mean that what did he mean? Of course when you take different things, each presenting different characteristics, we must, upon those different characteristics, form our judgment. Difference in kind between a cabbage and a man sounds as though it had some semblance of truth about it, but when you go step by step until you reach the lowest recognised form of animal life; then take the lowest

form of recognised vegetable life; then trace from these, when you find animal life without power of locomotion, and vegetable life with it, then you begin to wonder what "difference in kind" means. Our friend was perfectly correct when he distinguished the cabbage from man in degree; that the cabbage has not the power of determining in the smallest degree—I do not dispute it. Then we had some talk about freedom, and he said that freedom—(I am going back to the first speech)—in the language of Necessitarianism, means freedom from physical restraint. First, we know of no restraint which is not physical. Every thought, every phase of the mind, is impossible except as a phase of the activity of the physical organisation with which it is associated. I deny that you can separate from the thinker the thought; from the willer, the will; and when the word "consciousness" is used, it expresses, not an entity, but a phase, which varies daily and hourly—a phase which fluctuates with each new perception, with each new reflection upon that perception. The consciousness of a man to-day is not the consciousness of that man yesterday. Take the case of a child; before it has reached the age of twenty years, new motives created with new thoughts—new motives created with new education—new circumstances growing with new knowledge—influence it, and that man to-day is as different as can be from what the child was twenty years before. So that you may have the individual of six years old and the individual of twenty years old willing in an absolutely contradictory fashion, under what were apparently the same conditions, from which the will previously resulted, because the individual of twenty-six years old is a different individual, with different thinking ability. He is different in capacity and will-power altogether. Then our friend was good enough to say Necessitarianism must be Fatalism. It is true he was frank enough to read my denial of this and my explanation of my denial. There is one case in which Necessitarianism must be Fatalism. Supposing a man happen to believe in an omnipotent ruler of the universe that decreed everything, the Necessitarianism would be Fatalism, because what would be happening would be happening according to a certain decree which could not be avoided; but Necessitarianism is not Fatalism when it teaches that although under given con-

ditions disease is necessitated, that the conditions may be changed, the disease may be avoided, and the knowledge of what will result from certain conditions, is in itself a motive pushing the individual to endeavor to create new conditions. Then he says: "Oh, you cannot alter the conditions of your present life." That is not true. They are altered day by day. The main drainage system, for example, is an alteration. Well, then he says how would you deal with the thief? You would have us say you are the victim of your antecedents. But this is exactly what you do say; and, if your thief be young enough to mould, you try with new conditions to efface the antecedents, and you seek to cure him of, rather than punish him for, his crime. What is the whole of your reformatory legislation for, if not for this? Well, then he says why did I go to a maniac for an illustration of inaccurate consciousness? You always go to abnormal conditions if you want to give illustrations which shall be striking. If you only go to ordinary conditions it is often impossible to distinguish sufficiently accurately. But he says the maniac's consciousness is all right; only his interpretation is wrong. How do you distinguish between the consciousness you have, and the interpretation of that consciousness? I deny that it is impossible to make any such distinguishment. There may be inaccurate expressions of thought, either intentional or unintentional, arising partially through the inability to explain yourselves to others, or it may arise from their inability to understand you; but there is no such distinguishment between consciousness and interpretation of it to yourself, as our friend puts it; but he says: "I know I am free;" so does the maniac know he is Emperor of China. Do you know you are free? "Yes; each one knows that each is in some degree free—in some degree the author of his own actions." In some degree? Only one leg tied. In some degree? In what degree? Free must be free. Limited freedom cannot be introduced like limited liability. Our friend says, in illustration of his freedom: I can sin if I will. What do you mean by "sin" in this phrase? and what do you mean by "will"? (Loud cheers.)

The Rev. Dr. McCann:—Mr. Bradlaugh, in a large portion of his address, had it not been for the great dissimilarity of his voice, would have led me to imagine that it was myself

speaking, for he was so thoroughly in many points echoing my own sentiments. (Laughter.) Mr. Bradlaugh affirms that man has volition. That is not denied by anyone. But the question is, has he freedom of volition? It is not a question of whether a man has a will, but can man will his own actions in any degree? Does freedom of will originate man's actions? I affirm that man has freedom of volition, which is a totally different matter from volition as understood by Mr. Bradlaugh, and I require Mr. Bradlaugh to show me where the break occurs between the antecedent that produces the circumstances resulting in volition and the consequents in action that follow it; for there the freedom is introduced. He represents me as saying that a man with a low nature is guiltless, what I said was that he is guiltless in so far as he is constrained, but no further. All mankind have volition; but Mr. Bradlaugh says that they have not freedom of volition; that they are as the cabbage, which differs not in kind from man. He has, he says, gone step by step from the lowest organisation to the highest—that is to man—and he can find no break in the order; and therefore he wants to know what I mean by "differing in kind" from the cabbage. I reply, that if man has something of which we can find nothing similar in kind in the cabbage—no trace, for example, of its being free—then, so far, man differs in kind from the cabbage. In other words, man has freedom of selection, while the cabbage has none whatever in even the smallest possible degree. This is difference in kind; man can choose between two courses presented to him, while the cabbage cannot. You must begin somewhere; start where you like—start at Adam if you like and go through the whole universe, and the same thing will be abundantly confirmed. Then Mr. Bradlaugh says, "Freedom is freedom from physical restraint." He knows no restraint that is not physical. Well, that is exactly what I tell you is Secular freedom; not freedom of mind, not freedom of self-determination; not freedom of self-control—only freedom where no external restraint exists to compel us in one direction rather than in another. This is not mental restraint, but physical restraint, and therefore its absence is not freedom in the true sense of the term. Then he said an extraordinary and unphilosophical thing—that consciousness varies daily and hourly, and is not the same in any two human beings. I must say that this is the most

startling statement I have ever heard. Why consciousness is the one thing that never varies. You never find a man conscious that he did not exist. How does Mr. Bradlaugh know that he exists? It is only as consciousness tells him. If consciousness lies in one case it might lie in all. I can only know that I am speaking to you by my consciousness. If consciousness be untrustworthy, I am not sure even of this, and therefore all reasoning is useless, and all debate waste of time. We cannot have knowledge of that which does not exist. He is opposed to the best Psychologists who affirm that to deny the veracity of consciousness is to commit philosophical suicide. Then he says that I affirm that we cannot alter the conditions of the present day, and he says that we can alter those conditions by education and by culture. That is exactly what I say. In altering the conditions of a man—in educating that man—I alter the conditions of his life. Take a child, educate it, and it may give it a better character. This is what the libertarians affirm. But the necessitarians say that we cannot alter those conditions voluntarily.

Mr. Bradlaugh tells us why he goes to a maniac for his illustrations — because the abnormal conditions are more striking. That is, he goes to an insane man to illustrate the condition of a sane one; to explain the mental state of healthy mind by the conditions of a lunatic! You go to a mad man to see what a mad man is; to a sane man to see what a sane man is. He affirms that if the interpretation of consciousness be wrong, consciousness itself must be wrong, because consciousness is simply knowledge of a fact. Consciousness gives the knowledge of personal existence. I am conscious that I exist, but I cannot be conscious that I exist as a soldier, tailor, or merchant. Consciousness is knowledge. You cannot know that which does not exist. I know that I am free; I do not infer it. It is knowledge of fact. If consciousness is not true how can you know that.

Mr. Bradlaugh objects to my statement that we are free in some degree. He says, "What do you mean by limited freedom? If we are free we are free." Well, of course we are. We are free in so far as we are not constrained—constrained, that is, up to a certain point, but beyond that point we are free. I am so far constrained in my mode of

life by my surroundings, but that constraint is limited. I have motives and a will. Reason as we may upon this, the ultimate appeal must be to consciousness, and I now appeal to the consciousness of everyone here that if you raise your arm is it you that do so and not your physical antecedents? There is freedom in the physical as well as freedom in the mental acts. But Mr. Bradlaugh will tell you that there is no freedom in either. Every act differs in kind. I am free to select; the lower orders are not free to select —the cabbage for instance; the unconscious world are not free to select, the conscious are.

Mr. Bradlaugh has assented to my first proposition, that Secularism is Atheism; also to my second proposition, that it is Necessitarianism. Therefore, if you are consistent Secularists you must be Necessitarians. He only differs from me in the third proposition so far as to say that consciousness is not reliable; that it varies from day to day; but I hold the philosophical principle that the veracity of consciousness is the basis of philosophy, and therefore in denying this Secularism is unphilosophical.

Mr. BRADLAUGH: If repeating over and over again what I do not say as though I had said it (I do not mean to say there is any wilful misrepresentation, I am sure it is unintentional), will make me say it, then, undoubtedly, our friend is making great progress. There were one or two questions I put to him which he omitted to answer—what he meant by sin? and what he meant by will? It is not true that I affirm one volition for man. I affirm volitions. With me the word volition expresses a state of mind, a mental phase, which is also a physical phase, because every mental phase is a physical phase; nor is it true that I speak of our consciousness as if each had the same consciousness. With me the word consciousness expresses a varying phase of the mind day by day, the measure of each man's knowledge, of his immediate perceptions, of his remembered perceptions, of his reflections upon his remembered perceptions, of his comparison of his perceptions together, of his comparison of his memory of perceptions with others of these, or with his immediate perceptions and of his conceptions founded on such perceptions. These make up his consciousness, an ever varying quantity. Dr. McCann says that the leading Psychologists disagree with me. I am sorry,

for if that be true I am afraid I have not read them, then, with sufficient attention. Some few Psychologists I have read agree with me, and if it is to become a question of what is the evidence of Psychologists, I shall, if required, be ready to put a dozen in the box—as to this I shall be glad to know; but I think it will be better for us, in any case, to agree what we mean here by the words we use. Dr. McCann took an illustration which seems to me to show that he does not yet apprehend what the point between us is. He says that man has the power of selection and the cabbage has none. Let us see. The cabbage is planted; between the seed and the sair is a stone. It grows by degrees, it reaches the stone—but because of it cannot reach the air. It goes round the stone to the air, because it has some capacity of selecting a route; it does not go in a direct line because its capacity is limited by the stone, and if a man were under a two ton stone his capacity would be also limited. Well, then, we are told that consciousness is simply knowledge; but consciousness, we are also told, never varies. Do you mean to put the proposition, that the knowledge of individuals never varies? I do not think that Dr. McCann would say that. But if the knowledge does vary, and consciousness is knowledge—consciousness must vary. (Cheers.) He says that, according to me, consciousness tells lies. I have never said anything of the kind. I do not regard consciousness as being a separate entity able to tell me anything, but I do say that my consciousness may be, and often is, an inaccurate estimate of phænomena. Go to a shooting range and if you are not used to measuring distances you might think that the distance is 400 yards, it would be so according to your consciousness; but a man with a more accurate ability of judging distances from his consciousness, will tell you that it is 300 yards. There is no subject which you can put to yourselves as to which a better trained consciousness cannot give you a better result. Then, so little is it true that the distinction is quite accurate as to the limited capacity of selection, that while we found the cabbage coming through the ground to the light and finding a stone in its way, was turned, warped and twisted, we find not unlike limitations of capacity for selection in man himself. We find, for example, that if a bullet found its way into a man, that then the

growing tissue has only a limited capacity of selection, and is warped and distorted. I need not refer to the case of President Garfield, but go to any hospital and you will find the same thing. Things like cabbages and men are different, and things which differ cannot be the same, but allowing for these differences you get evidence that all results have to be similarly related to the conditions by which they are determined. Nor is it true that every human being is always conscious. He may be made temporarily as unconscious as a cabbage, a poker on his skull may do it. A hundred illustrations might be given of unconsciousness producible by drugs, but I will not weary you with them. I will, however, go a little further and take the illustration which has been given. A man says I will not be useful to my fellow-men, and another says, I will do all the good I can. It is not true that the desire to do good or ill is free in man, or that even with the desire it may have free outcome in volition. There are many who desire to do good but cannot, owing to the circumstances by which they are surrounded; look at a man who is crushed by disease—look at a man who has not inherited physical strength sufficient, who has not the brain quality or ability to think accurately. These men are all limited. But Dr. McCann says, "I am constrained so far but no farther." Tell me how far? and when you speak again in your opening speech tell me how far you are constrained by your inherited qualities, and tell me how for you are constrained by the circumstances which surround you now, and by those changing circumstances which have surrounded you since birth; tell me how far the average man in a city like that in which we are speaking is constrained, and how far he is free. Then our friend is good enough to put it as though I have at some time or other used words which imply less respect for the thinking abilities of other people than I ought to have employed. Well it is perfectly true that I do use strong words. If repeating these makes the case any stronger against me, I will not complain. But otherwise it can serve no useful purpose in this debate. I am content to argue the question out fairly and reasonably. If anyone were to pick up stray words which seem to imply that the speaker used at one time harsher words

from those he had used at another, then I say that such a discussion can do no good. I have had so many debates that I would prefer that the discussion should be useful to others, if not to ourselves. That the discussion of the freedom of the will may be in some degree useful, I will promise that on the next occasion I will submit to you what at least some of the best Psychologists have to say on the subject. I do not mean that I limit my views to the best Psychologists, but I go to those men who have devoted themselves to the study of a special class of phænomena, and have formed their opinions upon what is put before them. We are approaching the end of this evening's debate. Up to the present there has not been one word that either of us need wish unsaid. I occupy to-night rather an usual position for me—the defensive. My friend has a right to attack me on any point he will, and he exercises that right with no unfairness. Let me say that it is many years since Dr. McCann and I met in debate. Let us try as far as possible to speak not only to those who are present, but equally to those who will read the debate. Let us convey to them the impression that we are struggling for the truth, and striving to wrestle truth out of the diverse propositions advanced. We shall have great success if we can add but ever so little to human thought. Truth keeps increasing day by day, and there is more possibility of judging what is truth in the world at the present time than there was ten thousand years ago. Let us in this discussion, at least, endeavor to aid men in the search for truth (cheers). I accepted the invitation which the Rev. Dr. McCann gave me to meet him in this discussion, because I knew him to be a gentleman of ability and high repute, and because it would give me an opportunity of saying something about Secularism which I might not otherwise have had the like opportunity of saying. What I have to say I shall endeavor to make as clear as possible, and its value I must leave for your deliberation and judgment. (Cheers.)

Dr. McCann proposed and Mr. Bradlaugh seconded a vote of thanks to the Chairman, which was unanimously passed and briefly acknowledged.

SECOND NIGHT.—MRS. BESANT in the Chair.

MRS. BESANT, in opening the proceedings, expressed a hope that the audience would make her work as easy as they had made it for the chairman on the previous occasion. The subject for that night's discussion was, of course, a continuation of that of last week, Dr. McCann maintaining that Secularism was Unphilosophical, Immoral and Anti-social, Mr. Bradlaugh standing on the defensive throughout. She would especially ask them not to interrupt either of the speakers with expressions of dissent. Each disputant had the right and the duty of doing the very best he could for his own side; and, while it was always fair to cheer as much as they liked, it was not fair, and they had no right, to hiss or groan at anything which might be said on either side to which they objected. That was the one thing they wished to avoid. (Applause.)

The Rev. Dr. MCCANN, in rising to reopen the debate, was greeted with cheers. He said: I resume the debate this evening by acceding to the request made by Mr. Bradlaugh in his last speech last evening, that I would define will and sin. Will I define as the power of self-determination, and volition as an act of the will directing our present activity. Sin was only casually introduced into my first speech, as it formed part of a quotation from Mr. Bradlaugh. It is not at all necessary in the present discussion, and therefore I am content to mean by it whatever Mr. Bradlaugh meant when he used the word.

I now proceed to reply to what my friend has advanced in opposition to my views, or rather to show how slightly he has opposed me and how completely he has corroborated and illustrated my position, especially in his concluding speech last night. To do this, however, at all satisfactorily, I must go slightly back on what he stated earlier in the evening. He then said: "The only difference between myself and Dr. McCann will be that what he means by Necessitarianism I do not mean." I now show that this difference does not exist, and must be pardoned if I dwell a few minutes on this subject, as it is of the utmost importance. The only alleged difference is thus stated: "Dr. McCann says that Necessitarianism denies that we can in any degree originate

our own actions. No! It does not say 'in any degree.'" According to my friend, therefore, Necessitarianism acknowledges that we can in some degree originate or self-determine our own actions. But Necessitarianism cannot admit that which is not necessitated. Necessitarianism cannot be Libertarianism. If there be any degree of the latter the former must be absent; to adopt Mr. Bradlaugh's own expressive and uncontrovertible words, "Things are different, and when different they are not the same." (Laughter.) Now, I believe there is no man in England who can better distinguish things that differ than our friend, and I believe there is not a lawyer in England who has opposed him who would not say the same with a sigh for his client—(laughter and applause)—and a chuckle for himself as he pocketed his fees. I was, consequently, somewhat surprised at Mr. Bradlaugh's confusion on this point, but that confusion soon passed away, and he remained clear to the last—on my side. (Laughter.) I have read most carefully all he said, for I consider it due to my subject, my audience and my opponent to be as accurate and careful in the matter as I can, and I do not find one single illustration that does not confirm my statement that Necessitarianism denies all self-origination of action, the almost last illustration being the weightiest of all, where he places a brother man under a stone weighing two tons. I am charged with misapprehending his assertion that "Man cannot resist the circumstances which result in volition." The misapprehension is on my friend's part, who, apparently, and considering the rapidity with which I spoke, most excusably, supposed me to say that we resisted the volition. I, however, never said anything so absurd. I referred solely to the circumstances "that resulted in volition," a resistance which I hold not only to be possible, but to be a fact of almost daily occurrence in many lives. Mr. Bradlaugh has asked me how far we are constrained by our inherited qualities and by the circumstances that surround us. This is a question impossible to answer, because no two men are in nature or circumstances exactly alike. He might as well ask me how much are men educated. Each man must answer the question for himself. We now proceed to the illustrations my friend has brought forward to make clear his view of Necessitarianism. In reply to my remark that man has the power of selection while the

cabbage has not, he replies: "Let us see. The cabbage is planted—it grows, and by degrees it reaches a stone, but it cannot reach the air. It goes round the stone because its capacity is limited, and if a man were under a two-ton stone his capacity would be also limited." I should say it would be altogether extinguished. But let us look at this plant first. Because the plant cannot go through the stone, but goes round it, it is said to have a power of selection, limited, no doubt, but still existent. I say the plant has no capacity whatever of selection, that is of self-determination. Its going round the stone is determined for it, and not by it—that is, it is necessitated. The man under the stone is, however, still more necessitated, for he has no power to move at all, either through the stone or round it, so he is under the necessity of remaining where he is, but most assuredly not willingly, for I fancy if alive he would get away if he could. In both cases the restraint or the freedom are necessitated completely, there being no self-action possible. Another case similar to these is that of those who desire to do good, but, owing to the circumstances by which they are surrounded, such as disease or weakness, are unable. In the hurry of speech Mr. Bradlaugh apparently overlooked the very important distinction between desire and will. The weakest man in the world might say "I desire to do good." We should understand his wish and respect him for it; but if, while unable to leave his bed, he said "I will go forth and do good," we should think him mad and keep a sharp look out on him. Desire and will differ, and "things that differ are not the same." One more illustration of my friend's, and I have done with this portion of my reply. Mr. Bradlaugh said: "Men are not helplessly driven to and fro in the sense of being merely passive victims. Each one is an active drop in the waves which make up the ocean of human life, not only making up the wave, but making part of its activity." Well, but what liberty has the drop in all this? Is it not necessitated to receive whatever impulse may be imparted to it, and to pass that on without diminution or increase? And this is what I have been contending for all along—that Necessitarianism denies all self-determination. Drops in the ocean of life! No! We are not. They are not only utterly helpless in all they do, helpless in all their activities when they

are dashing, as when they are frozen, and they are all alike. We are as drops, are we? There sits one man reading his morning paper—he sees that Dr. Aveling has been dismissed from his lectureship, and he says "What a pity," and in the same breath asks for some more buttered toast. (Laughter.) That is one "drop." Mr. Bradlaugh reads the same, and leaping from his chair exclaims, "The rascals! it is a shame"—(cheers)—and I perfectly agree with him it was a shame. (Loud cheers.) He continues, "I shall expose it throughout the land," and so he scatters letters like fireballs, and comes here to orate in a voice of thunder and with the force of a cataract. (Much laughter.) That is the other "drop," and pardon me if I can't help fancying that there was some self-determination in the last "drop" at any rate. (Renewed laughter.)

Thus, therefore, stands the case so far as Necessitarianism is concerned. I stated my views as to what Necessitarianism is, quoting from John Stuart Mill and Professor Bain in support of them. Apparently I did this correctly, as my friend took exception to only one point, the denial of any liberty except external liberty, but so far from substantiating his objection, every single illustration he has used has altogether corroborated my statement and confirmed my views, so that as far as we have gone this debate might be called—not McCann *versus* Bradlaugh, but McCann *plus* Bradlaugh. (Laughter and applause).

I now come to what has been said by my friend about the veracity of Consciousness, especially in his last speech. Whatever difficulty there may be in placing this in its true light will arise from the very peculiar manner in which certain words have been used, such as "knowledge." Mr. Bradlaugh defines Consciousness to be "the varying phase of the mind from day to day," the measure of man's knowledge from his immediate and remembered perceptions, reflections, comparisons, etc. In knowledge Mr. Bradlaugh apparently includes fancies, blunders, ignorant errors of all kinds, as in the case of the man said to be conscious that a target was 400 yards away while it was only 300 yards, or when the maniac knows he is Emperor of China! To me, knowledge means certainty. No wonder Mr. Bradlaugh says that Consciousness is inaccurate, when to him it expresses the measure of all the contents of the mind, includ-

ing the vagaries of the maniac. Increase of knowledge may also, according to this teaching, be a most undesirable thing, as it may mean an increase of insanity, or nonsense, or error. I believe this is a fair—nay, a necessary inference from what my friend has said. I do not much care how hard I hit, but I do care about hitting fairly. (Applause.) If this be his conception of Consciousness I should like to know its use, and also how he could get on without it. Also, if there be a standard of truth, where is it to be found? and if there be no truth on what he bases his arguments, why he gives himself the trouble of arguing at all? To me, as I have already stated, Consciousness never varies, and Consciousness is Knowledge; but Mr. Bradlaugh here became somewhat confused, for he reasons as though I had said all Knowledge was Consciousness. All eagles are birds, but all birds are not eagles. Consciousness may or may not include all knowledge: on this point psychologists differ. For the purpose of this debate, I define Consciousness as the Knowledge of our own mental states. In this discussion I have nothing whatever to do with the question whether we can be also conscious of anything beyond those states. That we are conscious of mental states cannot, I imagine, be denied, even by Mr. Bradlaugh. Again, I should like to ask him a question. How does he know—no! it will not do to say "know," as that may be imagination—how is he certain he has mental states, or any states at all, if Consciousness be inaccurate? When I say that Consciousness never varies, I mean as to its nature. Consciousness is Consciousness all the world over and at all times. The states we are conscious of do vary from day to day. Yesterday I may have been conscious of misery—to-day of happiness; yesterday of ignorance—to-day of learning; yesterday of doubt—to-day of faith; but the Consciousness in each case has been true, for I was in the states of which I was then conscious, as I could not have been conscious of them had the states not been there. If we followed Mr. Bradlaugh's teaching we might say that while we were conscious of being unutterably happy we were really unutterably miserable, Consciousness being inaccurate. Once again, I affirm that Consciousness must be pronounced veracious, or philosophy is impossible; consequently whatever system contradicts Consciousness is

thereby proved unphilosophical and false. Secularism does this; therefore, I hold it to be unphilosophical and false.

I now come to the fresh matter for this evening. The subject for this evening being the Morality of Secularism—a subject, it will be acknowledged, of the utmost importance. I hope Mrs. Besant, who to-night occupies the chair, will excuse me for quoting her, but I have to deal with Secularism, and I do not know that I could quote a higher or a better authority. (Applause.) As Mrs. Besant truly says, ("True Basis of Morality," p. 2): "That which touches morality touches the heart of society; a high and pure morality is the life-blood of humanity." (Cheers.) I perfectly agree with her. My next proposition is consequently one that it behoves me very clearly to prove, as it brings against Secularism the very serious charge that it would poison the life-blood of humanity, for the next proposition is this, that Secularism is immoral; and by this I do not mean merely that Secularism is without morality, but that it is against morality. Understand that I am not bringing any charge against Secularists, with them I have nothing whatever to do. They may be, and doubtless are, as moral as other men, but I shall show that they are moral, not in virtue of their Secularism, but in spite of it. I cannot, of course, in the time at my disposal exhaust the subject, or treat it with anything like the fullness its importance demands, but I hope to say enough to justify the position I have taken.

What then is morality from the Secularist's point of view? I searched the "Freethinkers' Text Book" naturally hoping to find any information I needed regarding Secularism, but here, strange to say, I was doomed to disappointment, for I could not find anything whatever on the subject of Secular morality. It may be there, but I could not discover it; in fact it seemed to me the strangest "Text Book" that ever I read. There was much peculiar writing about other matters, but very little about the positive principles of Freethought. I was, therefore, compelled to search elsewhere, and turned next to Mrs. Besant's "True Basis of Morality," and here I read (page 3): "Morality in the deeper and truer meaning of the word means harmony with natural order; physical morality is harmony with all those laws, obedience to which results in physical vigor; and

moral morality is harmony with all those laws, obedience to which result in moral vigors." The only attempt at a definition here is that of physical morality, which means keeping oneself physically strong, so that eating a chop is a moral action; but we are not told what moral morality is, nay we are rather puzzled by it, for when we speak of moral morality we imply that there might be a morality that was not moral. True, the authoress speaks of "moral vigor," but she does not tell us what moral vigor is. Elsewhere (p. 9) she writes: "That which promotes the general happiness is right; that which lessens or undermines the general happiness is wrong. These are the axioms on which a true morality must be grounded." Still, there is no definition; we are only told on what it must be grounded. I know full well what, by the necessity of the case, the definition must be; still I wish to have it in words, and those words I find in the debate between Mr. Bradlaugh and Mr. King, where Mr. Bradlaugh says, in effect (King Debate, p. 17) that the creed which he accepts as to morals is Utility. It could not be otherwise—there is no other moral creed possible to an Atheist; and this I shall show is not a creed as to morals at all. Now, in the first place, Utilitarianism regards only the uses of things—it concerns itself alone with the results of actions and ignores motives altogether. According to it a moral action is a useful one. Never mind why it was performed, if the tendency of the action was towards human happiness, all is well. According to it the moral man is he who does the useful thing; but I maintain that this is not in accordance with our judgments. We judge a man, not according to the character of the action, but according to the motive prompting it when we know that motive. I care not how useful that action may be, when we know the motive to be a bad one we call the man a bad and immoral man. That cannot be true morality which totally ignores all consideration of motive, as Utilitarianism necessarily does. Again, all personal actions are not necessarily moral even when they contribute to the pleasures of others. If I be a musician and play to amuse another in order that I may pocket so many guineas, it is surely a violation of all our laws of thought to call that a moral action on my part. It may be prudent, or it may be useful, but who, apart from the demands of theory, would call it moral? If, on the

other hand, I play or sing to sooth suffering, or to aid a scheme of benevolence, I am doing not only a useful but also a moral act; for, let this ever be remembered that, while all moral acts are useful, all useful acts are not moral. It does appear to me exceedingly strange how any can persuade themselves that they are correct when they assert that every action which aids happiness, pleasure and agreeableness is, therefore, moral, for all these are the same in Utilitarianism, as is shown by Mrs. Besant's phrase "physical morality," and also by the fact that they are used as synonymous terms by Utilitarian writers. If this be true, the eating of an apple, the preference of grouse to tripe for dinner, the selection of champagne rather than table beer to drink—are all moral actions—(laughter)—and moral because they give us pleasure. It may be said I treat this lightly. I do; because it seems impossible to treat this aspect of morality seriously. It may be the morality of Secularism, but it is not the morality of consciousness, and therefore it is not morality at all. John Stuart Mill felt the unreality of this conception of morality, and although a leader in the school of Utilitarianism, he could not be logically consistent. He was so true to his humanity that he became false to his philosophy, by adding quality of happiness to quantity, and so abandoning the whole position. Apart, however, from all question of motive and quality of pleasure, the very words we use show us that utility and morality are not the same thing. We are perfectly conscious that when we use the word "right" we do not mean useful—that when we describe an action as moral we do not mean only pleasant. That the right, the useful, and the agreeable, denote different qualities of action. Even Hume confesses this when he says: "Had nature made no original constitution of the mind, the words honorable and shameful, lovely and odious, noble and despicable, had never had place in any language; nor could politicians, had they invented these terms, ever have been able to render them intelligible, or make them convey an idea to the audience." And in this he is quite correct. If there be no difference between morality and utility—whence came the two words? Let our Secularist friends be consistent in this matter and banish all such words as "right and wrong," "moral and and immoral," and confine themselves to the words that

express their meaning such as "useful," "prudent," "pleasant," "agreeable," and so on; and if they do, I fancy their system will not require much further refutation, but they know this full well, and so they dare not be true to their own teachings. But, further, this system is called the "selfish system," and truly, because selfishness is the only motive force it can bring to bear on its disciples with any hope of success. You may tell a man to do his best to promote the greatest happiness of the greatest number. He has, however, a perfect right to ask you why he should. He may tell you he does not care for the happiness of the greatest number, or any number except Number One. (Laughter.) In that case there is no alternative but to appeal to his selfishness and try to persuade him that by helping others to happiness he is helping himself—but this is selfishness pure and simple. To imagine that mankind will love their neighbors as themselves and study the happiness of others rather than their own, with no better theory than Utilitarianism to inspire them, is to imagine that which will not be borne out by facts. Mr. John Stuart Mill acknowledges this in so many words where he says (page 137), "the idea of the pain of another is naturally painful; the idea of the pleasure of another is naturally pleasure." Mr. Bradlaugh affirmed the same thing still more explicitly in his debate with Mr. Hutchings (page 49) where he states, "We Secularists say that the act which does not tend to the happiness of your fellows, does not tend to your own, and is wrong." That is, it is not pleasant, then why does he not say so? His next sentence is significant. "Any attempt to murder your fellow man does not tend to his happiness, and does not, therefore, tend to your own." Certainly I do not know any case where the attempt to murder adds to the happiness of the victim, but there are cases where it does add to the happiness, such as it is, of the murderer. Surely, Mr. Bradlaugh does not forget his friends the Thugs? Apart from them, however, our friend tells us that the attempt to murder will not add to our own happiness, and therefore had better not be indulged in. And this is what Secularists call morality! Others would call it by a very different name. (Applause.)

Mr. Bradlaugh, who was received with loud cheers, said: Let me first point out to you that some of you have

utterly disregarded the appeal made to you by Mrs. Besant in interrupting Dr. McCann at several points of his speech by expressions of dissent. While it is perfectly justifiable to applaud Dr. McCann it is quite out of order for anyone to express an opinion of contradiction. Dr. McCann has told you that I had forgotten my friends the Thugs. Well! I have so wide a circle of friends that I can hardly help forgetting some of them occasionally, but Dr. McCann having reminded me of the Thugs I will proceed to deal with them. The Thugs afford instances where, applying Dr. McCann's contention, a bad deed done with a good motive becomes good. The Thug believes that it is good and that his goddess desires that he should do as he does to the unwary traveller he guides, and with this good motive he strangles—say, Dr. McCann—and according to Dr. McCann the good motive governs the action, and he has no right to complain. (Laughter.) There is one thing which Dr. McCann forgot in the interesting and able speech he has just delivered to you, and that is he forgot to give you a definition of morality. Dr. McCann has been good enough to tell us what it is not, and if we go on with the negatives, by a process of elimination we may hope at last to get at what it is; but I would suggest to him that the more desirable and speedier method would be for him to tell us what he holds morality to be. We are told by Dr. McCann that he has looked through a great number of our writings without getting a definition. Will he permit me to refer him to the first speech which I made in this debate, in which it was clearly laid down by me that morality must be tested by utility. He appears, however, to have overlooked this definition, which was drawn up and endorsed by a national meeting of Secularists, and complains that in searching through our writings he cannot find the positive principles of Secularism. I do not complain that he has read from my debates, because I hope for good results from the reading. We are told that drinking champagne instead of a glass of beer is moral with the Secularist, because it is pleasurable, and we are told that Mr. Mill was inconsistent because he added quality to pleasure as well as taking quantity. But may not rather an objector be unfair when he takes away every quality from pleasure except those that suit him, and then says we only mean by it what he chooses

to leave? "Will is the power of self-determination"—the power of whom? The power of what, is it? Upon what ground exercised? By what and in what manner? "Individuals differ"—then will does not mean the same thing in any two individuals. But let us follow this a little. We are told that sin means—whatever I choose it should mean. But I don't choose it should mean anything! Sin in the theological sense has no meaning with me whatever. I can understand offence against the laws, but if you mean sin in the sense of an act originating in the will of an actor entirely apart from and independent of all circumstances extrinsic to that will, then that is to me a phrase without meaning. We are told that it is impossible to say how far men are acted on, as no two men are exactly alike. Is not that an entire abandonment of the whole position? Then again will is distinguished from volition, but I confess I do not understand the distinction as drawn; and the distinguishment is absurd, because here will is spoken of as if will were an entity, and as though volition were some action of that entity. The plant, we are told, has no power of selection. Mrs. Besant, who is much better versed in botany than myself, reminds me that there are some plants which have tendrils which they push into holes, and if they find the holes unsatisfactory to the tendrils they draw them out and try some other. I ask Dr. McCann to describe to me what he considers this? Capacity? or selection? or what? Then we are told in the definition of consciousness that knowledge means certainty. Absolute certainty or relative certainty? If relative, to what and to whom? Then we are told that consciousness is defined as "the knowledge of our own mental states." I ask Dr. McCann to give one case of a mental state in which, and to state by what, he distinguishes between the mental state and the consciousness itself. Then he asked me how I am certain that I have any mental states at all if consciousness is inaccurate. I have never said that all consciousness was inaccurate. On the last occasion Dr. McCann declared that the view I put forward of consciousness was one which was held by no psychologist. In the first volume of *Mind* there is an article by the late George Henry Lewes on "What is Sensation?" and that acute writer answered: "It means sometimes the simple reaction of a sensory organ—as in a sensation of color or of tem-

perature. It sometimes means a complex of many reactions —usually called perceptions—as in a sensation of sight. It sometimes means only one element in a judgment; at other times it means the judgment which groups the present impression with the revived impressions of the other sensory organs," and he adds: "consciousness stands for sensibility in general and also for a particular mode of sensibility, known as reflection, attention or thought." In another article in *Mind*, vol. 2, on "Consciousness and Unconsciousness," the same able thinker says: "Organisms really differ in complexity, yet because they also agree in the cardinal conditions of vitality, among which sensibility is one, we conclude that they all have feeling; but the feeling of the one will differ from that of another, according to the complexity of the sentient mechanism in each. The perfection of this mechanism lies in the co-ordination of its parts, and the consensus of its sentient activities; and disturbance of that consensus must cause a modification in the total consciousness; and when the disturbance is profound the modification is marked by such terms as 'insanity,' 'loss of consciousness,' 'insensibility.' These terms do not imply that the sentient organs have lost their sensibility, but only that the disturbed mechanism has no longer its normal consensus, no longer its normal state of consciousness. Each organ is active in its own way so long as its own mechanism if preserved; but the united action of the organs having been disturbed, their resultant function has been altered." Professor Herzen (of Florence) affirms consciousness to be resultant from special molecular movement induced in the central nervous elements either by an impression from without, conveyed to them by afferent nerves, or by a reflex sensation from within—consciousness, according to Professor Herzen, accompanying the functional disintegration of the nervous elements. W. L. Davidson, in *Mind* for 1881, says with great clearness: "Consciousness is awakeness. In every moment of our conscious being, we exist in some definite state or other. Now we are absorbed in thought, now we are engaged in action, now we are experiencing sensation; but whatever the state at any particular instant may be, it is that particular state and nothing else. There is not both the state and the consciousness of it; the state and the consciousness are identi-

cal." As Dr. McCann contends that consciousness is one and invariable, I will draw his attention to a case recorded in the *Revue Scientifique* for May 20th, 1876, from the report of M. Azam, Professor of Surgery at Bordeaux. This was a case of loss of memory and of double consciousness. The patient, a female, in 1876, aged 33, had since 14 years of age been subject to attacks lasting for two periods each of three years, and also for several shorter periods. In what is called her normal state the patient knows nothing of what passes during these attacks; in her secondary state she remembers what happens in both states. If these facts are accurately recorded, how does Dr. McCann think that this affects his theory of one and invariable consciousness? Another case is given in the *Revue Scientifique* for July 15th, 1876, that of a female patient of Dr. Dufay. Here there was what is sometimes called somnambulism—and I am inclined myself to regard the previous case also as somnambulistic—but attended with abnormal consciousness, so that in the normal state the patient knew nothing of what happened in the somnambulistic state, but in this latter condition she had the double memory of both states. Many cases similar to these might be quoted and are given in the various volumes of *Mind* where the notes of these cases are also translated. Dr. McCann, in the illustration of the lifting the arm, spoke as though visible physical action were the only, or at any rate the best illustration of the result of volition. Indeed he did not seem to separate the volition from the resultant act, although in truth there might have been the intense desire to raise the arm and no physical ability to carry out the volition by action, and it is excessively curious that the very point which I have marked for notice as unsatisfactory on his side he has also drawn attention to in his speech stating that I have not distinguished between desire and volition. (Laughter.) On the contrary I took express pains, but probably I did not succeed, to sketch the various phases of mind antecedent to volition. I hope I did nothing—I certainly did not intend to do anything—that should make the ineffective desire the equivalent of an effective volition. I think that Dr. McCann hardly did justice to me there. Visible action is, however, only one phase of result from will. The influence of volition is often traceable in our thinking. Here volition follows associations as its deter-

minants all being governed by general consciousness. All ordered thought is resultant on volition. Does Dr. McCann mean by free-will "uncaused volition"? If not, what does he mean? I contend that our volitions are, in each case, determined by our antecedent consciousness and the surroundings immediately preceding volition. Ability resultant from what is this power of self-determination of which he spoke? From nothing? If not, then, everything which tends to the exercise of the ability in the mind of Dr. McCann, must be laid before us to enable us to appreciate what his definition means. He tells you I did not distinguish between volition and will. The words to me mean the same. I do not know some big lump "will;" I do not know some ability, marked "will," each activity of which is a volition. I only know in each case the effective volition consequent on antecedent states, generally preceded by intense desire, and I know nothing of these volitions except as phases of the mental states of the willer—neither of these volitions has otherwise the smallest relation to the other. (Applause.) If Dr. McCann contends that volitions are uncaused, will he please say in what the motiveless volition of an indifferent is more or less moral than the determined volition which I maintain? We have got it now that the actions urged by us are immoral, because necessitated. The actions urged on the other side are the actions of persons with "freedom of volition," whatever that may mean—no, not quite—"limited in extent," and the extent of the limitation it is impossible to determine; and if it is impossible to determine the extent of this limitation, where does the freedom begin and the necessity end? (Hear, hear, and applause.) If Dr. McCann holds that volitions are not determined, will he explain how volitions originate? If he holds, as his words seem to convey, that in some cases volitions are either wholly or partly determined, will he give illustrations of these as distinguished from the volitions he describes as free? For example, will he take some illustrations of human beings with whom he is conversant and give me in two cases one in which there is a limited and controlled volition according to him, and one with a volition which is free? and if he says, "by free I mean a self-determined volition," I shall want him to tell me what he means by "self." Dr. Dr. McCann has not told us what he means in each indi-

vidual case by "I" or "me." In his speeches he has often spoken as though with him the "I" or the "me" was thinkable distinct from, or even hostile to, consciousness or volition. "I" is the bodily, living, thinking organism. Every thought process is included in the "I." No so-called mental phase from sensation to volition is separable from it. Each so-called mental phase is the consequence of the so-called physical activity of the "I." If Dr. McCann has any other definition I shall be glad to hear it, and if he asks me why do you say "so-called," I reply that it is one of the misfortunes of every language in the world as well as one of its advantages, that every language in the world is a growing language, and consists not only of the sound coins which men use, but also of the counterfeits, fruits of the ignorance of the past, which are only slowly giving way to the education of the present. I should like Dr. McCann to tell us what he means when he uses the word "sin." It will not do for him to say that it is a piece of luggage he need not have brought with him, and that he can take a ticket for it or not as he pleases. It is part of his baggage and equipment in this debate—(laughter)—and he must deal with it or get rid of it. I come back to the point from which I started. Dr. McCann declares that Secularism is immoral, that is against morality, and he is bound to tell what he means by morality. (Applause.) In my first speech I gave utility as the test of morality. Dr. McCann answers to that, that while all moral actions are useful, all useful ones are not moral. I will ask him to give an illustration of any useful act which is not a moral one. I have given him in my speech utility as the test of morality, and I want in return some test from him. (Hear, hear.) Dr. McCann, for example, says that drinking a glass of champagne or a glass of beer is not moral. Why not? He says it is only pleasurable. Why, being only pleasurable, is it not moral? What do you include under pleasure? You must not take a wide illustration of that kind. There may be well cases in which drinking a glass of champagne or beer is immoral. You must make it specific, so that I may know what I am dealing with. Then what do you mean by pleasurable? That which is pleasurable to all? If so, why is it not moral? If you say you don't mean that, why don't you? (Laughter.) Where is the meaning which you will give

instead? Oh, but you say a selfish act is immoral. Why necessarily so? Why might not a selfish thing be also a moral thing? There are many acts which may be described as selfish which, if you specify them, I may be able to tell you whether I regard them as immoral or not. A selfish act is not necessarily an immoral act. The highest morality is to do good to others, knowing that that will produce good to you; and to do it because you know it will produce good to you means that you know that by increasing the general amount of happiness you increase your own share therein. (Loud applause.) I say that which increases the general amount of happiness is moral—that is my measure and test of morality. That a good motive makes a good act is not true. Go back a century or two, and see men with good motives murdering their fellows for the glory of their god, racking and burning the people who differed from them in opinion in order to prevent the spread of hostile opinion. Their motive to them was good, but their act was very immoral. (Loud and continued applause.)

Dr. McCann: Mr. Bradlaugh asks me to define morality, and I do so in one word—rightness. I regard the rightness of an action as distinct from the utility of an action. Now, with regard to the veracity of consciousness, what I said was that Mr. Bradlaugh's views differed from those of the best psychologists. He affirmed that consciousness was not always reliable, and he has quoted only three psychologists in support of his proposition. I have several here on my side, and one of them is one of those that he has already quoted. I hold in my hand Lewes' "Biographical History of Philosophy," Library Edition, p. 379, and here are Lewes' words on the subject: "If Descartes is wrong, if consciousness is not the ultimate ground of certitude, embracing both objective and subjective, if ideas are not the internal copies of external things, then must philosophy be content to relinquish all claim to certitude, and find refuge again in faith." That is the opinion of Lewes with regard to the certainty of consciousness. Again, he says elsewhere, p. 599: "Consciousness, then, which had for so long formed the basis of all philosophy, was thrown over by Schelling, as incompetent to solve any of its problems. Consciousness was no ground of certitude. Reason was the organ of philosophy, and reason was impersonal. The

identity of being and knowing took the place of consciousness, and became the basis of all speculation. We shall see what it led to in Hegel." He tells us that consciousness was the basis of all philosophy. Lewes' words are as clear, as explicit and as strong as words which can be used by any human writer. I have also here a number of other writers, all on my side, extending from Descartes downwards, because before his time consciousness in philosophy was not a prominent subject. Therefore I say that Mr. Bradlaugh has not proved that the best psychologists are on his side. I define will as being the power of self-determination. I exercise will; I have will; I have self-determination; I have self-control; I have the power of voluntary selection and choice. As no two men, however, are alike in all points, he says that consequently the volitions of men are different. But surely he confounds here things which differ? The power that men exercise in volition, the power to control their own actions, the power they possess over themselves, varies in different individuals, and that varies from day to day. The power is one thing, but the strength of the power is another thing, and no two men have the same degree of power. (Applause.) A large number of my auditors are Secularists, but have you no power to do anything for Secularism because you cannot do so much or speak so well as our friend, Mr. Bradlaugh, does? I never spoke of will being an entity at all; I exercise will; I can determine; I can choose; but it does not follow from what I have said that will is an entity. If I choose I am conscious that it is I who choose—I am conscious of exerting my own power. The statements made by Mr. Bradlaugh with regard to the tendrils of the plant are no doubt perfectly true, but does the plant think that the hole won't suit it, therefore it will try another hole? What does the plant know about it? The plant is wholly unconscious and is absolutely controlled, and once more I say Mr. Bradlaugh's illustration is altogether in my favor. (Laughter.) Mr. Bradlaugh's illustrations would show that we have no power whatever of selection or choice or of control, which is exactly what I assert of his teaching. He also asks me to distinguish between the state and the consciousness. I say the state is not the consciousness. The state is one thing, and the consciousness of the state is another. Mr. Brad-

laugh told you that a blow on the head will render a man insensible for a time. Then, does the man exist in no state when, as is affirmed, he is not conscious of the state. If state and consciousness be one and the same thing, if a man be not conscious he is in no state at all; and, if not, in what state is he? (Laughter.) And if consciousness sometimes tells lies, is sometimes inaccurate, how are you to know when it is accurate and when true—what is to guide us in judging when consciousness is telling "the truth, the whole truth, and nothing but the truth"? Then Mr. Bradlaugh refers to double consciousness as an illustration that consciousness is not one and invariable. But what has this to do with the question at all? A person is conscious of one condition of mind to-day and another yesterday. Does it follow that consciousness is false? No, it does not. Then Mr. Bradlaugh still confuses desire and will. Desire is merely the wish to have something which we have not already. Will is a determination to do an action. Will is the power of self-determination. The volition is the will determining. Mr. Bradlaugh asks me here whether the volition is caused. Of course, the volition is caused. Every change is caused. My friends on the other side are they who do not believe in causation; they believe only in antecedents and consequents. My volitions are caused, but not caused by my ancestors, but by myself. It is I who shape my own courses. It is I who choose and not they. I, and not some of my antecedents, am the cause of my own actions. If I am not, then something else must be, and my actions are not my own actions at all. If the actions of my life are mine they can only be mine as I have caused them. If we are partly necessitated and partly free, Mr. Bradlaugh asks me where freedom begins. Freedom begins where necessity ends; if a man's actions are altogether determined there is no freedom. I cannot give my friend the illustration he asks for of a person altogether constrained or of a person altogether free. Every person is partly free and partly not free, and his freedom ends just where necessity commences. (Cries of "Where's that?") I could tell perfectly in my own case where my antecedents were bringing their force to bear upon me. My consciousness tells me exactly when I am resisting temptation and when I am not. Is there anyone here who cannot tell when he is yielding to temptation

and when he is struggling with temptation? Mr. Bradlaugh tells us that language is a growing thing—that every language is a growing language. Very well, then let it grow according to your ideas. That is what I ask you to do. (Laughter.) "Freedom," "liberty," "choice," are according to you only immature words. I say banish them altogether, and use only the full-developed words, "prudence," "pleasure" and "necessity," and we shall see exactly what you are at. I never said that the drinking of a glass of champagne in itself was either moral or immoral. But, according to Mrs. Besant's teaching, it must necessarily be moral if it give pleasure. The drinking of the champagne is justified on the principle of its being pleasanter than drinking a glass of beer, and accordingly more moral. "There are circumstances where it becomes immoral," we are told. Are there? How can it be immoral if you cannot help it? If your antecedents compel you to drink, you have no more responsibility in drinking than in abstaining from drinking.

Mr. BRADLAUGH: I have to object that, while Dr. McCann has used the word "I" at least a dozen times in his last speech, he has taken no objection to my definition of it, and has given none of his own. If he meant by the word "I" what I stated that I meant when using that word, then every phrase he has used is simply without sense—I am not saying it unfairly—and if he meant something else by the word, and wants me to reply to him, he must tell me what he means. We are now told morality is "rightness," but this is mere verbal substitution, which adds nothing. What is the standard of rightness? How am I to know what is right? Where is the test by which I can determine the rightness of any action? You have given me no standard, you have given me no test. Different peoples of the world disagree to-day as to what is right and not right. For example: You hold it to be right to eat beefsteak, but the Hindu thinks it wrong. I must have some test to determine rightness in such a case, or the debate is mere waste of time. The test of utility is objected to—no other test is given. You in this country hold it wrong to have more than one wife; others in other lands hold it right to have as many wives as they can keep. I am not meaning individuals of irregular life, I am meaning nations—peoples

who have professed to be religious, and people who are held up to us by you as models as to religion and morality even to this very moment. I did not understand Dr. McCann last week to say that my definition of consciousness differed from the best psychologists. I understood him to say that there were no psychologists who agreed with me. This, however, is of little importance. But I have to object that it is not fair to quote from Lewes where he is explaining the philosophy of each individual thinker that he is dealing with, as against his own view put separately and distinctly in a later work. Dr. McCann says by power of self-determination he means power of the person. He says, "I have self-determination, I have self-control"; but then he has not defined "I," and my definition included every thought process, included what he calls determination, included what he calls desire, included what I call perception, reflection, judgment, volition. He uses "I" as possibly meaning to him something clear and distinct, but though he has heard me say what I mean by it—and my meaning is fatal to his argument—he does not give me any means of judging what he means by it, and in what sense he uses it. Then we have a proposition which startles me, that consciousness in its nature is always the same, that volition in its own inherent nature is always the same, differing only in degree. I thought from what Dr. McCann said that he regarded consciousness as an entity. If it is an entity, describe it to me. If it is not an entity, why do you speak of its nature? Then, again, I should like to know why you speak of consciousness and volition as distinct from you, and say that, while your knowledge varies from day to day, your consciousness in its own nature is always the same. What is its own, if it has no own? You talk of the power of all men being the same, and different only in degree. There is no thing or entity called power. You may talk of ability of perception, of ability to distinguish between perceptions, of ability to reflect upon them, of ability to form new conceptions, of ability to will or to do—these are all abilities of some person; but to talk of power as though one understood some thing, some entity distinct from the person, and then to say it differs in degree, is simply to use words without having any relevancy in them. Then about the plant. I am asked, What does the plant know? I

don't know. But I do know that it does draw away the tendril when the hole is not suited to it, and puts it somewhere else. You say it can't help it. I don't say it can. (Laughter.) We will take another case. There is a well-known class of plants which exist by capturing and killing animals, and by digesting those animals. Such a plant, if you drop upon it a very small piece of flesh, will close upon that piece of flesh just as it will upon a fly, and ultimately digests the flesh just as it will digest the fly, but if you put a little piece of brickdust instead, it won't do, or attempt to do, anything of the kind. (Laughter and loud applause.) To use your own illustration, What does the plant know about it? Why doesn't it think brick-dust as good as meat? (Laughter.) As a matter of fact, neither is my question fair, nor is the question addressed by my opponent fair. I don't pretend that the plant thinks or that it knows in the same way as we know. But when you tell me that it has not the capacity of drawing its tendril back and putting it out in some other place, experience contradicts that, and you have no right to ask me what the plant knows. On your theory of free volition for man you have to deal with the illustrations right through the range of vital phænomena. Then we are told—and here is a mistake if Dr. McCann will permit me to say so—"To me my state is one thing and consciousness of the state another." Dr. McCann commits an error in supposing that words which are clear to him are necessarily clear to everybody else. Saying it in that way is simply using a form of words which mean nothing whatever. Consciousness and the state of which you are conscious can be distinguished, can they? Let us see the illustration which Dr. McCann gives to serve him. He says when a man is not conscious in what state is he? If he is in a no conscious state is he in any state at all? Does Dr. McCann mean, to me, to other people, or to himself? Other people, finding in the man none of the phænomena associated with consciousness, would describe him as in an unconscious state. If you ask him while unconscious he could not describe it at all, and it would be to him no state at all to him. (Laughter and applause.) I have not Dr. McCann's great ability of jesting on a matter of this kind, and if he will permit me to say it, we want, in dealing with this question of consciousness some-

thing more even than good humor. Dr. McCann asks me how we are to distinguish when consciousness is inaccurate and when it is accurate. I reply, by verifying, so far as is possible to us, each new phase of consciousness. Phases of consciousness with which we are familiar sufficiently verify themselves in their repetition. Our verification is not always complete, it is possibly never infallible, but that is the only possible way in which you can test the veracity of consciousness. There are many facts of consciousness which some individuals are incapable of verifying without assistance from others. Take for instance the case of color-blindness. We have it now shown from investigations in France and other countries, that a very large percentage—a considerable minority—of human beings are affected with color blindness in regard to some colors or others. There the difficulty of verification is sometimes insuperable to the individual unless he is brought in contact with better trained and more accurate abilities than his own, and unless he has himself the ability to appreciate the differences which those others see for him. Then we are asked what double consciousness has to do with the matter. Only this, that it shows that consciousness cannot be one and invariable. If you have one individual who while being able to think, speak, and have apparently all his consciousness about him, is in some states unable to remember a good half of his life, his consciousness is certainly not infallible. Then Dr. McCann says that volition is caused, and I agree with him. But is not that the end of this debate? No! he says; because my volition has been caused by myself. But you have not explained what you mean by myself. Define "I" or "self"—then I shall know what you mean? You tell me that freedom begins where necessity ends. Show me the point of this beginning of freedom. That is what I want! (Loud applause.)

The Rev. Dr. McCann: There are as many points in this room as there are persons. If you will bring me any particular person and allow me to examine him we shall all see it for ourselves. (Oh, oh, and interruption.)

Mr. Bradlaugh rising: Any person interrupting Dr. McCann will have to be expelled from this room. (Applause.)

Dr. McCann continuing: I don't think that Mr. Brad-

laugh can complain very much of you, because I think you have behaved very fairly towards us. But to continue my argument; to suppose that the line between compulsion and freedom is the same in all beings is to suppose what my friend must know is not in accordance with fact. He finds fault with me for speaking about consciousness being an entity, but I do not remember yet having said that it was an entity. Did Mr. Bradlaugh never hear of an action having a nature. An action is not an entity, but we talk of the natures of actions. Why may I not talk of the nature of consciousness? Then Mr. Bradlaugh asks for a definition of "I" or "me." There are certain words which do not require a definition and these it seems to me are two of them. But by "I," I mean my personality — my individual self who is speaking, acting, thinking. The present question, however, is the veracity of consciousness. Secularism being Necessitarianism contradicts consciousness, and therefore is fallacious in philosophy and not true. About that quotation from Lewes I will say that it was a perfectly fair one. The passage I read was one where Lewes is giving his own views. Now, I resume my argument where I left off when discussing the selfishness of Secularism, and showing that as Secularism was selfish it was, therefore, immoral. In complete accordance with this conception is the teaching of Mrs. Besant, who writes: "On what were these laws based except on utility? Murder and theft were forbidden. Why? Because the half savages' intuitions were against them? Not at all; but because men could not live together in security if these things were allowed" ("True Basis of Morality," p. 12). The only reason, therefore, for abstaining from murder, theft, and lying is a prudential one! And this is Secularist morality! Mr. Bradlaugh, however, also says ("Hutching's Debate,") "I honor my wife, I love my wife, and would do all I can to increase her happiness." Now, that sounds very nice and loving, and would have been most satisfactory had he ended there. But, unfortunately for himself, he does not end there. The next words are "because in making her happiness I am adding to my own. I admit it is selfish." Well, so I think. So Mr. Bradlaugh tells us that disinterested love is not possible to a Secularist, that his love for his wife is not love for his wife, but only

for himself. And if this be true with regard to one's wife, how much more true must it be with regard to one's neighbor? He then proceeds to say: "I would be good and do good to men, that being good to men, they may be good to me and those around me, reflecting the good which I give back on myself." All, you will see, is in the same direction. The good is given forth, not for the good of the recipient nor for the love of the good because it is good, but that it may be reflected back on the giver. How generously benevolent all this is! Mr. Bradlaugh advocates the cause of Secularism, not for the good of his fellow men, but for the good of himself. I should not venture to say so, but as Mr. Bradlaugh says it of himself Mr. Bradlaugh knows best. Will he forgive me for saying that I don't believe him. His theory compels him to make himself appear worse than he is, for I am perfectly convinced that he would do good to another without any consideration or hope of a reflected reward. If he saw a hungry child looking into the window of a baker's shop, I know full well he would give it a bun. Why? Because it would reflect pleasure on himself? No! It would do that, but that would not be his motive. His motive, I am convinced, would be kindness to the child. (Applause.) But many men are better than their creed, and Mr. Bradlaugh is one, for he is human, and utility is so low as to be, I think, not only immoral, but inhuman. Professor Bain arranges the matter very systematically, and let me say I would not quote Bain or any other man if he were not in complete accordance with my friend on the left. He says ("Mental and Moral Philosophy," page 392):— "Human pursuit, as a whole, is divided, for important practical reasons, into two great departments. The first embraces the highest and most comprehensive regard to self, and it is designated Prudence, self-love, the search after happiness. The second department of pursuit comprises the regard to others, and is named Duty. It is warred against, not only by the forces inimical to prudence, but also occasionally by prudence itself." This is so plain that it is impossible to mistake its meaning. Prudence first, duty afterwards; and, should a war arise between the two, duty must give way. Once more I return to the words we use, and say, if morality be only utility, "self-love," and "prudence," banish all such words as "benevolence," "philanthropy,"

"generosity," "sympathy," and use only such words as you have a right to use, as "usefulness," "prudence," and "selfishness," and see what your Secularism will come to. This may be utility, but it is not morality. Utility is morality, say our friends; but, as Mr. C. Watts most pertinently says, "An important question here suggests itself. What is utility? and how is it to be judged of and tested? What may appear, it is urged, useful to one man, another may regard as altogether useless; who, therefore, is to decide the utility of an act? The answer to this will be found in the greatest happiness principle" (*Secular Review*, January 10th, 1880). This is no answer at all, for the question still remains, what tends to the greatest happiness? Mr. Bradlaugh practically confesses there is no one to answer the question—there is no standard of morality. He said to Mr. Hutchings: "The reason why I cannot give you a definite system to-day, expressly limiting not only for to-day, but also for the future, the standard of right and wrong, that the knowledge of to-day may teach us a still better system than the knowledge of yesterday, and the knowledge of to-morrow may teach us a still better system than the knowledge of to-day" ("Hutchings Discussion," page 42). Rather an awkward position to be in, not to have a system at any time because a better one may follow after! What utter waste of time to talk about the morality of utility, when there is no one to tell us what utility is, even for to-day; to boast of the greatest happiness for the greatest number, when its advocates do not know what it is, except as a definition. We are all familiar with the great activity of Mr. Bradlaugh, but how unfortunate for him not to know whether his activity is useful or useless, is for happiness or misery, is moral or immoral. The position, therefore, is this: either there is or there is not a test of Secular morality. If there be not, then no one has any right to find fault with any one, no matter what he does. If there be a test, it must either be individual or social. Some Secularists, such as Mr. Lewin, seem to consider it altogether a personal matter. He says: "Nor do I approve of investigation permitted into a man's motives for joining the society, or even an investigation of his personal character before admitting him. A man's morals, like his opinions, are his own affair, and presidents and

secretaries are not competent to sit in judgment on such matters." The very fact, however, that Mr. Lewin has to utter such a complaint shows that it is not generally the teaching of Secularism that a man's morals are his own affair. It would be more than strange if it were. We are consequently shut up to the conclusion that society must decide what is pleasantest for itself—what is to be its morality. Professor Bain puts this with remarkable clearness. He says for the peculiar attribute of rightness: "We must refer to the institution of government or authority." Again: "A moral act is merely an act tending to reconcile the good of the agent with the good of the whole society; it is an act prescribed by social authority, and rendered obligatory on every citizen. Its morality is constituted by its authoritative prescription, and not by its fulfilling the primary ends of the social institution. A bad law is still a law; an ill judged moral precept is still a moral precept, felt as such by every loyal citizen." In other words it is more useful to obey the social authority even when the authority is bad than to disobey it. Whatever social authority decrees to be moral, is thus made moral be its character what it may. It seems a strange position but it is the only logical one open to Secularism. In perfect agreement with this Mr. J. Symes says in the *National Reformer*, of May 18th, 1879: "Society contains everywhere and always all the real and necessary elements and sanctions of morality." . . . . "Public opinion is the standard of morality." "Here then is the standard of morality practically omnipotent in its operation." He further proceeds to argue that public opinion has the right to enforce its dictates even to the point of persecution. He says, "Therefore we must say again that for the individual, whatever public opinion sanctions is right." "But while public opinion justifies the persecution the heretic is justified on the principle of self preservation in resisting that public sentiment, and those laws which no longer protect him, but are bent on his destruction. A simpler case still is the following: A seaman is cast away among cannibals, whose public opinion impels them to eat him if they can; while his principle of self-preservation inspires him to resist and do his best to escape from such a fate. Here also we see utterly irreconcilable elements thrown into violent antagonism,

though both are in a very important sense right." But surely Mr. Symes is not consistent. The cannibals, according to him, were acting morally in trying to eat the sailor, and therefore the sailor must have been an immoral man to oppose their appetite. Except in this little blunder, Messrs. Symes and Bain are perfectly consistent in the standard they give for Secular morals. Mr. Symes, however, is a prudent man, and gives the following advice to his brother Secularists: "When a man differs fundamentally from the community in which he dwells his only safe and prudent course is to be silent or emigrate." Now, that the Secularists do differ fundamentally from the community in which they dwell is beyond controversy. But lest there should be any doubt on the point, we have the authority of Mr. Bradlaugh, who says: "They (the community) have all the wealth, all the power, all the talent, all the logic, all the eloquence." We thank him for the tribute. But if public opinion be the standard of morality, and the Secularists are opposed to "all the wealth, all the power, all the talent, all the logic, all the eloquence," the very things that give value to public opinion, then it necessarily follows according to his own showing that Secularism is immoral; and therefore Mr. Bradlaugh, according to his own showing, ought either to be silent or emigrate; but I am quite sure he will neither be the one or do the other. (Laughter.) Once more I ask the Secularists to be consistent and banish from their vocabulary all such words as morality and immorality, virtue and vice, praise and blame, censure and approval, and in doing so they will banish some of the noblest words we use, and do more to expose the true character of Secularism than months of debate. Expose its character not only to those who are not Secularists, but, what is of far more importance, give its true character to Secularists themselves. If I am not now warranted in asserting that Secularism is immoral, I should much like to know what could possibly give me such right; and if I am warranted I have proved the proposition that Secularism is immoral.

Mr. BRADLAUGH: Linking together some words from an article of Mr. Symes's with some words of my own utterly unconnected with it cannot make an argument. We have had no test of "rightness" given in the last speech, and it is utterly impossible to discuss whether Secularism is moral

unless Dr. McCann tells us what he means by "right." I understand him to say he will pass it over till by-and-bye. Then it was not worth while opening the question at all. Unless we each know what is the test which the other claims to apply, the discussion is utterly without meaning. Dr. McCann is good enough to tell us that there are as many points of difference with reference to freedom and necessity in each volition as there are persons in this room, but he did not venture to say where the point of limitation was in any one case. Undoubtedly not only organisations differ, but the antecedents to each volition differ with each individual and each separate volition is the resultant of those organisations and antecedents. He frankly confesses that he cannot generally give the line—the point where liberty commences, necessity ceases. He implied that he could do it in his own case, but he did not. Then he turns upon me and says actions have natures as well as entities—consciousness is an action of mind. What? one and invariable action of mind right through his existence? That definition is an absurdity on the face of it. Activity without change, actions all the same from the very first moment of the child coming from the womb till vitality ceases? What, then, becomes of your one and invariable consciousness only changing in the states? If consciousness be action only what do you mean by states of the action? And then you say "I" means the individual thinking, speaking, acting person. I agree in that. Then is not this consciousness part of the thinking? If it is a part of the thinking it is a part of the person. It changes with each new thought. Consciousness is made up of the totality and sum of thought. It is made up of perception, the memory of perception, the judgment on perceptions. These and various other thought-processes are all different phases of it, and there is constant change; it cannot be one invariable action. (Applause.) You have to distinguish the nature of each of these mental phases to properly define consciousness. Then Dr. McCann says our only reason for abstaining from murder, theft, and lying is a prudential one. You say murder is wrong. Why? We have said it is wrong because it tends to mischief and not to improvement, to misery and not to happiness—because it diminishes the general sum of the well-being of the human race. Give your

reasons, other than these, why murder is wrong. Why should a prudential act be necessarily an immoral one? Dr. McCann says it is "prudence first and duty afterwards." Where did you learn that we thus distinguish between prudence and duty, and where do we put prudence first and duty second? With us prudence is duty, if you know it tends to human well being. Dr. McCann says disinterested love is not possible to a Secularist. Will he give me an instance of any human being of any grade to whom disinterested love is possible? Then Dr. McCann is good enough to disbelieve me with regard to my advocacy of Secularism. He says that I do not advocate Secularism for myself; he says that I advocate Secularism for the benefit of others. But to me the good of others is the good of myself. I cannot separate my good from the good of others. I am a sharer in the general heritage of humanity. As that diminishes I suffer, as it increases I enjoy it. (Applause.) Dr. McCann is quite sure that I would give a hungry child a bun. Not always sure; because if I had reason to suppose that persons were trading upon its misery, I should not give the child the bun, to be carried by it to some lazy idler, and thus encourage the perpetuation of robbery and meanness. Then we are told that prudence first, duty afterwards is not rightness. But what is rightness? You have omitted to tell us. (Hear, hear.) You have changed the word morality to the word rightness. But you have given us no standard or test—you have given us no code where we can find it, and you reproach us with not having a code. You tell us that no one can even to-day say what is useful. To tell us that is not true. It simply is not the fact. We do not say no one can tell us what is useful to-day. But that what people do tell us is useful to-day may be corrected by better knowledge which they or other people may have to-morrow. We can only shape our conduct to-day by the experience of to-day, including in this the stored experience of the long yesterday. Dr. McCann is good enough to quote from a large number of people. He would have me answer for Mr. Walter Lewin, who is hostile to Secularism, and would have me bound by each word of Mr. Symes, while he would not accept the official declaration of the principles of the National Secular Society, carefully drawn up and formally endorsed by the general body. He has never tried to answer what I put

forward as the official declarations of Secularism. Instead of answering my first speech in this debate he builds straw men to demolish. These are the puppets he pulls to amuse you; there is not the slightest attempt to even examine the Secularism I put to you. He has not even troubled to show you that it was not a true representation of Secularism. He has not dealt with it at all. He only complains that we have no code, but does not examine what we have. He introduces funny illustrations, which, if relevant, might make myself, or someone else ridiculous, but may be equally turned against himself. How, according to you, are the cannibals to act who are hungry, with a tender missionary amongst them? (Much laughter.) How, according to you, are they to determine whether it be rightness or not to eat that missionary; and, according to you, what should determine the rightness of the missionary in resisting or otherwise? May he not have been provided as a special breakfast or dinner for these poor hungry cannibals by some ruler who created them and himself, who has sole charge of the morality of the world? (Laughter.) We have got now nearly to the close of two-thirds of this debate, and at any rate there is one satisfaction so far, that my antagonist has treated me with the most perfect courtesy, and has treated you even generously so far as your expressions of dissent are concerned. He speaks here with a large majority hostile to the views he holds; here apparently it is the smaller minority who sympathise with those views. Let me ask you, therefore, that on the closing night, when feelings are likely to get warmer, that you will aid us in preserving the same decorum; that whatever we may disagree about in our discussion of rightness and wrongness, we shall, at any rate, preserve fair respect to each other's reasonings in the enunciation of opinion, feeling certain that patience on each side must tend more to the elucidation of the truth than mere flinging personal words, which serve no purpose but to make bitterness now and to perpetuate that bitterness. (Loud applause.)

A vote of thanks to Mrs. Besant for presiding, proposed by Dr. McCann, seconded by Mr. Bradlaugh, and carried unanimously, closed the proceedings.

THIRD NIGHT.—W. BARNARD, Esq., in the Chair.

THE CHAIRMAN said: We have arrived at the last night of this most interesting debate, and hitherto we have got on very comfortably. You must remember this—those of you who are here to-night for the first time—that debaters do not require to be thwarted in any way, but they require all the assistance you can give them. Debating is a very difficult task, and you know very well that both these gentlemen intend to do their very best—(A voice: "One of them does," and interruption)—and I am quite sure you want to do your best as an audience, so that you will listen to them patiently and attentively, and not interrupt either of the speakers. The first speaker to-night will be Dr. McCann, who will reopen the debate in a speech of half-an-hour; then Mr. Bradlaugh will follow in a speech of half-an-hour; and then each speaker will follow alternately with speeches of a quarter of an hour, and we shall thus get to the close of the two hours, Mr. Bradlaugh taking the last speech.

The Rev. Dr. MCCANN, who was received with hearty applause, then said: As this is the last evening of our debate, my best plan will be to finish what I have to say on the affirmative side, and then occupy the remainder of my time in replying to Mr. Bradlaugh. In continuation of my argument that Secularism is immoral, I have yet one other point to bring forward, and that is that a moral act must be one done voluntarily. We must have the power to do some other act at the time we did the one called moral. In other words, it must be an act of choice; by no fair use of language can that be called a moral act that is thrust upon me, or that I am compelled to perform. The man in the uncomfortable position indicated by my friend, under the two ton stone, could hardly be said to be either moral or immoral for lying there, seeing that he had no power of getting up, although lying there might cause his death. But if the stone were removed, and all physical restraint taken away, and he chose to lie on still, after he had the power to rise, and lying there resulted in his death, then you would say he had acted immorally, and truly so; but you will observe the morality and choice go hand-in-hand. It must be perfectly clear to all that there can be

neither morality nor immorality where there is no liberty of selection. But neither can there be virtue nor vice, praise nor blame. It is impossible to call that virtuous or vicious which could not be avoided, unless indeed a meaning be attached to virtue and vice different from that attached to it by the generality of mankind. No matter what else these words may include they always include freedom of choice. Secularists may use these words in deference to the weakness of mankind, who they imagine still to be in the infancy of thought, and therefore also in the infancy of language, but what meaning do they attach to them? If man "cannot resist the circumstances resulting in volition," or, as Mr. Bradlaugh put it last evening, if "the volition is the resultant of those organisations and antecedents"? I cannot press this point too strongly, that according to my friend's teaching the volition of the man is as the volition of the plant, the resultant of organisation and antecedents. If Secularists speak of virtue or vice in men, why then do they not extend the term to plants, or even to stones, as their actions are also resultant of their structures and their antecedents? Why not speak of a virtuous or vicious diamond, a virtuous or a vicious rose? Secularists have no more right to apply these terms to human beings than they have to all other beings. I hold that if they call men virtuous or vicious and refuse to call roses the same, they are utterly inconsistent. I shall be glad if Mr. Bradlaugh will say whether he will apply these terms to plants and minerals, or if he will not, to tell us why he will not. I have nothing whatever to do with defining virtue or vice. (Much laughter.) They have some meaning, I presume, even to Mr. Bradlaugh. Whatever that meaning be it must be applicable to all similar modes of action whether of plant or man, and must be applicable to plant and man if both act under like conditions as Secularists affirm they do. If these words belong to the infancy of language, and at Mr. Bradlaugh's advanced stage convey no meaning to him, will he kindly say so and save all further discussion of them? I fancy that system will not commend itself to the general judgment of mankind that either says virtue and vice have no meaning, or if they have, it is one that is applicable equally to all modes of minerals, plants, and man. I hope my friend's bye-

play on side issues—(hear, hear)—and his demands for definitions where they are not required, but only hinder the discussion of important points, will not banish "virtue" from his reply. There are, however, other words in frequent use amongst us, and which are also generally supposed to have some definite meaning, such as praise and blame, approval and censure. But whence come they? You cannot praise anyone for doing what he cannot help doing. To force anyone to do a kindness and then praise him for doing it would be mockery of the cruellest kind. As little can we blame anyone if necessitated to any action. If my antecedents and my organism compel me to kill—if they result in the volition that is followed by murder—it is utterly inconsistent to blame me for the act. I think even Mr. Bradlaugh will feel himself compelled to acknowledge this. Would he praise a rose if it were a fine specimen, or blame it if it were a poor one? If not, why not, while he accords praise or blame to the actions of mankind? Will he tell us how, if our actions are determined by our organisation and our antecedents, they can be the object of approval or disapproval of any kind whatever? or whether he will here discard the language usually employed by other men and never speak of either praise or blame? Mr. Austin Holyoake was consistent in the matter when he said that as he could not help the impulses of his nature he did not consider any thanks were due to him. It was rather a rebuke to his brother Secularists for so far forgetting their principles as to award him thanks. Mr. H. G. Atkinson is also consistent when he says: "I am a creature of Necessity. I claim neither merit nor demerit. I feel that I am completely the result of my nature, and compelled to do what I do as the needle to point to the north, or the puppet to move according as the string is pulled. I cannot alter my will or be other than I am, and cannot deserve either reward or punishment." Will Mr. Bradlaugh be equally consistent, and at once acknowledge in so many words what he has already maintained in fact—that we are only puppets moved by the strings of organisation and antecedents, and so deserving neither of praise nor blame? Will he be consistent, and not again take part in what must be to him the farce of proposing or seconding a vote of thanks to our chairman? Will he be consistent? He cannot help being inconsistent

if the string pulls him that way; so that when he proposes a vote of thanks to the chairman this evening, as I presume he will, you will know it is no voluntary action on his part—it is only the string that has pulled him in that direction. (Laughter and applause.) In point of fact it is perfectly impossible to talk consistently in the language of Secularism. (Loud applause and laughter.) Hence Secularism is in reality a bundle of contradictions. (Renewed laughter.) It tells us "that it is the duty of every individual to actively attack all barriers to equal freedom of thought and utterance upon all political, theological, and social subjects." (Hear, hear, and applause.) I think so, but I am puzzled to know how Mr. Bradlaugh can urge this when he has shown so clearly, and by such luxuriance of illustration, that he does not believe in the power of anyone to will action of any kind whatever. (Laughter.) It is, doubtless, possible for Secularists to pass on force, but not to originate it, for we must ever remember that when Mr. Bradlaugh speaks of force, energy, or activity, he is speaking of that which is physical, the same as that which moves stones and stars. Secularists are urged to certain lines of action. They are blamed for their indifference, and, as Mrs. Besant has put it, for their "disgracefully and lamentably small contributions" (*National Reformer*, June 6th, 1879). (Laughter and applause.) But surely this is scarcely fair. Why urge men to do the impossible? As well urge the plant to go through the stone, or digest the brick-dust. If the physical conditions be present—if the right strings are attached to the puppets—they will be pulled the right way without any urging; but if the other strings are attached, all the urging in the world will not be of any avail. Language will require to grow for a long time, at its present rate of growth, before Secularists shall be able to speak so as to be in harmony with their own theories. I want no better illustration of the contradictory character of Secularism than any one of Mr. Bradlaugh's speeches. I now arrive at my next proposition, which is that Secularism is anti-social—in other words, that it is practically opposed to the best interests of society. (Hisses and applause.) My time will not permit me to do much more than restate the principles which I have shown to be those of Secularism, and ask what would be the condition of society if they were

universally adopted. It first affirms Atheism to be the true doctrine of life. (General cries of Hear, hear.) Very well, that is exactly what I have said. (Loud applause.) It next affirms that, all men being the results of their physical conditions and antecedents, have no self-control, consequently if they lie, or steal, or murder, they are not to blame, and cannot be blamed. (Oh, oh!) If, on the other hand, they are true, honest, and good, they deserve not praise any more than does the rose for its bloom. If they aid their brethren they deserve not reward, if they wrong and injure them they deserve not punishment. The strong arm of society may punish them, but they do not deserve it. Let this belief become prevalent in society, and what would be the natural result? Again, it asserts that utility is the highest, the only morality. (Hear, hear.) You see I am quoting accurately the principles of Secularism. (Hear, hear, laughter, and applause.) That morality consists in pleasing ourselves. That selfishness is to be our guide in life. That we are to do good in order to get good—to help others in order that they may help us. That disinterested love is impossible. What would the condition of society be if these beliefs held sway? Men are selfish enough as it is. What would they be then? Secularism, also must ignore virtue and vice as we have seen. Now, what do you suppose would be the effect on society if men could be persuaded that no action of theirs could be either virtuous or vicious? That, no matter how earnest they may be to make the world better than they found it, it is not virtue, and no matter how earnest to make it worse than they found it, it is not vice. That such words as these, and all others of the same family, only express antiquated ideas, having no corresponding reality in life. It would require a cleverer word-painter than I am—(hear, hear, laughter, and applause)—to paint the results of a universal belief in what I consider such terrible fallacies. (Renewed laughter and interruption.)

The CHAIRMAN: Do not interrupt the speaker. If you think he is putting his foot in it by all means let him to do so, and let Mr. Bradlaugh deal with him. It is not for the audience to deal with the speaker. (Hear, hear.)

The Rev. Dr. MCCANN: The following quotations will also help to place the anti-social character of Secularism in a clearer light. They are from an old debate—that with

Dr. Baylee. I would not quote them did I not think that they accurately express the belief of Mr. Bradlaugh to-day, as they did then. I do not think it fair to quote a man to-day against himself ten or twenty years ago, if he says that in the meantime he has altered or modified his views. No man, the Pope excepted, now calls himself infallible. I have changed my own views on many subjects, and should be the last, therefore, to deny to another the right I claim for myself. (Hear, hear.) It is not my wish to snatch any platform triumph, but it is my wish, and my very earnest wish, to have the subject honestly and thoroughly discussed. Dr. Baylee asks Mr. Bradlaugh: "What restraint has an Atheist from stealing a small sum from a wealthy master if his own family be in want?" Mr. Bradlaugh replied: "The cognizance that all actions which do not tend to the general happiness of the human family are immoral." The case was this, an Atheist's family was in want, he was employed by a wealthy master, he saw an opportunity of taking a small sum of money to help his starving family under circumstances that would prevent his master knowing he had taken it, and the only thing to prevent him taking food to his starving children was the knowledge of the proposition that the action was immoral, *i.e.*, useless, because it would not tend to the general happiness of the human family. (Hear, hear.) Remember that the man was an Atheist, and therefore this was the only consideration that could influence him against the taking of the money. But there were many to influence him in its favor—the consideration that if he took it he could not be blamed, nor would he deserve punishment, nor was it vice; the consideration that—as according to the great Utilitarian, Bain, prudence comes first and duty afterwards—he was acting prudently in providing for his starving family. Surely Mr. Bradlaugh, who knows men as well as most, cannot deceive himself into the belief that this would be an effective aid to honesty! Responsibility is also generally supposed to play rather an important part in the working of society. Dr. Baylee asked Mr. Bradlaugh the important question: "To whom is man responsible?" The answer was: "I do not know that he is responsible to anyone." In that case man is not a responsible being—not responsible to anyone for his actions to anyone. Of course, he cannot be if he could not help them. Next question:

"Then, if a man commit adultery is he responsible to no one?" Answer: "If by responsibility you mean does the commission of an immoral"—(that is, useless act)—"tend to misery, Yes; if more than that, No."——

Mr. BRADLAUGH (rising): I do not think the words "useless act" are in my answer.

The Rev. Dr. MCCANN: No, no! I did not say they were. But the prevention of an immoral act tending to misery is not responsibility, therefore Mr. Bradlaugh says, in fact, that an adulterer is responsible to no one. If this be not anti-social, what can be? (Applause.) But may I ask in passing, hoping for an answer, why should an immoral, that is, a useless act, necessarily tend to misery—it may tend to regret—but why to misery? The next question was, "Is he not responsible to the husband?" Reply: "One must have the whole of the circumstances to say yes or no." (Hear, hear, and loud applause.) "Suppose a husband were unkind to his wife?" Then, according to this——

Mr. BRADLAUGH: I think, if you are quoting from the Baylee Debate, it will be better to finish the quotation first, and make your comment afterwards; otherwise there may be misapprehension. (Hear, hear; and a voice: "A jumble.") Give us each answer by itself.

The Rev. Dr. MCCANN: I take each answer, and comment on each answer as I go along. According to this adultery, where the husband is unkind, is justifiable. But who is to decide where the degree of unkindness is to be drawn? Next question: "Is he responsible to a good and kind husband?" Answer: "If by responsible you mean should a good husband take measures to prevent the commission of adultery, yes; if more, what do you mean?" Comment by myself: According to this, therefore, if adultery be committed with the wife of a good and kind husband, all the husband has a right to do is to try and prevent its repetition! He has no right to censure the adulterer; no right to call the deed even vicious; he can only call it useless, and try to prevent the recurrence of the useless act; for do not forget that the immoral and the useless are exactly the same thing, in the Secular creed, at least. Another question was: "Then, in your sense of the word responsibility, is not man responsible to his fellow-men?" Reply: "My own sense

shuts out responsibility; therefore, no." Whether this be social or anti-social I leave others to infer. Yet, I fancied I had read of responsibility somewhere, so I turned to the *National Reformer*, and there I read the remarkable words, "For the opinions expressed in all signed articles the writers alone are morally responsible." (Laughter.) Morally responsible! (Renewed laughter.) Here we have not only responsibility, but moral responsibility. Apparently, if Mr. Bradlaugh's own sense shuts out responsibility, he does not intend that the senses of the writers in his paper shall shut it out. Perhaps he will explain this. (Hear, hear.) A further question was, "What does Atheism teach about marriage?" the reply being, "It teaches that if a man take a woman, he is bound to do everything that a man can for their mutual happiness." (Hear, hear.) "He should be thoughtful before marriage to see that they have a mutually suitable organisation." Comment by myself: Why is he bound to do what he can for their mutual happiness? If he wants her to help him, then, according to what we have already heard, he will help her; but if he does not want happiness from her, as Mr. Bradlaugh has implicitly stated, there is no reason why he should add to hers. Next question: "If their organisation be unsuitable, may they separate at will?" Reply: If they both be of opinion that their continued marriage union would tend to misery, it would be better for them to separate"—(hear, hear, and applause)—let me finish Mr. Bradlaugh's answer, "and that is the tendency of our present legislation." But that this may not be misunderstood, we must see what Mr. Bradlaugh means by marriage. In his debate with Mr. King, he said—

Mr. BRADLAUGH (interrupting): I beg pardon for a moment. I must object to quotations from a debate which I have repudiated, unless it is taken either from the report of the *National Reformer* or the *Bury Times*. The King Debate is one of the grossest misrepresentations that has been printed.

The CHAIRMAN: As Chairman, I think it is better that the person who is opening the discussion shall be allowed to go on in his own way, and I shall use the same argument to Dr. McCann if he interrupts Mr. Bradlaugh. I think it is better that the reply shall come in its proper place.

The Rev. Dr. McCANN: Mr. Bradlaugh may have re-

pudiated the King Debate, but does he repudiate the quotation I have given? Does it, or does it not, express his sentiments? Mr. Bradlaugh says in his debate with Mr. King, "I call every woman a wife who lives with and has children to a man." I do not blame Mr. Bradlaugh for this sentiment: it is a necessary deduction from the Secularistic theory that we are only developed brutes; for if there be no such thing as marriage amongst cattle, why should there be amongst human beings if we are only cattle of a higher order? The effect of such teaching on society, if society believed it, which fortunately society does not, would be to shake the social fabric to its foundation, and turn our country into a pandemonium. I now finish my positive work of affirming and giving my reasons for my affirmations that Secularism is Atheism, is unphilosophical, is immoral and is anti-social. I hoped to have maintained the proposition also that it is anti-secular, but if the propositions I have already advanced be true, then it necessarily follows that it must be anti-secular also, or a system opposed to our best interests for time. I now proceed to reply to some of the discursive remarks made by my opponent on last evening, which I may not have already noticed. I call them discursive, because he has not from the first attempted to follow my reasoning as a whole, but has selected words and phrases here and there, and has concentrated attention on them, as though they were the main body of my argument. Mr. Bradlaugh said that "linking together some words from an article of Mr. Symes with some words of his own could not make an argument." I never thought it could. But having concluded my argument, basing it upon its own merits, some words from Mr. Symes and some words from Mr. Bradlaugh may illustrate and confirm it. This is what I did and nothing more, and this was all Mr. Bradlaugh had to say upon the question whether society had a right to determine its own morality and to enforce its determination. My friend spent much time in asking for a definition of "I," giving one of his own which he knew I could not accept. I thought it a pity to draw off attention from the main line of thought to definitions which were not required for an adequate understanding of the subject. Surely, if my friend were very anxious to have the fundamental practical points discussed,

he would not studiously avoid them, and spend his time, and try to spend mine, on subsidiary and minute details which cannot affect the discussion much either one way or the other. (Applause.) However, I gave him a definition with which he agreed. Then I am asked: "Is not consciousness a part of the thinker—is it part of the person?" No, it is not part of the person. A thought is not an entity, but an action of the thinker. Thought and thinker are not the same, though you cannot separate the thought from the thinker except in thought. Steel is bright, but the brightness is not the steel. My friend has tried hard to get from me some acknowledgment of the untrustworthiness of consciousness, but in vain. Our senses may deceive us, as in the case of color-blindness instanced last evening, and also referred to by Huxley to show that we must rely on consciousness at last; our inferences may be illogical; our judgment warped; but our consciousness, our knowledge of our own mental states—as I have all along said, it is of that consciousness alone I am speaking—this is always trustworthy, always reliable. It is quite natural he should try to overturn this, as it cannot be pleasant for Secularists to have their system demonstrated to be unphilosophical, because they so frequently boast of their philosophical character. But perhaps it is with them as with those in France, who most loudly shouted of "liberty, equality and fraternity" when they had least of it. In reply to my question how we are to distinguish when consciousness is inaccurate and when it is accurate it is answered, "by verifying each new phase of consciousness; our verification is not always infallible, but that is the only possible way in which you can test it." But that is no test at all. You verify an unreliable consciousness by an unreliable verification. An unreliable verification is no verification; therefore, according to my friend, it is impossible to be certain when consciousness is true and when it is false. Most certainly, whatever else it may be, it is not a test of truth to Secularists. Again, I ask where are they to find such a test—a starting point in thought that cannot deceive them? If there be such starting point, where is it? If there be not, what then? (Loud continued applause.)

The CHAIRMAN: Mr. Bradlaugh will now have half an hour.

Mr. BRADLAUGH then rose to make his first speech, and was received with demonstrations of enthusiasm. He said: Dr. McCann, in this debate, undertook to show that Secularism was unphilosophical, immoral and anti-social. He has sought to make this out by alleging that Secularism is Atheistic, Necessitarian and Utilitarian. Out of all these words there is only one word which he has sought to define, *i.e.*, the word Necessitarian; and he persists to-night that definitions are unimportant. But if definitions are unimportant, what is the use of using language at all? We may use the words in exactly opposite senses, or we may use the words without comprehending the senses in which we use them. All the other words which have been used by him have been used without the slightest attempt at definition or explanation. I explained at length what the word Secularism meant according to a large number of Secularists and as officially declared by the National Secular Society, but Dr. McCann has, up to the present moment, not thought fit to offer a solitary word of criticism on this explanation. He has only in his last speech used one or two words out of my first speech, but even then has not attempted any answer or criticism. He dismisses the explanation as in no manner concerning him in this debate, although many weeks ago he knew from me in writing that this would be the explanation of Secularism I should defend. He apparently will not take this as Secularism, or even as a presentment of Secularism needing the smallest examination, yet he uses detached phrases of individuals, worthy or unworthy, some of them, as Mr. Walter Lewin, being only remotely connected with Secularism by having attacked it. To-night he has referred to answers—supposed to have been given by me in various debates, and with reference to those taken from my debate with Mr. David King, I regret he has used a report which misrepresents my real views, and which puts into my mouth words which I did not utter. From the very first issue of that report—at the time when it was printed and published by Mr. David King—I denounced it a falsehood, and have repeatedly made the same denunciation. I am sure that Dr. McCann would not have quoted that if he had known that such was the case, and I am rather surprised that so attentive a reader of our literature should not have been acquainted with it. I

am sure that Dr. McCann would have preferred to refer to the *Bury Times* report, in which he would have found something a little more clear and distinct. It is so easy to give a rough turn of words to a phrase and make it seem coarse where it is not, and that is just what has been done in the case of this report published by Mr. David King. Of the word Atheism, although it was declared that Secularism was Atheism, Dr. McCann offered no definition, but was content to leave it as if everyone agreed in its meaning. By "Atheism" I mean Monism, that is the affirmation of one existence, of which existence I only know mode, each mode being distinguished in thought by its qualities. This affirmation is a positive, not a negative, affirmation, and is properly describable as Atheism, because it does not include in it any possibility of Theos. It is, because without God, distinctly an Atheistic affirmation. It is perfectly true that Secularism is without God. The word "immoral," in the question, I have defined by making utility the Secularistic test. Dr. McCann has only substituted one word "rightness" for another word "moral," and does not define either of them. (Loud applause.) Unphilosophical has passed as a big word of condemnation, but not the faintest attempt has been made to explain what is meant by philosophy, or which is the particular philosophy by which Secularism is condemned. Last week, when Dr. McCann read to you from the exposition by the late George Henry Lewes of the views of Descartes on the certitude of consciousness, I suggested that it was hardly fair to put the exposition by Mr. Lewes of the views of Descartes, as against Mr. Lewes's own and later explanation of consciousness. I understood Dr. McCann to reply that what he had read were the views of Mr. Lewes personally. Here Dr. McCann must have been misled either by an imperfect copy of Lewes's brilliant work, or in the hurry of selection he must have misread. If he will turn to the "History of Philosophy," 3rd edition, vol. ii., p. 154, he will find—a few lines lower down than where he concluded his quotation on Descartes' proposition of the certitude of consciousness—these words:—"This is the basis on which Descartes' system is erected; if this basis be rotten, the superstructure must fall. If the root is vitiated the tree will bear no fruit. No thinker, except Spinoza, has so clearly, so frankly, stated

his criterion. And the criterion is fallacious." (Loud applause.) A little lower down on the same page Lewes asks: "What ground can my consciousness afford respecting things which are not me? How does the principle of certitude apply? How far does it extend?" The quotation made by Dr. McCann, from Lewes on Schelling, was still more unhappily selected, for if Dr. McCann had read on vol. ii., p. 529, he would have found these words: "Consciousness, then, which had so long formed the basis of all philosophy, was thrown over by Schelling as incompetent to solve any of its problems. Consciousness was no ground of certitude." (Applause.) As an illustration of the difficulties which occur in defining morality, unless you have a clear test or standard, I may take the expressions of several clergymen of the Church of England in reference to the recent convictions for bribery—(loud applause)—and I am sure Dr. McCann will bear with me if I have any difficulty when I come to deal with the matter of virtue and vice. The Rev. D. Bruce Payne says, writing to the *Daily News*, that "the crime for which these men are picked out from thousands of similar offenders is not moral but political." The Vicar of Deal describes one of the very worst of the bribers as "an upright Christian gentleman." (Oh, oh!) With the Secularist bribery is wrong, not because the law forbids it, but rather because it tends to the demoralisation and degradation of the country where it is practised. (Loud cheers.) The chief briber, on behalf of whom the clergymen at Deal have interested themselves, had, on his own admission, not only bribed, but had sworn falsely, to try to conceal the fact on the trial of the election petition. He had not only taken money wherewith to bribe, but had kept part of the money back for his own profit—(oh!)—and yet here are clergymen of the Church declaring that this person has committed no moral offence, but is "an upright Christian gentleman." (Oh! and laughter.) I have no doubt Dr. McCann would say that bribery, perjury and embezzlement were immoral; but I ask him where is the test and standard by which the moral quality of such perjury, embezzlement and bribery may be determined, if not by utility? To tell me this is subsidiary, to tell me that I avoid the fundamental question in so raising it, is to use language which does not accurately convey the position I

have taken in this debate. Dr. McCann says a moral act must be done voluntarily, but he has never yet answered the question I put to him early in this debate—viz.: Why is the act following a causeless volition more moral than that following a caused volition? Unless he does this it is simply wasting time to repeat phrases about immorality of necessitated volition. Where have Necessitarians ever said that man has no power of control? From beginning to end I have taken man's organisation and antecedents, not as separate from the man, but as the man. Dr. McCann separates these to find his powerless man. Then Dr. McCann speaks of praise and blame being inconsistent with Necessitarianism. What relations have praise and blame to free volition? I can understand that a man who believes that volition is caused may use words which he thinks will change the future volition. But I cannot understand a man talking of praise or blame in reference to free volition, to which praise or blame must be as inapplicable as it is possible for anything to be. Praise and blame—that is, words of appreciation or depreciation of any acts—are used by Secularists, first because they think expressions of enlightened opinion must instruct and reform, and next because they think that expressions of enlightened public opinion may compel in the persons a change of conduct in the future. They don't praise or blame as penalty-punishment for crime in the past; they praise and blame to prevent the recurrence of the crime in the future. (Applause.) Why should you praise or blame a man with uncaused will? What is the use of talking to him at all? His volition is free! Free! Then your words are wasted; your blame is mockery! Praise and blame—that is, words of appreciation or depreciation—words pointing out the mischief or the advantage of a course, are useful when you think that a man's volition is caused. The people who listen to them may be influenced and change their conduct. Dr. McCann thinks that Mr. Bradlaugh's position is that the volition of man is the same as the volition of a plant. Luckily this debate will be in print; luckily it will be read, and one feeling of astonishment will characterise those who read these words of Dr. McCann's. They will turn through the report and they will never find any phrase like it—they will never find a phrase of mine implying any such opinion on my part as

to volition on the part of the plant. You will find phrases implying capability of selection. If you tell me that volition is necessary to that, then it is on you that the affirmation of that proposition comes, because I deal with the capacity I find, and I do not invent abilities for a thing. I wait until I have found evidence of it. But, says Dr. McCann, why not talk of a virtuous or vicious diamond? Because I apply the words virtue and vice to those actions which result in increasing happiness or diminishing it. I have never yet met an acting diamond—(loud laughter)—and have therefore had no reason to characterise its action. If Dr. McCann will give me any illustration of a diamond having done something, then I will tell him whether, in my opinion, the act which the diamond did was an act which tended to the greatest happiness of the greatest number or not. (Laughter.) Until he does that, his question to me is as sensible and as relevant as that alleged to have been put by an arithmetician to his scholars—"If a cart-load of turnips cost £5, how much would a wagon-load of herrings cost? (Laughter.) Dr. McCann says that he is not concerned with the meanings of the words virtue and vice. He declares that you all know what they mean. But, first, you don't all know what they mean. The clergymen whom I read about don't know what the words mean in relation to bribery. If we were discussing this question before these clergymen, we should very likely disagree very strongly as to the meaning of these words. (Laughter.) It is not true that virtue and vice have had a fixed and definite meaning all the world over; it is not true that the same understanding will be had of them to-day in different countries of the world; it is not true that the same understanding has attached itself to them even during a number of centuries in this country. Then Dr. McCann says that I have practically wasted time in this debate by making a demand for definitions where they were not required. I have always thought that definitions were required where it was possible that disputants did not know what they were talking about. Why! you pitch words about here without saying what you mean by them, though on each word there has been wide disagreement. There are no words as to which patient thinkers have differed more than the meaning of right and wrong, moral and immoral, virtuous and vicious—there are

no words which, if you took them round the world and put them with acts, you would find a more astonishing and conflicting variety of actions called into use by each of those very names. Then Dr. McCann says, "You cannot praise or blame." You may if you choose try to reason why we should not: to declare that we cannot is absurd; we do. He says, You cannot praise or blame, because your actions are compelled. Explain why I may not! Oh! you say, my antecedents and organisation compel me. There is no "my antecedents and organisation" apart from "me." Your organisation and antecedents make up the "me." You talk as if the antecedents and organisation were there [pointing to the other end of the Hall], and "me" here. (Loud cheers.) You speak as if poor "me" were the weakly, puny thing, and my antecedents and organisation my separate and irresistible ruler — (applause); and to show that I am not justified in this, Dr. McCann went on to say, "Would Mr. Bradlaugh blame the rose if it was a poor specimen?" No! but I might blame the gardener. (Laughter.) If I met with a Secularist and he were a poor specimen, I would try and change the conditions, so that the next Secularist would be better; and this is what is done by the gardener. They don't praise or blame the rose, but they give it more room in a new pot, fresh mould, more light, new air, fresh soil, less or more of each. They know that as they surround the rose with new conditions so the rose will be changed for better or for worse. (Laughter and applause.) The only difference between myself and Dr. McCann is that he will do with me what he will not do with the rose. He takes away my body, and then he speaks as if the body and the ability of the body were grappling with "me" and making "me" do what they wished. Why! I never propounded such a ridiculous proposition! And then there was a word of good-humored banter respecting why I should propose a vote of thanks to the chairman. If our volition is not free but determined, he says why do I go through the farce of proposing a vote of thanks to the chairman. I will tell you why I do so. I do so because I want the chairman to speak better and more fairly of us in the future—(hear, hear); and I think that the chairman may reason thus about the matter: If Mr. Bradlaugh was good enough and considerate enough to think that my con-

duct as chairman was impartial and deserved thanks, I must try and be at least as good as Mr. Bradlaugh by-and-bye. (Laughter.) Well, now! I may be wrong in that, but still—(renewed laughter)—still that is the sort of reasoning which influences me in proposing that vote. Now we are told that Mr. Bradlaugh has shown that he does not believe in the power of anyone to will any actions. When did I say anything so absurd? The fact is, our friend listens to what I ought to say, according to him, and not to what I do say. He had, with scissors and paste, before he came here, from a huge number of Secularist writings, cut out a man of straw, and he occupies himself in refuting his arguments, and does not touch the arguments I have brought forward in this debate. To say that I do not believe in the power of anyone to will action is to misrepresent the position I have taken in this debate. On the contrary I tried so to define volition—I tried so to picture volition as the phase of mind, often immediately precedent to action—I tried so to put this as to show how each mental phase succeeded until the individual willed. I may have failed; I dare say I did fail, but, at any rate, I never denied man's ability to will any more than I deny man's ability to strike. What we differ about is as to whether the will is in any fashion determined. Our friend says it is free, and then that it is limited to a certain extent, and to the rest of the way it is free—it is tied and it is loosed; and this is the sort of thing which I have to meet in this debate. Then Dr. McCann lays down the proposition that Secularism is anti-social, and that it is practically opposed to the best interests of society; but we have not been told, even in the opinion of Dr. McCann, what the best interests of society are; and I ask, who is to judge them? who is to say what the best interests of society really may be? Take the Irish landlords. There are people alive now who think that the best interests of society consist in maintaining the laws which have enabled them to rob and oppress their fellow-men. It is no use repeating phrases like these about the best interests of society. We must know what they mean. We have been told by Dr. McCann that if a man's volition be determined it is wrong to punish him for acts committed which are injurious to the best interests of society. Permit me to point out that punishment is a different thing from vengeance. Punishment is utterly useless,

except so far as it is administered for the prevention of crime in the future. If it is simply vindictive punishment, then that punishment is in itself a crime. Then he says that we teach that morality consists in pleasing ourselves; but he does not tell you what we mean by pleasure. We teach that the best pleasure to oneself is found in the endeavor to increase the pleasure of those around us. By pleasure we do not mean some low type which he may choose to select. We mean a high—we mean a lofty, a thorough and a clear type; and here I will deal with what Dr. McCann says about disinterested love not being possible to a Secularist. Last week I invited Dr. McCann to give some illustration of what he meant, this he has not done. Of course you may take illustrations of the love of a mother for her child, of a man for his wife, of a woman or man for her or his country, in all of which there may be personal suffering endured through and because of this love. But in each case the individual suffering would be less happy if recreant to the love, although by so being recreant she or he escaped the personal suffering. The happiness of such sacrifice may and does differ in quality, but it is happiness, and I should allege far higher happiness than that of the escape of recreancy. We are told that Secularism denies that any action can be virtuous or vicious. There, again, we have still the putting into my mouth words which put upon me meanings which Dr. McCann invents. I do not mean invents in any unfair sense, that he knows them not to be true, but invents, possibly, because he himself does not understand the position we take. He says, with reference to adultery—he says that according to us there cannot be such things as useless acts. An act cannot be neutral; it must either be for good or for mischief. You say that an act can be neutral. Give me an illustration. It is a question of usefulness or mischief; it is a question of increasing the general happiness or diminishing it. Dr. McCann has introduced another set of acts which are neither virtuous nor vicious, and which he himself has got to explain. He was excessively unfair—I hope he won't think I mean intentionally so—but he was excessively unfair in the comment he made on my answers which he quoted from the Baylee debate. I think I did wrong in rising—Mrs. Besant checked me in so doing;, but I rose because it was so difficult for the audience to understand how

much was comment and how much was quoted. It is perfectly true that Dr. McCann was good enough to state afterwards which was quotation and which was comment; but I have to object that I did not say that it was the duty of a husband to prevent the recurrence of his wife's adultery. You won't find that word "recurrence" there. I said it was the duty of the husband with his wife to prevent the happening; and if the husband loves his wife—if they tried before marriage to understand one another, and to see that they were suited for each other—then the good husband does prevent, not the recurrence of the act, but the possibility of it. (Applause.) I will deal with the responsibility question when I speak again. Then Dr. McCann asks me why is a man bound to do what he can for the mutual happiness of himself and wife? Why? Because in increasing the happiness of the domestic circle he increases the tendency and power of each member of that circle to make happiness in the society to which it belongs. Because each member of that circle may become the centre of such another circle, and so the happiness of one spreads out more and more widely, increasing the general good. You have no such inducement, but the Secularist has. If you say you have, show me where you have. Don't simply fling bricks of opprobrious words at us. Show some stones of your own morality for us to judge. (Loud cheers and cries of "Bravo.")

The Rev. Dr. McCann: I will reply very briefly to what Mr. Bradlaugh has raised in his last speech, and then go on to reply to what he said before. First with regard to Atheism. It does not concern the question what Atheism is. (Oh.) Let Atheism be what it may, it is not the purpose to discuss the truth or falsehood of Atheism in the debate. Secularism is Atheism, let Atheism be what it may. My definition of Secularism was that it is Atheism; that Mr. Bradlaugh has acknowledged, and my work there is ended. (Hisses and interruption.) Mr. Bradlaugh objects to my quotation from Mr. Lewes, which he says does not represent the view of the writer of the History of Philosophy. It was Mr. Lewes' own sentiment that I quoted, and not his statement of the opinions of any other philosopher. He speaks of consciousness being the basis of all philosophy, and he says that if that be rotten the superstructure will fall, but he does not himself hold that that

basis is rotten. He states that Spinoza held that the basis was rotten, but this was not the teaching of Lewes himself. But I have a later work of Lewes' here—"The Problems of Life and Mind;" and, at page 277, vol. i., I read these words, "Consciousness is admitted to be the only ground of certitude." I have here "The Physical Basis of Mind," and at page 334 we read—"We are all agreed that Consciousness is the final arbiter."

Then we have heard a good deal from Mr. Bradlaugh about the opinions of certain clergymen on the bribery question. In reference to that, I will only say that my subject here is the morality of Secularism, and not the morality of clergymen. (Laughter.) Mr. Bradlaugh goes on to ask me "why an uncaused volition should be more moral than a caused volition?" I reply, I do not know, because an uncaused volition I never heard of. All changes are caused. But my friends on the left have no philosophical right to use the word "causation" at all, because their theory is that they know nothing of causation; they only know of antecedents followed by certain consequents. I hold that all changes in the world are caused, and therefore volitions must be caused too. I have contended that utility has nothing whatever to do with the morality of an action; and also if a man's volition be not free he cannot be praised or blamed. I do not say you cannot physically praise or blame; what I do say is, you ought not to do either. (Laughter.) I never denied your physical ability to do so, but what I say is you cannot consistently praise a man for doing what he could not help doing—and you cannot blame a man consistently for doing what he cannot help doing. (Laughter and applause.) I may not dwell the whole evening on this point. I shall now show you that Mr. Bradlaugh denies will altogether of man. He has not spoken of the volition of a plant, but he has referred men and plants to the same category of caused actions. And then he says that if the rose were a poor specimen he would not blame the rose, he would blame the gardener. I blame the gardener, but it is the rose I am talking about—not the gardener. Mr. Bradlaugh, you see, goes outside the rose for blame. You cannot blame the rose. And, therefore, if you are to blame anything, blame something outside me, don't blame me; blame my antecedents if you like, blame my

organisation, but don't blame me—blame the gardener. (Much laughter.) Then our friend found fault with me because I used the term my organisation, my volition, my will; and Mr. Bradlaugh says I speak of these as though they were something beyond "me." Does Mr. Bradlaugh never say my bones, my limbs, my brains, my eye, my hand; and when he does, does it mean his hand is out there beyond him? I still say my organisation, I still say my thought, and my volitions, without, for for one moment, attempting to affirm that consciousness or volition is an entity or not an entity. Then he found fault with me, again, for not defining virtue and vice, and he says that the conceptions regarding virtue and vice vary in different countries. On one point, they have never varied, and never can vary. Wherever there was an action, whether virtuous or vicious, it was a voluntary action. This one point has always been attributed to virtuous and vicious actions—they must be done by the man himself, and not by his antecedents or his organisation—(laughter)—they must be done voluntarily, by exerting his own will, selecting one action rather than another action himself; because, if he did not select the action, then it was not his action at all. The action must be selected by you to become your action, and if it be not your action, you cannot call it a virtue or a vicious action. Now, I will reply to what Mr. Bradlaugh had previously advanced. I have been struggling to get from Mr. Bradlaugh the acknowledgment, in so many words, that men have no will. All his illustrations and his reasonings have involved it; but he did not state it till last night. He then said, "He tells you I did not distinguish between volition and will. The words to me mean the same. I do not know some big lump 'will;' I do not know some complete entity 'will;' I do not know some ability marked 'will,' each activity of which is a volition. I only know the effective volition consequent upon antecedents." There I want nothing more on that subject, as man, it is affirmed, is without "will." In my view will is partly determined and partly free; and once more I say that, asking me for the line of demarcation between the freedom and the determination, is asking me for the impossible. Will Mr. Bradlaugh draw me the line between ignorance and learning, and tell me where ignorance ends and learning

commences? (Applause and laughter.) When he does that I will draw the line between determination and freedom. It is made a ground of complaint against me that when I wanted a definition of morality I did not go to the principles quoted by Mr. Bradlaugh in his first speech, and which were so carefully drawn up by the Committee of the Secular Society. In the first place, it was not for Mr. Bradlaugh to define Secularism; it was for me to define Secularism. He could object to my definition if he chose, but he was to follow my lead; I was not to follow Mr. Bradlaugh's lead. I thought the "Text Book of Freethought" as good a place to go to as any, and now I am glad I did not go to those principles, as it would only have been a waste of time, as there is no definition of morality there whatever. We are told what Secularists consider a test of morality, but we are not told what morality is. Telling me how I can test the presence of an acid is not saying what the acid is. Nitric acid may be a test for gold, but nitric acid is not gold. (Much laughter.) If that be your chemistry, to think nitric acid gold, I have nothing further to say! (Renewed laughter.) The word test, here, is altogether inappropriate. Utility may be to others a test for morality, but not to the Secularist. The Secularist test is the very thing we want to get at, but which apparently does not exist. Mr. Bradlaugh says he knows what is useful to-day, but cannot tell us what may be useful to-morrow. That is, he has a test for the morality of to-day, but none for that of to-morrow; that what is morality to-day may be immorality to-morrow; that what was immorality yesterday may be moral to-day; so that morality is so fluctuating a thing that you never know where to have it. (Oh, oh, and applause). He tells me that I have given him no test for my morality, but he forgets that I am discussing, not my morality, but his. (Hear, hear.) I wish to know about his tests; he has at present no concern with mine. (Oh!) I prefer discussing one subject at a time; and when I say that utility is not morality, I define so far only as to enable him to understand why I say it is not morality. I define morality as rightness, and what I mean by rightness I leave to the general judgment of thinkers. (Oh, oh, and laughter.) I appeal to the practical judgment of mankind. Why! we might spend night after night on logical definitions without being any

the wiser. (Laughter.) All I want to make clear now is, that when we say an action is useful we refer to one quality, but when we say it is right we mean something else—never mind what else—(laughter, and oh, oh)—something else. It is sufficient to show that the words referring to utility and the words referring to morality are not interchangeable terms, and, if not, then morality and utility are not the same thing. But Mr. Bradlaugh further charges me with being unfair because I say that Mr. Mill is inconsistent when he adds quality of pleasure to quantity. Why unfair? I do not take away any quality of pleasure, as is asserted, but I do say that utility has nothing whatever to do with quality of pleasure. Will Mr. Bradlaugh show that it has. If the greatest number should find their happiness in the most grovelling vices, whatever contributes to their happiness must be in harmony with Secular morality. (Hear, hear.) I am asked to give an illustration of a moral act that is not a useful act. I cannot—for, as I have already said, I believe all moral acts are useful. I am also asked to name a useful act that is not moral. Of course, from a Secular point of view it would be impossible, as they are the same things. I could not name even the ripening of an apple, for that is useful and contributes to the happiness of some, and is therefore moral. From my own point of view I have given one in the case of the musician playing only for pay. I am also asked, in reference to champagne, why a pleasurable action may not be a moral act. I see no reason why it should not; but the pleasure is one thing and the morality is another. I see no reason why a red body should not be a round body, but redness is one thing and the roundness another. The further query put to me: "Why should not the selfish thing be also a moral thing?" Because morality, as understood by all but utilitarians, excludes selfishness. Selfishness, however, according to Mr. Bradlaugh, is the highest morality. He will not permit me to say that he does good for its own sake. He said, and with the approval of his followers here, that he would increase the general amount of happiness because by that means he would increase his own. That is, he sells his activities as the baker sells his loaves, for what he can get for them. Mr. Bradlaugh says he never saw an active diamond that gave pleasure. I never saw an inactive diamond, or one that did not.

Mr. BRADLAUGH: I never said that. I never said that I never saw an active diamond that gave happiness. I never saw an active diamond at all. What I said was that I never met with an acting diamond, which is a very different thing from the words which are put into my mouth. I am sure Dr. McCann would not misrepresent me intentionally. May I beg you to be very patient with Dr. McCann in his next speech—the closing one on his part in this debate—so that we may conclude in orderly fashion? Dr. McCann has asked me to draw the line between ignorance and learning, and he asks me to tell him where one finishes and the other commences. Luckily, I had prepared a very small piece bearing upon that, which I will read to you. Dr. McCann, substituting inaccurately knowledge for consciousness, defines knowledge as certainty, and jests with me, that, if not, increase of knowledge may mean increase of error. But what is understood by Dr. McCann in thus using the word knowledge? The Mahomedan knows that there is one God, and that Mahomed is his prophet. The Trinitarian knows that Christ is God. The Unitarian knows that Christ is not God. Dr. McCann may answer that these are not cases of knowledge, but of belief. Therefore I will take another illustration. A man knows that a cloth is red, another man—color-blind—knows that the same cloth is green. If Dr. McCann should say, as he may well do, that these are not illustrations of knowledge, will he give one illustration which he thinks accurate to guide us? Does knowing a thing mean more than that in thought we distinguish the thing perceived from other things—that is, from other phænomena? We so distinguish it, accurately or inaccurately, according to our sensative abilities and their efficiency. The accurate distinguishment of phænomena I should describe as knowledge. Ignorance I should describe as the inaccurate attempt at distinguishment, as the inaccurate result of imperfect distinguishment. Knowledge I should define as commencing when clear and accurate distinguishment is, and that distinguishment is remembered. Dr. McCann says it "does not concern him what Atheism is." "It may be what it likes." No! but is it what I define it? Because, if it be what I define it, all that you said about it amounts to nothing. I am sorry that Dr. McCann, too, did not appreciate what I put as to Lewes.

Either I have misunderstood his answer, or it was not quite accurate. If you refer to the pages of Lewes which I gave, you will see that I have been specifically accurate, and when Dr. McCann spoke of Lewes as if saying that Spinoza was fallacious, and replying that Lewes did not say that, the fallaciousness of Spinoza does not enter into the quotation. The only phrase relating to Spinoza is, "No thinker except Spinoza has so clearly, so frankly stated his criterion." What Lewes meant by that was this: Whether you agree with Spinoza or not, he writes very clearly what he means to convey. Lewes said Spinoza has done this clearly; Descartes did it clearly, too; and the criterion of Descartes so clearly given is fallacious. The words are here, and there is no excuse for saying that I have not correctly represented the quotations and the consequence of them. It will be a matter for you to examine when you read the debate. It is not a question of what is the ground of certitude, but whether consciousness itself is the measure of certitude, and whether that what you determine is your consciousness is therefore certain; because you so put it. Remember that I, myself, have put it that to make up consciousness you have perception, memory of perception, reflection upon these, conception as to and founded on these, judgment and discrimination in relation to perception and conception; and the exactitude of each and all of these goes to make up any certitude there is. But then the question comes, may not there be points in all these stages of inability to distinguish, and of inability to remember the points of distinguishment? Dr. McCann says he does not hold the doctrine of uncaused will. He affirms all changes are caused. By what is volition caused, according to him? If you say you don't know—which you have a perfect right to say—then all this debate is beside the question, and you should never have entered into it. We are told that we cannot consistently praise or blame the man. We can consistently praise or blame the man, that is—and I was careful to put what I meant by praise and blame in my last speech—we can express our appreciation of the act done, and we can apply this with advice to the repetition or advice against the recurrence of the act; because we hold that that advice, and the strong expression of our opinion, may influence the man—may influence the

future action about it. Then with regard to the rose and the gardener. I will not do Dr. McCann the injustice of supposing that he did not listen to what I said. I pointed out why I might blame the gardener. I might see whether or not the gardener had attended to his business—whether or not he knew the best kinds of soil and surroundings for his rose tree, and then I should blame him in the sense of instructing him so that he might do better in the future, and I should especially instruct him in making that point of rose culture better in the future which had been worse in the past. Our friend puts it as though I made—as perhaps he does—some mighty gardener who was responsible for the morality of the world. But, says Dr. McCann, I do distinguish between the organisation and the individual. I spoke of my hand. What did I mean by that? My hand! But you don't say my hand gripped me in spite of myself and put me on the broad of my back—(laughter)—and you did wish to put it as if I urged that the antecedents and the organisation compelled me. You did distinguish and did make them into separate things, whether, in your mind, they are entities or not. Well, then, we are told that there is one thing the world is always agreed about, and that is—it is rather rash to say what the world is altogether agreed about—that all actions, whether they be regarded as moral or immoral, virtuous or vicious, are regarded as voluntary. Will you please tell me, excepting certain reflex actions, on which I would rather express no opinion in this debate, as not affecting its subject-matter, what you mean by a voluntary or an involuntary act. Explain to me, so that I may see that you have formulated, even to yourself, any distinction at all. I should put it to you that all actions are voluntary actions—eliminating, for the moment, and avoiding any declaration that they are not voluntary—all reflex actions. Now Dr. McCann says that I know nothing of volition except as consequent on antecedents, and he seemed to contend from that that I denied volition altogether. I do not see any connection between the two propositions. I make an affirmation of volition of a most distinct character, and it is for you to say anything opposed to that. When you have told me that volition is caused, it is for you to show how that differs from volition consequent on antecedents. Show me what

the difference is between succeeding that which is antecedent to it in consequence of the antecedents having happened, and being caused. (Applause.) Will, then, Dr. McCann say that it was for him to define Secularism and for me to object? But I did object—(laughter)—and I gave what I said was the more accurate definition of it, and you have never answered it. You say you have nothing to do with the Secularism explained in my first speech. You should have told me this when I informed you that the Secularism I should defend would be that of the National Secular Society. Then we are told that I have said we have no code of morality, for what is morality to-day is immorality to-morrow. I think what I said was that we could only judge of what was useful—what was moral—by the knowledge of to-day, but that the knowledge of to-morrow might throw fresh light and teach us that other things were morality which we to-day knew not of. I think I have always distinguished and clearly put it that the only way in which you can estimate the utility of an action is by the best judgment of the period in which the action takes place. But to put it in the way Dr. McCann has done is not answering me, but only misrepresenting what I say. Then he says that utility is not morality, for it must be right as well as useful. What do you mean by right? It is not enough when you say an action is right, and therefore it is morality. What is moral? Oh! he says, never mind what that means. But I do mind what it means. What is the use of debating it if we never mind what it means. Do you know what it means? I don't think you do. I don't think you have refrained from telling us what it means; I think that you have been unable to tell us. I don't think you have any test, any standard, which you are willing to submit to criticism. You may have some code of laws, some standard, which you withhold because you are afraid to submit it to my examination. (Loud continued cheers and cries of bravo.) You may have some language, some decree of some head gardener, and you may not want me to look into it. But except that which you dare not bring here I do not think you have anything at all to produce to us. Then Dr. McCann asks me will I show him what utility has to do with the quality of pleasure. Utility is the greatest happiness of the greatest number. The greatest happiness

is the greatest happiness, the measure of quality is the measure of the greatness of it, and therefore the volition has to do with the quality of happiness. In his first speech Dr. McCann asked me if I did not accept his quotation from the King Debate on marriage to state my real view, and I will, therefore, explain what I mean by marriage, on which subject I have not been fairly represented. I mean by marriage, apart from all churches and chapels—(hear, hear)—apart from all laws, all States, when one man and one woman, honestly, lovingly, and truly unite themselves to one another, intending to try to make the happiness of each more complete through life. (Applause.) I know that some countries have fixed vile ceremonies, that some have added religious forms to marriage. I know that vile customs have been practised with reference to it. I know that in some countries they slit men's faces to mark the act of marriage; and I ask you is it one of these customs or ceremonies you want to put, as making marriage, or what other view of marriage against me dare you put than the one I have given? (Loud continued cheering.)

The Rev. Dr. McCann: Mr. Bradlaugh has objected to my changing the word immoral into useless, because he says there are no acts which are useless acts; and, if you introduce a third class of acts, you acknowledge there are actions which are neither virtuous nor vicious. I at once admit there are acts which are neither useful nor useless—indifferent acts. If I look at a picture, I don't call that action necessarily either virtuous or vicious; it is an example of actions which are neither useful nor pernicious. Then, with reference to my quotation from the Baylee Debate, I have not the pamphlet with me, but, so far as I remember, Dr. Baylee was supposing the case of a man who had committed the act—what responsibility had he to the husband? And the reply is that the husband should do the best to prevent the happening of the action again, or the recurrence of the action. This, at least, is what Mr. Bradlaugh has stated in substance. Then he has defined learning and ignorance, and I can also define necessity and freedom in volition; but that does not tell me where to draw the universal line. We are told that where ignorance ends knowledge begins. Well, of course it does; and where determination ends, there freedom begins. But to say you can draw one

line for all human beings is to say that all human beings are equally ignorant or equally learned. About the veracity of consciousness, Mr. Bradlaugh tell us that one man knows cloth to be red, and another knows that cloth to be green. They know nothing of the kind. I was speaking of subjective and not of objective consciousness. Professor Huxley refers to color-blindness to show that our senses deceive us; we must have something beyond our senses to give us certainty. (Laughter and interruption.) With reference to Lewes, I will only say that the debate will be printed, and the words will be there; and in your calm and quiet moments read the debate and compare one side with the other. I am perfectly content to abide by your verdict. I never intended to imply anything so absurd as that Mr. Bradlaugh had made a mighty gardener, because he said that the blame ought to be given to the gardener, and not to the rose. Then I stated that one quality of every act called virtuous or vicious was that it must, in all cases, be voluntary, and Mr. Bradlaugh asks me, what is voluntary? That does not touch my affirmation. Before a man apprehends an act to be virtuous or vicious it must be what he believes to be a voluntary act; and if the act were believed to be an involuntary one, you would neither call it virtue nor vice. Then with regard to praise and blame. I must explain that I was talking about the praise of a person and not of an act. You may praise an act, and dispraise a person. (Hisses, interruption, and cheers.) I am exclusively speaking now of praising or blaming persons. My part in this debate now draws to a close, and it becomes my duty to epitomise on my side what has been done, and how far I think I have succeeded or failed. But, before doing so, allow me to thank my opponent for the courtesy with which I have been treated. I have done all I could, consistently with my duty, to avoid any personal references that might arouse angry feelings; my friend has done the same. I am always willing to argue, but I cannot condescend to quarrel—(applause)—and if all controversies were conducted as harmoniously as ours has been, it would, I think, be better for the cause of truth. My object in this debate has been not so much to prove the abstract truth or falseness of the Secularist positions, as to have those positions explained and

acknowledged, as I consider this their best refutation. Secularists indulge in so many fine phrases, and profess so much earnestness in the cause of a deluded humanity, and so much heroism in the cause of civil and religious liberty, that it becomes necessary to see whether all this be as fair as it looks, whether the blossom that promises so much be healthy, or whether there be not some hidden worm there that will prevent the blossom setting into fruit. I at once say that my object has been fully attained—(a voice: "How about the gardener?" and laughter)—that my opponent has granted all my important positions—(interruption)—yielding without a struggle what I fancied he would fight for, and only showing fight over some distant outpost which was not of much comparative importance to either party. However, he knew his own forces best, and if he had no hope of capturing my citadel, his best policy was to blaze away at the outer lines. I now proceed to show rapidly that I am justified in saying this. I begin with Mr. Bradlaugh's denials, as they are the fewest in number, in fact the only important one is that consciousness is reliable. This he denies most emphatically, and with a perseverance and reiteration that I thought quite unnecessary when there were other matters to decide. His reasons will form interesting and suggestive reading when the debate is published. It is Mr. Bradlaugh on the one side and the best psychologists on the other. His confessions are almost as complete as I could wish them. He has confessed that Secularism is Atheism with all that Atheism involves; that Secularism is Necessitarianism, denying all will to man, all power of self-control, all choice, all agency in action, reducing him to the level of the plant so far as will is concerned—neither having any; that while man is higher in degree in other respects he is no higher in this—the most important of all; the plant and mineral being only the transmitters of received force. No wonder Mr. Bradlaugh did his very utmost to shake the reliability of consciousness, as consciousness gives the lie direct to degradation such as this. It has been confessed that Secular morality is utility; it knows nothing higher than usefulness—nay, it knows nothing so high, for its usefulness means usefulness ultimately to self. Mr. Bradlaugh told us the highest morality (that is, Secular

morality) is selfishness. Selfishness, then, is the highest motive force of Secularism. But is selfishness the regenerator of society? Is selfishness the purifier of the lives of men? Is selfishness the inspirer of sympathy? Does selfishness keep a mother tending her sick child at the risk of her own life? Does selfishness take the volunteer into the forlorn hope, with almost certain destruction before him? Does selfishness take the miner down the shaft, with suffocation threatening him on every side? Does selfishness man the lifeboat, with death riding on the crest of every wave? (Applause.) Does selfishness, or ever did or could selfishness, do anything great, or grand, or glorious in the world? The fact is, selfishness is nothing more than Epicureanism—(laughter)—nothing more nor less than the desire for pleasure. The only reply to my affirmation that moral actions were voluntary, is the question, What do I mean by voluntary? All I said about virtue and vice is dismissed with the remark, that men have differed as to what is virtuous and what is vicious. I have not been told why if virtue be attributed to men, it should not also be to plants. Praise and blame have been transferred from the rose to the gardener, and from the person to his acts. Nothing has been said in reply to my charge that Secularism is a bundle of contradictions—that Secularism is anti-social. I have abundantly shown by its denial of responsibility between man and man, and the position in which it places virtue and vice, praise and blame. It has not been denied that it contradicts consciousness, has no absolute standard of truth or morality; that society has a right to determine its own morality, and enforce its own determination. What more could be confessed against Secularism than all this my opponent has confessed, I am at loss to imagine. Mr. Bradlaugh has said that he tries to make more Atheists every day. I do not envy him his task. I try to unmake Atheists when I meet them —(hisses and interruption)—therefore I am here to-night because I believe Secularism to be destructive of all that is noblest and best in man. I have stated the reasons of my belief as fairly, as honestly, and as kindly as I could. I hope I may leave no enemy behind me—(hear, hear)—and my final and sincerest utterance is that we may all at last be found on the side of truth. (Loud continued cheers and

cries of bravo, during which Dr. McCann resumed his seat.)

Mr. BRADLAUGH: If the Rev. Dr. McCann is no better acquainted with Secularism than he appears to be with Epicureanism when he says that Epicureanism is selfishness, it is perhaps not surprising that we make little progress in our debate. I won't do Dr. McCann the injustice of supposing that he has read the debate between Dr. Baylee and myself, so I will not accuse him of intentionally misrepresenting me or my views; I can only suppose that he has taken the extracts which he has used against me to-night from a report full of wilful misrepresentations of my utterances—such, for instance, as that published by a wretched scoundrel like Henry Varley—a report which omits every word which will do me any good, and puts in every word which, torn from its context, is likely to do mischief to me. As Dr. McCann was quoting from that debate answers purporting to have been given by myself, I thought that some of the phrases did not seem to be quite complete; but as twenty long years has passed since the debate took place, I hoped my memory might have mislead me. I therefore sent for a copy of the debate, which I now hold in my hand, and from which I will read the answers of which Dr. McCann has only read you disjointed sentences. In so doing I must express my regret that Dr. McCann did not think it worth while to obtain an original report, instead of quoting third or fourth-hand from a sixpenny debate.

Dr. MCCANN was understood to intimate that the edition he quoted from was a report issued by Dr. Baylee.

Mr. BRADLAUGH: This (holding up a pamphlet) is a copy of a report of which some sixty thousand have been sold during the last twenty years, and it is the only report of the existence of which I am aware. If Dr. Baylee has issued one, and has been as dishonest in his representations as Mr. Varley has been, I can only say that I regret there are two of them. I have to thank my co-worker, Mrs. Besant, who pointed out to me that there was a difference between the answers read by Dr. McCann and the report which I hold in my hand, and drew my attention to the difference, so that I should not be burdened with words which I had not uttered; and I will read to you from this report the answers of mine which Dr. McCann partially

quoted, so that you may be able to see for yourselves the misrepresentations of which I complain. Dr. Baylee asks: "To whom is man responsible?"—I reply: "I do not know that he is responsible to anyone." Dr. Baylee: "Then if a man commit adultery is he responsible to no one?"—Answer: "If by responsibility you mean does the commission of an immorality tend to misery, yes; if you mean more than that, no." Dr. Baylee: "Is he not responsible to the husband?"—and here is where you will find a difference occurs—"One must have the whole of the circumstances to say yes or no. Suppose a husband were unkind to his wife,"—and here Dr. McCann stopped, leaving out the next words: "suppose a husband were unkind to his wife, that he turned her into the street for the basest of purposes, would your question apply to such a husband?" (Loud applause.) I rose at that answer, as mutilated by Dr. McCann, because I knew there was something wrong as it was put to you. However, this is not the strongest. Dr. Baylee continues: "Is he responsible to a good and kind husband?"—My answer was: "If by responsible you mean, should a good husband take measure to prevent the commission of adultery, yes; if more, what do you mean?"—that is, prevent the commission, not the recurrence. Dr. Baylee: "After the act of adultery, is he responsible to a good and kind husband?"—Myself: "As you have given no further explanation of what you mean by responsibility, I have no further answer to give." Dr. Baylee: "I mean responsibility in its common, popular sense."—Myself: "You and I disagree as to the common, popular sense of words. Give me your definition of the word 'responsibility.'" Dr. Baylee: "Do you refuse to answer the question?"—Answer: "If you refuse to define the word 'responsibility'—yes." All that was omitted in reading it to you. Dr. Baylee: "What do you suppose will all sane persons judge of your refusal?"—Answer: "That you did not find it convenient to define the word you used, and that I was not foolish enough to answer a question until we both agreed upon its meaning." (Applause and laughter.) Dr. Baylee: "Has the husband a right to inflict any punishment on the adulterer?"—I replied: "I do not understand what you mean by a right; but if a man were to rob me of that which I prize more

than all the world besides, then if I came upon him in hot blood in the excitement of passion, I should probably kill him, because my passions might be stronger than my reason. If I came on him when my passion had cooled, I cannot so certainly speak as to the result. Others might be of stronger organisation, others again of weaker frame, and their conduct would necessarily vary." Dr. Baylee then asked me: "Has society a right to punish the adulterer?" —and I answered him: "Society is bound to do that which will prevent the commission of immoral deeds. Punishment should only be preventive of future crime, not vengeance for that which has passed." (Bravo and applause.) Now, I ask you, was that which was read to you by Dr. McCann a fair representation of my answer? It was not even anything like it. I do Dr. McCann the justice of supposing that—although he appears to be thoroughly well acquainted with all my debates, and that he knows that I have published versions of most of them—I do him the justice of supposing that he was ignorant of the existence of this, or I feel sure that he would have thought it due to me to quote from this report, and not to use one that perverts the views which I take as to marriage with the object of injuring me. In order that you may be perfectly clear as to my utterance in this debate with Dr. Baylee on this important point, I will read to you the answer on marriage to Dr. Baylee's question, for, curiously enough, that was stopped in the same way. Dr. Baylee asks—"What does Atheism teach about marriage?" Answer—"It teaches that if a man take a woman he is bound to do everything that a man can for their mutual happiness, also the woman for the man. It teaches that the man and the woman should be thoughtful before marriage, to see that they have a mutually suitable organisation; that they should endeavour to thoroughly understand and appreciate each other; that the man and the woman have equal rights and duties, that, on the whole, the man is not inferior to the woman, that the woman is not inferior to the man, but in the speciality of each there is much that the other cannot do." Dr. Baylee then asks: "If their organisation be unsuitable, may they separate at will?" To which I replied: "If they both be of opinion that their continued union would tend to misery, it would be better for them to separate than to live

in strife and unhappiness; and that is a principle now fully recognised in the tendency of our present legislation." Surely, when you are trying to represent that our views on marriage are abominable views—surely it would only be just to try and see whether you are giving the most accurate version of them—(Bravo)—or whether you may not possibly, from the hands of a hostile and very unscrupulous antagonist, be taking what we have not said, and may be using an untruth to discredit us. And you must remember that no man has ever yet had to charge me with publishing an incorrect report of any debate that I have ever held. My own reports have been used by my antagonists, and it has never been alleged against me—bad as some of my enemies would make me out to be—that I have descended so low as to publish an inaccurate report. And here let me complain that Dr. McCann persists in substituting the word pleasure for happiness throughout this debate. Whether he thinks that the word pleasure will give you a lower opinion of our creed or not I do not know, but he speaks of the greatest pleasure for the selfish person in such a way as would lead you to suppose that we advocated the pleasure of individuals instead of the happiness of all: thus putting upon us a doctrine we do not hold. Then, Dr. McCann says that there are acts which are neither virtuous nor vicious. If he looks at a picture or reads a poem, that is an act, according to him, which can neither be characterised as a virtuous or a vicious action. Now, it may be either. It may be either a virtuous act or a vicious act. It depends entirely upon the picture and the poetry—(applause)—and the illustration is one of the most unfortunate that could possibly have been used. Then Dr. McCann says that knowledge and ignorance cannot be separated. But surely this is merely to play with words. I defined what I meant by "knowledge," and pointed out the particular point in the definition where I said there was ignorance and where there was not. Then, all through this debate until to-night consciousness, according to Dr. McCann, was one and invariable. To-night, for the first time, we hear of the existence of two consciousnesses—objective and subjective. Not until the last speech in the debate—when he knows no new matter may be introduced in answer by me—does Dr. McCann say one

word about this other consciousness, which has been carefully concealed in a back pocket, and only brought out at the eleventh hour. And then we are asked is selfishness this, that, or the other, and will it take the miner down the shaft of an exploded mine? With selfishness, as such, I am not here concerned; but if you mean, will Secularism do so, yes! When flame burst out in Swaithe Main pit, when the stifling gas rolled up, when men were in peril below, and all round the pit mouth shrunk back; when to descend seemed certain death, and all feared to face it, then it was William Washington, an Atheist, a Secularist, who sprang into the cage, and set the example of perilling life to save those below. (Bravo, and loud applause.) As president of the National Secular Society I had the good fortune to present him with the testimonial which was awarded to him for his brave conduct. (Applause.) You say in answer to my declaration that I tried to make Atheists, that you try to unmake them. Yes; but there is one difference—I succeed. (Loud cheers.) You ask, is Secularism an inspirer of sympathy; will it tend to regenerate the world; will it act as a purifier of the lives of men; will it make a man fling himself into the forlorn hope? Yes it will, and it has done so with me. Name one struggle for liberty within the last twenty-five years in which I have not engaged, one great reform for which I have not labored? When your bishops were voting for an unjust war, when your Christian Jingoes came with bludgeons in favor of war into Hyde Park—when the clergy were silent—it was I, the Secularist, who lifted up my voice for peace at the peril of my life. (Loud applause.) It inspires us to try, because in the very inspiration, in the trying, we have a happiness of which you can know nothing. I do not know whether you have any morality at all. You have kept it from us in this debate if you have any, and you have shown that you did not understand ours. You have said that ours has failed; but you have not shown where. You have indulged in denunciation, repetitions of denunciations, and then you say that I have only attacked your outworks. Outworks! Your very citadel is but a mud fort, fenced about with a few rotten bamboos; it is taken, and in its very midst we have planted the flag of truth, and it flies there and has not been touched. (Loud cheers.)

I cannot pretend to vie with you in figures of speech. I cannot pretend, because I always try to make mine fit in with the subject to which I apply them, and you take a wider license. But we assail the fort of bigotry, of prejudice, of ignorance, the fort held by those who call actions immoral because they do not comprehend them, who denounce those who toil for the greatest happiness of the community without trying to emulate them, who invent, and then blame us for the invention, who take our views from our antagonists, and not from ourselves. I, too, am satisfied with this debate; not as well satisfied as if you had examined the views I hold and demonstrated their error, but satisfied because I take it that from one so able, one so practised, one so thoroughly reputed as of great ability amongst those to whom he belongs, I take it he has said the worst that could be said of Secularism, and those who hear or read will judge its value. They will also rate at its true worth the miserable artifice of quoting something which was not said in a debate twenty years ago, and representing that as Secularism. I do not mean that Dr. McCann has done this—he has been misled by those by whom he is put forward, the Varleys, and the vile things who, in fields and open spaces, where we are not to answer for ourselves, stab our reputation and our children's, and try to make a prejudice against us, that even in the House of Commons itself may be used for want of a better weapon. In this debate I have spoken as the representative of the National Secular Society, and in defending the principles of Secularism I have undertaken no new task. The views I have here defended have been mine for many a long year, and in their defence I have never flinched, I have never wavered. I put them to you to-day, as I did when I was a boy in Bonner's Fields, and I am no more ashamed of them now than I was then. (Prolonged enthusiastic cheering.)

On the motion of Mr. Bradlaugh, seconded by Dr. McCann, the usual vote of thanks was unanimously accorded to the Chairman for presiding, and the proceedings then terminated.

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

HUMANITY'S GAIN FROM UNBELIEF.

As an unbeliever, I ask leave to plead that humanity has been real gainer from scepticism, and that the gradual and growing rejection of Christianity—like the rejection of the faiths which preceded it—has in fact added, and will add, to man's happiness and well being. I maintain that in physics science is the outcome of scepticism, and that general progress is impossible without scepticism on matters of religion. I mean by religion every form of belief which accepts or asserts the supernatural. I write as a Monist, and use the word "nature" as meaning all phænomena, every phænomenon, all that is necessary for the happening of any and every phænomenon. Every religion is constantly changing, and at any given time is the measure of the civilisation attained by what Guizot described as the *juste milieu* of those who profess it. Each religion is slowly but certainly modified in its dogma and practice by the gradual development of the peoples amongst whom it is professed. Each discovery destroys in whole or part some theretofore cherished belief. No religion is suddenly rejected by any people; it is rather gradually out-grown. None see a religion die; dead religions are like dead languages and obsolete customs; the decay is long and—like the glacier march—is only perceptible to the careful watcher by comparisons extending over long periods. A superseded religion may often be traced in the festivals, ceremonies, and dogmas of the religion which has replaced it. Traces of obsolete religions may often be found in popular customs, in old wives' stories, and in children's tales.

It is necessary, in order that my plea should be understood, that I should explain what I mean by Christianity; and in the very attempt at this explanation there will, I think, be found strong illustration of the value of unbelief. Christianity in practice may be gathered from its more ancient forms, represented by the Roman Catholic and the Greek Churches, or from the various churches which have grown up in the last few centuries. Each of these churches calls itself Christian. Some of them deny the right of the others to use the word Christian. Some Christian churches treat, or have treated, other Christian churches as heretics or unbelievers. The Roman Catholics and the Protestants in Great Britain and Ireland have in turn been terribly cruel one to the other; and the ferocious laws of the seventeenth and eighteenth centuries, enacted by the English Protestants against English and Irish Papists, are a disgrace to civilisation. These penal laws, enduring longest in Ireland, still bear fruit in much of the political mischief and agrarian crime of to-day. It is only the tolerant indifference of scepticism that, one after the other, has repealed most of the laws directed by the Established Christian Church against Papists and Dissenters, and also against Jews and heretics. Church of England clergymen have in the past gone to great lengths in denouncing nonconformity; and even in the present day an effective sample of such denunciatory bigotry may be found in a sort of orthodox catechism written by the Rev. F. A. Gace, of Great Barling, Essex, the popularity of which is vouched by the fact that it has gone through ten editions. This catechism for little children teaches that "Dissent is a great sin", and that Dissenters "worship God according to their own evil and corrupt imaginations, and not according to his revealed will, and therefore their worship is idolatrous". Church of England Christians and Dissenting Christians, when fraternising amongst themselves, often publicly draw the line at Unitarians, and positively deny that these have any sort of right to call themselves Christians.

In the first half of the seventeenth century Quakers were flogged and imprisoned in England as blasphemers; and the early Christian settlers in New England, escaping from the persecution of Old World Christians, showed scant mercy to the followers of Fox and Penn. It is

customary, in controversy, for those advocating the claims of Christianity, to include all good done by men in nominally Christian countries as if such good were the result of Christianity, while they contend that the evil which exists prevails in spite of Christianity. I shall try to make out that the ameliorating march of the last few centuries has been initiated by the heretics of each age, though I quite concede that the men and women denounced and persecuted as infidels by the pious of one century, are frequently claimed as saints by the pious of a later generation.

What then is Christianity? As a system or scheme of doctrine, Christianity may, I submit, not unfairly be gathered from the Old and New Testaments. It is true that some Christians to-day desire to escape from submission to portions, at any rate, of the Old Testament; but this very tendency seems to me to be part of the result of the beneficial heresy for which I am pleading. Man's humanity has revolted against Old Testament barbarism; and therefore he has attempted to disassociate the Old Testament from Christianity. Unless Old and New Testaments are accepted as God's revelation to man, Christianity has no higher claim than any other of the world's many religions, if no such claim can be made out for it apart from the Bible. And though it is quite true that some who deem themselves Christians put the Old Testament completely in the background, this is, I allege, because they are out-growing their Christianity. Without the doctrine of the atoning sacrifice of Jesus, Christianity, as a religion, is naught; but unless the story of Adam's fall is accepted, the redemption from the consequences of that fall cannot be believed. Both in Great Britain and in the United States the Old and New Testaments are forced on the people as part of Christianity; for it is blasphemy at common law to deny the scriptures of the Old and New Testaments to be of divine authority; and such denial is punishable with fine and imprisonment, or even worse. The rejection of Christianity intended throughout this paper, is therefore the rejection of the Old and New Testaments as being of divine revelation. It is the rejection alike of the authorised teachings of the Church of Rome and of the Church of England, as these may be found in the Bible, the creeds, the encyclicals,

the prayer book, the canons and homilies of either or both of these churches. It is the rejection of the Christianity of Luther, of Calvin, and of Wesley.

A ground frequently taken by Christian theologians is that the progress and civilisation of the world are due to Christianity; and the discussion is complicated by the fact that many eminent servants of humanity have been nominal Christians, of one or other of the sects. My allegation will be that the special services rendered to human progress by these exceptional men, have not been in consequence of their adhesion to Christianity, but in spite of it; and that the specific points of advantage to human kind have been in ratio of their direct opposition to precise Biblical enactments.

A. S. Farrar says[1] that Christianity "asserts authority over religious belief in virtue of being a supernatural communication from God, and claims the right to control human thought in virtue of possessing sacred books, which are at once the record and the instrument of the communication, written by men endowed with supernatural inspiration". Unbelievers refuse to submit to the asserted authority, and deny this claim of control over human thought: they allege that every effort at freethinking must provoke sturdier thought.

Take one clear gain to humanity consequent on unbelief, *i.e.*, in the abolition of slavery in some countries, in the abolition of the slave trade in most civilised countries, and in the tendency to its total abolition. I am unaware of any religion in the world which in the past forbade slavery. The professors of Christianity for ages supported it; the Old Testament repeatedly sanctioned it by special laws; the New Testament has no repealing declaration. Though we are at the close of the nineteenth century of the Christian era, it is only during the past three-quarters of a century that the battle for freedom has been gradually won. It is scarcely a quarter of a century since the famous emancipation amendment was carried to the United States Constitution. And it is impossible for any well-informed Christian to deny that the abolition movement in North America was most steadily and bitterly opposed by the religious bodies in the various States. Henry Wilson, in his "Rise and

[1] Farrar's "Critical History of Freethought".

Fall of the Slave Power in America"; Samuel J. May, in his "Recollections of the Anti-Slavery Conflict"; and J. Greenleaf Whittier, in his poems, alike are witnesses that the Bible and pulpit, the Church and its great influence, were used against abolition and in favor of the slave-owner. I know that Christians in the present day often declare that Christianity had a large share in bringing about the abolition of slavery, and this because men professing Christianity were abolitionists. I plead that these so-called Christian abolitionists were men and women whose humanity, recognising freedom for all, was in this in direct conflict with Christianity. It is not yet fifty years since the European Christian powers jointly agreed to abolish the slave trade. What of the effect of Christianity on these powers in the centuries which had preceded? The heretic Condorcet pleaded powerfully for freedom whilst Christian France was still slave-holding. For many centuries Christian Spain and Christian Portugal held slaves. Porto Rico freedom is not of long date; and Cuban emancipation is even yet newer. It was a Christian King, Charles 5th, and a Christian friar, who founded in Spanish America the slave trade between the Old World and the New. For some 1800 years, almost, Christians kept slaves, bought slaves, sold slaves, bred slaves, stole slaves. Pious Bristol and godly Liverpool less than 100 years ago openly grew rich on the traffic. During the ninth century Greek Christians sold slaves to the Saracens. In the eleventh century prostitutes were publicly sold as slaves in Rome, and the profit went to the Church.

It is said that William Wilberforce, the abolitionist, was a Christian. But at any rate his Christianity was strongly diluted with unbelief. As an abolitionist he did not believe Leviticus xxv, 44-6; he must have rejected Exodus xxi, 2-6; he could not have accepted the many permissions and injunctions by the Bible deity to his chosen people to capture and hold slaves. In the House of Commons on 18th February, 1796, Wilberforce reminded that Christian assembly that infidel and anarchic France had given liberty to the Africans, whilst Christian and monarchic England was "obstinately continuing a system of cruelty and injustice".

Wilberforce, whilst advocating the abolition of slavery, found the whole influence of the English Court, and the

great weight of the Episcopal Bench, against him. George III, a most Christian king, regarded abolition theories with abhorrence, and the Christian House of Lords was utterly opposed to granting freedom to the slave. When Christian missionaries some sixty-two years ago preached to Demerara negroes under the rule of Christian England, they were treated by Christian judges, holding commission from Christian England, as criminals for so preaching. A Christian commissioned officer, member of the Established Church of England, signed the auction notices for the sale of slaves as late as the year 1824. In the evidence before a Christian court-martial, a missionary is charged with having tended to make the negroes dissatisfied with their condition as slaves, and with having promoted discontent and dissatisfaction amongst the slaves against their lawful masters. For this the Christian judges sentenced the Demerara abolitionist missionary to be hanged by the neck till he was dead. The judges belonged to the Established Church; the missionary was a Methodist. In this the Church of England Christians in Demerara were no worse than Christians of other sects: their Roman Catholic Christian brethren in St. Domingo fiercely attacked the Jesuits as criminals because they treated negroes as though they were men and women, in encouraging "two slaves to separate their interest and safety from that of the gang", whilst orthodox Christians let them couple promiscuously and breed for the benefit of their owners like any other of their plantation cattle. In 1823 the *Royal Gazette* (Christian) of Demerara said:

"We shall not suffer you to enlighten our slaves, who are by law our property, till you can demonstrate that when they are made religious and knowing they will continue to be our slaves."

When William Lloyd Garrison, the pure-minded and most earnest abolitionist, delivered his first anti-slavery address in Boston, Massachusetts, the only building he could obtain, in which to speak, was the infidel hall owned by Abner Kneeland, the "infidel" editor of the *Boston Investigator*, who had been sent to gaol for blasphemy. Every Christian sect had in turn refused Mr. Lloyd Garrison the use of the buildings they severally controlled. Lloyd Garrison told me himself how honored deacons of

a Christian Church joined in an actual attempt to hang him.

When abolition was advocated in the United States in 1790, the representative from South Carolina was able to plead that the Southern clergy "did not condemn either slavery or the slave trade"; and Mr. Jackson, the representative from Georgia, pleaded that "from Genesis to Revelation" the current was favorable to slavery. Elias Hicks, the brave Abolitionist Quaker, was denounced as an Atheist, and less than twenty years ago a Hicksite Quaker was expelled from one of the Southern American Legislatures, because of the reputed irreligion of these abolitionist "Friends".

When the Fugitive Slave Law was under discussion in North America, large numbers of clergymen of nearly every denomination were found ready to defend this infamous law. Samuel James May, the famous abolitionist, was driven from the pulpit as irreligious, solely because of his attacks on slaveholding. Northern clergymen tried to induce "silver tongued" Wendell Philips to abandon his advocacy of abolition. Southern pulpits rang with praises for the murderous attack on Charles Sumner. The slayers of Elijah Lovejoy were highly reputed Christian men.

Guizot, notwithstanding that he tries to claim that the Church exerted its influence to restrain slavery, says ("European Civilisation", vol. i., p. 110):

"It has often been repeated that the abolition of slavery among modern people is entirely due to Christians. That, I think, is saying too much. Slavery existed for a long period in the heart of Christian society, without its being particularly astonished or irritated. A multitude of causes, and a great development in other ideas and principles of civilisation, were necessary for the abolition of this iniquity of all iniquities."

And my contention is that this "development in other ideas and principles of civilisation" was long retarded by Governments in which the Christian Church was dominant. The men who advocated liberty were imprisoned, racked, and burned, so long as the Church was strong enough to be merciless.

The Rev. Francis Minton, Rector of Middlewich, in his recent earnest volume[1] on the struggles of labor, admits

[1] "Capital and Wages", p. 19.

that "a few centuries ago slavery was acknowledged throughout Christendom to have the divine sanction . . . . . Neither the exact cause, nor the precise time of the decline of the belief in the righteousness of slavery can be defined. It was doubtless due to a combination of causes, one probably being as indirect as the recognition of the greater economy of free labor. With the decline of the belief the abolition of slavery took place."

The institution of slavery was actually existent in Christian Scotland in the 17th century, where the white coal workers and salt workers of East Lothian were chattels, as were their negro brethren in the Southern States thirty years since; they "went to those who succeeded to the property of the works, and they could be sold, bartered, or pawned".[1] "There is", says J. M. Robertson, "no trace that the Protestant clergy of Scotland ever raised a voice against the slavery which grew up before their eyes. And it was not until 1799, after republican and irreligious France had set the example, that it was legally abolished."

Take further the gain to humanity consequent on the unbelief, or rather disbelief, in witchcraft and wizardry. Apart from the brutality by Christians towards those suspected of witchcraft, the hindrance to scientific initiative or experiment was incalculably great so long as belief in magic obtained. The inventions of the past two centuries, and especially those of the 18th century, might have benefitted mankind much earlier and much more largely, but for the foolish belief in witchcraft and the shocking ferocity exhibited against those suspected of necromancy. After quoting a large number of cases of trial and punishment for witchcraft from official records in Scotland, J. M. Robertson says: "The people seem to have passed from cruelty to cruelty precisely as they became more and more fanatical, more and more devoted to their Church, till after many generations the slow spread of human science began to counteract the ravages of superstition, the clergy resisting reason and humanity to the last".

The Rev. Mr. Minton[2] concedes that it is "the advance of knowledge which has rendered the idea of Satanic

[1] "Perversion of Scotland," p. 197.
[2] "Capital and Wages", pp. 15, 16.

agency through the medium of witchcraft grotesquely ridiculous". He admits that "for more than 1500 years the belief in witchcraft was universal in Christendom", and that "the public mind was saturated with the idea of Satanic agency in the economy of nature". He adds: "If we ask why the world now rejects what was once so unquestioningly believed, we can only reply that advancing knowledge has gradually undermined the belief".

In a letter recently sent to the *Pall Mall Gazette* against modern Spiritualism, Professor Huxley declares,

"that the older form of the same fundamental delusion—the belief in possession and in witchcraft—gave rise in the fifteenth, sixteenth, and seventeenth centuries to persecutions by Christians of innocent men, women, and children, more extensive, more cruel, and more murderous than any to which the Christians of the first three centuries were subjected by the authorities of pagan Rome."

And Professor Huxley adds:

"No one deserves much blame for being deceived in these matters. We are all intellectually handicapped in youth by the incessant repetition of the stories about possession and witchcraft in both the Old and the New Testaments. The majority of us are taught nothing which will help us to observe accurately and to interpret observations with due caution."

The English Statute Book under Elizabeth and under James was disfigured by enactments against witchcraft passed under pressure from the Christian churches, which Acts have only been repealed in consequence of the disbelief in the Christian precept, "thou shalt not suffer a witch to live". The statute 1 James I, c. 12, condemned to death "all persons invoking any evil spirits, or consulting, covenanting with, entertaining, employing, feeding, or rewarding any evil spirit", or generally practising any "infernal arts". This was not repealed until the eighteenth century was far advanced. Edison's phonograph would 280 years ago have insured martyrdom for its inventor; the utilisation of electric force to transmit messages around the world would have been clearly the practice of an infernal art. At least we may plead that unbelief has healed the bleeding feet of science, and made the road free for her upward march.

Is it not also fair to urge the gain to humanity which has been apparent in the wiser treatment of the insane, consequent on the unbelief in the Christian doctrine that these unfortunates were examples either of demoniacal possession or of special visitation of deity? For centuries under Christianity mental disease was most ignorantly treated. Exorcism, shackles, and the whip were the penalties rather than the curatives for mental maladies. From the heretical departure of Pinel at the close of the last century to the position of Maudsley to-day, every step illustrates the march of unbelief. Take the gain to humanity in the unbelief not yet complete, but now largely preponderant, in the dogma that sickness, pestilence, and famine were manifestations of divine anger, the results of which could neither be avoided nor prevented. The Christian Churches have done little or nothing to dispel this superstition. The official and authorised prayers of the principal denominations, even to-day, reaffirm it. Modern study of the laws of health, experiments in sanitary improvements, more careful applications of medical knowledge, have proved more efficacious in preventing or diminishing plagues and pestilence than have the intervention of the priest or the practice of prayer. Those in England who hold the old faith that prayer will suffice to cure disease are to-day termed "peculiar people", and are occasionally indicted for manslaughter when their sick children die, because the parents have trusted to God instead of appealing to the resources of science.

It is certainly a clear gain to astronomical science that the Church which tried to compel Galileo to unsay the truth has been overborne by the growing unbelief of the age, even though our little children are yet taught that Joshua made the sun and moon stand still, and that for Hezekiah the sun-dial reversed its record. As Buckle, arguing for the morality of scepticism, says[1]:

"As long as men refer the movements of the comets to the immediate finger of God, and as long as they believe that an eclipse is one of the modes by which the deity expresses his anger, they will never be guilty of the blasphemous presumption of attempting to predict such supernatural appearances.

[1] "History of Civilisation," vol. i, p. 345.

Before they could dare to investigate the causes of these mysterious phænomena, it is necessary that they should believe, or at all events that they should suspect, that the phænomena themselves were capable of being explained by the human mind."

As in astronomy so in geology, the gain of knowledge to humanity has been almost solely in measure of the rejection of the Christian theory. A century since it was almost universally held that the world was created 6,000 years ago, or at any rate, that by the sin of the first man, Adam, death commenced about that period. Ethnology and Anthropology have only been possible in so far as, adopting the regretful words of Sir W. Jones, "intelligent and virtuous persons are inclined to doubt the authenticity of the accounts delivered by Moses concerning the primitive world".

Surely it is clear gain to humanity that unbelief has sprung up against the divine right of kings, that men no longer believe that the monarch is "God's anointed" or that "the powers that be are ordained of God". In the struggles for political freedom the weight of the Church was mostly thrown on the side of the tyrant. The homilies of the Church of England declare that "even the wicked rulers have their power and authority from God", and that "such subjects as are disobedient or rebellious against their princes disobey God and procure their own damnation". It can scarcely be necessary to argue to the citizens of the United States of America that the origin of their liberties was in the rejection of faith in the divine right of George III.

Will any one, save the most bigoted, contend that it is not certain gain to humanity to spread unbelief in the terrible doctrine that eternal torment is the probable fate of the great majority of the human family? Is it not gain to have diminished the faith that it was the duty of the wretched and the miserable to be content with the lot in life which providence had awarded them?

If it stood alone it would be almost sufficient to plead as justification for heresy the approach towards equality and liberty for the utterance of all opinions achieved because of growing unbelief. At one period in Christendom each Government acted as though only one religious faith could be true, and as though the holding, or at any rate the

making known, any other opinion was a criminal act deserving punishment. Under the one word "infidel", even as late as Lord Coke, were classed together all who were not Christians, even though they were Mahommedans, Brahmins, or Jews. All who did not accept the Christian faith were sweepingly denounced as infidels and therefore *hors de la loi*. One hundred and forty-five years since, the Attorney-General, pleading in our highest court, said[1]: "What is the definition of an infidel? Why, one who does not believe in the Christian religion. Then a Jew is an infidel." And English history for several centuries prior to the Commonwealth shows how habitually and most atrociously Christian kings, Christian courts, and Christian churches, persecuted and harassed these infidel Jews. There was a time in England when Jews were such infidels that they were not even allowed to be sworn as witnesses. In 1740 a legacy left for establishing an assembly for the reading of the Jewish scriptures was held to be void[2] because it was "for the propagation of the Jewish law in contradiction to the Christian religion". It is only in very modern times that municipal rights have been accorded in England to Jews. It is barely thirty years since they have been allowed to sit in Parliament. In 1851, the late Mr. Newdegate in debate[3] objected "that they should have sitting in that House an individual who regarded our Redeemer as an impostor". Lord Chief Justice Raymond has shown[4] how it was that Christian intolerance was gradually broken down. "A Jew may sue at this day, but heretofore he could not; for then they were looked upon as enemies, but now commerce has taught the world more humanity."

Lord Coke treated the infidel as one who in law had no right of any kind, with whom no contract need be kept, to whom no debt was payable. The plea of alien infidel as answer to a claim was actually pleaded in court as late as 1737.[5] In a solemn judgment, Lord Coke says[6]: "All infidels are in law *perpetui inimici*; for between them, as

with the devils whose subjects they be, and the Christian, there is perpetual hostility". Twenty years ago the law of England required the writer of any periodical publication or pamphlet under sixpence in price to give sureties for £800 against the publication of blasphemy. I was the last person prosecuted in 1868 for non-compliance with that law, which was repealed by Mr. Gladstone in 1869. Up till the 23rd December, 1888, an infidel in Scotland was only allowed to enforce any legal claim in court on condition that, if challenged, he denied his infidelity. If he lied and said he was a Christian, he was accepted, despite his lying. If he told the truth and said he was an unbeliever, then he was practically an outlaw, incompetent to give evidence for himself or for any other. Fortunately all this was changed by the Royal assent to the Oaths Act on 24th December. Has not humanity clearly gained a little in this struggle through unbelief?

For more than a century and a-half the Roman Catholic had in practice harsher measure dealt out to him by the English Protestant Christian, than was even during that period the fate of the Jew or the unbeliever. If the Roman Catholic would not take the oath of abnegation, which to a sincere Romanist was impossible, he was in effect an outlaw, and the "jury packing" so much complained of to-day in Ireland is one of the habit survivals of the old bad time when Roman Catholics were thus by law excluded from the jury box.

The *Scotsman* of January 5th, 1889, notes that in 1860 the Rev. Dr. Robert Lee, of Greyfriars, gave a course of Sunday evening lectures on Biblical Criticism, in which he showed the absurdity and untenableness of regarding every word in the Bible as inspired; and it adds:

"We well remember the awful indignation such opinions inspired, and it is refreshing to contrast them with the calmness with which they are now received. Not only from the pulpits of the city, but from the press (misnamed religious) were his doctrines denounced. And one eminent U.P. minister went the length of publicly praying for him, and for the students under his care. It speaks volumes for the progress made since then, when we think in all probability Dr. Charteris, Dr. Lee's successor in the chair, differs in his teaching from the Confession of Faith much more widely than Dr. Lee ever did, and yet he is considered supremely orthodox, whereas the stigma of heresy was attached to the other all his life."

And this change and gain to humanity is due to the gradual progress of unbelief, alike inside and outside the Churches. Take from differing Churches' two recent illustrations: The late Principal Dr. Lindsay Alexander, a strict Calvinist, in his important work on "Biblical Theology", claims that

"all the statements of Scripture are alike to be deferred to as presenting to us the mind of God".

Yet the Rev. Dr. of Divinity also says:

"We find in their writings [*i.e.*, in the writings of the sacred authors] statements which no ingenuity can reconcile with what modern research has shown to be the scientific truth—*i.e.*, we find in them statements which modern science proves to be erroneous."

At the last Southwell Diocesan Church of England Conference at Derby, the Bishop of the Diocese presiding, the Rev. J. G. Richardson said of the Old Testament that

"it was no longer honest or even safe to deny that this noble literature, rich in all the elements of moral or spiritual grandeur, given—so the Church had always taught, and would always teach—under the inspiration of Almighty God, was sometimes mistaken in its science, was sometimes inaccurate in its history, and sometimes only relative and accommodatory in its morality. It assumed theories of the physical world which science had abandoned and could never resume; it contained passages of narrative which devout and temperate men pronounced discredited, both by external and internal evidence; it praised, or justified, or approved, or condoned, or tolerated, conduct which the teaching of Christ and the conscience of the Christian alike condemned."

Or, as I should urge, the gain to humanity by unbelief is that "the teaching of Christ" has been modified, enlarged, widened, and humanised, and that "the conscience of the Christian" is in quantity and quality made fitter for human progress by the ever increasing additions of knowledge of these later and more heretical days.

NEW LIFE OF DAVID.

BY C. BRADLAUGH

In compiling a biographical account of any ancient personage, impediments mostly arise from the uncertainty of the various traditions out of which we gather our biography, and from the party bias and colouring which often pervade and detract from their value. In the present case no such obstacle is met with, no such bias can be imagined, for, in giving the life of David, we extract it from an all-wise God's perfect and infallible revelation to man, and thus are enabled to present it to our readers free from any doubt, uncertainty, or difficulty. The father of David was Jesse, an Ephrathite of Bethlehem-judah. Jesse had either eight sons (1 Samuel c. xvi., v. 10 and 11, and c. xvii., v. 12) or only seven (1 Chronicles, c. ii., vv. 13 to 15), and David was either the eighth son or the seventh. Some may think this a difficulty to commence with, but such persons will only be those who rely on their own intellectual faculties, or who have been misled by Colenso's arithmetic. If you, my dear reader, are in any doubt, at once consult some qualified divine, and he will explain to you that there is really no difference between eight and seven when rightly understood with prayer and faith, by the help of the spirit. Arithmetic is an utterly infidel acquirement, and one which all true believers should eschew. In proof of this, I may observe that the proposition three times one are one is a fundamental article of the Christian faith. David's great grandmother was the holy harlot Rahab, and his grandmother was a lady who when unmarried went in the night and lay at the feet of Boaz, and left in the morning before it was light enough for any one to recognise her. Like her grandson she was "prudent in matters." When young, David tended his father's sheep, and apparently while so doing he obtained the reputation for being cunning in playing, a mighty valiant man, and a man of war and prudent in matters. He obtained his reputation as a soldier early and wonderfully, for he was "but a youth," and God's most holy word asserts that when going to fight with Goliath he tried to walk in armour, and could not, for he was not accustomed to it (1 Samuel c. xvii., v. 39, Douay version), Samuel shortly prior to this anointed David, and the spirit of the Lord came upon him from that day forward. If a man takes to spirits his life will probably be one of vice, misery, and misfortune, and if spirits take to him the result in the end is nearly the same. Saul being King of Israel, an evil spirit from the Lord troubled him. The devil has no ear for music, and Saul was recommended to have David to play on a harp in order that

harmony might drive this evil spirit back to the Lord who sent it. The Jews' harp was played successfully, and Saul was often relieved from the evil spirit by the aid of David's ministrations. There is nothing miraculous in this; at the people's concerts many a working man has been released from the "blue devils" by a stirring chorus, a merry song, or patriotic anthem. David was appointed armour-bearer to the king, but curiously enough this office does not appear to have interferred with his duties as a shepherd; indeed the care of his father's sheep took precedence over the care of the king's armour, and in the time of war he "went and returned to feed his father's sheep." Perhaps his "prudence in matters" induced him thus to take care of himself.

A Philistine, one Goliath of Gath (whose height was six cubits and a span, or about nine feet six inches, at a low computation) had defied the armies of Israel. This Goliath was (to use the vocabulary of the reverend sporting correspondent of a certain religious newspaper) a veritable champion of the heavy weights. He carried in all two cwt. of armour, offensive and defensive, upon his person, and his challenge had great weight. None dared accept it amongst the soldiers of Saul until the arrival of David with some food for his brethren. David volunteered to fight the giant, but Saul objecting that he was not competent to take part in a conflict so dangerous, David related how he pursued a *lion and a bear*, how he caught *him* by his beard and slew *him*. Which animal it was that David thus bearded the text does not say. The Douay says it was "a lion or a bear," but it looks, on an attentive reading, "very like a whale." David's offer was accepted, he was permitted to fight the giant, his equipment was simple, a sling and stones, and with one of these he slew the giant. Some suggest that the weapon Goliath fell under was the long bow. This is rendered probable by the book itself. In one verse it says that David slew the Philistine with a stone, in another verse it says that he slew him with the giant's own sword, while in 2 Samuel c. xxi., v. 19, we are told that Goliath the Gittite was slain by Elhanan. Our translators, who have great regard for our faiths and more for their pulpits, have kindly inserted the words "the brother of" before Goalith. This saves the true believer from the difficulty of understanding how Goliath of Gath could have been killed by different men at different times. David was previously well known to Saul, and was much loved and favoured by that monarch. He was also seen by the king before he went forth to do battle with the gigantic Philistine. Yet (as if to verify the proverb that kings have short memories for their friends) Saul had forgotten his own armour-bearer and much-loved harpist, and was obliged to ask Abner who David was. Abner, captain of the king's host, familiar with the person of the armour-bearer to the king, of course knew David well; he therefore answered, "As thy soul liveth, O king, I cannot tell." David, having made known his parentage, was appointed to command, and often stood before Saul, but one day the evil spirit from the Lord came upon Saul and he prophesied. Men who are spiritually inclined often talk great nonsense under the influence of spirits, which they sometimes regret when sober. It is, however, an interesting fact in ancient spiritualism to know that Saul prophesied with a devil in him. Under the joint influence of the devil and prophesy, he tried to kill David, and when this was repeated, even after David had married the king's daughter (for whose wedding trousseau he had procured an interesting and

delicate offering by the slaughter of two hundred men), then to save his own life David fled to Naioth, and Saul sent there messengers to arrest him, but the king's messengers having all become prophets, in the end Saul went himself, and this time the spirit of the Lord came upon him, and he stripped off his clothes and prophesied as hard as the rest. What he prophesied about we do not know. In fact, the priests have made so great deductions from the profits during the plenitude of their power, that there has been little which is profitable in connection with religion left for the people.

David lived in exile for some time, having collected round him every one that was in distress, and every one that was in debt, and every one that was discontented. Saul made several fruitless attempts to effect his capture, with no better result than that he twice placed himself in the power of David, who twice showed the mercy to a cruel king which he never conceded to an unoffending people. David having obtruded himself upon Achish, King of Gath, and doubtful of his safety, feigned madness to cover his retreat. He then lived a precarious life, sometimes levying a species of black mail upon defenceless farmers. Having applied to one farmer to make him some compensation for permitting the farm to go unrobbed, and his demand not having been complied with, David, who is a man after the heart of the God of mercy, immediately determined to murder the farmer and all his household for their wicked reluctance in submitting to his extortions. The wife of farmer Nabal compromised the matter. David "*accepted her person*," and ten days afterwards Nabal was found dead in his bed. David afterwards went with 600 men and lived under the protection of Achish, King of Gath, and while thus residing (being the anointed one of a God who says, "Thou shalt not steal,") he robbed the inhabitants of the surrounding places ; being also obedient to the statute, "Thou shalt do no murder," he slaughtered, and left neither man nor woman alive to report his robberies to King Achish ; and as he "always walked in the ways" of a God to whom "lying lips are an abomination," he made false reports to Achish in relation to his actions. Of course this was all for the glory of God, whose ways are not as our ways. Soon the Philistines were engaged in another of the constantly recurring conflicts with the Israelites. Who offered them the help of himself and band ? Who offered to make war on his own countrymen ? David, the man after God's own heart, who obeyed his statutes and who walked in his ways to do only that which was right in the sight of God. The Philistines rejected the traitor's aid, and saved David from the consummation of this baseness. While David was making this unpatriotic proffer of his services to the Philistines, his own city of Ziglag was captured by the Amalekites, who were doubtless endeavouring to avenge some of the most unjustifiable robberies and murders perpetrated by David and his followers in their country. David's own friends evidently thought that this misfortune was a retribution for David's crimes, for they spoke of stoning him. The Amalekites had captured and carried off everything, but they do not seem to have maltreated or killed any of their enemies. David was less merciful. He pursued them, recaptured the spoil, and spared not a man of them, save 400 who escaped on camels. In consequence of the death of Saul, David soon after was elevated to the throne of Judah, while Ishbosheth, a son of Saul, was made King of Israel. But Ishbosheth, having been

assassinated, David slew the assassins, when they, hoping for reward, brought him the news, and he reigned ultimately over Israel also.

As my religious readers are doubtless aware, the Lord God of Israel, after the time of Moses, usually dwelt on the top of an ark or box, between two figures of gold, and on one occasion David made a journey with his followers to Baal, to bring thence the ark of God. They placed it on a new cart drawn by oxen. On their journey the oxen stumbled and consequently shook the cart, and one of the drivers, whose name was Uzzah, fearing that God might be tumbled to the ground, took hold of the ark, apparently in order to steady it, and prevent it from overturning. God, who is a God of love, was much displeased that any one should presume to do any such act of kindness, and killed Uzzah on the spot as a punishment for his error. This shows that if a man sees the Church of God tumbling down, he should never try to prop it up; if it be not strong enough to save itself, the sooner it falls the better for human kind—that is, if they keep away from it while it is falling. David was much displeased that the Lord had killed Uzzah; in fact, David seems to have wished for a monopoly of slaughter, and always manifested displeasure when killing was done unauthorised by himself. Being displeased, David would not take the ark to Jerusalem; he left it in the house of Obed Edom, but as the Lord proved more kind to Obed Edom than he had done to Uzzah, David determined to bring it away, and he did so, and David danced before the ark in a state of semi-nudity, for which he was reproached by Michal. The story is one which, by itself, would be as entertaining to a depraved mind as any Holywell Street pamphlet, if Lord Campbell's act did not prevent the publication of indecencies. The pages of God's most holy word, we believe, do not come within the scope of the act, and lovers of obscene language may therefore have legal gratification so long as the Bible shall exist. The God of Israel, who had been leading a wandering life for many years, and who had "walked in a tent and in a tabernacle," and "from tent to tent," and "from one tabernacle to another," and who "had not dwelt in any house" since the time that he brought the Israelites out of Egypt, was offered "an house for him to dwell in," but he declined to accept it during the lifetime of David, although he promised to permit the son of David to erect him such an abode. David being now a powerful monarch, and having many wives and concubines, saw one day the beautiful wife of one of his soldiers. To see with this licentious monarch, was to crave for the gratification of his lust. The husband Uriah was fighting for the king, yet David was base enough to steal his wife's virtue during Uriah's absence in the field of battle. "Thou shalt not commit adultery" was one of the commandments, yet we are told by God of this David, "who kept my commandments, and who followed me with all his heart to do only that which was right in mine eyes" (1 Kings, c. xiv., v. 8). David, having seduced the wife, sent for her husband, wishing to make him condone his wife's dishonour, as many a man has done in other lands, when a king or prince has been the seducer. Some hold that virtue in rags is less worth than vice when coronetted. Uriah would not be thus tricked, and David, the pious David, coolly planned, and without mercy caused to be executed, the treacherous murder of Uriah. God is all just; and David having committed adultery and murder, God punished and killed an innocent child, which had no part or share in David's crime, and never chose that it

143

should be born from the womb of Bathsheba. After this the king David was even more cruel and merciless than before. Previously he had systematically slaughtered the inhabitants of Moab, now he sawed people with saws, cut them with harrows and axes, and made them pass through brick-kilns. Yet of this man, God said he "did that which was right in mine eyes." So bad a king, so treacherous a man, a lover so inconstant, a husband so adulterous, of course was a bad father, having bad children. We are little surprised, therefore, to read that his son Amnon robbed his sister, David's daughter Tamar, of her virtue; and that Amnon was afterwards slain by his own brother, David's son Absalom, and are scarcely astonished that Absalom himself, on the house-top, in the sight of all Israel, should complete his father's shame by an act worthy a child of God's selected people. Yet these are God's chosen race, and this is the family of the man "who walked in God's ways all the days of his life."

God, who is all-wise and all-just, and who is not a man that he should repent, had repented that he had made Saul king because Saul spared one man. In the reign of David the same good God sent a famine for three years on the descendants of Abraham, and upon being asked his reason for thus starving his chosen ones, the reply of the Deity was that he sent the famine on the subjects of David because Saul slew the Gibeonites. Satisfactory reason!—because Oliver Cromwell slew the Royalists, God will punish the subjects of Charles the Second. One reason is to profane eyes equivalent to the other, but a bishop or even a rural dean would soon show how remarkably God's justice was manifested. David was not behind hand in justice. He had sworn to Saul that he would not cut off his seed—*i. e.*, that he would not destroy Saul's family. He therefore took two of Saul's sons, and five of Saul's grandsons, and gave them up to the Gibeonites, who hung them. Strangely wonderful are the ways of the Lord! Saul slew the Gibeonites, therefore years afterwards God starves Judah. The Gibeonites hang men who had nothing to do with the crime of Saul, except that they are his descendants, and then we are told "the Lord was intreated for the land." Perhaps David wanted to get rid of the royal family of Saul. The anger of the Lord being kindled against Israel, and he wanting some excuse for punishing the descendants of Jacob, moved David to number his people. The Chronicles say that it was Satan, and pious people may thus learn that there is little difference between God and Devil when rightly understood. Both are personifications founded in the ignorance of the masses, and their continuance will cease with their credulousness. David caused a census to be taken of the tribes of Israel and Judah. There is a trivial disagreement to the extent of about 270,000 soldiers between Samuel and Chronicles, but the readers must not allow so slight an inaccuracy as this to stand between them and heaven. What are 270,000 men when looked at prayerfully? The idea that any doubt should arise is to a devout mind at the same time profane and preposterous. Infidels suggest that 1,570,000 soldiers form a larger army than the Jews are likely to have possessed. I can only add that as God is omnipotent, there is no reason to limit his power of increasing or decreasing miraculously the armament of the Jewish nation. David, it seems, did wrong in numbering his people, although we are never told that he did wrong in robbing or murdering their neighbours, or in pillaging peaceful agriculturists. David

said, "I have sinned." The king having done wrong, an all-merciful God brought a pestilence on the people, and murdered 70,000 Israelites, for an offence which their ruler had committed. The angel who was engaged in this terrible slaughter stood somewhere between heaven and earth, and stretched forth his hand with a drawn sword in it to destroy Jerusalem itself, but even the bloodthirsty Deity of the Bible "repented him of the evil," and said to the angel, "It is enough." Many volumes might be written to answer the inquiries—Where did the angel stand, and on what? Of what metal was the sword, and where was it made? As it was a drawn one, where was the scabbard? and did the angel wear a sword-belt? Examined in a pious frame of mind, much holy instruction may be derived from the attempt at solution of these problems.

David now grows old and weak, and at last, notwithstanding that he has the advantage of a pretty maiden to cherish him, he wears out, and his death hour comes. Oh! for the dying words of the Psalmist! What pious instruction shall we derive from the death-bed scene of the man after God's own heart! Listen to the last words of Judah's expiring monarch. You who have been content with the pious frauds and forgeries perpetrated with reference to the death-beds and dying words of the great, the generous, the witty Voltaire, the manly, the self-denying, the incorruptible Thomas Paine, the humane, simple, child-like man, yet mighty poet, Shelley—you who have turned away from these with horror, unfounded if real, come with me to the death couch of the special favourite of God. Bathsheba's child stands by his side. Does any thought of the murdered Uriah rack old David's brain, or has a tardy repentance effaced the bloody stain from the pages of his memory? What does the dying David say? Does he talk of cherubs, angels, and heavenly choirs? Nay, none of these things pass his lips. Does he make a confession of his crime-stained life, and beg his son to be a better king, a truer man, a more honest citizen, a wiser father? Nay, not so—no word of sorrow, no sigh of regret, no expression of remorse or repentance escaped his lips. What does the dying David say? This foul adulterer, whom God has made king, this red-handed robber, whose life has been guarded by "our Father which art in Heaven," this perjured king, whose lying lips have found favour in the sight of God, and who when he dies is safe for Heaven—"There shall be more joy in heaven before God over one sinner that repenteth than over ninety and nine righteous men." So it is written. Does David repent? Nay—like the ravenous tiger or wolf, which once tasting blood is made more eager for the prey, he yearns for blood; he dies, and with his dying breath begs his son to bring the grey hairs of two old men down to the grave with blood. Yet this is the life of God's anointed king, the chief one of God's chosen people.

David is alleged to have written several Psalms, but of this there is little evidence beyond pious assertion. In one of these he addresses God in the phraseology of a member of the P.R., praising Deity that he had smitten all his enemies on the cheek bone and broken the teeth of the ungodly. In these days, when "muscular Christianity" is not without advocates, the metaphor which presents God as a sort of magnificent Benecia Boy, may find many admirers. In the eighteenth Psalm, David describes God as with "smoke coming out of his nostrils and fire out of his mouth," by which "coals were kindled." He repre-

1.405

sents God as coming down from heaven, and says "he rode upon a cherub." The learned Parkhurst gives a likeness of a one-legged, four-winged, four-faced animal, part lion, part bull, part eagle, part man, and, if a cloven foot be any criterion, part devil also. This description, if correct, will give some idea to the faithful of the wondeful character of the equestrian feats of Deity.

In addition to riding on a cherub, God has other means of conveyance at his disposal, if David be not in error when he says that the chariots of the Lord are 20,000.

In the twenty-sixth Psalm, the writer, if David, exposes his own hypocrisy in addition to his other vices. He has the impudence to tell God that he has been a man of integrity and truth; that he has avoided evil-doers, although, if we are to believe the thirty-eighth Psalm, the vile hypocrite must have already been subject to a loathsome disease —a penalty consequent on his licentiousness and criminality. In another Psalm, David the liar tells God that "he that telleth lies shall not tarry in my sight." To understand his malevolent nature we cannot do better than quote his prayer to God against an enemy (Psalm cix., vv. 6—14):—

"6. Set thou a wicked man over him: and let Satan stand at his right hand.

"7. When he shall be judged, let him be condemned: and let his prayer become sin.

"8. Let his days be few: and let another take his office.

"9. Let his children be fatherless, and his wife a widow.

"10. Let his children be continually vagabonds, and beg: let them seek their bread also out of their desolate places.

"11. Let the extortioner catch all that he hath; and let the strangers spoil his labour.

"12. Let there be none to extend mercy unto him: neither let there be any to favour his fatherless children.

"13. Let his posterity be cut off; and in the generation following let their name be blotted out.

"14. Let the iniquity of his fathers be remembered with the Lord; and let not the sin of his mother be blotted out."

A full consideration of the life of David must give great help to each orthodox reader in promoting and sustaining his faith. While he is spoken of by Deity as obeying all the statutes and keeping all the commandments, we are astonished to find that murder, theft, lying, adultery, licentiousness, and treachery are amongst the crimes which may be laid to his charge. David was a liar, God is a God of truth; David was merciless, God is merciful, and of long suffering; David was a thief, God says, "Thou shalt not steal;" David was a murderer, God says, "Thou shalt do no murder;" David took the wife of Uriah, and "accepted" the wife of Nabal, God says, "Thou shalt not covet thy neighbour's wife." Yet, notwithstanding all these things, David was the man after God's own heart.

Had this Jewish monarch any redeeming traits in his character? Was he a good citizen? If so, the Bible has carefully concealed every action which would entitle him to such an appellation, and in lieu has given us the record of his attempted extortion in the case of Nabal, and furnished us with a notice of his horde of followers—out-

146

lawed, discontented, and in debt. Was he a kind and constant husband? To whom? To which of his many wives and mistresses? Was he grateful to those who aided him in his hour of need? Nay; like the wounded serpent which half frozen by the wayside, is warmed into new life in the traveller's breast, and then treacherously stabs him with his poisoned fangs, so David robbed and murdered the friends and allies of the King of Gath, who had afforded him refuge against the pursuit of Saul. Does his patriotism outshine his many vices? Does his love of country efface his many misdoings? Not even this. David was a heartless traitor who volunteered to serve against his own countrymen, and would have done so had not the Philistines rejected his treacherous help. Was he a good king? So say the priesthood now; but where is the evidence of his virtue? His crimes brought plague and pestilence on his subjects, and his reign is a continued succession of wars, revolts, and assassinations, plottings and counterplots.

The life of David is a dark blot on the page of human history, and our best hope is that if a spirit from God inspired the writer, then that it was a lying spirit, and that he has given us fiction instead of truth.

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

INTRODUCTION.

THE following pages are reprinted, with some alterations and additions, from the columns of the *Freethinker*. They are neither methodical nor exhaustive. I had the privilege of knowing Mr. Bradlaugh more or less intimately for twenty years. I have worked with him in the Freethought movement and stood by his side on many political platforms. It seemed to me, therefore, that if I jotted down, even in a disjointed manner, some of my recollections of his great personality, I should be easing my own mind and conferring a pleasure on many readers. Beyond that I was not ambitious. The time for writing Mr. Bradlaugh's life is not yet, but when it arrives my jottings may furnish a point or two to his biographer.

G. W. FOOTE.

March 30, 1891.

Reminiscences of Charles Bradlaugh.

WHEN I came to London, in January, 1868, I was eighteen years of age. I had plenty of health and very little religion. While in my native town of Plymouth I had read and thought for myself, and had gradually passed through various stages of scepticism, until I was dissatisfied even with the advanced Unitarianism of a preacher like the Rev. J. K. Applebee. But I could not find any literature in advance of his position, and there was no one of whom I could inquire. Secularism and Atheism I had never heard of in any definite way, although I remember, when a little boy, having an Atheist pointed out to me in the street. Naturally I regarded him as a terrible monster. I did not know what Atheism was except in a very vague way; but I inferred from the tones, expressions, and gestures of those who pointed him out to me, that an Atheist was a devil in human form.

Soon after I came to London I found out an old school-fellow, and went to lodge with his family. They were tainted with Atheism, and my once pious playmate was as corrupt as the rest of them. They took me one Sunday evening to Cleveland Hall, where I heard Mrs. Law knock the Bible about delightfully. She was not what would be called a woman of culture, but she had what some devotees of "culchaw" do not possess—a great deal of natural ability; and she appeared to know the "blessed book" from cover to

cover. Her discourse was very different from the Unitarian sermons I had heard at Plymouth. She spoke in a plain, honest, straightforward manner, and I resolved to visit Cleveland Hall again.

Three or four weeks afterwards I heard Mr. Bradlaugh for the first time. It was a very wet Sunday evening, but as 'bus-riding was dearer then than it is now, and my resources were slender, I walked about three miles through the heavy rain, and sat on a backless bench in Cleveland Hall, for which I think I paid twopence. I was wet through, but I was young, and my health was flawless. Nor did I mind the discomfort a bit when Mr. Bradlaugh began his lecture. Fiery natural eloquence of that sort was a novelty in my experience. I kept myself warm with applauding, and at the finish I was pretty nearly as dry outside as inside. From that time I went to hear Mr. Bradlaugh whenever I had an opportunity. He became the "god" of my young idolatry. I used to think of him charging the hosts of superstition, and wish I could be near him in the fight. But it was rather a dream than any serious expectation of such an honor.

When the new Hall of Science was opened I became a pretty regular attendant. I heard Mr. Charles Watts, who was then as now a capital debater; Mr. G. J. Holyoake, Mr. C. C. Cattell, Mr. Austin Holyoake, and perhaps one or two other lecturers whom I have forgotten. Mr. Austin Holyoake frequently took the chair, especially at Mr. Bradlaugh's lectures, and a capital chairman he was, giving out the notices in a pleasant, graceful manner, and pleading for financial support like a true man. He was working hard for the success of the enterprise himself, and had a right to beg help from others.

Mr. Bradlaugh, however, was the great attraction in my case. Perhaps I was more impressionable at

that time, but I fancy he was then at his best as an orator. In later life he grew more cautious under a sense of responsibility; he had to think what he should not say as well as what he should. He cultivated the art of persuasion, and he was right in doing so. But at the earlier period I am writing of he gave a full swing to his passionate eloquence. His perorations were marvellously glowing and used to thrill me to the very marrow.

Gradually I began to make acquaintances at the Hall. I got to know Mr. Austin Holyoake and his charming wife, Mr. and Mrs. Bayston, Mr. Herbert Gilham, Mr. R. O. Smith, and other workers. By and bye I was introduced to Mr. Bradlaugh and shook hands with him. It was the proudest moment of my young life. I still remember his scrutinising look. It was keen but kindly, and the final expression seemed to say, "We may see more of each other."

In 1870 I wrote my first article in the *National Reformer*. For a year or two I wrote occasionally, and after that with tolerable frequency. I was also engaged in various efforts at the Hall; helping to carry on a Secular Sunday School, a Young Men's Secular Association, etc. Naturally I was drawn more and more into Mr. Bradlaugh's acquaintance, and when he found himself unable to continue the Logic Class he had started at the Hall he asked me to carry it on for him. Of course I was proud of the invitation. But the Class did not live long. It was not Logic, but Mr. Bradlaugh, that had brought the members together. Nor do I think they would have learnt much of the art from Mr. Bradlaugh, except in an empirical way. He had a very logical cast of mind, but as far as I could see he had little acquaintance with formal Logic as it is taught by Mill and Whately, whom I select as typical masters of Induction and Deduction,

without wishing to depreciate the host of other authorities. Mr. Bradlaugh really gave his class lessons in Metaphysics; his talk was of substance, mode, and attribute, rather than of premises and conclusions.

Mr. Bradlaugh and I were brought into closer acquaintance by the Republican agitation in England after the proclamation of the present French Republic. I attended the Republican Conference at Birmingham in 1871, when I first met my old friend Dr. Guest of Manchester, Mr. R. A. Cooper of Norwich, Mr. Daniel Baker, Mr. Ferguson the Glasgow Home Ruler, and other veterans of reform. We held our Conference on Sunday in the old meeting-place of the Secular Society, which was approached by very abrupt steps, and being situated over stables, was not devoid of flavor. On Monday the Conference was continued in one of the rooms under the Town Hall. A long political programme was concocted. I was elected Secretary, and had the honor of speaking at the public meeting in the large hall. It was my first appearance in such a perilous position. I was apprehensive, and I said so. But Mr. Bradlaugh put his hand on my shoulder and told me not to fear. His kind looks and words were an excellent tonic. When I rose to speak I thought next to nothing about the audience. I thought "Mr. Bradlaugh is listening, I must do my best." And now as I am writing, I recall his encouraging glance as I looked at him, and the applause he led when I made my first point. He was my leader, and he helped me in an elder-brotherly way. Nothing could exceed his considerate generosity. Other people did not see it, but I remember it, and it was typical of the man.

One incident at the Conference is worth noting. It occurred in the afternoon, when Mr. R. A. Cooper (I think) was in the chair. The question of Free Educa-

tion was being discussed. Mr. Bradlaugh did not quite like it, nor did I. He asked me to go with him into an ante-room and consider an amendment. What it was I can hardly remember, although I recollect that Mr. Cooper was very sarcastic about it. Since then my own opinion has changed, as I dare say Mr. Bradlaugh's had changed; and the incident would not be worth recalling if it did not throw a light upon Mr. Bradlaugh's philosophy. He was always in favor of self-help and individual responsibility, and he was naturally hostile to everything that might weaken those precious elements of English life.

During the years immediately after the opening of the Hall of Science, Mr. Bradlaugh was there a good deal. Sometimes he attended the week-night entertainments and gave a reading from Shelley or Whittier or some other poet. The audience applauded as a matter of course. They always applauded Mr. Bradlaugh. But he was no reader. He delivered his lines with that straightforward sincerity which characterised his speeches. He cultivated none of the graces or dexterities of the elocutionist. Besides, he was too original to be a successful echo of other men. I think he only did justice to Shelley's lines "To the Men of England." But this is a piece of simple and vigorous declamation; very fine, no doubt, but rather rhetoric than poetry.

Mr. Bradlaugh was anything but a cold man. I should say he was electric. But his tastes, so far as I could discover, did not lie in the direction of poetry. Certainly I heard him once, in those old days, read a great part, if not the whole of Shelley's "Sensitive Plant." He loved Shelley, however, as an Atheist and a Republican, and I suppose he took Shelley's poetry on trust. But I do not think, though I speak under correction, that he cared very much for poetry

as such. I could never discover from his conversation or writings that he had read a line of Shakespeare—the god of Colonel Ingersoll. His mind was of the practical order, like Oliver Cromwell's. He had a genius for public affairs. He was not only a born orator, but a born ruler of men. Naturally he had, as the French say, the defects of his qualities. And it may be that the terrible stress of his life tended to repress the poetical side of his nature, and less developed his subtlety than his strength. Yet his feelings were deep, and his heart was easily touched. When William O'Brien delivered that great speech in the House of Commons after his imprisonment by Mr. Balfour, with all its needless indignities, there were two men who could not restrain their tears. One was an Irish member. The other was Charles Bradlaugh. One who witnessed the scene told me it was infinitely pathetic to see that gigantic man, deemed so hard by an ignorant world, wiping away his tears at the tale of a brave man's unmerited suffering.

Mr. Bradlaugh used to attend the social parties pretty often in those old days. He did not dance and he stood about rather awkwardly. It must have been a great affliction, but he bore it with exemplary fortitude. Once or twice I saw Mrs. Bradlaugh there. She had a full-blown matronly figure. Miss Alice and Miss Hypatia came frequently. They were not then living in the enervating air of London, and they looked extremely robust. I also remember the boy Charles, of whom Mr. Bradlaugh seemed very proud. He was a remarkably bright lad, and full of promise. But he was carried off by a fever. Only a day or two after the lad's death Mr. Bradlaugh had to lecture at the Hall. I was away, and I wondered whether he would fulfil the engagement. He did fulfil it. A

friend wrote to me that Mr. Bradlaugh walked through the hall and mounted the platform with a face as white and rigid as that of a statue. He made no reference or allusion to his loss, but all could see he carried a bleeding heart. His lecturing in such circumstances was characteristic. Weaker men would have indulged their grief; he was made of sterner stuff, and would not let it interfere with what he deemed his duty.

Splendid as was his eloquence at that time, Mr. Bradlaugh did not draw the large audiences that flocked around him a few years later. The Hall of Science was at first but half its present size, the platform standing on the right as you entered, with a small gallery on the opposite side. Its holding capacity could not have been more than half what it is at present, yet I have seen the place far from full. But the audiences grew larger and larger, and eventually the hall was increased to its present proportions, although for a long time there was not cash enough to put on a proper roof, and the building was defaced by a huge unsightly beam, on each side of which there was an arch of corrugated iron.

Those were glorious times. Difficulties were great, but there was a spirit at the Hall that laughed at them. How the foremost men about the place did work! Mr. R. O. Smith and Mr. Trevilion, senior, could a tale unfold. Whenever Freethinkers are at all dejected they should have a chat with one of those gentleman. Perhaps it would make them ashamed of their dejection, and fill them with the spirit of the heroic days.

Friends have told me with what energy Mr. Bradlaugh fought the battles of the old Reform League. I *know* with what energy he threw himself into the Republican agitation that followed the downfall of

Napoleon III. He tried to get to Paris but failed. Jules Favre and his friends did not want him. Favre himself was an eloquent histrion, and no doubt he felt afraid of a man like Mr. Bradlaugh. But if Mr. Bradlaugh could not get to Paris he fought hard for France in London. Meetings at the Hall of Science did not suffice. There was money from French sources and St. James's Hall was taken for a big demonstration. The Positivists shared in the proceedings. Their chief man was Mr. Frederic Harrison. Mr. Bradlaugh and he were a tremendous contrast. In fact a London paper (I think the *Echo*) remarked that Mr. Bradlaugh spoke as well as Mr. Harrison wrote, and Mr. Harrison spoke as badly as Mr. Bradlaugh wrote. There was some truth in this, though like most epigrams it was not all true. Mr. Bradlaugh was a born orator, but not a born writer. Yet he often wrote with a forthright power, naked and unadorned, which could dispense with the aid of literary artifices.

During this English agitation on behalf of France, held firmly under German feet, Mr. Bradlaugh came into contact with a French countess, who, I believe, either supplied or was the channel of supplying the necessary funds. As the lady is mentioned in Mr Headingley's *Life of Charles Bradlaugh*, which was published with Mr. Bradlaugh's sanction, there is no reason why I should not refer to her. She came several times to the Hall of Science, and I was introduced to her. She had been a beauty, and although time was beginning to tell on her, she retained a good deal of charm and distinction, which, like a true Frenchwoman, she heightened by the art of dressing. Then as now, of course, foul tongues wagged in foolish heads, and Mr. Bradlaugh's enemies were not slow to point to the French countess with prurient grimaces. Unable to understand friendship between man and

woman, owing to their Puritan training or incurable rankness, they invited the orthodox in religion and politics to note this suspicious connection. Something of this malicious folly must have reached Mr. Bradlaugh's ears, but I imagine he was too proud and self-contained to let it disturb him.

After the Birmingham meeting, and the founding of the Republican League, of which Mr. Bradlaugh became president, and I secretary, he visited Spain on private business, taking with him a message from the Conference to Senor Castelar, the leading spirit of the short-lived Spanish Republic. I remember writing out the message in a clear, bold hand, and addressing the foolscap envelope in the same way. When Mr. Bradlaugh fell among the Carlists he cursed my caligraphy. Happily, however, the officer who scrutinised that envelope could not read at all, and Mr. Bradlaugh escaped the consequences of being known to carry about letters addressed to the devilish Castelar.

During Mr. Bradlaugh's first visit to America I was a frequent contributor to his journal, and I corresponded with him privately. I went down to Northampton and delivered a lecture at his request, under the auspices of his electoral committee. The old theatre—a dirty, ramshackle place as I recollect it—was crowded, and I had my first taste of the popularity of Mr. Bradlaugh in the borough. Every mention of his name excited the wildest enthusiasm.

While Mr. Bradlaugh was lecturing in the States a general election took place in England. It was impossible for him to return in time, but his friends looked after his interests. A committee was formed at the Hall of Science to raise the necessary funds, and Mr. Charles Watts and I went down to Northampton to conduct the election. We addressed outdoor meetings in the day, and crowded indoor meetings at night.

Again I saw what a hold Mr. Bradlaugh had on his Northampton followers. They sang "Bradlaugh for Northampton" in the Circus with all the fervor of Scotch Covenanters on their hillsides "rolling the psalm to wintry skies."

Mr. Watts and I did not win the seat for Mr. Bradlaugh, nor did he win it himself at the next election, but we managed to increase his vote, and he expressed his pleasure at the result.

Soon after the election Mr. Bradlaugh returned to England. Mr. Watts and I went down with him to Northampton. There was a crowded public meeting, I believe in the Circus; and I saw Mr. Bradlaugh, for the first time, in the presence of his future constituents. They were simply intoxicated with excitement. The shouts of "Bradlaugh" and "Charley" were deafening. Hats and handkerchiefs were waved in the air. The multitude rose to its feet and gave its hero a splendid welcome. Then we settled down to speech-making, but all that followed was somewhat tame and flat after that first glorious outburst of popular devotion.

The next election came quickly. It resulted in the return of a Tory majority for Benjamin Disraeli, and Mr. Gladstone went off to sulk in his tent. Two Tories were returned for Radical Northampton. Mr. Bradlaugh let them in. He was determined to have one of the Northampton seats. To get it he had to make himself inevitable. He had to prove that if Northampton wanted two Liberal members, one of them must be Charles Bradlaugh. It took him thirteen years to demonstrate this, but he succeeded, as he succeeded in most things. At last, in 1880, he ran as official Liberal candidate with Mr. Labouchere, and both were returned.

I assisted Mr. Bradlaugh during his second (1874)

election. It was then that I first saw Mrs. Besant. She had not yet taken to the platform, but she was writing for the *National Reformer*, and her pen was active during the contest. Mr. Watts was also there. Another figure I remember was Mr. George Odger, who labored among the Trade Unionists of Northampton in Mr. Bradlaugh's interest. George Odger was one of the ablest of all the working-class leaders I have ever met. He came from my own county, Devonshire, being born at Horrabridge, on the road between Plymouth and Tavistock. He was honest to the heart's core, as well as very able, but he was incurably indolent. You never could be sure of him at a public meeting. He had to be looked up beforehand, or he might forget the engagement and spend his time more agreeably. He was passionately fond of the theatre, and could talk by the hour on famous performances of old actors and actresses. During the daytime at Northampton I had long chats with him. He objected to fine hotels, and he objected to walking; so I had to sit with him in the garden of a semi-rural public-house, where our conversation was altogether out of proportion to our liquor. Odger liked beer; not much of it, but just enough; it suited his palate and his purse; and as I drank next to nothing, the landlord must have thought us unprofitable customers.

Mr. Bradlaugh had rooms at the George Hotel. It was the Tory house, but he preferred it, and Mrs. Besant, Mr. Watts, and the rest of us, fed and slept there during the election. This gave rise to a good deal of silly talk among Mr. Bradlaugh's enemies. One evening we were returning from a Town Hall meeting, and the Tories had been holding a small meeting at the "George." As we reached the foot of the stairs, we encountered a knot of Tories. One of them was Mr. Merewether, the Tory candidate. He

was nearly of the same height as Mr. Bradlaugh, and well built. His friends were holding him back, but he broke from them, exclaiming, "Hang it! I *will* have a look at him." He stood at the very foot of the staircase and looked hard at Mr. Bradlaugh ascending. His expression was one of good-tempered insolence. After a long look at Mr. Bradlaugh, he returned to his friends, shouting, "Well, I'm damned if he's as bad-looking as I thought."

I left Northampton before the close of the poll. Mr. Bradlaugh was leaving the same night for America, having barely time to catch the boat at Liverpool. I drove round with him before leaving, on a visit to some of the polling stations. He had paid me a modest sum for my services, but he found he had hardly enough to take him across the Atlantic, and he asked me to lend him what money I had. I fished seven or nine pounds out of my pocket—I forget which—and handed it to him. It was paid back to me by his order a few weeks subsequently; and the incident would not be worth mentioning if it did not throw a light on the libellous nonsense of Mr. Bradlaugh's enemies that he was rolling in wealth.

While at Northampton with Mr. Bradlaugh, and on other occasions, I saw something of his personal tastes and habits. He struck me as an abstemious man. He was far from a great eater, and I never noticed him drink anything at dinner but claret, which is not an intoxicating beverage. On the whole, I should say, it is less injurious to the stomach and brain than tea or coffee. He was rather fond of a cup of tea seventeen years ago, and latterly his fondness for it developed into something like a passion. More than once I found him at St. John's Wood drinking a big cup of pretty strong tea, and was seduced by his genial invitation into joining him in that reckless indulgence.

He used to smoke too in the old days, but he afterwards gave up the practice for several years. About seven years ago, however, he resumed it. I do not think he ever attained to the dignity of a pipe. He smoked cigars. Some time in April, 1889, I spent an hour with him at the House of Commons. He got the Speaker's leave to take me into the lower smoke-room, and we "discussed" a cigar and some claret while discussing some Freethought business. The claret he seemed indifferent to, but he puffed the cigar with an air of enjoyment.

During the Northampton election times I used to take a good stiff daily walk. All through my youth I had plenty of exercise in the open air, and I still grow desperately fusty without a brisk tramp at least once in the twenty-four hours. Mr. Bradlaugh generally took a drive, and I remember telling him with youthful audacity that he ought to walk for his health's sake. Of course it was difficult for him to walk in the streets. His stature and bulk made him too noticeable, and mobbing was very unpleasant. But he might have driven out of town and trudged a mile or two on the country roads. My opinion is that his neglect of physical exercise helped to shorten his life. Occasional bouts of fishing were very well in their way, but *daily* exercise is the necessary thing. I do not forget the tremendous labor, physical as well as mental, of lecturing on burning questions to large audiences. All that, however, goes on in hot, crowded rooms, full of vitiated air; and it gives no proper exercise to the legs and loins or the lower vital organs.

After one of my remonstrances Mr. Bradlaugh invited me to play a game of billiards. It was the only time I ever played with him. His style with the cue was spacious and splendid. The balls went flying about the board, and I chaffed him on his flukes. He

had not the temperament of a billiard-player. Still, I have heard that he played a fair game at St. Stephen's; but I can hardly believe it without first-hand testimony. I am willing to believe, however, that he was a good chess-player. Certainly he had a head for it. But chess is a vile game for a brain-worker, whose recreations should never involve a mental strain.

When I first knew Mr. Bradlaugh he was living at Tottenham. I never visited him there, but I often called on him at his later lodgings in Turner-street, Commercial-road. He occupied the ground floor, consisting of two rooms. The back was his bedroom, and the front his library and workshop. It was what the Americans call a one-horse affair. Shelves all round the room were filled with books. Mr. Bradlaugh sat at a desk with his back to the fireplace. On his right was the door communicating with his bedroom, facing him the door opening on the passage, and on his right the street window. The room itself could hardly have been more than twelve or thirteen feet square. I once told him he was too near the fireplace, and he said it was sometimes good to have the poker handy. At that I stared, and he told me the following story.

One day a gentleman called on him and was invited to take a chair. He sat down facing Mr. Bradlaugh, and explained that he wanted advice on a very particular matter. God Almighty had told him to kill someone, and he had a difficulty in selecting a victim. Mr. Bradlaugh put his hand behind him and quietly grasped the poker. The inspired gentleman put the problem as a knotty one, and begged the assistance of the clever Iconoclast. "Well," said Mr. Bradlaugh, keeping quite cool, "what do you say to the Archbishop of Canterbury?" "The very man!" exclaimed the inspired gentleman. He got Mr. Bradlaugh to

give him the Archbishop's address, and said, "Good-day," with a profusion of thanks. Mr. Bradlaugh went to the door to look for a policeman, but none was visible, and the inspired gentleman was soon out of sight.

"So you see," said Mr. Bradlaugh, "It's good to have the poker handy. I never saw or heard of the man again, and I knew he couldn't get near the Archbishop. There are too many flunkeys in the way."

Those were my struggling days, and Mr. Bradlaugh was very kind to me. I remember the Sunday evening when I told him I thought of taking to the Freethought platform. He pointed out the hard and thorny path I should have to tread, but when he saw I was resolved on the attempt, he put his hand on my shoulder and said, "There is no young man in the movement I would sooner welcome."

In the very same room, on another Sunday evening a little later, I first saw James Thomson. He came down to the Hall of Science with Mr. Bradlaugh, in whose employment he then was, and I gave him the article I had brought for the *National Reformer*. He shook hands very cordially, and I was delighted to meet one for whose poetry I had a profound admiration.

It was also at the Hall of Science, about the same time, that I met the eccentric Mr. Turberville, brother to Mr. Blackmore, the novelist. He was a man of parts with a bee in his bonnet. He claimed kinship with Turberville, a minor poet of the sixteenth century, and he loved to talk of poetry. His knowledge of Shakespeare was profound and minute. He admired Mr. Bradlaugh's perorations immensely, as well as his bold defence of Freethought. He made out a will in Mr. Bradlaugh's favor, but he subsequently made another will, and died in circumstances that necessitated an inquest. By agreement, however,

Mr. Bradlaugh obtained £2,500 from the estate, and the windfall came opportunely, for his struggles and litigations had involved him in considerable debt. I know he often had to borrow money on heavy interest. One day, at Turner-street, he told me that a creditor of this species had coolly invited him to dinner. "Hang it," he said, "you can't dine with a man who charges you sixty per cent."

Another recollection I have of Mr. Bradlaugh is in connexion with the funeral of Mr. Austin Holyoake. The death of this gentleman was a great loss to the Freethought cause. He was highly respected by all who knew him. The geniality of his disposition was such that he had many friends and not a single enemy. For some years he was Mr. Bradlaugh's printer and publisher, and a frequent contributor to his journal. He was foremost in every good work, but he was one of those modest men who never get the credit of their labors. He died at 17 Johnson's-court, Fleet-street, in an upstairs room above the printing office, where his devoted wife had for many weeks nursed his flickering life. The funeral was a notable event. Those of us who could afford it rode in the undertaker's coaches, and the rest walked in procession to Highgate Cemetery. I can still see Mr. Bradlaugh in my mind's eye, bustling about on the ground floor, taking everything as usual on his own shoulders. He sorted us in fours for the coaches, my *vis à vis* being James Thomson. At the grave-side, after the reading of Austin Holyoake's own funeral service by Mr. Charles Watts, Mr. Bradlaugh delivered a brief address which he had written for the occasion. On the whole it was too much a composition, but one sentence was true "Bradlaugh," and it sounds in my ears still:—"Twenty years of friendship lie buried in that grave."

How such scenes are impressed on one's memory! As I write I see the set face of Charles Bradlaugh. I behold the sob-shaken back and bowed head of Herbert Gilham just in front of me. I hear and feel the cool, rustling wind, like a plaintive requiem over the dead.

Once again, years afterwards, I saw Mr. Bradlaugh in the same cemetery, supporting the helpless figure of Mrs. Ernestine Rose as she left the open grave of the dear partner of her long life of labor for the cause of human redemption.

Owing to circumstances, into which I need not enter, I saw little of Mr. Bradlaugh between 1875 and 1880. When he was returned for Northampton I rejoiced, and when he was committed to the Clock Tower I saw my duty sun-clear. It was to participate as I could, and might, in the struggle. My contributions to Mr. Bradlaugh's journal were resumed, and I spoke at meetings in his behalf. In May, 1881, I started the *Freethinker*, my oldest living child. Mr. Bradlaugh acted with his natural generosity. He advertised my bantling gratuitously in his own journal, and gave it every possible facility. This was not known at the time, but I ought to state it now.

Throughout that long, terrible struggle with the House of Commons I was with Mr. Bradlaugh on every point. If he made a single mistake I have yet to see it indicated. My article in the first number of the *Freethinker* was entitled "Mr. Bradlaugh's Advisers." Its object was to show the absurdity of the plentiful advice offered him, and the absolute justice of the course he was pursuing.

Three weeks afterwards the bigots convened a ticket meeting at Exeter Hall. The chief promoters were Earl Percy, Sir Bartle Frere, and butcher Varley. Mr. Bradlaugh was afraid the meeting would have a pre-

judicial effect on public opinion in the provinces. The fact of the *tickets* would be kept back, and the report would go forth that a vote was unanimously passed against him at a big London demonstration. It was necessary, therefore, that the meeting should be *spoiled.* And it *was.* Mr. Bradlaugh gave me the task of moving an amendment. We had a chat in his library at St. John's Wood, and as we parted he said, "I rely on you, Foote." He looked at me steadily, holding my eyes as though to read the depths.

We got tickets somehow. But the Protestant Alliance smelt mischief, and Mr. Bradlaugh's supporters had to fight their way in. Two hundred and fifty police were not enough to keep them all out. I was naturally a marked man, and fighting had to be supplemented by diplomacy. When the noble Smithson (Earl Percy), had drivelled for a few minutes as chairman, and the resolution against Mr. Bradlaugh had been proposed and seconded by Sir John Kennaway and Canon Taylor, I rose to move an amendment. But the amendment was refused. The resolution was put, and the Christians stood up and voted, while the organ played "God Save the Queen." Then, at a signal, our people jumped on the forms, and rent the air with cheers for "Bradlaugh." At another signal they all trooped out, went off to Trafalgar-square with the big crowd outside, and passed resolutions in Mr. Bradlaugh's favor. The bigots' meeting was completely spoiled. They had to barricade the doors and keep out their own people as well as the enemy; the hall was never half full, and their resolution was passed after refusing an amendment, amidst loud execrations. Such a lesson was taught the bigots that they never made another attempt. Mr. Bradlaugh had trusty lieutenants and stern supporters, and the bigots knew he would spoil every *private* meeting that pro-

fessed to be *public*. He acted with wisdom and determination, and the result showed he knew the stake he was playing for when he said, "I rely on you," with that steady Napoleonic look.

. . . . . .

Mr. Bradlaugh's legal exploits, if properly recorded, would fill a good-sized volume. When his life is adequately written, as it will be some day, this department will have to be entrusted to a skilled lawyer. No other person could do anything like justice to a most important part of the career of one whom the Tories used to call "that litigious man," when they were trying to ruin him in the law courts and he was only defending himself against their base attacks.

Those who had only known Mr. Bradlaugh as a platform orator had some difficulty in recognising him when they first met him in one of our "halls of justice." His whole manner was changed. He was polite, insinuating, and deferential. His attitude towards the judges was admirably calculated to conciliate their favor. I do not mean that *he* calculated. He had quite a superstitious veneration for judges. It was perfectly sincere and it never wavered. He would not hear a word against them. When he pleaded before them his personal sentiments ran in a line with his best interests; for although judges are above most temptations, their vanity is often sensitive, and Mr. Bradlaugh's manner was intensely flattering.

Had he followed the legal profession, Mr. Bradlaugh would have easily mounted to the top and earned a tremendous income. I have heard some of the cleverest counsel of our time, but I never heard one to be compared with him in grasp, subtlety and agility. He could examine and cross-examine with consummate dexterity. In arguing points of law he had the tenacity of a bull-dog and the keenness of a sleuth-hound. He

always fortified himself with a plethora of "cases." The table in front of him groaned with a weight of law. Here as elsewhere he was "thorough." An eminent jurisprudist once remarked to me, "there is little gleaning to be done after Bradlaugh."

As a pleader before juries, however, I doubt whether he would have achieved a great success. He was too much of a born orator. He began well, but he soon forgot the limited audience of twelve, and spoke to a wider circle. This is not the way to humor juries. They like to feel their own importance, and he succeeds best who plays upon their weakness. "Remember," their looks say, "you are talking to *us;* the other gentlemen listen accidentally; *we* make you or damn you."

My first recollection of Mr. Bradlaugh in the law courts is twenty-two years old. How many survivors are there of the friends who filled that dingy old court at Westminster where he argued before a full bench of judges in 1869? He was prosecuted for not giving sureties in the sum of £400 against the appearance of blasphemy or sedition in his paper. The law was resuscitated in his single case to crush him; but he fought, as he said he would, to the bitter end, and the Gladstone Government was glad to repeal the obsolete enactments. The Crown retired from the suit with a *stet processus*, and Mr. Bradlaugh was left with the laurels—and his costs.

I obtained an hour or two's leave from my employment, and heard a portion of Mr. Bradlaugh's argument It gave me a new conception of his powers. That is the only impression I retain. The details have dropped out of my memory, but there remains as fresh as ever the masterful figure of Charles Bradlaugh.

The best view I ever had of Mr. Bradlaugh in litigation was in the old Court of Queen's Bench on

Tuesday and Wednesday, July 19 and 20, 1881, when he cross-examined poor Mr. Newdegate. For a good deal of the time I sat beside him, and could watch *him* closely as well as the case. By raising the point whether the writ against him for penalties had been issued before or after he gave his vote in the House, he was able to put all the parties to the prosecution into the witness-box and make them give an account of themselves. Mr. Newdegate was one of the victims, and the poor man made confessions that furnished Mr. Bradlaugh with ground for a successful action against him under the law of Maintenance.

Mr. Newdegate was a hard-mouthed witness, but he was saddled, bridled, and ridden to the winning-post. His lips opened literally, making his mouth like the slit of a pillar-box. Getting evidence from him was like extracting a rotten cork from the neck of a bottle, but it all came out bit by bit, and the poor man must have left the witness-box feeling that he had delivered himself into the hands of that uncircumcised Philistine. His cross-examination lasted three hours. It was like flaying alive. Once or twice I felt qualms of pity for the old man, he was such an abject figure in the hands of that terrible antagonist. Every card he held had to be displayed. Finally he had to produce the bond of indemnity he had given the common informer Clarke against all the expenses he might incur in the suit. When this came out Mr. Bradlaugh bent down to me and said, "I have him." And he *did* have him. Despite the common notion that the old law of Maintenance was obsolete, Mr. Bradlaugh pursued him under it triumphantly, and instead of ruining "Bradlaugh," poor Newdegate was nearly ruined himself.

What a contrast to Mr. Newdegate was Mr. Bradlaugh! He was the very picture of suppressed fire, of rampant energies held in leash: the nerves of the face playing

like the ripple on water, the whole frame quivering, and the eyes ablaze. It was wonderful how he managed to keep his intellect alert and his judgment steady. Six hours of such work as he had in court that day were enough to tax the greatest strength. Before it was over I saw bodeful blood-rims under his eyes. It did not surprise me, on meeting him at the Cobden Workmen's Club the next evening, to learn that he had been frightfully ill. "Mr. Bradlaugh," I wrote at the time, "is a wonderfully strong man, but the Tories and the bigots are doing their best to kill him, and if this sort of thing is to continue very much longer they may succeed." Alas, they *did* succeed. That terrible struggle killed him. No man ever lived who could have passed through it unbroken.

Mr. Bradlaugh was clearly right on the point raised, but the jury went against him, apparently out of sheer prejudice. When he went out into Westminster Hall he was loudly cheered by a crowd of sympathisers, who, as the *Times* sneered, "applauded as lustily as though their champion had won." Precisely so. Their applause would have greeted him in the worst defeat. He was not a champion on whom they had "put their money." He represented their principles, and the *Times* forgot, if it ever knew, that men are devoted to leaders in proportion to the depth of the interests they espouse. Conviction "bears it out even to the edge of doom."

Now let me mention something that shows Mr. Bradlaugh's tact and consideration. My work on the *Freethinker* brought me no return. I had just read the proof of an article for Mr. Bradlaugh's paper. While we were waiting for the jury's verdict he referred to the article, and guessing my need he said, "Shall I give you the guinea now?" My answer was an expressive shrug and a motion of the eye-brows.

Taking the two coins out of his pocket, he wrapt them in a piece of paper *under the table*, and presently slipped the packet into my hand. The whole proceeding touches me deeply as I recall it. He might well have thought only of himself in that time of suspense; but he thought of me too, and the precautions he took against being seen to pay me money were expressive of his inbred delicacy. Reader do not say the incident is trivial. These little things reveal the man.

Little did I dream, as I watched Mr. Bradlaugh fighting bigotry in the law courts, that the time would come when he and I would be included in a common indictment and stand in a criminal dock together. But as the French say, it is always the unexpected that happens. Early in July, 1882, I was served with a summons from the Lord Mayor of London, ordering me to appear at the Mansion House on the following Tuesday and take my trial on a charge of Blasphemy. Two other gentlemen were included in the summons, and all three of us duly appeared. We were all members of the National Secular Society, and Mr. Bradlaugh attended to render any possible assistance. The case was adjourned to the following Monday, by which time a summons had been served on Mr. Bradlaugh, who took his place beside us in the dock. After an animated day's proceedings we were committed for trial at the Old Bailey.

The object of this prosecution was, of course, to stab Mr. Bradlaugh in the back. He had fought all the bigots face to face, and held them all at bay; so they put a stiletto into Sir Hardinge Giffard's hands, and paid him his blood-money to attack the hero from behind.

Mr. Bradlaugh had to play the fox again. He wanted to gain time, and he wanted to be tried, if at all, in the Court of Queen's Bench. He always told me that

being tried at the Old Bailey was going like a lamb to the slaughter, and that a verdict of guilty there would certainly mean twelve months' imprisonment. The obvious resource, therefore, was to obtain a writ of *certiorari* removing our indictment to the superior court. Happily it was in the long vacation, and application had to be made to a judge in chambers. By another piece of good luck, it was Mr. Justice Stephen who sat behind the table on the fatal morning when the writ had to be finally granted or refused. It was obtained on July 29, 1882. Poor Mr. Maloney, who represented the prosecution, was no match for Mr. Bradlaugh, who treated him like a child, and only let him say a word now and then as a special favor.

Roaming the law courts with Mr. Bradlaugh, I was able to see his intimate knowledge of legal practice. He threaded the labyrinth with consummate ease and dexterity. We went from office to office, where everything seemed designed to baffle suitors conducting their own cases. Our case, too, was somewhat peculiar; obsolete technicalities, only half intelligible even to experts, met us at every turn; and when we got out into the open air I felt that the thing was indeed done, but that it would puzzle omniscience to do it in exactly the same way again. Seven pounds was spent on stamps, documents, and other items, and securities for costs had to be given to the extent of six hundred pounds. As I walked home I pondered the great truth that England is a free country. I had seen with my own eyes that *there is* one law for rich and poor. But I could not help reflecting that only the rich could afford it, and that the poor might as well have no law at all.

Mr. Bradlaugh next moved to quash the indictment. He argued that the public prosecutor's fiat was bad, as it did not name the persons who were to be proceeded

against, and thus resembled a general warrant, which in the famous Wilkes case the judges had held to be invalid. On this point, however, two judges, one of them being Sir James Stephen, gave judgment against him. The case was argued on Mr. Bradlaugh's part, the judges said, with "great power and learning." For my part, I think he showed a greater knowledge of "cases" than both the legal luminaries on the bench, who laid their heads close together over many a knotty point of the argument.

Beaten on the main issue, Mr. Bradlaugh was successful, however, on the subsidiary one. Two counts were struck out of the indictment. The excision made no difference to me, but a great deal of difference to him. Two numbers of the *Freethinker* were thus disposed of bearing the imprint of the Freethought Publishing Company—under which name Mr. Bradlaugh and Mrs. Beasant traded—and owing to the lapse of time it was impossible to open a fresh indictment. Of course I saw what Mr. Bradlaugh was driving at, and I could not but admire the way in which he made light of this point, arguing it baldly as a formal matter on which, as their lordships would see at a glance, he was absolutely entitled to a judgment. They would see that he was still open to all the other counts of the indictment, and therefore it might make very little difference, but right was right and law was law. Under the spell of his persuasive speech, it was amazing to see the judges smoothing their wrinkled fronts. I fancy they gave him his second point the more readily because they were against him on the first; indeed, they seemed to think it a pity, if not a shame, that all his learning and ability should be displayed for *nothing*.

Our indictment went into the list of Crown Cases Reserved, and did not come on for trial till the following April. Meanwhile I was prosecuted again, and failing

to get a writ of *certiorari*, owing to the flagrant bigotry of Baron Huddleston and Justice North, I was tried at the Old Bailey, and sentenced to twelve months' imprisonment like a common thief—as Mr. Bradlaugh had predicted.

During my trouble Mr. Bradlaugh lent me every assistance, furnishing me with legal books and advice, and visiting me in Newgate between the first and second trials, while Judge North's underlings were preparing a more pliant jury than the one which had declined to return a verdict of guilty.

In Holloway Gaol I lost sight of Mr. Bradlaugh and everyone else, except persons I had no desire to see. But one morning, early in April, 1883, the Governor informed me that Mr. Bradlaugh was going to pay me a visit, having the Home Secretary's order to see me on urgent business. The same afternoon I was marched from my cell into one of the Governor's offices, where Mr. Bradlaugh was waiting. Compared with the pale prisoners I saw day by day, he looked the very picture of health. Fresh, clean-shaven, neatly dressed, he was a most refreshing sight to eyes accustomed to rough faces and the brown convict's garb. And it was a friend too, and I could take his hand and exchange human speech with him. How vivid is my recollection of him at that moment! He seemed in the prime of life, little the worse for his terrible struggles, only the gray a trifle more decided about the temples, but the eyes full of light, and the mobile mouth full of vitality. And now he is dead! Dead! It is hard to realise. But I rang the muffled bell as he lay fighting his last battle, and I followed his corpse to the grave; and I know that the worm is busy about those leonine features, and the rain trickles through with a scent of faded flowers. Yes, it is true; he *is* dead. Dead like the king and dead like the

clown; yet living truly beyond the dust of death in the lives of others, an inextinguishable light, a vivifying fire, a passionate hope, an ardent aspiration.

> Till the Future dares
> Forget the Past, his fate and fame shall be
> An echo and a light unto eternity.

On the morning of April 10, 1883, I put on my own clothes and was driven in a four-wheeler from Holloway Gaol to the Law Courts, in company with Warder Smith, who superintended the wing of the prison in which a grateful country lodged and boarded me at its own expense. It was lovely spring weather, and I felt like a man new-born.

Inside the court where the great Blasphemy case was to be tried I found Mr. Bradlaugh with his usual load of law books. The court was crowded with friends of the defendants and legal gentlemen anxious to witness the performance.

Mr. Bradlaugh applied for a separate trial, on the ground that as there was no charge of conspiracy it was unjust to prejudice his case by evidence admitted against his co-defendants; and Lord Coleridge, who obviously meant to see fair play, granted the application.

Mr. Bradlaugh's position was, in one sense, the most perilous he had ever stood in. Just as his long litigation with respect to his seat in Parliament was drawing to a close, and as he believed to a *successful* close, he had to defend himself against a charge which, if he were proved guilty, would entail upon him the penalty of imprisonment. Of course it would not have been such imprisonment as I was suffering, for Queen's Bench prisoners are generally sent to the civil side of Holloway Gaol. But *any* imprisonment at such a moment gravely imperilled his prospects of success in the mighty struggle with wealth, bigotry, and political

prejudice. A sense of this fact weighed heavily upon him, but it did not impair his energy or intellectual alertness; indeed, he was one of those rare men whose faculties are sharpened by danger.

I need not dwell upon the evidence of the prosecution. It was most unsatisfactory, and failed to connect Mr. Bradlaugh with the *Freethinker*. Sir Hardinge Giffard, therefore, almost entirely confined himself to playing upon the prejudices of the jury.

Mr. Bradlaugh was perfection itself in examining and cross-examining, and was soon on the windward side of the judge, but his address to the jury was too boisterous. He *felt* too much. His adversary was not under this disadvantage, and Sir Hardinge Giffard's address to the jury, considered merely as a tactical display, was better than Mr. Bradlaugh's.

On the second day of the trial (it lasted for three days) there occurred a curious episode. Just before the adjournment for luncheon Mr. Bradlaugh intimated that when the Court re-assembled he would call his co-defendants as witnesses. Lord Coleridge replied in a low, suggestive tone, "Do you think it necessary?" Mr. Bradlaugh rose and for the first time I saw him tremble. "My lord," he said, "you put upon me a grave responsibility." "I put no responsibility upon you," said Lord Coleridge, "it is for you to decide." And the stately judge glided away in his robes of office.

If Mr. Bradlaugh put his co-defendants in the witness-box, one of two things might happen. They might decline to give evidence, as every answer would tend to criminate themselves; or they might exculpate Mr. Bradlaugh and procure their own damnation.

I do not blame Lord Coleridge for looking at the matter in this way. But I naturally looked at it in a different light. Mr. Bradlaugh was my general, and

I was his lieutenant, and it was clearly my duty to sacrifice myself. I could release him from danger with half a dozen words, and why should I hesitate to say them or he to exact them? I was already in prison, and another conviction could add little to my misfortune, whereas he was still free, and his continued freedom was just then absolutely indispensable to our common cause. For my part, I had not a moment's hesitation. But Lord Coleridge's words sank into Mr. Bradlaugh's mind, and after luncheon he announced that he would *not* call his co-defendants. His lordship looked pleased, but how he frowned when Sir Hardinge Giffard complained that *he* was deprived of an opportunity! Lord Coleridge did not say, but he *looked*—"Have you no sense of decency?" Sir Hardinge Giffard, however, was thick-skinned. He relied on Mr. Bradlaugh's sense of honor, and made it the basis of an artificial grievance. He even pretended that Mr. Bradlaugh was *afraid* to call his co-defendants. But he overreached himself by this hypocrisy, and obliged Mr. Bradlaugh to put his co-defendants into the witness-box. We were formally tendered as witnesses, Mr. Bradlaugh going no further, and leaving Sir Hardinge Giffard to do as he would. Of course he was obliged to interrogate us, or look foolish after his braggadocio, and in doing so he ruined his own case by giving us the opportunity of declaring that Mr. Bradlaugh was never in any way connected with the *Freethinker*.

Mr. Bradlaugh, of course, did not in any sense sacrifice me. It would have been contemptible on my part to let him bear any responsibility for my own deliberate action, in which he was not at all implicated, and if I had not been tendered as a witness I should have tried to tender myself.

After half an hour's deliberation the jury found Mr.

Bradlaugh not guilty. Standing up for the verdict, with pale set face, the grateful little "not" fell upon his ear, and his rigidity relaxed. Tears started to *my* eyes, and I saw the tears in *his* eyes as I squeezed his hand in speechless congratulation.

My own trial followed Mr. Bradlaugh's, and I was not found guilty. Three members of the jury held out against a verdict that would have disgraced a free country; and as the prosecution despaired of obtaining a verdict while Lord Coleridge presided at the trial, the Attorney-General was asked to allow the abandonment of proceedings. This he granted, the case was struck off the list, and I returned to my prison cell at Holloway.

. . . .

Let me now go back to the crowning incident of that long struggle between Charles Bradlaugh and the House of Commons. On May 10, 1881, the House passed a resolution authorising the Sergeant-at-Arms to prevent Mr. Bradlaugh from entering. On June 20, the jury gave a verdict in Mr. Newdegate's favor for the £500 penalty and costs. A motion for a new trial failed, and Mr. Bradlaugh appealed to the country. Enthusiastic meetings were held in his behalf, and he prepared a fresh *coup*. It had to be something striking, and it was. On the morning of August 3 Palace Yard and Westminster Hall were thronged with his supporters. Every one was armed with a petition, which he had a legal right to take to the House of Commons. Mr. Bradlaugh himself drove up in a hansom cab, and entered the precincts of the House by the private door. He made his way to the door of the House itself and tried to enter by a sudden effort, but he was seized by fourteen officials and stalwart policemen, picked for the work, and thrust back through the private passage into Palace Yard. Not

expecting such indignity, he contested every inch of the ground. Inspector Denning said he never thought that one man could have offered such resistance. The small muscles of both his arms were ruptured, and a subsequent attack of erysipelas put his life in jeopardy.

When he was finally thrust on to the pavement in Palace Yard his coat was torn and the rest of his garments were disarranged. His face was livid with the intense exertion when I saw him a minute afterwards. There he stood, a great mass of panting, valiant manhood, his features set like granite, and his eyes fixed upon the doorway before him. He seemed to see nothing but that doorway. I spoke to him, and he seemed not to hear. I believe a mighty struggle was going on within him, perhaps the greatest struggle of his life. He had suffered a frightful indignity, he must have been tempted to avenge it, and he had but to hold up his hand to bring around and behind him the myriads who stood outside the railings. The action would have been impolitic, but what a temptation he crushed down, and what an effort it necessitated! Never was his heroic nature more sorely tried. He justified his mastery of others by his mastery of himself. How small in comparison seemed the mob of his enemies! I never admired him more than at that moment. He was superb, sublime. They had wound their meshes about him, and the lion had burst them. One swift, daring stroke had frustrated all their plans. He who was to be quietly suppressed by resolutions of the House had cut the knot of their policy asunder, made himself the hero of the hour, and fixed the nation's eyes on his splendid audacity.

Reaction set in after that terrible struggle, and he accepted a chair that was brought him. Several members passed as he sat there. One of them was the coward, Frank Hugh O'Donnell. He had a lady on

his arm, and he passed with her between himself and Mr. Bradlaugh, so that her dress trailed over the hero's feet. It was a wretched display of insolence and cowardice. But the lady must be exonerated. She looked annoyed, her cheeks reddened, and her eyelids fell. It is so hard for a woman to resist the attraction of courage, and the coward by her side must have suffered in her estimation.

There was a crowded meeting that evening at the Hall of Science, at which I had the honor of speaking. Mr. Bradlaugh's greeting was tremendous. Two days afterwards he was seriously ill.

During that great constitutional struggle I was present at many "Bradlaugh" meetings, and I never witnessed such enthusiasm as he excited. No man of my time had such a devoted following.

The last "Bradlaugh" demonstration I attended was on February 15, 1883, in Trafalgar-square. Seventy or eighty thousand people were present. There were four speakers, and three of them are dead, Joseph Arch being the sole survivor. Mr. Adams, of Northampton, lived to see his old friend take his seat and do good work in the House of Commons, became himself Mayor of Northampton, and died universally respected by his fellow-townsmen; William Sharman, a brave, true man, is buried at Preston; and Charles Bradlaugh sleeps his long sleep at Woking.

For another twelve months I attended no public meetings except the silent ones on the exercise ground of Holloway Gaol. But I saw Mr. Bradlaugh at several demonstrations on various subjects after my imprisonment, and I could perceive no abatement of his popularity. He had his enemies and detractors, but the spontaneous outburst of feeling at his death proved his hold on the popular heart.

* * * *

I must now leap forward to that dreadful illness which left him a broken man. Years before, in 1882, when we were roaming the Law Courts together, he tapped his chest as he coughed, and seeing my anxious expression he told me that he brought up a good deal of phlegm in the morning, and that strangers who heard him clearing his chest would fancy he was very ill. But he looked so well that I soon dismissed the unpleasant fact, though it returned before his breakdown when I saw he was obliged to cancel engagements. I heard in 1884, though not from himself, that he had some heart trouble. But I was far from prepared for the shattering illness that laid him low in October, 1889.

When I called to see him after his partial recovery I was shocked by his appearance. He looked twenty years older, grey, and infirm. I sat down half-dazed. Theoretically I knew he was mortal, but I did not realise it as a fact until I saw him thin and pale from the valley of the shadow of death. His mind was clear enough, however; and although everything about him was pathetic he was quite self-collected.

One thing he said to me I shall never forget. There had been talk of his wavering in his Freethought, and as he referred to this folly he spoke in grave impressive tones. Pointing to the humble bed, he said, "When I lay there and all was black the thing that troubled me least was the convictions of my life."

Words and accents were alike solemn. The cold shadow of death seemed to linger in the room. A moment or two later he said with a broken voice, "The Freethought party is a party that I love."

The memory of that interview will always be a precious possession. I treasure it with the sacred things of my life. I had seen and touched the naked sincerity of a great soul.

When Mr. Bradlaugh returned from India I called on him, and found him greatly improved by his voyage. I waited for him a few minutes in his library, as he was at lunch, and the doctors attached great importance to regularity in his meals. He came into the room with a most genial smile. His air was fresh and buoyant, and he walked over to me quickly, holding out his hand all the way. I took it heartily, and had a good look at him, which satisfied and yet dissatisfied me. He was certainly better, but I could not help feeling that his constitution was irrecoverably broken. Never again could I hope to see the grand Bradlaugh of the old fighting days. His mind was as brave and alert as ever, but the body was too obviously disabled.

He showed me some of his Indian presents, of which he was justly proud, and then we sat down to chat. He was full of his voyage and the kindness he had experienced on every side. His reception in India had exceeded his highest anticipations, and he was looking forward to work in the House of Commons on behalf of our great Dependency.

Speaking of his financial prospects, he told me he had received offers of work from several magazine editors. But he added, "one doesn't know how long it will last; 'tis a precarious business." His face clouded for a moment, and I saw he was more troubled than he cared to say.

One thing he told me which I had no right to repeat while he lived, but I may repeat it without a breach of confidence now that he is dead.

During his brief stay in India he could have had plenty of money if he had been less scrupulous. There was nothing very dishonourable in accepting money from rich Hindoos, for he was poor and broken in health, and he was fighting for their best interests. But he was too proud to take it, and when wealthy natives

were calling on him, he always took the precaution to have an English friend in the room.

"No," he said to me, "I cannot do that. I'll live like the old Bradlaugh, or I'll go under."

He lived like the old Bradlaugh, and he went under. He took to the platform again to earn a livelihood, and it killed him, as his doctors had foreseen. I implored him at the time not to resume the lecturing. He was going to fulfil an old-standing engagement at Manchester in the vast St. James's Hall, and I begged him to cancel it. He replied that he could not afford to forfeit twenty pounds. "What is that to your life?" I asked. He only smiled grimly. His mind was made up, and he was not to be bent by advice.

On Sunday morning, February 16, 1890, Mr. Bradlaugh resigned his presidency of the National Secular Society, which he had held for so many years. The Hall of Science was packed with members, chiefly from the London district, but many of them from the provinces.

The scene was infinitely pathetic. One sentiment reigned in every heart. The Old Guard was taking leave of its General. Some of them had fought around him for thirty years, and the farewell was a mutilation of their very lives. Tears were streaming down strong faces; and they coursed down the strongest face of all, the face of Charles Bradlaugh, and plashed on the table before him. For a while he let them fall, and then he controlled his grief and rose to speak. But the words would not come. His frame shook with a great sob, and he sat down again. A second time he rose and failed. But the third time his strong will prevailed, and he began to speak in low, trembling tones.

Never was I so struck with his oratorical powers as on this occasion. Without once lifting his voice above

the note of conversation, he swayed the meeting for a full half-hour, as easily and universally as the wind billows a cornfield.

In resigning the presidency he thought it his duty to nominate a successor, and his choice was ratified by the meeting. He handed me the president's hammer after a solemn, impressive apostrophe, in which he expressed his hope that he might thank me, after many years, for good, loyal work as leader; and when I had acknowledged the lofty honor he rose to vacate the chair. Naturally I declined to let him do anything of the kind, and for a moment the two Presidents stood together in friendly altercation. But for once he gave way, and Charles Bradlaugh filled the chair to the last.

Resigning the Presidency did not mean retirement from the National Secular Society. At his own suggestion Mr. Bradlaugh was elected a life-member. He was thus a member of the Society up to the last moment of his life. Nor was he an inactive one. I frequently had occasion to consult him, and one of his last bits of work was the drawing up of a long document for the Society on Secular Burials.

Months rolled by, and the evening came for the great debate on the Eight Hours Bill between Mr. Bradlaugh and Mr. Hyndman. St. James's Hall was packed to suffocation. I sat on the platform near my old leader, and I saw how the effort was telling on him. His opponents in the meeting behaved with incredible brutality. Some of them laughed aloud when he said, "Believe me, this has tried me more than I had thought." But now the hero they laughed at is dead, and they *know* that he spoke the truth.

The last time I saw Mr. Bradlaugh in public was on Wednesday evening, December 10, 1890, when he lectured at the Hall of Science on behalf of the Forder

Testimonial Fund. I believe that was the last lecture he delivered there, if not the last lecture he delivered anywhere. He dealt with the Evidences of Christianity, in reference to Archdeacon Watkins' lectures on the Fourth Gospel, and assuredly he was as firmly sceptical as ever. At the close of the lecture he spoke of his theological position, and declared that he could not conceive of any such change of mind as glib gossipers were asserting of him.

The weather was extremely foggy, and Mr. Bradlaugh was ill. He ought not to have been there at all. After struggling painfully through the lecture, he sat down and waited for discussion. A Christian opponent rose, and Mr. Bradlaugh replied; but, being in the chair, I would not allow a second speech, and I was glad to see him well wrapt-up, and once more in the care of his devoted daughter.

. . . . . .

Having concluded my reminiscences of Charles Bradlaugh in relation to the *events* of his life, I shall wind up with a little personal talk of a more general character.

I have already referred to Mr. Bradlaugh's extraordinary knowledge of the law. This was strikingly illustrated after the so-called Trafalgar-square riots. The Tories made a wanton aggression on the right of public meeting in London, and found a ready instrument of tyranny in Sir Charles Warren. No doubt there is much to be said against promiscuous meetings in Trafalgar-square at all hours of the day and night, but it was a high-handed act of brutality to prohibit *all* meetings directly it was known that the London Radicals were convening a Sunday demonstration on the Irish question. While the Radicals were chafing under this insult they held several stormy meetings to discuss their best policy, and at last a Committee was

appointed to find out, if possible, the legal rights of the people and the Crown. I was a member of that committee, and I am able to state that although we waited on several eminent lawyers, it was only from Mr. Bradlaugh that we obtained any light. The others talked vaguely about the right of public meeting, and the primary and secondary uses of public thoroughfares, but Mr. Bradlaugh gave us the *facts* of the case. Trafalgar-square was Crown property, its control was vested in the Commissioner of Works, and at any moment it could be absolutely closed to the British public.

This had escaped the other lawyers, who did not find it in the Statutes at Large, from which the Trafalgar-square Act, probably as being a private one, had been excluded. Nor was it known to the Government when Sir Charles Warren issued his first proclamation. As Chief Commissioner of Police he had no authority over the Square, and until he obtained the order of its proper guardians, which he did a week later, his proclamation was only a piece of waste paper. Mr. Bradlaugh saw this, though he said nothing, when the demonstration committee called upon him a few days before Bloody Sunday. He told them that he had an engagement in the provinces on that day, but if they would postpone the demonstration until the following Sunday he would himself lead it to Trafalgar-square. His offer was not accepted, however; for the committee resented the condition he stipulated, namely, that he should have absolute control of the arrangements. They thought he was taking too much upon himself. They did not reflect that if he who takes power without responsibility is a despot, he who takes responsibility without power is a fool. It was their action, and not his, that lost the battle.

Mr. Bradlaugh made no public parade of his brave

offer. It was not his way. But it is due to his memory that it should be put on record, so that posterity may know the extent of his generous courage.

There can be no doubt, I think, that Mr. Bradlaugh was less popular with the working-classes in London after he took peaceable possession of his seat in Parliament. The London masses love a fighter, and while he was battling for his seat he was, in my opinion, the most popular figure in the metropolis. The Radical workmen never tired of his demonstrations. He could bring fifty or a hundred thousand of them together at a few days' notice. And the other speakers were, for the most part, only padding to fill up the time. It was "Bradlaugh" the multitude came for. They waited to hear him speak, they applauded him to the skies, and when he had done they dispersed. And on such occasions he was magnificent. No one can conceive the power of the man who never saw him at one of these demonstrations. He stood like a Pharos, and the light of his face kindled the crests of the living waves around him.

But he was out of sympathy with the Socialist movement, which began to spread just as he took his seat; and being assiduous in Parliament, he was drawn more and more from "the Clubs," where his libellers and detractors wagged their tongues to some purpose. His strong individualism, as well as his practical good sense, made him bitterly hostile to the mildest proposals for putting the people's industrial interests into the hands of Government departments. And being a man of most positive quality, it was natural that he should excite the hatred of the more fanatical Socialists; a sentiment which, I cannot help thinking, he exasperated by his apparent denial of the generosity of their aims. There are men in the Socialist camp (and I say it without being a Socialist) who are neither "poets"

nor "fools"—though it is no disgrace to be the former; men who have studied with severity and sincerity, who have made sacrifices for conviction, and who were sometimes hurt by his antipathy. But, on the other hand, he was bitterly goaded by Socialist adversaries, who denied his honesty, and held him up to undeserved scorn as the hireling of "the classes"—a charge which the more sensitive among them must now repent, for his death has revealed his poverty.

Mr. Bradlaugh was naturally irritable, but the irritability was only on the surface. The waves were easily raised, but there was plenty of quiet sea beneath. Though giants are often phlegmatic, his big frame embedded highly-strung nerves. When he was put out he could storm, and he was misunderstood by those who took the mood for the man. Had they seen him in the melting mood they would have learnt that Charles Bradlaugh was a more composite personality than they imagined.

During the last year or two of his life he underwent a wonderful softening. A beautiful Indian-summer light rested upon him. He was like a granite rock, which the sweet grass has overgrown, and from whose crevices peep lovely wild flowers.

. . . . .

As President of the National Secular Society he did a great work. I do not think he had a pronounced faculty for organisation. But he was a firm, sagacious leader, with the personal magnetism to attract devotion. That he was never overbearing I will not affirm. But it is easy to organise sheep. One good dog will do it. Mr. Bradlaugh had to hold together a different species, with leaping legs, butting horns, and a less gregarious tendency.

He was a splendid chairman to push through a mass of business, but he shone less on ordinary occasions.

An ideal chairman, when not promoting his own schemes, should be like a midwife; he should aim at a quick delivery and a safe birth. Mr. Bradlaugh did not always observe this rule. But every man has the defects of his qualities, and even the sun must be taken with its spots.

Mr. Bradlaugh's speeches at the annual Conferences of the National Secular Society are better reading than his political speeches. Being less in the world of practice there, and more in the world of principle, he gave play to his ideal nature, his words took color, and metaphors flashed like jewels in the sword of his orations. It was a signal proof of his power, that after a whole day's exhausting work, both to himself and his audience, he never failed to rouse the wildest enthusiasm.

Now that Mr. Bradlaugh is dead I do not hesitate to repeat what I said during his lifetime, that his Freethought work was the most fecund and important. Even his great battle against the House of Commons was for religious freedom against bigotry, and his one great legislative achievement was the Act dealing with Oaths and Affirmation. His staunchest political supporters were his Freethought followers. His lectures, his personal influence, and his reputation, leavened the public mind more than his orthodox enemies suspected, and he created a vast quantity of raw material to be utilised by his successors in Secular organisation.

. . . . .

In the foregoing pages I have attempted no complete sketch of Charles Bradlaugh. I have written, not a monograph, but a number of rough jottings. Yet I hope I have conveyed an impression of the man, in some degree faithful, to those who may have been imperfectly acquainted with him; and I trust the

features I have presented, however baldly outlined, will be recognised by those who knew and loved him.

When all is said and done, I think the final impression one retains of Charles Bradlaugh is his *heroism.* His was cast in a great mould of mind and character, as well as body. Like every hero the world has ever seen, he had his defects and failings, for it is given to no man to be perfect. But positive excellence, with all its drawbacks, is far above negative merit. "Thou shalt" is loftier virtue than "thou shalt not," and the hero is superior to the saint.

Charles Bradlaugh was a colossus of manhood. He was one to design, and dare, and do. The beaten path of mediocrity had no attraction for that potent spirit. He belonged to the heroic type which seeks perilous ways and fresh conquests. Like the hero of one of Browning's poems, he was "ever a fighter." In stormy times he naturally rose to the top. He was one of the select few, not of those who enrich the world with great discoveries, or new principles, or subtle perceptions of beauty—but those who appeal to the heroism of man's nature, without which he is at best but a splendid beast, and who minister to that sense of dignity which is the supreme necessity of our race.

> The elements
> So mixed in him, that Nature might stand up
> And say to all the world, "This was a man!"

"Truth gains more even by the errors of one who, with due study and preparation, thinks for himself, than by the true opinions of those who only hold them because they do not suffer themselves to think."—J. S. MILL.

Dedication.

To the honoured memory of those whom the world warred against and struck down, but who warred for the very world which crushed them; to the revered memory of those who, with the blood-drops from their wounded feet, softened the rugged path along which all must travel; to the memory of the martyrs for Freethought in every age and clime, I dedicate this volume. I could wish that their worthiness, redeeming its faults, might give it force for good in freeing human thought from bondage.

INTRODUCTION.

It is to be regretted that in the second half of the nineteenth century, and in a country professing to occupy an advanced position amongst enlightened peoples, there should be any necessity for the publication of a commentary on Genesis, written for the purpose of demonstrating that the book is not a perfect and infallible revelation specially given from an all-wise and infinite Deity, Creator, and Ruler of all worlds, to his creatures on this planet alone, and that it is not an unerring guide and monitor to humankind in their constant life-struggle for happiness. There is no great honour or pleasure, although there is much wearisome toil, in gathering the materials for proving that Genesis nearly always blunders in its attempts at statements of fact, that it is repeatedly chronologically incorrect, and in the chronologies of its principal versions utterly irreconcileable; that copyists, through ignorance, carelessness, or design, have in many places incorrectly transcribed the text; that the translators, according to their respective creeds, vary in their interpretations of different momentous passages; that the Hebrew language itself has been altered by the addition of vowel points, by means of which a sense is often given entirely different from the original intention; and that the majority of the ancient versions contain different and contradictory readings of various important verses. But it is absolutely necessary to do all this in a form accessible to the general reader so long as the Church persists, under statutory sanction and indorsement in its teaching to the people from their early childhood, that this Bible is God's word free from blemish. Genesis is forced upon the child's brain as God's word by nurse and pedagogue, and the mode of thinking of the scholar is in consequence utterly warped in favour of the divinity of the book before his reason has opportunity to mature for its examination. If the book only had claimed for it that which may be claimed for all books—namely, in part or whole to represent the genius, education, and manners of the people and times, from whom and which it issued, then it might fairly be objected by supporters of the Bible that the tone of criticism here adopted is not of the highest

order, and that the petty cavillings about misplaced names, misspelled words, incorrect dates and numbers, and geographical errors, &c., are hardly worthy the attention of a serious student. But as the Bible is declared to be the revelation and representative of perfect intelligence to the whole human family; as it is placed by the whole of its preachers immeasurably above all other books, with a claim to dominate, and if necessary to overturn the teachings of all other books; as it is alleged that the Bible is free from the errors of thought and fact more or less found in every other book; and as it is by act of parliament declared to be a criminal offence in this country for any person to deny this book to be God's holy word, it is not only a right, but becomes an unavoidable duty on the part of a freethinking critic to present as plainly as possible to the notice of the people every weakness of the text, however trivial, that may serve to show that the Bible, or any portion of it, is fallible, that it is imperfect, that so far from being above all other books, it is often below them as a mere literary production.

Holding this opinion, I issue the following commentary, in the hope that its perusal will induce thought in some who have hitherto been contented to drift down the stream of life, and who have been carried along the customary channel as though they were without energy enough to find or make new thought-paths for themselves or others. That my work is incomplete I am well aware, and I shall gladly see it supplemented from abler hands. I invite criticism, trusting that in the discussion of each point the debaters and onlookers may be brought to a more liberal mode of treating each other, and to a more correct appreciation of the subjects examined. To the orthodox opponent, who will probably condemn before reading, and who may probably wish to remind me that I am but the weak imitator of greater infidels, who have in former ages attacked the Bible and have failed in their attacks, I reply, that I do not pretend to originality, but that so far from the greater infidels, whose muster-roll of names includes such as Spinoza, Voltaire, and Paine, having failed in their attacks upon the Bible, they have at any rate so far succeeded that Biblical investigation is now possible without fear of serious penal consequences, when before their struggling a fiery death ended nearly every strife against the Church. They have so far succeeded that science, by their efforts set free from church fetters and restrictions, has discovered, since their success, many new

facts with which to demolish more easily the old creeds. The objections of to-day are not in whole, or even in great part, those of Voltaire and Paine. Geology and chronology have furnished weapons against the Bible which the old Freethinkers never dreamed of being able to use. But not only has Freethought new weapons, we have also had achieved for us a great success in that many of the former defences of superstition no longer avail even in the opinion of the most bigotedly orthodox. Excommunication is no longer accounted an unanswerable and logical refutation of any argument presented from heretical mouth or pen. To burn a volume in the open market-place by the hands of the common hangman cannot now be accepted as a successful answer to an infidel treatise. The king's attorney-general, and the borough or county gaol, have no longer their orthodox eloquence with which to persuade the unbeliever. From Vanini to Carlile, from faggot to dungeon, the attacks of infidelity on superstition have become more and more successful. The Church can no longer put heretics to death, although the stain of legal persecution still adheres to her robe. Penalties for opinion still exist by law, but even in her own Ecclesiastical Courts the Church finds it difficult to override the stubborn judgment of outside public opinion. Now it is only an almost obsolete statute which forbids disbelief, and in the next generation that barrier even will be swept from the path of free discussion.

The reader will find frequent references made to Bellamy's New Translation of Genesis. Bellamy was a painstaking, honest man, and good Hebraist, but his desire to free the text of the Bible from the imputation of containing objectionable passages often leads him to strain for an interpretation not warranted by the Hebrew. Kalisch's Commentary—a far superior and much less partial book, is also in constant use in these pages. His volume contains one of the most admirable collections of criticisms on Genesis ever presented to the English reader. It utters far more heresy than Colenso has yet ventured to put forward against Genesis. The author does not profess to reject the Bible as a divinely inspired book, but as he admits that it is irreconcilably contradicted by science, and confesses that in more than one place its own self-opposing statements cannot be explained away, it is evident that Kalisch's views on inspiration are not of a very orthodox order. Colenso's volumes, repeatedly quoted here, are valuable as coming from a Church of England

bishop, but the various criticisms on Genesis are scattered through the four parts, and do not, except in one part, follow in any order of chapter and verse, nor does the Bishop appear to be much acquainted with the English school of writers against the Bible. Questiones Mosaicæ, by Osmond de Beauvoir Priaulx, containing a comparison of the ideas traced in the first twenty-five chapters of Genesis with the Hindoo, Chinese, Grecian, and Egyptian myths, is specially useful as a guide to the general reader wishing to trace out coincidences of myth; it is written by a very plain-speaking man, who disclaims connection with either the orthodox or heterodox commentators, but who does not hesitate to occasionally judge very severely the morality of the narratives he examines. A very earnest and straightforward analysis of the Pentateuch, specially intended for the working classes, has recently been issued by a writer adopting the name of Presbyter Anglicanus. It is well deserving the attention of the Freethinking student. The writer has evidently been at considerable pains to place a reliable handbook in the reach of those whom he addresses. I am indebted to one of the noble band driven into exile by France's imperial degradation, for the use of Cahen's admirable French translation of the Bible, a work which ought to be in the library of every critical reader. In all references to the Hebrew I refer to it without points, believing the latter to have been added at a comparatively modern period, and to have often entirely varied the meaning of the word to which they were added. The present commentary might have occupied much greater space, its details being susceptible of considerable amplification; but my plan of criticism has necessarily been subordinate to the exigencies of business life—a few hours occasionally morning or evening being all I have been able to devote to study or writing, and this will account for many points in Genesis which, though open to similar objections to those here raised, have yet been passed without notice. So far as I have gone I believe my examination to have been thorough, and the refutation of Biblical infallibility to be complete; should any orthodox opponent think otherwise, I shall be ready to supplement the list of objections if any considerable portion of the discrepancies and flaws here noticed are got rid of by any plausible argument.

C. Bradlaugh.

Tottenham.

GENESIS:

ITS AUTHORSHIP AND AUTHENTICITY.

The book of Genesis, as the first book of the Pentateuch, is at the present time the subject of sharp discussion, the general public finding a special interest in the controversy in consequence of the comments of the public press on the recent publications by Dr. Colenso on the one side, and those of Dr. Cumming, Dr. Alexander McCaul, &c., on the other; and although it is probably almost impossible to present any new features to the reader on the general question of the genuineness and authenticity of Genesis, in addition to the criticisms of the last few centuries, yet I hope to include in the following comments, and in order of chapter and verse, the principal points which have been debated by the objectors to, and defenders of, this first book of the Bible, and trust in this to be useful in guiding the working class reader to information not generally accessible to him. The name "Genesis" is a Greek prefix put into English letters, and means creation, formation, production, origin, or growth. In the Hebrew the book has no title whatever beyond its first word (BeRAShITH)* בראשית, *in the beginning*, which is written in characters rather larger than those which follow. The words, "the first book of Moses," found in the authorised version, are without any authority whatever in the Hebrew text, and are unfounded in fact. Spinoza, a Jew of great learning,

---

* Throughout this commentary capital letters will answer for the actual Hebrew letters, while the small letters respond to the intercalated vowels.

who wrote in Holland about the middle of the 17th century, considered it "as clear as the noon-day light" that Moses was not the author of any part of the Pentateuch; and urges that nothing is known as to when, where, or by whom the book of Genesis was penned, or by whom it was preserved.* He declares that many blemishes have crept into the Hebrew text itself, and that even the most ancient Jewish writers have animadverted on various doubtful readings and on several imperfect and truncated passages. He also urges that our Hebrew canon rests upon the decision of the Pharisees of the second Temple, who, on grounds to us unknown, selected the books we have from amongst a great number, and that their decision was far from unanimous: one book (Ezekiel) becoming the word of God, through the support given to it by Neghunja, the son of Hiskias; and another (Ecclesiastes) narrowly escaping suppression, because objected to by certain learned persons referred to in the Talmud, by Rabbi Jehuda, surnamed Rabi. (Tractatus Sabbathi, cap. 2, fol. 30, p. 2.) These persons, he says, also desired to suppress the book of Proverbs.

It is surprising, in the face of the researches of the most erudite Biblicists, that men, such as Dr. Baylee, the head of St. Aidan's College, at Birkenhead, and Dr. Miller, of Birmingham, should maintain that the original Hebrew text of God's revelation to mankind has been preserved by the Jewish Rabbis uncorrupted and without the loss or variation of a single letter or word. And why do they speak of the original Hebrew in which Moses wrote? It can hardly be pretended that the Deity selected the Hebrew for its flexibility and capacity for expressing his meaning. On the contrary, the Greek far excels the Hebrew as a written tongue. Nor is the Hebrew the most ancient written language. The construction of the various Hebrew Roots affords reason to the contrary, and it is absolutely certain that the whole of the vowel points (which in many cases entirely change the meaning of the text) are of comparatively modern date, say from the second to the fifth century of the present era—probably not earlier than A.D. 450. The

* Tractatus Theologico-Politicus, caps. 7, 8, and 9.

present square letter form of Hebrew, and the twenty-two letter alphabet, are also of limited antiquity. The Hebrew Scriptures are neither the most ancient nor the most perfect of Scriptures. That the Hebrew text of Genesis has been corrupted there can be but little doubt, and that the authorised translation is imperfect is still more certain. Luke Burke, the able Editor of the *Future*, referring to the comparative merits of the Samaritan, Hebrew, and Septuagint versions, says—"The Jew naturally prefers the reading which exists in his own version, the Samaritan contends for the superiority of his copy, and the generality of Christians prefer of course the Septuagint. Each party accuses the other of wilful corruption of the text, and some at least of these accusations must be true."* Dr. Wall, Vice-Provost of Trinity College, Dublin, speaks of the "blemishes in the existing condition of the Hebrew text," some of which he attributes to fraud, and others to gross ignorance;† and it is declared by competent critics that the Hebrew text, even after the Masoretic correction and purification, was "deficient, imperfect, interpolated, and full of errors."‡ Before the Christian era there were no divisions between words of the Hebrew text, and the five final letters were not invented; and from then till A.D. 1000 the texts of the various codices were in a most corrupt and unreliable state, and even of these we have not a single M.S. extant in the present day. The English translation (authorised version) is wretchedly imperfect. Errors abound in it, and some of them of a most laughable description. On this account great calls have been made for a new translation, and also for a new edition of the Hebrew; but neither a new translation nor a new Hebrew text will remove the bulk of the difficulties. Science has rendered the objections to the narrative insurmountable, and a pseudo-revelation must succumb to fact-supported reason.

Remembering how often I have been twitted, and probably with justice, on my want of knowledge of the Hebrew

---

* Ethnological Journal, p. 19.
† Grounds for Revision of the Hebrew Bible, pp. 102 and 545.
‡ Types of Mankind, pp. 621 and 627

tongue, by those who profess to have had a better education than myself, and seeing that in the answers to Bishop Colenso, his opponents denounce him as ignorant of Hebrew (as was also the case half a century since, when the pigmy D'Oyley, set up his pretensions as an orthodox philologist against the giant erudition of the heretical Sir William Drummond), I have some pleasure in laying before my readers the following selection from a great Hebrew writer:*—"The first great 'difficulty,'" he says, "connected with our method arises from the consummate knowledge of the Hebrew tongue which its due application implies. But whence is this now to be obtained? The ancient masters of the Hebrew tongue have left nothing to posterity on the elements and principles of the language; we, at all events, have little or nothing of theirs—no dictionary, no grammar, no syntax. The Hebrew nation has lost all that it ever had of the elegancies and ornaments of life (nor is this wonderful after such long ages of depression, disaster, and persecution), and has preserved nothing but a few fragments of its language and its literature. Then the meaning of many nouns and verbs which are met with in the Bible, is either wholly unknown or is a subject of dispute. With all this when we apply ourselves to study the syntax of this language, a matter of so much moment, and seek to discover the idioms and modes of expression peculiar to the Hebrew people, we find that time, the consumer, has blotted them almost all from the memory of man. We shall, therefore, not be able, as we would wish, to determine the precise meaning of every passage which the common uses of the language would permit, and we shall come upon many sentences which, although expressed in words extremely well known, are nevertheless of meaning most obscure, and are sometimes incomprehensible. To these difficulties must be added those which arise from the constitution and nature of the language itself, which occasion so many ambiguities that it is impossible to find such a method as shall assuredly teach us how to investigate the true sense of all the ex-

* Spinoza: Tractatus Theologico-Politicus, p. 154, Latin Edition, cap. 7, sec. 44.

pressions of scripture." After pointing out that doubt and obscurity result from the use of one letter in lieu of another, from the various meanings attaching to conjunctions and adverbs, and from the imperfections of the verb, Spinoza adds—"Besides the three causes of obscurity now noted in the Hebrew language, there yet remain to be mentioned two others, each of much more moment than all the rest. The first of these is that the Hebrew has no vowels; the second that it is without spaces between the words and sentences, and has no accents to indicate the proper pronunciation; and although these two deficiencies—viz., the vowels and signs of accentuation, are wont to be supplied by points, it is impossible that we should acquiesce in the sufficiency of these, inasmuch as they are the invention and resource of men of these later times, whose authority can have no weight with us. The ancient Hebrews wrote without points (*i.e.*, without vowels and accents), as appears from the most ample testimony. The moderns supplied vowel-points and accents, as it seemed good to them that the Bible should be interpreted; wherefore they are to be regarded as mere interpretations of yesterday, and deserve no greater faith, as they have no higher authority, than the lucubrations of ordinary commentators."* Gesenius admits that the ancient translators of the Hebrew, "evidently so often translated by conjecture only."†

In the following comments I shall seek to show that in its narrative the book of Genesis is inaccurate, contradicted by other books of the Bible, and is even self-contradictory; that its chronological statements are incorrect; that its teachings on ethnology, geology, and astronomy are in opposition to the revelations of science; and that its views of morality are not such as would aid in promoting general happiness if universally entertained.

Eighty years ago Sir William Jones declared that "either the first eleven chapters of Genesis are true, or the whole fabric of our national religion is false."‡ This conclusion

* Tractatus, p. 156.
† Hebrew Lexicon, by Leo, p. 17.
‡ Asiatic Researches, vol I, p 225.

is the simple truth, and is confirmed by the critical researches of the last half century. If the authenticity and divine origin of the Pentateuch can be successfully questioned, the whole theology based upon it must fall with it. In the first eleven chapters of Genesis are contained statements upon which rest the so-called "vital truths of Christianity." The Rev. Alexander McCaul, in his reply to Colenso, feels this, and urges that "the Pentateuch possesses the testimony of the Saviour's omniscience," that it "has the testimony of the Son of God and his inspired Apostles," and that "our Lord and his Apostles taught that the Pentateuch was given by Moses, and that he was the penman."* In these statements Dr. McCaul exaggerates the real extent of New Testament corroboration, whatever that may be worth; but no one can doubt that a Christian will cling to every possible support for Genesis, as the Saviour and Redeemer will be the object of little faith if the narrative of the Fall be disbelieved (without which fall the salvation and redemption would have been unnecessary).

I shall now take each chapter and verse in its Biblical order, and though this may not appear the most agreeable course, I hope that it will prove the most useful. In doing this I am much indebted to the recent work by Dr. Kalisch,† and only regret that the reasonings of that able author appear to be very often in opposition to his facts. Chap. i. v. i. "In the beginning." According to Bellamy,‡ Grotius rendered the word בראשית Berashith, *when first;* Simeon, *before;* the Jerusalem Targum, *in wisdom;*§ Tertullian, *in power;* Philo, Rabbi Bechai, and Castalio, *in order, before all;* Maimonides, who avowedly stretched interpretations to fit any hypothesis he might choose to sustain, *with matter.* Some to whom the Hindoo mythology was familiar, have rendered this verse "By the first was created the Gods, the heavens, and the earth." In the Hindoo faith we are taught that the great Bram created the inferior Gods, the heavens, and the

§ The Jerusalem Targum substitutes בחוכמא for the Berashith.

earth. Were the אלהים (ALEIM) inferior Gods in the mind of the compiler of the Hebrew Records? M. Priaulx,* in commenting on this first verse, says—"In the beginning of what? Not of the universe certainly, for the universe yet was not; and not of God's existence, for God's existence is infinite and eternal." The Theism of the writer of the first verse of Genesis was of no exalted order. He had determined to tell a creation story, and probably repeated in writing the tradition which had passed from sire to son, orally transmitted through many generations. That such traditions existed long prior to the Jews themselves, and certainly anterior to Moses, few can doubt who have carefully examined the Egyptian, Hindoo, and Grecian mythologies, and have endeavoured to trace their origin, especially if they happen to hold with Sir W. Jones, that a connection subsisted between the old nations of Egypt, India, Greece, and Italy long prior to Moses.† The author of the first verse of Genesis rendered the tradition into definite words without staying to notice, or perhaps lacking the mental power, to consider the logical consequences of his words. If "in the beginning" does not imply the beginning of God or of the universe, it must mean in the beginning of creation. But this would imply that God, eternal, immutable, had existed without creating and changing, then without cause had commenced to create. But if God alone existed prior to creation and at any time existed without creating, he, there being nothing but himself to affect or influence him, would still have existed without creating—that is, there would have been no creation.

The first and second verses of Genesis, which Dr. Kalisch‡ says must not be separated, are very obscure. "In the beginning God created the heaven and the earth, and the earth was without form and void, and darkness was upon the face of the deep." Is this second verse a recital of the state of the earth prior to or after creation? Prior to creation seems to be the proper response; that is, that the writer of this

‡ Historical and Critical Commentary on Genesis, p. 55.

part of Genesis having no conception of "creation" other than "formation," and holding the doctrine supported as Dr. John Pye Smith thinks in the apocryphal book of Wisdom, c. ii. v. 17, tells you what was the state of things before the work of creation commenced. That this is so is clear from the fact that while it says, "In the beginning God created the heaven and the earth," actually the heaven is not created (*vide* v. 8) until the second day. The old philosopher said "ex nihilo nihil fit." Sir W. Hamilton observes that "to create is not to make something out of nothing, for this is contradictory, but to originate from self;"* yet the orthodox doctrine of to-day is that Genesis teaches that God created the world out of nothing. Which shall we take, orthodoxy or philosophy? The Rev. Dr. John Pye Smith remarks that "the mere etymological argument from בראּ or any other scripture words, is fallacious and utterly unnecessary: since those words may be applied to ordering, disposing, or bringing into a new state or condition. The primary meaning of בראּ (BeRA) is "*to hew out.*"† Bellamy translates the word את (ATh) substance, making verse i. read, "In the beginning God created the substance of the heaven, and the substance of the earth," and thus to some extent avoiding a portion of the objection, which naturally arises with reference to the use of pre-existent material. Speaking of the word (ATh) he says, "Some translators have thought it to be a mark of the accusative case simply, after an active verb; but if so, there must be a repetition of the article *the;* as the following word שמים *shaamayim, heaven,* has the emphatic prefix ה *ha, the;* by which it is to be translated, *the heaven.* I say if this word *eth,* comprehends no more than simply the accusative, there must either be a repetition of the article *the,* and so את השמים *eth hashamayim,* must be translated *the, the heaven;* or the word *eeth,* must be passed over without being translated, as it is in the translations. But if this word be translated, it will add consistency to the narrative, and remove an old objection. It is said, that the historian contradicts himself, as

* Philosophy of the Unconditioned, p. 8.
† First Lines of Christian Theology, p. 321.

he says, the heaven and the earth were created and finished, and afterwards, that it *was without form and void, and that darkness was upon the face of the deep, until God said, let there be light.* First, that there was a completion of the whole, both of the heaven and the earth; and then that there was nothing but chaotic darkness, and primæval matter. Certainly the present translations carry this sense; but this has arisen from the rejection of the word *eth.* This word is composed of the first and last letter of the Alphabet, the א *aleph*, and ת *thau;* which have the same meaning as the Greek α *alpha:* and ω *omega*; the *arche kai telos, the first and the last,* in one mass, comprehending in itself all the principles necessary for the production of all things. Briefly, it signifies the very SUBSTANCE of the thing spoken of; the קרב *karab, inmost,* generative properties, as well as the visible matter; agreeably to the Syriac, the *esse cœli et esse terra.*"* Dr. Kalisch, who seems by his phraseology to refer to the above quoted argument from Bellamy, utterly denies that the word את is anything more than the sign of the accusative. When learned men thus differ on a word which changes the entire sense of the passage, how are the uneducated multitude to submit to threats of penalties here and pain hereafter because of their unbelief, when in fact they are unable to believe that both disputants are right, and are also unable to believe in one in preference to the other?

The Rev. Dr. Macdonald† discusses from a somewhat orthodox stand-point the question whether verse 1 should be taken as a title to, or read as part of, the history of creation; and that writer inclines to the latter opinion, as he thinks the former view would favour the ancient notions of eternal chaos; but the latter opinion is equally objectionable, for if verse 1 be regarded as anything more than a title, you have heaven created in verse 1, and yet not created until verses 6 to 8; you have the earth in verse 1, and yet the dry land not called earth until verse 10. Dr. John Pye Smith affirms—"That the proper and primary act of creation, is the causing of being when there was no cause,

* New Translation, p. 4.
† Creation and Fall, p. 245.

material means, or existing thing whatever except the Deity." The learned doctor's proposition is logically absurd, and on the face of it impossible, although it contains the ordinary orthodox teaching. He states that the adverse notion appeared in two forms—1. That the whole sensible universe, and every part of it, is an emanation from Deity of cœval eternity and necessity. The very ancient Oriental doctrine, the foundation of Buddhism, dominant in Thibet, many parts of Tartary, the Burman Empire, and Ceylon. 2. The belief of a necessarily existing matter altogether distinct from God.* These two opinions will easily be traced in several portions of the Hebrew text, but are also as illogical as the first.

Verse 2—"And the earth was without form and void." Bellamy renders this—"Now the earth was without form, even a waste." Kalisch—"And the earth was dreariness and emptiness." Bellamy's translation is not forcible enough, the word בהו (BEU) should be rendered *void* or *vacuum*. The writer's meaning in the verse is not very clear, because that which is empty within and has no form without, is a very unsubstantial result of creation; and it will at once overturn all orthodox notions, if creation be understood as the formation of the pre-existing chaotic mass. "And darkness was upon the face of the deep." There is yet no light, darkness prevails, and the creation of light is not recorded until verse 3; so that either the Creator had existed prior to this period† without light, a most extraordinary, or, as Kalisch calls it, "ludicrous" supposition, or the believer must imagine that the Unchangeable had more than once varied the conditions of his existence. Kalisch urges that improprieties are involved in these queries; surely the greater impropriety consists in the demand of unquestioning belief in the opposite views. "The spirit of God moved upon the face of the waters." Kalisch has it "hovered over." The word רוח (RUaCH) here translated *spirit* is

* First Lines of Christian Theology, p. 321.

† And this is the Rev. Dr. Macdonald's opinion, for he says—"This is not the darkness which was afterwards so far subdued and bounded by the light as to be called night, but the primeval darkness into which no ray of light had ever penetrated."

rendered *wind* by Aben Ezra, Onkelos, Philo, and others; *air* by Nachmanides; *mist* by Johannsen. In Genesis iii. 8, the same word, Ruach, is translated "cool." לרוח היום (LeRUaCh EIOM) being rendered in our authorised version as "the cool of the day," or, as Parkhurst renders it, "*the morning breeze.*" In Ecclesiastes iii. 19, the same word is in the authorised version translated *breath.* The primary meaning of the word Ruach, according to Parkhurst, is that of the *air in motion as in the act of breathing,* Gesenius and other Hebraists agree in this. Macdonald says—"To take רוח אלהים (RUaCh ALEIM) for a *strong wind,* as is done by Dathe Vater and Schinmann, after Onkelos, Saadias, Aben Ezra, and other Jewish expositors, is an interpretation of which Calvin well remarks, 'Adeo frigidum est ut refutatione nulla indigeat.' The Hebrew can be undoubtedly rendered *wind* as well as *spirit;* but how can it signify wind before the atmosphere was created?"* How does this reverend writer know when the atmosphere was created, unless he has some special revelation enabling him to fix the epoch? There is not the slightest record, so far as I am aware, in Genesis enabling the reader to fix the time of the creation of the atmosphere, so that this objection to the word Ruach, meaning *wind,* is, to adopt the very words of Calvin, "so silly as not to require refutation." The words translated "Spirit of God," are Ruach Aleim, the word rendered God being the word אלהים (ALEIM). The meaning of this word Aleim is not easy to arrive at. Macdonald says the etymology is involved in much obscurity. It is probably a plural noun, but the derivation is a question for dispute. Some derive it from אלה (ALE) *to curse,* which would make Aleim, *the cursers,*† an appropriate rendering, if the eternal damnation of unbelievers and disbelievers to brimstone flames so glibly preached by too many of the revivalist school had indeed any reality. Others derive it from אל (AL). This word Al is by the Septuagint translated on one occasion *Ourana, heaven,* and in the Phœnician worship the Sun was called

* Creation and Fall, p. 249.

† Newman's Lexicon, vol. 1, p. 27—Parkhurst, p. 19.

Al or Hel.* It is curious that the same word Al in the Hebrew stands for *oak*, and that in the Druidic worship entirely of Tsabaistic origin the oak was most sacred. Doubtless all the mythologies of the world have more or less a Tsabaistic source, most certainly Judaism derives some of its early pseudo history from astrologic myths. The use of this word Aleim alone in one part, and in another the word יהוה (YEUE) coupled with it or used separately, has enabled some of our Biblicists to distinguish in the Book of Genesis at least two narratives from different pens, which they entitle the Elohim document and the Jehovah document. The German writers have most exhaustively dealt with the document theory. Luke Burke argues that "the first ten chapters of the Book of Genesis are composed throughout of at least three principal documents, so elaborately interwoven as to constitute one continuous and tolerably consistent narrative. It is highly probable," he says, "that the actual number of documents in these ten chapters is five, but the existence of three will be shown to be incontestible."†

Dr. Colenso says—"It will be seen hereafter, when we proceed to examine critically the whole Book of Genesis, that throughout the book the two different hands, which we have already detected, are distinctly visible; and the recognition of this fact will explain at once a number of strange and otherwise unaccountable contradictions. One of these two writers, it will be found, is distinguished by the *constant* use of the word Elohim, the other by the intermixture with it of the name Jehovah, which two words appear as God and LORD (not 'Lord,' אדני *Adonai*), in our English translation. Sometimes the latter writer uses *only* Jehovah for considerable intervals, as the other uses only Elohim: thus, in chapter i. verse 1, to chapter ii. verse 3, we have only Elohim thirty-five times; in chapter xxiv. only Jehovah nineteen times. Can any one believe that these two passages were written by one and the same writer?"

* Parkhurst's Lexicon, p. 15.
† Ethnological Journal, p. 202.
‡ Part II., p. 175, the Pentateuch, &c.

Macdonald* remarks that the interchange of the divine names in the Pentateuch was taken notice of at an early period. Among the Christian fathers. Tertullian, Chrysostom, and Augustine, offered explanations. In the first sections of Genesis the change is not between Elohim (or Aleim) and Jehovah (or Yeue), but between Elohim, which is used constantly and exclusively in the first section, and the compound form Jehovah-Elohim, which appears in the second, with only three exceptions, where in the mouth of the serpent and of the woman it is Elohim.

Verse 3 records the creation of light, and it has been fairly objected that the creation of light on the first day, and before the sun, which was not created until the fourth day, is a point of difficulty, and some orthodox commentators have adopted the most absurd theories to meet this objection. Kalisch suggests "that on the first day the luminous matter was created, spreading through infinite space in its rarified state; but that on the fourth day it was condensed into the light-giving bodies." This is in contradiction to the Bible narrative, which clearly does not regard light as infinite, but speaks of division of light from darkness; neither does it remove the difficulty. The solar system cannot be imagined to exist short of its central sun, much less can our earth, one of a dependent series, be conceived as existing independently. Our solar system consists of various sized bodies revolving around the huge central sun, all the planets of this system moving nearly in one plane, corresponding with the centre of the sun's body, and in one direction—namely, from west to east. There is also in the solar system a progressive increase of bulk and diminution of density from the planet Mercury to Mars, while from Jupiter to Neptune the reverse is the case.† This should mark the sun as primal in order, and give to the earth at least a tertiary place, while in the Genesaic story the earth is before the sun. To imagine the earth without the sun would be to picture it under inconceivable conditions. Evening and morning, day and night, are spoken of in this verse.

* Creation and Fall, p. 28.

† Vestiges of Creation, p. 10; Kalisch, Genesis, p. 17.

The terms "evening," "morning," "day," "night," now express clear ideas, but take away the sun entirely, how do you have any rational conception of meaning for either morning, day, evening, or night? The notions of appearance to us of the sun above the horizon, and its disappearance from us below the horizon, are involved in the use of these words, which otherwise are inconceivable.* The third verse begins with "and *Aleim* said," that is "spoke," but speaking implies the possession by the speaker of the organs of speech, tongue, larynx, &c. (as the phrase "God saw" will involve "eye," optic nerve, &c., in the God seeing.) And to whom did *God* speak? Was it to "one of us" mentioned in verse 22? It is from such phrases Parkhurst demonstrates, to his own satisfaction, the orthodox doctrine of the trinity. To the less orthodox reader such expressions will rather serve to demonstrate the polytheistic views of the writer of the Elohim document, as well as the anthropotheism which pervades the Hebrew scriptures. In verse 6, God divides the waters by a firmament רקיע ReQIO (expanse.) This was to have waters above and waters beneath it, and the stars were afterwards fixed in it. Where is now this firmament? If it means the atmosphere, there is no water above it, the clouds float in it, and the stars are not in it. Kalisch says, this firmament is the expanse of heaven, that is, including the stars—*i.e.*, the central suns of many astral and solar systems. But what waters are divided above and beneath this expanse, which is, according to such an explanation, itself the universe? He says, "The earth, illumined by all-pervading light, was freed from the encumbering mass of water; an adequate portion was congregated in immeasurable distance above it, beyond a solid expanse, intended to mark this eternal division."† This explanation is entirely unjustified by science, and this "solid expanse" dividing earth from the waters, exists only in the fertile brain of the commentator. M. Priaulx points out the full absurdity of the text when he says, "the expanse not merely divides, but sustains the waters, and when rain is about to be poured down upon the earth, the windows

* Questiones Mosaicæ, pp. 13, 14.
† Genesis, &c., p. 69.

or floodgates of heaven are said to be opened."* The doctrine of a local heaven above the earth, and used as the general abiding place of Deity, from whence at various periods he descended to the earth, is supported by the general tenor of Genesis, yet I doubt whether even any thoughtful Theist would entertain an opinion so opposed to the infinity of God. The early chapters of Genesis profess to relate the creation and fall of man, but incongruities and contradictions exist, demonstrating either that the Book is not reliable, or that, instead of being an account of one creation, the chapters in fact contain two distinct accounts of separate creations. The first probably written by one who knew nothing about the garden of Eden, or the Fall, or of Cain or Abel, and whose account breaks off at verse 3 of chapter ii., and recommences with verse 1 of chapter vi.

The two distinct narratives are easily traced, and the English reader may find this done for him by Luke Burke, who prints the selected portions in order.† He makes the Elohim document begin with Genesis i. 1, and go to ii. 3 inclusive, then omitting all until verse 1 of chapter vi., recommences and continues with some omissions which deserve the attention of the reader as showing a duplicate narrative of the flood as well as a double account of the creation. These will be dealt with in their proper place in this commentary. The orthodox deny that there are two accounts of the creation in the two first chapters, and allege that "in no sense can these chapters be viewed as distinct narratives of creation. The first, they say, is a narrative of creation in all its parts, order, and proportions, but sketched only in outline; while the second is a filling up of one of the compartments of this grand picture;"‡ that is, they allege that the fourth and following verses of the second chapter are really only a continuation and amplification of the relation contained in the first chapter. The truth of this declaration will be best tested by ascertaining whether there is such an agreement between the two chapters in the treatment of similar subjects as (allowing for the

---

* Questiones Mosaicæ, p. 16.
† Ethnological Journal, 1848, p. 205.
‡ Macdonald: Creation and Fall, p. 39.

second account being more ample and extended) will determine if the narrative in the second chapter is really an amplified continuation of the first. Some allege that only the first chapter gives the order of time, and that the second gives the order of importance.

Dr. Kalisch makes no such futile pretensions, but when he arrives at the end of the third verse of the second chapter says, "A languid repetition appears to follow, another cosmogony is introduced, which, to complete the perplexity, is in many important features in direct contradiction with the first. It would be dishonest to conceal these difficulties, it would be weak-mindedness and cowardice; it would be flight instead of combat; it would be ignoble retreat instead of victory: we confess there is an apparent dissonance." The dissonance is not only apparent, it is real and irremovable, as I shall seek to show in the following remarks. Assuming the second narration to commence chapter ii. verse 4, it may easily be divided into three sections—1st. from verse 4 to verse 9 inclusive, containing an account of the creation of the heavens, earth, and dormant plants, of irrigation by mist, and, in conjunction therewith, the creation of man; this section also contains the announcement that the Lord God had formed a garden eastward in Eden, and planted it with every tree pleasant to sight and good for food, and the trees of life and knowledge of good and evil; and had placed man therein; 2nd, from verse 10 to verse 17, contains a geographical description of the garden, also a repetition of the announcement that the man was placed in the garden with the additional information that he was placed there to dress and keep it; 3rd, from verse 18 to end of chapter, includes the declaration that the Lord God will make a helpmeet for man, the creation and naming of the animals, and the manufacture of woman from the rib of the man.

As the separate subjects of these sections are distinct and easily distinguishable, we shall proceed to place them in comparison with similar subjects in the first chapter. With regard to the creation of light, the division of day and night, the creation of the firmament, the sun, moon, and stars, as narrated in the first chapter, they find so meagre

a parallel in the second, as to leave no room for useful comparison, although so far as these subjects are concerned, the second chapter in no respect amplifies or extends the narrative, but on the contrary, renders it more limited.

The creation of plants affords more scope for examination and is thus described in chapter i., verses 11, 12: according to which the earth brought forth grass, herbs, and fruit trees, growing and yielding fruit and seed *before* the creation of man; while we are informed in the second chapter that God made the dormant plants, but that they were not put in the earth, and had not grown, or, as Kalisch translates it, "sprouted forth," because there had not been any rain, and there was no man to till the ground; and the creation of man precedes the narrative of the commencement of vegetation. According to chapter ii. verse 5, the earth was dry and unbroken, therefore unfit to receive the dormant germs of the plants. In order to remove this disability, God first moistened the earth by a mist, then created man to cultivate it. The stated preliminary obstacles to vegetation are removed, and the requirements are supplied —*i. e.*, water to irrigate and man to till. This being accomplished, a garden is planted, and man is placed in it to tend it; after which, the usual course of vegetation proceeds.

There is in this a grave dissonance. In the first chapter, at the command of God the earth brings forth grass, herbs, and trees, yielding seed and bearing fruit, without mention of pre-requisite conditions or obstacles; but in the second chapter vegetation cannot take place until the soil has been watered and tilled. In the first chapter the entire flora was created, grew, brought forth seed, and yielded fruit, *prior* to the creation of man; growing plants are created on the third day, man on the sixth; while in the second chapter the plants do not commence to grow until *after* the creation of man, who would thus be in existence on or before the third day. The comparison, as far as yet attempted, has elicited so striking an instance of incongruity as would of itself be sufficient to demonstrate that the account in the second chapter is not in harmony with that of the first. If the account in chapter ii. does not agree with the previous chapter, then we must admit either that the two accounts

relate to different original creations (which would be manifestly absurd), or that one of the chapters, or both of them, are false.

There seems ground for asserting that these chapters are the productions of different countries, and that the climatic conditions associated with, and influencing, the writer of chapter i., were extremely different from those affecting the writer of chapter ii. The author of the first chapter seems to have been perplexed by a quantity of superfluous water. Water covered the whole of the earth; and after having got rid of a portion of this water by placing it above the firmament, the remainder is collected into seas, leaving the dry land to appear. The author of the second chapter, on the contrary, is at first deficient of water. The earth is for him too dry for vegetation, and he waters it with a mist.

We proceed to compare the account of the creation of animals, which is set forth more fully.

In default of any professed consecutive order in the second chapter's narrative of creation, it would be a natural assumption that the gramnivorous animals would not be created before their food, and this is confirmed by the first chapter, where the vegetation is created on the third day, and the animals on the sixth. Man is also created on the sixth day after the animals, but, as according to the second chapter, man assisted in bringing forth vegetation, he must have been created before the plants and likewise before the animals. That is to say, in the second chapter man is produced at an early period of creation and *prior* to the animals, while in the first chapter man is created *after* the animals, and is, in fact, the last object created. These contradictions clearly prove that the two chapters cannot possibly be accounts by the same author of one and the same creation.

The same distinction is observable as to the material used in the production of animals.

In chapter i. verse 20, we are told that the moving creatures and the fowls of the air were produced from the waters; but in chapter ii. verse 19, it is stated that they were formed out of the ground.

The difference of time, and the relative priority in the

creation of man and the animals, can be otherwise independently proved by reference to chapter ii. verses 7 and 19, and the 20th and following verses of the first chapter.

In chapter ii. verse 18, it is said, "It is not good for the man to be alone, I will make an helpmeet for him." This evidently alludes to *the* man of verse 7, for the man of the first chapter had his female created with him, and only one act of creation is related, "male and female created he them." After the Deity had announced his intention in the second chapter of creating "an helpmeet" for the man, the narrative relates the creation of animals, and that they were brought to Adam to be named, "but for Adam there was not found an helpmeet for him." The tenor of this second chapter narrative is to place man *before* the animals (and, according to our previous argument, on the third day prior to them) in the order of creation, while in the first chapter, on the contrary, man is created *after* the animals and on the same day with them. In the second chapter man is created alone, and in solitude performed his labours in the garden. No friendly hand to aid him in his toil, he is emphatically declared to have been *alone*. "It is not good that man should be alone, I will make an helpmeet for him." It is perfectly clear that this act of making the helpmeet for man took place after the beast of the field and the fowl of the air had passed before Adam to be named, and there is, therefore, no alternative but to assign the end of the creation as the period when the Lord "made a woman and brought her to man." Thus the man of the second chapter (who was fabricated from the dust of the ground before the plants grew, which was, according to chapter one, on the third day of creation) is proven to have been in existence on the third day previous to the making of his female; while the man of the first chapter has his female created simultaneously with him. The same may be said of the females. One female has her male created simultaneously with her, while the creation of birds and beasts interposes between that of the man and woman of the second chapter. Hence neither the male nor female of one chapter can be understood to be that of the other—they are two distinct pairs.

Again, in the dedication of food to mankind, the palpable incongruity of statement thrusts itself upon our attention. In chapter i. verse 29, God said, "Behold I have given you every herb bearing seed which is upon the face of all the earth, and every tree in which there is the fruit of a tree yielding seed, to you it shall be given for meat." Here is a gift without reservation of every herb bearing seed, and every tree bearing fruit, which is upon the face of the earth. The terms are clear and distinct, "to you it shall be for meat;" there is no exception. Yet in chapter ii. verse 17, are the words, "But of the tree of the knowledge of good and evil, thou shalt not eat." Nay, more, by chapter iii. verse 22, it is evident that the "tree of life" was not intended for meat for man.

The discordance in this case is not limited to the mere exception of a particular tree from the gift to man, but, in fact, extends throughout the whole of the Scriptures, as upon the truth or falsity of the exception of the tree of knowledge of good and evil hangs the whole of the Christian religion. If no exception were made, then no command was broken, no sin committed, no curse merited; there was no fall, and, therefore, no necessity for a redemption or Redeemer.

M. Priaulx* in his examination makes reference to the Heathen mythologies as suggesting possible sources for some of the traditions; he also quotes Michaelis, De Wette, and other authors, whose criticisms may guide the unlearned reader. To illustrate the points of discord, the following epitome of the two accounts is presented to the reader:—

First.	Second.
Water abundant.	Water deficient.
Vegetation proceeds at God's fiat.	Vegetation is dependent on moisture and agricultural labours.
Plants grow in the earth before man's creation.	Plants cannot grow in the earth until man has tilled the ground.

* Questiones, pp. 6 to 83.

Fowls made out of the water.	Fowls made out of the ground.
Animals created before man.	Man created before animals.
Man and woman created same day.	Man created first, then an interval for creation and naming animals, then woman made.
Man made to have dominion over the earth.	Man made only to dress the Garden of Eden.
Every fruit given to man for food.	One kind forbidden and another withheld.
Concludes with blessing.	Concludes with cursing.

Is it not justifiable to say, in the words of Kalisch, "those differences are too obvious to be overlooked or denied?"

Some time has elapsed since even the most pious amongst educated men argued that the universe was created out of nothing no longer than 6,000 years ago; but it is not yet very far distant from the day when all the orthodox preachers of theology, and ordained misrepresenters of the declarations of science, united in declaring that the Bible taught that man had only existed on the earth 6,000 years; and pious geologists then proved, at any rate to their own satisfaction, that the world's strata and the Hebrew Records bore like testimony to the modern origin of the human family. There are few men of superior attainments as philologists, ethnologists, geologists, or archæologists who still entertain this doctrine, which is conserved specially by those persons in whom the maximum of faith is accompanied by the minimum of knowledge. There are ignorant frequenters of Little Bethels, some of whom even yet limit the age of the world to the Bible period—this class diminishes as schools multiply. Many who feel the strain on their faith resulting from the discoveries of the last thirty years, declare that the Bible does not limit man's existence to 6,000 years, and are of opinion that the Genesaic record leaves him a much longer term of mundane existence. This opinion is an erroneous one, and its refu-

tation will be apparent on a careful examination of the text. Fortunately an arithmetical test may be applied, and a result arrived at in reference to the Hebrew Chronology which, if not precise, shall be sufficiently exact to determine the controversy to an unprejudiced reader.

It cannot be denied that a grave difficulty meets us at the outset of an examination of the chronology of Genesis —viz., that the figures given in the Hebrew, Samaritan, and Septuagint versions are not respectively to the same effect, the differences amounting to several centuries. This clashing of the chronologies of the various versions sorely militates against the reliability of the whole. But the Genesaic Chronology is not only unreliable from its contradictions in the various versions, but is impeachable from the physiological and archæological points of view. The enormous longevity of the patriarchs has been attacked by Luke Burke on physiological grounds.* He affirms that "All careful investigation of the facts of natural history will prove that there are determinate relations between the period of puberty and the total duration of life. In birds the multiple is sometimes very high, in fishes still more so; but in the mammalia generally, and especially in man, it will be found that the highest possible duration of life is seven times the age of finished puberty. Few human beings, especially in civilised life, ever reach this period; none, we believe, have ever exceeded it. The age of puberty greatly varies in different races of men, and the natural duration of their lives is longer or shorter accordingly. Now the chronology before us is at utter variance with this great law of nature. Mahalaleel begot Jared at the age of 65, and lived 895 years afterwards, more than thirteen times the period of complete puberty. This is the same as saying that a person whose natural life would extend to 80, 90, or 100 years, might be a man and have children at the age of 6, 7, or 8 years. In the post-diluvian period, we have even a higher multiple than this. Salah begot Eber in his thirtieth year, and yet lived 433 years: more than fourteen times the age at which his son was born. All genuine

* Ethnological Journal, p. 114.

history is entirely opposed to the admission of such extreme longevity. Neither in ancient nor modern times is there one authenticated instance of any human being having reached the age of 200 years, to say nothing of such enormous periods as 969 years." This objection is of tremendous weight, and has nowhere been effectually replied to, so far as I have been able to ascertain. Priaulx* points out that similar exaggerated notions of longevity are to be found in the Egyptian, Chinese, and Hindoo mythologies.

According to the ordinary authorised version of the Bible, not only does man's existence seem to be limited to 6,000 years, but the creation of the world itself very little antedates the scriptural origin of the human race. That is, I affirm—and in this I am supported by the orthodox chronological tables in use at each of the Universities—that the Bible declares man and the universe to have originated about 6,000 years ago. Adam, who was made at farthest on the sixth day of the creation, has, when 130 years old,† a son Seth, to whom at the age of 105 Enos is born,‡ who has when 90, a son Cainan. Mahalaleel, his son, is born when his father is 70,§ and Mahalaleel is 65 at the birth of Jared,‖ who bears Enoch at the ripe age of 162.¶ Methuselah is born when Enoch is 65,** and Lamech when Methuselah was 187.†† This brings us to Noah, who is born when Lamech's age is 182.‡‡ The Deluge took place when Noah was 600,§§ so that from the creation of Adam to the flood would be, according to the authorised version of the Genesaic chronology, 1656 years. There is from this era to the time of Terah a curious diminution in the ages of the patriarchs at the time of the birth of their respective first-borns. Two years after the flood, Arphaxad is born ;‖‖

he has attained 35* at the birth of Salah, who is 30† when Eber is born. Eber begets Peleg at 34,‡ to whom Reu is born at 30.§ Serug is born when Reu‖ is 32, and Nahor when Serug is 30.¶ Terah is born when Nahor is 29,** and Abram when Terah is 70.†† Isaac, the son of the promise, is born when Abraham is exactly a centenarian.‡‡ Isaac was sixty at the birth of Jacob.§§ When Jacob was 130, he went to reside in Egypt,¶¶ making to that date a total from the creation of the world of about 2238 years:* The period of the sojourn in Egypt was, according to Exodus,† 430 years, but was 400 according to Acts‡ and Genesis.§ This period is also calculated at 215 or 210 years‖ by those who have felt themselves embarrassed in the endeavour to explain this portion of the Hebrew Chronology. Reckoning the sojourn of the Jews in Egypt after Jacob's descent at about 215 years, and adding 40 years for the rule of Moses,¶ we are brought to Joshua and the Judges. No exact dates can be fixed for the rule of the Judges, but it will probably not be an unfair estimate to allow between 400 and 500 years from Moses to David, although, according to the chronological tables by Nott and Gliddon,** founded on the genealogies given in Kings, Chronicles, and Josephus, the period varies from about 200 to about 400 years. The shorter the period the stronger the case against the Bible Chronology. Munk says that it is impossible to present any historical tableau of the history of the Shopetim (Judges). The Book of Judges he does not consider historical, but declares that everything in it is recounted without regularity, and events succeed each other without regard to chronological order.†† A more extended or briefer period will be allowed for the rule of these

Israelitish Judges, according to the views of the calculator as to the simultaneous or successive careers of any of the Judges; but no such contraction or extension can materially affect this argument. From David to the Captivity there are 22 reigns, making about 473 years, which are very clearly and distinctly stated, and thence to the supposed nativity of Jesus about 580 years, thus making in all, according to the Bible chronology, about 4000 years from Adam to Jesus. This will give the ordinary orthodox total of a little less than 6,000 years for man's existence on earth, and it is certain that the received version of the Bible teaches this doctrine, and also that the same authority declares that the whole human family find a common parentage in one pair, Adam and Eve. On the other hand there are ethnologists of no mean repute, and geologists of undoubted ability, who respectively affirm that man has existed on the earth for many chiliads prior to the Adamic era. The ethnologists declare that as far as we can trace the human race we detect apparently isolated groups diverse in type, and they deny that there is any evidence to mark one pair as the source of the whole human race; but that on the contrary many centres of origin are probably traceable for each type. I will first offer a few illustrations of the antiquity of the human race, and then discuss its unity of origin. Sir William Jones some years since advanced the strongest arguments in favour of the antiquity of the Airyan races, and later Bunsen fixes one dispersion of the Airyans from Airyana Vaêdjô at 5,000 years before the Christian era.* This calculation presumes centuries of pre-historic existence. Dr. Nott says, speaking of Egypt,† —"Not only the tattered fragments of her history handed down to us by the Hebrews, by Herodotus, Manetho, Eratosthenes, Eusebius, Diodorus, &c.; but her pyramids of 5,000 years, her massy and gorgeous temples, her obleisks, her stone tablets, her sepulchres of the dead, her numerous papyri, and even the mummied skulls of primeval races found in her catacombs, bear witness that Egypt

* Biblical and Physical History of Man, p. 78.
† Origin of Species, p. 18.

was old, populous, and civilized 1,000 years before Abraham;" that is, that Egypt was peopled and ancient amongst peoples long prior to the Bible date of the Deluge. Darwin says that "M. Horner's researches have rendered it in some degree probable that man, sufficiently civilised to have manufactured pottery, existed in the valley of the Nile thirteen or fourteen thousand years ago."* Fragments of manufactured brick have been found in the delta of the Nile, for which an antiquity of 30,000 years has been claimed, but how far the calculations supporting this hypothesis are reliable is a matter in dispute.† Dr. Bennet Dowler claims for a human skeleton discovered in the delta of the Mississippi no less than 57,600 years. His estimate is founded amongst other items on a calculation of the age of the over-lying cypress forests, and is capable, according to Sir Charles Lyell,‡ of investigation under very favourable conditions.

Thomas Henry Huxley says, "Sufficient grounds exist for the assumption that man co-existed with the animals found in the *diluvium*, and many a barbarous race may, before all historical time, have disappeared together with the animals of the ancient world."§ Sir Charles Lyell supports the statement that "North America was peopled more than a thousand centuries ago by the human race.‖ He suggests that Europe was peopled antecedent to the division of Ireland from England, or of England from France; a theory which would carry man's existence back to ages extremely remote. Those of the orthodox who cling to the Bible notion that the world was made 6,000 years ago, must feel a strange horror when reading Darwin's supposition of "a longer period than 300 million years" for the denudation of the weald by the action of the sea.¶ How will the pious acceptors of the Bible doctrine, that all the animals were created at most a few days prior to man, regard Charles Darwin's statement that "an infinite

number of generations which the mind cannot grasp must have succeeded each other in the long roll of years?"

Baron Bunsen claims an antiquity for the human race of at least 20,000 years prior to the Christian era, and traces in Egypt a double empire of hereditary kings to 5413 B.C. (that is, to near 1000 years prior to the time of Adam). Before these he discovers elective kings reaching back to 7230 B.C. Prior to these, priest kings, the first of whom (Bytis the Theban) ascended the throne B.C. 9085. Farther back still does Bunsen trace the Egyptian peoples by the aid of their pyramids, their obelisks, their stone records, rescued from the sand ocean which for centuries had hidden them from human gaze.*

In Greece itself, for which no such antiquity of history can be claimed as for the land of the Nile, the Pelasgic occupation carries us back into the night of time.

Unless we are to reject as utter fable the words of Plato, historic records had been preserved by the priests of Sais relating to Greece extending over a period of about 9000 years prior to Solon.† Plato expressly affirms this to be in every respect true.

The unity of the origin of the human race is a subject which must not be confused with that of the unity of species. It is quite consistent to deny a common origin, and yet to accept sameness of species. Humboldt says—"Les recherches géographiques sur le siege primordial, ou, comme on dit, sur le berceau de l'espece humaine, ont dans le fait un caractere purement mythique. 'Nous ne connaissons,' dit Guillaume de Humboldt, dans un travail encore inedit sur la diversité des langues et des peuples, 'Nous ne connaissons ni historiquement, ni par aucune tradition certaine un moment ou l'espece humaine n'ait pas été séparée en groupes de peuples.'" "Geographical researches on the primordial seat, or, as it is called, the cradle of human kind, are in fact purely mythic in their character. 'We do not know,' says William von Humboldt, in a work as yet unpublished on the diversity of languages and peoples, 'We do not know,

* Egyptens Stelle, quoted by Gliddon: Indigenous Races, p. 579.

either historically or by any certain tradition, any period when the human race was not separated into groups of peoples.'"*

Kalisch argues that "ethnographic inquiries have established the fact that if the human race does not descend from one pair, it certainly belongs to one species." He admits that the former supposition has been rejected by many intelligent and competent scholars, and that a plurality of first parents brought forth in different centres seems to be more and more extensively adopted.†

Dr. Morton says that he "can see no satisfactory explanation of the diverse phenomena that characterise physical man except in the doctrine of an original plurality of races."‡

To adopt the language of Dr. August Zeune, inasmuch as it has not yet occurred to anybody to sustain that all figs have sprung from a solitary primitive fig, even as little can any one admit the whole of mankind to be derived lineally from a single human pair. Wherever the conditions for life were, there life has been. Ethnologists to-day divide humankind into at least three great races—Mongolian, Ethiopian, and Caucasian.§ These are each subdivided, and the diversities of humanity traced out are of a most striking character.

"In the Mongolian type the skull is of a square shape, rather angular than rounded; head of a heavy form, though not large; capacity varying from 69 to 73 cubic inches: facial angle sloping backwards from 70° to 80°. The cheekbones are high and project outwards; the nose is flat, and on the same level with the cheekbones; the arch of the eyebrow is scarcely perceptible; nostril narrow; the edge of the jaw slightly rounded forward, and the chin prominent. The face is broad and flattened without any distinguishing depression, the space between the eyes is flat and very broad; lips generally well formed and not thick, cheeks round and projecting, nose broad and flat.

* Humboldt's Cosmos, par Faye.

† On Genesis, p. 33. ‡ Types of Mankind, p. 305.

§ Some contend for five distinct races, some for more. The science of ethnology is not yet matured.

The line of the outer eyelids extends towards the temples, the skin being drawn up by the unusual protruberance of the cheek bones, while the internal angle is depressed towards the nose, and the upper eyelid at this point is continued into the underlid by a rounded sweep, the eyes thus appearing as if placed obliquely; eyes small and iris dark. Skin of an olivaceous tint, varying from sallow lemon-peel to brownish yellow, but never very fair or intensely swarthy. Hair coarse, lank and black, beard scanty, not curly, partially or wholly wanting at the ears, and hair scanty on other parts of the skin. Body square, stature rather low, trunk long, extremities rather short, wrists and ankles weak."*

"The Ethiopian embraces the African central type and its varieties. An elongated narrow cranium, crisp and curly hair, jaws more or less projecting, thick lips, and black or dusky skin, are its general characteristics; but there are two marked divisions—the true *Negro* of Western Africa, and the *Kaffirs* of the South, besides various intermixtures.

"In the Negro the skull is narrow and compressed at the sides, and elongated from front to back; the dome arched and dense; the forehead convex, retreating, and narrow; the contour of the head is smooth compared to the angular form of the Mongol; the cheek bones project forward; the bridge of the nose is small and flat, the nostrils round and wide; both jaws are much elongated, edges narrow and elliptical; front teeth somewhat oblique. The whole skull is thick and heavy, facial angle from 65° to 70°; the mouth wide, with very thick lips; the face is narrow, and projects greatly in the lower part; chin retracted; eyes prominent and rather large, iris black, vessels of the eye suffused with a bilious tinge. The hair in infants rises from the skin in small mamillary tufts, disposed in irregular quincunx; in adults, it is of a crisp woolly texture, except the eyebrows and eyelashes; beard scanty on the upper lip, and chiefly confined to the point of the chin, except in late

* Space does not permit me to give the distinguishing and differing characteristics of Malay, Australian, and American subdivisions of the Mongolian type; though indeed to me they are so sufficiently striking as almost to constitute distinct types.

manhood; a few tufts of hair are on the breast, but the arms and legs are bare. Hair on the head woolly and curled in the pure races, never hanging loose or rising into a mop; body strong, muscular, and very symmetrical; bones of the fore-arm somewhat elongated; shin-bones of legs slightly bent forward, and calves placed high up; the feet broad, heavy, and soles flat; the heel-bone projecting. Skin soft and silky to the touch: in the new-born infant, dull cherry red—in adults, varying from a deep sallow to an intense black; emits a strong offensive odour, especially under exposure to the sun."

In the Caucasian type—"The head is almost round, or somewhat oblong, and the skull is smooth, rounded, and of the most symmetrical form, with a full development of the anterior portion; the cheek-bones are rather narrow, without any undue projection; the jaws are rounded, the front teeth of each being placed perpendicularly; the capacity of the skull, according to the measurement of Dr. Morton, fron 75 to 109 cubic inches, the facial angle rising 75° to nearly 90°. The face is of a round, or more generally oval shape, and the features moderately prominent; the forehead arched; the nose narrow, slightly arched, or at least with the bridge somewhat convex; the mouth small, with the lips slightly turned out, especially the lower one, and the outline gracefully waved; the chin full and round; colour of skin fair and ruddy (*Xanthous*), or of various shades of brown (*Melanous*); hair abundant on head and chin, generally soft, smooth, and wavy, and dispersed also on other parts of skin—colour various, according to complexion, from a yellow-red auburn and deep brown to glossy black: colour of iris of eyes also various, from shades of blue to hazel, dark brown and black; eyes generally full; medium stature, approaching to six feet in the Xanthous, and from five feet three to five inches in the Melanous; muscular strength, energy, and endurance generally considerable—in many superior."

These varieties of human kind may now be found on the earth's surface. Do they trace their origin to one pair? Or are they severally indigenous to their own soil and climate? Are these varying types, with all their differences,

the natural result of an origin under primarily and persistently different life conditions? Or did they find a common origin in Noah about 4,300 years ago?*

Assuming, for the purpose of the argument, a common origin in one pair for the whole human family, there are but three suppositions on which the orthodox can account for the present physical diversities amongst mankind.

1. A miracle, or immediate act of Deity changing one type into another.

2. The gradual action of physical conditions, such as climate, food, mode of life, &c.

3. Congenital or accidental varieties.†

The first point hardly needs remark. No such miracle or act of God is alleged to have taken place. The writer in Genesis who invented a Tower of Babel miracle to account for the diversity of language of which he could not help being well aware, did not find it necessary to account for the diversity of type—a fact of which he knew nothing. Ethnology is the most modern amongst sciences, though her lessons are likely to be of the highest importance to human welfare. It lies upon any one supporting the first proposition, at least to vouch its truth with his tongue or pen, ere it is needed that a formal refutation of Ethnic-thaumaturgy should be placed before the reader. The affirmative of the second and third positions has been taken by Dr. James Cowles Prichard, in his voluminous works on the "Natural and Physical History of Man."

It cannot be denied that races improve and deteriorate under varying conditions of food and climate, but it is most strongly contended that no such influences will convert one race, as the Negro, into another race, as the Caucasian. Of the permanence of type under its own climatic conditions—that is, in the country to which it is indigenous—we have overwhelming proof in the statue of an ancient Egyptian scribe, taken from a tomb of the fifth dynasty, 5,000 years

* It is not necessary to discuss the question whether Adam and Eve were the parents of the human races at 6,000 years date; or any other period, because, as the Noachian deluge is alleged to have reduced all mankind to one family, it is only necessary to start from the date of that flood.

† Dr. Nott's Physical History of Man, p. 28.

old, and precisely corresponding to the Fellah of the present day.* The sand had preserved the colour of the statuette, which, from its portrait-like beauty, marks a long era of art-progress preceding its production. It ante-dates the orthodox era of the flood, carries us back to a time when, if the Bible were true, Adam was yet alive, and still we find centuries before it kings reigning and ruling in mighty Egypt. Can the reader wonder that these facts are held to impeach the orthodox faith in the reliability of Genesis?

Dr. Nott says—"It is a commonly received error that the influence of a hot climate is gradually exerted on successive generations, until one species of mankind is completely changed into another; a dark shade is impressed on the first, and transmitted to the second; another shade is added to the third, which is handed down to the fourth; and so on, through successive generations, until the fair German is transformed by climate into the black African." *This idea is proven to be false.* A sunburnt cheek is never handed down to succeeding generations. The exposed parts of the body alone are tanned by the sun, and the children of the white skinned Europeans in New Orleans, Mobile, and the West Indies, are born as fair as their ancestors, and would remain so, if carried back to a colder climate. The same may be said of other acquired characters (except those from want or disease). They die with the individual, and are no more capable of transmission than a flattened head, mutilated limb, or tattooed skin. The monuments of Egypt present us the features of the Mongol, the Caucasian, and the Negro, 3,000 B.C. If time were wanted to produce this diversity, how many chiliads prior to the Adamic era shall we travel in order to find the first pair?"†

The only question remaining is that of congenital or accidental varieties or peculiarities alleged to spring up, and be transmitted from father to son so as to form new races. On this point, I again adopt the language of Dr. Nott—"Let us pause for a moment to illustrate this fanciful idea. The negroes of Africa, for example, are admitted not to be offsets from some other race, which have been gradually

* M. Pulzsky: Indigenous Races, p. 111.
† Physical History of Man, p. 28.

blackened and changed in moral and physical type by the action of the climate; but it is asserted that, 'once in the flight of ages past,' some genuine little negro, or rather many such, were born of Caucasian, Mongol, or other light skinned parents, and then have turned about and changed the type of the inhabitants of a whole continent. So in America, the countless aborigines found on this Continent, which, we have reason to believe, were building mounds before the time of Moses, are the offspring of a race changed by accidental or congenital varieties. Thus, too, old China, India, Australia, Oceanica, &c., all owe their types, physical and mental, to congenital or accidental varieties, and are all descended from Adam and Eve. Can human credulity go further, or human ingenuity invent any argument more absurd? Yet the whole ground-work of a common origin for some nine or ten hundred millions of human beings, embracing numerous distinct types, which are lost in antiquity far beyond all records or chronology, sacred or profane, is narrowed down to this baseless fabric.

"In support of this argument, we are told of the porcupine family of England which inherited for some generations a peculiar condition of the skin, characterised by thickened warty excrescences. We are also told of the transmission from father to child of club feet, cross eyes, six fingers, deafness, blindness, and many other examples of congenital peculiarities. But these examples merely serve to disprove the argument they are intended to sustain. Did any one ever hear of a club-footed, cross-eyed, or six fingered race, although such individuals are exceedingly common? Are they not, on the contrary, always swallowed up and lost? Is it not strange, if there be any truth in this argument, that no race has ever been formed from those congenital varieties which we know to occur frequently, and yet races originate from congenital varieties which cannot be proved and are not believed by most of our best writers ever to have existed? No one ever saw a Negro, Mongol, or Indian born from any but his own species. Has any one ever heard of an Indian child born from white or black parents in America during more than two centuries that these races have been living there? Is not this brief state-

ment sufficient to satisfy any one, that the diversity of races now seen on the earth, cannot be accounted for on the assumption of congenital or accidental origin? If a doubt remains, would it not be expelled by the recollection of the fact that the Negro, Mongol, and White Man existed, with their present types, at least 1000 years before the date when Abraham is alleged to have journeyed to Egypt as a suppliant to the mighty Pharaoh."

The science of geology affords to the inquirer still further means for testing the Genesaic narrative of the creation, and more than one surpliced defender of the faith has been compelled during the last twenty years to admit that the teachings of this science and those of the Pentateuch are in direct and irreconcilable variance. The Rev. Baden Powell says "that the whole tenor of geology is in entire contradiction to the cosmogony" of the Bible; and he adds, that "whenever the sacred writers introduce physical statements, they may fairly be understood as speaking conformably to the existing state of knowledge, and adapting themselves to the ideas, belief, and capacities of those whom they addressed."* That is, in effect, a declaration on the part of this Church of England clergyman that the Bible is not divinely inspired, but is the production of fallible and imperfectly educated men.

M. Priaulx says† that in reviewing this creation, we are struck by its division into days. These days, though several of them are undetermined by any revolution of the earth round the sun, were nevertheless meant and understood to be natural days of twenty-four hours each. Faber argues that these days are homogeneous, that the term day is often used for an indefinite time, and cannot in this chapter mean a natural day, and that therefore each day measures a space of at least 6000 years. To this argument there are two objections. 1. That the assumption that God has been since the creation, and is still, resting is contrary to Christian notions of Deity, and contrary also to scripture, and especially contrary to the theological views of infant man, whose deities are ever too busy, too personally

* Unity of Worlds; essay 2, sect. 2.
† Questiones Mosaicæ, 29.

active; and ever engaged, if not in creating, in mending and rectifying their handiwork. 2. That though "day" may be used for any indefinite time, it is surely never so when particularised and defined by adding the words "morning" and "evening." Hugh Miller in his lecture on the two records, Mosaical and Geological, enlarges on the explanatory hypotheses of Dr. Chalmers and Dr. Pye Smith, both of which represent the creation recorded in Genesis as an event which took place about 6000 years ago, as begun and completed in six natural days, but as cut off from a previously existing creation by a chaotic period of death and darkness.*

According to the first chapter of Genesis, the creation of the whole universe occupied only six days and nights, and this view of the matter is clearly confirmed by the words of the Decalogue as given in Exodus xx., 11. Geologists, on the contrary, declare that the various early strata of the earth have occupied enormous periods of time during their formation, and that even in the vegetable and animal kingdoms, the extinction and creation of species have been, and are, the result of a slow and gradual change in the organic world.†

It is worse than puerile to contend that the words "day" and "night" in Genesis are intended to express six indefinite periods of time, because as the same words are used in Exodus xx., 10 and 11, and in reference to the same event, as expressing only the seventh part of a week, it is clear that it was not the intention of the Hebrew cosmogonists to express an indefinite period, or indeed anything but a natural day. Nor would this explanation, if a correct one, relieve the orthodox students from the difficulties raised by scientific investigators. The objection is not alone that there was no such formation or creation in six days, as alleged in the text under notice, but is also, that it did not even take place in the order, or at any time, in the manner recorded in the Bible. A fashionable contention is for a very long period of chaos covered by the two first verses of Genesis,

* Testimony of the Rocks, pp. 115 to 156.

† Lyell's Principles of Geology, 8th edition, p. 179.

and then for a six day or six period work of forming the pre-existing material into the universe. But the description of the chaos of the first two verses refers to an "earth" already existing, with "waters" also. But land and waters are not the earliest aspects under which geology discover our earth. In a very pleasant book recently published in Paris,* the writer in his chapter, entitled "Epoque Primitive," argues, following Laplace's theory, that the whole of our earth, as indeed the whole of our firmament, was at one period a diffused mass of nebulous matter, and he deals with this globe as primarily a mass of gaseous incandescence gradually cooled down to its present shape and density.

This theory has been put before English readers at various times, and at great length, and especially by one most able anonymous writer (the author of the "Vestiges of the Natural History of Creation"), who in the first two chapters of his extraordinary work, explains the nebular hypothesis most lucidly.†

Kalisch supports the nebular theory, declares positively that the primary condition of the earth was a fiery one, and suggests that the time required for the cooling down of our planet to its present state, would be about 353,000,000 years.‡ M. Figuier prefixes to his work a plate showing the present strata of our earth, giving first the underlying internal and yet unextinguished fire, then the basalt, gneiss, and primitive granite, all of which rocks are now almost universally acknowledged to be the result of fire action.

An orthodox explainer of Bible difficulties says—"The first glimpse of our planet presents us with a revolving mass of igneous fluid, wheeling its annual course round the solar centre of the system, and gradually cooling down by radiation into space, whereby a granite crust is formed upon the surface."§

While it is impossible fully to discuss here the nebular theory, enough has been advanced to show that even if a pre-created chaos were conceded, "earth" and "waters"

‡ Genesis, pages 13 to 19.
§ McCausland on Stones, p. 93.

were not amongst the primitive conditions of our globe. There is, however, really no other pretence for the theory which places an arbitrary division between the first and second verses of Genesis, or between the second and those following, than this, that the clergy cannot fairly combat the difficulties raised by the text. Each verse is connected by the particle Vau ו (and) and there is not the slightest break in the narrative.

By verses eleven and twelve we are informed that the vegetable kingdom was created by one fiat on the third day. Yet the best students of geology declare that an universal primeval flora cannot be sustained, but that on the contrary the development of the vegetable world has been slow, gradual, and spread over enormous periods. According to the text, herbs and trees were created on the third day, while fishes, reptiles, and creeping things were not made until the fifth and sixth days. Yet the stone records teach us that there existed fishes, reptiles, and creeping things long ages before the period of those plants whose existence is now testified by the huge coal beds of our country.

According to Genesis, the vegetable kingdom was created only a few days earlier than man. According to geology, many millenniums intervened between the first plant and the first man.

An appeal to astronomy is equally decisive against the Bible story of the creation. According to the first chapter of Genesis, our earth was the primarily created planet of this universe. According to astronomy our earth is but one, and that neither first nor second of a series of planets, probably thrown off from, and certainly now revolving round a central sun, the whole of this vast solar being itself part of a huge astral system, and this again but a small fraction of the immeasurable universe.*

According to the Bible, the firmament is a fixed partition studded with stars, and dividing the waters, so that for heavy rain, as in the case of the Noachian deluge, the windows of heaven are opened that water may pour on the earth.

* It is estimated that the solar system to Uranus occupies at least 3,600 millions of miles.

According to astronomy all the water clouds are within a few miles of each other, while Venus, one of the nearest stars, is distant 27,000,000 of miles. No such fixed firmament exists at all. Heaven does not mean a fixed partition, it is but the word used to express the space in which an infinity of worlds, millions of miles distant from each other, perform their various revolutions.

According to the Bible God made the stars after the earth had been created, and set them in the heaven to give light upon the earth. According to astronomy, vast numbers of stars exist whose light must have been many thousands of years travelling to our earth, notwithstanding the startling rapidity with which light travels, and some nebulæ have been discovered whose light must have been travelling more than a million of years, and, therefore, so long ago, must they have existed to send out those rays we now perceive. According to the Bible, there are two great lights in the heavens; the greater—that is, the sun, to rule the day, the lesser—that is, the moon, to rule the night. According to astronomy, although the sun is by far the largest member of our solar system, being no less than 892,000 miles in diameter, it is by no means the largest amongst stars, and the moon has in reality no claim to be marked as great, being actually but little more than 1-64th the size of the earth. If Genesis be true, the earth existed some days before the sun. If astronomy be true, the earth once formed part of the sun's enormous volume, and not only never existed without the sun, as centre of the system of which the earth is a member, but could not possibly do so. According to Genesis light—that is, day light, was created before the sun. According to astronomy, day light is impossible without the sun. The terms evening and morning are used in Genesis before the sun is created; and yet these words convey to the mind but two impressions; "evening," that portion of sun light immediately preceding and succeeding the sun's apparent departure or disappearance below our horizon, and "morning," that portion of light that immediately precedes and succeeds its apparent rising above.

In the words of Kalisch, "We believe that we have indisputably demonstrated that, with regard to astronomy

and geology, the Bible records are, in many essential points, utterly and irreconcilably at variance with the established results of modern researches."

A writer in the *Westminster Review** says:—"That the 'Creation of the World' took place 4004 years before the Christian era, used to be taught in our schoolboy days as a fact not less certain than that the Norman Conquest took place 1066 years after it. And although every educated man of the present generation well knows that if there be the least truth in Geology, this statement is a baseless fiction, it is nevertheless repeated on the margin of the first verse of every 'Reference Bible' issued under Ecclesiastical authority; and thus it comes to be accepted as a dogma—which it is nothing less than a dangerous heresy to question—by that vast mass of well-meaning people who are content to take their religion upon trust, and to forego the use of their reason while professing to seek the highest of all truths. And even of those who are ready to admit that the changes of which we have evidence in the succession of stratified deposits forming the crust of the Earth, and of the Organic remains entombed in them, must have occupied hundreds of thousands or even millions of years, the great bulk are satisfied with simply antedating their commencement, and still continue to believe as devoutly as the rest, that a general chaotic disturbance, followed by a remodelling of the globe which prepared it for the introduction of Man, took place at the date assigned. Yet the progress of geological inquiry has clearly disproved the notion of any such general remodelling, by showing that all the most recent alterations which have taken place on the Earth's surface, and in the distribution of Organic life upon it, have been effected by agencies purely local and gradual, and in continuity with changes which carry us back to a period when the countries now inhabited by Man were tenanted by animals long since extinct; while it has also shown that many of the races at present existing can be traced so far back in geological time, as to have plainly lived through any such convulsionary epoch. And thus the well-meaning

* No. 46, April, 1863, pp. 517-19.

attempts which were made a quarter of a century ago to reconcile the Mosaic Cosmogony with the verities of science, have fallen into discredit; sensible and well-informed men have ceased endeavouring to harmonize the successive 'days' of creation (elongated into indefinite periods of time) with the Azoic, Palæozoic, Secondary, Tertiary, and Post-Tertiary epochs; and it has come to be tacitly admitted that Geology has as much claim as Astronomy or any other science, to build up inductions on the facts of Nature, untrammelled by the supposed *dicta* of Revelation.

"Yet it is remarkable how chary Geologists have until recently been of disturbing the popular notion that the creation of *Man* took place in the year 4004 B.C. It has seemed as if they had purchased their right to speculate freely on the anterior history of the Earth, by promising to leave untouched that which the Theologian claims as his proper province, the origin and early history of the Human Race. And if some of the more venturous among them have now and then drawn attention to the facts which seemed to claim for him a remoter antiquity, they have been called to order by those 'potent, grave, and reverend' seniors, whose credit with the educated public has mainly rested upon their obvious unwillingness to run counter on this point to the accepted belief; the facts have been quietly ignored, or the inferences voted unsound.

"Indications have not been wanting, however, in the progress of other branches of scientific inquiry, that the Human Race is much older than the ordinary chronology admits; and the convergence of such indications from several distinct paths of research, is in itself no insignificant attestation of the validity of the conclusion towards which they severally lead. The Ethnologist, who aims at tracing-out the relations of the existing families of Mankind on the hypothesis of their common origin, finds that making the largest allowance which experience justifies for the modifying influence of external conditions, he is quite unable to account for the divergence of the races clearly recognisable in the oldest Egyptian paintings, within the limited number of centuries intervening between the probable period of their execution (from 1500 to 1000 B.C.) and the date

assigned to the Creation; still less between the same period and the date of the Noachian Deluge, after which (if the Mosaic record is to be literally interpreted) the population of the world began a second time. The Philologist, who studies the filiation, growth, and metamorphoses of Languages, and who finds, the higher he mounts into antiquity, more and more reason to believe that even their most divergent forms have had a common original, still feels the necessity of a far greater lapse of time than the received chronology admits, to account for the early development of those marvellous linguistic fabrics which are at present only known to us in their ruin or decay. The Antiquarian, again, who allows due weight to the accumulating evidence that the implements and usages of 'Pre-historic Man,' in various quarters of the globe, are referable to several epochs as distinctly successive as those of the Historic period, and each of them in all probability a great deal longer, finds it impossible to conceive with any show of reason, that such a succession can have occurred within the few centuries to which we must limit it if we first make a fair allowance for the lapse of time required for the mere peopling of the earth by the descendants of a single pair. And the Physical Geographer who grapples with the difficulties presented by the existing localization of those races of Plants and Animals which are popularly supposed to have been called into being contemporaneously with Man, for his express use and service, feels himself unable to solve those difficulties without the hypothesis that very extensive changes in the relative distribution of land and waters, such as must have required an enormous lapse of time for their accomplishment, have taken place since they first diffused themselves over the areas they now occupy."*

* "Thus it was long since shown by Dr. J. D. Hooker, that the relations of the Plants of South America, New Zealand, and Tasmania cannot be accounted for except on the supposition that these countries once formed part of a great Antarctic Continent. And more recently Mr. Wallace has shown that the relations of the Animal inhabitants of the Indian Archipelago similarly point to the former existence of a great Southern Asiatic Continent, the partial submergence of which may not improbably have been synchronous with the elevation of the Himalayan range."

Chap. i., verse 24.—The words translated "and beast of the earth," are in the ordinary Hebrew version וחיתו (UChIThU) ארץ (AReTz), the correct rendering of which would be "and his beast, earth." The fact being that the writer of the Hebrew has blundered in substituting the final letter of the first word ו (Vau) for the prefix ה (He) which ought to be, and in the Samaritan version actually is, the commencing letter of the second word. The error, though a trivial one, serves to show that, notwithstanding Jesus is reported to have said—"Till heaven and earth pass, one jot or one tittle shall in no wise pass," yet the Hebrew text has not been preserved without blemish; and also that our translators have not hesitated to make up its deficiencies. Dr. Wall adduces this and several similar blunders as instances of extremely hasty and inaccurate vocalisation of the original Hebrew.*

Chap. ii., verse 7.—"And man became a living soul." You have in this verse a forcible illustration of the dishonesty of the translators of our authorised version. The words rendered in the orthodox version "living soul," are נפש חיה (NePheSh ChIE). In chap. i., v. 21, where exactly the same Hebrew words are used with reference to the animals produced from the waters, the translators give "living creatures" as the equivalent, as they do likewise in chap. ii., v. 19, where precisely the same two Hebrew words are again translated "living creature." The truth is that the writer of Genesis never used any phrase denoting "soul" in the modern and orthodox sense of the word. If the translators had deemed "soul" the correct rendering, why did they not use it always? The answer is that it would then have given the same "soul" to man and beast—that is, to the whole animal kingdom, and this is really the doctrine taught in the Hebrew Bible, "that which befalleth the sons of men befalleth beasts, as the one dieth so dieth the other; yea, they have all one breath; so that man hath no pre-eminence above a beast." (Ecclesiastes, chap. iii., v. 19. See also page 11, and Questiones Mosaicæ, p. 64.) The word נפש (NePheSh) means to breathe or respire.† Park-

* Grounds for Revision, p. 233.

† Hebrew Lexicon, p. 460, 7th edition.

hurst in his Lexicon says that the word has been supposed to signify soul, but that he can find no passage where it hath undoubtedly this meaning. From the instances given by Gesenius it is clear that "the soul" spoken of in the Old Testament was not immortal, as it is said to live, to die, to be killed, &c.*

Verse 8.—"The Lord planted a garden in Eden." Wilford says,† Mussulmans as well as Christians have assigned various situations to the garden of Eden, and there is hardly a country on earth or a region in heaven but has been ransacked in search of it, whilst some of the fathers have denied its existence. In consequence of the great difficulty experienced by the orthodox in finding any spot on the globe which would harmonise geographically with the Biblical description of Eden, it has been asserted by some commentators that the description is antediluvian, and that the deluge had changed the position of the rivers. But this raises two difficulties—first, if the description be antediluvian Moses was certainly not its author; and second, in describing the rivers the text uses the present tense as though the author or compiler of Genesis had in view some particular district familiar to himself, and which he expected to be able sufficiently to make known to his readers by the special features he pointed out. Kalisch gives a list of nearly forty different sites selected for Eden by prominent writers.‡ Wilford fixes it in the neighbourhood of the Indian mountains.

Stroth says—"We are obliged to assume, with Theophilus and other fathers of the Church, that Paradise fluctuated like a balloon between heaven and earth, from which each of the rivers precipitated itself downwards towards its earthly source!"§

Verses 9 and 17.—"The tree of knowledge of good and evil." It can hardly be contended that this tree had a real and tangible existence. If it is so contended, then I ask—was it the unique specimen of its species, and did it only

---

§ Jewish Antiquities, by the Rev. D. G. Wait, preface, p. 25

grow in that fabled Eden for whose site men have so long and vainly sought? Did any such tree now exist producing fruit the eating of which would give a knowledge of good and evil, it would afford a short and pleasant way of acquiring knowledge; but such trees only grow in children's stories, in Arabian Nights' tales, or in the myths of ignorant nations. But supposing the tree to be a literal tree, did Adam, from eating its fruit, acquire a knowledge of good and evil? If yes, then he had previously no such knowledge. Yet he was created by God in his image; was he in his ignorance the image of God? The word "image" cannot be intended as a corporeal likeness, because God is represented as an invisible spirit without body or parts. Besides which it has been rightly observed that if Adam was ignorant of the nature of evil, he ought not to have been condemned for a transgression he did not understand.* Priaulx says—"If man was ignorant of good and evil, how could God threaten him with punishment? For, with the conception of a punishment is involved the idea of some evil: and the very threat of punishment, therefore, when rational, presupposes in the being threatened a capacity to choose between, and consequently a knowledge of good and evil."†

It is difficult to refrain from ridiculing the statement that there exist real trees bearing knowledge-giving fruit, but admitting the statement as serious, it is even more difficult to comprehend why an all-wise, all-good God should plant a tree of knowledge and then inhibit man from partaking of its fruit.

Verses 19 and 20.—Lawrence‡ says that the representation of all the animals being brought before Adam to be named, is zoologically impossible. But this is consistent, notwithstanding, with the orthodox doctrine that it is theologically possible. He objects that there are animals from the frigid zone, and some of those of the torrid zone, which could hardly exist except on the soil and under the climatic conditions to which they were indigenous. That the food for the sustenance of

* See Bellamy, new translation, p. 10.
† Questiones Mosaicæ, 75.
‡ Lectures on Man, 9th edition, p. 169.

all the animals in the world could not easily have been collected at one point at one time. The devout readers know that a miracle would remove all these difficulties, and although no such miracle is recorded, the mere omission of it ought not to weigh against the text. It is further objected that either God knew beforehand what names Adam would give, or he is not omniscient, and that if he did know then Genesis is incorrect, as it says "he brought them to Adam to see what he would call them."

Verses 21 and 22.—Was the first man made with an extra rib? If yes, did God give him the rib in order that he might afterwards take it away? Or was the first man left with a rib deficient after the making of woman? Could not the Creator have made woman of the same materials as those of which the man had been previously formed? Bellamy denies the whole story of the rib, declaring it to be a mistranslation. His version does not in this instance seem to me reliable.

Chapter iii.—This chapter is really one of primary importance to the believer in Christ, as on the truth or falsity of its narrative rests the whole Christian scheme. In the history of the fall is contained the foundation stone for the much vaunted structure of redemption. Briefly summarised, the contents of the chapter are as follows:—Man and woman are in Eden's garden where grows the tree bearing the mystic fruit, which before woman's creation man had been positively forbidden to take. A most wonderful and unique serpent, subtle and suasive in speech, is created by Deity and permitted within the limits of the primal paradise. It is idle to object that no description of serpent has ever been discovered possessed of organs for speech, or that condemned now to crawl on its belly for punishment, it must have previously progressed in some utterly incomprehensible manner on its head, its tail, or its back. The serpent talks to the woman;* we appear in Genesis to have

* Priaulx asks—"But how did the serpent speak? Did he utter a serpent's mind with a serpent's hiss, or did he talk in good set terms? If we can suppose that the serpent was so like a seraph that Eve mistook him for a good angel, we can also easily suppose that he spoke very passable Hebrew."

only a fragment of the conversation; the remark of the serpent in verse 2 is apparently too abrupt for the commencement of an important dialogue by a subtle diplomatist. In fact, in the Hebrew, the opening words are even more abrupt than they appear in the authorised version, which has "Yea hath God said." Bellamy translates it—"But how hath God said?" Kalisch—"Hath indeed God said?" Such a form of speech obliges us to suppose some previous conversation relating to the matter and not reported in the text. However this may be, we are confined to the words of the Bible wherein the astute serpent declares to the woman that the threatened punishment of death need not be feared. The woman examines the God-created tree, she sees that God has made it "good for food" although not permitted to be eaten, "pleasant to the eyes" although a tree to be shunned and avoided because of its baneful influence on all human kind, "a tree to be desired to make one wise." How the woman could see this, is one of the mysteries of our holy and act-of-parliament-protected religion. The allurements of the tree, and the persuasion of the serpent are altogether too powerful. The woman gathers the fruit and eats; she gives to her husband also, who shares the repast. In chap. ii. v. 17 it says, "in the day thou shalt eat thereof thou shalt surely die." They did not die, but on the contrary were more alive than before hearing "the voice of the Lord God walking in the garden in the cool of the day;" "in the cool of the day, when the evening breeze arises, Jehova-Elohim walks forth to take his pleasure," the man and woman hide themselves from the Omnipresent amongst the trees. God the all-wise called to Adam saying, "Where art thou?"* Adam's answer is partially incorrect. He excuses himself for hiding on the ground of his nakedness, which must have been in some degree remedied by the fig leaf aprons. In answer to the accusing question, Adam,

* Can God be conceived as speaking? If yes, he must be conceived as possessed of the organs, on the using which articulate speech is possible. Yet to think of a Deity with mouth, tongue, larynx, &c., nevertheless, having neither body nor parts!

with true Biblical manliness, shifts the responsibility to the woman, and, by implication, to God himself. His answer and defence are, "The woman whom thou gavest to be with me, she gave me of the tree and I did eat." The woman in her turn fairly says that she was beguiled and did eat. God then curses the beguiling serpent which he himself had created so fitted to beguile and so intended to beguile. God then decrees subjection to the woman and sorrow in the bringing forth of her offspring, finishing with cursing Adam by cursing the ground. In the orthodox statement of the fall there is an evident contradiction between the hypothesis and the fact, for Adam is represented as originally upright and obedient to God, and at the same time as disobedient. The alleged perfection of moral nature given by God to man ought, if true, to have been a guarantee against man's fall. His imperfection and weakness are well shown by his fall without any show of resistance on the very first temptation. The Christian doctrine is that by the one man Adam's fall, sin, suffering, and death entered into the world. (See Romans v., 12 and 17; 1 Corinthians xv., 21 and 22.)

I cannot do better in order to illustrate this doctrine than quote from a pamphlet by the well known author of the treatise on "The Necessary Existence of Deity."* He regards Hugh Miller as proving—1. That animal life existed on this earth untold ages before man appeared, and, ever since animal life began, there existed carnivora which could not live but by the death of their neighbours. 2. Those destroying animals were not only prepared to kill and devour each other, but were besides furnished with organs for the express purpose of torturing each other.† 3. That those destructive and torturing animals—existing as they

* The Theology of Geologists, by W. Gillespie.

† Hugh Miller instances the sting of the Pleuracanthus Lævissimus of the coal measures, a plate of which, half natural size, he gives on p. 72 of the "Testimony of the Rocks." "It was sharp and polished as a stiletto, but from its rounded form and dense structure, of great strength; and along two of its sides, from the taper point to within a few inches of the base, there was a thickly set row of barls, hooked downwards, like the thorns that bristle on the young shoots of the wild rose, and which must have rendered it a weapon not merely of destruction but of torture."

did before man, and, therefore, standing in no dependent relations to man's sin—came directly, of course, from the hands of the Creator, who thus made those destructive and torturing animals for his mere good pleasure. 4. That this creator is the God of the Old Testament. 5. The fact of those carnivora, existing anterior to the introduction of man upon our planet, is entirely at variance with the sentiments of those who hold (what the Bible categorically states) that there is such a connection between suffering and sin, that there could have been no suffering (physical evil) had there been no sin (moral evil) in the world. 6. The matter of fact always determining the question of right, whatever the Creator, whom this sort of geologist discovers, does, is right, simply because he does it. The creation of all manner of physical suffering among the lower animals, including, of course, exquisite torture, is right, simply because the suffering had existence [at God's fiat.]

Chap. iii., verse 7.—"They sewed fig leaves together and made themselves aprons." Bellamy says that at this period there were no implements to enable them to perform the operation of sewing; and admitting that there had been such things as needles, if the fig leaves were the same then as now, they were not of a nature and texture capable of holding together by such a process.

Man being cursed is expelled from the garden of Eden lest, as the Lord God says, "man having become as one of us," "he should take also of the tree of life and eat and live for ever;" and then the Lord placed at the east of the garden of Eden "cherubims and a flaming sword which turned every way." According to this, unless Adam got at the tree of life in some unrecorded fashion, he will not live for ever, and the doctrine of eternal torment will not apply to him, the chief sinner. Does the text mean that if Adam had taken of the tree of life before his expulsion, or had taken it by regaining admittance to Eden after he had been driven forth, then that he would have lived for ever despite the decree of the Omnipotent? If yes, then the tree has greater influence than the Almighty, and if not, then the text is a confused jumble of contradictions.

The first chapters of Genesis were classed, according to a Jewish rule, with the Song of Solomon, and the beginning and end of Ezekiel, the reading of which was forbidden to all Jews who had not attained to a certain age (according to some twenty-five, according to others thirty years.)* In Psalm xviii., v. 11, we are told that God "rode upon a cherub, and did fly." Michaelis compares the cherubs with the *equi tonantes,* thundering horses, of the Greeks. Eichorn makes them as the griffins of the Persians, guardians of the gold-producing mountains.† For a description of these cherubim, I must refer the reader to Exodus chap. xxv. 18 to 22; xxxvii. 7 to 9; 1 Kings vi. 23 to 28; 2 Chronicles iii. 10 to 13; Ezekiel i. 5 to 11; x., 9, 14, 21. 22. The Rev. Mr. Parkhurst, in defiance of the Decalogue, has obliged us with an engraving of two cherubs, who are represented standing on the top of the ark, in a vastly uncomfortable fashion, each on the only leg it possesses. Certainly these would be strange guardians for the tree of life. But why only place them on the East of Eden? Are the north, south, and west sides unguarded? Many fathers of the Church and Rabbis of the Synagogue have been of opinion that the fall never really occurred as recorded in the Bible.‡ Origen says—"What rational man will believe that God, like a husbandman, planted a garden, and in it a real tree of life to be tasted? or that the knowledge of good and evil was to be obtained by eating the fruit of another tree? And as to God's walking in the garden, and Adam's hiding himself from him amongst the trees, no man can doubt but that these things are to be understood figuratively, and not literally." St. Austin, of the three first chapters of Genesis, says, "no Christian will say they are not to be understood figuratively." Philo says, "they are figurative descriptions, leading us to allegorical and recondite senses, to which, if any one rationally attends, he will see that the serpent is used for the emblem

* Carpsovii's Veteris Testamenti, quoted by Macdonald, p. 11.

† Gesenius's Lexicon, Bagster's edition, p. 415; but see Eichorn's edition of Simonis' Lexicon, p. 826, vol. i.; and Wait's Jewish Antiquities, p. 145.

‡ Bellamy's new translation, p. 15

of sensual pleasure." Rabbi Maimonides says "that these things were not so literally understood." He taught also that "every part of Scripture admitted of various and even contrary interpretations," and that "if a passage in its literal sense were found repugnant to reason, although clearly expressed, it ought to be translated figuratively."*

Josephus† says "that at the time the serpent talked to Eve all living creatures had one language." That "when God came into the garden, Adam, who was wont before to come and converse with him, being conscious of his wicked behaviour, went out of the way; *this surprised God*, and he inquired the cause." That God "deprived the serpent of speech out of indignation at his malicious disposition towards Adam," and when he had deprived him (the serpent) of the use of his feet, he made him go rolling all along, and dragging himself upon the ground.

Chap. iv., v. 5.—Why did God accept the offering of Abel? Why reject that of Cain? Cain brought as offering the fruits of the field; Abel slaughtered the firstlings of his flock, and offered to the Creator a sacrifice stained with blood. Who was it that taught these two brothers that God needed sacrifice? Who explained to them what the sacrifice should be? The laws as to sacrifice do not appear to have been given before Moses. Why should the God who said "I delight not in the blood of bullocks, or of lambs, or of hegoats," why should he have respect unto the offering of Abel, and not unto that of Cain? How was the preference manifested? How did Cain know that God preferred Abel? On all these points the text is silent, leaving the wider range for the faith of the true believer. Should not God look with greater benevolence upon a vegetable offering produced with sweat and toil from the stubborn earth which had just been laden with the curse of sterility, than upon the mangled carcases of the firstlings of the flock? Or is this narrative to be taken as emblematical of Judaism, with its fierce and brutal propa-

---

* Spinoza's Tractatus Theologico Politicus, cap. 7, sec. 75, quoting More Nebuchim, cap. 25, part ii.

† Antiquities of the Jews, Book i., cap. i., sec. 4.

ganda; with its bloody pilgrimage from Egypt to Canaan, and of Christianity, with its God-sacrificed God, nailed on a cross, spear-pierced in his side, the immortal bleeding to death, that we may no longer die? In Leviticus, chap. ii., v. 14, the very kind of sacrifice is commanded which was rejected when brought by Cain.

Verse 8.—"And Cain talked with Abel his brother." In reference to this verse, and as illustrating the spirit in which the translators dealt with what they would have us believe to be God's most holy word, it is not inappropriate to quote the words of the Rev. Dr. Wall.* He is speaking of various faults in the text, and having dealt with two classes, he proceeds—"But those of the class next to be noticed, are of a nature decidedly objectionable, as having arisen from an effort to conceal blemishes in the existing condition of the Hebrew text—an effort which led the translators, not only to a partial suppression of the truth in the cases referred to, but still further, to at times its positive misrepresentation.'

. . . An example of the kind of fault I am now complaining of, occurs in Genesis, chap. iv., v. 8., "And Cain talked with Abel his brother; and it came to pass when they were in the field, that Cain rose up against his brother Abel and slew him." Here no chasm appears; yet the context of the original passage clearly shows one, as may be perceived at once from its first clause, ויאמר (UIAMeR) קין (KaIN) אל (AL) הבל (EBeL) אחיו (AChIU) signifying literally, "and Cain said to Abel his brother"—a statement which obviously implies that some words used by Cain on this occasion originally followed in the text, which are no longer to be found in it. Accordingly a vacant space is left immediately after this clause in several Hebrew MSS., more than twenty of which have been specified by Kennicott, and the Masorets, to whose authority our translators elsewhere pay the greatest deference, have not only inserted here in their edition of the text a mark of something being omitted, but have also added the observation that there are twenty-eight such blanks in the middle of verses in the sacred record.

* Grounds for Revision of the Authorised Version, p. 102, but see contra Kalisch, 140 Genesis. Bellamy, New Translation, p. 27.

The first quarrel appears to originate in a religious difference. On questions of religion how many quarrels have since racked the world! At the first altar erected to a God, to whom the attributes of infinite love and mercy are attributed, the two sole worshippers are taught to hate each other. How many steeples have since surmounted roofs covering crowds of worshippers, whose fanatical zeal prompts them to fiendish cruelties against their fellow men! The eleventh and twelfth centuries of our era, with the glorious Christian crusades for their chief feature, present to us a historical tableau on which none but the most ignorantly pious can look without a shudder.

The question, "Where is Abel thy brother?" was one which God the All-wise did not need to put, and of the answer to which he was well aware before putting it. The declaration of Cain in v. 13, "every one that findeth me shall slay me," is a most extraordinary one, especially when it is considered that if the Bible narrative of Adam and Eve's creation be accepted, then Cain's father and mother were the only living human beings on the face of the earth. It may fairly be answered that Cain may not know how far the earth was peopled, and this, notwithstanding that his father had tasted of the fruit of the tree of knowledge, but even admitting this, it does not account for God sharing Cain's error, and setting a mark on Cain, lest any one finding him should kill him. Bellamy* declares, quoting Dodd, that the population of the world at the death of Abel, according to a fair calculation, must have amounted to many millions. This is, however, a monstrous assertion, for the text, Genesis, chap. iv., v. 25, distinctly states that Seth was not born until after the killing of Abel by Cain.

Verse 13.—In the Douay version Cain is made to say that his sin is too great for pardon. In our version he complains that the punishment is greater than he can bear. Bellamy translates it, "Great is my iniquity to be forgiven.'

Verse 16.—"Cain went out of the presence of the Lord." Despite Psalm cxxxxi., vv. 7 to 12, the writers of the early Hebrew books always speak of the God of the Jews as if he

* New Translation, p. 29.

were a localised and limited Deity. Cain goes east, Adam left Eden for the same direction. Is it in the east that the Lord is not? Cain dwelt in the land of Nod. As the situation of Eden is yet unsettled, and as the only clue we have to Nod is that it was on the east of Eden, it is useless to follow the various writers who have placed it at different parts of the world, through their lengthy dissertations, ending in nothing. Bellamy remarks that there is no land of Nod at all, but that the text means that Cain wandered about.

Verse 17.—Cain's taking a wife is here spoken of as though his marrying was the ordinary and natural event, but as according to the Bible narrative, there was yet no woman but his mother Eve, the statement is at least a startling one, as is the declaration that he built a city when there would only be himself, his wife, and son, to inhabit it.

The Roman Catholic Church teaches in a foot-note to the Douay Bible, that Cain's wife was his own sister, and a daughter of Adam, and that God permitted such marriages in the beginning of the world as otherwise mankind could not have been propagated. It is fair to inquire how Cain could have ever married his sister before she was born. Adam is not said to have had any daughter until after the birth of Seth.

Verse 26.—"Called his name Enos, then began men to call upon the name of the Lord." Bellamy translates this "called his name Enos, who began to profane in the name of Jehovah," and he says that Adam's grandson was one of the earliest idolatirs, and quotes Maomonides as supporting this opinion.* Clericus and Michaelis render it "then they began to call themselves by the name of God." Onkelos, and others, "they began to desecrate the divine name by calling the idols Gods." The Douay gives it, "this man began to call upon the name of the Lord." In an edition of the Breeches Bible printed in 1589, the translators use the language of our version, and say in a marginal note "In these days God began to move the breasts of the godly to restore religion which a long time by the wicked had been suppressed." When learned translators and commentators so differ, is it safer to believe that Enos was an idolator, or

* New Translation, p. 32. Kalisch, Genesis, 154.

that he was a pious man? Perhaps, after all, the distinction is not very great between worshipping the God of the Bible and worshipping an idol.

Chap. v., v. 2.—"Called their name Adam." Kalisch gives this, "called their name man." This verse seems to use "Adam" as the name for all the first created men and women, rather than as the proper name of one man. Bellamy says that Adam appears to be a general term for the human race. The supporters of the document theory alluded to on page 12, urge that the fifth chapter is a continuation from chap. ii., verse 3. It is at least remarkable, that neither Cain, nor Abel, nor the descendants of Cain are referred to in this chapter. The wise translators of the Breeches Bible say that by giving male and female the one name "Adam," God noteth the inseparable conjunction of man and wife!

Verse 3.—"And Adam lived 130 years," and begat Seth. According to Josephus, Adam was 230 years of age before Seth was born. The extraordinary ages assigned in this chapter, have been already alluded to in page 22. Luke Burke* presents the following table, founded on this chapter, of the patriarchal ages from Adam to Noah, according to the Samaritan, Hebrew, and Septuagint version:—

	Before Generation.		
	Hebrew	Samaritan	Josephus & Septuagint
Adam	130	130	230
Seth	155	105	205
Enos	90	90	190
Canaan	70	70	170
Mahaleel	65	65	165
Jared	162	62	162
Enoch	65	65	165
Methuselah	187	67	167 or 187
Lamech	182	53	188 or 182
Noah	500	500	500
Added century	100	100	100
Deluge	1656	1307	2242

* *Ethnological Journal*, p. 16

Josephus very *naïvely* remarks, "Let no one inquire into the deaths of these men, but let him have regard to their births only." Colenso says,* "If according to the Septuagint, Methusaleh was 167 years of age at the birth of his son, he must have been 355 years at the birth of Noah, consequently when the flood took place in the 600th year of Noah's life, he would have been only 995 years old, so that he would have overlived the flood fourteen years. See page 23."

Mr. Burke, after giving the above quoted table, adds, "The writer has here within a very brief compass an amount of disagreement probably without parallel." Whence can it arise? Not certainly from any peculiar difficulty or obscurity in the original texts. Neither in the originals, nor in the generality of copies, are the numbers anywhere expressed by letters or characters, but written out fully in words. Yet in the case before us, we have, to say nothing of minor variations, a difference of 349 years between the Hebrew and Samaritan dates of the deluge, and a difference of no less than 935 years between the Septuagint and the Samaritan. And these discrepancies not produced by a single passage, but resulting from the gradual accumulation of minor differences. As to various versions the reader is referred for information to Horne's Introduction, p. 85.

Verse 24.—"And Enoch walked with God *and he was not.*" The Breeches Bible has it, "and he was no more seen," and adds in the marginal note, that "to inquire where he became is mere curiosity." It is curious that Enoch's 365 years correspond exactly to the days of the solar year. Some seek to identify Enoch with Anakos, the Phrygian sage, who was translated to heaven.

It is worthy notice† that the names run in—

* Pentateuch, Part 4, p. 166. † De Wette, Books of Moses, sec. 150.

See on this point Priaulx "Questiones Mosiacæ," p. 159, and Kalisch, Genesis, p. 162. Some urge that one list is a corrupted version of the other, three of the names being reversed. The generations of Adam as well as the two accounts of the creation summarised in page 21, are urged, as strong evidence against the Mosaic authority of Genesis, and consequently of the whole Pentateuch, of which, according to the orthodox notion, Moses was the actual writer. It may not be improper, therefore, in this place to deal with the general question of the Mosaic authorship of Genesis, and in fact with the authorship of the Pentateuch, leaving the special illustrations arising on particular texts, to be dealt with as those texts are reached in their order. The question of disputed authorship is not confined to the first book, or first five books, but extends to the whole Bible. Spinoza says,* "Of the authors, or if you please, writers, of many of the books, we either know almost nothing, or we entertain grave doubts as to the correctness with which the several books are ascribed to the parties whose names they bear. Then we neither know upon what occasion, nor at what time those books were indited, the writers of which are unknown to us. Further, we know nothing of the hands into which the books fell; nor of the codicils which have furnished such a variety of reading, nor whether perchance there were not many other variations in other copies." Peyrere followed Spinoza, and said, "God suffered the autographs to perish, and only very imperfect copies to come down to us."† In the apocryphal book of Esdras, it is distinctly stated that in consequence of the "law being burnt,"‡ Esdras took five rapid writers, and shut himself up forty days, so that they might "write all that had been done in the world since the beginning," and it is alleged that these having "understanding given them by the highest," wrote in forty days 204 books of things "which they knew not." Eusebius, after speaking of the wonderful unanimity of the translators of the Septuagint, who were alleged to have been shut up in seventy-two separate cells and without inter-

‡ Esdras, c. xiv., v. 31

course to each other, to have made the whole translation in just the same words and letters, quoted from Irenæus—"Neither was it anything extraordinary that God should have done this, who, indeed, in the captivity under Nebuchadnezzar *when their scripture had been destroyed*, and the Jews returned to their country after seventy years, in the time of Artaxerxes, King of the Persians, *he inspired Esdras, the priest of the tribe of Levi, to compose anew all the discourses of the ancient prophets, and to restore to the people the laws given them by Moses.*"*

Bishop Colenso, after referring to a number of texts, which will be dealt with hereafter, says—"It is quite possible, and, indeed, so far as our present inquiries have gone, highly probable that Moses may be an historical character—that is to say, it is probable that legendary stories, connected with his name, of some remarkable movement in former days, may have existed among the Hebrew tribes, and these legends may have formed the foundation of the narrative. But this is merely conjectural. The result of our inquiries, as far as we have proceeded, is that such a narrative as that which is contained in the Pentateuch could not have been written in the age of Moses or for some time afterwards." Sharpe says of Genesis†—"We have no account of when this first of the Hebrew books was written, or by whom. It has been called one of the Books of Moses, and some small part of it may have been written by that great lawgiver and leader of the Israelites. But it is the work of various authors and of various ages." Michel Nicolas says,‡ quoting as his authorities Esdras, Irenæus, Jerome, and Augustine, "that there was a tradition generally received amongst the Israelites, that Esdras had been the restorer of the Mosaic writing, which had suffered great damage at the destruction of the Jewish kingdom, and which writings, according to some, had even been totally destroyed." "St. Jerome held it indifferent to regard the Pentateuch as the work of Moses, or as retouched and put

* Ecclesiastical History, book v., cap. viii., Cruse's translation, p. 171.

† Historic Notes on the Old and New Testament, Moxon, 1854, p. 6.

‡ Etudes critiques sur la Bible—Ancien Testament, p. 2.

in order by Ezra." Nicolas adds that although the Protestants have more firmly insisted on Moses as the author of the five books than have their Catholic brethren, yet it is amongst the Protestants that the first doubts were raised amongst the Christian public as to the authorship. In the earliest times of the reformers, Carlstadt declared that it was possible to sustain that Moses was not the author of the Pentateuch. In 1753 Dr. Astruc first urged the document theory referred to on page 12; he believed himself able to distinguish twelve different documents, of which he called the two principal the Elohistic and Jehovistic, from the recurrence of one of those names in the one and not in the other. Notwithstanding this, Astruc considered Moses the editor of Genesis, but argued that he had united in one volume a number of totally different and pre-existing documents. J. S. Vater elaborated Astruc's theory, and subjected the text to a much more careful and critical examination, the result of which was that he confirmed Astruc's opinion that several pre-existing and fragmentary documents were used in the composition of the Pentateuch, but he denied that Moses was the collector and editor or author of the five books, although he conceded that many portions might have been written by Moses. His opinion was, in fact, that the Pentateuch was made up of various documents imperfectly and sometimes improperly joined together. Dr. Colenso,* following the German school, has elaborated the document theory more fully than any other English writer, and concludes that the early chapters of Genesis must have had different authors. The Rev. Dr. Giles argues that the internal evidence furnished by the Pentateuch, shows that Moses is not its author, and that external evidence obtained from various sources leads to the same conclusion.†

Kurtz,‡ writing to prove that the whole Pentateuch as at present existing is from the hand of Moses, at last admits that the results of his examination have convinced him that several authors have taken part in the compostion of the Pentateuch. Ewald, who commenced by asserting one author for Genesis, now admits that more than one hand

* Pentateuch, part iv., cap. iii.
† Hebrew Records, p. 118.
‡ Colenso, part iv., p. 15.

may be traced in the book. Delitzch, while contending for Moses, admits other authors and the employment of pre-existing documents. Spinoza distinctly declares that the original writings of Moses [if they ever existed] are no longer extant, and that the present books of the Old Testament are a selection from a greater number finally put together, and approved by a Council of Pharisees, so that it depended on the votes of certain Rabbis whether or no a particular Hebrew Book was or was not God's revelation to his people. It is quite certain that if Moses wrote the Pentateuch he did not write it in the square-letter Hebrew, which is comparatively a modern language, and which did not exist in his time. It is not contended that any other language was used by Moses, and there is no pretence for carrying modern Hebrew, or any proof in favour of carrying ancient Hebrew as a language with written characters to such a period as that assigned to Moses. It is hardly possible that any work so voluminous as the Pentateuch could have been graven on stone in hieroglyph and carried about on the Levite's shoulders in the ark, yet this is the only depository assigned to the Mosaic books.

De Wette says—"Without doubt it (the ancient Hebrew) originated in the land (of Canaan), or was still further developed therein after the Hebrew and other Canaanitish people had immigrated thither from the mother country"*—and he regards Hebrew, Arabic, and Aramean as branches from a common stem. In what language, then, is Moses to be supposed to have written? Some of the Talmudists taught that the ancient Hebrew language became entirely extinct during the captivity. Genesis itself does not speak of writing amongst the patriarchs; on the contrary, remarkable events were chronicled by the help of heaps of stones, trees, altars, &c., which were named after the events. The first allegation of writing is on the tables of stone, but surely this, if written, was not in Hebrew characters. The Hebrews had been slaves to the Egyptians, and might have gathered from them some of the hieroglyph lore of that age, but surely nothing more can be claimed for the ignorant slaves than was in use amongst their educated masters. De Wette

* De Wette on the Old Testament, part 2, secs. 30 and 35.

says*—"The opinion that Moses composed these books is not only opposed by all the signs of a later date, which occur in the book itself, but also by the entire analogy of the history of Hebrew literature and language."

Chap. vi.—"The sons of God seeing the daughters of men that they were fair, took to themselves wives." Amongst all peoples, or nearly all, the mythologies delight in the love of gods and women, and men and goddesses. Voltaire says—"No nation has ever existed, unless perhaps we may except China, in which some God is not described as having had offspring upon women. These corporeal Gods frequently descended to visit their dominions upon earth; they saw the daughters of men, and attached themselves to those who were most interesting and beautiful; the issue of this connexion between Gods and mortals must, of course, have been superior to other men, thus giants were produced." The incarnation of Jesus, in consequence of the visit of the Angel Gabriel to the Virgin Mary, is but another phase of the same myth. The Greek and Hindoo mythologies furnish similar examples.

Verse 3.—"My spirit shall not always strive with man for that he also is flesh." Bellamy says that this translation makes it appear that God is flesh, and he renders it—"My spirit shall not strive with man for ever, because that he moreover is flesh." The Douay puts it—"My spirit shall not remain in man for ever, because he is flesh." Kalisch translates it—"My spirit shall not always preside in man while he is also flesh." The Breeches Bible gives—"My spirit shall not always strive with man, because he is but flesh." Which of these is the correct translation? That the spirit of God, the all-powerful, should strive with finite man for any period seems absurd.

Verse 4.—The "giants" of this verse are translated by Bellamy into "Apostates." The word is נְפִלִים (NePheLIM) from Nephel, "to fall," and might be translated "fallen ones."† Bellamy says—"The Septuagint translate the word by *gigantes*, which means earthborn, but the translators, without attending to the original word, have trans-

* Books of Moses, sec. 163.

† Gesenius' Hebrew Lexicon, 537; Parkhurst's do., 458; Simonis, 1036; Bellamy, p. 36.

lated it by "giants." The translators and revisors have followed the Greek and the Vulgate, which accounts for the errors in all the modern translations.

Verse 6.—"And it repented the Lord that he had made man on the earth, and it grieved him at his heart." The Douay Bible puts in a foot note—"God, who is unchangeable, is not capable of repentance, grief, or any other passion. But these expressions are used to declare the enormity of the sins of men, which was so provoking as to determine the Creator to destroy these his creatures whom before he had so much favoured. In Numbers, c. xxiii., v. 19, it says—"God is not a man, that he should lie; neither the son of man, that he should repent: hath he said, and shall he not do it? or hath he spoken, and shall he not make it good?" The epistle of James, c. i., v. 17, speaks of the "Father of lights, with whom is no variableness, neither shadow of turning." In Malachi, c. iii., v. 6, we find—"For I am the Lord, I change not." Bellamy translates the verse 6 above quoted—"And Jehovah was satisfied that he had made the man on the earth, notwithstanding he idolised himself at his heart," and he urges at considerable length that the words "repented" and "grieved" ought not to be in the text.* It is useless to do more in this place than regret that there should be so much room for difference as to the meaning of Hebrew words, when our salvation is said to depend on the rightly understanding their signification. Taking the text as it stands in our version, it is hard to understand how God, the immutable, could be affected to grief by an event. It is the knowledge of an event which causes grief; but if God be omniscient, he always knew of man's wickedness, and was therefore always grieved by it, and if the foreknowledge of man's wickedness caused God to repent that he had made man, then, as God's knowledge is unvarying, it must have caused God to repent that he was to create man eternities of ages before he actually created him.

It cannot be forgotten that if God made man, he also created all his surroundings, and must, if all-wise, have foreknown the effect these would produce on man's conduct.

---

* New Translation, p. 37

Either God had not the power to arrange things differently, in which case he is not omnipotent; or he was careless as to man's well-being, in which case he is not all-good.

Verse 7.—That God should repent that he had made the beasts, birds, and creeping things, and should determine to destroy them, because man had acted wickedly, is a most monstrous supposition, if God is to be considered as just and good. The threat of destruction does not, in form of words, include the fish of the sea, nor do they appear to have been considered by the writer of this portion of Genesis as destroyed by the deluge. Why should there be an exception in favour of the fishes? It is remarked by many critics that the "fish also in the rivers and fresh-water lakes must almost all have died, as soon as the salt-water of the sea broke in, and rendered them brackish. And, as the flood still increased, and the waters of the sea began to lose their saltness, the fish in the sea and the shellfish on the shore must also have perished. The writer of Genesis certainly did not anticipate the destruction of the fishes; for he makes no provision for the preservation of any of their species.

Kalisch confirms this, and adds—"It has been conjectured that the spawn of fishes might have been preserved, even if the living individuals perished; but the spawn would, in an universal deluge, have lost its vitality, or have developed into fishes long before the expiration of the year; so that these individuals also would have perished." In our version verse 7 ends with the words, "For it repenteth me that I have made them." Bellamy translates it—"Yet I am satisfied that I have made them."

Verse 14.—"Make thee an ark of gopher-wood: rooms shalt thou make in the ark, and shalt pitch it within and without with pitch." Kalisch, in thus agreeing with Genesis, p. 734, makes the word קִנִּים (KeNIM) "cells," rendering it—"In cells shalt thou make the ark." The word is plural, signifying some hollow receptacles, as nests, cells, cabins, &c. (See Parkhurst, p. 645.) The Douay puts it—"Thou shalt make little rooms in the ark." If these were to divide the animals, the space would be much diminished thereby. Bellamy declares, p. 41, that the word *Kenim* only means the two rooms for sacrifice; and he renders this

verse, "Make for thee an ark of the wood of gopher; rooms shalt thou make in the ark: for thou shalt expiate in it, even a house, also with an outer room for atonement." Our translators give "pitch within" and "pitch without," for that which Bellamy renders "sacrifice" and "atonement." Bellamy writes in wrath, charging the error on imperfect translations which grew from bad to worse until the time of Jerome, who, in the fourth century, endeavoured with the help of a Jew who did not understand Latin, to amend the earlier Latin versions.

He adds*—"How far he succeeded in removing the errors of the first translators, we are all judges: for, from the copy of Jerome the Latin Vulgate made its appearance; and from this contaminated source all the European translations have been made—for sixteen centuries no translation of the sacred Scriptures has been made from the original Hebrew only. Even in the reigns of Elizabeth and James, when the old translation was revised, no appeal was made to the Hebrew." The word which is always used, and which is the proper word for pitch, is זֶפֶת (ZePeTh) used twice in Isaiah, xxxiv. 9—"And the streams thereof shall be turned into pitch, and the dust thereof into brimstone, and the land thereof shall become burning pitch," and once in Exodus, c. iii., v. 2. The word כֹּפֶר (KePeR), which the translators have rendered pitch, is not thus translated in any other part of the Bible."

What a curious language this Hebrew, if "atonement" may be converted into "pitch," or *vice versa!* The wood of the ark would be but a fragile enclosure to many of the animals, who, during a year's imprisonment therein, would gnaw a considerable number of holes in various parts of the vessel.

Verse 15.—"The length of the ark shall be three hundred cubits, the breadth of it fifty cubits, and the height of it thirty cubits." Hugh Miller† makes the ark 450 feet long, 75 feet broad, and 45 feet high. Dr. Kitto increases this to

* New Translation, p. 41. Jerome, quoted by De Wette, says—"For the most part among the Latins there are as many different Bibles as copies of the Bible, for every man has added or substracted, according to his caprice, as he saw fit."

† Testimony of the Rocks, p. 321.

547 feet in length and to 96 feet in breadth. Kalisch says, "The cubit is the length of the forearm from the elbow to the extremity of the longest finger." It is unquestionable that if the dimensions above given are arbitrary—that is, if the ark were 50 cubits broad in every part from end to end —then the ark as a floating vessel, fit to swim out such a deluge, is simply architecturally impossible. Then that Noah, even with the assistance of his family, could construct the ark, and that when constructed it would contain all the animals and their food, are statements contradicted by the probabilities of the case. The ark was to contain one pair of every unclean species, and sevens or seven pairs of every clean species.* Now there are already known upwards of 1600 species of mammalia, including at least two distinct kinds of elephant, so that there must have been at least four elephants in the ark; there are seven different species of rhinoceros, so that at least fourteen of these bulky animals must have been present. The bison, buffalo, and ox furnish twenty species of huge animals, of whom either 140 or 280 (seven, or seven pairs) representatives were to be contained in the ark; the sheep, 27 species, either 189 or 378; the goats, the same as the oxen; the deer, 51 species, give either 357 or 714; antelopes, 48 species, either 336 or 672. These are only a few of the illustrations as to large bodied animals, and might be enlarged with the various kinds of horses, lions, tigers, &c., the whole forming an enormous sum total. Then there are the birds, some of the large winged species requiring an extremely wide space to occasionally stretch themselves in. Then as to the insects, which were estimated in 1842 to consist of no fewer than 550,000 species. How could these all be brought to one centre and kept there? Many have no wings, and but feeble powers of locomotion, many live only a few hours or days after obtaining their wings, and there are myriads able to subsist only on plants found in limited botanic centres. To invent a miracle to answer the objection is but adding a difficulty rather than removing one. Some of the aquatic birds would habitually require water, yet no reservoirs or swimming tanks are provided. Many animals live only in a

* Kalisch, Genesis, p. 211. Miller, Test. of Rocks, p. 328, etc.

certain zone, and perish if suddenly transported to an entirely different climate. Were all the laws of physiology interfered with to enable the animals to live? No such miracle is recorded.

Verse 16.—"A window shalt thou make to the ark, and in a cubit shalt thou finish it above; and the door of the ark shalt thou set in the side thereof; with lower, second, and third stories shalt thou make it." Was there only one window to the ark? If yes, where was it placed, and what was its size? The Douay has, "In a cubit thou shalt finish the top of it," and this at first sight agrees with Bellamy, who says, "Moreover of a cubit thou shalt finish it at the summit;" but Bellamy declares that it was the ark and not the window which was to be narrowed to a cubit at the top of the roof. One window, wherever placed, and of whatever reasonable size, could not possibly light the whole three storied vessel, even tolerably, and yet one window, apparently a cubit wide at the top, closed, I suppose, during the rain, and one door, necessarily closed during the flood, are the only apparent means of ventilation and light. The door was most certainly closed, for we are told that God shut Noah in the ark. The window appears as certainly to have been closed for forty days until Noah opened it to send out the raven.

Verses 19 and 20.—"And of every living thing of all flesh, two of every sort shalt thou bring into the ark, to keep them alive with thee; they shall be male and female. Of fowls after their kind, and of cattle after their kind, of every creeping thing of the earth after his kind; two of every sort shall come unto thee, to keep them alive.' These should be compared with chap. vii., verses 2 and 3:—"Of every clean beast thou shalt take to thee by sevens,* the male and his female; and of beasts that are not clean by two, the male and his female. Of fowls also of the air by sevens, the male and the female; to keep seed alive upon the face of all the earth." If taken as written by one pen, these passages contradict each other as to the number of animals to be taken into the ark; and those who support the document theory refer to these verses as illustrations

* The Douay has "seven and seven" of the clean.

of the doctrine that several documents, and these of an incongruous character, have been used in the compilation of Genesis. The seven and two story is alleged to be a fragment of the Jehovah Document, and the "two of every sort" a portion of the Elohim Document.* Kalisch says, "But after even it had been mentioned that Noah had executed all that God had commanded him (vi. 22), the text not only repeats in the first ten verses of the seventh chapter several of the statements already distinctly made, but, what is more important, is in one point irreconcilable with the preceding narrative. Noah was commanded to take into the ark seven pairs of all clean, and one pair of all unclean; whereas he had before been ordered to take one pair of every species, no distinction whatever between clean and unclean animals having been made. All the attempts at arguing away this discrepancy have been utterly unsuccessful." It is puzzling, as the animals were not divided into clean and unclean until the commandments given to Moses, how Noah was to distinguish between the kinds.

Verse 21.—"And take thou unto thee of all food that is eaten, and thou shalt gather it to thee; and it shall be for food for thee, and for them." This injunction to Noah is a most extraordinary one: he is to go out through the length and breadth of the earth and gather food for himself and the pairs saved. Did he select spare animals as food for the carnivorous beasts, birds, and reptiles? If yes, how is it these are not mentioned? Did he and his three sons go out to collect fish for those birds and beasts, whose diet they are? If yes, how did he preserve them in the ark? Did these animals intended for food come to Noah voluntarily? If yes, where is this miracle alleged? Or did he and his family, in addition to their ark-building labour, have to hunt and fish in order to procure more than twelve months' food for the animals saved from drowning? Then for the birds and other animals whose food consists of the moths, grubs, worms, and other members of the insect kingdom. Did Noah go out to collect these? If yes, where were all these living things intended for food stored when collected, taking into account that some members of the

* De Wette, Books of Moses, § 150. Kalisch, Genesis, p. 183

food store would be inclined to eat their fellows? Then the vegetable food, the green and preserved fodder, the growing vegetables and flowers for those insects and birds, which cannot live without them. How are these accounted for? There is no mention of a garden or plantation in the ark, or of water provided to quench the thirst of the animals preserved. Priaulx says—"The Elohim gives Noah instructions to build an ark, and instructions which pretty clearly show that Noah knew nothing of shipbuilding; and yet follow these instructions to the letter—build the vessel to order and load it as this ark was loaded, and it would not, and could not, float; unless, indeed, you built it on a raft. But, however, let the ark be built—let it float—how then do you provide light and air for the crowds within the cells of its several stories? How do you cleanse off the impurities of this Augean stable? And how, with a crew of eight persons only, do you manage daily to supply so many animals, all so different in their habits, with their just proportions of wholesome food?"

Chap vii., v. 11.—"In the six hundredth year of Noah's life, in the second month, the seventeenth day of the month, the same day." Josephus makes the flood commence either 600 or one thousand years and ten days later than our Bible; for he says it began on the 27th day of the month and 2656 years from Adam. In his additions of the ages immediately after he only makes this 2256 years.* In dealing with the chronologies, Josephus quaintly observes —"Let every one look upon them as he sees fit."

Verse 11.—"The fountains of the great deep broken up, and the windows of heaven were opened." The Douay makes "windows" into flood-gates. It is evident that the writer thought of the waters above the firmament (heaven), which, according to him, could only be let down on to the doomed earth by opening some window or flood-gate through which they might pass (see page 14). The same language is used in chap. viii., v. 2.—"The fountains also of the deep and the windows of heaven were stopped, and the rain from heaven was restrained." The notion of supplies obtained from the deep to deluge the earth is charming in its sim-

* Antiquities, Book 1, cap 3

plicity—as if emptying an ocean or lake, however deep, could do more than result in a partial and temporary submergence of other land than the ocean-bed left bare by the receding waters. The idea of windows in heaven to let out the water is scarcely less absurd.

Kalisch, in stating the difficulties of the deluge story, says*—"The waters are represented to have covered the earth to the height of fifteen cubits above the tops of the mountains. This would require, at least, eight times the aggregate quantity of water contained in all the seas and oceans of the earth. But the rain can, even if the clouds at once discharge all their stores, cause a water-sheet of only a few inches in thickness; and the sea might spread its floods over the earth, but it does not thereby increase the actual amount of water. The sudden addition of so great a mass of water would materially change the action of gravity upon the earth; the mutation of the axis would be varied, and not only the orbit of our planet, but the whole solar system must be deranged." From whence was the water to effect an universal deluge derived? From the fountains of the deep it could not come, from the windows of heaven it did not come, and the Bible names no other source. Supposing the deluge to have happened, what then became of the water? They "returned from off the earth," "decreased continually," and "dried up," so says the Bible. But where did the waters go, and how? As to this the Bible is silent, and without a miracle, the draining away is as impossible as the deluge.

Verse 16.—"And the Lord shut him in." The Douay has —"And the Lord shut him in on the outside." Kalisch puts it—"And the Lord closed behind him." Bellamy says—"When the ineffable Deity is mentioned, such undignified and familiar language does not become the creature; it is bringing the infinite Jehovah to a level with man. It must appear obvious that there was no necessity for such a translation: as the man, under whose direction the ark was made, was capable of shutting the door of the ark." The word translated "shut," Bellamy renders as "delivered."

* Genesis, p. 211.

Verse 11.—"And the dove came in to him in the evening; and, lo, in her mouth was an olive leaf pluckt off; so Noah knew that the waters were abated from off the earth." Kalisch says—"Fresh olive leaf." Colenso says*—"The difficulty, that so long an immersion in deep water would kill the olive, had, no doubt, never occurred to the writer, who may have observed that trees survived ordinary partial floods, and inferred that they would just as well be able to sustain the deluge to which his imagination subjected them. Of the enormous pressure that would be caused by such a superincumbent mass of water, he was, we may be sure, entirely ignorant. What would be the state of an olive-tree, after having been buried for months in water, some thousands of feet deep, without its natural supplies of air and light?"

Kalisch observes that "There are trees still existing older than the date of the Noachian Deluge. If they had been submersed in water, they would scarcely, even had they outlived that catastrophe, have maintained the strength necessary to carry their existence through so many millenniums. Of the 100,000 species of known plants, very few would survive submersion for a whole year; at least, three-fourths of them would necessarily have perished in an universal deluge. It is agreed by all botanical authorities, that, though partial inundations of rivers do not long or materially change the vegetation of a region, the infusion of great quantities of salt water destroys it entirely for long periods. But the earth produced the olive and the vine immediately after the cessation of the deluge." It is hard to understand why Noah sent out the raven and the dove. The ark was stranded on a mountain, from whence Noah might have daily seen the recession of the waters. He could have learned all, and much more, by the aid of his eyes than the raven and dove could tell him.

The following extracts from Kalisch seem unanswerable:—"The surface of the earth is, in many vast tracts, covered with accumulations of soil, sand, and gravel; they have no connection with the rock formations of the former ages; and are generally known under the name of *diluvium*, since they

* Part 4, p. 18.

are believed to be the result of some vast flood. But these aggregations were indisputably produced by *many* currents of *different* force, and from *different* directions; they are the result of *different* ages, and are all of a *local* extent; they have in some cases been washed away by some new current; they are in other instances overlaid by more recent drifts; they are produced by the long action of the floods working from deep waters, by currents, eddies, and tides; they are, in fact, nothing but a part of the ordinary and uninterrupted process by which the continents have gradually formed and been elevated during unnumbered ages. There is, therefore, no probability whatever that this diluvium is the result of a transitory and general deluge. . . .

"A temporary deluge could never have produced the geological changes observable in the superficial deposit. The animals whose remains have been discovered in the 'mammalifer ous crag,' not only of Great Britain but of Northern Siberia, the elephant, the rhinoceri, the hippopotamus, the hyenas and tigers, cannot have been transported thither by the flood from the intertropical regions; this is not merely *improbable* on account of the vast distance of four to five thousand miles which separate those respective lands; or on account of the great numbers in which they are found in the same localities; or on account of the remarkable circumstance, that the *shed* antlers of the great Irish Elk, which exceeded in bulk and size the largest horses, and measured upwards of ten feet in height, occur everywhere, and mostly in an uninjured state, *together with* the bones and skeletons of that animal: but it is rendered *impossible* by the facts that they are extant in beds of various ages; and still more by the observations of comparative anatomy; for the latter has shown beyond a doubt that those northern animals were very widely different, in their internal structure and their external provisions, from the same species now living in the southern climes; the difference is greater than between an ass and a horse, or between the dog and the wolf; and it is certain beyond contradiction that those animals lived and died in the northern countries in which their remains have been found. It is known that the cavern of Kirkdale, in Yorkshire, contains the bones and remains of twenty-four species of animals, from the pigeon and the mouse, to the

hyena, the hippopotamus, and rhinoceros. But the opening of the cavern is not larger than four feet; the huge bones cannot, therefore, have been washed thither by the tropical waves; they are, besides, almost all of them *gnawed*, and show the clear marks of teeth, especially of hyenas', which in that haunt probably devoured their prey. . .

"The violent irruptions of water, and the up-heavings proceeding from the interior of the earth, have alternately, and an indefinite number of times, immersed and elevated the same tract of land; every new geological period is marked by such an event; the same part of the earth's surface was more than once sea and dry land; but the last revolution of this kind occurred before the existence of man on earth; in no stratum of the earth, nor even the very highest tertiary beds, have remains of human bodies or of human works been discovered; they occur only in the loose sand and gravel which cover the surface. It has, indeed, been alleged that human bones have been found in earlier rocks. But those instances are uncertain; and have been declared inconclusive by almost all geological authorities. Man was called into being after the earth had carried its development forward to its present state. No deluge destroyed, therefore, a wicked and disobedient race of men.

"The Biblical narrative relates that all the species of animals were preserved by Noah, and that they later propagated themselves; it implies that the deluge was no violent convulsion or catastrophe, that it did not change the aspect of nature; although it destroyed the living beings on the earth, it left no trace of its existence on the surface or in the interior; it was an event of the existing creation; the vegetable kingdom remained, essentially, uninjured; and the soil was soon afterwards fit for cultivation. . . .

"The older lateral cones of Mount Etna are, after a moderate computation, at least, twelve thousand years old; they are composed of the ordinary incoherent materials; and yet they show in no parts marks of denudation; they retain in integrity their original shape; a devastating deluge cannot, therefore, have passed over them within that period.

"In the centre of France, in the provinces of Auvergne and Languedoc, are still the remains of several hundred volcanic hills and mountains. The craters, some of which

are higher than that of the Vesuvius, ejected immense masses of lava to the heights of fifty, one hundred, and many more feet, and spreading over many miles of area. Distant periods separate different eruptions. Distinct mineral formations, and an abundance of petrified vegetable and animal life, bespeak an epoch far anterior to the present condition of our planet. And yet, since these volcanoes ceased to flow, rivers have worked their way through that vast depth of lava; they have penetrated through basalt rocks one hundred and fifty feet in height, and have even considerably entered into the granite rocks beneath. The time required for such operation is immeasurably slow. Centuries are required to mark the least perceptible progress. The whole period, which was necessary for the rivers to overcome that hard and compact mass, is large almost beyond the conception of man; all our measures of chronology are insufficient; and the mind stands amazed at the notion of eternal time. That extraordinary region contains rocks, consisting of laminated formations of siliceous deposits; one of the rocks is sixty feet in thickness; and a moderate calculation shows that, at least, eighteen thousand years were required to produce that single pile. All these formations, therefore, are far more remote than the date of the Noachian flood; they show not the slightest trace of having been affected or disturbed by any general deluge; their progress has been slow, but uninterrupted; even the pumice-stone, and other loose and light substances, with which many of those hills and the cones of the volcanic craters are covered, and which would have been washed away by the action of a flood, have remained entirely untouched."*

Kalisch thus sums up:—"Geological evidence denies the possibility of an universal deluge, both in general and especially within the last 5,000 years," yet he says—"It is impossible to read the narrative of our chapter without

* "*Comp. Cuvier*, Discours sur les Révolutions de la Surface du Globe; *Buckland*, Feliquiæ Diluvianæ, and Bridgewater Treatise; *De la Beche*, Geological Manual, p. 172, *et. seq.*; *Murchison*, Silurian System, cap. 36; *Hitchcock*, Geology of Massachusetts, p. 148, *et. seq.*; *W. J. Hamilton*, Tour in Asia Minor, vol. ii., p. 386; *Lyell*, Principles of Geology, vol. iv., p. 219; *Pye Smith*, Geol. and Script., pp. 90—149; *Hugh Miller*, Testimony of the Rocks, pp. 306—350."

being impressed that the whole earth was destined for destruction. This is so evident throughout the whole of the description, that it is unnecessary to adduce single instances. Such expressions, as 'all the mountains were covered by the floods,' are asserted to mean a great part of them. In one case, the universality does not lie in the words merely, but in the tenor of the whole narrative. *All* flesh had corrupted its way before the Lord upon the earth (v. 12); therefore, the *whole* human race was to be destroyed with the earth. The text admits of no other acceptance but a universal flood." The text speaks of the whole earth, and of everything wherein was the breath of life. The question stands thus:—"Geology teaches the impossibility of a universal deluge since the last 6,000 years, but does not exclude a partial destruction of the earth's surface within that period. The Biblical text, on the other hand, demands the supposition of a universal deluge, and absolutely excludes a partial flood."

It has been admitted by many that the deluge could not have been universal, and these have sought to urge that the Bible only teaches a partial deluge, and when you read to them, chap. vi., v. 17—"And, behold, I, even I, do bring a flood of waters upon the earth, to destroy all flesh wherein is the breath of life, from under heaven; and everything that is in the earth shall die." Chap. vii., v. 4—"Every living substance that I have made will I destroy from off the face of the earth." Verses 21, 22, and 23—"And all flesh died that moved upon the earth, both of fowl, and of cattle, and of beast, and of every creeping thing that creepeth upon the earth, and every man. All in whose nostrils was the breath of life, of all that was in the dry land, died. And every living substance was destroyed which was upon the face of the ground, both man, and cattle, and the creeping things, and the fowl of the heaven"—they reply, but the whole earth may not, at the date of the deluge, have been inhabited by man and the lower animals, and, therefore, the deluge need only have extended to the parts occupied by animal life; but this answer will not suffice if you read chap. vii., verses 19 and 20—"And the waters prevailed exceedingly upon the earth; and all the high hills, that were under the whole heaven, were covered. Fifteen cubits up-

ward did the waters prevail: and the mountains were covered." A deluge, which prevailed above the top of Ararat for 150 days, must have extended to the whole earth. The words of the text are as express in favour of the universality of the deluge as they can possibly be.

Chapter viii., v. 4—Colenso argues* that, as the summit of Ararat is 17,000 feet high, 3,000 feet above the region of perpetual snow, it would have been impossible for Noah, his family, and the animals to have remained there for more than seven months—viz., from the 17th day of the 7th month, to the 27th day of the second month of the following year. A miracle alone could have prevented all from being frozen to death. This objection would be the same whether the deluge were partial or universal.

Chapter viii.—"And Noah builded an altar unto the Lord, and took of every clean beast, and of every clean fowl, and offered burnt-offerings on the altar." It is hardly possible to imagine a more revolting picture than this. According to the text, God had just finished the act of destroying, by a fearful deluge, not only the whole human race, with the exception of Noah and his family, but also the whole of the animal kingdom, save the few of each species saved in the ark. And yet more life is now destroyed in sacrifice to the Deity who has so recently consummated his vengeance by the destruction of every creature outside the ark wherein was the breath of life. The earth must yet have been strewed with decaying carcases; the whole world must have been one vast slaughterhouse, and yet the sacrifice is not enough. The fumes of the burning victims are to afford pleasure to the infinite Deity.

Verse 21.—"And the Lord smelled a sweet savour; and the Lord said in his heart, I will not again curse the ground any more for man's sake; for the imagination of man's heart is evil from his youth: neither will I again smite any more everything living, as I have done." Instead of verse 21, Bellamy translates—"Jehovah accepted the incense of rest; moreover, Jehovah said in his heart, I will neither consume nor curse again the ground for the transgressions of men, though the imagination of the heart of man be evil

* Part 4, p. 196.

from his youth. No. I will neither consume, nor smite again all living, as I have done." That the Lord should smell a sweet savour is an idea worthy the Hebrew records, and the statement deserves to accompany those in which God is represented as waxing wrath, coming down from and going up to heaven, walking and dining with Abraham, wrestling with Jacob, and carried about on the top of a box by the Levites. Sir William Drummond, in the preface to his "Œdipus Judaicus," says—"The reason which is given why the Lord would not curse the ground any more appears to me to be very strange. God smelled a sweet savour, and because his olfactory nerves were tickled, he would not curse the ground any more." According to our version the whole deluge is inefficacious, man's heart is still evil, and the punishment having been entirely useless as a reformatory measure, God determines not to destroy mankind again in such wholesale fashion.

It is impossible to dismiss this deluge story without some remarks on its utter failure as a remedial measure, if so intended by Deity, and on its terrible brutality, if regarded only as an act of divine vengeance. Genesis represents man as created good; yet in a short time, influenced by the surroundings prepared by God, man becomes so bad, that God grieved at his heart—repents that he has made him, and to relieve himself from this source of grief, determines to destroy man from the face of the earth, together with every living thing, save those protected in the ark.

But the human beings saved from the deluge were by no means without taint; they were liable to the same vices, and in the end, they and their descendants actually committed as great crimes, and this result must have been known to the Deity if all-wise. God confesses as much when he resolves that he will not again destroy the earth for man's evil imaginations. The deluge was as useless as it was cruel, and does not present any feature acceptable to a humane man. Those saved in the ark are evidently preserved not from mercy, but to prevent the necessity for another creation of the animal kingdom.

Chap. ix., verse 4.—"But flesh with the life thereof, which is the blood thereof, shall ye not eat." The Douay translates this saying, "that flesh with blood ye shall not

eat." The Breeches Bible says, "But flesh with the life thereof, I mean, with the blood thereof." Bellamy renders it, "But flesh with his soul, his blood." Kalisch gives —"Only flesh with the soul, which is its blood." The word translated *life* in our version is נֶפֶשׁ (Ne Phe Sh,) the same word which in c. ii., v. 7., is there translated *soul* (see page 42.) Either the Bible must be taken to teach that beasts have souls as well as man, or that man has no other life in kind than have the beasts. The Roman Catholics avoid the difficulty by deliberately omitting the words "which is the life thereof" altogether.

Priaulx says,* "*In the second chapter* Jehovah Elohim breathes into man's nostrils, and the plastic clay becomes a living soul. The life then of the man made by Jehovah Elohim, of the dust of the ground, seems to have been in the breath, *according to this passage*, however the life of the man made by the Elohim, and made in his image, is in the blood." Both these representations as to human life may be erroneous, but both cannot be right.

Verse 5.—"At the hand of every beast will I require it." If there is any meaning contained in these words, they teach that God will hold the beast responsible for any destruction of human life. Are beasts accountable? If yes, are birds, fishes, and insects? Or may a rattle-snake or a shark destroy human life with impunity, while God punishes the lion, tiger, and leopard?

Verses 9 and 10.—Did God make a covenant with the beasts? Do the beasts understand the covenant made with them? Voltaire, and others, have made merry over this covenant. But why, if serpents and asses can talk, as the Bible makes them, should not they be partners to a covenant?

Verse 13.—"I do set my bow." Kalisch, Bellamy, and the Breeches Bible give, "I have set my bow," the Douay "I will set my bow." The Hebrew must be a glorious language, if past tense, present tense, and future tense are so easily mistaken. Our version and the Douay both convey the impression that the rainbow had not existed before the time of Noah; that prior to the era of Noah, men had been without the brilliant coloured arch, which now always makes its appearance if the sun is shining brightly, while

* Questiones Mosaicæ, p. 216.

rain is falling in the region of the sky opposite to the sun. The theory of the refraction of the sun's rays was probably unknown to the writers of Genesis.

Horne* says it is objected that "as the same causes produce the same effects, the rainbow must have existed before the flood." Answer. So it may, but not as a sign of the covenant. The Hebrew word which in Genesis ix., 13, is rendered set, ought to be rendered *appoint*, in which case the passage would run thus:—"I do appoint my bow in the cloud to be a sign or token of the covenant between me and the earth."

Colenso says†—"The writer evidently intends to account in this way for the first appearance of the rainbow. This is the plain meaning of the language here used, which must be twisted to imply that, though the rainbow had often been seen before, as it must have been if there was rain and sunshine together before the deluge, it was first, after the deluge, made the sign of peace between God and man. The writer supposes it was then first set in the clouds after the deluge."

Verse 21.—Noah's drunkenness and Ham's offence so soon after the deluge, have been urged as some evidence that the family saved from the deluge were not quite free from spot or blemish. Bellamy denies that Noah was in his *tent*, and says that the Hebrew text represents Noah in the tabernacle. According to Parkhurst, he word אהלה (AELE) certainly does not mean *his* tent.

There seems great injustice in Noah's curse against Canaan, who, according to the text, is unconnected with his father's offence. Ham, the real culprit, escapes uncursed.

Bellamy in the notes to his translations, denies that Noah was drunken.‡ He denies that Noah was in his tent at all. He denies that Noah was uncovered, and he denies that Ham saw his father's nakedness. He renders verses xxi. to xxiv. thus:—"Then he drank of the wine and was satisfied, for he himself opened the most inward part of the tabernacle, where Ham, the father of Canaan, exposed the symbols of his father; which he declared to his two brethren without.

* Introduction to the Bible, p. 18.

† Part 4, p. 223.

‡ Genesis, p. 46

But Shem, with Japheth, had taken the vestment, which both of them set up for a portion; thus they afterwards went, and concealed the symbols of their father with their faces backward, but the symbols of their father they saw not. When Noah ended his wine, for he knew that his younger son had offered for himself."

Chap 10.—There is very strong reason to doubt whether any of the names given in this chapter are or ever were the names of individuals. Some of them are certainly by the text itself not meant for individual names at all, and others are plural nouns, more fairly applicable to the inhabitants of a district, than to one individual. Josephus suggests that the countries took their name from the first inhabitants, but even the adoption of this suggestion will not remove the difficulty, that several of the words used as proper names of individuals, are certainly plural, implying that the genealogical table of this chapter was an *ex post facto* endeavour to account for such nations as were known to the compiler of the table.

Gliddon's valuable treatise on the tenth chapter of Genesis, contained in the "Types of Mankind," and Kalisch's elaborate Essay, in his commentary on Genesis, are too long to quote here, but will well repay perusal.

Verse 3.—Riphath ריפת (R I Ph*e* Th) in 1 Chronicles, c. i. v. 6, is called Diphath, דיפת (D I Ph *e* Th) but the translators, to avoid unpleasantness, have written Riphath in both cases. Some of the editions of the Bible have in the margin of Chronicles "or Diphath, as it is in some copies," v. iv. Dodanim דדנים (D*e* D*e* N I M) in the margin of Genesis is written "or as some copies read it Rodanim." In verse vii. of 1 Chronicles, chap. i., the word is רודנים (R U D*e* N I M) so that here two letters are different in the Hebrew text; yet the translators have in Chronicles written it Dodanim, to make it agree with Genesis, though they have the less reason for this, because if they followed the sound given to the letter in the word Iavan in verse vii. of Chronicles, they ought to have written Ravadanim. This criticism of mere mistakes of letters would be without value were it not even yet contended by many of the clergy, that the Bible is God's inspired word free from error, and to confute this, it is necessary to expose the many trivial as well as

grave blunders which abound as well in the Hebrew text as in the translation. It was often pretended that the text was guarded against the possibility of error by the precautions of the Masorites—this is simply untrue. They indeed counted the verses in the Bible, but their counting neither agrees with the Talmud nor with the authorised version. Before the time of the Masora, the text had been corrupted. The cabalists and others, to support their theories, had removed and misplaced consonants, and mangled words in the most capricious manner.* Since their era new errors have increased the confusion.

Spinoza, speaking of the Hebrew text, says—"The books of the Old Testament have by no means been so very carefully preserved by those into whose hands they fell successively, but that blemishes have crept into them," "that errors, blemishes, and mistakes have crept into Scripture, no one possessed of sound judgment can, in my opinion, deny."†

Verse 5.—"By these were the isles of the Gentiles divided in their lands; every one after his tongue, after their families, in their nations." What is meant by "isles of the Gentiles?" Kalisch translates it "isles of the nations." Bellamy, "countries of the Gentiles." The word translated *Gentiles* is, in the Hebrew, almost identical with the word at the end of the same verse translated *nations*. In Genesis c. xiv., v. 1, and Joshua, c. xii., v. 23, precisely the same word is translated *nations*.

Verses 8 and 9.—"And Cush begat Nimrod; he began to be a mighty one in the earth. He was a mighty hunter before the Lord; wherefore it is said, Even as Nimrod the mighty hunter before the Lord." Bellamy translates these verses—"Now Cush begat Nimrod; he prophaned to be mighty in the earth. He was a mighty destroyer, in the presence of Jehovah; concerning which thing it shall be said: Like Nimrod the mighty destroyer in the presence of Jehovah." He adds,‡ "As to the population of the world at this period, we have no certain or probable account given; it cannot be supposed that the families and names

* De Wette, vol. i. sec. 91.
† Tractatus Theologico Politicus, chap. ix., sec 32 and 34.
‡ New Translation, p. 52.

introduced made up the population of all the countries and cities mentioned. The population at this time must have been great, or he could not have made the four great cities here spoken of, the principal cities of his kingdom, for this is the meaning; תהי (Th E I) is not noticed in the common version (verse x.), which means *revived, caused to live, made famous,* as the principals of his kingdom, Babel, Erech, Accad, and Calneh." According to Kalisch excavations amongst the ruins of Babylon, give us Urukh, as reigning about B.C. 2230, or only 119 years after the deluge.* According to the Bible, there were only two generations between Noah and Nimrod, and yet the population is already so great that kings rule over great cities.

It is quite certain that the Hebrew does not, in verse xi., mean Asshur as a person, but as a place where Nineveh and the other cities were built. Kalisch renders verse xi., "out of that land he went forth to Asshur, and built Nineveh." Bellamy, "from this land he went forth to Assyria, and there built Nineveh." Our translators having undoubtedly translated the country into a man, it is a problem worthy solution on the part of the pious, whether the blunders such as this may be safely believed in by the ignorant, and rejected by the educated, without endangering their respective salvations.

Chapter x.—Volney† has a lengthy chapter in examination of this 10th c. of Genesis, in which he alludes to the name Javan in verse 2, which in the Hebrew is written יון (I U N) or (I O N), and which Volney and others identify with the Ionians, a colony alleged to have been established in Asia about eighty years after the Trojan war—that is, about B.C. 1130, being three centuries after the Book of Genesis was written, if Moses was its author. Volney argues that the word Nimrod, which, he says, has no meaning in Hebrew, signifies "the Star of Ethiopia"—Ethiopia and Cush being the same. In effect, Volney seeks to identify Nimrod the mighty hunter with the constellation Orion.

Chap xi., vv. 1 and 2.—That all the inhabitants of the earth should speak one language would not have been ex-

* Genesis. 288.

† New Researches, cap. 18 and 19. See Colenso, Part 4, p. 244.

traordinary, if the sole inhabitants were only the descendants of Noah for about five generations; but, in that case, this chapter, in order of time, should be prior to chap x., where verses 5, 20, and 31 speak of already existing diversities of language. Besides, the whole of the inhabitants of the world would hardly have been journeying from the East, after they had built the cities mentioned in verses 10, 11, and 12 of the previous chapter. Nor would a journey from Ararat to Shinar be exactly a journey from the east. It would be rather from north to south. These two verses of chap. xi. treat the whole human race then existing, as if but one tribe travelling from the east in search of some good camping ground which they find in Shinar. The marginal chronology of the orthodox version gives about 100 years between the deluge and the building of Babel; if before the birth of Peleg's son, it must have been less than 130 years. The marginal note to the Breeches Bible fixes it—"In the yeere an hundreth and thirtie after the flood," and, taking even a most extraordinarily rapid multiplication of the human race in an age where the first child was not born until the father had attained thirty, this would leave a very scant number of builders for so vast a structure as Babel. It is extraordinary that Noah, who is spoken of as a perfect man in Genesis, and whose faith is recorded in Hebrews, should not have made some remonstrance as to this Babel building. The text does not refer to him as concerned in the matter, yet, if the Bible be true, Noah must have been present at the time. Priaulx notices this, well remarking that Noah, as head and chief of the great human family, should have ruled it, controlling or influencing its counsels and directing its actions. The preceding chapter speaks of four cities, including Babel, erected in the land of Shinar, and of three other cities, including Nineveh, built in Assyria, yet here Babel itself is left unfinished; and if the story be true, the other cities could not have been founded at that time.

Verse 9.—"The derivation," says Colenso,* "of the name בבל (BeBeL) from the Hebrew בלל (BeLeL) *confound*, which seems to be the connecting point between the story and the tower of Babel, is altogether incorrect, the word being compounded either of 'Bel,' so as to mean House of Bel,

* Part 4, p. 268.

Court of Bel, Gate of Bel, or, perhaps, as some suppose, of EL or IL, in which case BabEL means Gate of God." If the above be true, and Colenso quotes in confirmation Delitzch and Professor Rawlinson, then the accuracy of the text is very strongly impeached. If Babel originally meant, and indeed still means, a place of the God Bel, then there is a misstatement in the words of the text, "Therefore is the name of it called Babel, because the Lord did there confound all the language of the earth." Herodotus expressly calls the Tower of Babel the Temple of Bel.* Volney,† after quoting from Ktesias as to the building of the walls and gigantic works of Babylon under Semiramis, and noticing that a Babel had been erected long prior, says that the circumstance of 2,000,000 men forcibly levied throughout the whole of the vast dominions of Semiramis wearing different dresses, speaking probably more than eighty different dialects, may have given rise to a fable of confusion of tongues. Volney denies that the word Babel signifies in the Hebrew *confusion;* he renders it, Palace of Bel. The calculations of Volney would carry back the ancient Tower of Bel or Belus to a period long anterior to the Noachian deluge.

Verse 4.—Josephus says that it was Nimrod who said he would be revenged on God, if He should have a mind to drown the world again, for he would build a tower too high for the waters to be able to reach. The text asserts that the inhabitants of the world declared their intention to build a tower, whose top might reach to heaven. The writer of this part of the Bible, ignorant of astronomy, does not seem to consider this heaven-reaching tower impossible, for he says that the Lord *came down* to see the tower, and expressed his opinion that the builders would carry out their intention. The God of Genesis does not seem able to see from heaven to earth, or to know what is going on amongst human kind without a personal visit to the scene of action. He is neither omnipresent, nor omniscient. Bellamy, who does not believe that God did inspire all men with new languages in the same moment wherein he caused each indivi-

* Parkhurst's Lexicon, p. 65, and Gesenius, p. 100. See also Eichorn's Simonius, p. 204.

† New Researches, Part 3, cap. 3 to cap. 7.

dual to forget every word of his old tongue, declares the authorised translation to be incorrect. He says,* "If we were to entertain no higher sentiments concerning it, than that of building a tower whose top should reach unto heaven, to avoid the fate of a second deluge, and which, to put a stop to, required the interference of God in a way inconsistent with every idea we can form of his attributes; then there would be an end to all rational religion, and the Bible would be brought to a level with the tales of the Persian *Soph.* He who, by omniscience, knows all things, who, by his omnipotence and omnipresence is present to execute his will, had no necessity to come down from heaven to confound their language." The phrase, "Let us go down," is a puzzling one for those believing in the unity of Deity.

Verse 12.—"And Arphaxad lived five and thirty years, and begat Salah." But, according to Luke, chap iii., vv. 35 and 36, it was Cainan and not Arphaxad who was the father of Salah. Josephus† and the Book of Chronicles concur with Genesis in excluding Cainan. The Septuagint inserts his name. Which ought we to believe of our authorised version, the Old Testament or the New? Or shall we follow the Septuagint version? Is a belief in the existence of Cainan material? If yes, how is the contradiction to be reconciled?

Professor Rawlinson‡ prefers the Septuagint as deserving most respect, because he says it is the version most commonly quoted in the New Testament; and, undoubtedly, those who believe Jesus to have been the son of God, or identical with God, ought to consider Jesus and his disciples as able to decide which version best represented God's revelation. But, in case the Septuagint is preferred to the Hebrew, then the believer must alter nearly the whole of his sacred chronology. Josephus disagrees in nearly every statement of the ages of the patriarchs. He makes Arphaxad 135 at Salah's birth instead of 35 as in our version; he makes Salah 130 at Heber's birth instead of 30; Heber 134 at the birth of Peleg instead of 34; Peleg 130 at the birth of Reu or Ragau instead of 30; and Reu or Ragau

* New Translation, p. 34.
† Antiquities, Book i., cap. 6.
‡ Aids to Faith, p. 252.

130 at the birth of Serug instead of 32; Serug 132 at the birth of Nahor instead of 30.

Verse 26—"And Terah lived 70 years and begat Abram." Verse 32—"And the days of Terah were 205 years, and Terah died in Haran." Chap. xii., v. 1—"*Now* the Lord *had* said unto Abram, Get thee out," &c.* Verse 4—"And Abram was 75 years old when he departed out of Haran." According to Acts, chap. vii., v. 4, this departure was after Terah's death, so that Abraham must have been 75 years old, at least 130 years after he was born. Kalisch suggests, following Usher and others, but contrary to the Bible, that Abraham journeyed to Canaan during the lifetime of Terah, and thus avoids the difficulty† "which the Samaritan text endeavours to remove by arbitrarily changing the number 205 into 145 . . . this is not the only falsification which the numbers of one chapter have suffered." Kalisch complains of other unwarrantable alterations made in the Samaritan text. What a glorious prospect for the man to be saved by faith. His Bible is a translation from the Hebrew, the translation incorrectly executed. Of the Bible there are ancient versions, Hebrew, Samaritan, and Septuagint—all of which have been more or less tampered with, and abound in inaccuracies and misstatements—yet it is by implicit faith in this Bible he is to have eternal salvation. Luke Burke,‡ after pointing out the inaccuracy as to the ages of Abraham and Terah, and the shorter term of 145 years assigned to the latter by the Samaritan version, says—"The discrepancy we have pointed out was perceived by the Samaritan doctors, and thus coolly rectified; sixty years being lopped from off the age of Terah. An easy and expeditious way of settling historical difficulties. But those who did not hesitate to shorten the life of Lamech by 100 years, that of Jared by 115, and that of Methusaleh by 249, could not feel much scruple in abridging that of Terah by nearly one-third. Surely it is but charity to suppose that

* This is a mistranslation. The text reads, "And Jeue said." The Douay translates it, "And the Lord said." The "Now the Lord had said" is a rendering which implies a direction that might have been given long since in Terah's lifetime, instead of following after Terah's death.

† Kalisch: Genesis, p. 324.

‡ Ethnological Journal, p. 362.

when these changes were made, the Book of Genesis was not considered the word of revelation. Such changes cannot be justly regarded in any other light than as disreputable forgeries" The editors of the Breeches Bible, discovering the gross contradiction as to Abraham's age, declare that he was not Terah's first born, but that he was born when Terah was 130 years of age. Usher has put forward the same hypothesis. Luke Burke* ably answers this orthodox invention, which is indeed only an endeavour, entirely unsupported by evidence, to escape from an otherwise unanswerable difficulty. Colenso says that the text may mean that the whole of Terah's three children were born before he was seventy.† Josephus distinctly says that Abraham begat Terah in his 70th year.

Verse 29.—Sarai.‡ This is written in the Hebrew text שרי (ShRI), and means "my princess," and it is rather puzzling why God should have in chap. xvii., v. 15, altered it to שרה (ShRE) "a princess"—a distinction almost meaningless taken with the context. Dr. Wall urges that the Hebrew text has here been corrupted, and that the word Sarai was originally written סרי (SRI)—that is, ס (the letter Samek) instead of ש (the letter Shin), Sarai so written signifying emigrant or wanderer.

Verse 31—"Ur of the Chaldees." Where was Ur, and who were the Chaldees? If you are to treat them as identical with the Chaldeans of later date in the Bible, how can the existence of Chaldeans before Abram be reconciled with Isaiah, chap. xxiii., v. 13?—"Behold the land of the Chaldeans: this people was not till the Assyrian founded it for them that dwell in the wilderness." The Hebrew words rendered "Ur of the Chaldees" are, in fact, Aur of the Casdim כשדים (Ce Sh DIM) אור (A U R), the word Aur or Ur signifies "light" or "fire,"§ and Parkhurst says no doubt Ur had its name from the light or fire there worshipped. The word Ceshdim or Casdim is rendered Chaldees, and we are told that the Chaldeans were inhabitants of Babylon; but, on referring to the book of Daniel we find the astrologers or magi were called Chaldeans by the Baby-

§ Parkhurst's Lexicon, p. 38. Gesenius, p. 23 and p. 418.

kanians themselves; so that Ur of the Chaldees stands also for "light of the magi" or "fire of the magi." Priaulx says, "The Chaldees, according to Diodorus Siculus, were claimed by the Egyptians as their descendants; and they are spoken of by him not as a race or nation, but as a family or tribe set apart for the worship of the Gods."*

The name Abram must not be passed by without comment. It is first written אברם (ABReM), Ab meaning father and Rem high, elevated, exalted. Volney† argues that Abraham never really existed, and seeks to identify the father of elevation with the planet Saturn. This, at any rate, is not more strange than the declaration in Galatians, c. iv., v. 25, that the story of Abraham, Hagar, and Sarah is an allegory, and that Hagar, the bondwife of Abraham, was a mountain. Abba Rama is not more unlike Brama than it is like Abraham. Some have sought to show that there is more than an accidental resemblance between the two names. Maurice‡ quotes Hyde and Postellus as alleging that Brahma and Abraham were the same. Sir William Drummond§ mentions that the Hebrew characters composing the word Abraham, the second name of the patriarch, אברהם (ABREM), represent the exact number of bones in the human body.

Chap. xii., vv. 1, 2, 3, 7; chap. xiii., vv. 14 to 17; chap. xv., vv. 5, 14, 18; c. xvii., vv. 1 to 8; c. xviii., v. 18; c. xxii., vv. 17, 18; c. xxvi., v. 2; c. xxviii., v. 14. The above chapters and verses contain a solemn promise, a formal covenant, and, finally, an oath on the part of God to Abraham, repeated to Isaac, and renewed to Jacob, that the children of the former should be as numerous as the stars of heaven or as the dust of the earth, and that this prolific offspring should possess the land of Canaan for ever. They were to possess certain land from the river of Egypt (the Nile) to the Euphrates. Why Abraham and his race should have been selected for this promise in preference to all others is not very clear. No great deeds are recorded as having been performed by Abraham prior to the first pro-

† New Researches, c. 14.
‡ Indian Antiquities, vol. ii., p. 322.
§ Letters to D'Oyly.

mise, nor, so far as the Bible tells us, did the descendants of Abraham justify the choice by their subsequent conduct. The original promise and the renewals are expressly stated to have been made because of Abraham's faith, and they are not stated to have been the reward of his morality. If Abraham's descendants are the Jews, the promise has hitherto been left unperformed. They have not held in perpetuity the promised land, nor have they yet become so numerous as to render a census impossible. If the promise applies to the Jews, history does not record a period when they held the whole of Canaan free from war, or hostile occupation, or aggression.

Verse 6.—"And Abram passed through the land unto the place of Sichem, unto the plain of Moreh. And the Canaanite was then in the land." Kalisch makes "*plain* of Moreh" into "oak of Moreh." Bellamy, to avoid the difficulty contained in the last sentence of the verse, follows our version to the word Moreh, and then reads "for *that Canaanite* was then over the land." The Douay renders the verse—"Abram passed through the country into the place of Sichem, as far as the noble vale; now the Canaanite was at that time in the land." It has been objected by Aben Ezra, followed by Spinoza,* that in the words—"And the Canaanite was then in the land," the "then" "at that time" plainly excludes the time when the narrative was written; whereby it is clear that the phrase must have been penned after the death of Moses, and when the Canaanites had been driven out and no longer possessed the land. This argument goes to the effect either that Moses did not write the book, or that the phrase has been interpolated since his time. Bellamy's justification of the text, by altering the phraseology, is hardly defensible. Aben Ezra, who was afraid to say all he thought, observes—"There must be a mystery concealed in the matter, and he who divines what that is, had better keep silence."† Precisely the same comment applies to verse 7 of chap. xiii.

Verse 11.—It is clear that, although the New Testament praises Abraham for his faith in God's promises, that the patriarch did not rely on God very much. He feared that

* Tractatus Theologico Politicus, c. 8.

† See also Colenso, Part ii., p. 210; De Wette: Books of Moses, §148.

he might be killed amongst the Egyptians, because of the beauty of his young wife, Sarah (she was not yet seventy years of age), and he, therefore, resorts to a falsehood to save himself. Commentators say that Abraham did not tell a lie in calling Sarai his sister, for that she was so. (See chap. xx., v. 12.) The only evidence for this is Abraham's statement in excuse of his misstatement. On the contrary, Josephus says expressly that Abraham married his niece, Sarah, as did Nahor his niece Milcah, both Sarah and Milcah being the daughters of Haran, who was the brother of Abraham and Nahor.* Bellamy and the Douay version agree in this; Bellamy identifying Iscah with Sarah.† If Iscah and Sarah be the same, then certainly Sarah was not Abraham's sister. The whole story is open to objection on account of the repetitions, with slight variations, of the same remarkable events on three different occasions. Voltaire says—"The God of the Jews commanded Abraham to go towards Palestine, promising that in his seed all the nations of the earth should be blessed. It is for theologians to explain, by allegory and *mystical sense*, how all the nations of the earth were to be blessed in a seed from which they did not descend. A short time after these promises, Abraham's family was afflicted by famine, and went into Egypt for corn. It is singular that the Hebrews never went into Egypt but when pressed by hunger; Jacob afterwards sent his children on the same errand.

"Abraham, who was then very old, went this way with his wife Sarah, aged sixty-five; she was very handsome, and Abraham feared that the Egyptians, smitten by her charms, would kill him in order to enjoy her transcendent beauties; he proposed to her that she should pass for his sister. Human nature must at that time have possessed a vigour which time and luxury have since very much weakened. That which Abraham had foreseen came to pass; the Egyptian youth found his wife charming, notwithstanding her sixty-five years; the king himself fell in love with her, and placed her in his house; but the Lord plagued the king and his house with very great plagues. The text does not tell us how the king came to know that this dangerous beauty was

* Antiquities, Book I., chap. 6.
† New Translation, p. 59.

Abraham's wife; but it seems that he did come to know it, and restored her.

"Sarah's beauty must have been unalterable; for, twenty-five years afterwards, when she was ninety years old, pregnant, and travelling with her husband through the dominions of a King of Phœnicia, named Abimelech, Abraham, who had not yet corrected himself, made her a second time pass for his sister. The Phœnician King was as sensible to her attractions as the King of Egypt had been; but God appeared to this Abimelech in a dream, and threatened him with death if he touched his new mistress. It must be confessed that Sarah's conduct was as extraordinary as the lasting nature of her charms."

The conduct of the patriarch, in receiving cattle and slaves as a compensation for the violence offered to his wife, cannot be said to redound to his credit. His putting his wife in danger to save himself, and his afterwards receiving a bribe to connive at his wife's dishonour, marks the founder of the Jewish race in a unenviable light. Abraham appears to have made no effort to rescue his beautiful wife from *one* king, although we find him strong enough and eager enough to rescue his brother Lot, when the latter was shortly after taken captive by *four* powerful monarchs.

Chap. xiii., v. 10.—"And Lot lifted up his eyes, and beheld all the plain of Jordan, that it was well watered everywhere, before the Lord destroyed Sodom and Gomorrah, even as the garden of the Lord, like the land of Egypt, as thou comest unto Zoar." Colenso says*—"This is supposed to have been written for the instruction in the first instance of the Hebrews in the wilderness. But what could they have known of the nature of the country in the land of Canaan, 'as thou comest unto Zoar?' Or what could Moses himself have known of it?" Colenso's criticism is open to the objection that, even in the time of Moses, the land of Egypt, on the road to Zoar, might have been known by repute without Moses or the Jews of his day being necessarily acquainted with Zoar itself.

Verse 18.—"Then Abram removed his tent, and came and dwelt in the plain of Mamre, which is in Hebron, and built

* Part II., p. 217.

there an altar unto the Lord."* Objections have been raised as to the possibility of the "plain of Mamre" being in the city of Hebron. Kalisch makes it—"Oak grove of Mamre." Bishop Patrick and Kidder render it—"By the oak of Mamre." Dr. Giles says—"It is evident that, though an oak may be in a city, a plain can only be in its neighbourhood." That which our version makes "a plain," the above-named learned and reverend Doctors make "an oak" or "oak grove;" and the Douay "a vale."

Chap. xiii., v. 18; chap. xxiii., vv. 2 and 19; chap. xxxv., v. 27, &c. These verses, in which Hebron is named, cannot be from the pen of Moses, for there was no such place as Hebron in his day. Kirjath Arba was not called Hebron until given to Caleb, son of Jephunneh, long after the death of Moses (vide Joshua, chap. xiv., vv. 14 and 15.) Colenso says—"It is a mere evasion to say as some have done that the city had of old both names."

Chap. xiv., v. 1.—Amraphel, King of Shinar, is identified (by Bellamy, who quotes Onkelos) as the King of Babylon, and Chedorlaomer as the King of Persia. It is a matter not free from cause of surprise that such powerful monarchs should be leagued together in war against the petty rulers of five inconsiderable towns. Josephus speaks of this simply as a war of the Assyrians against the five petty Sodomite Kings: Amraphel, Arioch, Chedorlaomer, and Tidal being commanders of the Assyrian forces and not a confederacy of independent monarchs. That Abraham, with a few hundred men, pursued and defeated the victorious confederates, recapturing the spoil they had taken, is some evidence in favour of Josephus's view. This victory of Abraham, whether it was over four independent and mighty kings, or over the Assyrian forces only, is, if true, a very wonderful one. It is quite clear that Chedorlaomer was a very powerful chieftain, having the inhabitants of the five cities of the Jordan district for his vassals. Amraphel is represented in the text as the king of the mighty empire of Babylon, Shinar being the country wherein Babylon was erected, doubtless not so grand as it afterwards became, but still one of the most powerful of the then monarchies of the

* Hebrew Records, p. 130; De Wette: Books of Moses, §148; Dr. Cooper: Geology and Pentateuch, p. 25.

world. These are assisted by two other kings; one of whom is described as the king of nations. The four allies make war upon certain kings, five in number; and, according to verse 10, they fight, and the kings of Sodom and Gomorrah fall in the vale of Siddim.

Abraham, hearing that Lot, his relative, was taken prisoner, took with him three Amorites, Mamre, Eschol, and Aner, and their followings, together with three hundred and eighteen men born in his own house, and, by night, pursued and smote the four allied kings, and recaptured his brother. As he went near to Damascus in pursuit, he must have travelled more than one hundred miles, beside crossing some very mountainous country; this, of course, enhances the character of the victory. One of the fruits of this triumph seems to have been, that the King of Sodom, who is apparently killed in verse 10, comes to meet Abraham, alive and well, in verse 17.

Josephus says that Abraham fell on his opponents in the night, "and before they could arm themselves, he slew some as they were in their beds before they could suspect any harm; and others who were not yet gone to sleep, but were so drunk they could not fight, ran away."*

Chap. xiv., 14; Deuteronomy, xxxiv. 1.—The city of Lais, Laish, or Leshem, was not called Dan until long after the death of Moses, when the Danites possessed themselves of it and called it after Dan, their father (*vide* Joshua, xix. 47, and Judges, xviii., 29). Bishop Watson replying on this point to Thomas Paine, says first that the name Dan may be the alteration of some later hand. He proceeds,† "But if this solution does not please you, I desire it may be proved that the Dan mentioned in Genesis was the same town as the Dan mentioned in Judges. I desire further to have it proved, that the Dan mentioned in Genesis was the name of a town and not of a river. It is merely stated, Abraham pursued them, the enemies of Lot, to Dan. Now a river was full as likely as a town to stop pursuit. Jordan, we know, was composed of the two united streams of Jor and Dan." Dr. Colenso remarks, "That such reasoning, which

* Antiquities, Book I, c. 9.

† Watson's Apology, Letter 3, p. 205.

might be allowed to pass in the days of Bishop Watson, would not be accepted as of any value whatever in our own days. The rivers 'Jor' and 'Dan' are not mentioned in the Bible, and their existence is not, I believe, recognised in the geography of Palestine."* Bellamy observes that it is not likely that the river Jordan derived its name from the union of two smaller rivers called Jor and Dan, because the river Jordan has only one springhead, rising near the foot of Mount Lebanon.†

Verse 18.—Melchizedek; who was he? Before answering this question, read Psalm cx., 4, Hebrews, v., 6, 10, and 11, chap. vii., and chap. viii., 1. In the verse we are examining, he is described as מלכיצדק (MeLeKITzeDeQ) —מלך (MeLeK) שלם (SheLeM). Melek generally means king, but it is also used for the sun or solar fire. Tzedek means justice. Shelem sometimes means peace, sometimes "to complete," "to finish," "to perfect."‡

What does this mean? Melekitzedek or Melchizedek; first by interpretation King of Righteousness, and after that the King of Salem, which is, the King of Peace; without father, without mother, without descent, having neither beginning of days, nor end of life—*vide* Hebrews, chap. vii. v. 3.

This description will not apply to any man who ever lived on the face of the earth; nearly everybody claims to have had a father and a grandfather: everybody has had a mother. Everybody was one hour old before he grew older; and after existing some few score years, more or less, every man has, sooner or later. died. So Melchizedek could not have been a man. In Malachi, chap. iv., v. 2, we find שמשצדק (SheMeShTzeDeQ); this is translated *Sun* of Righteousness, and it is only to the mythologic representation of the sun that the description of Melchizedek will apply. The ancients looked upon the sun as the everlasting source of all existence, and personified it in various names; Melchizedek, king of the Zodiac, appears to be one of the Bible personifi-

* Colenso, Part IV., preface, p. 12, and Part II., p. 201; but see Kalisch: Genesis, p. 358.

† New Translation, p. 65.

‡ Parkhurst's Lexicon, pp. 401, 610, 742.

cations. But supposing Melchizedek to be not a real person, what becomes of the story of Abraham giving him tithes of his spoils? If this story be not fact, how much is allegory?

Is any portion of the history of Abraham a fact? In chap. xvi., we find part of the history of Hagar and Sarai; while, in Galatians, chap. iv., vv. 24 and 25, we are told that the whole history is an allegory, and that Hagar represents Mount Sinai in Arabia, and Sarai the City of Jerusalem, which is "above."

Melchizedek is called priest of the most high God, the words translated "most high God" are אל עליון (AL OLIUN). It is not by any means certain that Melchizedek's God was the same as Abraham's. The Phœnicians called one of their Gods by this very name. Al Oliun might as reasonably be translated "the high heavens" as "the most high God." The word Al אל is actually translated heaven in the Septuagint—Isaiah, c. xiv., v. 13. The Phœnicians called the sun Hel.*

Genesis, xv. 2.—Our version says, "The steward of my house is this Eliezer of Damascus." The Douay says, "The son of the steward of my house is this Damascus Eliezer." Bellamy reads, "The steward is the son of my house, this Eliezer of Damascus." Which of these three statements did God intend to reveal to humankind? Can we prefer our translators' version to the others, and why? Our authorised text is most certainly wrong in this verse, for it omits the Hebrew word translated "son" in the other versions. Abraham, when speaking of one born in his house as his heir, seems to have quite forgotten his brother Lot, who would have been his natural heir.

Verse 8.—"And he said, Lord God whereby shall I know that I shall inherit it?" Abraham's faith, which is so highly praised in the New Testament, does not seem to have been very potent. This is at least the fourth time God has communicated with Abraham, who knowing that he is addressing God, yet requires something to corroborate God's statement, which he must have therefore doubted though coming from God direct.

Verse 11.—Instead of "Abraham drove them away," as in

* Parkhurst's Lexicon, pp. 15 and 528.

our version, the Septuagint reads, "Abraham sat down by them." Bellamy goes further. He not only says that Abraham did not drive the fowls away, but denies that he sat down by them. In fact, he repudiates the fowls altogether; for while our version reads, verse 11, "And when the fowls came down upon the carcases, Abraham drove them away," Bellamy has, "Then descended the covering upon the bodies, and with them he inspired Abraham." How satisfactory to the true believer to know that God's revelation can be so contradictorily translated. Whether or not the fowls were driven away by Abraham, all idea of infallible inspiration must, by such discrepancies, be driven from the mind of the reader.

Verse 15.—"And thou shalt go to thy fathers in peace; thou shalt be buried in a good old age." Taking the patriarchal ages as a guide and standard Abraham died young. Shem, Noah's son, Salah, Shem's grandson, and Eber, Salah's son, were actually alive when Abraham died, although Shem was born nearly 400 years before the birth of Abraham. God's promise to Abraham in this respect was certainly not kept. Compared with his long-lived ancestors, Abraham died at an early period.

Verse 13.—"And he said unto Abraham, Know of a surety that thy seed shall be a stranger in a land that is not theirs, and shall serve them; and they shall afflict them four hundred years." If this four hundred years refers to the Egyptian captivity, it is four hundred and thirty years according to Exodus, chap. xii., v. 40 and 41, "Now the sojourning of the children of Israel, who dwelt in Egypt, was four hundred and thirty years. And it came to pass, at the end of four hundred and thirty years, even the selfsame day it came to pass, that all the hosts of the Lord went out from the land of Egypt." (Also see Galatians, chap. iii., 17). But, according to the Bible chronology, it is only about two hundred years. It is impossible to give credit to one more than the other; for Genesis, Exodus, and Chronology, while they contradict one another, are not supported by any other evidence themselves. Josephus says, "They left Egypt in the month Xanthicus, on the 15th day of the lunar month, 430 years after our forefather Abraham came into Canaan, and 215 years after Jacob removed into Egypt."* This contradicts

* Antiquities, Book 2, chap. xv.

both Genesis and Exodus. Neither Abraham, Isaac, nor Jacob can be said to have been servant to or afflicted by the Egyptians.

Verse 17.—"And it came to pass, that when the sun went down, and it was dark, behold a smoking furnace, and a burning lamp that passed between those pieces." This representation of a smoking furnace and a burning lamp, serves to remind one rather of an Arabian Night's tale than of a communication from an infinite Deity. Does the text mean that an infinite and immaterial God appeared finite and material as a smoking furnace and a burning lamp? Bellamy says, "This translation gives us no information; we can have no conception of the meaning or application of a smoking furnace and a burning lamp passing between the pieces." Clouds, smoke, and fire are more than once connected in the Hebrew Records with the appearance of Deity. See Exodus, xix., 9, 16, 18; xx., 18; Deuteronomy, iv., 11 and 12, and numerous other passages. So in many of the eastern stories the angels and genii use fire and smoke to mark their coming and going.

Verses 18 to 21.—"In that same day the Lord made a covenant with Abraham, saying, Unto thy seed have I given this land, from the river of Egypt unto the great river, the river Euphrates: the Kenites, and the Kennizzites, and the Kadmonites, and the Hittites, and the Perizzites, and the Rephaims, and the Amorites, and the Canaanites, and the Girgashites, and the Jebusites." Ten nations are specified here; in Joshua, chap. iii., 10, seven only are mentioned—that is, the Kenites, Kennizzites, Kadmonites, and Rephaims are omitted; and the Hivites mentioned, in Deuteronomy, chap. xx., 17, and in Exodus, chap. iii., 17, and chap. xxiii., 23, we find only six, the Girgashites being omitted. The land from the Nile to the Euphrates has never yet been in the undisturbed possession of the Jews; portions of it have never been in their possession for a single moment, so that this promise has never been performed.

Chap. xvi.—"And the angel of the Lord found her." This is the first time an angel is mentioned in the Bible. Angel in Hebrew and Greek signifies *envoy* or messenger. The reader will hardly be the wiser for being told that the Persians had their *peris*, the Hebrews their *melakim*, and the Greeks their *demonoi*.

But it is, perhaps, better worth knowing that one of the first of imperfectly civilized man's ideas has always been to place intermediate beings between the Divinity and himself; such were those demons, those genii, fairies, and gnomes, invented in the ages of antiquity by nearly all peoples. Man always made the Gods after his own image; princes were seen to communicate their orders by messengers; therefore, the Divinity has also his couriers. The Jews, the only people under the conduct of the Divinity himself, did not, at first, give names to the angels whom God vouchsafed to send them; they borrowed the names given them by the Chaldeans when the Jewish nation was captive in Babylon. Michael and Gabriel are named for the first time by Daniel, a slave among those people. The Jewish Tobit, who lived at Nineveh, knew the angel Raphael, who travelled with his son to assist him in recovering the money due to him from the Jew Gabaël.

In Leviticus and Deuteronomy, although witches, wizards, familiar spirits, and devils are spoken of, not the least mention is made of the existence of the angels, much less of the worship of them; neither did the Sadducees believe in the angels.

But, in the histories of the Jews, they are much spoken of. The angels were corporeal; they had wings at their backs, as the Gentiles feigned that Mercury had at his heels; sometimes they concealed their wings under their clothing. How could they be without bodies, since they all ate and drank?

The ancient Jewish tradition, according to Ben Maimon, admits ten degrees, ten orders of angels.

The Christian religion is founded on the fall of the angels. Those who revolted were precipitated into hell, and became devils. A devil, in the form of a serpent, tempted Eve, and damned mankind. Jesus came to redeem mankind, and to triumph over the devil, who tempts us still. Yet this fundamental tradition is to be found nowhere but in the apocryphal book of Enoch; and there it is in a form quite different from that of the received tradition.

It is not known precisely where the angels dwell—whether in the air, in the void, or in the planets.* It has not

* Philosophical Dictionary.

been God's pleasure that we should be informed of their abode.

The Bible itself gives us very imperfect and contradictory information as to the angels whom it mentions. Hagar speaks of this angel as though he were God (see v. 13), and throughout the Bible instances will be found where the same person is spoken of as the angel of God, and as God.

Verse 12.—Our version says Hagar's son shall be "a wild man," Kalisch says "a wild ass of a man," Bellamy "a fruitful man."

Verse 13.—"And she called the name of the Lord that spake unto her, Thou God seest me: for she said, Have I also here looked after him that seeth me?" In the Douay this is translated, "And she called the name of the Lord that spoke unto her, thou the God who hast seen me; for she said, verily here have I seen the hinder parts of him that seeth me." The reader will perceive a strange difference in the two texts. If the Douay be the correct translation, where are the hinder parts of a God who is without parts? (*Vide* Thirty-Ninth Article). Kalisch translates the last clause of the verse, "For she said, Do I even still see [live] after seeing [God]."

Chap. xvii.—"And when Abram was ninety years old and nine, the Lord appeared to Abram, and said unto him, I *am* the Almighty God; walk before me, and be thou perfect." As the Lord had previously appeared to, and communicated with Abraham, it is somewhat strange that God should find it necessary to tell the patriarch, "I am the Almighty God." Abraham was certainly no more perfect after this injunction than before. It was after this that he repeated his falsehood as to his wife, and it was after this that he was privy to the ill-treatment of Hagar.

Verses 10 and 14.—"This is my covenant, which ye shall keep, between me and you and thy seed after thee; every man child among you shall be circumcised. And the uncircumcised man child, that soul shall be cut off from his people; he hath broken my covenant." If these verses apply to the whole human family, then nearly the whole of the inhabitants of Europe will be cut off, while the Abyssinians, the Kafirs, some of the South Sea and other Islanders, will be saved by the mark of the covenant. The following will be

found in the "Philosophical Dictionary," under the head "Circumcision:"—"It appears," says Herodotus in his book Euterpe, "that the inhabitants of Colchis sprang from Egypt. I judge so from my own observations, rather than from hearsay; for I found that, at Colchis, the ancient Egyptians were more frequently recalled to my mind than the ancient customs of Colchis were, when I was in Egypt.

"'These inhabitants of the shores of the Euxine sea stated themselves to be a colony founded by Sesostris. As for myself I should think this probable, not merely because they are dark and woolly-haired, but because the inhabitants of Colchis, Egypt, and Ethiopia, are the only people in the world who, from time immemorial, have practised circumcision; for the Phœnicians and the people of Palestine confess that they adopted the practice from the Egyptians. The Syrians, who at present inhabit the banks of Thermodon, acknowledge that it is, comparatively, but recently that they have conformed to it. It is principally from this usage that they are considered of Egyptian origin.

"'With respect to Ethiopia and Egypt, as this ceremony is of great antiquity in both nations I cannot by any means ascertain which has derived it from the other. It is, however, probable that the Ethiopians received it from the Egyptians; while, on the contrary, the Phœnicians have abolished the practice of circumcising new-born children since the enlargement of their commerce with the Greeks.'

"From this passage of Herodotus, it is evident that many people had adopted circumcision; but no nation ever pretended to have received it from the Jews. To whom, then, can we attribute the origin of this custom? to a nation from whom five or six others acknowledge they took it, or to another nation, much less powerful, less commercial, less warlike, hid away in a corner of Arabia Petræa, and which never communicated any one of its usages to any other people?

"The Jews admit that they were, many ages since, received in Egypt out of charity. Is it not probable that the lesser people imitated a usage of the superior one, and that the Jews adopted some customs from their masters?

"Clement Alexandria relates that Pythagoras, when

travelling among the Egyptians, was obliged to be circumcised in order to be admitted to their mysteries. It was, therefore, absolutely necessary to be circumcised to be a priest in Egypt. Those priests existed when Joseph arrived in Egypt. The government was of great antiquity, and the ancient ceremonies of the country were observed with the most scrupulous exactness. (Joseph was married into the family of the Priest of the Sun before his relations had established any religious system.)

"The Jews acknowledge that they remained in Egypt two hundred and five years (the Bible says four hundred and thirty.) They say that, during that period, they did not become circumcised. It is clear, then, that for two hundred and five years the Egyptians did not receive circumcision from the Jews. Would they have adopted it from them after the Jews had stolen the vessels which they had lent them, and, according to their own account, fled with their plunder into the wilderness? Will a master adopt the principal symbol of the religion of a robbing and runaway slave? It is not in human nature.

"It is stated in the book of Joshua that the Jews were circumcised in the wilderness. 'I have delivered you from what constituted your reproach among the Egyptians.' But what could this reproach be to a people living between Phœnicians, Arabians, and Egyptians, but something which rendered them contemptible to these three nations?"

Kalisch says, "The question arises, what was the origin of this singular custom? It must evidently have a general cause, inherent either in the human mind or in the human frame, since it was in use amongst so many different nations possessing no mutual intercourse. Now a religious motive seems to be out of the question, for some of the nations alluded to are not only strangers to all religious ceremonies but destitute of all moral feelings."* Kalisch argues for a physical reason, but in this case the whole story of the institution of the covenant of circumcision by God with Abraham is reduced to fable.

Verse 17.—"Then Abraham fell upon his face, and laughed, and said in his heart, Shall a child be born unto him that is

* Genesis, p. 386.

an hundred years old? and shall Sarah, that is ninety years old, bear?" This is not only an illustration of Abraham's want of faith in God's promise, but it also shows either that he did not know, or did not believe, that Shem had a son when 130 years old, or that Noah had children when 500 years old, or that Jared when 162 years of age begat Enoch, or that Methusaleh was 187 at Lamech's birth. If Abraham did not believe this in Shem's lifetime, why should greater faith be expected from us so many centuries after?

Genesis, chap. xviii.—The attentive reader of this chapter cannot fail to observe the extraordinary confusion in the text, as to the three men and the Lord. It is difficult to discover whether the Lord was one of the three visiting Abraham, or all of the three, or separate from the three. Kalisch tries to argue that God who, according to the Bible, is invisible, appeared to Abraham, who at the same time saw three figures in human form; and Kalisch separates the three men from God, saying that the three, who were not simply mortals, sat down to food, while the spirit of God hovered among the assembly. If not mortals, it is difficult to imagine their eating and drinking Abraham's calf, milk, butter, and cakes, and in truth Kalisch has no authority in the text for his hypothesis. The Douay version in a note says, that of the three one "represented the Lord," the other two being the angels who went on to Sodom. This hypothesis does not contradict the text, but is certainly not explicitly vouched by it. Josephus* says that the three "declared that they were angels of God; and that one of them was sent to inform them about the child, and two for the overthrow of Sodom." Josephus certainly could not have learned this from the book of Genesis, as we have it. Bellamy says, "Many writers have thought that God appeared to Abraham in three distinct forms, and that these represented the three persons of the trinity; others that they were three angels, because after it is said 'the Lord appeared unto him;' it is also said in the next verse, that 'he lift up his eyes, and looked, and lo, three men stood by him.' Were this the case, that these persons were Jehovah, or that they were three angels, was there any necessity for Abraham, when he knew the quality of his guests, to show them the way by

* Antiquities, chap. 11, 52.

going with them as a guide? for we read (verse 16), 'Abraham went with them to bring them on the way.' Can it be supposed that heavenly beings, and even God himself, required a guide?"*

Verse 2.—"And he lift up his eyes, and looked, and lo, three men stood by him: and, when he saw them, he ran to meet them." Bellamy observes that if the three men stood by Abraham, he could have hardly run to meet them. In verse 3, after having seen three persons, Abraham goes on to speak to them as if they were but one, and in verse 4, without any break, he speaks as if to more than one. In verse 9, "*they*" speak to Abraham, and verse 10, without any break in the conversation, "he" speaks to Abraham. Who is meant by "he" the text does not explain, and if it were not that the speech is addressed to the patriarch, "he" would grammatically be Abraham himself.

Verses 11 to 15.—"Now Abraham and Sarah were old, and well stricken in age; and it ceased to be with Sarah after the manner of women. Therefore Sarah laughed within herself, saying, After I am waxed old shall I have pleasure, my lord being old also? And the Lord said unto Abraham, Wherefore did Sarah laugh, saying, Shall I of a surety bear a child, which am old? Is any thing too hard for the Lord? At the time appointed I will return unto thee, according to the time of life, and Sarah shall have a son. Then Sarah denied, saying, I laughed not: for she was afraid. And he said, Nay; but thou didst laugh." Sarah in Hebrews, c. xi., vv. 11 and 12, is noticed for her faith in relation to this matter; but unless the writer of the epistle had a different copy of Genesis, Sarah's faith is surely of a doubtful character. There is more of mockery and laughter (at what she regarded as the idle promise and impossible boast on the part of the Lord), coupled with a fear of punishment for the avowal of disbelief, than there is of faith. One orthodox commentator says that "Sarah, who considered herself as past the age of child-bearing, either treated the promise with unbecoming levity, or was so delighted with the prospect of having a son, that she was thrown into an ecstasy, which discovered itself by a burst of laughter. *Let us hope, for her credit sake, that the latter*

* New Translation, p. 75.

was the case."* Abraham makes a difficulty, and Sarah laughs because at their advanced age God had promised a child; but they ought both to have known that some of their ancestors had had children at a much greater age, and the writer of the text, who speaks of them as very old people, must have been well aware that Abraham was a mere youth compared with the great majority of his ancestors. God himself, when Sarah laughed because of the absurdity of her having a child at that great age (instead of reminding her that Adam and Eve were 180 when Seth was born, that Seth was 105 when Enos was born, that Jared was 165 when Enoch was born, and Methusaleh 187 when he begat Lamech), speaks as though the promised event, though a wonderful one, would be achieved by special divine interposition, and God in nowise treats it as a natural event which, having occurred before, might not unreasonably be expected to occur again.

Verses 20 and 21.—"And the Lord said, because the cry of Sodom and Gomorrah is great, and because their sin is very grievous, I will go down now, and see whether they have done altogether according to the cry of it, which is come unto me; and if not, I will know." According to these verses God, the omnipresent, being away from Sodom and Gomorrah, had received a report of the evil doings of the people of those cities, and the Bible in effect declares that he, God, being omniscient, but not knowing whether the actual state of things had been correctly represented to him, had determined to go down to Sodom (from which city the omnipresent could never have been absent) personally to find out the truth. The chaffering and bargaining between God wavering and undetermined and Abraham persistently petitioning as to the salvation of Sodom, has in it something so contemptibly ridiculous that one is puzzled to conceive how any large number of the human family could believe the narrative inspired by the infinite God. Either God knew that there were not so many righteous persons as fifty, forty-five, forty, thirty, twenty, or ten in Sodom, in which case all his promises were deceptive, or God did not know, in which case he is not omniscient.

Verse 22.—This verse is one of those eighteen altered

* Jones: Biblical Cyclopædia, vol. 1.

according to the decrees of the Scribes. Originally it was ויהוה עודנו עמד לפני אברהם—"And Jehovah still stood before Abraham;" but Tikun Sopherim (the decrees of the Scribes) have substituted our present reading: ואברהם עדונו עמד לפני יהוח—"And Abraham still stood before Jehovah;" because it appeared offensive to say that the Deity stood before Abraham.*

Verse 33.—"And the Lord went his way, as soon as he had left communing with Abraham: and Abraham returned unto his place." Bellamy says, "This is a very undignified and awkward expression when applied to God. The Lord, who is always everywhere, went one way, and Abraham went another. This style of writing (which makes God, who is alleged to be infinite and immaterial, finite, and subject to material conditions; subject to order of time and space, having a material body, and eating material food) ought to be enough without further comment to destroy the present faith and to prevent further belief in the infallible inspiration of these Hebrew legends."

Chap. xix.—"And there came two angels to Sodom." This would leave it doubtful whether or not these were the same as the angels of the former chapter. But Kalisch translates it—"And two of the angels came to Sodom," and the Douay says—"And the two angels came to Sodom." The angels then were so much like men that they ate, drank, washed their feet, rested under a tree, walked, talked, and were clearly bodily visible to Abraham, to Lot, and to the people of Sodom. Dr. John Pye Smith says that the angel who remained with Abraham in chap. xviii., has all the predicates of Deity, and he identifies as the same the one introduced in c. xix., vv. 17 to 25; and by drawing attention to the remarkable repetition of the word Jeue (Jehovah) in verse 24, Dr. Pye Smith revives the point as to the one God Jeue on earth, calling down brimstone and fire from another God Jeue in heaven.† Priaulx‡ says—"Unless this be some Hebrew idiom, one would suppose the Lord raining, and the Lord in heaven were different persons." According to verses 8 and 30, Lot appears to have had two daughters

* Jacob Ben Chajim's Introduction, p. 28.
† Christian Theology, 249. ‡ Questiones Mosaicæ, 398.

only, and these unmarried, and yet verse 14 speaks of the "sons-in-law which married his daughters." Some translators allege that it should read "who were about to marry his daughters."

Verse 26.—"But his wife looked back from behind him, and she became a pillar of salt." Josephus says that this pillar of salt was standing in his day, and adds—"For I have seen it."* Professor Whiston, in a note to the translation, states that the existence of the pillar of salt is also attested by Clement of Rome and by Irenæus. Bellamy denies that there is any ground for believing in the conversion of Lot's wife, observing†—"Had she been turned into salt, it would have required a perpetual miracle to have preserved this monument: for salt, whether alkaline, neutral, or acid is soluble by water, and, therefore, it could not have remained long in the form of a pillar, to convince posterity, as many weak people have supposed, that she was punished for her disobedience. Commentators of this description have done more injury to the religion of the Bible than all the Atheists and Deists in the world, though they have interlarded their comments on this subject with the monkish interpolation of Josephus, who is made to say that the pillar of salt was in existence in his day. I say monkish interpolation for, at this early period, additions, alterations, and explanations were foisted into the translations to suit the craft and policy of designing men. Certainly, a moment's consideration will convince any man, that a pillar of any species of salt could not have continued visible nearly 2000 years from Abraham to the time of Josephus." And it might be added that, as neither ancient nor modern travellers, before or since that Jewish writer, have satisfactorily vouched its existence, it would require some strong evidence to identify Josephus's pillar of salt with Lot's unfortunate wife. I conclude this subject with an extract from orthodox sources‡—"Irenæus and Tertullian say it was standing about A.D., 200. Benjamin of Tudela, the Jewish traveller, avers that it was standing near one thousand years after, which would make its duration about

* Antiquities, chap. 11, sec. 4. † New Translation, p. 83.
‡ Jones: Biblical Cyclopædia, vol. 2

3000 years. Some modern travellers pretend to have seen it; but their relations savour so strongly of fable, and differ so widely, that we cannot credit them. It is certain that Maunder, Shaw, and other travellers of veracity do not pretend that there are now the least remains of this noted statue." There is in truth no evidence to identify the site of the asphalt waters of the Dead Sea with the place whereon stood the fire-destroyed city of Sodom.

It is impossible to imagine a story more fearfully horrible than that of this chapter, and it is hardly possible to conceive it to be a representation of facts. That the whole of the male inhabitants of a city should crowd round a house, as alleged in verses 4 and 5, is so monstrously unnatural that reason revolts against it. That this crowd, when smitten suddenly with utter blindness, should continue to endeavour to carry out their former design, is utterly incredible. The preservation of such a disgusting record for the edification of our children is worthy the system which supports this most moral book. Lot's lingering and reluctance to quit the city is inexplicable, and that God should pardon a little city, so that it might serve as Lot's shelter, because Lot objected to journey to the mountain, is also a most unreasonable statement. Either the inhabitants of Zoar were equally guilty with those of the other cities of the plain, in which case the same doom should, in justice, have fallen on them, or else the dwellers in Zoar were innocent, in which case it was not true, as pretended by the text, that God spared the little city on Lot's petition, in order that it might serve as his shelter. Priaulx says*—"As one of the objects of the tale is to illustrate by an example the wickedness of Sodom, I naturally conclude that the conduct it attributes to the Sodomians was not the effect of some sudden and unaccountable frenzy, but something habitual; and I cannot help asking how Lot could voluntarily fix his residence among, and afterwards contract family alliances with so lawless and so vicious a people? and how was it that, knowing their character, he did not warn away the strangers from the dangers of the loathsome city?" The concluding incidents of the nineteenth chapter are as infamously foul, and as utterly incredible as are the features

* Questiones Mosaicæ, 397.

displayed in the earlier verses. No moral lesson is even conveyed by the terrible destruction of all the cities of the plain, for it is impossible to forget that God (who deluged the earth to wash away the stains of its sin, saving only one righteous man and his family) might have prevented instead of punishing the crime: nor does the preservation of Lot and his daughters from the destroying fire in anyway result in any improvement of their moral condition. They who saw the burning cities, seem utterly unaffected thereby. It is but just to remark that Bellamy makes a most ineffectual but praiseworthy attempt to purify this chapter by attributing its foulness to an improper translation of the Hebrew text. He says, after exposing many blunders in the text—"Some may ask how could the Jews be deceived as to their language? Would they not have detected these errors? I would observe that the Jews have no advantage above the Christians in acquiring a knowledge of the language; had they, surely before this day it would have been shown that all those palpable contradictions and inconsistencies which disgrace the translations, are not to be found in the original. But, indeed, the far greater part of the Jews in all nations, though they pronounce the Hebrew or read the Hebrew Bible, yet they know not the meaning; and are obliged to gain their knowledge of the original from the national translations." This very much accords with the opinion of Spinoza quoted in pages 4 and 5 of the present volume.

Chap. xx.—On pages 87 to 89, attention has already been called to the story of Abraham's second falsehood in reference to Sarah. The first account was extremely incredible; the repetition is monstrously absurd. Sarah ninety years of age, by her own admission is now an old woman, and yet the text represents her as so charming that Abimelech sends and takes her from her husband. Newman, in his "Phases of Faith," asks, "What was I to make of God's anger with Abimelech, whose sole offence was the having believed Abraham's lie? for which a miraculous barrenness was sent on all the females of Abimelech's tribe, and was bought off only by splendid presents to the favoured deceiver." According to verse 6, Abimelech was not free and responsible. God

knew Abimelech to be a good man, and withheld him from sinning, so that the punishment was for an offence not committed, unless the sending for Sarah was an offence, when the text shows that God permitted it, and God's prophet Abraham originated it by his voluntary falsehood; and why punish others for Abimelech's offence (if offence was really committed)? If God withheld Abimelech from committing sin, why is he not as merciful to every one? It would surely be more Godlike to prevent sin than to punish the sinner.

Verse 5.—"Said he not unto me, She is my sister? and she, even she herself said, He is my brother." Dr. Kennicott,* quoting the Hebrew, says—"In these twelve (Hebrew) words, we find the pronoun of the third person five times; twice properly *he*, and three times originally *she*; but, in the printed editions, two of the feminine pronouns have been most absurdly changed into masculine. So that the preceding words, if closely, or rather if truly translated, contain the following expostulation of Abimelech on account of Sarah—'Said *he* not unto me, *he* is my sister? and *she*, even *he* said, *he* is my brother.' And is this the boasted integrity of Jewish transcribers?" It is evident by this verse that both Sarah and Abraham, with a knowledge of the consequences of Abraham's former similar falsehoods, must have both personally misrepresented their relationship to Abimelech.

Verse 16.—"And unto Sarah he said, Behold, I have given thy brother a thousand pieces of silver: behold, he is to thee a covering of the eyes, unto all that are with thee, and with all other: thus she reproved." Bellamy makes the last four words—"Thus she was justified." Kalisch renders them—"And thou wilt be recognised." The Douay gives—"And remember thou wast taken." Priaulx† quotes Boothroyd as rendering the verse—"I have given thy brother 1000 pieces of silver to purchase veils for thee, and all that are with thee." Michaelis: "I have placed with thy brother 1000 shekels of silver, with it buy thee a veil,

* Wall's Grounds for Revision, 222.
† Questiones, 412.

and wear it everywhere, so that every man may know thou art married." De Wette: "I have given thy brother 1000 shekels of silver, with it buy thee a veil, and wear it before all that are with thee, and before all other, so that thou mayest be distinguished." The Vulgate* reads—"Sarae autem dixit: Ecce! mille argenteos dedi fratri tuo, hoc eri tibi in velamen oculorum ad omnes, quî tecum sunt, et quocumque perrexeris; mementoque te deprehensam."

Verses 17 and 18.—As all the events recorded here took place after the Lord's promise to Abraham; chap. xvii., v. 21, and after the visit at Mamre, and after the destruction of Sodom, and yet before Sarah's state betokened her to be a wife, they must have occupied at most but a few weeks; how, then, did Abimelech or Abraham know that the Lord had afflicted Abimelech's wives with barrenness?

Chap. xxi., v. 9.—"And Sarah saw the son of Hagar the Egyptian, which she had born unto Abraham, mocking." The Douay says—"And when Sarah had seen the son of Hagar, the Egyptian, playing with Isaac, her son," and, in this, it follows and agrees with the Septuagint version. Which is also corroborated by the Vulgate—"Cumque vidisset Sara filium Agar Aegyptiæ ludentem cum Isaac filio suo." Which version is right? has the Hebrew been corrupted in order to afford some justification for Ishmael's expulsion? If yes, how much of the text has been similarly dealt with? It is hardly probable that the translators into the Greek or Latin have turned the "mocking" into harmless play. All orthodoxy would seek to substantiate Sarah's justification, not to lessen it.

Verse 12.—"And God said unto Abraham, let it not be grievous in thy sight because of the lad, and because of thy bondwoman; in all that Sarah hath said unto thee, hearken unto her voice." Priaulx says†—"Michaelis thinks that this counsel of the Deity sounds somewhat harshly; but he afterwards consoles himself with the reflection that it is more in accord with our views of marriage than those which obtained in the time of Abraham. To my poor judgment,

* Hahnii Biblia Heb. cum Vulgata, 21.
† Questiones, 433.

however, it seems that every man, married or not, who in our day seduces a woman, by that very act engages himself in certain duties towards her: he is bound, for instance, to save her from the perils of starvation, prostitution, &c., and, though he may, I care not for what reasons, have withdrawn from her society, his duties he is ever bound earnestly to fulfil. To us, therefore, the conduct of Abraham is, to say the least of it, cruel and unjustifiable. And when we remember that both in her own eyes and in the eyes of those among whom she lived, Hagar was innocent of all crime: that she had shared Abraham's bed at Sarah's instigation and for Sarah's sake: then Abraham's conduct appears criminal indeed. Abraham has large possessions of sheep, oxen, servants, and camels, and yet he spares not a solitary beast of burden to sustain his wife and child, no servant to guide or help them, no tent to shelter them. Out of his great wealth, twice increased by large gifts resulting from most questionable conduct, the prophet of God gives his wife "bread and a bottle of water," and then sends her into the wilderness to die. Verse 15.—"She cast the child under one of the shrubs." The child Ishmael was between 13 and 16 years of age; did the writer forget this?

Verses 30 and 31.—In chap. xxvi., vv. 25, 32, and 33, we are told that it was not Abraham, but the servants of Isaac, who digged the well; and that it was not Abraham, but Isaac who called the name of the place Beersheba. Which is correct, or were there two Beershebas? In both cases Abimelech and Phichol are parties to the oath. Did they repeat with Isaac the covenant with Abraham, or are some of the incidents in Isaac's life but copied from that of Abraham?* The thirty-third verse reads, "Therefore the name of the city is Beersheba unto this day." The Rev. Dr. Giles adds: "It is sufficient to remark that no city of Beersheba existed in the time of Moses; consequently the book in which it is found could not have been written by Moses or any of his contemporaries."

Chap. xxii.—"God did tempt Abraham." James, chap. 1, verse 13: "Let no man say when he is tempted, I am

* Kalisch: Genesis, 441; Hebrew Records, 135.

tempted of God; for God cannot be tempted with evil, neither tempteth he any man." Bellamy, commenting on this chapter, says: "This is one of the most unaccountable things in sacred history as it stands in the vulgar versions." Ancient and modern objectors have said: "Is it possible to suppose that the Supreme Being, who knows what is in man, would require him to give a proof of his faith and obedience by murdering his only son, and this in direct opposition to his commands under that dispensation?" Bellamy urges that the translation is entirely wrong. "But," he observes, "the intelligent reader will naturally ask the question: If the translation be wrong, why has this error been retained for so many ages? The reason is obvious. The first Christian translation was made in Greek by Symmachus, and 200 years afterwards Jerome, who could not read Hebrew without the assistance of a Jew, with whose help he compared his translation with the original, was the first who attempted to give a translation from Hebrew into Latin; or rather who revised the old Vulgate then in use, which was a mixture from the Greek, the present Vulgate being only a mixture ex-Hieronymi, *veteris Vulgatæ et Theodotionis editionibus.* To this the Council of Trent have affixed their seal of infallibility. And though it has so many marks of human infirmity, and scarce a page that does not betray the ignorance of the compiler, yet it is with them sacred and canonical, the authentic scripture. From this translation all the European translations have been made; and thus all the errors we find in every page of the authorised version have had their origin from this contaminated fountain, the Latin Vulgate, which the Council of Trent, in order to cover their ignorance of Hebrew, have declared to be infallible."

Many competent critics are of opinion that the Hebrew text itself is as unreliable as the Latin Vulgate.

Francis William Newman* says: "A man who, in obedience to a voice in the air, kills his innocent wife or child, will be either called mad, or shut up for safety, or will be hanged as a desperate fanatic: do I dare to condemn this

* Phases of Faith, 91.

modern judgment of him? No outward impressions on the eye or ear can be so valid an assurance to me of God's will as my inward judgment. How amazing, then, that a Paul or a James could look on Abraham's intention to slay his son as exhibiting a praiseworthy faith." Paul and James agree in extolling Abraham as the pattern of faith; James and the author of the epistle to the Hebrews specify the sacrifice of Isaac as a first-rate fruit of faith; yet, if the voice of morality is allowed to be heard, Abraham was (in heart and intention) not less guilty than those who sacrificed their children to Moloch.

Voltaire remarks: "It seems astonishing that God, after causing Isaac to be born of a centenary father and a woman of ninety-five, should afterwards have ordered that father to murder the son whom he had given him, contrary to every expectation. This strange order from God serves to show that, at the time when this history was written, the sacrifice of human victims was customary amongst the Jews, as it afterwards became in other nations, as witness the vow of Jephtha."

Verse 2.—In the Douay, Abraham is told to go "into the land of vision;" in this the Vulgate "*in terram visionis*" is followed; in our version "into the land of Moriah." The Septuagint version does not agree with either, but reads *eis ten gen ten upselen*—"to the high land." Symmachus agrees with the Vulgate. The version of Aquila differs from all the others.* "And Abraham said unto his young men, abide ye here with the ass; and I and the lad will go yonder and worship, and come again to you." If Abraham believed that he was really about to offer Isaac, then he was lying to his young men. If he believed that Isaac would return, then the whole story of God's command must be untrue.

Chap. xxii., v. 12.—If this verse be taken to mean that God knew Abraham to be godfearing because he did not withhold his son, then it would appear that until this test the All-wise was uncertain as to the patriarch's piety.

Verse 14.—"And Abraham called the name of that place

* Kalisch: Genesis, 446; Colenso, part 2, 246.

Jehovah-jireh: as it is said to this day, In the mount of the Lord it shall be seen." Aben Ezra observes that the title, "Mount of the Lord," was not given to Mount Moriah until after the building of the Temple.* This would be conclusive against Moses as the writer of this phrase. The LXX. translate the last sentence *en tō orei Kyrios ōphthē*—"In the mount the Lord was seen." The Douay reads, "In the mountain the Lord will see." Abraham calls the name of the place Jehovah-jireh, yet in Exodus c. vi. v. 3, we read, "And I appeared unto Abraham, unto Isaac, and unto Jacob, by the name of God Almighty, but by my name JEHOVAH was I not known to them." If the name of Jehovah was not known to Abraham, how came he to use it?† Jacob likewise uses the name Jehovah (see Genesis, chap. xxviii., 13 and 21, and chap. xxxii. 9); although if God's speech be correct, neither Abraham nor Jacob knew it. As it is evident that if Abraham and Jacob used the name Jehovah they must have been acquainted with it, one of three theories must be adopted—either that the account in Genesis is untrue, or that the all-wise God had forgotten that Abraham and Jacob were acquainted with the name, or that his words are misstated in Exodus. Either supposition is fatal to the Bible. The word anglicised as Jehovah is יהוה JEUE. The word itself is derived from the Hebrew verb "to be," and doubtless was intended to express existence past, present, and future.‡ Godfrey Higgins§ quotes Archbishop Usher in confirmation of this rendering of the word, which he says, in chap. v., sec. 37, "is so absurdly written Jehovah." "A Mr. Davis, who was employed by the bishop to procure MSS. for him in the East, learned from the Samaritans that their nation pronounced the word Jehueh in Hebrew יהוה J e u e. This must be *j* as *i* in pine, *e* as *a* in ale, *u* as in hume or in use." In

§ Celtic Druids, p. 25, chap. i., sec 21

the historic work of Diodorus Siculus (lib. i., §94) the name of the God of the Jews is written Ιαω, showing that the four-lettered name יהוה had been read as Yahoh. In a fragment of Philo Byblius, preserved in 'Præparatio Evangelica' of Eusebius (lib. i. cap. 9) the same name is transcribsd Ιενω, which accords with the reading of the original group, as Yehuho. Clement of Alexandria gave in his Stromata (lib. v. §6) as the transcript of the four-lettered mystic name Ιαου, corresponding with the reading thereof Yahuh. His pupil Origen transcribed this name in two different ways—Ιαω, corresponding with Yehoah (or Joh), and Ιωα with Yahoh.* The name in question was transscribed by Macrobius (in his Saturnalia, lib. i. cap. 18) Ιαω, by Jerome, *Jao*, in his book 'De Interpretatione Nominem,' and *Jaho* in the commencement of his commentary on the eighth Psalm, all of which agree with Yahoh. Epiphanius, in the tenth section of his treatise against the Gnostics, states Ιαω 'as the name given by those heretics to the Ruler in the highest heaven;' and in the fifth section of his treatise against the Archontics includes Ιαβε as one of the names of the true God [the *b* and *v* being exchangeable]—this makes Yahveh. This last transcript (Ιαβε) Theodoret informs us accorded with the Samaritan pronunciation of the four-lettered name, while he transcribes the Jewish pronunciation Aia.† Αια is obviously the transcript not of יהוה but of the substantive verb היה (EJE) Hayah, of which this inflexion signifies 'he was,' or 'he has been.' Besides the above diverse pronunciations of יהוה another has been transmitted to us. In MS. copies of the Septuagint no longer extant, *pipi* is recorded to have been written instead of *Kyrios*, to represent the four-lettered name. The word Adonai is substituted in the Douay for Jehovah, which the Jews (says a foot note) never pronounce, but instead of it, whenever it occurs in the Bible, they read Adonai, and therefore they put the points which

* Joh, in the Coptic, means Moon. The name Isis is either derived from it, or it from the name Isis. (See Sharpe's Egypt, pp. 128 and 135.) See also as to Jah, the "Pentateuch Controversy," by Presbyter Anglicanus, pp 118 and 119; and Taylor's "Diegesis," c. 22.

† Grounds for Revision, pp. 200, 213, etc.; Gesenius' Lexicon, 337.

belong to the name Adonai to the four letters Iod, He, Vau, He. Hence some moderns have framed the name Jehovah unknown to all the ancients, whether Jews or Christians, for the true pronunciation of the name, which is in the Hebrew text, by long disuse is now quite lost." Origen expressly says that the four-letter name was unutterable amongst the Jews. Gesenius at one time regarded the word יהוה as perhaps of the same origin as Jov*is* Ju*piter*, and transferred from the Egyptians to the Hebrews. Parkhurst* quotes Varro as identifying Jove, Jovis pater, and Jupiter with the four-lettered name. Cahen† speaks of יהוה as a tetragrammatic name, composed of היה "it was," הוה "it is," יהיה "it will be," and he always translates IEUE as "l'Eternel."

The Rev. Mr. Etheridge says that the reverence with which the name Jehovah has been regarded for many centuries, and its consequent disuse as a spoken word, has been followed by the absolute loss of its true pronunciation. It was thought that the pronouncing the name was blasphemy.‡ "When the high priest pronounced it in the service of the day of Atonement, the people fell prostrate on the ground. After the time of the high priest Shimeon Hazaddik, it ceased to be spoken. It was last heard in the temple from his mouth. Henceforward whoever should attempt to pronounce it was to have no part in the world to come. The consequence has been an utter oblivion of the orthoepy of the name, not only in its oral sound, but in its grammatical vocalisation. The four antique consonants remain, but the peculiar nature of the Hebrew language will greatly modify the signification."

Layard in deciphering the hieroglyphical inscriptions on one of the upright tablets at Nineveh, discovered amongst the names of thirteen great gods, one identical with Yao or Jupiter.§ Abbé Cambalot, quoting Lao Tse, a Chinese writer, gives the following curious passage—"Celui que vous regardez et que vous ne voyez pas, se nomme *I;* celui que vous écoutez, et que vous n'entendez pas, se nomme

* Lexicon, p. 156.

§ Second Expedition to Nineveh, p. 629.

HI; celui que votre main cherche, et qu'elle ne peut sasir, se nomme *Weï:* ce sont trois êtres que l'on ne peut comprendre, et qui confondus n'en font qu'un. Celui qui est au-dessus n'est pas plus brillant; celui qui est au-dessous n'est pas plus obscur: c'est une chaîne sans interruption, qui rentre dans le nom être, qu'on appelle *forme* sans *forme*, être indéfinissable. En allant au-devant, on ne lui voit point de principe; en le suivant, on ne voit rien au-delà." M. Abel Remusat thinks that "the *I, HI, Weï* is identical with the Jehovah of the Jews."*

The Pentateuch, says Von Bohlen, "can no better conceal, than the books which immediately succeed it, that Jehovah was at first merely the national Deity of the Israelites. Cain is afraid to dwell in a land where 'Jehovah is not;' the Deity goes down with his people into Egypt, and appears there to his chosen servants. He is constantly spoken of as 'the God of Abraham, Isaac, and Jacob,' or 'the God of the Hebrews.'"† Von Bohlen denies that the name Jehovah is Semitic in its origin; he does not affirm from whence the Jews derived the word, but apparently favours the theory of its Egyptian origin.

Chap. xxiii. v. 2.—A writer in the *Cornhill Magazine*‡ says—"We may remark that the antipathy of the Jewish professors to women is oddly enough evinced in one of their glosses on the Book of Genesis. In this they contend that Abraham shed but few tears on the death of Sarah, inasmuch as she had grown old, and that, as a consequence, he was not altogether sorry to get rid of her. That his tears were scanty, they conclude from the fact that the letter *Caph*, which is used in describing his weeping, is a remarkably small letter, and, being a small letter, could only be used with propriety in the description of a small thing; and, accordingly, the thing described being the weeping, that weeping must have been small, as the letter certainly is." I do not know on what authority this is given. The letter *Caph* is relatively not a small letter, either in Biblical or Rabbinical Hebrew.

* Cambalot's Elemens de Philosophie, p. 20.
† Introduction to Genesis, vol. 1, p. 148: Hevwood's translation.
‡ No. 64, p. 486.

Chap. xxiii., v. 6.—"Hear us, my Lord: Thou art a mighty prince among us." Kalisch, Bellamy, the Douay, the Vulgate, and the Septuagint agree in translating the words "a mighty prince" as "a prince of God." The word rendered mighty in our version is אֱלֹהִים (ALEIM), which is generally translated God in our Bible. Why have the orthodox translators given a different rendering here?

Verse 9.—"Cave of Machpelah." The Douay, the Vulgate, and the Septuagint translate this "the double cave." That is, while our version makes Machpelah the proper name of a district, the other versions do not treat it as a proper name at all. In verse 17 this distinction quite alters the sense. Our version reads—"And the field of Ephron, which was in Machpelah;" the Douay and Vulgate, "And the field that before was Ephron's, wherein was the double cave." Was the field in Machpelah, or was Machpelah (*i.e.*, the double cave) in the field?

Verse 13.—"Saying, But if thou *wilt give it*, I pray thee, hear me." The Jewish reading of this passage affords internal evidence of some corruption, by the impossibility there is of collecting from it any intelligible and consistent meaning; and accordingly all the various attempts to fill up the chasm have proved utterly ineffectual. Thus, for instance, the supplement which is introduced into the authorised English rendering of the sentence, and marked with italics, is quite at variance with the context. The Septuagint reads, following in this the sense of the Samaritan and Syriac: "Since thou art on my side, hear me."* The Douay, following the Latin Vulgate, reads: "I beseech thee to hear me;" Bellamy: "But if thou wilt hear me;" Kalisch: "If thou only, oh, if thou would'st hear me." The words "wilt give it" are not only not in the Hebrew, but are absurdly introduced by the translators of our version, and without any warranty in the spirit of the story.

Chap xxiv., v. 3.—The conduct of Abraham as to cath-taking is disapproved in Matthew, chap. v., vv. 34 to 37, and James, chap. v., v. 12. In the Pentateuch and other books of the Old Testament swearing is common. God binds

* Grounds for Revision p. 447.

himself by an oath, and his prophets do likewise. It is not an edifying task for the true believer to estimate how often these scripture-recorded oaths have been broken.

Chap. xxiv., v. 14.—Bellamy says that "in this verse there are six words in the authorised version for which there is not any authority in the Hebrew—viz., "let the same be she that." According to the Douay and the Latin Vulgate, Abraham's servant talked to himself; how were the words made known to the writer of Genesis?

Verse 47.—"I put the earring upon her face." Kalisch renders this, "I put the nose-ring in her nose."

Verse 55.—Five words are put in for which there is no authority in the Hebrew—viz., "a few at the least."

Chap. xxv., vv. 1 and 2.—"Then again Abraham took a wife, and her name was Keturah. And she bare him Zimran, and Jokshan, and Medan, and Midian, and Ishbak, and Shuah." The account is repugnant to what went before. If Abraham, at the age of 100 years, laughed at the idea of his having a son, how does it happen that, when he was 137 years old, he marries again and begets six children?* The great age of Abraham has long before been emphatically urged (xxiv., v. 1); about forty years previous to the period to which this portion seems to refer he had felt the debility of advancing years approaching (xvii., v. 17), and the birth of Isaac was considered a miracle beyond the natural order of events (xviii., v. 11), since Abraham was at that time as good as dead (Hebrews xi., v. 12); and yet after all this he has a large family.

Verse 3.—Kalisch says, "a great perplexity arises from the circumstance that it contains names elsewhere introduced in perfectly different connections. For Sheba and Dedan, here traced to Abraham and mentioned as the sons of Jokshan, are in the great catalogue of nations (x., 7) enumerated amongst the Cushites, and described as the sons of Raamah." Asshurim seems to me more like the inhabitants of Asshur (see chap. x., v. 11, and page 80) than the name of an individual. The other two names, Letushim and Lemmim, seem plural nouns.

* Giles's Hebrew Records, p. 183.

Verses 5 and 6.—If Abraham really gave "all that he had" unto Isaac, what kind of gifts did his other children get? The text intends, probably, that Isaac got the residue of Abraham's property, not that he had the whole of it.

Verse 6.—The word פילגשים (PhILeGeShIM) "concubines," should, according to Rabbi Solomon Ben Isaac, "be פלגשם (PheLeGeSheM), without the י, to show that it was only one concubine—*i.e.*, Hagar, who was identical with Keturah, according to the opinion of Berishith Rabba."*

Verse 23 —Advocates for the rights of primogeniture ought to read this verse attentively. God seems to have a preference for younger sons: the dutiful Ishmael (who, though turned out into the desert to starve, forgot his wrongs, and attended to place his father's body in the grave) was set aside for his younger brother Isaac. The truthful, manly, and forgiving elder born Esau is supplanted by the crafty, cowardly, and untruthful Jacob.

Chap. xxvi., vv. 7 to 11.—Of this adventure happening a third time in the history of father and son, and a second time in the same country, Professor Newman says, "Allowing that such a thing was barely not impossible, the improbability was so intense as to demand the strictest and most cogent proof; yet, when we asked who testified it, no proof appeared that it was Moses; or, supposing it to be he, what his sources of knowledge were." Isaac's falsehood in passing off his wife as his sister seems to have been directly rewarded by God. (See verse 12.)

Verse 8.—The word מצחק (MeTzHQ), here translated "sporting," is the same word which in c. xxi. v. 9 (see page 108) was rendered "mocking," the translators hoping to manufacture some justification for Sarah's hard heartedness. In 2 Samuel, c. ii. v. 14, "play" seems to take a wide meaning; but the Hebrew word in that case, although somewhat similar, is clearly not the same as in the two under notice.

Verse 34.—"And Esau was forty years old when he took to wife Judith the daughter of Beeri the Hittite, and Bashemath the daughter of Elon the Hittite." In c. xxxvi. vv. 2

* Jacob Ben Chajim's Introduction, p. 20.

and 3, we read that "Esau took his wives of the daughters of Canaan; Adah the daughter of Elon the Hittite, and Aholibamah the daughter of Anah, the daughter of Zibeon the Hivite; and Bashemath, Ishmael's daughter, sister of Nebajoth." The only name agreeing is that of Bashemath, who is in one verse described as Ishmael's daughter, and in the other as the daughter of Elon the Hittite. In c. xxviii. v. 9 the third wife, the daughter of Ishmael, is called Mahalath. Is it important that Christians should have any belief as to the names of Esau's wives? If yes, how are they to believe one statement in preference to the other? If the names are declared to be unimportant, may not an objector fairly urge that many other names and a great deal of narrative are also immaterial? and if once you commence the process of rejecting any portion as unnecessary, where is the line to be drawn?

Gen., chap. xxvii., vv. 18 to 24.—"And he came unto his father, and said, My father. And he said, Here am I; who art thou, my son? And Jacob said unto his father, I am Esau thy first-born; I have done according as thou badest me: arise, I pray thee, sit and eat of my venison, that thy soul may bless me. And Isaac said unto his son, How is it that thou hast found it so quickly, my son? And he said, Because the Lord thy God brought it to me. And Isaac said unto Jacob, Come near, I pray thee, that I may feel thee, my son, whether thou be my very son Esau or not. And Jacob went near unto Isaac his father; and he felt him, and said, The voice is Jacob's voice, but the hands are the hands of Esau. And he discerned him not, because his hands were hairy, as his brother Esau's hands. So he blessed him. And he said, Art thou my very son Esau? And he said, I am." Psalm cxx., v. 2—"Deliver my soul, O Lord, from lying lips, and from a deceitful tongue." Proverbs xii., v. 22—"Lying lips are abomination to the Lord: but they that deal truly are his delight." Proverbs vi., vv. 16 to 19—"These six things doth the Lord hate: yea, seven are an abomination unto him: a proud look, a lying tongue, and hands that shed innocent blood, an heart that deviseth wicked imaginations, feet that be swift in running to mischief, a false witness that speaketh lies, and he that soweth

discord among brethren." Malachi i., v. 2—"Was not Esau Jacob's brother? saith the Lord: yet I loved Jacob, and I hated Esau." Our Roman Catholic friends try to show that this was not a lie on Jacob's part, or if one a white lie. A note to the Douay Bible tells us "St. Augustine (L. contra mendacum, c. 10) treating at large upon this place, excuseth Jacob from a lie, because this whole passage was mysterious as relating to the preference which was afterwards to be given to the Gentiles before the carnal Jews, *which Jacob by prophetic light might understand!* So far it is certain that the birthright, both by divine election and by Esau's free cession, belonged to Jacob, so that if there were any lie in the case it could be no more than an officious and venal one." Were Abraham's lies also prophetic truths? Was Isaac's falsehood of the same character? The God who hates liars and abominates lying lips specially calls himself the God of Abraham, of Isaac, and of Jacob. It is sad to read the pitiable efforts made by various writers to free Jacob from blame. Bellamy says that Jacob did not lie, for that "when he said 'I am Esau,' he did not mean the person of Esau, but that he was in the place of Esau as to the succession of primogeniture."* What did Jacob mean when he answered that he had found the venison so quickly because the Lord God brought it to him, while he well knew that he had taken tame goats from the flock? It is idle to justify this, or the reply "I am" to the question "art thou my very son Esau?" The pious William Jones says, "We are struck with horror indeed at seeing one lie added to another, and the sacred name of God introduced as it were to sanctify the cheat."† Kalisch declares that Jacob debased himself in this scene by falsehood, craft, and shameless blasphemy. Most readers will be inclined to endorse the judgment of Kalisch. In fact a perusal of verse 12—"My father peradventure will feel me, and I shall seem to him as a deceiver; and I shall bring a curse upon me, and not a blessing"—shows that Jacob himself knew that he was trying to deceive his blind old father.

---

* New Translation, p. 111.
† Biblical Cyclopædia.

Verse 36.—"Is not he rightly named Jacob? for he hath supplanted me these two times." Kalisch says Jacob, "if taken in its obvious etymological meaning, implies a deep ignominy; for the root from which it is derived signifies to deceive or defraud;" it is in this sense Esau uses the word. Our translators in this verse have followed the Vulgate, Septuagint, and Syriac, not the Hebrew, which is incoherent and evidently inaccurate. Literally translated the Hebrew is "Whether because *one* hath called his name Jacob, for he hath supplanted me this pair of turns." Cahen translates it—"L'a-t-on appelé Jacob parcequ'il m'a déja supplanté deux fois." Wall says*—"How grievously the later sets of English translators were perplexed by the structure of the Hebrew passage here examined, is placed in a prominent light by the artifice to which they were induced to resort, in order to give their respective renderings of it, in seeming conformity with the profession made by them in the title pages of their versions, some faint appearance of being taken from the Hebrew. It is obviously for this purpose that they put the first clause of their several translations of this passage in an interrogative form. But a question, coupled with a negative, substantially amounts to a positive statement; and the query 'is he not rightly named?' is virtually equivalent to the assertion, 'he is rightly named;' so that the renderings employed by them certainly could not have been derived from the Hebrew text in its present state, but must have been surreptitiously borrowed from one of the ancient versions. The very negation introduced into these renderings estranges them from the Hebrew passage, wherein no warrant whatever is to be found for such an expression, any more than for the adverb "justly" or "rightly" here inserted in their translations.

Verse 39—"Behold, thy dwelling shall be the fatness of the earth, and of the dew of heaven from above." Kalisch translates this—"Behold, without the fatness of the earth shall be thy dwelling, and without the dew of heaven from above." He adds, that were the authorised version correct, the prediction would be untrue, since Idumea is no fertile,

* Grounds for Revision, p. 455.

but, on the contrary, a most dreary and unproductive land.* Cahen, whose translation agrees with our version, remarks, "Toutefois l' Idumée, séjour d'Esau, n'etait pas une terre fertile."

Verse 40.—"And by thy sword shalt thou live, and shalt serve thy brother [there is no evidence that Esau ever did serve his brother]; and it shall come to pass when thou shalt have the dominion, that thou shalt break his yoke from off thy neck." The Douay translates this—"And the time shall come when thou shalt shake off, and loose his yoke from thy neck." Kalisch, who declares our version incorrect, renders it—"When thou truly desirest it, thou shalt break his yoke from thy neck." Cahen gives—"Toutefois quand tu auras (assez) souffert, tu secoueras son joug de dessus ton cou." The Samaritan version is just the opposite to Cahen's.† Other translators have given still different renderings of this passage.

Chapter xxviii., v. 11.—Even in a dream, the idea of a ladder reaching from earth to heaven to enable God and his angels to go up and down is rather ludicrous. The Douay says that Jacob "saw the ladder in his sleep." A dream, in the Bible, is intended to have a far stronger significance than we should attach to it; we are told that God often appeared to various persons in dreams. The writer of Genesis evidently conceived a ladder necessary to enable the angels of God to get up to heaven, in the same style in which you or I might ascend to the roof of a house.

"In India, many caves used as temples, contain a high ladder, with seven gates, in conformity with the number of planets, upon which the soul is believed gradually to ascend to the highest abode of bliss. In the mysteries of Mythra, a ladder is introduced with seven steps, on which the spirits were believed to ascend through the planets till they arrived in the eighth heaven, where the Deity is enthroned."‡

Verses 20 and 21.—"And Jacob vowed a vow, saying, If God will be with me, and will keep me in this way that I go, and give me bread to eat, and raiment to put on, so

* Genesis, p. 515.
† Cahen's Genese, 85.
‡ Kalisch: Genesis, 522.

that I come again to my father's house in peace, then shall the Lord be my God." The fair inference from this conditional statement is, that if God does not keep, clothe, and feed Jacob, then he shall not be Jacob's God. Jacob was a shrewd fellow; he did not want to be religious for nothing. He would have cared little for the preacher, whose sermon should have taught, "Take no thought what ye shall eat, or what ye shall drink, or wherewithal ye shall be clothed." Objectors to the text have rightly spoken of this chapter as recording Jacob's selfish bargain. Jacob's generous offer recorded in verse 22, to repay to God a tithe of all God might give to him, is in thorough harmony with the preceding verses.* Cahen adds—"The Scriptures do not say when Jacob performed this part of his vow."

C. xxix. v. 17 to 25.—The Douay says that Leah was bleareyed, Josephus that she had "no comely countenance," and he adds that Jacob was drunk after the wedding feast, which fact and being in the dark prevented him from discovering the change of brides.

C. xxx. v. 8.—"With great wrestlings have I wrestled with my sister." The Douay and Vulgate read—"God hath compared me with my sister." Kalisch gives—"Struggles of God have I struggled with my sister."

Verse 11.—"A troop cometh." The Douay translates this—"Happily;" Kalisch, "In felicity;" Vulgate, "Feliciter." Cahen says the phrase is difficult to translate.

Jacob's frauds upon Laban are in keeping with his previous character; but Jacob and Laban are better matched than Jacob and Esau. Laban is as willing to cheat as Jacob; the latter is only ultimately successful because he has God to aid him. Jacob expressly states to his wives that God had taken the cattle of Laban to give to him.

Chapter xxxi.—Jacob's stealing away unawares whilst Laban was away sheep shearing, forms a fitting termination to his connection with Laban. The "images" which Rachel stole are called "Teraphim" by Kalisch and Bellamy. The Douay, the Septuagint, and Vulgate call them "idols." The Hebrew is תרפים (TheRePhIM.) The Teraphim are

* Genese, p. 88.

sometimes identified with the Cherubim, see page 49. In Hosea, c. iii., v. 4, "Teraphim" are mentioned as advantages of which the sinning Israelites were to be temporarily deprived.* From the history of Micah in Judges chaps. xvii. and xviii., the Teraphim seem to have been regarded as Deities, who, although made of metal, delivered oracles in reply to priestly interrogations. They are also spoken of in the Bible as though they were heathen idols. Kalisch says†—"Almost numberless absurdities have been advanced with regard to the Teraphim; ancient Rabbis assert that their worship was connected with atrocious customs of murder, and, with ludicrous efforts to elicit divinations, that they were horoscopic or astrologic instruments; that they were automata to indicate the hours, or *that they were something like donkeys.*" Parkhurst says—"There is little room to doubt that each Teraphim was a compound image with several heads, joined to one body like the Cherubim in form, but for more private purposes."‡ Newman calls them—"Household gods which were made in the form of a human person." Mr. Etheridge says—"The obscurity which hangs over the true meaning of this word (Teraphim), may be judged of by the multiplicity of the derivations assigned to it. 1. That, by a change of the first letter, it is equivalent to Seraphim, and may denote images of bright or burnished brass. 2. That it comes from *tseraph*, 'to melt,' whence *tsoreph*, 'goldsmith,' and signifies molten images. 3. It comes from *rapha* 'to heal,' and describes talismans used as charms for curing or averting diseases. 4. From *taraph*, 'to feed, nourish.' The Teraphim from this view were some kind of objects, the presence of which, in a house, was thought to ensure support and plenty. 5. Some Rabbins make it a term of contempt from *turaph*, 'shamefulness.' 6. Others with the same idea derive it from *raphaim*, 'weak things,' like the dead. 7. Another opinion assigns it to the Syriac *teraph*, 'to ask of, inquire,' in which re-

---

spect the teraphim were domestic idols."* The devout student of the Bible can be certain either that teraphim are good, or that they are bad; the evidence goes both ways, and, as to the meaning of the word, the less probably a true believer knows about meanings the better for his faith.

Verse 24: "Speak not to Jacob either good or bad."—This would in fact be an injunction from God that Laban was to observe absolute silence. The Vulgate has "ne quidquam aspere loquaris contra Jacob," in this following the Septuagint.

Verse 51.—"And Laban said to Jacob, Behold this heap, and behold this pillar, which I have cast betwixt me and thee." In lieu of "which I have cast," the Douay has, "which I have set up;" the Vulgate, "quem erexi;" Cahen, "que j'ai erigés." This is in direct opposition, says Dr. Wall, to the rest of the narrative. "For we are expressly informed, in the 45th and 46th verses of this very chapter, that the pillar here mentioned was set up, not by Laban but by Jacob; and that the heap of stones was collected, not by Laban's but by Jacob's direction."† The Septuagint altogether omits the phrase.

Verse 53.—The words "God of their father" are not in the Septuagint. Cahen translates it, "the Gods of their fathers."

Chap. xxxii., v. 1.—"Angels of God." Bellamy does not believe these were celestial beings. (See pages 95 to 97.) The Reverend A. M'Caul has a long article,‡ in which he admits that the mere word translated angel might as fairly be rendered man; but he argues that there are beings, "angels" entrusted with various missions on earth, and that one of these is in fact God himself. The courage of Jacob does not seem raised by the meeting with the angels; their presence does not appear to have given the Jewish patriarch the slightest confidence in God's intention to protect him; Jacob's fear of Esau is greater than his faith in God.

Verse 22: "His eleven sons."—Cahen translates "ses

* Grounds for Revision, p. 458.
† Targums on Leviticus, p. 23.
‡ Rabbi Kinchi on Jeremiah, p. 9.

onze enfans;" the Hebrew is, אחד עשר ילדיו (AChaD OSheR ILeDIU), "his eleven children." Our translators have rendered sons because Jacob had then twelve children—viz., Joseph, Dinah, Zebulun, Issachar, Asher, Gad, Naphthali, Dan, Judah, Levi, Simeon, Reuben. The word "sons" is בנים—BeNIM, an entirely different word.

Verse 28.—"And he said, Thy name shall be called no more Jacob, but Israel." Yet, notwithstanding this, the name of Jacob is afterwards used repeatedly in Genesis; and when talking to Moses God calls himself "the God of Jacob," not the God of Israel.

Verse 30.—"And Jacob called the name of the place Peniel: for I have seen God face to face, and my life is preserved." 1 John, chap. xl., v. 12: "No man hath seen God at any time;" and John, chap. i., v. 18; chap. v., v. 37; and chap. vi., v. 46. 1 Timothy, chap. vi., v. 16: "Who only hath immortality, dwelling in the light which no man can approach thereto; whom no man hath seen, nor can see." Exodus, chap. xxxiii., v. 20: "And he said, Thou canst not see my face; for there shall no man see me and live." This seems as express and clear a contradiction in words as it is possible to conceive.

Verses 31 and 32.—"And as he passed over Penuel, the sun rose upon him, and he halted upon his thigh." "Therefore the children of Israel eat not of the sinew which shrank, which is upon the hollow of the thigh, unto this day; because he touched the hollow of Jacob's thigh in the sinew that shrank." This reference to a custom still existing among the Israelites seems decidedly to indicate a later date than that of Moses. No one has ventured to assert that the Mosaic law was observed by the Jews before it was instituted by Moses. Now the words of the passage before us seem to show that the Israelites had, for a very long time, abstained from eating the sinew which shrank. Moses being conscious that this custom was ordained by himself, could hardly have used such language, or have claimed such great antiquity as the words seem to indicate.*

The narrative in verses 24 to 30, coupled with Hosea,

* Hebrew Records, 142.

c. xii., vv. 3 and 4, conveys the meaning that Jacob wrestled with God, who had assumed the form of a man, that the finite and created man was as strong and able at wrestling as the omnipotent and infinite creator. That God, to conquer Jacob unfairly, put his thigh out of joint, and that even then Jacob refused to let God go until he had given him his blessing. Bellamy entirely denies the correctness of our version, and disputes the whole story.

It is impossible to read of Jacob's coward fear of Esau, and his boldness against God, without some surprise. Jacob's attempts to bribe his brother to forgive him, Esau's rejection of the proffered gifts, and his magnanimous conduct to Jacob, form an instructive scene. Jacob free in his own heart from all generous emotions, could only imagine Esau's march with 400 men as one of vengeance, and his abject entreaties to God, "Deliver me, I pray thee, from the hands of my brother," will mark his despicably cowardly nature.

It is almost impossible to find a greater contrast than that presented by Jacob whom God loved, and Esau whom he hated. Esau, rough, manly, vigorous, brave, genuine, truthful, and generous—Jacob, mean, unprincipled, cunning, cowardly, and lying.

Chap. xxxiii., v. 14.—Jacob still adheres to his old craft, it is evidently not his intention to follow Esau to Seir. Cahen says—"*Tout le monde convient que l'intention de Jacob n'etait pas d'aller à Seir mais d'eloigner son frère.*"

Verse 18.—"Jacob came to Salem." Many Rabbis translate it that "Jacob arrived in peace," or arrived safely; or cured of his accident. Coverdale, Matthews, and others, deny the existence of Salem as a city.*

Chap xxxiv.—Upon this chapter Voltaire has the following severe observations:—"The son of a king is desirous to marry, to repair a wrong done to a Hebrew girl; the marriage is approved; Jacob, the father, and Dinah, the daughter, are loaded with presents: the King of Sichem deigns to receive the patriarchs within his city; he has the incredible politeness to undergo, with his son, his court, and his people, the rite of circumcision, thus condescending to

* See Bellamy's New Translation, 132; and contra Cahen: Genese, 110; and Kalisch, 575.

the superstition of a petty horde that could not call half a league of territory their own! And, in return for this astonishing hospitality and goodness, how do our holy patriarchs act? They wait for the day when the process of circumcision generally induces fever; when Simeon and Levi run through the whole city with poignards in their hands and massacre the king, the prince his son, and all the inhabitants. We are precluded from the horror appropriate to this infernal counterpart of the tragedy St. Bartholomew, only by a sense of its absolute impossibility. It is an abominable romance; but it is evidently a ridiculous romance. It is impossible that two men could have slaughtered in quiet the whole population of a city. The people might suffer, in a slight degree, from the operation which had preceded; but, notwithstanding this, they would have risen in self-defence against two diabolical miscreants; they would have instantly assembled, would have surrounded them, and destroyed them with the summary and complete vengeance merited by their atrocity." It is difficult from the incoherency of Bible chronology to arrive with accuracy at a knowledge of Dinah's age, but the chronological evidence, such as it is, would make her very juvenile at the time of this tragedy. Some opponents of the text have contended that Dinah was only three years old. Josephus tells the story very differently from Genesis; he not only omits the whole account of the circumcision of the Shechemites, but actually states that when the sons of Jacob were asked about the proposed marriage, "the greatest part said nothing not knowing what advice to give," but that it being the time of a festival when the Shechemites were employed in ease and feasting, Simeon and Levi fell upon the watch when they were asleep, and coming into the city slew all the males.*

Spinoza says—"In the 47th chap. of Genesis, it is recorded that Jacob, when first presented by Joseph his son to Pharaoh, was 130 years old, from which if 22 be taken, which he passed in sorrow on account of the loss of Joseph, and 17 for Joseph's age when he was sold by his brethren, and lastly seven when he served for Rachel, Jacob is found

* Antiquites: Book 1, chap. 21.

at a very advanced age—viz., 84, when he took Leah to wife; on the contrary, Dinah could have scarcely been seven when she was violated by Sechem; and Simeon and Levi, again scarcely 12 and 11 when they ravaged a city and put all the inhabitants thereof to the sword."* Kalisch says,† "Some of the details of the narrative contained in this chapter are certainly of an extraordinary nature. True the caprice of Oriental princes has demanded and obtained stranger things from their subjects than that which Sechem required from the men of his town; it may further be granted that Simeon and Levi were, under the circumstances, alone able to kill the whole male population of a large city, and to carry away all the cattle and every other property (for the text does not countenance the supposition that they were supported by a large number of servants), but what did the victors do with the captive women and children?"

Chap. xxxv., v. 10.—This verse is a repetition of c. xxxii., v. 29, indeed it is a contradiction of it, for if the first change had been made by God, the second would have been unnecessary.

Verses 14 and 15.—These verses seem in the same way a repetition of chap. xxviii., vv. 18 and 19.

Verse 16.—"There was but a little way." Cahen, on the contrary, says—"Il y avait encore une grande étendue de pays."‡ The Douay and Vulgate make it, "He came in the spring time to the land." It can hardly be satisfactory for the unlearned believer to discover passages so differently translated by learned men. He is either driven to doubt, or is compelled to have faith, *not* in God's original revelation, but in the infallibility of some one out of several opposing translations.

Chap. xxxv., v. 19.—"And Rachel died, and was buried in the way to Eprath, which is Beth-lehem." 1 Samuel x., v. 2, says that Rachel's sepulchre was at Zebzah. Colenso notices "Eprath which is Beth-lehem," as one of the signs of later date, the modern name being given as well as the ancient one.§

---

* Tractatus Theologico Politicus, cap. 9. † Genesis, 583.
‡ See also Kalisch 589, who makes it "still a distance."
§ Colenso, Part ii., 217.

Verse 21.—The whole of this verse is omitted in the Septuagint.

Verse 22, and chap. xlix., vv. 3 and 4., and 1 Chron. v., v. 1.—The family to whom God promised "the land," seem to have been most immoral and vicious. Abraham's conduct has been already noticed; the lives of Lot, his family, and neighbours, afford, too, much scope for animadversion; Isaac's procedure was certainly not free from blame in the matter of Rebekah, but he appears a saint by comparison with the rascality of his son Jacob, whose wife, Rachel (worthy partner of such a husband) robs her own father—the cut-throat propensities of Simeon and Levi—and the licentiousness of Reuben.

End of verse 22 to verse 26.—Dr. Giles* speaks of the inaccuracy of the last verse as follows:—"'These are the sons of Jacob, which were born to him in Padan-Aram.' But it is well known that Benjamin was born some years after Jacob returned to Canaan. The text, therefore, is incorrect, and creates a serious difficulty, if we suppose that Moses, writing in the presence of God, could have been liable to such an error." Kalisch thus sums up, *inter alia*, the difficulties of this chapter†—"The words, 'and Jacob arrived at Luz, which is in the land of Canaan' (verse 6), seem to imply that he was coming from a part beyond the territory of the Holy Land (see chap. xxxiii., v. 18), and yet he is supposed to have proceeded from Shechem [which is part of Canaan]. Jacob was commanded by God to stay or to live in Bethel (verse 1), but he left it after a very short time (verse 16). The name of Bethel was long in existence (verses 1 and 3, chap. xxviii., v. 19), and yet it seems now only to have been given to that place by Jacob (verse 15). The Patriarch's name had been changed at Peniel (chap. xxxii., verse 29), but it would seem that he received the appellation of Israel now only at Bethel (verse 10)."

Chap. xxxvi.—"Now these are the generations of Esau, who is Edom." In verse 9 the Hebrew says that Esau is the father of Edom; to avoid the contradiction our translators have written "father of the Edomites."

---

* Hebrew Records, 190.

† Genesis, 591.

Verse 11.—צפו (TsePhU) is, in 1 Chron. i., v. 36, written צפי (TsePhI), probably a copyist's blunder.

Verse 12.—"Timna was concubine to Eliphaz." 1 Chron. i., v. 36, makes Timna the son of Eliphaz.

Verse 14 is a mere repetition of verse 5, and verse 18 again another repetition of the same statement.

Verse 20.—Who was Seir? In several places there is mount Seir mentioned, but we find no man so named.

Verse 22.—הימם (EIMeM) is, in 1 Chron. i., v. 39, written הומם (EUMeM), just reversing the sort of blunder referred to in verse 11.

Verse 23.—עלון (OLUN) is written, in 1 Chron. i., v. 40, עלין (OLIN), a similar error in copying, but again reversed. שפו (ShePhU) is written, in 1 Chron. i., v. 40, שפי (ShePhI).

Verse 26.—חמדן (HeMDeN) is, in 1 Chron. i., v. 41, written חמרן (HeMReN). In anglicising this word, the translators have turned the final N into M, writing it in Chronicles Amram.

Verse 27.—עקן (OQeN) is, in 1 Chron. i., v. 42, written יעקן (IOQeN). These inaccuracies, and some others occurring in this chapter, are of the same character as those pointed out in page 78, and while—being simply copyist's blunders, in substituting one letter for another, the letters being similar in form—they are of little importance to an ordinary reader, if the Bible be regarded as uninspired; they are most important to all mankind if the Bible be regarded in every particular as God's inspired word demanding our implicit faith, because these errors demonstrate not only that errors may occur in the sacred text, but that they have occurred.

Chap. xxxi., v. 31.—"And these are the kings that reigned in the land of Edom, before there reigned any king over the children of Israel."* This verse has long been a stumbling block to the critics. Colenso says—"The phrase, 'before there reigned any king over the children of Israel,' is here used to imply that one king at least had reigned, or was reigning

* Dr. Giles's Hebrew Records, 140; De Wette, vol. ii., sec. 149; Spinoza, Tractatus, c. 8.

over 'the children of Israel,' that is, apparently, not over one of the separate kingdoms of Judah or Israel, but over the *united people*, at the time when it was written. In other words, it could not have been written before the time of Samuel.*

Verse 39.—הדר (EDeR) is, in 1 Chron. i., v. 50, הדד (EDeD); and פעו (POU) is, in Chronicles, פעי (POI).

Verse 40.—עלוה (OLUE) is, in 1 Chron. i., v. 51, written עליה (OLIE).

Verse 40.—Cahen regards these latter verses as an incorrect repetition of those commencing with verse 15. He remarks that the list of dukes succeeding, instead of preceding the Kings of Edom has much embarrassed the commentators.†

Chap. xxxvii., v. 1.—In the Douay, instead of "wherein his father was a stranger," it reads, "wherein his father sojourned." Cahen reads, "*où son père avait séjourné.*" The Vulgate, "*in qua pater suus peregrinatus.*" And in verse 2, instead of "seventeen," the Douay and Vulgate read "sixteen," and they state that Joseph "accused his brethren to his father of a most wicked crime."

The words, "These are the generations of Jacob," seem without sense or connection with the verses following.

Verses 25, 27, and 28.—"Here the merchants to whom Joseph is sold, are thrice called Ishmaelites, and once Midianites. Bishop Patrick explains the inconsistency in the following extraordinary manner:—

"'*Ishmaelites.* They are called below Midianites. These people were near neighbours to each other, and were joined together in one company, or caravan, as it is now called. It is the custom, even to the present day, in the East, for merchants and others to travel through the deserts in large companies, for fear of robbers or wild beasts.'

"If the passage to which these comments are annexed, occurred in one of the famous Greek or Latin historians—Livy, Thucydides, or any other—such a note would not, for one instant, be taken as sound criticism, because none of

* Pentateuch, Part ii., p. 202.

† Genese, 124.

those able writers would be guilty of such an absurdity as applying two names, known to be distinct, to the same people, within the space of four lines. If some idle and weakly written tale contained the inconsistency, the mode of interpreting it, which Bishop Patrick applies to the passage before us, might be passed over, but even then more from its being of no importance than from its soundness or its propriety. But when we find this discrepancy in a work which professes to be inspired, it is highly desirable that such an inconsistency or discrepancy should be cleared up. Why have none of the commentators remarked on the singular circumstance of there being Ishmaelitish merchants at all, in the time when Joseph was sold into Egypt? Ishmael was Jacob's uncle, being brother to Isaac, Jacob's father. The family of Ishmael could not have increased to such an extent in the time of which the history treats. The mention of Ishmaelites, in the text before us, indicates that the writer lived many generations later, when Ishmaelitish merchants were well known. Still less likely is it that there were Midianitish merchants in those days; for Midian was also one of the sons of Abraham, and fifty-four years younger than Isaac (see chap. xxv., v. 2.) At all events, the variation in the name of this tribe of merchants renders it impossible that Moses could have written the narrative, unless we suppose that, when he had it in his power to describe the matter accurately and definitely, he rather chose to relate it in such a manner as to puzzle all future ages as to its exact meaning."*

Verse 35.—"All his daughters." What daughters had he besides Dinah? In the Douay, the word "hell" is substituted for the word "grave." The Hebrew is שְׁאֹלָה (SHALE). Jacob, it is urged, believed his son was devoured by wild beasts, and, therefore, could have hardly expected to find him in his grave; and by hell the Catholic fathers intend purgatory. I must refer my more precise readers to the various controversial works written by various shades of

* Hebrew Records, p. 145.

Catholic and Protestant divines, on the words "purgatory," "limbo," "hell," and "grave."*

Verse 36.—"Unto Potiphar, an officer of Pharaoh's, and captain of the guard." The word translated "officer" is סרים—which the Douay, Vulgate, Septuagint, and Syriac, all render "eunuch."† Cahen makes Potiphar "*chef des executeurs*," as the correct rendering. Kalisch in his note agrees in this, giving "chief of the executioners." Septuagint makes him "head cook," *archimageiro*. The word anglicised as Pharaoh is a common appellation of the ancient rulers of Egypt, and signifies "the sun."

Chap. xxxviii.—It is indeed difficult to discover why such a chapter should, during the later centuries of advanced civilisation, be permitted to disgrace a book which is placed in the hands of our daughters for their instruction. Dom Calmet says, that on first perusal it strikes our minds as not of a nature for edification, but the hidden sense which is shut up in it is as elevated as that of the mere letter appears low to carnal eyes. I deny that there is in this chapter any such elevated meaning derivable by any sensible interpretation. The record is in the first place unambiguously filthy and barbarous, without any redeeming feature. The whole of the chapter enables us to believe that the early traditions of the house of David formed a fitting preface to the life of that pious monarch, while we are obliged to wonder for what wise purpose the infinite Deity traces the genealogy of his only begotten son Jesus to so polluted a source.

Chap. xxxix., v. 1.—This verse is a mere repetition of chap. xxxvii., v. 36. The narration in this chapter serves by way of contrast to heighten the effect of the story told in the preceding chapter. Bible histories, with few exceptions, continue to place women in a degraded light.

Verse 41.—"See he hath brought in an Hebrew unto us." Verse 17, "The Hebrew servant which thou hast brought to us." Chap. xli., v. 15, "For indeed I was stolen away

* See Fulke's defence against Martin, p. 128, and pp. 278 to 231; Parker, Society Edition, pp. 81 to 84.

† See Lexicons, Bresslau, Gesenius 595, contra Parkhurst, 504, Kalisch, Genesis, 617.

out of the land of the Hebrews." Chap. xli., v. 12, "And there was there with us a young man, an Hebrew." "In the above passages the word 'Hebrew' is used in a familiar way, as if it were a well-known appellation of a *whole people*, well known even in Egypt—nay, as if the land of Canaan could already be spoken of by Joseph as the 'land of the Hebrews,' so as to be readily understood by the Egyptians with whom he was speaking."* These are evidently expressions of a later age, for in Joseph's time there was yet no Hebrew people, and even in the time of Moses there was no "land of the Hebrews."

Chap. lxi., v. 14.—In consequence of the omission in the Hebrew of certain letters, this verse is capable of at least sixteen different readings.† Our version says, "that Joseph shaved himself, changed his own raiment, and came unto the king." The Douay says that "they shaved Joseph, and changed his apparel, and brought him unto the king." The Septuagint differs from both.

Verse 45.—"And Pharaoh called Joseph's name Zaphnath-paaneah; and he gave him to wife Asenath, the daughter of Poti-pherah priest of On. And Joseph went out over all the land of Egypt." Our version says Pharaoh called Joseph Zapnath-paaneah, and the margin renders this "a revealer of secrets." The Douay and Vulgate translate it "Saviour of the world." Cahen says it is probably an Egyptian name of which the sense is unknown. The Septuagint omits the words "and Joseph went out over all the land of Egypt."

Verse 56.—This famine was over the whole earth, so that the favoured family of Abraham were worse off than the Egyptians, to whom God gave seven years' notice to enable them to prepare against the coming trouble. The seven years of previous plenty seem to have been limited to Egypt.

Chap. xliii., v. 32.—How could it be considered an abomination for the Egyptians to eat with the Hebrews? The latter were only the descendants of Abraham, few in number,

---

* Colenso, Part ii, p. 206.

† See Wall's Grounds for Revision, p. 551.

and the Egyptians could not have known of their existence until they made acquaintance with Joseph; and by giving him the daughter of the high priest to wife, they had conferred great honour and favour on him—he was the first in the land, and the only Hebrew amongst them. The verse speaks as if of a custom well known. It is probable that the Egyptians did not eat with strangers. Herodotus says* that no Egyptian man or woman will kiss a Grecian on the mouth, or use the knife, spit, or caldron of a Greek.

Chap. xliv., v. 5.—The Douay commences this verse with the words, "the cup which you have stolen."

Chap. xlv., v. 10.—"Goshen." There is no such place or district known in Egypt—no profane writer mentions it.†

Verse 18.—If Pharaoh knew them to be Hebrews and shepherds, how is this reconcileable with c. xliii. v. 42, and c. xlvi. v. 34?

Chap. xlvi., vv. 8 to 15.—"All the souls of his sons and daughters were thirty and three." The names recorded in these verses only number thirty-two. The Talmudical writers, to account for the one deficient, suggest that Iochebed, the mother of Moses, was born while Jacob's family were *en route* for Egypt.‡

Verse 9.—פלוא, PheLUA, is in Numbers, c. xvi., v. 1, פלת, PheLeTh. If this second name is not intended for the other, then Genesis incorrectly states Reuben's family.

Verse 10.—ימואל, IeMUAL; and in Exodus, c. vi., v. 15, but in Numbers, c. xxvi., v. 12, and 1 Chronicles, c. vi., v. 24, he is called נמואל, NeMUAL. יכין, IKIN, is in 1 Chronicles, c. iv., v. 24, called יריב, IRIB. צחר, TseHeR, is in Numbers, c. xxvi., v. 13, and in 1 Chronicles, c. iv., v. 24, זרה, ZeReH.

Verse 10.—אהד, AED, is omitted altogether in Numbers, c. xxvi., v. 12, and from 1 Chronicles, c. iv., v. 24.

Verse 11.—גרשון, GeRShUN; in 1 Chronicles, c. vi., v. 16,§ is גרשם, GeRSheM, two letters differing.

---

* Euterpe, sec. 41.

† See Kalisch, Genesis 679, and Cahen, Genese 159.

‡ Cahen's Genese, 163; and Kalisch, 689.

§ In the Hebrew this is in reality v. 1 of chap. v., the five preceding verses belonging to chap. vi.

Colenso says—"'And the sons of Judah, Er, and Onan, and Shelah, and Pharez, and Zarah; but Er and Onan died in the land of Canaan; and the sons of Pharez were Hezron and Hamul.'—G. xlvi. 12.

"It appears to me to be certain that the writer here means to say that Hezron and Hamul were *born in the land of Canaan,* and were among the seventy persons (including Jacob himself, and Joseph, and his two sons) who *came into Egypt* with Jacob.

"He repeats the words again and again:—'These are the names of the children of Israel, which came into Egypt,' v. 8. 'All the souls, that *came with Jacob into Egypt,* which came out of his loins, besides Jacob's sons' wives, were three score and six,' v 26—which they would not be without Hezron and Hamul; 'and the sons of Joseph, which were born him in Egypt, were two souls; all the souls of the house of Jacob, which *came into Egypt,* were three score and ten.'—v. 27.

"So again we read—'These are the names of the children of Israel, which *came into Egypt;* every man and his household *came with Jacob.* And all the souls that came out of the loins of Jacob, were seventy souls; for Joseph was in Egypt already.'—E. i. 1. 5. 'Thy fathers *went down into Egypt* with threescore and ten persons, and now the Lord thy God hath made thee as the stars of heaven for multitude.'—D. x. 22.

"I assume, then, that it is absolutely undeniable that the narrative of the Exodus distinctly involves the statement, that the sixty-six persons, 'out of the loins of Jacob,' mentioned in G. xlvi., and no others, went down with him into Egypt.

"Now Judah was *forty*-two years old,* according to the

* "Joseph was thirty years old, when he 'stood before Pharaoh,' as governor of the land of Egypt, G. xli. 46; and from that time nine years elapsed (seven of plenty and two of famine) before Jacob came down to Egypt. At that time, therefore, Joseph was thirty-nine years old. But Judah was about three years older than Joseph; for Judah was born in the *fourth* year of Jacob's double marriage, G. xxix 35., and Joseph in the *seventh*, G. xxx 24-26, c xxxi. 41. Hence Judah was forty-two years old when Jacob went down to Egypt."

story when he went down with Jacob into Egypt. But if we turn to G. xxxviii., we shall find that, in the course of these forty-two years of Judah's life, the following events are recorded to have happened.

"(1) Judah grows up, marries a wife—'at that time,' v. 1, that is, after Joseph's being sold into Egypt, when he was seventeen years old.'—G. xxxvii. 2, and when Judah, consequently, was, at least, *twenty* years old, and has, separately, three sons by her.

"(2) The eldest of these three sons grows up, is married, and dies.

"The second grows to maturity (suppose in another year) marries his brother's widow, and dies.

"The third grows to maturity (suppose in another year still), but declines to take his brother's widow to wife.

"She then deceives Judah himself, conceives by him, and in due time bears him twins, Pharez and Zarah.

"(3) One of these twins also grows to maturity, and has two sons, Hezron and Hamul, born to him, before Jacob goes down into Egypt.

"The above being certainly incredible, we are obliged to conclude that one of the two accounts must be untrue. Yet the statement, that Hezron and Hamul were born in the land of Canaan, is vouched so positively by the many passages above quoted, which sum up the 'seventy souls,' that, to give up this point, is to give up an essential part of the whole story. But then this point cannot be maintained, however essential to the narrative, without supposing that the other series of events had taken place beforehand, which we have seen to be incredible."*

The Rev. Dr. Giles† observes on verses 8 to 26:—

"An error is found also in the other catalogue of Jacob's children, who accompanied him into Egypt. The names occupy from verse 8 to 25 of Genesis, chap. xlvi. In verse 26 it is said:—

"'All the souls that came with Jacob into Egypt, which

* Colenso, Part I., chap ii., pp. 17-19. See also Spinoza, Tractatus Theologico Politicus, chap. ix., and Dr. McCaul; contra Colenso, pp. 3 to 15.

† Hebrew Records, p. 191.

came out of his loins, besides Jacob's sons' wives, all the souls were three score and six.

"This total is erroneous, for the names, added properly amount to sixty-seven; and a still greater difference is found between the Hebrew text and the Septuagint, in the twenty-seventh verse; the former makes 'all the souls of the house of Jacob' to be 'three score and ten,' whereas the latter states them to have been seventy-five.

"We might set aside the authority of the Septuagint as inferior to that of the Hebrew in such a matter, were it not that in St. Stephen's speech, in the Acts of the Apostles, chap. vii. v. 14, the number 27 is repeated; and an awkward dilemma is created, from which it is impossible to extricate ourselves, if these conflicting accounts, both written by inspiration, are to be considered as having come down to us in their original state. This may, with justice, be called in question; for Dean Shuckford, who supposes that the transcribers have added something in chap. xxxv., accuses them of having omitted something in chap. xlvi., of having added a verse in xlvi. 27, of the Septuagint, which is more full than the Hebrew, and, lastly, of having altered seventy into seventy-five, in chap. vii. of the Acts. It is difficult to imagine how a book, with which such liberties have been taken, can properly be regarded as an immaculate record. But the same mode of interpretation is entirely inapplicable to explain the remarkable fact, that, among those who accompanied Jacob into Egypt, are enumerated in chap. xlvi., v. 21, ten sons of Benjamin, and in v. 12, two grandsons of Judah, Hezron and Hamul. Jacob surely went into Egypt soon after the famine began; and Benjamin was then a lad, if we may trust the chroniclers, under twenty years of age. The grandsons of Judah, through his son Pharez, could not have been born until many years later; for Pharez, their father, was only two or three years old when the whole family first entered the land of their servitude."

Kalisch says*—"The text distinctly observes 'All the souls of the house of Jacob that came into Egypt were seventy,' verse 27. The same statement is as clearly re-

* Genesis, 686.

peated in other passages (Exodus i. 5., Deut. x., v. 22.) It is therefore scarcely possible to doubt that this was a historical tradition generally received amongst the Israelites. However the tenor of the present list certainly leads to the inference, that the total number of Hebrew settlers in Egypt was considerably larger than seventy. For first, Jacob had daughters (v. 7, and chap. xxxvii., v. 35). Secondly, his sons came with their wives (v. 26) none of whom is here counted. Third, his sons had likewise daughters (v. 7). but Serah only the daughter of Asher is introduced."

Verse 13.—פוה, PhUE, is in 1 Chronicles, c. vii., v. 1, פואה, PhUAE; and יוב, IUB, is ישיב, IShIB. In the first case one letter is added, and in the second two are substituted for one omitted.

Verse 16.—צפיון, TsePhIUN, is in Numbers, c. xxvi., v. 15, צפון, TsePhUN. The letter Yod is omitted. אצבן, ATsBeN, is in Numbers, c. xxvi., v. 16, אזני, AZNI, every letter being changed except the first. ארודי, ARUDI, is in Numbers, c. xxvi., v. 17, ארוד, ARUD, omitting the final Yod.

Verse 17.—ישוה, IShUE, is omitted in Numbers, c. xxvi., v. 44, but is inserted in 1 Chronicles, c. vii., v. 30. Heber and Malchiel, here put as the sons of Beriah, are by Josephus specially marked as the sons of Asher.*

Verse 20.- The Septuagint adds in this verse, for children of Ephraim and Manasseh, five names not given in our version—viz., Machir, Galaad, Soutalaám, Taám, and Edom.

Verse 21.—אחי, AHI, is in Numbers, c. xxvi., v. 38, אחירם, AHIReM. מפים, MePhIM, is in Numbers, c. xxvi., v. 39, written שפופם, ShePhUPheM. חפים, HePhIM, is in Numbers, c. xxvi., v. 39, חופם, HUPheM. These two latter names are in 1 Chronicles, c. vii., v. 12, put as children of Ir, while in Genesis and Numbers they are children of Benjamin.

Verse 21.—בכר (BeKeR), נרא (GeRA), and ראש (RASh), are all omitted in Numbers, c. xxvi., v. 38. In 1 Chronicles, c. vii., v. 6 (Beker), Becher is inserted, but the other two are omitted, and an entirely new name (Jedaiel)

* Antiquities, c. vii., sec. 4.

is added. In 1 Chronicles, c. viii., vv. 1 and 2, the reader will find another list of the children of Benjamin which contradicts the whole of the other lists, only two of the names corresponding. Becher (BeKeR), who is in this verse put as a son of Benjamin, is in Numbers, c. xxvi., v. 35, reckoned as a son of Ephraim. Naaman and Ard, in this verse called sons of Benjamin, are in Numbers, c. xxvi., v. 40, and in 1 Chronicles, c. viii., v. 3, designated sons of Bela, but Chronicles substitutes אדר (ADeR) for ארד (AReD). "All the souls were 14." The Septuagint has "18."

Verse 23.—חשים (HeShIM) is in Numbers, c. xxvi., v. 42, written שוחם (ShUHeM).

The reader will see from the above that not only do the lists severally given in this chapter, and in Numbers and Chronicles, differ from each other in spelling the various names to which attention has been drawn, but, as Kalisch observes, names introduced in Genesis are omitted in Numbers, and new names are introduced in Numbers not to be found in the Genesis list. The list in Chronicles deviates from and contradicts both. The list of names in the Septuagint contains many variations of names not above noticed.

"In verse 34 it is said, as a reason for the Israelites being placed in the land of Goshen, that 'every shepherd is an abomination to the Egyptians.' But it appears, from every other part of the history of Joseph and Pharaoh, that there was no such enmity between them. This is also the opinion of Dr. Shuckford, whose account of the matter is as follows:—

"'There is, indeed, one passage in Genesis which seems to intimate that there was that religious hatred, which the Egyptians were afterwards charged with, paid to creatures even in the days of Joseph; for we are informed that he put his brethren upon telling Pharaoh their profession, in order to have them placed in the land of Goshen, for or because, 'every shepherd is an abomination to the Egyptians,' Genesis, xlvi., v. 34. I must freely acknowledge that I cannot satisfy myself about the meaning of this passage; I cannot see that shepherds were really, at this time, an abomination to the Egyptians; for Pharaoh himself had his shepherds, and, when he ordered Joseph to place his brethren

in the land of Goshen, he was so far from disapproving of their employment, that he ordered him, if he knew any men of activity amongst them, that he should make them rulers of his cattle; nay, the Egyptians were, at this time, shepherds themselves as well as the Israelites, for we are told, when their money failed, they brought their cattle of all sorts unto Joseph, to exchange them for corn, and, among the rest, their flocks of the same kind with those which the Israelites were to tell Pharaoh that it was their profession to take care of, as will appear to any one that will consult the Hebrew text in the places referred to. Either, therefore, we must take the expression that every shepherd was an abomination to the Egyptians to mean no more than that they thought meanly of the employment, that it was a lazy, idle, and inactive profession, as Pharaoh seemed to question whether there were any men of activity amongst them, when he heard what their trade was; or, if we take the words to signify a religious aversion to them, which does, indeed, seem to be the true meaning of the expression, from the use made of it in other parts of Scripture, then I do not see how it is reconcilable with Pharaoh's inclination to employ them himself, or with the Egyptians being many of them, at this time, of the same profession themselves, which the heathen writers agree with Moses in supposing them to be' [Diod. Sic., lib. i].

"'Though learned men have observed that there are several interpolations in the books of the Scriptures, which were not the words of the Sacred Writers, some persons, affecting to show their learning, when they read over the ancient MSS., would sometimes put a short remark in the margin, which they thought might give a reason for, or clear the meaning of, some expression in the text against which they placed it, or to which they adjoined it; and from hence it happened, now and then, that the transcribers from manuscripts so remarked upon did, through mistake, take a marginal note or remark into the text, imagining it to be a part of it. Whether Moses might not end his period in this place with the words, *that ye may dwell in the land of Goshen;* and whether what follows, *for every shepherd is an abomination to the Egyptians,* may not have been added

to the text in this way, is entirely submitted to the judgment of the learned.' [Connexion, Book 5, vol. i., p. 341.]

"The learned writer of this extract is more correct in his statement of the difficulty, than in its solution. It is a principle in criticism to consider a book as free from interpolation, until it is proved that interpolations have certainly been made. The charge of interpolation is brought against the books of the Old Testament for no other reason, than to reduce them into harmony with the preconceived opinion that they were written by the authors to whom they are commonly ascribed. In the present instance, there has been no interpolation. The compiler, relating the honours paid to the family of Jacob in Egypt, and endeavouring to harmonise them with the state of things in his own times, 1,000 years later, when the Egyptians, by their religious absurdities, had been made to entertain an enmity towards shepherds, has given us a description which, in this particular, is inconsistent with itself. In short, the Egyptians held shepherds in aversion in the fifth, but not in the fifteenth century before the Christian era."*

It is scarcely necessary to add to the above; but, if it were, it would be hard to reconcile there being an abomination with the eleventh verse of chap. xlvii., in which it is stated that Pharaoh gave these very people "the best of the land, in the land of Rameses."

Herodotus† says that goatherds were held by the Egyptians in high honour.

Chap. xlvii., v. 2.—"And he took some of his brethren, even five men." The Douay says: "Five men, also the last of his brethren." Bellamy‡ says: "Some writers, in endeavouring to give the meaning of the word מִקְצֵה (MeQTsE) rendered "some," have said—1st, he took "the first that came to hand;" 2nd, "the meanest looking;" 3rd, "the best made and finest looking;" 4th, "five of the oldest;" 5th, "some of the eldest and some of the

* Hebrew Records, p. 124.
† Euterpe, 46; Cahen, Genese, 165.
‡ Genesis, 163, and see Kalisch, 696.

youngest." Rashi translates it, "the least or weakest." Jarhi interprets it, "the youngest of his brothers."*

Verses 13 to 26.—"What purpose did the penetration and shrewdness of Joseph serve? What advantage did the Egyptian people derive from his predictions? and what greater misfortunes could have befallen them than those which really happened; since without Joseph's interference they would have themselves possessed sufficient corn from the years of plenty to subsist in the years of famine? In what light, therefore, have we to view his character? Does it not, at first glance, appear despotic, cruel, and heartless, anxious only for the aggrandisement of the royal power, but unfeeling for the miserable condition of the people? Is not his person stained by the execrable meanness of sacrificing the happiness of a nation to a subservient sycophancy for a tyrannical dynasty?"†

Verse 31.—"And Israel bowed himself upon the bed's head." The Douay, following the Vulgate, reads: "Israel adored God turning to the bed's head." The Septuagint makes the bed into a staff, and the epistle to the Hebrews, chap. xi., v. 21, says: "By faith, Jacob, when he was a dying, worshipped, leaning upon the top of his staff."‡ Spinoza says the error arises solely from the use of the Masoretic vowel points; the word מִטָּה (MeTE) meaning either bed or staff, according to the points added to it.§ Cahen regards this difference as a proof that the Septuagint version is more ancient than the vowel points.‖

Chap. xlviii., v. 22.—Jacob's life contains no account of his wars with the Amorites, but rather represents him as of a very unwarlike temperament. Instead of the words, "I have given thee one portion above thy brethren," the Septuagint has, "I will give thee choice Sikima." The words in John, c. iv., v. 5, seem to refer to this, but then it

§ Tractatus Theologico Politicus, chap. vii.

‖ Genese, p. 170.

would seem to identify the land with that bought of Hamor (see chap. xxxiii., v. 19.*)

"The story of Joseph would seem to have been compiled in the later times of the Jews, when there was a more minute division of property, and the whole nation was composed of the triple elements of shepherds, agriculturists, and traders. It attempts to give the traditionary notion of the patriarchal times, strangely mixed up with more modern ideas.

"Now, if this famine pressed so severely on the family of Jacob, who is represented to have been left in possession of the whole country of Canaan, how utterly inadequate were the means taken to remedy the evil—a wearisome journey of some hundred miles through the desert to procure a few sacks of corn, that would have been almost consumed in the transit. Not a hint is given of danger, though the journey was long and tedious, the way through the desert, and the time a period of famine. On the contrary, the fictitious element is carried out, as if they had been travelling from Dan to Beersheba, in the tranquil days of Solomon.

"And then too, when Joseph sends for his father, the Prince of Canaan, he sends clothes and money, and provisions, and conveyances for himself and family, as if he had been in the depth of poverty. But not a word about his subjects, the people of Canaan, or his numerous dependents —they are left behind to shift for themselves; it is his own family only that appear to enter Egypt with him! Either, then, this history of Joseph formed no part of the original book of Genesis, or the statements of the great wealth and consequence of Abraham, Isaac, Jacob, and Esau are mere fictions. It is impossible to reconcile the two statements, they so clearly contradict each other.

"But what were the merchants of Tyre and Sidon and other seaports doing during this famine? for unless they carried corn to the most distant regions, the inhabitants must have all perished, for the famine was in all lands. What then could have induced the sons of Jacob to wander

* See Cahen: Genese, p. 173.

all the way through the desert into Egypt, when supplies could have been procured at the distance of a few miles? But it is useless to take up time with these minor inconsistencies, when the account contains so much that is glaringly contradictory. It is stated 'that the famine was *over all the face of the earth*, and that *all countries* came to Egypt to buy corn;' allowing that there is any truth in the narrative, this must be a gross exaggeration—but quite in the style of hyperbolic Orientalism!

"Now, we would ask how could Egypt feed the whole earth, when it was itself famishing, and obliged to subsist for seven years on the surplus produce of seven years of abundance? It matters not whether, in the years of famine, the land was wholly unproductive, or yielded only one-half of its usual return. Under any limitation, the narrative asserts contradictions and impossibilities; no amount of abundance in Egypt could have remedied the evil of even a partial famine."*

Chap xlix., v. 3.—"Reuben, thou art my firstborn, my might, and the beginning of my strength, the excellency of dignity, and the excellency of power." Bellamy, in lieu of "beginning of my strength," reads, "beginning of my sorrow." Instead of "excellence of dignity and the excellence of power," the Septuagint represents Reuben as self-willed and arrogant.†

Verse 5.—"Simeon and Levi are brethren; instruments of cruelty are in their habitations." Kalisch has, "An instrument of cruelty is their burning rage." Cahen, "*les instruments de violence sont leur parente.*" The Douay, "vessels of iniquity, waging war."

Verse 6.—"They digged down a wall." Kalisch has, "they hamstrung oxen." Cahen, "*ils ont coupé le jarret au taureau.*"

Bellamy thus renders verse 6.—"Into their council thou shalt not come, O my soul; to their congregation, be thou not united, mine honour; for in their anger they slew men; and for their pleasure they extirpated the bull.‡ 'O my

* The Pentateuch Controversy, pp. 105, 106.
† Kalisch, Genesis, p. 732; Cahen, Genese, p. 174.
‡ New Translation, p. 173.

soul, come not thou into their secret.' This passage, as it stands in the common version, affords us no information; it is altogether inexplicable; it cannot possibly be applied to the secret of the slaughter of the Shechemites by Simeon and Levi. Some commentators have said that this clause should be translated thus: 'Into their council, Oh my soul, thou didst not come;' but as the verb תבא (TheBA) is not the second person preter of the verb, but the second person future, it cannot be so translated; and therefore does not refer to any secret concerning the slaying of the Shechemites.

"בסדם (BeSeDeM) rendered secret, properly means council; Jer. vi. 11.—xxiii. 18, viz., 'Into their council thou shalt not come; O my soul.'

"איש (*Aish*) rendered man, is a general term; it means mankind, Job. xii. 10; the man, 1 Sam. xiii. 6; Jud. xx. 17.

"'And in their self-will they digged down a wall.' But the word שור (ShUR) never means a wall; its meaning is a bull, throughout the Scripture.

"Hence it is that the translators, not knowing how to apply the word *shor*, a bull, have concluded that this passage was applied by the sacred writer to the violence done by the sons of Jacob, and the manifest displeasure shown by him concerning the act they had committed. But this cannot be admitted, for the patriarch had shown his displeasure near fifty years before this period, when this total departure from the commands of God under that dispensation, gave birth to the slaughter of the Shechemites. I say a departure from the commands of God, from the positive precepts of that dispensation it was, which caused him to say, 'thou shalt not come into their council.' Besides, it cannot be admitted that Jacob, for near fifty years from the time of that transaction, never came into the assembly of his sons. But there evidently was no such meaning in the mind of the patriarch; he could not come into the secret assembly, or council, of that which had been transacted at so remote, or any past period; there was no necessity for his council or approbation.

"Neither would it be of any consequence to posterity to know that they slew a bull. Thus, though we have the true

translation of the word *shor*, by bull; still we are at a loss to know its true application.

"וברצנם (UBeRTzeNeM) is rendered self-will, but anger and self-will, as here applied, are the same; if they slew a man in their anger or self-will, they dug down a wall in their anger or self-will. This word means pleasure, desire, delight, to be gratified. Neh. ix. 37; 2 Chron. xv. 15; Prov. xi. 20; it reads, and for their pleasure.

"'They digged down a wall.' This clause cannot be understood; for if in their self-will they dug down a wall, it certainly was of too little consequence for the sacred writer to have committed it to posterity. It is proper here to inform those who do not understand the Hebrew, that the word שור *shor*, a bull, which the translators have rendered by wall, has the very same consonants as שור *shur*, a wall, and as the vowels [by vowels, Bellamy means only the Masoretic vowel-points], which vary the meaning and application (as in all languages) are not written between the consonants, as is the custom in the western or European languages, but under the consonants; the translators who have not attended to this most important branch of Hebrew learning, have rendered this word, which throughout the scriptures means a bull, by *shur*, which always means a wall. See 2 Sam. vi. 13; Neh. v. 18; Job vi. 5; Exod. xxi. 18; 2 Sam. xxii. 30; Job xxi. 11; Jer. xxv. 10.

"Some commentators also, not knowing what to make of the passage as it stands in the common version, have taken an unpardonable liberty with the sacred letter, by translating שור *shor*, a bull, by שר (SheR) a prince; but to render shor, a bull, by *saar*, a prince, after the manner of Kennicott and others who have followed him, is altogether inconsistent with the language; it has no such meaning in any part of scripture. The error committed in the English, and in all the European translations, is equally condemnable; for there cannot be a greater contrariety than between a wall and a bull. We shall, however, find the original to be perfectly consistent with good sense, consequently with the meaning of the sacred writer, without rendering shor, a bull, by shur, a wall, or by saar, a prince.

"עקרו (GneQRU) is translated, 'they digged down;'

but this word does not properly mean 'to dig;' neither is there any word for 'down;' it is one word, and cannot have this sense in any part of scripture. It truly means 'to cut in pieces, hough, hamstring,' Josh. ix. 9; 2 Sam. viii. 4; 1. Chron. xviii. 4."

Verse 10.—"The sceptre shall not depart from Judah, nor a lawgiver from between his feet, until Shiloh come; and unto him shall the gathering of the people be." Kalisch renders this, "The sceptre shall not depart from Judah nor the ruler's staff from between his feet, even when they shall come to Shiloh, and to him shall be submission of nations." The Douay, "The sceptre shall not be taken away from Judah, nor a ruler from his thigh, till he come that is sent, and he shall be the expectation of nations."

Kalisch says,* "As the empire of Judah ceased in the 6th century before the present era, and the tribe of Judah never afterwards obtained any permanent or brilliant political position, or exercised government over other branches of the Hebrew, and was in the time of the Maccabees, subordinate to leaders from the tribe of Levi, the prophecy would be unfulfilled were it referred to an event later than the Babylonian captivity. The Messianic interpretation must indeed rest on feeble arguments, since it forces its advocates to the assertion that intervals and interruptions of dominion are not excluded by the words 'the sceptre shall not depart from Judah until the Messiah comes.'"†

One Nikelsburger,‡ writing against the "Society for Conversion of the Jews," says—"It is universally acknowledged that Shiloh should come from the seed of *David*, who is from the seed of *Judah*, and great pains have been taken by writers of the New Testament to convince us, by long genealogical tables, that *Joseph* was from the seed of *David*, and was from the seed of *Judah*; and yet this same *Joseph* is not believed to be the *father* of *Jesus*. You believe (upon what grounds I am not aware) that *Jesus* was *also* from the seed of *Judah*. Let it be admitted for the sake of argument. Now, mark the concluding words of the verse

* Genesis, p. 750. See also Cahen, Genese, 175.
† See R. Cooper's "Bible and its Evidences," p. 200.
‡ Koul Jacob, pp. 15 to 17.

'Unto him (Shiloh, whom you believe to be *Jesus*) shall the gathering of the people be.' What can this mean, more or less, than that the people (then scattered) shall be gathered to him, as their head and ruler, and *lawgiver?* Then, if Jesus be the Messiah, or, if the Messiah be from the seed of Judah, and 'unto him shall the gathering of the people be,' of course the sceptre will remain in Judah at his coming.

"According to these words of Jacob, it must be concluded that the sceptre shall *not* depart from Judah, *from the time they are made use of by Jacob, until* (*and not before*) *Shiloh shall come* (whom you believe to be Jesus). Now, Judah had no sceptre, nor lawgiver, even in Jacob's time, nor for many years after; and many hundred years *before the birth of Jesus* the Jews had no sceptre nor lawgiver; they were a conquered nation, and in bondage in Egypt, and in Babylon, and were subject to kings and laws of other nations. Even at the time of the second temple, they were also without a sceptre, and subject to other kings. Then if the sceptre did depart *before* the coming of Jesus, and it was to depart *after* his coming, what must we make of Jacob's blessing?"

Paley, in his chapter headed "Prophecy, as an auxiliary evidence of Christianity," discreetly omits all mention of this verse. Dr. Hartwell Horne treats the prophecy as fulfilled. He says, "When the Messiah came the sceptre had departed from Judah," but the learned reconciler of Bible difficulties omits to notice that the sceptre's departure had taken place more than once, and long previous to the birth of Jesus.*

There is no trace of sceptre or lawgiver in Judah during the captivity in Egypt. In the time of Moses and Aaron, it was rather Levi than Judah whose house was honoured with regal or chief judicial authority. From Moses to David a variety of judges and rulers arose from the different tribes, Judah taking no special pre-eminence.

From the captivity to the Christian era, says Godwyn,† the state of the Jews became very confused. Sometimes

* Introduction to Bible, 8th edition, 455.

† Godwyn's Hebrew Rites and Customs, p. 3.

they were ruled by deputies and viceroys, subject to the Persian authority. In the time of Judas Maccabeus, the tribe of Levi held the chief office, and this continued until shortly prior to the reign of Herod the Askalonite.

Verse 14.—"Crouching down between two burdens." The Douay has, "lying down between the borders." Bellamy, "resting among the sheepfold." Cahen, "*se couche entre les etables.*"*

Verse 18.—This verse seems entirely unconnected with the rest of the chapter, and its obscurity has induced some critics to regard it as an interpolation†. Sir Wm. Drummond‡ regarded the prophecies of this chapter as astronomical symbols, and in his "Œdipus Judaicus," he certainly makes out a case, with which his antagonists failed to deal. The following extract illustrates the nature of his views:—"According to Aben Ezra, the figure of a man was painted on the ensign of the tribe of Reuben, and this man is supposed by Kircher to have been Aquarius. In fact, we find that Jacob calls Reuben his first-born, the beginning of his strength, etc., and these epithets apply very well to the sun in the commencement of his course, after he has passed the winter solstice. The sign of Aquarius is typified by a man with a pitcher, whence he pours forth water. Reuben is said to be as unstable as water. It is then remarked that he shall not excel because he went up to his father's bed, and we are thus reminded that he had lain with Bilhah. The oriental astronomers, and amongst others Ulug Beg, still designate a remarkable asterism in the sign of Aquarius by the name of Bula, or Bulha. This asterism rises while the sun is yet in Capricorn, which is the domicile of Saturn, the star of Israel; and it sets towards the end of July, when Aquarius sets also with his head foremost.

"Simeon and Levi are brethren.

"In the astrological calendar at the first degree of the decan of Pisces, we find the following words:—'Duo viri unum caput habentes.'

"'Instruments of cruelty are in their habitations.'

* See Kalisch, Genesis, 755

† Kalisch, Genesis 758. Bellamy, 180.

‡ Sir W. Drummond's Œdipus Judaicus, cap. 49 Genesis.

All the constellations which are considered as noxious are seen above the horizon while the sun is in Pisces. It is then that Sagitta rises, that Scorpius, according to Columella, begins to set, accompanied with tempests, and that Andromeda, not yet delivered by Perseus, regards the monster that threatens to devour her. But this is not all; the descent of Pisces is fixed by Columella, for the 14th of the Ides of October, and consequently their disappearance was the prelude to the passage of the sun into the sign of Scorpius, when the terrible reign of Typhon commenced. No sign appears to have been considered of more malignant influence than Pisces; and it appears from the astrological calendar, that the emblems accompanying this constellation were chiefly indicative of death and violence. 'Oh my soul, come not into their secret.' I am inclined to think that סד (SeD), does not signify *a secret*, but *a fetter*, or *a shackle*. It will be recollected, that the fishes are united by a bond, or shackle. 'Unto their assembly, my honour, be thou not united.' The word כבר (KeBeR), which is here translated *honour*, denotes in its primitive sense the action of light in irradiation. 'For in their anger they slew a man.' Jacob seems to attribute all the effects produced by the rising of Scorpius to the descent of Pisces. Columella fixes the passage of the sun into Scorpius on the 13th of the calends of November. We shall find that this period nearly corresponds with that in which Osiris was feigned to have been slain by Typhon, and when the death of Orion was attributed to the sting of the scorpion. The brilliant constellation of Orion sets shortly after the descent of Pisces, and immediately after the rising of Scorpius. 'And in their self-will they digged down a wall.' This interpretation rests upon the authority of Jerome; but I conceive it to be erroneous, and I appeal against it to the Septuagint, the Samaritan, and to the Hebrew copy itself. I translate, *in their self-will they castrated a bull.* Now the oriental astronomers represent Scorpius as devouring the genitals of Taurus; and, indeed, the stars called *testiculi Tauri* set precisely when Scorpius rises.

"According to all the traditions, a lion was painted on

the standard of Judah; and I can have no hesitation in agreeing with Kircher, that the sign of Leo was thereby indicated. 'Thou art he,' says the text, 'whom thy brethren shall praise.' While Taurus was the first of the signs, the summer solstice took place when the sun was in Leo; and that season of his highest elevation was held in the greatest honour. The sun in Leo was adored by the Egyptians as the king Osiris; by the Syrians as the lord Adonis; by the Tyrians as Melecharets, 'King of the Earth;' and by the Greeks as Hercules, vanquisher of the Nemean Lion. The sun being at his greatest altitude in Leo, the brothers of Judah are said to bow down before him. In the Indian sphere, in the second decan of the sign of Leo, a man is represented with a crown on his head and a lance in his hand. 'Judah is a lion's whelp, . . . he couched as a lion.' The progress of the sun through the sign of Leo was, according to Aratus, represented as a couching lion.

"'The sceptre shall not depart from Judah, nor a lawgiver from between his feet, until Shiloh come.' The constellation of Cepheus, King of Ethiopia, is still represented as a man with a crown on his head, and with a sceptre in his hand. This constellation rises, according to Columella, on the 7th of the Ides of July. Thus Cepheus, in the course of some days, comes to rise under Leo, of which it continues to be the paratanellon until the sun enters the sign of Scorpius.

"The word מחקק (MeHeQeQ), which we translate, *a lawgiver*, is shown by Bochart to be a corruption of חק (HeQ), *hyk*, which was the old Ethiopian word for a *king*. We may then suppose, with some appearance of reason, that *Hyk* was the ancient Ethiopian and Egyptian name for the constellation of Cepheus, or King of Ethiopia, which, being seen very low in the northern hemisphere when the sun is in Leo, may be figuratively said to be under the feet of the lion. 'Until *Shiloh* come.' The king with the sceptre sets about the time that Scorpius rises. In Scorpius there are two stars which the oriental astronomers call *Shulet;* and the brightest of these is named *Shuleh*. 'Binding his foal unto the vine, and his ass's colt unto the choice vine.' In the first decan of the sign of Leo in the Persian sphere I find the head of a horse and the head of an ass, and in the second

and third decan their middle and hinder parts." [The ass of Silenus, the companion of Bacchus, has been represented with its head bound round with vine leaves and grapes. Bacchus, Osiris, and the sun, are identical.]

Michel Nicolas says, "One of the most celebrated prophecies of the Old Testament is that of the dying Jacob, as to the future destinies of his numerous posterity. We are assured by many critics, amongst others by Gramberg, that this prophecy was not written until an epoch when the children of Israel already formed twelve distinct and established tribes in the land of Canaan. The 28th verse of the xlix. chapter, is sufficient to betray the later origin of the prediction, evidently written, at least in its present form, after the events of which it speaks. It proves that the editor of the passage, or at least the one who retouched it, knew of the existence of the twelve tribes." Nicolas does not, however, regard the *ex post facto* prophecy as fraudulent. He says, "The prophecies after the event are the result of the national mind celebrating the virtues of the ancient fathers of the people. The prophecy of the dying Jacob is a popular hymn, reciting the destinies of the twelve tribes, and which, by an ingenious fiction, the poet has put in the mouth of their common father. In effect, we know that poesy has often taken for its theme the recollection of some event which has actually occurred, but has become embellished by the popular imagination."*

Chap. i., v. 10.—"Threshing floor of Atad, which is beyond Jordan." Cahen says, "Does that refer to the right bank or the left? Hebron being between Egypt and the river Jordan, one cannot see why the procession came near the river." "Est-il question de la rive droite ou de la rive gauche? Hebrone etant entre l'Egypte et le Jourdain; on ne voit pas pourquoi le cortége de Jacob est venu près de ce fleuve."

In concluding a commentary on Genesis, it is not unnatural that I should be expected to make an endeavour to account for the Hebrew Record containing traditions which,

---

* Etudes sur la Bible, pp. 315 and 316.
† Genese, 180. See Kalisch 776.

in whole or part, and with somewhat varied accessories, may be traced in the mythical lore of nations more ancient than the Jews. In striving to meet this expectation I am to a considerable extent indebted to an anonymous but most able writer,* who seeks to show that whatever literature the Jewish people may have at one time possessed having been lost during their troubles, the restoration occurred at a period when communication of ideas had taken place between Egypt, Greece, Italy, India, and the Jewish scribes, and that consequently an embodiment and mingling of foreign tradition might reasonably be anticipated in a volume aided in its compilation by, if not entirely resulting from, the memories of the ancient men of the Jews, whose brains had received impressions of wonders and miracles from the Ganges and the Nile, impressions mingled with and modified by the teachings of Babylonian masters. It is admitted on all hands that the chief men amongst the Jews were captives in Babylon from the time of Nebuchadnezzar until at least the sixth year of the reign of Darius. The last chapter of Chronicles fixes the term of Jewish captivity at seventy years, thus giving ample time in a new generation for inoculation of new ideas and new faiths, a result rendered the more easy because the use of the Hebrew language as a vernacular was entirely lost, and Syro-Chaldaic had become the popular dialect at the time of the return from captivity. The critical knowledge of Hebrew could have rested with but few, and these, as Spinoza tells us, have left neither grammars nor lexicons to enable us to judge of the extent of their knowledge. Christian controversialists often insist on the care taken by the Jews of their sacred records, but it is evident by the state of the Hebrew text, as illustrated by Dr. Wall and others, that the care has not been sufficient to preserve it from great corruption, and it is certain that during several centuries care was not and could not have been manifested by the Jews for the preservation of their literature. The licentiousness of the most powerful of the Jewish monarchs, the disturbed reigns of others, and the idolatry of most, leave little foundation for supposing any

* What and How of the Eternal Worker, pp. 163 to 177.

royal guardianship, and the finding of a previously unknown book by Hilkiah is strong evidence against much care on the part even of the priesthood (whose special duty should have been the preservation of their sacred writings.) Bishop Marsh says,* "Whether the temple copy of the law was rescued from destruction when Jerusalem was taken by Nebuchadnezzar it is difficult at present to determine. It appears from the second Book of Chronicles that the sacred vessels of the temple were either destroyed or carried to Babylon. But neither in this place nor in the second book of Kings, nor in the fifty-second chapter of Jeremiah, where the vessels of the temple are minutely described, do we find any account of the Book of the Law. In that apocryphal work which we call the second book of Esdras, the unknown author says, 'Thy law is burnt, therefore no man knoweth the thing concerning thee.' If this account were correct, not only the Temple copy of the Law, but all other copies of the law must have been destroyed at the taking of Jerusalem. If after the Babylonish captivity, when Ezra was restoring the Temple worship, no man knew the things of the law, no copy of it could have been left." Dr. Marsh thinks this improbable, but the view here quoted seems correct. If Jeremiah had preserved the book, surely he would not have passed by so important a matter, when recording others most trivial in comparison. Assuming the destruction of the Jewish literature, then those who re-wrote,† must have collected from all quarters, and under great difficulties. The Hebrew language having been neglected, the captives speaking their captors' tongue—Babylonian, Egyptian, Brahminic, and Hebrew legends would become commingled. From the Persians the myth of Ormuzd and Ahriman would form the basis of the evil spirit resisting God, and deteriorating his creation. From the Hindoos the fable of Krishna incarnate to redeem the earth, gives colour to all the *Messiah* legends. From the Greeks their astro-mythology, giving myths containing more poetry than the Jewish mind could grasp. These, modified by their own ignorance and barbarism, and moulded on to

* 34 Lecture, p. 56.

† See page 57.

such history as their best men remembered, enabled the Jews to frame for us the Bible which so long has been maintained as the centre and standing point of, and circle within which, all knowledge was to be found, and outside which it was damnation to venture. A Bible incoherent in its narrative, often uselessly repeating itself; defective in its chronology; inaccurate in its geography; confused in its relation to general history; and utterly worthless as a code of morality. For the rude style and more than questionable morality of the Book of Genesis, many writers have found it necessary to apologise. Some have said that the Jews being ignorant and barbarous, God condescended to suit his revelation to their capacities. The Rev. Dr. Spencer says that "the Jews were, above all the inhabitants of the earth, of a morose, ill-natured, and infamously obstinate temper—they were a cruel and barbarous people; superstitious and destitute of almost all literature. . . and therefore God in dealing with this illiterate and exceedingly superstitious people was obliged to make allowance for their infirmity, and draw them to himself by a sort of craft and not by reason. For no brute is more crossgrained, or requires greater cunning to manage than the superstitious brute, especially if he be ignorant."* According to some Biblical apologists we are therefore to expect in the Bible phrases suited to the capacity of an ignorant man, and the errors of Genesis in stating matters testable by science are intentional errors, because to the ignorant Jew the truth would have seemed falsehood.

Kalisch admirably answers, "But let it not be said that the Bible intentionally described the actual objects in so simple and unscientific a manner, in order to adapt itself to the uncultivated understandings of the contemporaries. We shall not urge that the Bible repeatedly insists that it was not written for one age and one people, but for all times and all nations; that it must, under that supposition, have assumed that in no future period any nation would advance to more profound researches and more refined culture. But every one sees the very dangerous character of that principle, that the Scriptures are not *bonâ fide* truth,

* Spencer: de Legibus Hebræorum, p. 624.

but in many important points a convenient accommodation to prevailing absurdities and childish ignorance. When can we with confidence say they are in earnest, and that their doctrines claim the authority of absolute truth? This would throw open the Bible to uncertainty and doubt in so unparalleled a degree, that it would practically cease to have any definite meaning."*

The Book of Genesis takes a wide scope, whether written for ignorant men or for all men, it seeks to determine and conclude all questions on ontology, geology, astronomy, ethnology, primitive history, and philosophy; and in Europe for centuries Genesis has impeded inquiry, but the day for its domination is rapidly passing away. Inside the church and outside its pale heresy finds speech, stone strata are not as easily forged as musty parchments, the vast vault of heaven is more easily read by patient science than are the contradictory texts which fling a world inconceivably wandering in space until sun, moon, and stars are fixed around it. Our common humanity finds higher links of brotherhood than is given by asserting the same father, Adam, for all mankind. History, exhibiting on its pages memoirs of empires whose crumbling records antedate Eden's garden story, asks, how long shall a Genesis page hide pyramids and monuments from the inquiring gaze of the archæologist? The philosopher pointing to the charred stake, memento of that infidelity which the flame alone refuted, asks, how long shall the advocates of one old book seek with it to outweigh all newer and truer thinkings?

EXODUS:

ITS AUTHENTICITY AND CREDIBILITY.

The two words, ואלה שמות UALE SheMUTh, commencing the text, form its title in the Hebrew MSS. Often the second word is used alone to denote this book. The English title, Exodus, is from the Greek, and refers to the alleged departure of the Jews from Egypt, of which this book contains the account. The words added to the title in the authorised version "Second Book of Moses" are, like those added to Genesis, without warranty either in the Hebrew, the Greek of the Septuagint, or the Latin Vulgate.

According to orthodox commentators, Exodus gives a history extending over about 145 years from the death of Joseph. There is not only no proof that Moses ever wrote a single line of Exodus, but there is, in fact, considerable evidence to the contrary. The Mosaic authorship of the Pentateuch has already been referred to in comments on Genesis;* and it is, therefore, needless to repeat the objections to it in this place. Dr. Irons, prebendary of St. Paul's, in a little volume recently published, admits that most learned men are of opinion that the ordinary Hebrew character could not have been used by Moses, and that there is ground for denying that the compilation, we call the Old Testament, is, as a whole, of earlier date than the Babylonish Captivity, even if it reaches that epoch.† Exodus is, as will be seen by the attentive reader, an anonymous work, incomplete and incoherent in many parts,

---

* Genesis, p. 56.

† Dr. Irons' Bible and its Interpreters, pp. 21 to 40.

and probably based in part on pre-existing documents since lost, and in part on oral traditions. It is encumbered with repetitions, and, where capable of collation with other books of the Bible, is often contradictory.

There is but little, if any, attempt at corroboration of the narrative in Exodus by any profane writer much before the Christian era; any statement of earlier evidences depending almost entirely on the authority of Josephus, who wrote during the second half of the first century, so that the Book of Exodus must be tried on its own merits, there being no endorsement of contemporary authors to vouch its accuracy. The fruitful source of historical information, provided by the monuments of ancient Egypt, affords no result to the devout searcher for the Pharaoh who knew not Joseph, nor is there any hieroglyph recording the swallowing of Egypt's armies by the waters of the Red Sea. Between Exodus and history a wide gap intervenes. The records of God's chosen race are sadly open to adverse criticism, and their very origin is subject of controversy. Even if the fragments quoted from Manetho, of whom Josephus says that "he trifles and tells arrant lies," Chaeremon, Lysimachus, Diodorus, and others, be taken as some sort of evidence, the believer gains but little help to his faith in learning that the Osarsiph priest of Osiris was the leader out from Egypt of a crowd of leprous slaves. These can hardly be Moses' and God's chosen ones. Tacitus, who wrote about the close of the first century, during the reign of Trajan, and after the publication of Josephus's history, has the following curious statement*:—

"The Jews, we are told, escaping from the island of Crete at the time when Saturn was driven from his throne by the violence of Jupiter, settled in the extreme parts of Libya. Their name is adduced as a proof. Ida, it is alleged, is a well-known mountain in Crete; the neighbouring Idæans, by an addition to the name to adapt it to the language of barbarians, are ordinarily called Judæans. Some say that the population, overflowing throughout Egypt in the reign of Isis, was relieved by emigration into

* History, Book 5, § 2 and 3.

the neighbouring countries, under the conduct of Hierosolymus and Juda. Many state that they are the progeny of the Æthiopians, who were impelled by fear and detestation to change their abode in the reign of King Cepheus. There are those who report that they are a heterogeneous band from Assyria, a people who, being destitute of a country, made themselves masters of a portion of Egypt, and subsequently settled in cities of their own in the Hebrew territories, and the parts bordering on Syria. Others, ascribing to the Jews an illustrious origin, say that the Solymi, a nation celebrated in the poetry of Homer, called the city which they built Hierosolyma, from their own name.

"Very many authors agree in recording that a pestilential disease, which disfigured the body in a loathsome manner, spreading over Egypt, Bocchoris, at that time king, repairing to the oracle of Jupiter Hammon in quest of a remedy, was directed to purify his kingdom and exterminate that race of men as being detested by the gods; that a mass of people thus marched out and collected together were in a barren desert abandoned to their misery, when, all the rest being bathed in tears and torpid with despair, Moses, one of the exiles, admonished them not to look for any aid from gods or men, being deserted of both, but to trust themselves to him as a heaven-commissioned guide, by whose aid they had already warded off the miseries that beset them. They assented, and commenced a venturous journey, not knowing whither they went. But nothing distressed them so much as want of water; and now they lay stretched through all the plains, ready to expire, when a herd of wild asses, returning from pasture, went up a rock shaded with a grove. Moses followed them, and forming his conjecture by the herbage that grew upon the ground, opened copious springs of water. This was a relief; and pursuing their journey for six days without intermission, on the seventh, having expelled the natives, they took possession of a country, where they built their city and dedicated their temple."

Failing to discover, then, external bases for hostile criticism or for corroboration, the examination of the text itself must determine how far it is trustworthy.

Chap. i. v. 5.—"And all the souls that came out of the loins of Jacob were seventy souls: for Joseph was in Egypt already." The Septuagint states the number as seventy-five. The words, "Joseph was in Egypt," are placed in the Septuagint at the beginning of the verse, and not at the end, as in our version. Kalisch observes that, to make up the seventy persons who came out of the loins of Jacob, Aben Ezra and others have included Jacob himself, only sixty-nine being enumerated if Jacob be omitted.

Verses 6 and 7.—"Joseph died and his brethren, and all that generation. And the children of Israel were fruitful, and increased abundantly, and multiplied, and waxed exceeding mighty; and the land was filled with them." If these words mean anything, they mean that in the duration of a little more than two or three generations at the uttermost, the children of one man multiplied so as to fill the whole of the land of Egypt, and to become exceedingly mighty. An unbelieving reader may find reason to regard the whole legend as doubtful, but devout believers can only wonder that this numerous and exceedingly mighty people allowed the Egyptians so to maltreat and oppress them; or that this fruitful and abundantly-increasing people, who filled all the land, and must have numbered at least 2,500,000 persons, had only two midwives to attend them. They may also wonder why God made houses for those midwives, when, if the Israelites were so exceedingly fruitful and numerous, the midwives could have but little time to live in their own houses, but must have been always staying in other persons' houses while employed in their professional avocations. Admirers of God's unchangeable perfection may likewise wonder why he rewarded the midwives for telling Pharaoh a lie, when by his power he might have saved his chosen people from destruction without any such departure from truthfulness. The foot-note to the Douay Bible says, "The midwives were rewarded, not for their lie, which was a venial sin, but for their fear of God and their humanity; but this reward was only temporal, in building them houses—that is, in establishing and enriching their families."

Many endeavours have been made to account for the extraordinarily rapid increase in the number of the Israelites,

and one orthodox bishop has suggested that the Hebrew women might, "by extraordinary blessing of God," have brought forth "six children at a time."*

Unless it be supposed that the Egyptians were a superior race, in point of intelligence, to the Jews, it is very difficult to understand why the latter, more mighty and more numerous, should permit themselves to be oppressed by the former. The King of Egypt actually speaks of the Israelites as "more and mightier" than the Egyptians, and yet the fewer and weaker are represented as the taskmasters and oppressors. When it happens that the few oppress the many, it is usually because the few are intellectually superior, and that the many are either weak and incapable through their poverty and ignorance; or by internal dissensions are prevented from exercising such power as they really possess; but a pious reader can hardly suppose God's specially-selected and protected race to have fallen into either of these sad conditions. Josephus says that the oppression continued for 400 years,† and that the Egyptians grew delicate and lazy; that one of their sacred scribes prophesied that an Israelitish child should be born who should overthrow the Egyptian dominion, and that it was under the advice of the Egyptian prophet that the King ordered the two midwives, who were Egyptians, to kill the Israelitish males. Josephus contradicts the Bible, for he says that the midwives, by reason of their relation to the King, would not transgress his commands.‡ Professor Whiston adds in a note, "Indeed, Josephus seems to have had much completer copies of the Pentateuch, or other authentic records now lost, about the birth and actions of Moses than either our Hebrew, Samaritan, or Greek Bibles afford us." If Professor Whiston's suggestions have any foundation, what becomes of the reliability of the Hebrew Records? Doubtless, the idea that Josephus had fuller narratives to quote from is true, for we cannot assume

* See Colenso part i., 106; Cahen, Exode 1; and Kalisch, Exodus 4.

† This is clearly inaccurate, as the oppression would hardly commence till some time after the death of Joseph.

‡ Antiquities, Book ii., cap. 9, sec. 2.

that the Jewish historian invented the additional events, the more especially as in the books of the New Testament we have statements as to Moses not contained in the Pentateuch as we have it now. And in the later books of the Old Testament genealogical tables are provided with names not preserved in the columns of the Pentateuch, and which are either inventions or derived from records now lost.

Verse 11.—"And they built for Pharaoh treasure-cities, Pithom and Raamses." In place of "treasure-cities," Cahen has, "*des villes de provision;*" the Vulgate, "*urbes tabernaculorum;*" the Douay, "cities of tabernacles;" Kalisch, "store-cities." The Septuagint makes the Jews build three cities instead of two, for it adds after Raamses, "and On, which is Heliopolis." Samuel Sharpe says,* "Pithom was no doubt the same place as On, being preceded by the Coptic article." [This is in direct opposition to the Septuagint, which Sharpe quotes as an authority, and which expressly names On as a third and distinct city.] "And if we had not the authority of the Septuagint for On being Heliopolis, I should conjecture that Raamses were Heliopolis, Ra being the Coptic, as Helios the Greek, for the Sun, and that Pithom were Memphis, HM, or Hom, being the hieroglyphical name for Memphis in the Rosetta Stone."

Verse 22.—"And Pharaoh charged all his people, saying, Every son that is born ye shall cast into the river, and every daughter ye shall save alive." Von Bohlen says, "The 600,000 men contemporaries of Moses, and even his own brethren, are sufficient proof that this cruel order was never executed; or if it was, we must suppose that it only remained in force for a very limited period."† It is, however, hardly possible to believe in the countermand of the order, without some notice of such a countermand being given in Exodus, so that the difficulty is unexplained.

Chap. ii., v. 1.—The writer does not here name the father and mother of Moses. Colenso, in supporting the document

* Early History of Egypt, p. 13.
† Genesis, vol. i., cap. 10.

theory, suggests that the name of the mother was unknown to the author of this portion of the text. In chap. vi., v. 20, they are named Amram and Jochebed. Jarhi makes the mother of Moses 130 years old at the time of his birth —(this, our reader will see, is too moderate). She was at the same time his mother and his great aunt.*

Verse 10.—"And she called his name Moses; and she said, Because I drew him out of the water." The Egyptian, or Hebrew origin of the name Moses, has been much discussed. Some urge that Moses was the Egyptian name, and the Talmud gives no less than nine other names, given to him by the Jews. Others contending for Moses, as Hebrew give Osarsiph, Tisithen, or Hermes, as Egyptian appellations.

Verses 11-15.—"And it came to pass in those days, when Moses was grown, that he went out unto his brethren, and looked on their burdens: and he spied an Egyptian smiting an Hebrew, one of his brethren. And he looked this way and that way, and when he saw that *there was* no man, he slew the Egyptian, and hid him in the sand. And when he went out the second day, behold, two men of the Hebrews strove together: and he said to him that did the wrong, Wherefore smitest thou thy fellow? And he said, Who made thee a prince and a judge over us? intendest thou to kill me, as thou killedst the Egyptian? And Moses feared, and said, Surely this thing is known. Now when Pharaoh heard this thing, he sought to slay Moses. But Moses fled from the face of Pharaoh, and dwelt in the land of Midian: and he sat down by a well." It is curious that no man being present the story should get to the ears of Pharaoh. Josephus not only does not give one word of this account, but narrates very differently the motives which induced Moses to fly from Egypt. He states that Moses was made general of the Egyptian armies, and gained for them considerable victories. That he captured the royal city of Ethiopia, and married Tharbis, the daughter of the king. That on his return the sacred scribes, envious of his power, prompted the king to kill him, and that therefore

* Cahen, Exode, p. 5; and see Infra on cap. 6.

Moses, to avoid assassination, fled to Midian.* According to Abarbanel, or Abravanel, the Sepher Haishar makes Moses reign 40 years in Ethiopia before his flight to Midian.† Kalisch ‡ says, "The Book of the Chronicles of Moses differs from the relation of Josephus in some particulars, the most remarkable of which is, that Moses was proclaimed king of the Ethiopians in his 30th year, which dignity he maintained during forty years; and after this period he fled to Midian, where he was imprisoned seven years by Jethra, and then united in marriage with his daughter, Zipporah."

Verses 16-18.—"Now the priest of Midian had seven daughters." The Septuagint here adds the words, "feeding the flocks of their father Jothor." These verses give the name of the father-in-law of Moses as Reuel, but according to chap. iii., v 1, chap. iv., v. 18, chap. xviii., vv. 1, 2, 5, 6, and 12, his name was Jethro, while according to Numbers, chap. x., v. 29, his name was neither Reuel nor Jethro, but Hobab, son of Raguel. In Judges, chap. iv., v. 11, Hobab is also called the father-in-law of Moses. On reference to the Hebrew text, I find the same word רעואל is carelessly anglicised as Reuel and Raguel. Dr. Wall, who regards the Hebrew text as corrupted by the vocalizers, says, "The name of the father-in-law of Moses is exhibited, in both the Jewish and Samaritan copies of the Pentateuch יתרו ITHRU, but its transcription in the Septuagint *Jothor* proves that the *mater lectionis*, at present terminating the Hebrew group, is a spurious letter, and was not interpolated in the original text until after the first Greek version was written. Against the genuineness, indeed, of this letter the sacred text itself, even in its present state, can be made to bear evidence; as the interpolators, in their hurry, overlooked this group in one passage, Exodus, chap. iv., v. 18, where they suffered it to remain in its original state, יתר, without any vowel letter subjoined."§

Verse 21.—"And Moses was content to dwell with the

* Antiquities, Book ii., caps. 10 and 11.
† Cahen, Exode, p. 8.
‡ Exodus, p. 30.
§ Grounds for Revision, p. 147.

man." The Douay following the Latin Vulgate says, "And Moses swore that he would dwell with him." Kalisch states, that according to a rabbinical tradition, Moses promised with an oath that he would not leave Midian without the consent of Zethro.

Verse 21.—צִפֹּרָה TsePheRE, Zipporah. Cahen, remarking that the name is Hebrew, signifying *bird*, inquires what language was in use amongst the Midianites. Kalisch says the word is also Arabic, and that this was then spoken by the people of Midian. Kalisch has, however, no evidence to support his view.

Verse 22.—The Vulgate adds the following words, not found either in the Hebrew, or authorised English version, but translated in the Douay:—"*Alterum vero peperit quem vocavit Eliezer, dicens: Deus enim patris mei adjutor meus, eripuit me de manu Pharaonis.*" "And she bore another, whom he called Eliezer, saying, 'for the God of my father hath delivered me out of the hands of Pharaoh.'" Several other versions support the addition of these words to this verse.

Verses 23-25.—"And it came to pass in process of time, that the king of Egypt died: and the children of Israel sighed by reason of the bondage, and they cried, and their cry came up unto God by reason of the bondage. And God heard their groaning, and God remembered his covenant with Abraham, with Isaac, and with Jacob. And God looked upon the children of Israel, and God had respect unto *them*." Instead of had respect unto them, the Douay reads, "he knew them;" Cahen, "*Dieu les reconnut;*" the Vulgate, "*et cognovit eos;*" Kalisch, "God regarded them." Cahen says, "Look at the succession of ideas, the sufferings of the children of Israel on earth here below made them cry out. These cries mounting on high to God's dwelling, are heard by him, and the sensation recalls to his memory his ancient alliance, and in consequence he looks down upon the Hebrews, whom he then recognises."* The Bible, in fact, implies that God the omniscient had forgotten his chosen-race, to whom he had bound himself by solemn promise, covenant, and oath, that his memory refreshed, he looks down upon the Jews, who, until this, had been out of sight and out of mind.

* Exode, p. 9.

Chap. iii. v. 1.—"Mountain of God." The Septuagint does not contain this phrase.

Verse 2.—The Douay, following as usual the Latin of the Vulgate, says that "The Lord appeared," instead of the angel. As in the account of the Lord's appearance to Abraham (see commentary on Genesis, p. 100), the text is very confused—in v. 2, it is the angel; in v. 4, it is the Lord. Aben Ezra taught that throughout it was the angel, and not the Lord.* Parkhurst relying on the plural of Deuteronomy c. xxxiii., v. 16, says, "It is evident Jehovah appeared to Moses in more persons than one."† Dr. McCaul, quoting verses 2 to 6, says, "To a plain reader, abiding by the common rules of grammar and the usages of all languages, it would appear that the angel of the Lord here calls himself the God of Abraham, Isaac, and Jacob. Rabbi Bechai says, "The angel mentioned here is the angel, the redeemer, of whom it is written, 'I am the God of Bethel.'" Rabbi Moses Ben Nachman supports this view. Dr. McCaul therefore affirms that the angel of the Lord is, in truth, Jehovah, the God of Abraham, Isaac, and Jacob.‡ Parkhurst says, "We often read of the angel (sometimes angels) of Jehovah, or of the aleim; that is, his agent, personator, means of visibility or action; what was employed by God to render himself visible and approachable by flesh and blood. This angel was evidently a human form surrounded by light or glory with, or in which Jehovah was present." The portraying the infinite and omnipotent Deity as appearing in a flame of fire in the midst of a thorn bush, hardly induces a reverential feeling in the mind; that the bush should burn with fire and yet not be consumed, seems a pyrotechnic juggle, unworthy serious purpose; and when we find as a grand climax to all this that Moses is desired to remove his shoes as a mark of reverence to the blazing Deity, the whole story lapses into the category of "a thousand and one Arabian Nights' tales," for although it is undoubtedly true that the bare feet of the oriental

* Cahen Exode, p. 10. See also Genesis, chap. xxii., vv. 11 and 14,
† Judges, chap. vi., vv. 11 and 14.
and Hebrew Lexicon, p. 495.
‡ Kimchi on Zechariah, p. 26.

worshippers mark their reverence for the sacred ground on which they tread, it is clearly absurd to suppose infinity more present in one spot than in any other, and therefore any one spot more holy than any other to the infinite.

Verse 6.—In Genesis, chap. xxxii., v. 28, and chap xxxv., v. 10, God said of Jacob, "Thy name shall not be any more called Jacob, Israel is thy name," [See my commentary on Genesis, p. 126.] Yet we find he calls himself "the God of Jacob," and uses the name "Jacob" several times in the book of Exodus.

Verse 8.—After "the Perizzites," the Septuagint adds, "the Gergashites," omitted here (see Genesis, p. 95). The wording, "I am come down to deliver them," shows that to the writer of Exodus the idea of Deity was that of a God, residing in some heaven above, who, when his active interference in mundane affairs became necessary, and when "the cry" "came unto" him, descended to this globe to personally redress the wrongs done to his chosen peoples; wrongs which he, God, had been unaware of until the cry of suffering, uttered by the Israelites, had reached him in his heavenly dwelling.

Verse 10.—"Come now, therefore, and I will send thee unto Pharaoh, that thou mayest bring forth my people, the children of Israel, out of Egypt." It has been asked why did God, if he meant to really benefit the Jewish people, take them out of Egypt at all, when he might, by his omnipotence, have rendered their continuance in Egypt happy by inducing the Egyptians to cease their persecution. From the fertile plains of Egypt, and from its flesh-pots, which the Jews deeply regretted, he led them into the burning sands of the desert, or else into contact with hostile tribes, who contested each stage of their journey towards the land of promise, which, when reached, was far inferior to the fruitful valley of the Nile.

Verse 14.—"I am that I am." Douay, "I am who am." אהיה אשר אהיה AEIE ASheR AEIE. Cahen says, "These three words signify, grammatically, "I shall be that I shall be," or "I am that I am"—for אהיה AEIE, indicates as well the present as the future. The passage is difficult, but

there are abundant explanations. Onkelos does not translate it, and we have imitated him as to the word AEIE, which is only found used in this place, and is, perhaps, one of the names of God. Such is the opinion of the Sepher Hamivhar and of Vater. They say that AEIE is the name of the Eternal, applied by himself to himself. The Seventy translate, "Me I am he who is;" Mendelssohn, "I am the being who exists eternally;" the Vulgate, "*Sum qui sum.*" There are many other explanations more or less abstract.* (See Genesis, p. 114.)

Verse 15.—Godwyn says that the Jews, in order to defend their abstinence from the use of the word IEUE, corrupted the phrase "This is my name for ever." Instead of לעולם LOULeM "for ever," reading לעלם LOLeM "to be concealed."

Verse 17.—"And the Perizzites;" after these, and before the Hivites, the Septuagint, as in verse 8, inserts, "the Girgashites."

Verse 22.—"But every woman shall borrow of her neighbour, and of her that sojourneth in her house, jewels of silver, and jewels of gold, and raiment: and ye shall put *them* upon your sons, and upon your daughters; and ye shall spoil the Egyptians." This mode of "borrowing" seems very much like stealing, and the translators of the Breeches Bible, in a note, say that this example is not to be followed generally. Aben Ezra, speaking for the Jews, says, "Some inveigh against us, and say our ancestors were thieves, but these do not see that it was commanded them by God, and we have, therefore, no right to inquire into the reason.† Lessing retorts, "If we consider the action in itself, we cannot but admit that the whole is falsehood, deception, and theft. But how, if hereunto simply the words are added, 'the Lord hath said or commanded,' will thereby base deceit and nefarious fraud assume the character of sacred revelation? Will thereby the most impious wickedness be converted into a pious action? Thus it would be easy to stamp falsehood as inspiration, and rancour as

* Exode, p. 12
† Kalisch, Exodus.

virtue and piety; thus we lose every test of laudable and criminal deeds; thus religion and piety differ from the most glaring villainy, but by a few empty words 'God hath said.'" Cahen and Kalisch urge that "borrow" should be translated "ask," or "demand." Cahen says,* "Those are wrong who attack the Israelites on this account. They should think that these slaves, endeavouring to break their chains, would hardly scruple to deceive their old oppressors, that such an action may be excused, and is even in accordance with what we know of the manners of ancient Asiatic nations. To judge impartially the morality of a nation, it is necessary to know its particular notions of justice and injustice, and not to judge antiquity by our present views." But Cahen may fairly be answered, that the immorality is alleged to be directed by God, whose particular notions of justice ought not to be susceptible to modification by any such influences as those here alluded to.

Bishop Colenso takes an objection of an entirely different character. He says,† "We are told that 'every woman was to borrow of her neighbour, and of her that sojourned in her house, jewels of silver, and jewels of gold, and raiment' (Exodus, ii. 22). From this it would seem to follow that the Hebrews were regarded as living in the midst of the Egyptians, mixed up freely with them in their dwellings. And this appears to be confirmed by the statement (Exodus, xii. 35 and 36) that, when suddenly summoned to depart, they hastened, at a moment's notice, to 'borrow' in all directions from the Egyptians, and collected such a vast amount of treasure, in a very short space of time, that they 'spoiled the Egyptians.' And, indeed, it would seem only natural that those among the Egyptians who did not sympathise with the mad folly of their king, and had all along a friendly feeling, and by this time also a deep respect, for Israel, should have taken refuge in the Hebrew dwellings, and sought immunity in this way from the plagues which ravaged the land.

"And so writes Hengstenberg, p. 409:—'The Israelites

---

* Exode, p. 13.
† Part I., p. 56.

dwelt in houses, and intermixed with Egyptians, so that the destroying angel would pass by one door and stop at another. They lived with the Egyptians, with whom, in part, they stood on most friendly terms, in cities. According to Exodus iii., 20 and 22, it was not unfrequently the case, that Egyptian lodgers dwelt with an Israelitish householder, and those persons of good property, so that they could give from abundance, gold and silver ornaments and clothes.'

"But the supposition of their borrowing in this way, even if they lived in such a city, involves prodigious difficulties. For the city, in that case, could have been no other than Raameses itself, from which they started (Exodus xii., 37) a 'treasure-city,' which they had built for Pharaoh (Exodus i., 11)—doubtless, therefore, a well-built city, not a mere collection of mud-hovels. And so the story, in Exodus ii., 5, of the daughter of Pharaoh going down to bathe in the Nile, in the immediate proximity of the place where Moses was born, implies that his parents, at all events, lived not far from the royal residence. But, if the Israelites lived in such a city together with the Egyptians, it must have been even larger than London, and the difficulty of communication would have been thereby greatly increased. For we cannot suppose that the humble dwellings of these despised slaves were in closest contiguity with the mansions of their masters. And, in fact, several of the miracles, especially that of the 'thick darkness,' imply that the abodes of the Hebrews were wholly apart from those of the Egyptians, however difficult it may be to conceive how, under such circumstances, each woman could have borrowed from her that 'sojourned in her house.' Thus we should have now to imagine the time that would be required for the poorer half of London going hurriedly to borrow from the richer half, in addition to their other anxieties in starting upon such a sudden and momentous expedition."

Chap. iv., v. 1.—Moses was, like Abraham, a thorough unbeliever, despite the praise given to him in the New Testament for his faith; for, notwithstanding that, in chap. iii., v. 18, God personally assures Moses that the Israelites

shall hearken unto him, yet the Jewish leader now expresses his strong opinion to the contrary. He evidently did not regard God's decree as sufficient to determine the actions or opinions of the Israelites.*

Verses 8 and 9.—"And it shall come to pass, if they will not believe thee, neither hearken to the voice of the first sign, that they will believe the voice of the latter sign. And it shall come to pass, if they will not believe also these two signs, neither hearken unto thy voice, that thou shall take of the water of the river, and pour *it* upon the dry *land:* and the water which thou takest out of the river shall become blood upon the dry *land.*" The doubt as to which of several means should prove efficacious is not in character with the attribute of omnipotent omniscience. "God," says Spinoza, "is here revealed as indifferent to, and ignorant of the future actions of mankind." Two miracles are provided to be worked, so that if one fails, the second may succeed. God says if the people will not believe the first sign, they will believe the second, and yet he provides a third, in case both first and second are disbelieved. Aben Ezra, astonished by the language used here, and in other parts of the Bible, justified it on the theory that God in revelation had expressed himself incorrectly, in order to suit the inferior capacities of his chosen people. Kalisch, who alleges that God knew whether the Jews would believe or not, makes a very weak endeavour to explain the language of the text. While these wonders might have induced the Israelites to consider Moses a very extraordinary man, it is difficult to conceive how they could influence the belief of the Israelites as to the existence of God. Miracles may evidence a power out of the range of the beholder's experience, but can hardly demonstrate a theological proposition.

Verse 10.—"And Moses said unto the Lord, 'O, my Lord, I *am* not eloquent, neither heretofore, nor since thou hast spoken unto thy servant: but I *am* slow of speech, and of a slow tongue.'" The Midrash, and "The Chronicles of Moses" relate a story of a miraculous deliverance of Moses

* See Spinoza, Tractatus Theo-Pol., cap. ii.

from imminent danger of death in his infancy, when he had, by chance, in his childish play, grasped at the crown on Pharaoh's head, so that it fell down and broke into fragments. The king, considering this circumstance a fatal omen, ordered the boy to be instantly killed, when, on the advice of Jethro, in order to prove that the child was still without discernment, two basins, one filled with gold, the other with burning coals, were placed before Moses, who, by the invisible interference of an angel, did not choose the dazzling gold, for which he had already stretched out his hand, but a burning coal, with which he touched his lips; and thus he became "slow of speech, and of a slow tongue," and especially unable to pronounce the labials. "And because this defect of Moses," says Nachmanides, "was the consequence of a miracle, God did not wish to remove it."* This story is of course fabulous, but believers in the talking serpent, the talking ass, and other Bible wonders, can hardly make objection to an account because it is fable.

Verse 13.—"And he said, 'O, my Lord, send, I pray thee, by the hand *of him whom* thou wilt send.'" The Septuagint version makes Moses say, "I beseech the Lord appoint another whom thou wilt send."

Verse 14.—"And the anger of the Lord was kindled against Moses, and he said, 'Is not Aaron the Levite thy brother? I know that he can speak well. And also, behold, he cometh forth to meet thee: and when he seeth thee, he will be glad in his heart.'" The anger of the Lord kindled, and why? Because Moses had told him that he was not a good speaker, and that he (Moses) therefore desired the Lord to choose somebody else to represent his wishes to Pharaoh and the Jews. But why should the Lord be angry? He must have himself well-known Moses's disability and have foreordained that Moses should be reluctant to go. The name of Aaron is here introduced suddenly. There is no previous account of his birth, or of any difficulty in saving him from the Egyptian tyranny. There were yet no Levites, so that the title, "Aaron the Levite," is anticipatory. "Aaron thy brother, of the house of Levi," can

* Kalisch, Exodus, chap. 71.

hardly be intended, for if Aaron had been the brother of Moses, no identificatory explanation would have been necessary.

Verse 16.—"Thou shalt be to him instead of God." The Douay, following the Septuagint, has, "But thou shalt be to him in those things that pertain to God."

Verse 18.—"The Septuagint adds to this verse the words, "After many days the King of Egypt died."

Verse 20.—"His sons." Our version has, as yet, only related the birth of one—Gershom; and in v. 25 you find "her son," as if only one.

Verse 21.—What are the miracles which are previously mentioned but so many incidents in a solemn farce, if God had already determined that Pharaoh should pay no attention to them? The rod turned into a serpent, the serpent returning to its condition of a rod, the leprous hand, and the water changed to blood, not being intended by God to move Pharaoh, of what use are they? It can hardly be argued that they are like stage scenery, and used to heighten the effect of the grand *finale*. In the third chapter, God tells Moses to use subterfuge to Pharaoh, by pretending that the Jewish nation only wanted to go three days' journey to sacrifice in the wilderness, and at the same time God says, that he is "sure the King of Egypt will not let you go." If God is the ruler and ordainer of all things, he must have ruled and ordained that his chosen people should be ill-treated by Pharaoh, whom God must have created for that very purpose. Can anything be more inconsistent with the character of a just and merciful Deity? Cahen says, it is not easy to reconcile the involuntary hardening of Pharaoh's heart with the doctrine of a free will.

Verse 24.—"And it came to pass by the way in the inn, that the Lord met him, and sought to kill him." What does this mean? If the Lord sought to kill Moses, what hindered him from carrying out his desire? It is strange that he should seek to kill the very man whom he had selected to lead his chosen people out of Egypt. Where was the Inn, or *caravanserai*, situate, in which the All-Powerful sought to kill his newly appointed prophet? The foot note to the Douay says it was an angel who met

and sought to kill Moses. Onkelos says the same thing. The circumcision of the son of Moses seems connected with the story, but not very clearly. The abrupt transition from the message to Pharaoh, in v. 23, to the seeking to kill Moses, shows that something has been lost from the original text. The vv. 22-27, read as they stand, are absurd. In our version we are told that *after* the Lord let Moses go, Zipporah said, "A bloody husband thou art, because of the circumcision." In the Douay we find that Zipporah used these words—*before* the Lord let Moses go.

Verses 25 and 26.—The Septuagint has, *estē to aima tēs peritomēs tou paidiou mou*, "the blood of the circumcision of my son has ceased."

Verses 28-30.—Aaron, who wrought the signs, and spoke the words to the people, did so apparently without any direct communication from God, as to either the signs or oral declarations. He must have been more credulous or much more daring than Moses, for he seems to have readily undertaken, upon the mere representation of his brother, that which his brother had hesitated to do, although personally commanded by God.

Chap. v.—It is noteworthy that Moses not only adopts the ruse and pretence that he only desired a temporary leave of absence in order that the Jews might sacrifice, but he also speaks as though God would punish his people if such sacrifices were not offered.

Chap. v., vv. 2 and 3.—"And Pharaoh said, 'Who *is* the Lord, that I should obey his voice to let Israel go? I know not the Lord, neither will I let Israel go.' And they said, 'The God of the Hebrews hath met with us: let us go, we pray thee, three days' journey into the desert, and sacrifice unto the Lord our God, lest he fall upon us with pestilence, or with the sword." Moses and Aaron, when replying to Pharaoh, have evidently no idea of IEUE as an infinite and only God. They answer, "The God of the Hebrews met us." IEUE is to Moses a god of the Hebrews, just as Osiris is a god of the Egyptians.

Verses 22 and 23.—"And Moses returned unto the Lord, and said, 'Lord, wherefore hast thou *so* evil entreated this people? Why *is* it *that* thou hast sent me? For since

I came to Pharaoh to speak in thy name, he hath done evil to this people; neither hast thou delivered thy people at all.'" The faith of Moses in the divine wisdom and power was not yet very great, notwithstanding his special intercourse with God, nor does his reverence for the omnipotent manifest itself in his language.

Chap. vi., v. 3.—"And I appeared unto Abraham, unto Isaac, and unto Jacob, by *the name of* God Almighty; but by my name JEHOVAH was I not known to them."* In the commentary on Genesis, attention has already been drawn to the contradiction involved in this verse. Colenso, who notices the subject in his earlier parts, examines the matter very elaborately in his last volume. Following the majority of German critics in separating the Pentateuch into various Elohistic and Jehovistic documents belonging to different ages, he declares that,† "It is plain that the Elohist has intentionally abstained from using the name 'Jehovah,' till he had given the account of its revelation to Moses, in Exodus, chap. vi., vv. 2-7. He *meant*, therefore, to imply that it was literally *not known* till the time of Moses; and the words in Exodus vi., v. 3, 'I appeared unto Abraham, Isaac, and Jacob, by El Shaddai; but (by) my name Jehovah was I not known to them,' were really intended by him to be understood in this sense, which is their most obvious and natural meaning.

"The Elohist, then, meant to teach his people that the name 'Jehovah' *was not the name which their great forefathers used* for the Deity. It was comparatively a modern name, at the most only three or four centuries old, and was first revealed to living man at the time of the Exodus.

"On the other hand, we find the Jehovist habitually using the name 'Jehovah' from the first, putting it into the mouth of Eve (chap. iv., v. 1), and saying that from the time of Seth men 'began to call upon the name of Jehovah.' And, in short, he represents the name as thoroughly well-known, not only to the Patriarchs, and their wives and families, but to the *Philistines* (chap. xxvi., vv. 28, 29), and *Aramœans* (chap. xxiv. 31, 50, 51) generally.

* See pages 112 to 115.

† Part 5, p. 269. See also part 2, p. 357.

This contradiction shows us at once that the Jehovist did *not* believe implicitly in the Elohistic account of the origin of the name, and for some reason thought it best to carry back that origin to the most distant ages of mankind. And from this fact alone, independently of all other considerations, we may infer at once that the account in Exodus, chap. vi., v. 2 and v. 7, is not to be taken as historically true.'"

Cahen says, "*Le Tetragramme est souvent annoncé dans la vie des patriarches. Il est même dit expressement que ce nom a pris cours du temps de Seth* (Genesis, chap. iv., v. 26); *ce qui est difficile à concilier avec ce qui est dit ici.*"* "The four-lettered name is frequently mentioned in the lives of the Patriarchs. It is even expressly stated that the use of the name commenced in the time of Seth, which is difficult to reconcile with that which is here stated."

Nicolas, in a chapter on Jehovism, examines at considerable length the arguments of Vatke, Hengstenberg, Tholuck, Bohlen, and Knobel, as to the use, origin, and meaning of the words Jehovah and Elohim. Nicolas regards the word Jehovah as expressing the eternal, and the word Elohim, as expressing the all-powerful; remarking that the latter word is also applied to kings, princes, and judges, and the former only to Deity. Nicolas regards the Hebrew theology, expressed in connection with the name Jehovah, as purely monotheistic; but Von Bohlen takes precisely the opposite view. He says, "The Pentateuch can no better conceal, than the books which immediately succeed it, that Jehovah was at first merely the national Deity of the Israelites. Cain is afraid to dwell in a land where "Jehovah is not;" the Deity "goes down" with his people into Egypt, and appears there to his chosen servants. He is constantly spoken of as "the God of Abraham, Isaac, and Jacob," or "the God of the Hebrews;" they are forbidden to have any gods beside him, and Jehovah is represented as holding such other Gods to be similar to himself, although he eventually subdues them, and (as every nation believes of its tutelar deity) he is more powerful than they.

* Genese, chap. xiv.; Exode, chap. vi., 3.

Such it is evident cannot be termed a pure "monotheism."*

Colenso argues for the Phœnician origin of the four-lettered name which he identifies with ΙΑΩ, "a mysterious name, employed chiefly at the great feast of the Harvest," and used to designate the sun.

In an abridged translation from Moses, the Bishop gives the following extracts:—"(I.)† IAO is the sun—God at the different times of the year, with the predominant idea of Adonis as the harvest-Deity. In general, however, he represents a complexity of nature-deities, whose powers he comprehends in the meaning of his name, which is one full of mystery, and, according to Sanchoniathon, was taught in the priestly mysteries by the very oldest Phœnician hierophants.

"(II.)—As Adonis-Elyon, he is the primary being, together with the female goddess of nature, out of whom was born Uranos-Ge, as husband and wife, who parted afterwards from one another into 'heaven,' and 'earth.'

"(III.)—His name also was introduced, together with Dionysia, among the Greeks under various forms.

"(IV.)—In the Chaldee Religion, IAO was a designation of the spiritual principle of Light and Life, and seems to denote sometimes the highest Light-principle (Bel-Saturn), sometimes its efflux and image (Bel-Mithra). All these different ideas, however, are gathered up in his mysterious name IAO, which denotes him as the Principle of Life."

"The Chaldæans call the Deity IAO, which means in the tongue of the Phœnicians 'Intelligent Light;' and He is often also called 'Sabaoth,' as being over the seven (poles) heavens—that is, the Creator. Lydus, *de Mens.* iv., 38, p. 74.

"With this may be compared another passage of Lydus, *de Mens.* iv., 38, p. 74, *of Sabaoth, the Creator; for thus among the Phœnicians is the creative number named.*

"The first of these passages is found also in Cedrenus, i., p. 296, in a different connection, and with the name corrupted: "*For (ἠάὼ read Ἰαὼ) IAO among the Chaldæans is*

* Von Bohlen, Genesis, chap. xiii.

† Part v., pp. 312 and 316.

interpreted to mean, in the tongue of the Phœnicians, "Intelligent Light," and Sabbath also (to mean) "over the Seven Heavens"—that is, the Creator-Deity.

"Thus, then, we obtain the following new ideas about IAO:—

"(I.)—He was throned above the "Seven Heavens" of the Chaldæans;

"(II.)—He was a Light-Being, and, in fact, the holy Light-Principle, "Intelligent Light," out of which, according to Chaldeeism, all spiritual beings emanated;

"(III.)—He was regarded as Creator."

It is not unworthy of notice that the remarks of Colenso, and the authors from whom he quotes, are, to a considerable extent, corroborative of the views put forward by the Rev. Robert Taylor (following Dupuis and Drummond) in his Diegesis* and Devil's Pulpit, as to the Tsabaistic origin of our Hebrew mythology.

It is much to be regretted that the great learning and keen wit of Robert Taylor are sometimes rendered less effective for modern readers by the special mode of utterance adopted. He had to fight with rough adversaries, and he was drawn to fight with coarse weapons. The views he advocates on the Christian astro-mythology have received support from some most erudite investigators of Bible myths. That the sun, under various personified phases, has supplied the world with gods from the most ancient to the more modern, not excluding Jesus Christ, it would be idle to deny, after the researches of Dupuis, Drummond, and Higgins, or even after perusing such a work as Keightley's Mythology. The Bishop of Natal, by his quotations from Jablonsky and Movers, places before the multitude a ray of light on Christian history, from the use of which they may guess why the day fixed for the birth of Jesus corresponds with the New Year's birth, and why *Sun*day is our Lord's day. It will be, however, new to many, the suggestion that to Jesus himself has been applied the mystic name, IAO, and that this has been applied to him avowedly as the mystic emblematical sun.

---

* Diegesis, chap. xxii.

Kalisch*, who, in his commentary on Exodus, seems much more orthodox than in his later volume on Genesis, warmly combats the notion of any Phœnician, Egyptian, Chinese, or other than Hebrew origin for the word. The "I am all that has been, that is, and that will be," of the Temple of Isis, is not admitted by Kalisch as having the antiquity claimed for it.† Speaking of the sacredness of the name, Jehovah, he observes that, according to the Talmud, "Even he who thinks the name of God in its true letters, forgets his future life." The Egyptians had also a God whose name was too sacred for utterance. Nicolas, while admitting that there are weighty arguments in favour of the hypothesis of the Phœnician origin of the word, denies that those arguments are convincing.

Verse 9.—"And Moses spake so unto the children of Israel; but they harkened not unto Moses for anguish of spirit, and for cruel bondage," although, according to chap. iv. v. 31, they had previously believed.

Verse 10.—Kalisch says, "It cannot be denied that the following part of this chapter, and the beginning of the following, to verse 7, is so obscure in its internal connection and structure, that the often-repeated assertion that we have here incoherent fragments unskilfully inserted in the context, appears at the first glance not without foundation. For neither contain—verses 11 to 13, or verse 26 to chap. vii. v. 7—any new information, nor does the genealogy, verses 14 to 25, seem in its proper place here."

Verse 15.—The family of Ohad is not mentioned in Numbers, chap. xxvi. v. 12. Jemuel is there called Nemuel;‡ Zohar is there called Zerah; and so in First Chronicles, chap. iv. v. 24, where also Jachin is called Jarib.

Verse 17.—Libni is, in First Chronicles, chap. xxiii. v. 7, called Laadan. If the writer of Chronicles only had our Pentateuch to refer to, from whence did he get the names of the children of Libni and Shimei? The writer of the names of this family in Chronicles makes a most extraordinary jumble of confusion and contradiction.

---

* Exodus, chap. lii.

† See also on this, Nicolas, p. 154.

‡ See Commentary on Genesis, p. 136.

Verse 18.—No sons of Hebron are given in this chapter; but in First Chronicles, chap. xxiii. v. 19, and in chap. xxiv. v. 23, four are named.

Verse 21.—Of the sons of Izhar, three are here named, Korah, Nepheg, and Zichri; but in First Chronicles, chap. xxiii. v. 18, only one is named, Shelomith, or, according to chap. xxiv. v. 22, Shelomoth.

Verse 22.—The sons of Uzziel are here given as three, Mishael, Eezaphan, and Zithri; but in First Chronicles, chap. xxiii. v. 20, two are only named as "Micah the first, and Jesiah the second."

Verse 20.—"And Amram took him Jochebed, his father's sister, to wife." The Septuagint makes Jochebed "daughter of Amram's father's brother." Cahen suggests that this is so put because the marriage was within the prohibited degrees. The Septuagint also adds after Moses the words, "and Miriam, their sister." The name Jochebed being a compound, including the name Jah as prefix, religious critics are embarrassed by this, for, if the name Jah was not known prior to Exodus, chap. vi. v. 3, how could the ancestors of Moses use it?* Dr. John Pye Smith says that it appears to him impossible that the father of Moses should marry the daughter of Levi. Colenso says, "It is stated in the above passage that Amram took him, Jochebed, his father's sister, Kohath's sister, and, therefore, Levi's daughter, to wife; and so, also, we read in Numbers, chap. xxvi. v. 59, "And the name of Amram's wife was Jochebed, the daughter of Levi, whom her mother bare to Levi in Egypt; and she bare unto Amram Aaron and Moses, and Miriam, their sister." Now Levi was one year older than Judah, and was, therefore, forty-three years of age when he went down with Jacob into Egypt; and we are told, in Exodus, chap. vi. v. 16, that Levi was 137 years old when he died; Levi must have, therefore, lived, according to this story, 94 years in Egypt. Making the extreme supposition of his begetting Jochebed in the last year of his life, she may have been an infant 94 years after the migration of Jacob and his sons into Egypt. Hence it follows

* See Colenso, part 5, p. 273.

that if the sojourn in Egypt was 430 years, Moses, who was 80 years old at the time of the Exodus, must have been born 350 years after the migration into Egypt, when his mother must have been, at the very least, 256 years old."* "And the years of the life of Amram were an hundred and thirty and seven years." The Septuagint says, "One hundred and thirty-two."

Verses 26 and 27 could scarcely have been written by Moses, but rather appear to have been written, long after his age, by some one who wished to identify the Aaron and Moses of the genealogy with the Aaron and Moses to whom the Lord spoke, and who repeats, in oriental style, the words of identification. Cahen says, verse 26 gives the names, Aaron and Moses, in order of birth, and verse 27 reversed in order of dignity. Vater says, "Thus an author writes of men who lived long before him."

Chap. vii. v. 1.—What is meant by the words "I have made thee a God to Pharaoh?" In what sense could Moses be considered as Pharaoh's God? He was not worshipped by Pharaoh, nor did he rule Pharaoh. According to chap. iv. v. 16, Moses was to be instead of a God to Aaron. The Lord's reply is in answer to Moses's excuse that he is uncircumcised. From this it would appear that Egyptians had some repugnance to uncircumcised persons; yet, Moses, if born a Jew, ought to have been circumcised long before being put away in the ark—that is, if the Jews practised the rite, and if Moses, under care of Pharaoh's daughter, had been educated an Egyptian from his boyhood, he might fairly be supposed to have also conformed to all Egyptian customs.

Verse 7.—"And Moses was fourscore years old, and Aaron fourscore and three years old, when they spake unto Pharaoh." So that, though Aaron was the elder born, he seems to have escaped the river to which all the male infants were to have been consigned, according to Pharaoh's order. His birth is passed over without notice in the text, so much so that, according to chap. ii., verses 1 and 2, Moses would appear to be the first son born after the marriage of his parents.

* Part 1, p. 93.

Verses 10, 11, and 12.—"And Moses and Aaron went in unto Pharaoh, and they did so as the Lord had commanded; and Aaron cast down his rod before Pharaoh, and before his servants, and it became a serpent. Then Pharaoh also called the wise men and the sorcerers; now the magicians of Egypt, they also did in like manner with their enchantments. For they cast down every man his rod, and they became serpents; but Aaron's rod swallowed up their rods." The only possible conclusion from these verses is that sorcery, magic, and enchantment are actually practicable. Many clever tricks are practised in the East by serpent charmers, but the text does not regard these as tricks. It relates that the "magicians did so with their enchantments."

Kalisch, notwithstanding his orthodox efforts to clear away all the difficulties of Exodus, says, "It cannot be denied that the Pentateuch considers miracles performed, apparently not under the name of the God of Israel, but under the fancied influence of other deities, as not impossible; and that it admits even predictions which might be realised, and which are called 'false signs' only because they are given in a bad cause." Yet, to-day fortune-telling and conjuring are, except when practised as a show or stage performance, regarded as impostures deserving the House of Correction. As a specimen of the truly pious style of explanation, the following quotation is presented:* —"It may seem surprising that Jehovah should so far give countenance to a false religion as to permit these deceivers to imitate the miracles of his servants. But this was a contest between the votaries of the true God and the worshippers of demons. The necromancers were, therefore, suffered to succeed in some instances, to encourage them to persevere in their opposition, that the victory of Jehovah might be the more triumphant, and their defeat the more mortifying and complete."

To judge by the standard of to-day, the whole account of these miracles is in the highest degree unreasonable; even the most pious Theist, if he claimed for God the power

* Jones's Biblical Encyclopædia.

to turn a rod into a serpent, would hesitate to concede the same power to the sorcerers and magicians of Egypt. The throwing down the rod by Aaron, its change into a serpent, or dragon, as some versions put it, and the swallowing the other rods, form a juggler's display without purpose or utility, because God has already predestined that the signs should not produce any effect whatever upon Pharaoh. It is under colour of such a narrative, and of the texts in various parts of the Bible relating to witches and wizards, that the most monstrous beliefs have prevailed amongst Christian nations of all classes, and which follies, although nearly extirpated in most brutal fashion by the pious witch-hunters of past generations, to this day are found occasionally where piety and ignorance predominate.

Verses 19, 20, and 21.—These verses clearly threaten to change the whole of the water throughout Egypt, and consequently appear to teach that the *whole of the water* in Egypt was turned to blood; if so, the 22nd verse would be incorrect in stating that the magicians did the same, because, if *all the water* had been already turned to blood by Aaron, there would not be any left for the magicians to operate upon. Aben Ezra, seeing this difficulty, asks what waters the Egyptian magicians could change into blood, and suggests that they might have changed the subterranean waters.* We are told that this plague was throughout the whole of the land of Egypt; if so, the Jews must have suffered equally with the Egyptians. In support of the views put forward by those who regard these plagues as according with Egyptian climatic conditions, Cahen remarks that the Nile always reddens as it becomes swollen and troubled at the time of the inundations.

Chap. vii. in the Hebrew has 28 verses—that is, it includes the first 4 verses of chap. viii.

Chap. viii., v. 9.—"Glory over me when shall I entreat for thee." These words are not very clear. The Douay has, "Set me a time when I shall pray for thee."

Verse 16.—"Lice." Kalisch has "gnats;" the Douay, "sciniphs," this being merely the putting into English letters the Greek of the Septuagint *scniphes*, which Cahen renders "gnats."

* Cahen, Exode, p. 28.

Verses 17 and 18.—Had it not been for the previous transformation of non-existing water, it would scarcely be a matter for wonder that the magicians could not turn the dust into lice, when we are told that *all the dust* had been previously changed by Aaron.

Verse 21.—"Swarms of flies." Josephus says these were "various sorts of pestilential creatures;" and this is, to some extent, endorsed by the marginal reading of our Bible, "a mixture of noisome beasts." Aben Ezra makes it "crowds of wild beasts;" Cahen has "*un melange d'insects;*" Kalisch, "the beetle."

Verses 22 and 23.—It appears from these verses as if the Jews had been equal participators in all the evils attaching to the previous plagues. It is here, for the first time, that any protection to the Israelites is spoken of. Josephus says that, after the fourth plague, Pharaoh would have let the Hebrew men and women go away to sacrifice, but he would not let them take their children.*

Chap. ix., v. 10.—What kind of beasts could the boils break out upon, when all the cattle were killed by murrain? In verse 6 it is expressly stated that "all the cattle of Egypt died."

Verse 16.—"And in very deed for this cause have I raised thee up, for to show in thee my power; and that my name may be declared throughout all the earth." Cahen observes that, notwithstanding the God of the Jews did this that his name might be known through all the earth, yet that a large majority of humankind knew nothing of the Pentateuch, or of the Hebrew Deity. Even at the present day there are millions who live and die, never hearing of the plagues of Egypt.

Verses 20 and 21.—"He that feared the word of the Lord among the servants of Pharaoh made his servants and his cattle flee into the houses. And he that regarded not the word of the Lord left his servants and his cattle in the field." There is no account here of God's words being communicated to Pharaoh and the Egyptians. Perhaps a passage has been lost from the text. The Samaritan codex

* Antiquities, book 2, c. 14.

adds that Moses did tell Pharaoh. The writer of these verses ought to have remembered that all the cattle of Egypt were killed by the murrain, but he would then have had to explain how cattle already dead could flee from the field to escape being killed by the hail.

Verse 28.—Josephus says that, after the hail, Pharaoh "bid Moses take the Hebrews away with their wives and children, but to leave their cattle behind."*

Verse 30.—"But as for thee and thy servants, I know that ye will not yet fear the Lord God." The Douay has, "do not yet fear;" the Geneva has, "I know, afore I pray, ye will feare before the face of the Lord God." Kalisch argues that the Douay is the correct rendering. Cahen intimates, following the Rabbis, that the word "not" has been left out in the Hebrew text.

Chap. x. v. 9.—By this, and verse 25, it appears that Moses still pursued a policy of equivocation towards Pharaoh, notwithstanding that God had so manifested his power against the Egyptians. The request made by the Jewish prophet is not that the Israelites may be liberated, but that they may be temporarily released for the purposes of a sacrifice.

Verse 13.—"And Moses stretched forth his rod over the land of Egypt, and the Lord brought an east wind upon the land all that day, and all that night; and when it was morning, the east wind brought the locusts." The Geneva version calls the locusts "grasshoppers." Cahen translates the words "east wind" as "south wind," following the Septuagint. The Douay has "a burning wind," after the Vulgate, which has "*ventus urens.*" Kalisch defends our version, remarking that "It has frequently been asserted that an east wind could not have brought the locusts into Egypt, because these insects always wander south to north, and because they cannot well fly over water, and would, therefore, have perished in the Red Sea before reaching Egypt." Kalisch regards neither of these arguments as sufficient.

Verse 14.—"And the locusts went up over all the land

* Antiquities, book 2, chap. 14.

of Egypt, and rested in all the coasts of Egypt; very grievous were they; before them there were no such locusts as they, neither after them shall be such." Cahen remarks that Joel, describing, in a very poetic fashion, a plague of four kinds of locusts (Joel, chap. ii.), uses very similar language. Kalisch says that the two passages have been regarded as contradictory, but seeks to explain them* by alleging that in Exodus the quantity, and in Joel the number of species, is the feature unparalleled.

Verse 19.—"And Jehovah turned a mighty strong west wind, which took away the locusts, and cast them into the Red Sea." For "west wind" the original Hebrew of this passage has "wind of the sea"—that is, of course, the Mediterranean Sea, from which westerly winds blew over the land of Canaan, but not over Egypt. This expression obviously could not have been familiarly used in this way till some time after the people were settled in the land of Canaan, when they would naturally employ "wind of the sea," "seaward," to express "west wind," "westward," (1st K., vii. 25, 1st Ch., ix. 24, 2nd Ch., iv. 4), though they had also other ways of expressing the west (Jo., xxiii. 4, 1st Ch., xii. 15, Is., xlv. 6). It is evident that neither Moses nor one of his age could have invented this form of expression, either while wandering in the wilderness, or even when, in the last year, according to the story, they had reached the borders of the promised land, and the Mediterranean lay then actually to the west of their position. Still less could he have used the phrase "wind of the sea" to express a westerly wind, with reference to an event occurring in the land of Egypt, where the Mediterranean lay to the north, and the Red Sea to the east. And the same expression occurs in many other places of the Pentateuch, as G., xii. 8, xiii. 14, xxviii. 14, E., xxvi. 22, 27, xxvii. 12, xxxvi. 27, 32, N., ii. 18, iii. 23. xi. 31, xxxiv. 6, xxxv. 5, D., i. 7, iii. 27, xxxiii. 23.

It may, perhaps, be said that the Hebrews retained their own language, and their old forms of expression, after they went down to Egypt, and so used mechanically, as it were,

* Exode, p. 40; and Exodus, p. 168.

the word "sea" for "west," though so inappropriate. If this were the *only* difficulty to be met, such an explanation might be admitted. As it is, the phenomenon in question is but one of many like phenomena, as *e.g.*, that, in Genesis, xli. 6, the "east" wind is spoken of as a "parching" wind, which, as Gesenius observes, "it certainly is in Palestine, but not in Egypt, whence the LXX. in that place write 'south-west' wind instead of 'east' wind," and is very strongly suggestive of a later date of composition, for those parts, at least, of the Mosaic narrative in which it occurs.*

Verses 21, 22, and 23.—"And the Lord said unto Moses, Stretch out thine hand toward heaven, that there may be darkness over the land of Egypt, even the darkness which may be felt. And Moses stretched forth his hand toward heaven; and there was a thick darkness in all the land of Egypt three days. They saw not one another, neither rose any from his place for three days; but all the children of Israel had light in their dwellings." The difficulties as to this miracle become greater when you consider that the children of Israel were spread all over Egypt (chap. i. v. 7), and that they lodged in the same houses with Egyptians (chap. iii. v. 22), and that their dwellings were frequently in the same neighbourhoods. Darkness and light must have been near neighbours, and it is curious to consider whether, if an Egyptian and Israelite were at the time of the plague in the same room, light or darkness would prevail. Kalisch remarks that in the Septuagint, verse 23, it states, "neither rose any man from his bed." Kalisch objects to the Septuagint version as improbable. Does the learned doctor mean by so objecting that the narrative of this plague, as recorded in our version, bears an air of probability? To a plain mind, a patch-work of light and darkness over the whole of a country is about as great an improbability as can well be conceived.

Verse 29.—"And Moses said, Thou has spoken well; I will see thy face again no more." Yet, in chap. xi. v. 8, we find Moses again in the presence of Pharaoh.

---

* Colenso, part ii., pp. 199 and 200.

Chap. xi. v. 3.—"And the Lord gave the people favour in the sight of the Egyptians. Moreover the man Moses was very great in the land of Egypt, in the sight of Pharaoh's servants, and in the sight of the people." And the Lord *gave* the people favour. The Douay reads, "And the Lord *will give* favour to his people." Our version is evidently incorrect, because the Egyptians afterwards suffered another plague, which would have been cruel and unnecessary had they already granted or been favourable to the wish of the Israelites. "And the man Moses was very great." Moses can scarcely be supposed to have written this of himself.

Verse 5.—Commenting on this verse, Cahen remarks that ten righteous men would have been enough to have saved Sodom, but here thousands of innocent beings are condemned for one man's crime.

Goethe quaintly says—"The petition (of Moses and Aaron) was thus refused; and, with plagues oversweeping the land, ever more pressingly renewed, ever more obstinately denied. But the excited Hebrews, in the prospect of a land of heritage promised by an ancient tradition, in the hope of independence and self-government, recognised no further duties. Under the pretence of a universal feast, they borrowed from their neighbours vessels of gold and silver, and at the moment when the Egyptians thought the Israelites occupied with a harmless festivity, an inverted Sicilian vespers was undertaken; the foreigner murdered the native, the guest the host; and, guided by a savage policy, they smote only the firstborn, that, in a land where primogeniture enjoyed so many privileges, the selfishness of the younger sons might be occupied, and the instantaneous vengeance avoided by a swift flight. The artifice succeeded; the murderers were thrust out instead of being punished. Later only the King gathered his host; but the chariots and horsemen, otherwise so terrible to foot-soldiers, fought, on marshy ground, an unequal fight with the light and light-armed rearguard, probably with the same resolute, daring band who had already exercised themselves with the perilous universal murder, and whom, in the sequel, we cannot but recognise and distinguish by their horrible deeds."*

* Westœstlicher Divan. Israel in the Wilderness.

Chap. xii. v. 17.—"And ye shall observe the feast of unleavened bread; for in this selfsame day have I brought your armies out of the land of Egypt: therefore shall ye observe this day in your generations by an ordinance for ever." This would seem to be a commandment given after the Exodus. The Douay, instead of "have I brought," has "I will bring." Kalisch and Cahen translate in accordance with our version.

Reading verses 3 and 6 attentively, portions of this chapter have the appearance of being later additions, applying to an occasion of the passover subsequent to the flight.

Verses 21, 22, 23, and 28.—"Then Moses called for all the elders of Israel, and said unto them, Draw out and take you a lamb according to your families, and kill the passover. And ye shall take a bunch of hyssop, and dip it in the blood that is in the bason, and strike the lintel and the two side posts with the blood that is in the bason; and none of you shall go out at the door of his house until the morning. For the Lord will pass through to smite the Egyptians; and when he seeth the blood upon the lintel, and on the two side posts, the Lord will pass over the door, and will not suffer the destroyer to come in unto your houses to smite you. And the children of Israel went away, and did as the Lord had commanded Moses and Aaron, so did they." Colenso comments very fully on these verses. He says*:—

"In one single day the whole immense population of Israel, as large as that of London, was instructed to keep the passover, and actually did keep it. I have said 'in one single day,' for the first notice of any such feast to be kept is given in this very chapter, where we find it written, verse 12, 'I will pass through the land of Egypt this night, and will smite all the first-born in the land of Egypt, both man and beast.'

"It cannot be said that they had notice several days beforehand, for they were to 'take' the lamb on the tenth day of the month, and 'kill' it on the fourteenth (vv. 3, 6),

* Part i. p. 54.

and so verse 12 only means to say 'on *that* night—the night of the fourteenth—I will pass through the land of Egypt.' For the expression in chap. v. v. 12 is distinctly—as in chap. xiii. v. 8, and so chap. v. v. 14—'*this* day shall be unto you for a memorial;' and, besides, in the chapter preceding, chap. xi. v. 4, we read, 'And Moses said [to Pharaoh], Thus saith Jehovah, *about midnight* will I go out into the midst of Egypt, and all the first-born in the land of Egypt shall die,' where there can be no doubt that the 'midnight' then next at hand is intended. It is true that in the story as it now stands, the directions about 'taking' the lamb on the tenth day, and 'keeping' it till the fourteenth, are perplexing and contradictory.

"'Moses called all the elders of Israel.' We must suppose, then, that the 'elders' lived somewhere near at hand. But where did the two millions live? And how could the order to keep the passover have been conveyed, with its minutest particulars, to *each individual household* in this vast community in one day—rather in *twelve hours*, since Moses received the command on the very same day on which they were to kill the passover *at even* (Exodus, chap. xii. v. 6)?

"It was absolutely necessary that the notice should be distinctly given to each separate family. For it was a matter of life and death. Upon the due performance of the divine command it depended whether Jehovah should 'stride across' the threshold (see Is., chap. xxxi. v. 5), and protect the house from the angel of death, or not. And yet the whole matter was perfectly new to them. The specific directions—about choosing the lamb, killing it at even, sprinkling its blood, and eating it with unleavened bread, 'not raw, nor sodden at all with water, but roast with fire,' 'with their loins girded, their shoes on their feet, and their staff in their hand'—were now for the first time communicated to Moses, by him to the elders, and by them to the people. These directions, therefore, could not have been conveyed by any mere *sign*, intimating that they were now to carry into execution something about which they had been informed before. They must be plainly and fully delivered to each individual head of a family, or to a number

of them gathered together, though these, of course, might be ordered to assist in spreading the intelligence to others, but so that no single household should be left uninformed upon the matter.

"This would be done *most* easily if we could suppose that the whole Hebrew community lived as closely together as possible, in one great city. In that case, we should have to imagine a message of this nature, upon which life and death depended, conveyed without fail to every single family in a population as large as that of London, between sunrise and sunset, and that, too, without their having had any previous notice whatever on the subject, and without any preparations having been made beforehand to facilitate such a communication.

"The story, however, will not allow us to suppose that they were living in any such city at all. Having so large flocks and herds, 'even very much cattle' (Ex., chap. xii. v. 38), many of them must have lived scattered over the large extent of grazing ground required under their circumstances; and, accordingly, they are represented as still living in 'the land of Goshen' (Ex., chap. x. v. 26). But how large must have been the extent of this land? We can form some judgment on this point by considering the number of lambs which (according to the story) must have been killed for the passover. The command was, 'They shall take to them every man a lamb, according to the house of their fathers, a lamb for an house; and if the household be too little for the lamb, let him and his neighbour, next unto his house, take it according to the number of the souls; every man, according to his eating, shall make your count for the lamb' (Ex., chap. xii. vv. 3 and 4). Josephus (*de Bell. Jud.*, vi. g. 3), reckons ten persons on an average for each lamb; but, he says, 'many of us are twenty in a company.' Kurtz allows fifteen or twenty. Taking ten as the average number, two millions of people would require about 200,000 lambs; taking twenty, they would require 100,000. Let us take the mean of these, and suppose that they required 150,000. And these were to be all '*male* lambs of the first year' (Ex., chap. xii. v. 5). We may assume that there were as many *female* lambs of

the first year, making 300,000 lambs of the first year altogether.

"But these were not all. For if the 150,000 lambs that were killed for the passover comprised *all* the males of that year, there would have been no rams or wethers left of that year for the increase of the flock. And, as the same thing would take place in each successive year, there would never be any rams or wethers, but ewe-sheep innumerable; or, indeed, when the first set of rams died out, there would be no more propagation, and both ewes and rams would cease. Instead, then, of 150,000, we may suppose 200,000 male lambs of the first year, and 200,000 female lambs, making 400,000 lambs of the first year altogether. The total number of sheep in an average flock of all ages will be about *five times* that of the increase in one season of lambing. So that 400,000 lambs of the first year implies a flock of 2,000,000 sheep and lambs of all ages. Taking, then, into account the fact that they had also large herds, 'even very much cattle,' we may fairly reckon that the Hebrews, though so much oppressed, must have possessed at this time, according to the story, more than two millions of sheep and oxen.*

"What extent of land, then, would all these have required for pasturage? Let us allow five sheep to an acre. Then the sheep alone of the Israelites would have required 400,000 acres of grazing land—an extent of country considerably larger than the whole county of Hertfordshire or Bedfordshire, and more than twice the size of Middlesex, besides that which would have been required for the oxen.

"We must, then, abandon altogether the idea of the people living together in one city, and must suppose a great body of them to have been scattered about in towns and villages, throughout the whole land of Goshen, in a district of 400,000 acres—that is, twenty-five miles square [625

* This is hardly the full extent of the difficulty, for, as the lambs were to be free from blemish, they would be only a selection from a still larger number. Maimonides declares that, according to Jewish tradition, the four days between the taking and sacrifice of the lamb were to afford time to see that the intended victim was faultless (Kalisch, Exodus, p. 190).

square miles], larger than Hertfordshire (391,141 acres). But, then, the difficulty of informing such a population would be enormously increased, as well as that of their borrowing, when summoned in the dead of night (Ex., chap. xii. vv. 29-36), to the extent implied in the story. For, even if we supposed the *first* message to prepare, kill, and eat the Paschal lamb, communicated to the whole people within twelve hours, and acted on, when they were abroad in full daylight—or that they actually had had a previous notice to 'take' the lambs on the tenth, and 'keep' them to the fourteenth—yet how could the *second* notice, to start, have been so suddenly and completely circulated? Not one was 'to go out at the door of his house until the morning' (Ex., chap. xii. v. 22). Consequently, they could not have known anything of what had happened in Pharaoh's house and city, as also among his people throughout the whole 'land of Egypt' (Ex., chap. xii. v. 29), until the summons from Moses, or, at least, the news of the event reached each individual house. The whole population of Hertfordshire, by the census of 1851, was considerably under 200,000 (167,298). We are to imagine, then, its towns and villages increased more than *tenfold* in size or in number. And, then, we are to believe that every single household throughout the entire country was warned in twelve hours to keep the Feast of the Passover, was taught *how* to keep it, and actually *did* keep it; and that, further, they were warned against midnight to start at once in hurried flight for the wilderness when each family was shut up closely in its own house, and strictly forbidden to come out of it till summoned, and they could not, therefore, communicate the tidings freely as by day from one person to a number of others."

Chap. xii. v. 29.—In this verse is related the horrible consummation of a series of plagues which God had caused to fall on the Egyptians. And why all this punishment? Was it because the Egyptians, as a nation, had oppressed the Israelites? If so, the cattle, the trees, and the green herbs were included in the punishment, although they could not have participated in the offence; besides which, the Egyptians could never have oppressed the Israelites if

the oppression had not been permitted by the Omnipotent Deity who had sworn to Abraham to protect and cherish them. Was the punishment because Pharaoh would not let the children of Israel go? If so, what had the first-born of the "maid-servant in the mill, and of the captive in the dungeon," to do with Pharaoh's offence? How could these poor wretches prevent the decree of Egypt's mighty chieftain? But even Pharaoh was specially controlled by God; in chap. iv. v. 21, chap. vii. v. 3, chap. ix. vv. 12 and 16, chap. x. vv. 1, 20, and 27, chap. xi. v. 10, and chap. xiv. v. 4, we have distinct repetitions of the statement that God himself hardened Pharaoh's heart and prevented him from allowing the children of Israel to go. Then, why all this punishment? In chap. ix. v. 16, chap. x. v. 2, and chap. xiv. v. 4, we are told that God raised Pharaoh up for the very purpose of smiting him and his people, so that God might perform the miracles, that the name of God might be declared throughout all the earth, that the Israelites might worship the Lord, and that the name of God might be honoured amongst the Egyptians; and in seeking to attain this result, which, to this day, has not been arrived at, God plagues and torments the Egyptian nation with most painful and destructive plagues, killing the first-born in every family, from the monarch who sat on the throne to the captive in the dungeon, and ending by drowning Pharaoh and his army in the Red Sea. The religious thinker, attempting to examine this horrible picture, might, perhaps, be tempted to blaspheme by questioning God's justice and goodness, were he not saved from this dilemma by a consciousness of the falsity and absurdity of the whole tale. According to chap. ix. vv. 3 and 6, all the cattle of the Egyptians, their horses, asses, camels, oxen, and sheep, were killed by the murrain; by verse 10 of the same chapter, a boil breaking forth with blains is sent upon the same cattle; by verse 19 the Egyptians are cautioned to gather in *their cattle*, which, if the preceding verses be true, were already dead, lest they should again die from the effects of the hail, and he who feared the Lord amongst the servants of Pharaoh made his *dead* cattle flee into the house

lest they should be killed again, and those who did not fear the Lord had their cattle killed a second time by the hail; in chap. x. v. 25, Moses asks Pharaoh to give him some of his *twice killed* cattle that he may kill them a third time as sacrifices to the Lord; in chap. xii. v. 29, God, in the night, kills the first-born of all the cattle, some of which must have been thus *thrice* killed; yet, despite all this, we find Pharaoh with an army of chariots, horses, and horsemen, who are finally and irrecoverably got rid of by being drowned in the Red Sea.

Verses 37 and 38.—"And the children of Israel journeyed from Rameses to Succoth, about six hundred thousand on foot that were men, beside children. And a mixed multitude went up also with them; and flocks, and herds, even very much cattle." Cahen says, "This supposes a nation of at least 3,000,000 individuals; when camped with their beasts and camels, they would have occupied at least a square league of surface, and in marching must have extended into a column many miles long. It is difficult for such a multitude to travel in any country, and very difficult indeed to obtain nourishment in a desert." After reading Colenso's comments, which are subjoined, the reader should take De Quincey's masterly essay on the Revolt of the Tartars, from which he may judge the difficulties attending the exodus of any cattle-holding people. The Bishop of Natal says:—

"It appears from N., i. 3, ii. 32, that these six hundred thousand were the men in the prime of life, 'from twenty years old and upward, all that were able to go forth to war in Israel.' And this large number of able-bodied warriors implies a total population of at least two millions. Here, then, we have this vast body of people of all ages, summoned to start, according to the story, at a moment's notice, and actually started, not one being left behind, together with all their multitudinous flocks and herds. I do not hesitate to declare this statement to be utterly incredible and impossible. Were an English village of (say) two thousand people to be called suddenly to set out in this way, with old people, young children, and infants, what indescribable distress there would be! But what shall be said of a

thousand times as many? And what of the sick and infirm, or the women in recent or imminent childbirth, in a population like that of London, where the births are 264 a-day, or *about one every five minutes?*

"But this is but a very small part of the difficulty. We are required to believe that, in one single day, the order to start was communicated suddenly, at midnight, to every single family of every town and village throughout a tract of country as large as Hertfordshire, but ten times as thickly peopled; that, in obedience to such order, having first 'borrowed' very largely from their Egyptian neighbours in all directions (though, if we are to suppose Egyptians occupying the *same* territory with the Hebrews, the extent of it must be very much increased), they then came in from all parts of the land of Goshen to Rameses, bringing with them the sick and infirm, the young and the aged; further, that, since receiving the summons, they had sent out to gather in all their flocks and herds, spread over so wide a district, and had driven them also to Rameses; and, lastly, that, having done all this since they were roused at midnight, they were started again from Rameses that very same day, and marched on to Succoth, not leaving a single sick or infirm person, a single woman in childbirth, or even a 'single hoof' (E., x. 26), behind them!"

Verses 40 and 41.—"Now the sojourning of the children of Israel, who dwelt in Egypt, was four hundred and thirty years. And it came to pass, at the end of the four hundred and thirty years, even the selfsame day it came to pass, that all the hosts of the Lord went out from the land of Egypt." Stephen, in Acts, chap. vii. v. 6, says it was four hundred years. Dr. John Pye Smith, with all his orthodoxy, felt that there was a great difficulty to encounter, and writes as follows*:—

"Many comprehend in this reckoning the time from the communication to Abraham (Genesis, chap. xv. v. 13), or his entrance into Canaan, ten years earlier. This will leave only two hundred and fifteen years for the sojourn in

* First lines of Christian Theology, p. 459, as to Hebron. Dr. John Pye Smith could hardly have seen First Chronicles, chap. xxiii. v. 19. (See Genesis, p. 94).

Egypt. Yet, during that period, the population increased to what would give 603,550 *warriors*, men above twenty years old, not including the tribe of Levi (Numbers, chap. i. v. 46). Hence, it is scarcely imaginable that the whole number of the nation could be less than two millions; an increase from seventy-two, which is quite impossible. Supposing that they doubled themselves every fourteen years, the number would have been less than half a million. But if four hundred and thirty years be taken, the increase is probable. We see, also, that the males of the whole family of Kohath were 8,600 (Numbers, chap. iii. v. 28); yet Kohath had only four sons (Exodus, chap. vi. v. 18), from whom the grandsons mentioned are eight in number, none being mentioned from Hebron, who, perhaps, died childless. Also, that the father of Moses should have married the daughter of Levi, appears impossible. Surely, then, one or more generations have fallen out from the table (Exodus, chap. vi. vv. 17 and 18)."

The Samaritan has, "the sojourning of the children of Israel and of their fathers, while they sojourned in the land of Canaan and in the land of Egypt, was 430 years."* This reading would avoid, to some extent, the difficulty as to the 430 years. Cahen says, "Kohath, one of the first priests, and son of Levi, died 133 years old. His son, Amram, 137 years. Moses, Amram's son, 120 years. These added together only make 390 years, leaving 40 deficient. But there were also 40 years between the leaving Egypt and the death of Moses, making the difference 80 years. Moreover, these three generations can have hardly followed one at the end of the other, but must have been, to some extent, concurrent, still further increasing the deficiency. In order to make up the 430 years, some go back to the time of Abraham. But these are met by the difficulty that Genesis, chap. xv. v. 13, says that the Egyptians shall torment the Israelites for 400 years." Josephus says expressly "430 years after Abraham came into Canaan, but 215 only after Jacob removed into Egypt."

Verse 46.—In this verse we have one of many illustra-

* Colenso, part 1, pp. 91 to 95. Cahen, Exode, p. 50.

tions of the value of the Massoretic points. The words בבית BeBITh, אחד AChaD, יאכל IAKeL, "In one house it shall be eaten." According to the pointing of the Keri, the last word is *active;* the pointing, according to the Kethiv, makes it *passive,* and two inferences are deduced from this in the Talmud.* Rabbi Jehudah maintains that the man who partakes of the passover HE must eat it in one place, but that the passover itself may be divided, and a part of it eaten by another company in another place; basing his argument upon the Keri, *he must eat it at one place.* Whereas Rabbi Simeon maintains that the passover itself IT, must be eaten in one place, and cannot be divided between two different companies in different places, though the man himself, after having eaten his passover at home, may go to another place and partake of another company's passover; basing his argument upon the Kethiv, *it must be eaten in one place.*†

Chap. xiii. v. 2.—"Sanctify unto me all the first-born, whatsoever openeth the womb among the children of Israel, both of man and of beast; it is mine." By this and several other texts, it is stated that the first-born, both of man and beast, were devoted to the Lord. It is quite clear that the beasts so devoted were to be slaughtered as sacrifices, but it is not so clear as to the fate of the human beings. There are special regulations for some sorts of redemption, by payment, but what were the penalties falling on the unredeemed? By Leviticus, chap. xxvii. vv. 28, 29, and the history of burnt offering by Jephtha of his own daughter, Judges, chap. xi., it appears that human sacrifices were parcel of the Jewish religious rites; a portion of their

* The Keri is the text as written in the margin, the Kethiv the literal text. The Keri velo Kethiv gives the marginal insertion of words not found in the text, supplemented to elucidate it. The Kethiv velo Keri shows the omission in the margin of entire words written in the text, but suppressed to remove difficulties. Bellamy says, "The Keri translators endeavour to give the sense of the text, and frequently omit some important word, or attempt to alter the original. But by Chetib (or Kethiv) is meant the true text, which should be so translated as not to reject a single word in the original. The Keri and Chetib translators stand opposed to each other.

† Jacob Ben Chajim's Introduction, p. 31.

prisoners seems also to have been sacrificed to the Lord after each victory, as in other idolatrous nations; and in Jephtha's case we find these remarkable words after the account of the sacrifice, "And it was a custom in Israel." Kalisch indignantly denies the allegations made by some writers, which imply frequency of human sacrifice amongst the Jews.* Bunsen suggests that the sanctification of the first-born male was to prevent the practice (amongst the Hebrews) of sacrificing to Moloch, which was common with the Syrian tribes. The Douay says, in a foot-note to the above verse, that the first-born of the beasts were to be sacrificed, but that the first-born Hebrew males were to be deputed to the ministry in divine worship. The text bears the view precisely opposite to Kalisch, Bunsen, and the Douay, especially when compared with Leviticus, chap. xxvii. v. 29, "None devoted, which shall be devoted of men, shall be redeemed; but shall surely be put to death." This is surely explicit enough without even such an illustration as that of the case of Jephtha's daughter.

Verse 5.—After "Jebusites" the Septuagint adds "the Gergashites and the Perizzites." According to Cahen, the Samaritan version is the same as the Septuagint.†

Verse 6.—"Seven days thou shalt eat." The Septuagint has "six days." In Deut., chap. xvi. v. 8, the text of our version says, "Six days shalt thou eat."

Verse 8.—The Douay differs from our translation, which represents God as directing the Israelite to tell his son *that the feast is held because of that* which the Lord did; while the Douay directs the Israelite to tell his son "what the Lord did," but not that the feast is held because of it.

Verse 9.—"A sign to thee upon thy hand, and for a memorial between thy eyes."‡ Cahen says that "Before writing was known or taught, they were obliged to institute mnemonique means for recalling the historical events fit to consolidate the national unity. Even to-day anniversary fetes serve similarly as historic schools for the people." Kalisch says, "For a people little practised in abstract

* Exodus, pp. 186 and 187.

† See Commentary on Genesis, p. 95.

‡ See v. 16, in which similar language is used.

ideas, and sunk in slavish mental torpor, the prudent legislator thought it advisable to facilitate the understanding of the laws by visible, external symbols and signs ; and, for this purpose, he chose—1. Memorials to be borne on the arm and the forehead (phylacteries תפלין TePheLIN) ; 2. Memorials to be written on the doorposts of the houses (מזוזות MeZZUTh, Deut., vi. 9, xi. 20) ; and 3. Fringes and threads to be worn on the borders of the garments (ציצת TsITseTh, Num. xv. 37-41) ; with respect to which it is expressly said (vv. 39 and 40), 'And you shall see them, and shall remember all the commandments of the Lord and do them.' These three precepts, and the practical support they afford, are comprised in the following Talmudical passage :—'He who has *Tefillin* on his head and his arm—and *Zizith* on his garment—and a *Mesusah* on his door—has every possible guarantee that he will not sin' (Menach, 33 b.)."

Verse 13.—"And if thou wilt not redeem it, then thou shalt break his neck." Kalisch says "that it was not cruel to order the killing of an unredeemed male unclean animal, because it was in the power of the owner to redeem it." But the Douay and Cahen, instead of "if thou wilt not," translate "if thou do not." So that, if the owner was unable to redeem, he was obliged to kill.

Verses 17 and 18.—"And it came to pass, when Pharaoh had let the people go, that God led them not through the way of the land of the Philistines, although that was near ; for God said, 'Lest peradventure the people repent when they see war, and they return to Egypt.' But God led the people about, through the way of the wilderness of the Red Sea." Even a devout believer might be sadly puzzled by these verses. Was God afraid lest the people should repent? and did he express that fear to his confidant. Moses, or in what manner, and to whom did God speak? Did God lead his chosen people into Egypt to avoid all wars ? if so, how comes it that we almost immediately hear of the battle with the Amalekites ? *(vide* chap. xvii). God's fears seem ill-founded, for the Jews (although they had a very hard fight with the Amalekites, and one in which they were nearly beaten, even with God's aid in their favour)

never talked of returning to Egypt, in consequence of that fight. The road taken by the Israelites was rather away from than towards the land to which they were journeying. The right road was north-east; the road the Jews went was south-east. It is properly less than fourteen days' journey from Egypt to Palestine; the Jews took forty years! Kalisch says, "that from Raameses to Gaza, the most southern town of the Philistine Pentapolis, is a straight and much-frequented road of about eight or ten days' journey."

Verse 18.—"And the children of Israel went up harnessed out of the land of Egypt."* The word, חמשים ChaMeShIM, which is here rendered "harnessed," appears to mean "armed," or "in battle array," in all the other passages where it occurs. Thus, Joshua, i. 14, "But ye shall pass before your brethren *armed*, all the mighty men of valour, and help them." So, Joshua, iv. 12, "And the children of Reuben, and the children of Gad, and half the tribe of Manasseh, passed over *armed* before the children of Israel, as Moses spake unto them." And, Judges, vii. 11, "Then went he down, with Phurah his servant, unto the outside of the armed men that were in the host."

It is, however, inconceivable that these down-trodden, oppressed people should have been allowed by Pharaoh to possess arms, so as to turn out at a moment's notice 600,000 armed men. If such a mighty host—nearly nine times as great as the whole of Wellington's army at Waterloo (69,686 men, Alison's "History of Europe," xix. p. 401)—had had their arms in their hands, would they not have risen long ago for their liberty, or, at all events, would there have been no danger of their rising? Besides, the warriors formed a distinct caste in Egypt, as Herodotus tells us, ii. 165, "being in number, when they are most numerous, 160,000, none of whom learn any mechanical art, but apply themselves wholly to military affairs." Are we to suppose, then, that the Israelites acquired their arms by "borrowing" on the night of the exodus? Nothing whatever is said of this, and the idea itself is an extravagant one. But, if even in this or any other way they had come

* Colenso, part i. p. 48.

to be possessed of arms, is it conceivable that 600,000 armed men, in the prime of life, would have cried out in frantic terror, "sore afraid," Ex., xiv. 10, when they saw that they were being pursued?

The difficulty of believing this has led many commentators to endeavour to explain otherwise, if possible, the meaning of the word. Accordingly, in the margin of the English Bible we find suggested, instead of "harnessed," or "armed," in all the above passages except Joshua, iv. 12, "by five in a rank," because the Hebrew word, חמשים ChaMaShIM, has a resemblance to חמש ChaMaSh, "five." And others again explain it to mean "by fifties," as the five thousand were arranged in the wilderness of Bethsaida, Mark, vi. 40.

It will be seen at once, however, that these meanings of the word will not at all suit the other passages above quoted. And, indeed, by adopting the first of them, we should only get rid of one difficulty to introduce another quite as formidable. For, if 600,000 marched out of Egypt "five in a rank," allowing a yard for marching room between each rank, they must have formed a column 68 miles long, and it would have taken several days to have *started* them all off, instead of their going out all together "that self-same day," Ex., xii. 42 and 51.

But if they did not take it with them out of Egypt, where did they get the armour with which, about a month afterwards, they fought the Amalekites, Ex., xvii. 8-13, and "discomfited them with the edge of the sword?" It may, perhaps, be said that they had stripped the Egyptians, whom they "saw lying dead upon the seashore," Ex. xiv. 30. And so writes Josephus, Ant., ii. 16, 6:—"On the next day Moses gathered together the weapons of the Egyptians, which were brought to the camp of the Hebrews by the current of the sea and the force of the winds assisting it. And he conjectured that this also happened by Divine Providence, that so they might not be destitute of weapons." It is plain that Josephus had perceived the difficulty. The Bible story, however, says nothing about this stripping of the dead, as surely it must have done if it really took place. And though body-armour might have been obtained in this way, would swords, and spears, and shields, in any number,

have been washed upon the shore by the waves, or have been retained, still grasped in the hands of drowning men?

If, then, the historical veracity of this part of the Pentateuch is to be maintained, we must believe that 600,000 armed men (though it is inconceivable how they obtained their arms) had, by reason of their long servitude, become so debased and inhuman in their cowardice (and yet they fought bravely enough with Amalek a month afterwards), that they could not strike a single blow for their wives and children, or for their own lives and liberties, but could only weakly wail and murmur against Moses, saying, "It had been better for us to serve the Egyptians, than that we should die in the wilderness," Ex., xiv. 12.

Chap. xiv.—Aben Ezra says that we ought not to reflect upon the order contained in this chapter to return, so that Pharaoh, pursuing the Israelites, might be engulfed in the sea, the ways of the eternal are profound, and human wisdom nothing before him.*

Chap. xiv., vv. 19 and 20.—"And the pillar of the cloud went from before their face, and stood behind them. And it came between the camp of the Egyptians and the camp of Israel; and it was a cloud and darkness to them, but it gave light by night to these; so that the one came not near the other all the night." The cloud that gave a light to the Israelites must have been of a curious nature. The Douay, following the Vulgate, has it in the 20th verse, "it was a dark cloud, and enlightening the night." Kalisch says this rendering is without meaning; he admits that many of the translators have been sadly puzzled by the verse, and remarks, "but certainly the text narrates a miraculous fact, and it is futile to explain it naturally." Cahen, translating the passage, "it was a cloud and an obscurity, and it enlightened the night," asks what enlightened the night? The Septuagint reads as if the darkness of the cloud, deepening into night, prevented any communication between the two camps. Dr. John Pye Smith says†:—"Throughout the entire narrative the miraculous revelations of God to Moses are often spoken

* Cahen, Exode, p. 55.

† First Lines Christian Theology, p. 249.

of as being made in this luminous and awful cloud. It is called 'the glory of the Lord.'" It appears to have been the general, and probably the invariable, token and known proof of the Divine presence. Examples—Exodus, chap. xvi. vv. 9 and 10, chap. xxiv. vv. 16 and 17; Numbers, chap. xii. v. 5, chap. xiv. vv. 10 and 14, chap. xvi. vv. 19 and 42, chap. xx. v. 6; Deut., chap. i. vv. 30 and 33."

Verse 7.—Josephus says that Pharaoh took 600 chariots, 50,000 horsemen, and 200,000 footmen. The Jewish historian describes the whole affair with very different accessories to those presented in our version. A long speech by Moses to the Jews, and long prayer by Moses to God, are given by Josephus, but are entirely wanting here.

Verse 15.—The Talmud* says that Moses betook himself, in this critical position, to prayer; and that God said it was not the time to make long prayers while the people were in trouble. It is suggested that a portion of the Hebrew text preceding this verse has been lost.

Verses 24 and 25.—Our authorised translation reads, "The Lord looked unto the host of the Egyptians through the pillar of fire and of the cloud, and troubled the host of the Egyptians, and took off their chariot wheels that they drave them heavily." In the Douay it is, "The Lord, looking upon the Egyptian army through the pillar of fire and of the cloud, slew their host and overthrew the wheels of their chariots, and they were carried into the deep." Kalisch says, "confounded the host of the Egyptians, and made glide out their chariot wheels, and led them on with difficulty." The Septuagint, "and he tied up the axles of their chariots, and led them on with force." Aben Ezra asked how the Israelites could all cross the Red Sea in one night, and makes them pass in several columns, more than two millions of human beings, including women and children and baggage, started from their halting ground after nightfall, and reached the other side so rapidly that the Egyptians, following, were drowned towards morning. The story is monstrously incredible.

Verse 31.—"And Israel saw that great work which the

* Cahen, Exode, p. 58.

Lord did upon the Egyptians; and the people feared the Lord, and believed the Lord, and his servant Moses." The Israelites' belief in the Lord and in his servant Moses was of a very unstable nature; and, notwithstanding all the mighty miracles alleged to have been wrought in their presence, we find them repeatedly murmuring (chap. xv. v. 24, chap. xvi. v. 3), and in a very short time utterly repudiating Moses and God (chap. xxxii. v. 1). If the Israelites frequently doubted Moses and disbelieved in God, with the terrible series of plagues fresh in their recollection, can it be wondered that we, to whom they are related in a style so incoherent, at this distance of time, should also have misgivings as to their truth? Josephus, who is evidently rather staggered by the prodigies he has recorded in reference to the Exodus, assures his readers that, notwithstanding "the strangeness of the narrative," he delivered every part as he found it in the sacred book, and he quaintly adds, "as to these events, let every one determine as he pleases."

Chap. xv. v. 2.—"I will prepare him an habitation." Kalisch translates this, "I will glorify him," agreeing with the Douay.

Verse 3.—The expression, "The Lord is a man of war," although not unnatural as an oriental fashion of speaking of the deity supposed to have conquered the Egyptians, is hardly calculated to inspire us with that love of God alleged to be so necessary to our salvation. "The Lord is his name." The Douay has, "The Almighty is his name." Cahen, "The Eternal is his name." The Vulgate, "*Dominus quasi vir pugnator.*"

Verse 8.—"The blast of thy nostrils." The Septuagint has, "The breath of thy anger." The Vulgate, "*In spirito furoris.*" The Douay, "With the blast of thy anger." Kalisch says that it was an old and wide-spread belief that "anger sits in the nose," or that anger manifests itself most visibly in that part of the face.

Verse 11.—"Who is like unto thee, O Lord, among the Gods?" Who are the Gods? In the Douay the phrase is translated, "Who is like unto thee amongst the strong, O Lord?" The Roman Catholics wished to avoid the sus-

picion of polytheism. Cahen, "Who is like unto thee amongst the mighty?" The Vulgate, "*Quis similis tui in fortibus.*"

Verses 22, 23, 24, and 25.—"And they went three days in the wilderness, and found no water. And when they came to Marah, they could not drink of the waters of Marah, for they were bitter; therefore the name of it was called Marah. And the people murmured against Moses, saying, 'What shall we drink?' And he cried unto the Lord; and the Lord showed him a tree, which, when he had cast into the waters, the waters were made sweet." Josephus tells* this story differently. He says that "the water being bitter, Moses betook himself to prayer to God, that he would change the water from its present badness, and make it fit for drinking. And when God had granted him that favour, he took the top of a stick that lay down at his feet, and divided it in the middle, and made the section lengthways. He then let it down into the well, and persuaded the Hebrews that God had hearkened to his prayers, and had promised to render the water such as they desired it to be, in case they would be subservient to him in what he should enjoin them to do, and this not after a remiss or negligent manner. And when they asked what they were to do in order to have the water changed for the better, he bid the strongest men among them that stood there to draw the water, and told them that, when the greatest part was drawn up, the remainder would be fit to drink. So they laboured at it till the water was so agitated and purged as to be fit to drink."

Verse 27.—"And they came to Elim, where were twelve wells of water, and threescore and ten palm trees; and they encamped there by the waters." Josephus says that "the palm trees† were no more than seventy; and they were ill-grown and creeping trees by the want of water, for the country about was all parched, and no moisture sufficient to water them and make them hopeful and useful was derived to them from the fountains, which were in number twelve;

* Antiquities, Book III., chap. i. § 2.
† Antiquities, Book III., chap. i. § 3.

they were rather a few moist places than springs, which, not breaking out of the ground nor running over, could not sufficiently water the trees. And when they dug into the sand, they met with no water; and if they took a few drops of it into their hands, they found it to be useless, on account of its mud. The trees also were too weak to bear fruit, for want of being sufficiently cherished and enlivened by the water."

Chap. xvi. vv. 3 and 4.—"And the children of Israel said unto them, Would to God we had died by the hand of the Lord in the land of Egypt, when we sat by the flesh-pots, *and* when we did eat bread to the full; for ye have brought us forth into this wilderness, to kill this whole assembly with hunger. Then said the Lord unto Moses, Behold, I will rain bread from heaven for you; and the people shall go out and gather a certain rate every day, that I may prove them, whether they will walk in my law, or no." If we may judge by the Israelites' own account, starvation could not have been one of the phases of oppression suffered by them in Egypt. They appear, if hard worked, at least to have been well-fed by their Egyptian rulers.

Verse 4.—The Lord who spake to Moses was not an Omniscient Deity, for he says, "I will rain bread from heaven for you, etc., that I may prove them whether they will walk in my law or no;" so that God here pourtrayed did not know until he had proved the Israelites whether they would obey or disobey. *Kalisch has a most elaborate note, giving descriptions of the several sorts of manna known in Asia, but none of these correspond with the manna of the Bible. 1st. The Bible manna is constant for forty years, the natural manna is only found at certain seasons. 2nd. The Bible manna is abundant enough to feed more than 2,000,000 people; while, in plentiful years, 700 pounds of manna is a large yield for the whole peninsular of Sinai. 3rd. The Bible manna is the usual nutritious, satisfying substitute for bread, whilst the natural manna is a medical relaxing substance. 4th. The tendency on the part of the manna to fall in double quantities the

* See also Genesis, p. 102.

day before the Sabbath, so as not to fall on seventh day, is peculiar to the Bible species.

Verse 8.—Many critics urge that this verse must be misplaced, as Moses had not yet been informed that God intended to give the Israelites flesh. Some put vv. 11 and 12 immediately after v. 3

Verses 12 and 13.—This story of the gift of quails is told in Numbers, chap. xi., in an entirely different manner; nor does it seem possible to reconcile the two accounts. The date of the gift is different; in Exodus, chap. xv. v. 1, it is the fifteenth day of the second month of the wanderings; in Numbers, it is after the twentieth day of the second month in the second year of the wanderings. The place of the gift of quails is different. In Exodus, it is in the wilderness of Sin, between Elim and Sinai; in Numbers, it is at Taberah. The manner of the gift is very different; in Exodus the quails and manna come on the same day, one in the evening and the other in the morning, both being given together; in Numbers the manna is given some time before, and it is after the people have grown tired of eating manna, and murmur at it, that God in anger sends them quails. In Numbers Moses is represented as expostulating with Deity as to whence the supply of food is to be obtained; in Exodus there is no mention of this. In Numbers, God plagues and destroys the Jews because they ask for flesh-food; but in Exodus, all record of this vengeance is omitted. In Josephus, the gift of quails is placed in order of time before the gift of manna.

Verse 11.—Josephus, omitting the Lord's speech to Moses, says, after the gift of quails,* "as Moses was lifting up his hands in prayer a dew fell down; and Moses, when he found it stick to his hands, supposed this was also come for food from God to them: he tasted it; and perceiving that the people knew not what it was, and thought it snowed, and that it was what usually fell at that time of the year, he informed them that this dew did not fall from heaven after the manner they imagined, but came for their preservation and sustenance. So he tasted it, and gave

* Antiquities, Book III., chap i., § 6.

them some of it, that they might be satisfied about what he told them. They also imitated their conductor, and were pleased with the food."

Verse 15.—"And when the children of Israel saw *it*, they said one to another, It *is* manna; for they wist not what it *was*." The children of Israel did not call the bread from heaven manna, but they said when they saw it, מן הוא (MeN EUA), *i.e.*, What is this? The Vulgate so puts it, "*Manhu quod significat, quid est hoc?*" Kalisch translates it, "What is that?" So the Septuagint.* The English version, "It is manna," is singularly contradictory, for the children of Israel could hardly call it by a distinct name if "they wist not what it was." Cahen denies that the words MeN EUA are an interrogation, and translates them, "*C'est une nourriture.*"

Verses 16, 17, and 18.—These verses convey the notion that the quantity for each person was limited to one omer, and that though each person gathered as he could, some much and some little, yet when the gatherer measured for his family, he who gathered little, had not less than an omer for each; and he who gathered much, no more.

Verses 20 to 24.—While the manna invariably putrified if kept till the second day on six days of the week, yet, if the second day happened to be the seventh day of the week, then no putrefaction took place. In verse 23 Moses announces for the morrow a day of rest, but it is not until verse 26 that the seventh day is spoken of as a periodic holiday. Our version, which reads, "To-morrow is the rest of the holy Sabbath," is incorrect. Kalisch and Cahen agree in translating, "To-morrow is a day of rest, a holy rest." The word "Sabbath" is only the using English equivalent for the Hebrew letters, שבת SheBeTh, without translating.

Verse 25.—"To day is a Sabbath." "Many men of little faith," says Aben Ezra,† "have been misled by this verse. They have deduced from it that the Sabbath ought to include the day but not the night preceding. They rely on the word "to-morrow" of verse 23.

* See also Josephus, Antiquities, Book III., chap. i., § 6.

† Cahen, Exode, p. 70.

Verses 33 and 34.—"And Moses said unto Aaron, take a pot, and put an omer full of manna therein, and lay it up before the Lord, to be kept for your generations. As the Lord commanded Moses, so Aaron laid it up before the Testimony, to be kept." Cahen and Kalisch both argue that this could not have been done as related in the text; they urge that the verse is anticipatory. Kalisch says it is self-evident that the command, or, at least, its execution, could not have taken place until after the construction and elevation of the Jewish Tabernacle. Cahen agrees in this.

Verse 35.—"And the children of Israel did eat manna forty years, until they came to a land inhabited; they did eat manna, *until they came unto the borders of the land of Canaan.**" On this passage Scott remarks as follows:—"As Moses lived till a great part of the fortieth year was passed, when Israel was encamped on the plains of Moab, there is no reason to say that this verse was added *after his decease.*" But, surely, this verse could not have been written till after they had ceased eating manna, "on the morrow after they had eaten of the old corn of the land," Joshua, chap. v., v. 12. Nor could it have been written until the Israelites were *within* the Canaanite boundary; since קצה, "border," which is here used, as in Gen., chap. xxiii. v. 9, and about ninety other passages, never means *extra terminum*, but always *intra terminum.* Kalisch says, "According to Joshua, chap. v., vv. 10 to 12, the manna ceased after the transit of the Israelites over Jordan—after the death of Moses, who (according to Abarbanel) could only have made the statement by divine inspiration." Cahen says,† "Leclerc contends that this verse could not be by Moses, because he was dead before the cessation of manna." "The manna commenced the fifteenth yiar and finished the fifteenth nissau, thus it wanted thirty days to make up forty years."

Chap. xvii.—"And all the congregation of the children of Israel journeyed from the wilderness of Sin, after their journeys, according to the commandment of the Lord, and pitched in Rephidim: and *there was* no water for the people

* Colenso, part 2, p. 212. † Exode, p. 72. ‡ Exodus, p. 310.

to drink." In Numbers, chap. xx., vv. 1 and 2, the want of water is stated to be in the desert, at a place called Kadesh. In Numbers the miraculous supply of water is after the death of Miriam, here it is before her death.

Verse 7.—"And he called the name of the place Massah and Meribah, because of the chiding of the children of Israel, and because they tempted the Lord, saying, Is the Lord among us, or not?" There is no previous mention of any such question. Theologians may not unfairly be asked, how it was possible for the Jews to tempt the omnipotent and immutable Deity?

Verse 11.—"And it came to pass, when Moses held up his hand, that Israel prevailed; and when he let down his hand, Amalek prevailed." Kalisch says,§ "The sense of this verse is obscure, and has already much engaged the ancient interpreters, who attributed to it a symbolical meaning." Thus we read in the Talmud, "Can really the hands of Moses cause victory, if they are raised, or defeat, if they are let down?" But holy writ teaches us here, that, when the Israelites looked up to heaven, and humbled themselves before their heavenly father, they were victorious; if not, they were defeated. This is similar to the precept in Numbers, chap. xxi., v. 8: "Make thee a fiery serpent, and set it upon a pole: and it shall come to pass, that every one that is bitten, when he looketh upon it, shall live." Can a serpent cause or prevent healing? But if the Israelites regarded the heaven and were obedient to the precepts of their God, they were healed; if not, they perished. This interpretation, although it approaches the spirit of our narrative, is yet too general to apply to this event. For during the combat, piety or impiety were out of the question; and further, the text does not state that the Israelites looked sometimes up to the hand of Moses and sometimes not; but that Moses now raised and now lowered it. Can any reasonable man believe that if Napoleon had stood on an eminence near the scene at Waterloo, and had held up his hands, such conduct would have influenced the success of either party, other than as the conduct of a leader who might thus cheer or dishearten his troops? Why should a man believe of Moses that to

which he would refuse credence in the present day, if related of some modern general? The believer may fairly wonder why, if God was really on the side of the Israelites, he allowed his aid to depend upon whether Moses could hold up his hand?

Verse 14.—"And the Lord said unto Moses, Write this *for* a memorial in a book." Aben Ezra regards this verse as written in the fortieth year of the wanderings, and urges that the book it refers to is now lost. The writings, not now discoverable, but referred to in the Bible, are numerous, including—1, The book of the wars of the Lord; 2, The book of Jasher; 3, The book of the chronicles of the kings of Israel; 4, The books of Solomon; 5, The book, or story, or vision of Iddo; 6, The book of Nathan; 7, The book of Gad. There are various other writings mentioned in the Old Testament, but of which we know nothing but the names.*

Verse 16.—"Because the Lord hath sworn *that* the Lord *will have* war with Amalek from generation to generation." "Why was Amalek to be so punished? God the Creator must have created both Amalekites and Israelites (it must have been according to his special decrees that the former fought with the Hebrew race), yet the Bible Deity favours the latter and declares war against the former from generation to generation. What a strange idea—strife between an Omnipotent and Infinite God and his weak and puny creatures. By the expression 'the Lord hath sworn that the Lord will have war with Amalek from generation to generation,' true believers may learn that God predetermined to make war upon unborn generations of Amalekites, whom he was yet to create for the purpose of exterminating." Kalisch and Cahen translate the verse, "Because the hand was against the throne of God; therefore the Lord will have war with Amalek from generation to generation."

Verse 15.—"And Moses built an altar, and called the name of it Jehovah-nissi:" The words here written, "Jehovah-nissi," are, in the Douay, "The Lord is my exalt-

* See Cahen, Exode, p. 74. Kalisch, Exodus, p. 312. Giles's Hebrew Records, p. 40.

ation." The Septuagint, "God my refuge." Mendelssohn and Kalisch, "God is my banner." Cahen, "The Eternal, my standard."

Verse 16.—"For he said, Because the Lord hath sworn *that* the Lord *will have* war with Amalek from generation to generation." Kalisch and Cahen (who says that the passage is difficult) agree to substitute for the words, "Because the Lord hath sworn," the phrase "Because the hand was (or is) against the throne of God." The Douay has, "Because the hand of the throne of the Lord." The Septuagint reads, "Because the Lord hath fought Amalek with a hidden hand."

Chap. xviii.—Cahen says,* "The journey of the father-in-law of Moses gives rise to many difficulties. The Sepher Hamiv'har says that this journey did not take place until the second year of the going out of Egypt. These difficulties are also increased from Moses having only one father-in-law, who made one journey only, while we find seven names for the father-in-law—viz., 1, יתר, JeTheR; 2, יתרו, IThRU; 3, חובב, HUBeB; 4, חבר, HeBeR; 5, קני, QeNI; 6, רעואל, ROUAL; 7, פוטיאל, PhUTIAL. [Whence Cahen gets this seventh name is not clear, unless he goes outside the Bible and gets it from the Talmud.] It is not impossible that these seven names apply to the same man, but it is very improbable. To our knowledge, Moses has taken two wives, one Midianite and one Ethiopian (Exodus, chap. ii., v. 21). He might have married others, and had many fathers-in-law." Some ancient interpreters, as Eben Ezra (in v. 13) and Rashbam, whom several modern critics, as Ranke (Untersuchungen, i., p. 83), have followed, are of opinion, that the narration concerning Jethro, which is here inserted, does not stand in its proper place, and that the arrival of Jethro took place only in the second year after the legislation, or after the erection of the Tabernacle. As reasons, Eben Ezra mentions: 1, that according to v. 12, "a burnt-offering and eucharistic sacrifices†" were killed, whilst nothing has been related about the building of a new altar; 2, the words in v. 20, "And thou shalt illustrate to them the ordinances

* Exode, p. 75.

† Kalisch, Exodus, p. 314.

and laws," point to the time after the legislation; 3, that Moses encamps, according to v. 5, by "the mountain of God;" 4, that according to Numbers, chap. x., v. 30, Jethro returned to his home (v. 27), only when the Israelites departed from Horeb; and 5, that the new arrangement of Jethro, explained in our chapter, took place not earlier than in the time of that departure. Kalisch endeavours to explain away these points, but with very slight success.

Verses 1 to 6.—Some part of the previous history is clearly deficient. We have no account of Moses sending his wife back; on the contrary, in chap. iv., v. 20, we are told that he took both her and his two sons into Egypt. Cahen quotes from the Mechilta, an ancient and mystical commentary upon the Pentateuch, that when Aaron met Moses (c. iv., vv. 27 and 28) Aaron asked, "To whom do those belong?" Moses answered: "This is my wife, whom I have taken in Midian; those are my sons." "Where are you taking them?" "To Egypt." "We suffer already for those who dwell there, and yet you augment the number." Moses then said to his wife, "Go to the house of thy father." "She took her infants and went."*

Verse 9.—"And Jethro rejoiced." The Septuagint, "And Jethro was seized with astonishment."

Verse 11.—"For in the thing wherein they dealt proudly *he was* above them." Kalisch translates this, "yea, by the very thing, that they acted wickedly against them." The Douay, "because they dealt proudly against him." The Breeches Bible, "for as they dealt proudly with them, so are they recompensed." Cahen, literally, "for by the thing that they have acted with pride upon them." The passage is obscure, and seems as if part of the verse were missing.

Verse 21.—"Moreover thou shalt provide out of all the people able men, such as fear God, men of truth, hating covetousness; and place *such* over them, *to be* rulers of thousands, and rulers of hundreds, rulers of fifties, and rulers of tens." † "Not quite unfounded is the astonishment of Aben Ezra, that Moses should have been able to find among the degenerated Israelites, who showed them-

* Exode, p. 76. † Kalisch, Exodus, p. 321.

selves now, and almost always during the wanderings in the desert, pusillanimous and refractory, 78,600 men of so distinguished and exalted qualities." The way in which Moses speaks of the Jews would hardly lead us to expect a result so favourable. Josephus says there were to be judges over 10,000, then over 1,000, then 500, then 100, then 50, then 30, then 20, then 10.* This would make the number of judges much larger than 78,600, for reckoning only by the 600,000 fighting men, it would be—

for the	10,000	—	60
for the	1,000	—	600
for the	500	—	1,200
for the	100	—	6,000
for the	50	—	12,000
for the	30	—	20,000
for the	20	—	30,000
for the	10	—	60,000
making a total of			129,860

Cahen observes,† "It is evident that Jethro only indicated the hierarchical division of judicial power, necessary to facilitate the business of government. It is undoubtedly singular, that a man elevated midst the sciences of Egypt, that one of the greatest legislators of antiquity should have need of counsel for a matter which appears to us so simple."

Verse 25 is entirely wanting in the Samaritan, which, however, here adds ten verses not given in the Hebrew.

Chap. xix. v. 1.—"In the third month, when the children of Israel were gone forth out of the land of Egypt, the same day came they into the wilderness of Sinai." It would be difficult from this verse to determine upon which day of the third month it was that the Israelites came into the wilderness. Some of the ancient rabbis fix it the first, some the third, and others the fifteenth; none have any evidence to guide them. The modern believer who knows that his salvation depends on his faith, and who cannot, therefore, rest unconcerned as to the particular day, will fix on the

* Antiquities, Book III., chap. iv. † Exode, p. 79.

one he thinks most likely. There is no more evidence in favour of one than of another.

Verse 9.—"Believe in thee for ever." If God intended that the effect produced on the Israelites by hearing his voice from out of the thick cloud be that of ever-continuing faith, then the intentions of Deity were woefully disappointed; the faith of the Jews in the God who rescued them from Egypt did not endure even during the temporary absence of their leader, Moses, on the mountain.

Verses 12 and 13.—"And thou shalt set bounds unto the people round about, saying, Take heed to yourselves, that ye go not up into the mount, or touch the border of it; whosoever toucheth the mount shall be surely put to death. There shall not an hand touch it, but he shall surely be stoned, or shot through; whether it be beast or man, it shall not live; *when the trumpet soundeth long, they shall come up to the mount.*" The words italicised seem in direct contradiction to the whole of the remainder of the injunction (see also verses 21, 23, and 24). The Septuagint says that the people might go up into the mountain when the voice and the trumpets were no longer heard and the cloud no longer seen.

Verse 18.—"And the whole mount quaked greatly." The Septuagint reads, "all the people were stupified." The Douay reads, "and all the mount was terrible."

Verse 22.—"And let the priests also, which come near to the Lord, sanctify themselves, lest the Lord break forth upon them." Kalisch says, "It is difficult to comprehend the introduction of the priests in this verse, as it is not until chap. xxviii. v. 1, that the sons of Aaron are appointed to priestly functions." Instead of "break forth upon them," Cahen has, "*faire une destruction parmi eux.*"

If this account of the meeting between Moses and God had been given in the book of Mormon, in the Koran, or in the sacred books of any pagan people, some Christian critic would have exclaimed, "Why, this is clearly an imposture! Most certainly the man who led the people, and who wished to pretend that he was to have an interview with God, took precautions to keep the people at a sufficient distance to prevent detection of his schemes; the

trumpet sounding, the darkness, the thunder and lightning, are so many scenic and pyrotechnic appliances to impress his ignorant and credulous followers, and to give effect to the delusion. Perhaps the mount was a volcanic one, in which case the addition of the trumpet soundings completed the scene; and, in any case, the secrecy observed as to all the transactions on the mount protected Moses from exposure. How careful are the directions given to prevent any inquisitive straggler from getting sufficiently near to make a fatal discovery! Can any reasonable man believe that an infinite God blew a trumpet, or caused a trumpet to be blown, to announce his coming, or that he descended upon Sinai surrounded by fire and smoke? In many fabulous relations we find similar recitals, but it is absurd to suppose that this refers to an Almighty and Infinite Deity. We are told in verse 20, 'The Lord came down upon Mount Sinai on the top of the mount, and the Lord called Moses up to the top of the mount, and Moses went up.' Can you require stronger evidence of the character of your book? Omnipresent and Infinite Deity pictured as standing on the top of a mountain, and calling to Moses, who was down below, to come up to him!!" Cahen observes that to impress an ignorant people like the Israelites with a notion of omnipotence, the fear of the thunder, the lightning, and the tempest, was necessary. They surely ought to have been already enough impressed by the Egyptian plagues and the Red Sea miracle.

The records and traditions of most peoples show that in early times many of their national leaders increased their influence over the populace by pretended communications with the Gods.* Jewish fable differs only from Hindoo, Greek, or Egyptian myth by the coarseness of its surroundings. The general outlines are nearly everywhere the same, although the minor details may and do differ. Nicolas† says:—"It is a remark often made, but which cannot be too much repeated, that the anthropomorphisms which are so frequent in the Book of Genesis are not found in the other Books of the Pentateuch. Whilst Elohim

* Kalisch, Exodus, p. 331. Keightley's Mythology, p. 404, &c.
† *Etudes sur la Bible*, p. 130.

came in person, and under a human form, to treat with Abraham, and, again, later, to announce the birth of Isaac, Jehovah, invisible to the eyes of Moses, speaks to him from the midst of a burning bush, or out of the thick cloud. He never manifests himself under a tangible form; no man can see the face of the Eternal even in the tabernacle where he dwells on the mercy seat between the two cherubims; he remains invisible. When Moses enters the holy place to consult Jehovah, a voice answers him, but no figure appears to his eyes." [Exodus, chap. xxiv. vv. 10 and 11, is rather in opposition to this view of Nicolas.]

After relating the story of the tempest and thunder and lightning, when God appeared at Sinai, Flavius Josephus adds—"Now, as to these matters, every one of my readers may think as he pleases, but I am under the necessity of relating this history as it is described in the sacred books."* He then adds a very long speech of Moses, who begins by telling the Jews that God has received him graciously; is now in the camp, and has made some suggestions for their domestic and political government. This speech does not exist in our "sacred books."

Chap. xx.—The second verse of this chapter begins in the first person, "I am the Lord," and continues in the first person to verse 6, where it merges into the third person. The Talmudists, therefore, say that the Israelites did not themselves hear God's voice after the sixth verse.† The Decalogue given in the first thirteen verses of this chapter is repeated in the fifth chapter of Deuteronomy, but with considerable variations. Aben Ezra counted thirteen differences either in the words or ideas, some trivial and some important, and sought to explain them away.

Verse 3.—"Thou shalt have no other Gods (אלהים ALEIM) before me." Kalisch has "beside me." Cahen, following literally the Hebrew, "before my face." The Douay, "Thou shalt not have strange Gods before me." This prohibition of other Gods (Elohim) is in terms which, coupled with the preceding verse and two following verses, make this a command from the Jewish national Deity, who

* Antiquities, Book III, chap. v., § 2.
† Cahen, Exode, p. 87.

is jealous of the influence which might possibly be exercised by the Elohim of neighbouring peoples; it is not a clear declaration that only one God exists, but an injunction to worship only the Jehovah Elohim. The other Elohim were by no means few. The Hebrew Scriptures abound with names of various heathen deities, of which a list is given in the Glossary to Etheridge's work on the Targums, and which will be dealt with in this commentary in the order in which the names occur.

Verse 4.—"Thou shalt not make unto thee any graven image, or any likeness of any thing that is in heaven above, or that is in the earth beneath, or that is in the water under the earth." The Septuagint has, *eidolon*, "idol." Kalisch* admits, and Cahen declares, that the prohibition in this verse has exercised a retarding influence upon the progress and development of the plastic arts amongst the Hebrews, but he denies that the plastic arts in general are forbidden by the text, and considers that if it were so, the prohibition would be barbarous and irrational. This commandment is contradicted by the injunction in Exodus, chap. xxv. vv. 18 to 20, for the manufacture of the "cherubims;" and if it be replied that cherubims are not things that are in heaven above, earth beneath, or water under the earth, then vv. 33 and 34, for the images of almonds and almond flowers, remains to be explained away. In the serpent of brass, Numbers, chap. xxi. v. 8, the sculptured oxen of Solomon's temple, and in other texts, this command is further contradicted.

Verse 5.—"I the Lord thy God am a jealous God, visiting the iniquity of the fathers upon the children unto the third and fourth generation of them that hate me." Kalisch has, "a zealous God,"† but his translation is not justified by the context, which (as Cahen observes) explains that God is jealous of any bowing down of service rendered to idols or other Gods. Many commentators have been shocked by the vindictive character attributed to God in this verse, forgetting that it precisely accords with his disposition as manifested in Exodus, chap. xvii. vv. 14 to 16,

* Exodus, p. 345.

† See Parkhust on the root קנא, Lexicon, p. 635.

and in many other parts of the Bible. Kalisch says*—"It appears to be in opposition to the divine love and justice, that the children should innocently suffer for the crimes of their fathers; and this principle, if really contained in our words, would be a great defect in the system of the Mosaic ethics. But already the directly opposite declarations in other passages of the Old Testament ought to warn us to be circumspect in the exposition of our text. In Deut., chap. xxiv. v. 16, we read literally:—"The fathers shall not be put to death for the children, neither shall the children be put to death for the fathers: every man shall be put to death for his own sin;" and with a verbal reminiscence from this passage we read in 2 Kings, chap. xiv. vv. 5 and 6:—"And it came to pass as soon as the kingdom was confirmed in his hand [of Amaziah], that he slew his servants, who had slain the king, his father. But the children of the murderers he slew not: according to that which is written in the book of the law of Moses, wherein the Lord commanded, saying, The fathers shall not be put to death for the children." Still more solemnly rises Ezekiel against that preposterous maxim, and devotes to this subject an elaborate polemical discussion in the eighteenth chapter of his prophecies; and the result is, in vv. 20 to 24, thus condensed:—"The soul that sinneth, it shall die. The son shall not bear the iniquity of the father, nor shall the father bear the iniquity of the son; the righteousness of the righteous shall be upon him, and the wickedness of the wicked shall be upon him."

Chap. xx. v. 7.—"Thou shalt not take the name of the Lord thy God in vain; for the Lord will not hold him guiltless that taketh his name in vain." Instead of "in vain," Kalisch has "for falsehood," and Cahen says that the words "in vain" here apply to everything which is not true in each instance. Josephus gives this, "that we must not swear by God in a false manner." So far† back as the time of Hesiod (between 700 and 800 B.C.), Eris, or Contention, was called the god of oaths, and Polybius states that among the ancients the use of judicial oaths was rare, but as perfidy grew, oaths increased. The Egyptians con-

* Exodus, p. 348. † Kalisch, Exodus, p. 354.

sidered perjury as the blackest crime, which was invariably punished with death, since it implied both a contempt for the gods and a violation of that faith which is the only tie and guarantee for the welfare of society. The Persians refused to swear, but gave their hand as a plight of troth. The Scythians told Alexander the Great—"We swear only by keeping our word." "Hercules," says Plutarch, "was so devout that he never took an oath." Clinias held adjuration in perfect abhorrence, and the very Greek word "Epiorkos," signifying perjury, means literally the frequent habit of oath taking. This reluctance to swear at all, even just and judicial oaths, prevailed among the Jews also; the Talmud recommends a simple "Yes, yes," or "No, no," instead of every oath (Sheb., 36, *a*); and the New Testament expresses this idea with peculiar emphasis: "Swear not at all—neither by the heaven, for it is God's throne, nor by the earth, for it is His footstool, but let your communication be, Yea, yea, and Nay, nay: for whatsoever is more than these cometh of evil" (Matt., v. 34—37; James, v. 12; with which injunctions Matt., xxvi. 63, 64, does not stand in contradiction); and in accordance herewith oaths were denounced by Justin, Irenæus, Basil, Chrysostom, and Augustine.

How deeply this antipathy to swearing was rooted in the minds of the Orientals is shown by the exactly similar proverb of the Arabs: "Never swear, but let thy words be, Yes or No." And, indeed, oath-taking seems to imply, in its principle and origin, that other simple assertions are less sacred or binding, and thus indirectly to exercise an injurious influence upon the moral and religious notions of the people."

In his "Rationale of Evidence," and afterwards in a special essay entitled, "Swear not at all," to which papers* we are indebted for the following observations, Jeremy Bentham most elaborately and exhaustively examines the oath question, so far as it relates to England:—

"An oath is a 'ceremony composed of words and gestures,' in which the Deity is invoked as the sanction of

* Also Dumont's Traité des Preuves Judiciares, chapitre xii. Du Serment considéré comme sureté.

truth, or is engaged by the swearer to punish him should he not perform what he has thus promised. Though oaths have been distinguished into promissory and assertory, or into vows and testimonial oaths, there is no essential difference between them. In both cases the same religious sanction is called in to guarantee the truth; and in the testimonial oath, as in the vow, there is an undertaking or a promise, a promise to say that which is true under an engagement or obligation to the Deity to undergo punishment for the breach of that promise.

"If there is a natural inducement to tell the truth, independent of that popular sanction which is maintained by the opposed pain or punishment, consisting in disapprobation or shame; independent, also, of such inconveniences or pains expected as form the religious sanction; and independent, further, of those pains which form the political one, it must be sought in some pain or inconvenience which naturally and necessarily attends the use of falsehood, and which, were it sufficiently powerful to act against all the opposed inducements, would be the sufficient guarantee of truth.

"Where there is no opposing motive of superior power, truth is natural to man, simply because falsehood requires an effort of thought and contrivance, and is, therefore, painful. Truth is ready, because it is known; falsehood is not *known*, and therefore it must be invented. Invention is a labour; and our natural love of ease, therefore, determines us to speak the truth. And the strength of this inducement, or that of the motive of indolence, is increased by the proverbial and never-forgotten consciousness that the first invention may require many more, and thus carry with it a long train of future labour.

"If evidence is commonly and in common cases true, it is only because it is the easiest proceeding; the truth here, it is plain, being estimated by the perception and belief of the narrator; and when it is not true, or when it is false, in the same sense, it is because of the presence of some opposing motive of greater power.

"If any one shall object to the assumed force of this sanction here considered as the love of ease, or as a desire

to avoid the pains of labour or trouble, he has not considered the wide influence of this principle over the whole of our conduct, an influence to which we mainly owe the force of all our habits, since those are modes of conduct determined by their facility, as, reversely, to change them demands a powerful effort.

"The power or force of the natural sanction is, however, a very different question from that of its existence in any particular case. The very same cause which renders truth easier than falsehood tends also to impede the discovery of the whole truth. Here exertion becomes necessary, because of the imperfection of memory; and thus, although the narrator may relate what he remembers without much effort, he will not trouble himself to seek in his recollection that which would perhaps give him more pain than invention or falsehood. It is then that interrogation or cross-examination becomes a remedy auxiliary to the natural sanction.

"But if this inconvenience is thus corrigible, there is one of greater weight, for which a more powerful corrective is wanted. Whatever may be the force of the love of ease as a motive to truth, it is too feeble to contend against almost any interest in favour of what is not truth, or any interest to which falsehood would be favourable. Let us now, therefore, inquire into the nature and power of the popular sanction, or of that which consists in the public opinion in favour of truth and in disfavour of falsehood.

"Our welfare or happiness, it is plain, depends materially on our own actions or conduct, and our actions must be regulated by our knowledge. But that knowledge cannot all consist in personal experience; it must be founded on the experience of others in great part, and thus far it is dependent on testimony, or is regulated by the veracity or otherwise of those around us. It is, therefore, true or false, knowledge or ignorance, in proportion as society, or those persons on whom we depend, are veracious or falsifiers. Thus does it follow, that our happiness depends on our knowledge far more, indeed, than is generally imagined by mankind; but thus also must it be evident, that if ignorance is injurious, the false must be still more pernicious to us, since, if the one may prevent us from acting right, the

other will be the direct cause of our acting wrong. Thus does truth become a necessity of society, and hence public opinion has been invariably led to stigmatise the want of it as a disgrace or crime.

"The religious sanction is the one of those safeguards for truth which are independent of the form or ceremony of an oath, the purpose of which, however, is an attempt to render that sanction more operative or efficient. The religious sanction ought to be complete; it ought to be possessed of entire efficacy as it stands—a naked law. It is a positive law, declared from the mount amid thunderings and lightnings; it is a law declared again by Jesus, repeated by his Apostles. Whatever power religion possesses over man and his conduct as to its other laws, that power must it possess over him as to this one; and if it possesses none as to truth, how shall we believe that it possesses any over any portion of our conduct? And by whatever else religion enforces its laws, by that does it enforce the practice of truth; by the promise of future rewards and the denunciation of future punishment. Yet it is of no avail; or rather the law known to all, the sanction known to all, are acknowledged to be of no avail, nevertheless we seek to make them available by the addition of a ceremony.

"We shall inquire how that succeeds by-and-bye. But it is worth our while to see, in the meantime, what has been the practice, not merely of Christians, but of the establishments for the inculcation and support of Christianity—of the Church itself.

"That Church, the Catholic and the parent Church, which undertook to teach the people to speak truth—to speak nothing but the truth, at all events—and never to speak falsehood, systematically supported what is called the interests of religion, religion itself, the law of truth, by means of falsehood. In no one instance has the religious sanction placed the slightest obstacle in the way of falsehood when those interests of the Church called the interests of religion were to receive advantages, real or fictitious or apparent, from falsehood. Thus it is still in that Church; this is not the history of Leo, but the history of yesterday, to-day, to-morrow, as long as those interests shall thus be

misnamed. Thus was the door of exceptions opened, and thus for centuries is the history of the Church the history of falsehood—lies—for no other term but that vulgar one is available. Miracles, relics, saints, apparitions, decretals, fictitious gospels, acts of councils, revelations, all false; all, and more; a regular, arranged, determined system of falsehood, supported by the false testimonies and unblushing assertions of the highest characters in the series of that Church.

"And yet that Church sought to bind to truth by the religious sanction, adding to it a ceremony, those to whom it gave a daily example of falsehood in its own practice, under the very colour of religion and its interests. Truth was the law of Moses and of the Gospel, and yet Popes could relieve subjects from their oaths to kings, and the Church could decree that faith was not to be kept with heretics; could command falsehood to others as law, when it was the expounder and protector of that law which commanded truth from the mouth of Christ himself, whose vicegerent it pretended to be on earth. And this was the Church which established the doctrine of mental reservation and equivocation, which taught its most favoured friends and supporters to lie to God as to man; taught them not only to break his positive law, but to ridicule and insult him in the very act and mode. Here at least is a system under which we may surely ask, if anywhere, of what avail is an oath? Of what avail it is anywhere, as adding strength to the religious sanction, we shall proceed to inquire.

"We began with examining by definition what an oath is, but we chose to limit ourselves at first to its obvious, ceremonial, and political character. We must now ask what particular relation the Deity bears to the party swearing? as a larger part of the question rests on this than the thoughtless public are aware of.

"By the act of an oath man engages himself to submit to the punishment which the Deity has assigned to the breakers of his law—viz., no less than eternal torments; and by the same act he therefore engages, or endeavours to engage, the Deity to inflict that punishment should he fail in performing his portion of the contract.

"There are, therefore, two contracting parties, the Deity and the swearer; or, at least, there is an attempt to make such a contract. What, then, is the oath? No less than to make 'man the legislator and judge, God the sheriff and executioner; man the despot, God his slave.'

"If, therefore, in any case the Deity refuses to obey the order attempted to be imposed on him, or to agree to the contract, the effect of the oath is nothing, because the contract is void. The oath is a complete lien on the 'Almighty executioner' if in all cases he enforces the punishment, and it is thus perfectly efficacious; but if we adopt the term 'probable' only, then we do no less than assert that he is a 'negligent servant,' obeying the orders received from us sometimes, but at others disobeying them. And what can we know on this subject? That he engages to punish breaches of truth simply? We shall see presently to what besides this we attempt to bind the Almighty.

"The absurdity of all this, to give it no harsher name, ought to be apparent; and if it be admitted, then is the ceremony divested of its force, and of the influence which is attached to it. It does nothing unless it can enforce the Most High as a contracting party; and to this end, then, at least, of future penalties, and consequently of present force, it is nugatory.

"We need scarcely stop here to say that by human laws the infraction of an oath is perjury, a crime punishable by those laws; and therefore it follows that one or the other punishment must be superfluous or undue; while, if human penalties be adequate, no other can be necessary, whereas if inadequate, the justice of the Deity," as Mr. Bentham remarks, "cannot find adequate exercise till man gives him leave, and is thus kept in a state of dependence on human folly or improbity.

"But there is a far higher species of absurdity attached to an oath in the case where two swearers engage themselves to the production of incompatible or opposite effects. In this case the Deity is presumed to be compelled, or at least engaged, to punish two opposed modes of conduct—if the oaths mean anything—and is thus consequently engaged to produce incompatibilities. For example, 'James' swears

by his coronation oath to support the Catholic religion, while 'George' swears to maintain the Protestant. What, then, is the work cut out for the Almighty? To combat each religion, and at the same time and place to defend it, to combat it with one hand and defend it with the other.

"It is admitted that the preceding objections might be overlooked if the practical consequences of an oath presented a balance of utility; but it will shortly be proved that as far as relates to good consequences, it is an inefficient invention, and that, on the other hand, it often is, or may be, a direct and positive source of evil.

"It would be evil, for example, in the case of a despot or a tyrant, who should make use of the force of an oath of allegiance for purposes of oppression; while we have here also an example of that absurdity which would thus engage the Deity to abet vice and protect crime. The oath of allegiance, it is plain, if it be anything, places the Supreme Being in alliance with the tyrant or under his orders, because, engaging Him to punish those who do not keep their promise to obey the despot, they require him to sanction whatever crime towards the people thus engaged may seem fitting or convenient to this governing power.

"Here is another cause of evil, and a common one involving the same kind of absurdity. It is common for banditti to exact oaths from their prisoners to submit to various evils in their, the exactors' favour; such as secrecy, ransom, and so on, as is practised in Italy and Greece every day. Mark here the absurdity again. It is assumed that the Almighty becomes leagued with thieves and robbers; the most atrocious criminals are empowered to command the Supreme Being, and to make Him the abettor and protector of crime, and to direct His vengeance against those who refuse to submit to their orders in breach of His own laws. Common sense is sufficient to show the more than folly of obedience to an oath in such a case; and yet is it certain that nothing has been more disputed than the force of this kind of obligation, while timorous or conscientious persons daily submit themselves to it, in manifest breach of social order as well as of reason; in

manifest breach even of the Divine laws, as abettors of crime. But we will suppose, with the opposite party, that this obligation is not binding. The oath, then, is void. That is, it does not, in this particular case, bind the Almighty whom it undertook to bind. But this is the determination of the casuist; it is an oath or not an oath, as any one pleases to consider it, and it is evident that it will be judged by each according to his own views, and in numerous cases according to his own views, and in numerous cases according to his convenience, profit, or what not. The oath of Jephtha, the oath of Herod, these were both wicked oaths; they engaged the Supreme Being in murder; they were void oaths, therefore; yet were they kept and for evil. The oath of George ought to have been similarly a void oath; in the mind of one set of casuists, it must have been such; for what was the result to the adherents of James? It is an evil consequence, however, in which all persons, all governments, all religious institutions are concerned, that the usage of oaths is hostile to simple veracity or to truth. Two species of falsehood are thus established—simple mendacity and perjurious mendacity; while as censure or punishment is reserved for the latter exclusively, the former ceases to be a crime, and even loses a portion of its disgrace. There are thus instituted two degrees in one crime, and the smaller crime is practised without remorse as with impunity. Let us only suppose oaths abolished in juridical cases, and we should immediately see that not only would the general immorality of simple mendacity be immediately felt, but that the popular sanction would also immediately reappear in its full force. Thus also, and in the very same manner, do oaths tend to destroy the power of the more purely religious sanction of that very sanction which they have been invented to enforce. The law of truth, laid down in the Old and New Testament, becomes less availing because the very ceremony amounts to a declaration that its force is not much worthy of being regarded, or virtually, that it is undeserving of regard, or is powerless. It is a law which the ceremony declares to be a law not binding, a law that must be rendered binding by a human contrivance, before it can

deserve regard or be of avail. Religion is made to be at war with religion: man declares solemnly that the positive precept of the law is not a law, that the positive and explicit command of Christ does not command obedience. He attempts to abrogate the force of the law which he professes to support, the law of religion by religion.

"But, in this contrivance, man is not the mere inventor of a supererogation, the fabrication of a chain to bind, still faster, that chain by which religion is meant to hold man fast in the bonds of virtue and morality, the contriver of a chain, mischievously weakening or destroying the strength of that one by which the Deity had originally designed to bind him down to his duties, while he substitutes a worse one in its place. He declares, indeed, that he comes to aid the laws of the Supreme Being. But even thus, what is the amount of this declaration? That the Supreme did not know best how to effect his own purposes. That he requires man to teach him his duty, his road to his own ends. That Christ, his Christ, was so ignorant of the best means of securing the law of truth, as to require the counsel and aid of man; the Creator of the creature. Is this indeed so? and is this all? No. Man is not here a mere supererogator, an unbidden counsellor, a Pope dictating laws to the Supreme. He is an infractor of a positive law; he comes to amend the law, and he commences by breaking the law. He is not simply attempting to enforce the law by his unbidden counsel, but he is abolishing by his own act a positive law, plainly pronounced as tongue could speak. 'Swear not at all.' Not at all. Can any intention be more clearly expressed? Could it have been more clearly expressed than by the preface to this injunction, this absolute, uncompromising law? Can it be doubted that this command refers to formal swearing to oaths, not to profane and expletive swearing? 'Ye have heard that it hath been said by them of old time. Thou shalt not forswear thyself, but shalt perform unto the Lord thine oaths; but I, 'I' say unto you, swear not at all.'

"If we were to judge by the great and peculiar use made of oaths, we should conclude that they were effectual securities for truth; but when we examine the practice

and the results, we are compelled to adopt a conclusion directly the reverse. Historically viewed, the inquiry would be a curious one; but it is too spacious by far for our limits. The endless oaths of our Saxon or early ancestors' engagements before God, through saints and relics, made at every minute, to be broken at every hour, would alone tempt us to be content with our common and apparently much feebler securities. The force of an oath is compounded of three sanctions; of that of religion under the adjuration, of that punishment which the municipal law allots to the infraction, and of public opinion, or of the infamy attached to falsehood or perjury. Take away the two latter, and the former is nothing. Look at the jury-man's oath. It is as solemn as 'kiss the book, give me a shilling' can make it; though the shilling, which is the most valuable part of the oath in some cases, is excused in this one. Perjurious unanimity is even secured by torture, the oath is broken every day because it cannot be kept; it wants the two sanctions of punishment and infamy, and God, as usual, goes for nothing. This is an excellent expedient also, it cannot be denied, for impressing the value of an oath on the people, on witnesses in particular, swearing for the very same purposes before the same authorities, in the very presence of those persons to whom perjury is admitted and sanctioned. Let us, again, see what is esteemed respecting the validity of an oath in the Universities, in that of Oxford, at least; in that establishment founded by religion, maintained for religion, conducted by members, dignitaries of the Church, for the purpose of educating servants of the Church, for the sake of religious education. The statutes, drawn up some centuries ago, are no longer adapted to the habits and opinions of the times; they cannot be obeyed, and have accordingly fallen into disuse. The officers, dignitaries of the Church, who enforce them by oath, know that they cannot or will not be obeyed; those who take the oaths never intend to obey them; they are violated daily with impunity, impunity from man at least; and yet are these oaths perpetually administered, perpetually taken, to be perpetually broken, as they have been daily since the time of Laud.

This is not perjury punished or punishable by statute, but, if an oath means anything, it is perjury to God. And if, as the very theory of an oath supposes, the taker calls down on himself God's eternal wrath for the infraction or non-performance of that which is here a promissory oath, a vow, then, is there not a clergyman educated at Oxford existing who is not perjured; who is not, by his own deliberate and solemn act, now lying under the invoked penalty of future and eternal punishment; and this, by the ministers of religion, in the very seat of religion, and for the service of religion. 'Swear not at all;' here, at least, it would be policy, if no more, to obey the law. And here, also, it is unquestionable that the law is broken, because this is the precise kind of oath, the very vow itself, which is clearly forbidden, and which no gloss can evade.

"There can be no evasion of any kind here. If an oath is anything, in any case, it is binding here; and if it does not bind here, by itself, by its own intrinsic power, as a direct and unqualified imprecation of God's vengeance, where does it bind by those chains of man's forging? Nowhere, we should answer; because we cannot adopt the grievously absurd supposition, that a large portion of the Church of England, even omitting such laity as have been and are under the same engagements, are, as far as they have gone to eternity, gone to eternal punishment, and must continue to go thither, now and hereafter, until this absurd and mischievous custom shall be repealed.

"This usage is not now our affair. It lies between God and themselves; and what he may judge of this class of perjury, we do not pretend to conjecture. But it is our affair to say, or rather to think, that if an oath, quoad oath, is not binding in the Universities, it is not by consequence *per se*, binding in any case. Why is it not binding in human eyes at the Universities? Clearly for the same reasons that it does not bind the unanimous disagreeing jury. It wants the two sanctions of human punishment and popular infamy.

"The oath is necessary in cases of evidence, say the lawyers, because thus only can you punish pernicious mendacity in judicial cases. Certainly, at present. But why

not punish pernicious mendacity without the oath? The injury to man is the crime to be punished, not the defiance or insult to God. To this one must presume God will himself see. But no; it would not be convenient now to punish all judicial mendacity; it would cut off a vast mass of gain, and—what is as little to be desired by lawyers—prevent an endless mass of injustice. The effect of an oath, in cases of evidence properly so called, is perhaps to inspire the judge with undue confidence in the testimony given. Admitting the theory of this ceremony, presuming that it is to act on those who believe in future punishment for its infraction, what is the foundation of the judge's confidence in its power in individual cases? It rests on something which he cannot know, or even conjecture; on the power of the religious feeling in the swearer's mind, on its efficacy against opposing interests. And these interests are not merely pecuniary, they may consist in affection, political feelings or fancies, hatred, anything in the nature of passion of sufficient power to triumph over the principle of conscience.

"The apology for this species of oath is that it is applied to a case where we have no other means in our power of coming at the truth; it is that of a positive and negative assertion, on the opposed parts of the plaintiff and the defendant. But the answer is, that such an oath resembles the ancient cases of ordeal, and that as we have no means of conjecturing what its power is over either party, it gives no security whatever for truth: and that consequently it would be far better to take a solemn declaration, attaching to it the human penalties of false evidence in case of ascertained mendacity. Here is another inconvenience arising from an oath in the case of judicial testimony. To an inexperienced or indolent judge, it is an excuse for negligence or laziness. He has performed his legal duty in receiving testimony thus protected for him by the law, and may, therefore, if he pleases, leave the responsibility upon the law, and neglect all that belongs to the chances of veracity or otherwise, in the witness, as matter extra legal. But what, in reality, is the acknowledged value of the oath in this case, in practice? Is it anything at all, or is it ever trusted to? Scarcely

ever; perhaps never. The judge, every one, despises the oath which he is bound to administer, and proceeds as if it had never been given or thought of. All that he gains by it is the power of punishing the mendacious witness, if he chooses; a power rarely exerted, and which might equally be granted in any case of judicial mendacity. How is evidence examined? Just as it would be if there were no oath existent; just as if the ceremony had never been heard of; just, we may indeed almost safely add, as if there were no such thing as religion. A man cannot be received in evidence if he does not believe in God, and yet his evidence is received and examined as if there were no God. The whole religious sanction, without the oath or with it, bears no value in practice, even here; just as we have shown that it is perfectly worthless in the case of university oaths. Whether the university oath-takers believe, it is not our business to inquire; but they act as if they did not, and just so does the judge act in the examination of evidence. And properly; for how can he know what is the force of the religious sanction in the mind of the evidence? He forms his judgment by the nature and mode of the answers, by their simplicity, and that of the examinee, or otherwise, by his air and look, his tones, his confidence, his consistency, by the results of cross-examination. Here he has his rules of judgment; but he has no rule by which to judge of the power of the examinee's sense of religion. And the longer he lives, the greater his practice, so much the more does he learn to undervalue or despise the oath; while his experience teaches him, also, that the religious sanction is of the least avail in civil cases. Surely, we may fairly ask, what is the value of an expedient which is least esteemed by those who are best acquainted with its nature?

"It is an evil arising from oaths, that they tend naturally to make a witness persist in the falsehood which he has already uttered. In all cases, indeed, retractation is difficult, on account of the shame which attends it: but the difficulty is much increased when to this shame is to be added the disrepute of perjury. There also arises a singular evil of another character and of a very different kind—an evil from which society at large suffers in its feelings. The

judge, or the court, if it decides justly, is compelled to decide on the evidence from that conviction which is founded on all the collateral circumstances, independent of the oath to which we have already alluded; being in all this regulated by its knowledge and experience. See the consequences. There may be numerous sworn witnesses in any such case, to whom the court has attached no credit, as happens, in fact, in our own courts every day. And in this case the falsehood is notorious even to the public; to the audience present and to the whole abroad, by the publication of the proceedings. What is the result of this, but to prove the painful extent of immorality, and the contempt in which religion is held? It is not only that the public becomes convinced that an oath is of no value, a conviction sufficiently noxious in itself, but that there is no sense of religion among the people, should it happen that such events are common. Need we say that they are of every-day occurrence? There is another danger and another evil arising from the system of oaths, proceeding from a species of modified falsehood, short of their bold and plenary infraction. There are hundreds who, flattering themselves that the whole bond consists in the ceremony, conceiving that a sense of God and religion alone is no chain binding them down to the truth, think to escape under cover of some oversight, error, or incorrectness, in the ceremonial itself. The English swearer kisses his thumb instead of the book, and thus establishes in his own mind a clear privilege for mendacity. And this evil practically is increased, in our own judicial proceedings, by the slovenly way in which oaths are administered; an evil which the formula of Scotland has comparatively contrived to escape. Where superstitious usages are more minute and numerous, the difficulty of procuring a real oath in evidence becomes still greater among those who do not consider the intention as anything, but who regard the whole as a mere formula, partaking of a sort of incantation. Thus in Hindostan, the slightest error, out of numerous minute peculiarities, serves to vacate the oath; and hence a frequent difficulty experienced in the Hindoo courts. Thus will a Jew question whether the hat on his head is the real hat desig-

nated in his law, whether the book is the proper book. Here, it is plain, the very invention is an invention to produce and cause mendacity, instead of ensuring truth. It transfers the chain which, proceeding from religion, should bind the swearer to a formula; abolishes the ordinary religious sanction, should that have any force, to substitute in its place a complicated incantatory ceremonial, which the fraudulent examinee finds the means of avoiding. And even without all this, it is the oath which opens the door to all kinds of judicial and deceptive falsehood in the shape of mental reservations, words pronounced mentally or inaudibly, or words used by the speaker in one sense to be understood in another. That cannot, surely, be esteemed a very dexterous invention, which is, by its very nature, an engine for falsehood and fraud."

Sir William Hamilton, corroborating Bentham as to the university oaths, makes the following very potent remarks in illustration of the value of oath-taking in religious establishments. Speaking of Oxford, he says, "All members * of the University make oath to the faithful observance of the academical statutes; and the heads, specially sworn to see that these are by all faithfully observed, are by statute branded as pre-eminently guilty of 'broken trust and perjury.' If even 'by their negligence, any [unrepealed] statute whatever is allowed to fall into disuse,' the heads have for themselves voluntarily incurred the crime of 'broken trust and perjury,' in a degree infinitely higher than was ever anticipated as possible by the legislature, and, for others, have, for their interested purposes, necessitated the violation of their oaths by all members of the University. By law, Oxford is not merely an establishment for the benefit of the English nation, it is an establishment for the benefit of those only in community with the English Church. But the heads well knew that the man will *subscribe* thirty-nine articles which he cannot believe, who *swears* to do and to have done a hundred articles which he cannot, or does not, perform. The natural tendency of the academical ordeal was to sear the conscience of the patient to every pious scruple; and the example of 'the

* Discourses on Philosophy, p. 468.

accursed thing' thus committed and enforced by 'the priests in the high places,' extended its pernicious influence from the universities, throughout the land. England became the country in Europe proverbial for a disregard of oaths; and the English Church in particular was abandoned as a peculiar prey to the cupidity of men allured by its endowments, and educated to a contempt of all religious tests. As Butler has it:—

> 'They swore so many lies before,
> That now, without remorse,
> They take all oaths that can be made,
> As only things of course.' "

Oath-taking found its origin in bygone ages, in the infancy of civilisation, in the necessity for gaining some hold over the minds of ignorant and barbarous men. Chiefly in the hands of the priesthood the power of administering such oaths; chiefly in their hands the influence resulting from its administration. For a long time it was taught that the Church could absolve from all consequences of perjury; that the Pope could release subjects from their oaths of allegiance and liberate rulers from their most solemn pledges. It is said that Clement VI. granted to the reigning Prince and Queen of France and to their successors the faculty to break any oaths which they might find it inconvenient to observe. Civilisation has swept away much of the ignorance and barbarism. It has weakened the power of the priesthood. There are comparatively few who now regard Church absolution as removing the stain of perjury. How long shall it be ere the good sense of the nation shall destroy a most useless and pernicious ceremony; one which degrades alike the witness and the judge. In Great Britain, notwithstanding the Gospel prohibition of oath-taking—this Gospel being part and parcel of our common law—it is only by obedience to a detestable formula, and in opposition to the Gospel injunction, that an Atheist, or Deist, can obtain justice. Christians of all sects, Quakers, Moravians, and indeed persons of any religion, may now, if they choose, affirm instead of being sworn. But persons who do not believe in God, or in a future state of rewards and punishments, are to-day in precisely the same position

as that of the Quakers a few years ago. They have no choice but to accept a practical outlawry, or to kiss the cover of the Bible after the repetition, by the oath-administering official, of the peculiar formula, "So help me God"—a form which to the Atheist is a mockery. Nay, Atheists and all so-called Infidels who do not believe in a future state of rewards and punishments are, by the common law of England, declared utterly incompetent as witnesses. They may be sued, but may be prevented from entering the witness-box in their own defence. If they are plaintiffs, the process must be decided without the Atheist's evidence as to his complaint. The mere abolition of the oath ceremony would not be enough to meet the case of the non-believer, for although a witness might be permitted to affirm, it would still be a fatal objection to his competency that he was an Atheist, and would, if substantiated, cause the entire rejection of his evidence. What is necessary is, that an Act should be passed, giving liberty to affirm in all cases, and abolishing incompetency on the ground of want of religious faith. The liberty to affirm by itself would be useless so long as the utter incompetency of the proffered witness is declared by our common law. At present, and according to English law, any person might murder a bishop in the presence of half-a-dozen Atheists, and escape justice, because none of those Atheists would be legally competent to bear testimony as to the murder.

Chap. xx., vv. 8, 9, 10, 11.—"Remember the Sabbath-day to keep it holy. Six days shalt thou labour, and do all thy work. But the seventh day is the Sabbath of the Lord thy God; in it thou shalt not do any work, thou, nor thy son, nor thy daughter, thy man-servant, nor thy maid-servant, nor thy cattle, nor the stranger that is within thy gates. For in six days the Lord made heaven and earth, the sea, and all that in them is, and rested the seventh day; wherefore the Lord blessed the seventh day, and hallowed it."* Deut., chap. v., vv. 12, 13, 14, 15.—"Keep the Sabbath-day to sanctify it, as the Lord thy God hath commanded thee. Six days thou shalt labour, and do all thy work. But the seventh day is the Sabbath of the Lord thy God;

* See also Exodus, chap. xxiii., v. 12.

in it thou shalt not do any work, thou, nor thy son, nor thy daughter, nor thy man-servant, nor thy maid-servant, nor thine ox, nor thine ass, nor any of thy cattle, nor the stranger that is within thy gates; that thy man-servant and thy maid-servant may rest as well as thou. And remember that thou wast a servant in the land of Egypt, and that the Lord thy God brought thee out thence through a mighty hand and by a stretched out arm; therefore the Lord thy God commanded thee to keep the Sabbath-day."

Which of the above texts gives the correct reason for the observance of the Sabbath-day? Is it because, as stated in Exodus, that on the seventh day God rested after his creation labours? or is it because, as alleged in Deuteronomy, that on that day he rescued the Jews from Pharoah's power? The contradiction is here clear and precise; but passing it on one side, it is not unreasonable to ask, bearing in mind the statutory and common law restrictions as to Sunday observance, whether the Christian Sunday is in truth identical with the Jewish Sabbath? If not, how does this part of the decalogue as to Saturday apply to the conduct of the Christian community on Sunday? What is the real origin of the Sabbath? Does the doctrine of Sabbath observance relate to God or man? Is it to be judged as a religious dogma or a political need that on Sunday man should devote himself to worship or to rest? If the question is a religious one, the Government ought not to interfere. The State has no right to decide by statute a debatable point in theology, or to inflict restraints and penalties on the people (with reference to their social conduct on the Sunday), drawn from so-called divine decrees applying not to Sunday, but to Saturday, and which decrees were issued to a people whose social condition was widely different from our own. There is in truth not the slightest ground or pretence for the attempt to identify the Jewish Sabbath with the Christian Sunday. The Jews themselves, by their observance of the seventh day of the week, distinctly repudiate the attempt to transfer the law of the Pentateuch to the manufacture of the first day as a holy day.

The Christian believer can find in the Gospels no pre-

tence of sanction for the supposition that Jesus substituted first day for seventh day. The days of our week bear, throughout all Europe, names which mark their connection with Isabaism. In England the Saxon mythology has modified a little the nomenclature. Woden and Thor have taken their special days, but our Lord, the sun, still gets the first day of the week as honour to the chief place he occupies in our planetary system. Sunday for the sun, Monday for the moon. Tuesday, instead of Mardi, or Martedi, the day of the planet Mars, takes its name from Tuisco, or Tuisto, the god of war to the Saxons, as Mars to the Greeks. Wednesday, instead of Mercredi, or Mercoledi, the day of the planet Mercury, is Woden's day. Thursday, instead of Jeudi, or Jovedi, the day of the planet Jupiter, is Thor's day—Thor, the Thunderer, who, in the Scandinavian myths, filled Jove's throne. Friday, instead of Venerdi, or Vendredi, the day of Venus, is the day of the Saxon goddess, Freya, or Friga. Saturday, or Saturn's day, keeps its name. Yet out of these days—none of their names of Jewish origin—the followers of the Christian Church in this country pick one day, a day which the Jews do not recognise; and, by help of Jewish law, seek to frighten us away from the pure air and green fields, away from painting and sculpture, away from river and rail, away from everywhere but some Great Bethesda or Little Bethel, where supreme cant allied to grimmest godliness gives Sunday sanction to week day sin.

The Sabbath-day observance societies have no right to appeal to Exodus or Deuteronomy. There is no link between the Sabbath of the Pentateuch and the Pagan Sunday. Nor can those who desire to devote a day to the worship of God stop far short of blasphemy with their threats of hell-fire as the punishment awarded by infinite omnipotence to Sabbath breaking. They say, in effect, that little John, a child of respectable parents, having opportunities of week-day rambling, is good and righteous, and earns hope of heaven by resting contented in only walking from his parents' residence to church or chapel on Sunday; but that little James, the weaver's son, who works in a lucifer match manufactory, and inbreathes poison from

six on Monday morn till six on Saturday eve, will incur the penalty of deep damnation, because, up with the lark on Sunday morn, he runs away from the wretched shelter of home to the side of the clear sparkling river to look for fish who do not go to church, or ramble through the fields and woods to enjoy the odour-laden breeze, or to chase those ephemeral existences for whom even a Spurgeon has not yet reserved an eternity of brimstone for stretching their wings on Sunday. 'Tis rank sin for carpenter James to buy on Sunday morning from costermongers' barrows the poor provender for Sunday's meal; and if Exeter Hall and Newington Tabernacle speak truly, the creator and ruler of an infinity of worlds eagerly watches with angry jealousy to punish such awful crime. Three boys at toss-halfpenny on Sunday morning grieve the immutable, and render him severe and unforgiving, while he shows, nevertheless, great mercy towards a crowned murderer who tramples on the liberties of a nation.

Does the workman need a rest-day? Yes, indeed, and many more than he gets, or is likely to get. A weekly rest-day is good to keep; in that it breaks a little the too much machine-like existence which so many of the masses endure. But *rest* to the weaver, with treddle-wearied legs and shuttle-tired fingers, means a stroll across the verdant carpet spread by nature, a walk in the green lanes, sun-shaded by the foliage-covered trees. Rest to the unnameable, because innumerable, multitude of handicraftsmen who rise from their couches to toil and rejoin their beds to gather new strength for next day's labour—rest to them; change is rest. Let their eyes feast on the beautiful, let their ears drink in harmony. Let our picture-galleries, our collections of sculpture, our museums, and public gardens and parks be wide opened, and let the best music, fruit of highest genius, soften, for at least one hour per week, the harshness of the clang of the six days' struggle to live. Let road, river, lane, and field teem on Sunday with the out-loosed life which is pent up too often in unwholesome areas from Monday to Saturday. Out of the way with your threats of eternal brimstone after death; let me free into the open space where I may inhale the rich perfume of the

life elixir the pure atmosphere affords. Get you gone with your grim, straight-combed, miserable heads—clasp your hands, down on your knees, if you will; we, with easy elastic step, are off for a Sunday wandering; and as we return, odour-laden with Nature's freshness, we ask you, if there be a life-giver, is it not good worship to try to guard the gift?

What is the real origin of the Sabbath-day? Kalisch says:—"Although* every calm Biblical critic will sedulously keep aloof from mystic speculations on the hidden properties of the numbers, it cannot be denied that in the sacred volume some numbers predominate, which bear a holy and religious character. Among these the number *seven* ranks first. Its frequent, almost regular repetition cannot be accidental. The seventh day is the Sabbath; the seventh year, the שמטה, SheMeTE, or the Sabbath of the fields; after seven times seven years, the Jubilee, or the perfect restoration of the original conditions of property ensues; the seventh new moon is the 'day of the sound of the trumpet,' or 'the day of remembrance;' the seventh month is almost entirely occupied with the holiest festivals; Passover lasted seven days, and on every day a sacrifice of seven lambs was offered; seven days was the Feast of Tabernacles, and seven weeks lie between Passover and Pentecost; seven days the young animals remained with their mothers before they were fit for firstling-offerings (Exodus, xxii., 29); the circumcision was performed after full seven days from the birth; seven days was the legal duration for many Levitical lustrations; during seven days the priests were initiated; seven times the blood was sprinkled at important expiatory sacrifices; seven days lasted the mourning for the dead (Gen., i., 10); seven days also the marriages (Judges, xiv., 12); seven animals were, in primeval times, presented on solemn occasions as alliances and promises (Gen., xxi., 28-30); and the sacred word *oath* (שבועה) is etymologically connected with the number *seven* (שבע); symbolical actions are repeated seven times (1 Kings, xviii., 43; 2 Kings, v., 10, 14; compare Gen., iv., 15; Eze., xxxix., 9; xl., 12; xli., 3; Num.,

* Kalisch, Exodus, p. 448.

xxiii., 1, 14, 29; 1 Chron., x., 12, ect.); the mark of the highest reverence was a sevenfold prostration (Gen., xxxiii., 3); and a progeny of seven children was considered a peculiar blessing (1 Sam., ii., 5; Jer., xv., 9; Job, i., 2); seven was, in fact, frequently used as a number signifying *many*, in general, or as the number *kat exochen* (Deut., xxviii., 7; Judges, xv., 7, 17; 2 Kings, iv., 35; Isaiah, iv., 1; xi., 15; Job, v., 19; Mich., v., 4; Ruth, iv., 15). Seven chief utensils were in the holy tabernacle—1, the altar of burnt offerings; 2, the laver; 3, the show-bread table; 4, the altar of incense; 5, the candelabrum; 6, the ark; and 7, the mercy seat and the cherubim, which formed one vessel, xxv. *et seq.* But even in historical events the number seven is very markedly obvious. Noah took into the ark seven pairs of every clean animal (Gen., vii., 2); seven days before the beginning of the Deluge he was once more informed of it (verse 4); he waited seven days after having first sent out the dove; and when she returned, seven days more (verses 10, 12); Jacob served seven years for Leah and seven years for Rachel (Gen., xxix., 20, 27, 30); Pharaoh dreamt of seven fat and seven lean cows, of seven full and of seven empty ears of corn; and accordingly seven years of abundance and seven years of famine ensued (Gen., xl., 1; compare 2 Sam., xxiv., 13; 2 Kings, viii., 1); the father-in-law of Moses had seven daughters (Exod., ii., 16), of whom Moses selected the worthiest for his wife; Jericho was encircled during seven days; on the seventh day seven priests, with seven trumpets, passed seven times round the city, which was then only attacked and taken (Josh., vi.); Solomon finished the temple in seven years (1 Kings, vi., 38); and at its consecration celebrated a festival of twice seven days (viii., 65). It would be easy by obvious combinations to increase this list considerably, and we mention only that the three patriarchs and their four wives make the number seven; but we may distinctly call attention to the fact that the three 'signs of the covenant' of Mosaism, circumcision, the Passover, and the Sabbath, are all connected with the number seven. The same mystic number prevails especially in the Indian mythology: a God shines through the world on a chariot drawn by seven

horses; there are seven worlds (Locas), seven great continents (Dripas), seven oceans; the human body consists of seven chief members; there are seven periods in the life of man, &c.

"The simple and obvious explanation of the holiness of the number seven is that the ancient Israelites, as most of the Eastern nations, counted originally their months after the course of the moon, which renews itself in four quarters of seven and three-eighths days each, and after this time assumes a new phase. These periodical and extraordinary changes of the moon produced a powerful impression upon the susceptible minds of the ancient nations. They excited them to reflections on this wonderful phenomenon, and everything connected with it assumed, in their eyes, a peculiar significance. Hence the day of the new moon was generally celebrated with some distinguishing solemnity, which, like all festivals, is regulated and fixed in the Mosaic law (Num., x., 10, xxviii., 11, &c.); and the new moon is in the Old Testament frequently mentioned together with the Sabbath (2 Kings, iv., 23; Isaiah, i., 13, &c.) Hereto we add that the number of the seven planets known to them (Saturn, Jupiter, Mars, the Sun, Venus, Mercury, the Moon), which successively presides over the hours of the day, and each of which commenced, therefore, a different day, contributed in later times not a little to secure to it that mysterious significance, especially as the result of the astrological pursuits soon brought all human affairs and occupations into some relation with those planets. But that division of the week into seven days was known and adopted by the most different nations, as the Assyrians, Arabs, Indians, Chinese, Peruvians (but not the Persians), and many African and American tribes, which never came into intercourse with the Israelites, and later by the Greeks and Romans, who followed the Egyptians. We must, therefore, recognise therein, not an exclusively theocratical, but a general astronomical arrangement, which offered itself to the simplest planetary observation of every people."

So far Kalisch. M. Priaulx, in his comments on Genesis, deals with the same question. He says:—

*"The Book of Genesis tells us that a septenary cycle was possibly known to Noah, and certainly in use with Laban and his family. But that cycle is represented as subordinate to, and merely the consequence of, the Sabbath-day; as, in fact, owing its existence to the observance of that day; and yet throughout Genesis, with the exception of this creation, there is not the slightest allusion to any seventh as a peculiarly holy day. Not, indeed, till after the Exodus is the *Sabbath* mentioned, and then its sanctity is pressed upon us in almost every verse, and its observance is ensured by the heaviest penalties; the very severity with which it is commanded bespeaks it an innovation, and no ancestral and well-established custom. In a word, we have no evidence whatever that the hebdomadal, as a constantly recurring cycle, as dividing and measuring the whole year, was known to the Hebrews before their settlement in Egypt. And we must conclude, therefore, that the weeks of Noah and Laban were merely any seven days set apart for a festal or a religious purpose, perhaps because the heptad, or number seven, was held in peculiar reverence, or for some other reason which at this distance of time it would be vain to speculate on, but which may easily be drawn from many natural phenomena, as from the first chapter of Genesis. The Egyptian week is a cycle of seven days, each one of which has its appropriate name, taken from the planet to which it is dedicated. Did not, then, the Egyptians, a people devoted to astrology, thence fix the number of their days? Or were they led to a division of their months into weeks by the observation that the moon required *seven* days from new moon to its first quarter, and *other seven days* to reach its full, and so on to its decline? And did they, then, finding that the planets were the same in number as the days, apply the names of the one to denote the other? I cannot determine which of these is the more probable reason for the Egyptian week; but I perceive that, as that week was associated with no events, hallowed by no traditions, it had no arbitrary origin, but was founded on an observation, never mind how crude, of the phenomena of Nature; and that, therefore, like other

* Priaulx Questiones Mosaicæ, p. 36.

natural divisions of time, it might be alike original in China, in Haran, and in Egypt. If, however, it is necessary to decide between the pretentions of the Jews and those of the Egyptians, we must avow that it seems to us just as probable that the Jews, who show none but accidental or traditional reasons for the use of their cycle, should have borrowed it from the Egyptians, as it is improbable that the Egyptians, with whom it appears as a natural measure of time, should have acquired it from the Jews."

After drawing attention to Persia, China, India, and Mexico, as using no Sabbath, M. Priaulx proceeds :—

"The savage on his return from a successful chase makes holiday and prepares a plentiful banquet, and gorges himself with food, and then lays himself down to sleep, and wakes but to eat again, and then again to sleep, until his stock of provisions is exhausted, and hunger at length rouses him to fresh exertions. His life is divided between the severest toil and the most listless indolence. So soon, however, as men begin to live in societies, and have learned to tame and to keep cattle, and to cultivate the earth, so soon as they have some assured means of subsistence, so we find their legislators regulating the alternations of labour and repose, *consecrating particular days of rest, and hallowing these days* by dedicating them to the Gods, and making them happy days for the people, by adorning them with feasts and games, and solemn sacrifice. Thus among the Egyptians, according to Herodotus, there were many public festivals. In *Greece* the days were of three kinds—working days, black days, and festal days.

"On most of these last days, the shops and courts of judicature were shut up. The labourers rested from their works, the tradesmen from their employments, the mourners intermitted their sorrows, and nothing but ease and pleasure, mirth and jollity, were to be found among them.

"*In Rome* the days were similarly divided; every ninth day was a holiday, and on holidays the citizens were expected to abstain from litigation and quarrels, and the slave from labour. *The Persians*, besides many other holidays, celebrated the five intercalary days (dies appendices), which completed their year, in joy and feasting. These same days,

the Mexicans believed, 'had been purposely left by their ancestors as days of vocation, and during this time they gave themselves up wholly to idleness, and only studied how to lose that overplus of time. Tradesmen left off work, the business of the tribunals ceased, and the very sacrifices in the temples.' *In China*, the holidays were new and full moon. *In India*, there are certain prescribed days, on which the superstitious Hindoo dares not even clean his teeth. Among the Boodhists, of Ceylon, four days of the month are dedicated to public worship—the four first days of the changes of the moon; when those who are able attend at the temples. There are no other public days of festival or thanksgiving; all, however, are at liberty to select such days for themselves, and these they particularise by acts of devotion, consisting in fasting, prayer, and forming resolutions for their future good conduct; all which devout acts are addressed to their saviour Boodha."

The Mishna, in the treatises entitled, "Sabbath Erubin and Yom Tob," gives some curious and some very ridiculous examples of the rabbinical regulations for Sabbath observance. These go so far as to declare that a tailor may not carry his needle with him late on Sabbath eve for fear he might be tempted to sew on the Sabbath. One rabbi José declares that a one-legged cripple must not carry with him his wooden leg on the Sabbath. A man with toothache on the Sabbath must not rinse his teeth with vinegar. A flower may not be plucked from a perforated flower-pot, but it may be plucked from a flower-pot not perforated.

According to Exodus, chap. xxxi., v. 14, chap. xxxv., v. 2, Sabbath breaking was to be punished with death; and in Numbers, chap. xv., v. 32, an instance is given of the actual infliction of this penalty. If Sabbatarians were thoroughly logical, they ought to claim that all Sabbath breakers should be stoned to death.

According to English law, travelling in a stage or mail-coach on a Sunday is lawful, and the driver is lawfully employed. (See *ex parte* Middleton, 3 Barnewall and Cresswell, p. 164, and Sandiman *v.* Breach, 7 Barnewall and Cresswell, p. 96.) Contracts to carry passengers in a stage-coach on Sunday are therefore binding, but the

driver of a van travelling to and from distant towns, such as London and York, is unlawfully employed, and may be prosecuted and fined twenty shillings for each offence (see cases quoted *supra*) ; and, presuming that the laws of God and England are in unison, the driver of the van will be damned for Sabbath breaking, and the driver of the stage-coach will go to heaven for the same offence. By the 10 and 11 William, cap. 24, mackerel may be sold on Sunday either before or after Divine service. There is no offence against the common law of England in trading or working on a Sunday; therefore the statutes must be strictly construed. If a butcher should shave on a Sunday, he would commit no offence, because it would not be following his ordinary calling. Persons exercising their calling on a Sunday are only subject to one penalty, for the whole is but one offence, or one act of exercising, although continued the whole day. A baker, pastry-cook, or confectioner is liable to be prosecuted if selling bread and pastry before nine or after half-past one o'clock on the Sunday (sec. 34, Geo. III., cap. 61; 1 and 2, Geo. IV., cap. 50, sec. 11; and 3, Geo. VI., cap. 106). If the Archbishop of Canterbury's cook, groom, footman, butler, and all other his men-servants and maid-servants do not each of them attend church every Sunday, they may be prosecuted and fined under the 1, Elizabeth, cap. 2 ; and 3, James I., cap. 4. If the Archbishop of Canterbury's coachman drive his master to church on Sunday, and if his footman stand behind the carriage, these being their ordinary callings, and not works of charity or necessity, they may be prosecuted and fined 5s. each under the 29, Car. II., cap. 7. Tobacconists may be prosecuted for selling tobacco and cigars on a Sunday. Railway officials may be punished for working on a Sunday; certainly on excursion trains. The stokers and men employed on the steamboats plying to Gravesend, &c., are also liable to prosecution, although a few watermen enjoy the privilege of Sabbath breaking by Act of Parliament. Civil contracts made on a Sunday are void, with some few exceptions—viz., a soldier may be enlisted on a Sunday (Walton *v.* Gavin, 16; Queen's Bench, 48); a labourer may be hired on a Sunday (Rex *v.*

Whitmarsh, 7; Barnewell and Carrington, 596); a guarantee may be given for the faithful services of a person about to be employed (Norton *v.* Powell, 4; Manning and Grant, 42); a bill of exchange may be drawn on a Sunday (Begbie *v.* Levi, 1; Carrington and Payne, 180). Civil process must not be served on Sunday, but an ecclesiastical citation may; therefore, the Church reserves to itself the right of Sabbath breaking on all occasions. No civil arrest can be made on Sunday. A cookshop may be open on a Sunday for the sale of victuals. Every person who should go to Hyde Park, or any of the other parks, to hear the band play, if out of his own parish, is liable to be fined 3s. 4d. If two or three go from out of their smoky city residences to the Lea to fish, or to the green fields to play cricket, they may each be fined 3s. 4d., if out of the parish in which they reside.

Verse 13.—"Thou shalt not kill." This verse must be qualified by chap. xxi., vv. 20 and 21, and by Deut., chap. vii., v. 2; Deut., chap. xx., v. 13 to 16, and similar texts.

Verse 17.—The Samaritan Codex here differs very considerably from our version, inserting in substance the 23 to 27 verses of the fifth chapter of Deuteronomy. Josephus follows the Samaritan, with slight variation.

Chap. xxi., vv. 2 to 6.—"If thou buy an Hebrew servant,* six years he shall serve: and in the seventh he shall go out free for nothing. If he came in by himself, he shall go out by himself: if he were married, then his wife shall go out with him. If his master have given him a wife, and she have born him sons or daughters; the wife and her children

* The word "servant" עבד OBeD, is in Cahen translated "slave." Gesenius Lexicon, p. 599, translates "a servant who amongst the Hebrews was commonly 'a slave.'" Parkhurst, p. 508, "a servant or slave." Newman in his Lexicon, p. 450, says, "a slave either for life or a limited period." (A hired servant is שכיר SheKIR)—see Eichorn's Simonis, vol. ii., p. 1,137; and Bresslan, p. 416. The same word, OBeD, is used in Leviticus, chap. xxv., vv. 44 and 45. In v. 6, the word translated Judges, is אלהים ALEIM, which is, *1* Genesis, translated Gods (see commentary on Genesis, p. 11). The Septuagint has instead of "before the Judges," "before the tribunal of God." The Douay, following the Latin Vulgate, has, instead of "Judges," "Gods."

shall be her master's, and he shall go out by himself. And if the servant shall plainly say, I love my master, my wife and my children; I will not go out free. Then his master shall bring him unto the judges; he shall also bring him to the door, or unto the door post; and his master shall bore his ear through with an awl; and he shall serve him for ever."

These verses recognise, and in most terrible language, the existence of slavery as an institution connected with the then Jewish future. They declare that a man may buy a Hebrew servant, provide him with a bond-wife, and breed bond-children, who shall become the property of the master.

The offer of liberty to the Hebrew servant at the end of six years' servitude, on condition that he abandoned his wife and children, is a piece of indefensible cruelty. Did the writer of Exodus not know that a slave might love liberty and yet not desire to leave his family slaves while he enjoyed solitary freedom? Was God aware that sometimes the most wretched slave may have true and warm affection for his wife and children? Is a slave ever a man with a man's passions and feelings; or, is he always a chattel, or inferior animal?

It is a puzzling theory this, and, at first glance, scarcely worthy of a place in a revelation from an all-wise and all-good God—*i.e.*, that a man may be a religious man and yet keep his brother and sister as male and female slaves, breeding and begetting other slaves.

"If the servant shall plainly say, I love my master, my wife, and my children," why he would be less than a man if he did not love his wife and his children even more than a freedom which would be embittered by the consciousness of his family's slavery. He would be a strange husband if he did not wish to stay with them rather than be separated from them. The phrase, "I love my master," is a most diabolical addition. Could a man love the master in whose hands he would be forced to leave his wife and children as slaves, and would not the expression of love towards him be a venial falsehood in order to secure the opportunity of protecting the wife whom he had sworn to love, and the children whom he was bound to protect, because he had caused

their birth? What is the slave's reward for his love? If he prefers staying with his wife and children, does God give him his freedom as his recompense?—give the whole family their freedom, their reward? No. He says that the man who should be honest enough, humane enough, the man who should be true enough, to stay behind to protect his wife and his children—that man should be taken before the judge, should have his ear bored through, and be a slave for ever—a slave without hope of freedom—a slave without prospect of redemption; and this apparently because he has committed the crime of loving his wife and children. If he hated them—did not care for them—if he had no fatherly, no husbandly love, he might go free; but because he loved his wife and children, for that crime he must pay the penalty of being a slave for ever.

Verse 6, which provides that the Hebrew servant is always to continue in serfdom, is confirmed in Deut., chap. xv., v. 17, but is contradicted by Leviticus, chap. xxv., vv. 39, 40, 41, 42, 43, where the release of the Hebrew brother is to appear in the year of the Jubilee.

Verses 7, 8, 9, 10, 11.—These verses contain a provision for the sale by a man of his own daughter. And for what purpose? Our translators have carefully endeavoured to hide the real meaning of the text. Verse 7 reads, "And if a man sell his daughter to be a maid-servant, she shall not go out as the *men-servants* do." In the Douay it is, "If a man sell his daughter to be a servant, she shall not go out as *bondwomen* are wont to go out." Kalisch says, אמה LAME, is here rather concubine than maid-servant. Cahen says, "The father had power to sell his daughter at any age, אמה LAME, *slave.* The difference between this word and שפחה ShePheChE, appears to me to be this, שפחה ShePheChE generally designates a female slave, and אמה AME is the honorary title taken by the slave, become mother from אם *mother, a matron.* In admitting this, the whole of the paragraph, difficult enough otherwise, becomes very clear. It speaks of a father who sells his daughter to a master who makes her his concubine."

The 8th verse in our translation reads—If she please not her master, who hath betrothed her to himself, then shall

he let her be redeemed to sell her to a strange nation; he shall have no power seeing *he hath dealt deceitfully with her.*" In the Douay, "If she displease the eyes of her master to whom she was delivered, he shall let her go, but he shall have no power to sell her to a foreign nation *if he despise her.*" In the margin of Breeches Bible the last words of the 8th verse are translated, "seeing he hath deflowered her." Cahen renders *ayant été infidele envers elle,*"* "having been unfaithful towards her." Kalisch in his note to this verse adds, "he had brought her from her father only under the condition and with the promise to live with her in conjugal intercourse."

Verse 10.—In our version it is, "If he take him another *wife,* her food, her raiment, and her *duty of marriage,* he shall not diminish." In the Douay, "If he take another wife for him, he shall provide her a marriage, and raiment, neither shall he refuse the *price of her chastity.*" (Vulgate *pretium pudicitæ.*) In the Breeches Bible, "If he take him another wife, he shall not diminish her food, her raiment, and *recompense of her virginity.*" The word עונה ONeThE in our version, "duty of marriage," is in Kalisch translated, "conjugal cohabitation." Cahen writes, "*le devoir conjugal.*"

Can any man doubt as to the real meaning of the above four verses? Is it not clear and beyond contradiction that here is a law professedly from a God of truth and purity, rendering it lawful for a man to sell his own daughter, in order that she may fill a place in the seraglio of her purchaser. Our translators have somewhat glossed the text, partially hiding its disgusting meaning, but still enough was left to excite suspicion. Is this the Book from which you let your little girls read, and from which you expect them to acquire that knowledge which shall render them happy and virtuous?

Verse 16.—"And he that stealeth a man, and selleth him, or if he be found in his hand, he shall surely be put to death." Cahen translates this verse, omitting the word "or," ו, for which there is no Hebrew equivalent. The

* See Lexicon's under בגד Eichorn's Simonis, p. 205—Gesenius, p. 102—Parkhurst, p. 55—Kalisch, Exodus, p. 389.

Douay has, "being convicted of the guilt." The Rabbis discussed how the man being sold could still be found in the hands of his vendor, and they taught that the stolen person must have been seen in the house of the kidnapper, and then have been sold to another—without which the offence was not complete. The Rabbis applied this only to stealing an Israelite (see Deut., chap. xxiv., v. 7).

Verse 20.—"And if a man smite his servant, or his maid with a rod, and he die under his hand, he shall surely be punished." The Douay has, "He that striketh his bondman, or bondwoman, with a rod, and they die under his hand, they shall be guilty of the crime."

Verse 21.—"Notwithstanding, if he continue for a day or two, he shall not be punished, for he is his money." The Douay says, "But if the party remain alive a day or two, he shall not be punished, because it is his money." Cahen, "If he survives for a day or two." Colenso says, "I shall never forget the revulsion of feeling, with which a very intelligent Christian native, with whose help I was translating these words in the Zulu tongue, first heard them as words said to be uttered by the same great and gracious Being, whom I was teaching him to trust in and adore. His whole soul revolted against the notion, that the great and blessed God, the merciful Father of all mankind, would speak of a servant, or maid, as mere 'money,' and allow a terrible crime to go unpunished, because the victim of the brutal usage had survived a few hours."* We are here told that if one of God's children, whom God caused to be born free, or who had, during life, risen to freedom, kills another of God's children, whom God has caused to be born a slave, or who, during life, has been reduced to thraldom, the murderer of the owner of the victim shall escape punishment, if (as the Douay quaintly expresses it) the victim remain alive a day or two after the infliction of the punishment, which was the primary cause of death; and this notwithstanding v. 12, which says, "He that smiteth a man, so that he die, shall be surely put to death." Why is this mercy? Is it because there is some extenuating circumstance which reduces the heinousness

* Part 1, p. 9.

of the crime? None who read the Pentateuch can suppose the God of the Jews to be tender hearted as to taking human life. Why is the murderer spared? Has mercy any voice? No: but because the slave killed is the murderer's money; because the murderer bought and paid for that slave with current coin, justice is reverent to wealth and the power of gold is recognised even in the kingdom of God. To day the Society for Suppression of Cruelty to Animals would prosecute and obtain the committal to prison of any man, who, on such prosecution, should be found guilty of beating his horse or his dog, so that it died on the second or third day. It would be no defence to urge on the part of the prisoner that he had paid for the ill-used animal. It would be a rash advocate who ventured to raise such a defence. But in a trial at the last day before the Supreme Judge, when a "Legree" is accused of the murder of an "Uncle Tom," the accused, relying on the Pentateuch, may raise a valid defence with the words, "He was my money." The power of gold will open the gates of heaven to the murderer, who can look complacently down into hell upon the murderers who had no money.

Verses 23, 24, 25.—"And if *any* mischief follow, then thou shalt give life for life. Eye for eye, tooth for tooth, hand for hand, foot for foot. Burning for burning, wound for wound, stripe for stripe." Aben Ezra quotes a Jewish writer who denied that these verses could be taken literally; for instance, how could you apply the law "eye for eye" to a blind man, who had put out the eye of one possessing both organs of sight in good condition. How make a retaliative wounding neither more nor less dangerous than that for which it is retribution.*

Verse 32.—"If the ox shall push a man-servant or maid-servant; he shall give unto their master thirty shekels of silver, and the ox shall be stoned." The slave is quite treated as a mere chattel for loss or injury to which the master is to receive compensation. According to the calculation of Kalisch, thirty shekels of silver would be about seventy-two shillings and sixpence. In the Hebrew this

* Cahen, Exode, p. 96.

chapter numbers thirty-seven verses—the first verse of chapter twenty-two being included in chapter twenty-one.

Chap. xxii., v. 9.—"For all manner of trespass, whether it be for ox, for ass, for sheep, for raiment, or for any manner of lost thing, which another challengeth to be his, the cause of both parties shall come before the judges; and whom the judges shall condemn, he shall pay double unto his neighbour." The Douay join this to the last verse and read, "To do any fraud, either in ox, or ass, or sheep, or raiment, or anything that may bring damage: the cause of both parties shall come to the Gods, and, if they give judgment, he shall restore double to his neighbour." Cahen translates, "In all kinds of wrong relating to an ox, an ass, a lamb, or any lost object, of which they shall say that is it, the cause of the two shall come before the judges; and he whom the judges shall condemn shall tender double to his neighbour." He adds that it is difficult to seize the precise meaning of the verse. The word "judges" or "gods," as the Douay gives it, is אלהים, ALEIM (see "Bible: What it Is," Genesis, pages 7 and 11). Kalisch, who translates the verse somewhat differently, draws attention to further variation in the Septuagint and Luther's version, and says that there is no authority for the English rendering, "which *another* challengeth to be his."

Verse 11.—"Here an oath is commanded; in Matthew, chap. v., vv. 34 to 37; and James, chap. v., v. 12, oaths are forbidden."

Verse 18.—"Thou shalt not suffer a witch to live." The Septuagint has "poisoner" instead of "witch." In the Douay, "Wizards thou shalt not suffer to live." Can we wonder that our criminal courts occasionally reveal a scene of life in which we see some poorly taught servant girl parting with her hard-earned pence to propitiate some man or woman, whom she believes to possess supernatural power? It is customary, on such occasions, for the presiding magistrate to deplore the ignorance of the labouring classes, and to exclaim against the folly of believing in witches and wizards, yet he swears the witnesses on the Bible, containing this verse, and would refuse to receive the

evidence, if, after hearing the magistrate's opinion on the folly of believing in witchcraft, the deponent should happen to remark, "Then I cannot believe in the Bible." Kalisch declares that the doctrine of sorcery or witchcraft is opposed to Mosaism,* and that the idea of Satan as an evil principle was only borrowed after the Babylonian Captivity. We are placed, however, in this difficulty—*i.e.*, that either the Pentateuch is the reliable record of Mosaic doctrines, or there is no reliable record in existence; and, according to the Pentateuch, it is clear that the possibility of sorcery, enchantment, witchcraft, &c., was recognised. Witches are not spoken of as impostors but as criminals. The doctrine of the existence of angels and demons, of familiar spirits, who might be subject to human control, of guardian angels and evil genii, is as old as the childhood of nations. Those who have recognised, on the one hand, the theory of the existence of God and of good angels have, on the other hand, been quick to admit the doctrine of Satan and his devils. Hoping and believing that God and his angels were propitiated by prayer and offerings; they have also believed and feared that Beelzebub and his legions might be similarly influenced.†

Almost every mythology which has existed among mankind has sanctioned the belief, that beings exist in the universe greatly superior to the human race in wisdom and power, and regarding mankind with the most deadly hostility. The terrors of this faith have, in many instances, been very much aggravated by the absurd idea, that it is possible for mortals to become the allies of these superhuman beings, to partake their power and to assist their evil designs. In some countries, the persons to whom such a compact is attributed are venerated as the favoured priests and servants of a formidable Deity. In others, the accusation of witchcraft is the ready pretext for robbing or murdering an obnoxious neighbour. But, in almost all nations, savage or civilised, the delusion exists or has

* Exodus, p. 426 and contra 115. See also Deuteronomy, c. xviii., v. 10, and Leviticus, c. xx., vv. 26 to 31.

† Monboddo Antient Metaphysics, vol. iv., Book 2, c. 7. Farmer on the Demoniacs, p. 13.

existed. A very slight knowledge of the absurd and degrading notions, anciently entertained respecting the spiritual world, will enable our readers to form a sufficiently accurate idea of the accusations which were common in the old trials for witchcraft in Europe, and especially in our own land. Neither Tasso nor Dante was superior to the superstition which clothed a supposed fallen archangel in the vulgar terrors of horns, tusks, and cloven feet. In their age, and since the witch was generally a spiteful old woman, who had sold her salvation for the pleasure of blighting her neighbours' corn, destroying their cattle, and feasting by night in their cellars and larders, her familiar spirit or attendant devil was present as a cat, a toad, or, in some peculiarly atrocious cases, a blue-bottle fly; the Demon, to whose service the witch devoted herself according to popular repute, combined the lowest passions of humanity with the stupidity, ferocity, and almost the outward shape of a wild beast.

The old maxim of English law that an accused person is regarded as innocent until proved guilty, did not apply to cases of witchcraft. In these it was reversed, and, in default of testimony against the accused, tests were applied. The most common test was the ancient ordeal by immersion in water, or, as it was called, *swimming;* in which the failure of the accused party to sink completely was held an infallible proof of guilt. This test was most comforting; if innocent the patient got drowned, if he escaped drowning he was burned. Another approved method was by *pricking;* which consisted in puncturing the body of the unfortunate victim, in the hope of detecting the *marks* or insensible spots, which were supposed to exist in every witch. In a third, the culprit was kept bound hand and foot, without food, drink, or sleep, for a day and night; it being thought that no witch could exist for a longer time without some visible communication with her familiar spirits. In these trials, the malignant vigilance of the persecuting watchers was seldom disappointed in detecting some symptom which they chose to consider a sign of guilt; and even when this did not occur, the life of the accused was generally endangered by the inhuman violence with which the tests were applied.

But the ordeal, absurd, cruel, and partial as it was, was only used in cases of the barest suspicion, and where no pretence of testimony could be alleged. The slightest shadow of evidence, or of what the prejudiced demonologist chose to consider evidence, was enough to send the culprit to the stake without hope or respite. The Continental Jurists openly laid down the rule, that persons of notoriously bad character, although not to be believed upon their oaths on the ordinary occasions of dispute that might arise between man and man, were to be believed if they swore that any person had bewitched them. James I. of England confirmed their opinion and improved upon it, by adding that the evidence of children, not old enough to understand the nature of an oath, ought also to be received. And, indeed, it was well for the victims when these proofs were of a kind which, in the opinion of their judge, justified their condemnation to a speedy death; for any contradiction or uncertainty in the evidence was considered a ground not for acquittal, but for extorting a confession from the accused party, by the unrelenting use of the severest torture.

The evidence for the defence was weighed in a very different balance. The monstrous supposition that an ugly woman could be a good Christian, or that a convicted perjurer would bring a false accusation of witchcraft, required to be supported by such proofs as scarcely any human testimony could furnish. Bodinus, a learned demonologist of the seventeenth century, has declared that an acquittal for sorcery could never be justified, unless the innocence of the accused was clearer than the proof of the sin's existence. How a negative—and such a negative—could be established in the triumphant manner—how a friendless vagrant was to prove that, during a life of thirty, forty, or fifty years, he had *never* attended a witch Sabbath, *never* soured milk, or raised tempests, or *never* danced at midnight on a broomstick at the Brocken—the sage magistrate has omitted to specify. But it is certain that his rule, sweeping as it is, is far too limited to justify all the condemnations which took place; for proofs of *alibi*, supported by the clearest testimony of the senses, were frequently

set aside, on the gratuitous supposition that the witnesses had been deceived by a diabolical illusion; and women were burnt alive for having been present at the nightly revels of *Domdaniel* or *Blockula*, though their husbands swore that they had never quitted their beds during the nights in question. There is, in short, little or no exaggeration in affirming that every imputation of sorcery raised a presumption of guilt against the culprit, and that very nearly approaching to what the law of England terms a presumption *absolute*. It was a presumption which a mere conjecture was sufficient to establish, and which, though nominally liable to be disproved, was in practice altogether insuperable. The pretended crime of witchcraft has been recognised and punished, from the earliest ages among the nations of Western Europe; though it was not until a comparatively modern period, that the superstition assumed its most absurd and malignant shape. Its most ancient victims were in general persons who had provoked suspicion by pretending to possess, or attempting to exercise forbidden knowledge. Such was the well-known case of Eleanor Cobham, Duchess of Gloucester, who was condemned to perpetual imprisonment in the Isle of Man, for attempting the life of Henry VI., by means of a sympathetic waxen image. Such was that of the Marèchal de Retz, a French nobleman of high rank and distinguished military reputation, who was publicly executed for sorcery in the fifteenth century, although, if the stories told of his crimes have any truth, he might well have dispensed with diabolical assistance in tormenting mankind. And such, in some measure, was the death of the heroic Maid of Orleans, whose delusions, innocent and patriotic as they were, were of a kind which no doubt excited sincere distrust and abhorrence among her superstitious enemies. Early in the fifteenth century, a general belief began to spread through Europe, that the crime of sorcery was fearfully on the increase. This delusion originated in the gross superstition and ignorance, resulting from many centuries of monkish domination over the popular mind, probably powerfully assisted by the strange pretensions of the Alchymists, which had long attracted the unfavourable

notice of the Church, and which were just at this time attaining their highest pitch of extravagance. The contagion of fear spread rapidly and fatally. In 1459 took place the celebrated trials and executions for witchcraft at Arras; the earliest instance, upon a large scale, in which innocent persons were put to death for that crime without any apparent object or provocation. The horrible example was eagerly followed throughout France, Germany, and Switzerland; and a few years later, a superstition, peculiarly proper to Biblical Christianity, was solemnly sanctioned by the Supreme Pontiff of the Christian Church. In 1488, Innocent VIII. gave the signal for one of the most fatal and wicked persecutions that ever disgraced mankind; by issuing a bull, in which he summoned all good Christians to the rescue of the Church from the open assaults of Satan and his mortal allies. His exhortations were repeated and renewed by several of his successors; and particularly by the pious and infamous Alexander VI. Then arose throughout Europe that strange and fearful monomania, which has so often seemed to impart a mysterious fascination to crimes of a new and shocking character. It was fortunate for mankind that the crime of sorcery, being morally and physically impossible, could not become common; or the world would really have become, what a terrified Demonologist called it, "a large madhouse for witches and devils to play their antics in." But religious teaching did its best; everything that could be done under such discouraging circumstances was done most zealously and perseveringly, both by witches and witch destroyers. The more enthusiastic sorcerers scrupulously performed all the approved ceremonies for raising the Devil, and generally finished by becoming convinced that their object had been fully attained. The more artful and incredulous satisfied themselves with terrifying and robbing their neighbours, by the help of false pretensions to witchcraft. On the other hand, hypochondriac squires, terrified clowns, hysterical girls, and mischievous children, united in ascribing their sufferings and mishaps to enchantment; and usually fixed at random upon the nearest old woman as their tormentor. These accusations were so

readily heard, and so unsparingly acted upon by the legal authorities, that the number of executions shocked and startled even the thoughtless and excited mob. The poorer classes began to look forward with natural alarm to the time when age and deformity might qualify themselves for the fate which they daily saw overtaking their neighbours, and, in many places, the inquisitors of the law were compelled by popular violence to abandon their researches. But Churchmen and kings felt no such apprehension, and the fury of the persecution became daily more unsparing.

For nearly two hundred years after the bull of Innocent, the mania continued with scarcely any symptoms of abatement. Throughout the sixteenth century it was chiefly confined to France and Germany, in which countries the number of its victims must be reckoned by hundreds of thousands. Their total amount, indeed, can only be calculated from those which remain on record; but some idea of its magnitude may be formed from the fact that many districts and large towns burnt two, three, and four hundred witches every year; and that in some the annual executions destroyed nearly one per cent. of the whole population! The accusations were of the usual kind, except in the south of France, where the crime of *lycanthropy*, which consisted in self-transformation into a wolf, or, as such enchanted animals were called, a *loup-garou*, was believed to be very prevalent. The Reformation, which swept away so many superstitions, left this, the most odious of all, in full activity. The Churchmen of England, the Lutherans of Germany, the Calvinists of Geneva, Scotland, and New England, rivalled the most bigoted Roman Catholics in their severities. Indeed, the Calvinists, though the most opposite of all to the Church of Rome, were in this respect perhaps the most implicit imitators of her delusions.

The contagion was late in making its appearance in Great Britain, though its presence, when once it became general, was not less destructive than in other countries. It was not until 1562 that the English Legislature disgraced themselves by formally recognising the practice of magic as felony. After this time, however, the panic gradually increased; and towards the end of Elizabeth's

reign the spread of witchcraft had become a favourite subject of lamentation and warning with the Court preachers. At length, in 1593, occurred the well-known and disgraceful tragedy of the witches of Warbois, which ended in the public murder of a whole family, upon no better evidence than the ravings of a delirious girl. Still this was for some time almost a solitary instance. But the pestilence broke out afresh upon the accession of James I. That vain and worthless pedant had always looked upon witchcraft with peculiar horror, and had, moreover, been greatly delighted by the fatal flattery which asserted that he was the most dreaded enemy of their fraternity. A Scottish Act of Parliament for the suppression of sorcery had been passed in 1563, but during the reign of Queen Mary the executions under it, though more frequent than in England, were comparatively few. James, however, speedily increased them to four hundred annually, a number more than quadruple their previous amount, though not greater than was furnished by many single towns on the Continent. He presided at the famous trial of Euphemia Macalzean and her accomplices in 1591, a trial which terminated in the execution of thirty persons at once, many of them with circumstances of unusual and shocking barbarity. He also signalised himself by publishing a treatise on demonology, in which he maintained the most puerile superstitions of the witch-finders, and openly accused Reginald Scott of sadducism for denying the possibility of the crime.

Accordingly, in 1604, the very year after the accession of James to the English throne, a new act was passed for the detection and punishment of sorcerers; and from this time the persecution may be said to have fully commenced. During the seventeenth century, 40,000 persons are said to have been put to death for witchcraft in England alone! In Scotland the number was probably, in proportion to the population, much greater; for it is certain that even in the last forty years of the sixteenth century the executions were not fewer than 17,000. In 1634 the madness may be said to have reached its highest pitch. In that year occurred the celebrated case of the Lancashire witches, in which eight innocent persons were deprived of their lives

by the incoherent falsehoods of a mischievous urchin. The civil war, far from suspending the persecution, seems, if possible, to have redoubled it; for the English Puritans and Scottish Covenanters were, like all of their religious persuasion, full of love and charity, and most rigorous and unscrupulous in exterminating sorcery. In 1644 and 1645 the infamous Matthew Hopkins was able to earn a comfortable subsistence by the profession of witch-finder, which he exercised, not, indeed, without occasional suspicion, but still with general success. And even twenty years later, the delusion was still sanctioned by the most venerable name of the English law; for it was in 1664 that the excellent Sir Matthew Hale, after a trial conducted with his usual patience and impartiality, though not perhaps with his usual good sense, condemned two women to death as witches, both of whom were executed accordingly.

At length, however, soon after the middle of the seventeenth century, the superstition began to show signs of decline. In some countries its fall was hastened by the belief that the powers of darkness had used the general panic as a means of destroying the innocent, and that the witch-finders were either witches themselves, or subject to diabolical delusion. The conjecture excited general attention; for the most zealous demonologist could not deny that Satan would have found, in such a deception, a far easier and more effectual means of tormenting mankind, than in the petty mischief usually ascribed to him. This fortunate counter-delusion produced a great effect in many parts of Germany, and also in New England—in which colony the mania broke out with sudden violence about the year 1670, and, after costing nineteen lives, as suddenly disappeared.

In 1669 seventy persons were put to death at a small village of Dalecarlia, in Sweden, upon the evidence of some insane or malicious children: but, fortunately, the contagion did not spread any further in that country. And so late as 1697 five persons were executed together at Glasgow, upon the evidence of a sick girl, aged eleven! But these were the expiring effects of the delusion. In 1680, France set the example to Europe of its final and absolute suppression. In

that year, Louis XIV. issued a proclamation prohibiting all future prosecutions for witchcraft; and directing that even those who might profess the art should only be punished as impostors. A solemn remonstrance by the Parliament of Rouen was wisely disregarded; and the benefits of the step were speedy and conspicuous. The good example was followed, though less readily than it ought to have been, by other nations. In Germany the punishment of death had been already disused, and even that of imprisonment was daily becoming more rare. In England and Scotland the exertions of enlightened and humane judges, among whom Chief Justices Holt and Dundas of Arniston are honourably conspicuous, generally succeeded in drawing a verdict of not guilty from the jury, or a pardon from the Crown. At length the long list of murders was brought to its close in both countries. In the former, the last execution was at Huntingdon, in 1716; in the latter, at Dornoch, in Sutherlandshire, six years later. Two or three instances of popular violence against suspected witchery met with just and exemplary punishment; and in 1736, the statute of James I. was solemnly repealed throughout Great Britain. One solitary crime more was committed at Wurzburg, in Bavaria—a town which had early and long been infamous for the cruelty of its witch-finding magistrates. In 1749—when the subject was almost forgotten everywhere else—a young woman, named Maria Sanger, was, to the horror of all Europe, burnt alive in that town, on a charge of having bewitched the nuns of a neighbouring convent. This was the last execution for witchcraft which ever took place in a civilised country. Yet even to day, and even in England, remnants of the vulgar superstition may be traced out amongst the uneducated; and although civilisation has robbed religion of the power to burn the body, it has not yet entirely rescued the child from the liability to those early Bible teachings which leave their disastrous impress to taint maturer thinkings.

Chap. xxii., v. 20, "He that sacrificeth unto *any* god, save unto the Lord only, he shall be utterly destroyed." It should really be read, "He that sacrificeth to the ALEIM, except only to JEUE, shall be destroyed." And v. 28, "Thou

shalt not revile the Gods (Aleim)." And chap. xxiii., v. 13. Who and what are these gods, or Aleim, and why these commands? According to its best advocates, the sole end of this Mosaic dispensation is the worship of one God, yet here are other gods referred to. If I sacrifice to them, I hazard destruction, and if I revile them, I shall probably fare no better. Josephus says, "Let no one blaspheme those Gods which other cities esteem such."*

The words in v. 20 forbid any sacrifice to the ALEIM, except to JEUE (Jehovah), who is, therefore, here regarded as one of the Aleim. Who were the others? The prohibition in Exodus, chap. xx., v. 3, read with the verses above quoted, would apparently make the whole of the Aleim, except Jeue, heathen deities; but there are instances in which another name than that of Jehovah is given to a God of the Jews. For example, the names compounded with אל AL, such as אל שדי AL SheDI, Almighty God, אל עליון AL OLIUN, the most High God, &c., and we find one אלה מעוים ALE MOZIM, the God of fortresses, who may either be a Jewish or a heathen God. We give here a few of the names of heathen deities found in the Bible; and shall deal with others as we reach them in order.

בעל BOL † Baal, "the ruler." Under this name, which occurs very often in the Bible, several nations worshipped the Solar fire as the active ruling producing principle of nature. Sanchoniathon says, "This god the Phœnicians thought to be the only Lord of Heaven, calling him Beelsamen, which in their language is Lord of Heaven." God was called Bal in the Punic tongue. The name Hannibal, famous amongst the Carthaginians, signifies "God be gracious to me." Baal, says Etheridge, is sometimes used not only for the sun, but also for the planet Jupiter, and is then joined with Gad the designation of that star in the oriental astronomy. So, too, in the Zabian Mythology, Jupiter takes the name of Bel. ‡

‡ Targums on the Pentateuch, p. 21.

Phonizie" shows how this word Bel in various forms, as Bel Mithra, Bel Saturn, and Zeus Belus, is identified with the sun, the light-giver, the life-giver.*

Gesenius says that Baal was the domestic and principal deity of the Tyrians, and was worshipped together with Astarte or Ashtaroth by the Hebrews (see Judges, chap. ii., v. 13, and chap. x., v. 6); Bel being the sun, and Astaroth the moon.† Baal is said to have been represented by a bull, and Astaroth as a female with a bull's head.

בעל פעור BOL POUR, Baal Peor (Numbers, chap. xxv., v. 3). The word Pour, according to Parkhurst, means "open," as in the sense of an open-mouthed beast of prey, and it is alleged that this name was used because of the gaping mouth of the idol, into which the victims were thrust.‡ Professor Bresslau in his Lexicon gives, however, a very different meaning, treating the word as signifying "uncovering of the nakedness," and he identifies the worship of Baal Peor with that class of idolatry, by women, of the productive organs common to many of the old religions.§ The Reverend Thomas Maurice, who evidently takes this view, quotes Bishop Cumberland in favour of the opinion that the worship of Baal Peor and of Priapus is of one and the same character.‖ Selig Newman corroborates by his translation of the word POUR the opinion here given. Simonis also corroborates this view,¶ the Lexicons of Newman and Simonis give to the word POUR as here used a speciality of signification which can only apply to the Priapian rites. In the index to the Breeches Bible of 1589, the same explanation is given. Cahen couples Baal Peor with Belphegor.

Etheridge says, "the Rabbins give an obscene meaning to the name Peor, but others, as Gesenius, derive it from an

old verb, still retained in the Ethiopic, signifying 'to serve,' or 'worship.'"

בעל זבוב BOL *Ze*BUB, Beelzebub, Lord of the Flies.* This name does not occur often in the Bible (see 1 Kings, chap. i., vv. 2 and 3; Matthew, chap. x., v. 25; and Luke, chap. xi., v. 15, &c.); and Bresslau translates it, "The Baal who kills flies—*i.e.*, the Deity protecting from vermin." Parkhurst, referring to Baal Zebub as one of the Aleim of the Philistines, says, that he appears to have been one of their medical idols. The Septuagint render Baal Zebub as "Baal the fly."

מלך *Me*LeK, Molok, King—(Leviticus, chap. xviii., v. 21.) According to the Rabbins, the statue of Molok was of brass, with a human form, but the head of an ox; it was hollow within, and heated from below, and the children to be sacrificed were cast into its arms. Etheridge says, "From the similarity of meaning with that of Baal, 'a sovereign' or 'lord,' Molok is regarded as another epithet for the same deity—the ruler of existence; but as manifesting his dominion in the destruction of life, a phase of character opposite to that of Baal, the sovereign producer. Hence the worship of Molok was solemnised with fatal rites. The parent surrendered the life of his offspring and burned his own child as a holocaust." Parkhurst regards this as only another phase of sun-worship. The name Melek forms part of Melchizedek, the king who was without father or mother, without beginning or end. If the quotations from Diodorus are reliable, there seems to have been a striking likeness between the sacrifices offered to Saturn and to Molok. Adrammelech (the glorious Melech) and Annamelech (the cloud Melech)—2 Kings, chap. xvii., v. 31—are apparently only slightly varying names for the same deity.

כמוש, *Ke*MUSh. Chemosh. Parkhurst's guesses as to the meaning of this word do not much aid us. Etheridge says the symbol of Chemosh was a black star. Gesenius says it was a black stone. Cahen says that you have nothing but conjectures as to this deity or the meaning of his name.

* Leo's Gesenius, p. 188—Tregelle's Gesenius, p. 131—Bresslau, p. 170—Parkhurst, p. 169.

Chap. xxiii., v. 5.—"If thou see the ass of him that hateth thee lying under his burden, and wouldest forbear to help him; thou shalt surely help with him." The Douay has after burden, "thou shalt not pass by, but shall lift up with him." Kalisch reads, "forbear to leave it to it; thou shalt leave it only with him." Cahen has, "*garde toi de l'abandonner à luimême, abandonne-toi avec lui.*" Luther says, "take care; leave it not, but leave willingly thine own for his sake." Michaelis, "so shalt thou not go by and him for his master leave helpless, but thou shalt take hold and not leave him more than thine own." There appears to be considerable difficulty as to a Hebrew word, עזב, OZeB, which occurs three times in the passage referred to, and the meaning of which is disputed. How satisfactory to the true believer to know that God has revealed his will in a language which the rabbis of his own chosen race cannot agree in translating, even in apparently some of the most simple phrases.

Verse 15.—"And none shall appear before me empty." The verses 14 and 15 are repeated almost literally in Deut. c. xvi., v. 16. The injunction that none of the worshippers are to come empty handed is worth attention to those who still regard the Books as of divine origin. Every worshipper is required to bring with him some gift with which to propitiate the infinite and immutable Deity.

Verse 23.—"For mine Angel shall go before thee, and bring thee in unto the Amorites, and the Hittites, and the Perizzites, and the Canaanites, the Hivites, and the Jebusites: and I will cut them off." After the Canaanites, the Septuagint adds the "Gergashites."

Verse 28.—"And I will send hornets before thee, which shall drive out the Hivite, the Canaanite, and the Hittite, from before thee." The Septuagint puts "the Amorites" in before the others—"Hornets." The Hebrew word is צרעה, TzROE, but Gesenius regards the phrase as figurative.

Verse 29.—"I will not drive them out from before thee in one year; lest the land become desolate, and the beast of the field multiply against thee." Bishop Colenso, who shows that, if the Israelites had been as numerous as re-

presented in the Pentateuch, they would have peopled Canaan as thickly as were the English counties of Norfolk, Essex, and Suffolk in 1851, asks, are these three Eastern Counties in any danger of lying desolate with the beasts multiplying against the inhabitants.*

Verse 31.—The Septuagint, instead of leaving the river as in our version, names it the great river Euphrates—"Thou shalt drive them out." The Douay, Vulgate, Septuagint, and Cahen agree in saying, "I will drive them out." This promise of the angel going before the Jews to strike fear into the Philistines and Canaanites, and to drive them out, does not appear to have been entirely verified; nor is it true that the Lord kept all sickness away from the Jews, or that the other promises in this chapter were all fulfilled. CHAP. xxiv., vv. 9 to 14.—The narrative here given is in effect contradicted in chap. xxxiii., v. 20, John, chap. i., v. 18, 1st Epistle of John, chap. iv., v. 12, 1st Epistle to Timothy, chap. i., v. 17, Colossians, chap. i., v. 15. It cannot be urged that this is figurative, because the evident intention is to give a literal account of seventy-four persons going up to see God. To what place they went up is not clear; it was not upon the mount, or, at any rate, but a short distance on it, for Moses and Joshua left them, and went up from them into the mount.

Verse 1.—"And he said." The Rabbis have made great conjectures as to who it was said what follows. It is urged that it cannot mean "and God said," because the words used refer to God as a third person. The Samaritan version adds here, and in v. 9, after Nadab and Abihu, the names Eleazar and Ithamar,

Verse 4.—"Pillars." The Douay has "titles." Cahen has "steles."

Verse 5.—"Young men." נערי NORI. It is stated in the Talmud that the editors of the Pentateuch found in the temple three manuscripts; two of which had this word, and one of which had זעטוטי ZOTUTI, and that the Rabinical editors adopted the reading of the two, destroying the third.†

* Pentateuch, Part I., p. 83.

† Cahen, Exode, p. 101—Chajim's Introduction, p. 16.

Verse 7.—"Book of the Covenant." ספר הברית SePheR EBeRITh. What was this book so read? What has become of it? The Rabbis have disputed on these points but have left us no information. It clearly must have been a book separate from the Pentateuch and anterior to it. Was it God's revelation? And if yes, how does its loss affect the Bible believer?

Verse 9.—Joshua is not named here, and unless he is included amongst the seventy elders, which, from v. 14, does not seem probable, it is difficult to understand why he is omitted, as it is clear, from the remainder of the chapter, that he must have been with Moses.

In the Hindoo mythology we find several instances of gods, under whose feet paved work may be seen; but these gods are—according to Christians—neither omnipotent, infinite, nor omniscient. All Christians assert that the extraordinary histories of Indian deities are fabulous, and when they gaze on the curious pictures of various gods, given in the "Asiatic Researches," Maurice's "Indian Antiquities," and other kindred works, they feel convinced of the superiority of their own system, which is free from such ridiculous absurdities. But how do these enlightened Christians deal in their own minds with this chapter, which tells them that their "invisible" God was seen by seventy-four men in a fiery mount, with, as it were, a paved work under his feet? These seventy-four, though no man can see God and live, being so little affected by the immediate presence of the infinite that "they saw God and did eat and drink."

Dr. John Pye Smith, never at a loss, easily reconciles these apparent discrepancies by asserting that they refer to the different persons of the Father and the Messiah, but this is only "confusion worse confounded," for it is quite clear that it was not the Messiah who is referred to, either here or in the many other texts speaking of the appearance of the Lord to Abraham, Isaac, and Jacob; it is also clear from the New Testament that Jesus was not invisible; so we are left without aid from the Reverend Doctor's comment, and must still wonder how an "invisible" God ever appeared to anybody.

In a debate held between the writer and the Rev. Dr. Baylee, president of St. Aidan's College, Birkenhead, the following reference was made to this chapter :—

"I." Do you believe, according to 1st Timothy, chap. i., v. 17, that God is invisible; and according to chap. vi., v. 16, that no man hath seen or can see God; and according to 1st John, chap. iv., v. 12, that no man hath seen God at any time?

Dr. B. I do.

"I." Do you also believe, according to Exodus, chap. xxiv., v. 10, &c., that seventy-four persons all saw God at one time?

Dr. B. I do.

"I." Am I to understand that you believe that God has not been, and cannot be, seen, and that he has been seen. Do you thus believe?

Dr. B. I do.

"I." Is not that a contradiction?

Dr. B. It is not.

Comment on this would be worse than useless.

Chap. xxv., v. 1, &c.—The directions which follow are of a most extraordinary character when put into the mouth of an infinite Deity. To suppose the creator of the universe directing the manufactory of a dwelling for himself (v. 8); or to picture the Mighty Ruler of all existence ordering the fashion of a golden chair in which he shall sit (vv. 19 and 22), requires, at least, the exercise of great faith, and the utter disuse of all reason. It is somewhat embarrassing—even for a devout believer—to recollect the words of the injunction against graven images, &c., contained in v. 4 of chap. xx., and to apply it in connection with the directions for sculptural adornments of the tabernacle. The Douay version has in this chapter a number of trifling differences of translation. In v. 1, it has "first fruits" in lieu of "offerings;" in v. 4, "violet" instead of "blue," and it says the scarlet is to be "twice dyed;" in v. 5, it has "violet skins" in lieu of "badgers' skins." Cahen call this, skins of the Tehaschime, and says that the meaning of the expression is unknown. The Talmud teaches that this was the skin of a rare beast, something like a leopard, but which

existed only during the construction of the temple. In v. 8 the Douay has, "the rational" in lieu of "the breastplate." In v. 18, in lieu of "mercy seat," it has "oracle;" and the same in v. 20. In v. 25, instead of "a border of an hand breadth," it has "to the ledge itself a polished crown, four inches high."

Verse 10.—Sacred arks have been used amongst many ancient people—the Greeks, Romans, Etruscans, Egyptians, &c.; and some of them very similar in form to that here provided.* Did God adopt the Pagan pattern, or was he unaware of it?

In the reference to the cherubims in v. 18, no size is specified. They are spoken of as if they were objects familiar to Moses. Josephus, speaking of these cherubims, says, "They are flying creatures, but their form is not like to any of the creatures which men have seen, though Moses said that he had seen such beings near the throne of God."

Verse 40.—"And look that thou make *them* after their pattern, which was shewed thee in the mount." When was this pattern shown? Was it a pattern made by God and preserved in heaven? Some of the Talmudical commentators declare that Moses did see the model of the tabernacle during his stay on the mountain; and that, in fact, the Jewish Sanctuary is really an imitation of a similar, though infinitely more grand, structure in heaven.†

The twenty-sixth chapter one would regard as a most trivial description, utterly unimportant to us, but as we find the whole of it repeated only ten chapters further in the same book, we are bound to examine it in order to discover if it be possible the great moral lesson hidden by the curtains, rings, boards, bars, and vails, which are so amply delineated. Kalisch translates the word משכן MeShKeN (in our version called tabernacle) as "habitation." The tabernacle was to be the habitation of the God of the Jews.

Verse 1.—"Moreover thou shalt make the tabernacle *with* ten curtains *of* fine twined linen, and blue, and purple,

* Kalisch, Exodus, p. 491.

† Kalisch, Exodus, p. 496.

and scarlet: *with* cherubims of cunning work shalt thou make them." What does the last clause of this verse mean? The Douay, following the Latin Vulgate, has, "And thou shalt make the tabernacle in this manner: thou shalt make ten curtains of fine twisted linen, and violet and purple and scarlet twice dyed, diversified with embroidery." The Douay omits the cherubims, but the fair explanation seems to be that these lost birds, beasts, or monsters, were in addition to being placed as images on the ark, to be also embroidered, by way of ornamentation, to the curtains of the tabernacle.

Verse 29.—Cahen says, "Suppose that the interior was covered with gold of only a *millimétre* of thickness, it would have required more than 3,600 kilogrammes of gold; or in money, value about 14,000,000 of francs; a large sum this for a tribe of wanderers.

Verse 31.—There is here the same strange difference between our version and the Vulgate and the Douay—the latter reading, "wrought with embroidered work and goodly variety," in lieu of "with cherubims shall it be made."

Verse 35.—The Samaritan version inserts here the first ten verses of chap. xxx. There are numerous variations between the various translations of this chapter, but none of an important character. Josephus gives the following quaint explanation as to the tabernacle and its accessories:—"Now,* here one may wonder at the ill-will which men bear to us, and which they profess to bear on account of our despising that deity which they pretend to honour; for if any one do but consider the fabric of the tabernacle, and take a view of the garments of the high priest, and of those vessels which we make use of in our sacred ministration, he will find that our legislator was a divine man, and that we are unjustly reproached by others: for if any one do without prejudice, and with judgment, look upon these things, he will find they were every one made in way of imitation and representation of the universe. When Moses distinguished the tabernacle into three parts, and allowed two of them to the priests, as a place accessible and common, he denoted

* Antiquities, Book 3, chap. vii., § 7.

the land and the sea, these being of general access to all; but he set apart the third division for God, because heaven is inaccessible to men. And when he ordered twelve loaves to be set on the table, he denoted the year, as distinguished into so many months. By branching out the candlestick into seventy parts, he secretly intimated the *Decani*, or seventy divisions of the planets; and as to the seven lamps upon the candlesticks, they referred to the course of the planets, of which that is the number. The vails, too, which were composed of four things, they declared the four elements; for the fine linen was proper to signify the earth, because the flax grows out of the earth; the purple signified the sea, because that colour is dyed by the blood of a sea shell-fish; the blue is to signify the air; and the scarlet will naturally be an indication of fire. Now, the vestment of the high-priest being made of linen, signified the earth; the blue denoted the sky, being like lightning in its pomegranates, and in the noise of the bells resembling thunder. And for the ephod, it showed that God had made the universe of four (elements); and as for the gold interwoven, I suppose it related to the splendour by which all things are enlightened. He also appointed the breast-plate to be placed in the middle of the ephod, to resemble the earth, for that has the very middle place of the world. And the girdle which encompassed the high-priest round, signified the ocean, for that goes round about and includes the universe. Each of the sardonyxes declares to us the sun and the moon; those, I mean, that were in the nature of buttons on the high-priest's shoulders. And for the twelve stones, whether we understand by them the months, or whether we understand the like number of the signs of that circle which the Greeks call the *Zodiac*, we shall not be mistaken in their meaning. And for the mitre, which was of a blue colour, it seems to me to mean heaven; for how otherwise could the name of God be inscribed upon it?"

Chap. xxviii.—Can anything be more puerile than the representation of Deity given here? The supporter of the doctrine that this book is literally true requires us to imagine the God of the Universe giving directions for the particular description and decorations of cloak, girdle,

bonnet, and breeches to be worn by a few members of the human family dwelling in a narrow district of this our earth, which itself sinks into insignificant littleness when compared with the solar and astral systems of mighty vastness in which it figures but as the one grain of sand in Sahara's desert, or the solitary drop of water cast upon the bosom of the Atlantic.

Verse 30.—"And thou shalt put in the breastplate of judgment the Urim and the Thummim." The Douay has followed precisely the Latin of the Vulgate, "Thou shalt put in the rational of judgment doctrine and truth." Kalisch says that almost innumerable conjectures have been made as to the Urim and Thummim, and that the subject is one of the most obscure kind. The Jews believed that, through the Urim and Thummim, oracular replies were made. See Numbers c. xxvii., v. 21; 1 Samuel c. xxviii., v. 6. Cahen enters very fully into the examination of this verse. He says*—"It is necessary to remark that nowhere in the Hebrew text is there any mention of the construction of these objects, nor of their remarkable qualities. No part of the Bible gives the least information concerning them. The Pentateuch, which enters almost minutely into the details of the vestments of the priests, observes an absolute silence concerning the Urim and Thummim, as though these were commonly known to the Israelites, and not requiring description. Indeed, nothing is more common among the ancients than consultations by oracles in private, as in public affairs: also the Rabbi Azaria, the author of 'Maur Oinim' (the light of the eyes) says, 'In the name of the Rabbi Abadia Sephorno I have heard these words; in the breastplate of the High Priest there were two names, etc., and the Urim were similar in intention and form to those predictions which rendered by the idolatrous priests called oracles among the ancients.' These oracles had already ceased during many ages when the Chaldean and Greek translations were composed, and when Josephus and Philo wrote their works. And since their time, profound obscurity has reigned concerning the form and manner of consultation. We are,

* Exode: Notes Supplementaires.

therefore, reduced to analogies and conjectures concerning it, even upon the origin of the words Urim and Thummim. Onkelos does not translate them, nor Mendelsohn. Abarbanel relates, according to a commentator, that Urim and Thummim did not give the gift of prophecy, but that they gave the means of answering well to questions having for object the public needs."

Ben Ouziel paraphrases *Aurim* by that which enlightens from Aur אור, *gold, light;* and as to Themim תמים, he says, *that which makes perfect, from* תום Thum, *perfection;* which would be, for Urim and Thummin, *light* and *perfection*, as some translate. The Septuagint has translated in the same sense. These translations have given rise to the opinion put forth by Spencer, that Urim and Thummim were small speaking statues, as the תרפים Teraphim or סרפים Seraphim, *Serapis* of the Egyptians. There are quoted in support of this conjecture two passages from ancient authors—the one of Diodorus Siculus, and the other of Elian. The first, speaking of the president of the Egyptian tribunals, expresses himself thus—"He wore round the neck, suspended by a gold chain, a small figure of precious stones, which they called *the truth.* The debates opened when the president placed in front of himself the image of truth." (Lib. i., c. xxxi.) The second, after saying that the judges in Egypt were priests, adds—"The most aged among them was their chief and supreme judge. It was required that he should be the justest and most sincere of man; he wore round the neck an image of Sapphire; this image was called *the truth.*" (Varian. Hist., lib. xiv., c. 34.) The Prophet Hosea expressly joins the ephod to the teraphim:—"There is neither ephod nor teraphim." Ch. iii., v. 4. We know that Micah, wishing to improve the profession of Cohen, priest, provided himself with ephod and teraphim. (Judges, c. xvii., vv. 3, 5, and c. xviii., v. 17.) Some pretend that the twelve precious stones of the breastplate formed the Urim and Thummim. Such is firstly the opinion of Josephus—"By means of the twelve precious stones, he says, which the Pontiff wore on the breast in the breastplate, God predicted victory to those who went to battle. Then the light from these stones be-

came so brilliant before the army began its march, that the people remained convinced that they had God for an auxiliary. Thence also the name *Logion* (supreme reason) given by the Greeks to this oracle, for nothing could contradict it." (Ant., lib. iii., c. 8.) A divination by lot founded upon the greater or less brilliancy of certain gems, is still in use in several countries of India. The Babylon and Jerusalem Talmuds are of the same opinion. One reads in the first (Jom. c. vii. fol. 73)—"How was it made (the answer to the Urim and Thummim)? Rabbi Io'hanan (John) says, they (the letters) came forth; Resch Lakisch says, they reunited themselves. How? since there was not the letter *tsadi* צ among them? Rabbi Schemouel, the son of Isaac, says—the names of Abraham, Isaac, and Jacob were written. Then the letter Teth ט was still wanting? Master Rabbi A'ha, the son of Jacob, answers —the words of 'tribes of Jeschouroun' were written there." The Talmud of Jerusalem says that a very gentle voice made itself heard; and instead of Jeshuron, it puts Israel. According to the Talmud, this oracle was not consulted except for public affairs. (Jom. c. vii., fol. 72.)—"The priest is not questioned except for the king, the court of justice, and the wants of society." It is very probable, above all, by the history of Achan (Joshua c. vii.) that the answers were drawn by lot. It was in this manner, even according to the Talmud, that the distribution of the land was made among the tribes. The ephod had perhaps the form of a bag, in which were placed the several possible chances; that which was drawn was the decision of God. The possession of the divinatory apparel gave to the sacerdotal caste immense power, which it had soon to share legally with the seers (the *Nabis*, inspired orators); and illegally with simple individuals, such as Micah and the Levites, direct descendants of Moses. (Judges c. xviii., v. 31.) Josephus says that this oracle ceased about two centuries before the destruction of the second temple. (Ant. lib. iii., c. 18.)

The use of the equivalent to the Urim and Thummim amongst the Egyptians is rather a ground for the supposition that the Jews borrowed these mystical ornaments from the former nation; for, as the religious Parkhurst admits,

"It is by no means credible that they should take it from the Israelites after the giving of the law."* Gesenius also admits, that "The Hebrews seem in this manner to have imitated the Egyptians."† Etheridge says, "Connected, though to us in some uncertain way, with the breastplate, were the Urim and Thummim, the means or instruments of decision or judgment, in doubtful matters of importance to the public interests of the nation. Urim is the plural form of the noun אור, AUR—'fire or light'—and Thummim the plural of תם, TheM—'fulness or completion, integrity, uprightness, truth.' The ordinary rendering of Urim and Thummim is, 'Lights and Perfections.' Onkelos merely Aramaizes the terms. The LXX. give them by *ten delosin kai ten aletheian*, 'manifestation and truth;' the other Greek versions by Aquila, Symmachus, and Theodotion, by *tous photismous kai tas teleiotetas*, 'illuminations and perfections:' the Syriac by 'resplendence and completion;' the Samaritan version by 'elucidations and certainties;' and the Vulgate by *doctrinam et veritatem;* the Arabic, by 'holiness and truth.' As to the manner in which responses were obtained by the Urim and Thummim, *silente Scripturâ nihil pro certo statuatur.* There are several conjectures, more or less plausible, but conjectures only. *Ex. gr.*: 1. Two tablets representing an affirmative or a negative, inserted within the folds or pouch of the breastplate, and used in the manner of drawing lots. 2. That the priest dressed in the ephod stood before the veil, and heard the answer pronounced by a voice from within. 3. The verbal answer would be spelled out by the priest, as one letter after another became illuminated. 4. The wearing of the breastplate had a moral influence on the mind of the priest, which predisposed him to receive the answer by an inward dictate of the Holy Spirit. 5. The Urim and Thummim were identical with the twelve jewels. We see in Exodus, chap. xxviii., v. 30, that the Urim and Thummim were to be put upon the breastplate; what was put upon it but the jewels? These were, therefore, the Urim and Thummim, and were ordained to make instru-

* Parkhurst, Lexicon, p. 40.

† Tregelles Gesenius, p. 24.

mentally the perfect revelation, *Thummim*, by their lights, *Urim*. Now, as the Divine response, unlike the more diffuse oracles given in after-days by the Holy Spirit to the prophets, was vouchsafed to the high priest in a simple affirmative or negative—yes or no—it is conjectured that the affirmative answer might have been given by the increased refulgence of the jewels; and the negative, by the withholdment of it. On the general subject, compare Exodus, chap. xxviii., v. 30; Lev., chap. viii., v. 8; Exodus, xxxv., v. 27; Ezek., chap. xxviii., v. 14; 1 Samuel, chap. xxiii., v. 2. And the instances in Num. xxvii., vv. 18—31; Joshua, chap. vii., vv. 13 and 21; Judges, chap. i., v. 1; Judges, chap. xx., vv. 18 and 28; 1 Samuel, chap. xiv., vv. 40—43; 1 Samuel, chap. xxiii., vv. 9-12; 1 Samuel, chap. xxviii., v. 6."*

Chap. xxix.—At the very time that God was thus directing that Aaron and his sons should be anointed, and while God was intimating that he would sanctify Aaron, the latter must have been engaged in the manufacture of the golden calf. Did God know this? If he did, it is hard to understand how he chose an idolator for his priest. If otherwise, God is not omniscient. The family of Levi, who, with Simeon, was so severely spoken against by Jacob, seem the most favoured by Jacob's God.

Verse 33.—" And they shall eat those things wherewith the atonement was made, to consecrate *and* to sanctify them." The Douay reads, " That it may be an atoning sacrifice, and the hands of the offerers may be sanctified." Kalisch remarks that the construction of this verse is most embarrassing.

Verse 36.—The Septuagint's translation differs here in some respects from our version, and from the Hebrew saying, that the sacrifice is to be made the day of the purification. As the Jews were in the desert, and as these offerings were to be every day (v. 36) day by day (v. 38), and continually (v. 42), one is tempted to inquire, with Aben Ezra, where the Jewish wanderers were to find the necessary bullocks, lambs, flour, wine, and oil† for the fulfilment of all these sacrifices?

* Targums on the Pentateuch, p. 45.

† Cahen, Exode, p. 140.

Chap. xxx., vv. 1 to 10.—In the Samaritan these verses are wanting here, having been inserted, chap. xxvi., v. 35.

Verses 12 and 13.—"When thou takest the sum of the children of Israel, after their number, then shall they give every man a ransom for his soul unto the Lord, when thou numberest them; that there be no plague among them, when thou numberest them. This they shall give, every one that passeth among them that are numbered, half a shekel, after the shekel of the sanctuary: (a shekel is twenty gerahs;) an half shekel *shall* be the offering of the Lord." Cahen asks, whether the shekel was a piece of money or a weight? and remarks that the use of the words shekel of the sanctuary seems to imply that there was also another current or profane shekel. Colenso says,* "We may first notice in passing, that the expression, 'shekel of the sanctuary,' in the above passage, could hardly have been used in this way until there *was* a sanctuary in existence, or, rather, until the sanctuary had been some time in existence, and such a phrase had become familiar in the mouths of the people. Whereas, here it is put into the mouth of Jehovah, speaking to Moses on Mount Sinai, six or seven months before the Tabernacle was made. And in Exodus, chap. xxxviii., vv. 24, 25, and 26, we have the same phrase used again, of the actual contributions of the people towards the building of the Sanctuary. The Seventy indeed render the Hebrew phrase by *to didrachmon to agion*, 'The sacred shekel.' But this can hardly be the true meaning of the original, הקדש בשקל, EQeDeSh BeShQeL, and if it were, the difficulty would still remain, to explain what the 'sacred shekel' could mean, before any sacred system was established. But these words direct that, whenever a numbering of the people shall take place, each one that is numbered shall pay a 'ransom for his soul' of half a shekel. Now, in Exodus, chap. xxxviii., v. 26, we read of such a tribute being paid, 'a bekah for every man —that is, half a shekel, after the shekel of the sanctuary— for every one that went to be numbered from twenty years old and upward,' that is, the atonement money is collected;

* Part 1, chap. vii., in reply to Dr. McCaul's "Examination of Colenso," p. 39.

but nothing is there said of any census being taken. On the other hand, in Numbers, chap. i., vv. 1—46, more than six months after the date of the former occasion, we have an account of a very formal numbering of the people, the result being given for each particular tribe, and the total number summed up at the end; here the census is made, but there is no indication of any atonement money being paid. The omission in each case might be considered, of course, as accidental—it being supposed that, in the first instance, the numbering really took place: and, in the second, the tribute was paid, though neither circumstance is mentioned. But, then, it is surprising that the number of adult males should have been *identically the same* —(603,550)—*on the first occasion as it was half a-year afterwards.*"

Verse 15.—The words "when they gave an offering unto the Lord to make atonement for your souls," are totally omitted in the Douay version.

Verses 22 to 38.—The God of the Jews, who, according to Christians, is a God of love and full of mercy and loving kindness, here ordains that every man who shall manufacture, give to a stranger, or smell a particular kind of scented ointment, shall be put to death. Christian Theist, you tell me that yours is the "eternal, immortal, and only wise God" (*vide* 1st Timothy, chap. i., v. 17)—do you in truth believe that he would order me to be utterly cut off because I might perhaps unconsciously make an ointment of a particular odour? Do you believe if I take a certain description of perfumed pomade, and "smell thereto," or even if I proceed to the rubbing some on the hair of my head, that I shall be put to death? Many defenders of the Bible urge that these enactments were only meant for the Jews, who seem to have required some strange laws; if so, it is a pity God has allowed the Book to come to us in its present state, as we find it hard to believe that one verse or passage is intended only for the Jews, and the following one intended for the whole world.

Chap. xxxi., vv. 14 and 15.—Moses would hardly have been eligible for the "Society for Abolition of Capital Punishment," if it had been established in his day. These

verses must have since become a dead letter, an obsolete statute which, even if the Bible be the expression of God's law, God does not and man dare not attempt to enforce in the present age. But if this verse is a dead letter, how much more of the Bible is affected in the same manner? Who is to tell which enactments may be safely disobeyed, and which carry with them the terrible penalty specified in the text?

Verse 17.—"He rested and was refreshed." Although even the most faithful and pious believer must have great difficulty in attempting to satisfy his brain as to that stupendous miracle, the creation of the universe out of nothing, yet this great difficulty sinks into utter insignificance beside the greater one of endeavouring to imagine the omnipotent andimmutable Deity resting after his labour, and being *refreshed by his rest.*

Verse 18.—The expression "finger of God" is evidently intended to be understood literally here, but the question then arises as to the nature of an infinite spirit without body, parts, or passions (*vide* thirty-nine articles), yet having fingers, hands, face, and back parts. Dr. Pye Smith says,* on the anthropopatheia of the Scriptures (treatment of God as if possessing a human shape and nature)—"This is very remarkable and very extensive, but it is manifested by comparison with many other parts of the Scriptures, that the terms employed are terms of *condescending comparison* with the acts and effects of the thus mentioned organs of the human body, to convey, especially to unpolished men, a conception of those properties and actions of God, which to our feeble ideas have a resemblance, and that they were so understood. Language had not then terms for the expression of abstract conceptions." Dr. Smith, in instructing the Christian theologian, tells me that God created man and all the circumstances surrounding him, yet speaks of "human incapacity and infirmity," and of "the language of the Scriptures being formed in condescension thereto," and, in effect, says that the Bible is in God's own language, but the language of the Bible is imperfect, and not sufficient for the expression of the mes-

* First Lines of Christian Theology, p. 129.

sage which God intended the Bible to convey. Dr. Pye Smith admits that modern language is more expressive than that of the Bible; but is it not remarkable that the prescient Creator should have not foreseen the time when the language of his revelation would sink below the level of the human capacity? It is worse than folly to put forward hypotheses as to God's condescension in using weak language; in reality, not to express, but, in fact, to conceal some grand sentiment. The Book itself nowhere suggests such an idea, and I ask to what mind (however "unpolished" it may be) can the following words convey any other conception of the properties and actions of God than that of the literal reading?—

"And I will take away my hand, and thou shalt see my back parts, but my face shall not be seen." Dr. Smith says that "metaphysical or philosophical preciseness is not in the character of Scriptural composition," yet upon our misconception of the true meaning of that composition hangs the penalty of eternal torment.

Chap. xxxii.—During the absence of Moses on the mount the Jewish people applied to Aaron to make them Gods to go before them. Forgetting that Moses had so recently given proofs of his divine legation, they used very disrespectful language, saying, "As for this Moses, the man that brought us up out of the land of Egypt, we wot not what is become of him." Aaron, who had been specially chosen by God to be his priest and prophet, and as to whom God was then making special regulations, instead of reminding the people of the miracles God had just performed on their behalf, instead of reproving them for the slighting manner in which they had spoken of his brother Moses, instead even of appealing to Nadab and Abihu, and the seventy elders who had personally seen God so shortly before, and who must all have been impressed with the awful majesty of the Deity, forgetting or disregarding the first and second commandments contained in chapter xx., vv. 3, 4, and 5, and that their God is a jealous God, forgetting also the repetition contained in v. 23 of the same chapter, Aaron (who alone had been nominated to enter the holy of holies), without the slightest attempt at remon-

strance, asked the people to bring him their golden earrings, out of which he voluntarily made a molten calf;* and the people having said, "These be thy Gods, O Israel, which brought thee out of the land of Egypt," Aaron built an altar and proclaimed a feast. This calf (says Kalisch) was probably in imitation of the Egyptian Apis (Osiris in Memphis), or Mnevis (the sun in Heliopolis).

Verse 6.—"And rose up to play." Cahen observes that at the fêtes of Apis, after eating the remains of the sacrifices, the people always commenced to dance and play. The God was very unfortunate. Adam and Eve ate the fruit he forbad them to eat, and now his chosen people forget and forsake him, and repeatedly doubt and deny his power. The miracles performed by Moses and Aaron in Egypt—events any one of which should have been sufficient to have struck terror into the Israelites for the remainder of their lives—the interview between God and the seventy-four, only a few days before, were all passed as nothing; and the Israelites, after a few days' absence on the part of one of their leaders, seek new Gods, and find the other leader, in whose charge they are left, willing to gratify their desires. God having permitted all this to happen, informed Moses thereof, and then uses this remarkable phrase—"Let me alone that my wrath may wax hot against them, and that I may consume them, and I will make of thee a great nation." Is this the language of an infinite and immutable Deity?

Verse 10.—The Samaritan version inserts here the words, "Jeue was very angry with Aaron to have destroyed him." Can God the immutable be imagined in a state of furious anger, resolving to destroy his people, and yet, upon the persuasion of one of his own creatures, induced to change his resolve? The expostulatory reasoning of Moses addressed to God is worthy repetition.

Verses 11, 12, and 13.—"Lord, why doth thy wrath wax hot against thy people, which thou hast brought forth out

* Josephus not only omits all this story of the golden calf, but so states the absence and return of Moses after forty days and nights on the mount, that if the Jewish historian be correct, all this chapter must be untrue.

of the land of Egypt with great power, and with a mighty hand? Wherefore should the Egyptians speak, and say, For mischief did he bring them out, to slay them in the mountains, and to consume them from the face of the earth? Turn from thy fierce wrath, and repent of this evil against thy people. Remember Abraham, Isaac, and Israel, thy servants, to whom thou swarest by thine own self, and saidst unto them, I will multiply your seed as the stars of heaven; and all this land that I have spoken of will I give unto your seed, and they shall inherit it for ever." And this reasoning, which points out to the all-wise Deity that if he persisted in his new resolve he would be unable to keep his sworn promise to Abraham, and which reminds him that it will give an opportunity to the talkative Egyptians, is effective.

Verse 14.—"And the Lord repented of the evil which he thought to do unto his people." Cahen quotes the following from the Berechith Raba:—"Moses, wishing to appease God, said, 'Master of the universe, they have given thee a helper, and yet you are angry against them. This calf which they have made shall be thy auxiliary. Thou shalt make the sun shine, it the moon; thou the planets, it the stars; thou shalt make the rain fall, it shall make the plants grow.' God answered, 'Thou art also a dupe. This calf is nothing at all.' Then said Moses, 'Well, then, why get angry with these children?'"*

Verse 19.—"And it came to pass, as soon as he came nigh unto the camp, that he saw the calf, and the dancing; and Moses' anger waxed hot, and he cast the tables out of his hands, and brake them beneath the mount." According to verse 16 these tables were "the work of God," and the writing thereon was "the writing of God." After the breaking of the two tables of stone, and before the destruction of the calf, there was, according to Deut., chap, xx., v. 18, an interval of a second period of forty days and nights not mentioned here.

Verse 20.—"And he took the calf which they had made, and burnt it in the fire, and ground it to powder, and strawed it upon the water, and made the children of Israel

* Exode, p. 150.

drink of it." The word "burnt" Cahen translates "calcined."* Gold is a metal distinguished by its extreme permanence in air and fire, by its density, malleability, and ductility; it might have been melted by the action of fire, but could not be burnt—*i.e.*, consumed by fire. The Douay says that Moses "beat it to powder;" this would be very difficult, as it is so malleable that it may be beaten into leaves not more than the 280,000th part of an inch in thickness. Our version says, "ground it to powder;" this would be also a difficult task, unless Moses had chemical aids of which we know nothing. The golden calf being reduced to powder, Moses strewed it upon the water, and made the Israelites drink of it. Unless a chloride of gold had been formed by the use of chlorine and nitro-muriatic acid, and of which we have no account, or unless some analogous chemical process had been pursued, the gold would not be soluble in water, but would sink to the bottom, leaving the water entirely unaffected. According to the repetition of this story in Deut., chap. xx., v. 21, it appears that the golden calf was burnt, ground, and stamped until it was "as small as dust," and was then thrown into the brook. Nothing is there said about the Israelites drinking it.

Aaron was a most cowardly traitor when in charge of the people. He encouraged them to idolatry, and when questioned by Moses he laid all the blame on the Jews. His excuse for the manufacture of the calf is really charming. "I said unto them, Whosoever hath any gold, let them break it off. So they gave it me; then I cast it into the fire, and there came out this calf." After this, Moses, whose anger had waxed hot, collected the men of the tribe of Levi, who had been equally guilty with their brethren in the worship of the calf, and set them to slaughter every man his brother, his companion, and his neighbour. In this slaughter there fell, according to our version, 3,000 men; but according to the Douay, 23,000 men were slain. It is doubtful whether the author of 1 Corinthians, chap. x., v. 8, refers to this or to Numbers,

* See Exode, p. 151.

chap. xxv., for the reference agrees with neither. Whichever version is right, it is evident that Aaron, who deserved the most punishment, escaped scot-free. The Lord's vengeance was not satisfied with even this terrible sacrifice of human life; and we are told, in the phraseology of our orthodox version of the Bible, that "the Lord plagued the people because *they made* the calf which *Aaron made*."

Verses 32 and 33.—"Yet now, if thou wilt forgive their sin—; and if not, blot me, I pray thee, out of thy book which thou hast written. And the Lord said unto Moses, Whosoever hath sinned against me, him will I blot out of my book." Cahen says that it is an Israelitish tradition that God kept in heaven a register of all the living, and that if a name was effaced, the person died (see Psalms, chap. lxix., v. 28; chap. cxxxix., v. 16; Isaiah, chap. iv., v. 3).

Chap. xxxiii., vv. 1 to 3, and chap. xxxiv., v. 11.—Judea was not a land flowing with milk and honey, nor did the Lord perform his oath. He did not secure Canaan to the seed of Abraham, nor drive out the Canaanite and the other nations mentioned (*vide* Joshua, chap. xvii., vv. 12 and 13; Judges, chap. i., vv. 19, and 27 to 35; chap. ii., vv. 20 to 23, and chap. iii., vv. 1 to 6).

In verse 2, after Perizzite, the Septuagint and Samaritan, add "the Gergashites." "I will not go up in the midst of thee: for thou art a stiff-necked people: lest I consume thee in the way." This phrase from the mouth of an immutable Deity would be impossible. The person who wrote it regarded it as possible that, if God actually went with the Jews in presence in their journeying to the promised land, he might lose his temper at the sight of their shortcomings and destroy them; to obviate the possibility of an event so lamentable, God, the omnipotent, who is always everywhere, determines to keep away from the Jews, and sends an angel as his deputy.

Verses 4, 5, and 6.—Why did the Lord want the children of Israel to put off their ornaments? If this were narrated in any other book than the Bible some shrewd Christians would shake their heads and say, We are afraid Moses and Aaron were not quite honest—first, Aaron induces the people to bring him their gold earrings under

the pretext that he would make them a God, and now Moses deprives the people of their remaining trinkets, under the pretence that the Lord commands them to put them off. It must not be forgotten that many of these jewels, earrings, and other trinkets must have been actually obtained by the Israelites from the Egyptians, in accordance with the command of Moses given previous to the Exodus.

Verses 9 and 10.—This "pillar of cloud" is a favourite shape, and if the whole were an imposture, it would have been an easy matter for Moses by artificial means to have raised a "pillar of cloud" when he pleased, especially as such precautions were taken to prevent too close an examination by the Israelites.

Verse 11.—Apart from the question of contradiction (which has been noticed on page 271), is not this verse condemned by itself? The purpose and meaning of the language used is to raise Moses in the estimation of the Israelites, and to effect this object it degrades the Deity by the very terms used; the conversation contained in verses 12 to 20 has all the same tendency, making it appear that Moses was God's favourite, and that God *knew his name.* The "young man" Joshua was, according to Cahen, about 56 years old.

In verse 13, instead of "show me thy way," the Douay has "show me thy face;" this accounts for the expression in v. 20, "Thou canst not see my face," but it distinctly contradicts the "face to face" of verse 11.

Verse 14.—"My presence shall go with thee, and I will give thee rest." Cahen reads, "*mon indignation se calmera et je te serai favorable.*"

Verse 15.—"If thy presence go not with me, carry us not up hence." Cahen, "*Si ton indignation ne se calme pas, ne nous fais pas monter d'ici.*" The Douay, "If thou thyself dost not go before, bring us not out of this place."

Verse 23.—"And I will take away mine hand, and thou shalt see my back parts; but my face shall not be seen." Who can read this verse thoughtfully, and yet be filled with awe and admiration for a Deity, who only allows his favoured Prophet to see his "back parts." The absurdity is heightened by the remembrance of the many distinct

appearances of God to Abraham, Isaac, and Jacob, the view accorded shortly before to Moses himself, and seventy-three other persons who all saw God in the mount, and last, not least, the coming face to face with God noticed in verse 11.

Cahen says, "In speaking of the infinite, absolute, and immaterial Being, man is compelled to use terms which recall finite, contingent, and material objects. These kinds of figures, which are continually made use of in metaphysics, often throw upon this science a certain obscurity which is met with even in the works, written by our contemporaries in our mother tongue; how much more profound must this obscurity be when the writer makes use of a language which, seven centuries before the vulgar era, had been then for a long time dead, and the grammar of which does not date higher than the age of Charlemagne? We leave them to each the liberty of seeking in this phrase a metaphysical sense."

The Douay, in a foot note, says, "The Lord by his Angel, usually spoke to Moses in the pillar of the cloud; so that he could not see the glory of him that spoke familiarly with him. In the vision here mentioned, he was allowed to see something of him, in an assumed corporeal form: *not in the face, the rays of which were too bright for mortal eye to bear*, but to view him as it were behind, when his face was turned from him." The eleventh verse, unhappily for the recipients of the Douay, is directly in opposition to this. The Palestine Targum, on verse 22, makes Moses overshadowed by the Memra, until the glory of the Shekinah had passed by. This Memra is a sort of God in a second personality, and, Etheridge says, is probably identical with the "word" in the Gospel of St. John.*

Chapter xxxiv.—The reader finds again in this verse the temporary localisation of God on the top of the mountain where Moses goes to him for, at least, the third time, and fasts there for a third period of forty days, neither eating bread nor drinking water. While verse 1 says that

* Targums on the Pentateuch, p. 15.

the Lord will re-write the Decalogue on the two tables of stone, verse 20 says that it was Moses who actually did write the second edition of the Ten Commandments.

Verse 6.—The Lord "proclaimed." The Douay puts the words in the mouth of Moses, "The Lord God merciful and gracious." When, where, and how was this mercy, graciousness, and long suffering on the part of the God of the Bible manifested? Was it when condemning the first man and woman falling into the divinely baited trap, and cursing the very ground on which they stood (Genesis, chap. iii.); or when he determined to destroy not only man whom he was tired of striving to make better, but also the beast, and the creeping thing, and the fowls of the air (Genesis, chap. vi., v. 7); or was it when he rained brimstone and fire upon Sodom and Gomorrah (Genesis, chap. xix., v. 24); or when, having himself hardened Pharaoh's heart, so that he should not let the children of Israel go, he slew the firstborn in every family throughout Egypt in order to procure Israel's deliverance (Exodus, chap. xii., v. 29); or when he drowned all Pharaoh's army in the Red Sea (Exodus, chap. xiv., v. 27); or was it when he, the great creator, swore to have war with Amalek from generation to generation (Exodus, chap. xvii., v. 16)—that is, where was the mercy and graciousness of the destroyer who pre-doomed to misery the unfortunate race whom he must create in order that they should suffer; or when he killed Nadab and Abihu with fire (Leviticus, chap. x., v. 2); or when he repeatedly attached the penalty of death to the infringement of almost any article of the ceremonial law; or when his fire consumed the people because they complained (Numbers, chap. xi. v. 1); or when he smote them with a great plague (verse 33); or when he ordered the man to be stoned to death who was found gathering sticks on the Sabbath (Numbers, chap. xv. v. 36); or when he enjoined his people to be pitiless against all heretics (Deut. c. xiii., v. 6); or was it when he caused the earth to swallow Korah, Dathan, and Abiram, and all that appertained to them, and afterwards slew 250 more by fire, and 14,700 more by plague (Numbers, chap. xvi., vv. 31 to 35, and 49); or when he sent fiery serpents to

bite his people, so that they died (Numbers, chap. xxi., v. 6); or when he sent the plague, and killed 24,000 of his people (Numbers, chap. xxv., v. 9); or when he directed the terrible slaughter of the Midianites (Numbers, chap. xxxi.); or when he gave general injunctions for the pillage and slaughter to extermination of all peoples who did not consent to serfdom (Deut. c. xx., x. 40).

Verse 11.—After "Hivites," the Samaritan and Septuagint add "the Gergushites."

Verse 14.—"The Lord, whose name is jealous, is a jealous God." Kalisch renders "jealous," "zealous," but there does not seem sufficient ground for his change. According to an ordinary dictionary, to be jealous is to be "suspiciously viligant," "suspiciously fearful." The omniscient, omnipotent, immutable, and infinite Deity, of what can he be jealous? Perhaps this phrase might be considered figurative, were it not that we do find in the Bible narrative considerable evidences of this jealousy operating in God's transactions with his people.

Verses 29, 30, 35.—The Douay says that after Moses had talked to the Lord, his face was horned, and that the children of Israel, seeing the horns, were afraid to come near him. The Douay strictly follows the Vulgate, "*quod cornuta esset facies sua.*" Cahen says the word קרן, KeReN, signifies "ray" or "horn," from which, he says, is derived the singular idea of representing Moses with a horned face. This "horned" face is one of the many points of resemblance found in the stories of Moses and Bacchus.* In our own authorised version, this very word KeReN is translated "horn" in Exodus, c. xxvii., v. 2.

Chap. xxxv., vv. 1 and 2 give a third repetition of the prohibition of Saturday, with a second repetition of the threat of death as a penalty for disobedience. The command to "kindle no fire" on the Sunday has been much discussed by the Jewish writers.

We extract the following from Cahen on this subject:—"Rosenmüller, according to Michaëlis, declares that this

* See article "Bacchus," Voltaire's "Philosophical Dictionary," and Parkhurst's "Hebrew Lexicon," p. 659.

law (as also several others established by Moses) was suitable to Palestine and not to all countries. In hot countries, the supper is the principal meal. The Jews, who reckoned the day from one evening to the next, prepared and took this meal on the sixth day, a little before the commencement of the Sabbath, and they lit a fire when the Sabbath was ended, to prepare the supper of that day. It does not appear that this law forbade them to light a fire in order to keep away the cold." Rosenmüller adds, "It is shown sufficiently by this prohibition that the Mosaic Code was not established for every nation, nor for every country." The Talmudist and the Caraïtes have not always understood it thus; these extend the rigour of the prohibition to a much higher degree. One of their chiefs, Eli Bechizi, in the fifteenth century, attempted to bring back his people to more reasonable ideas: but a Caraïte doctor, named Abrahame Babi, in a work entitled, "*Aisur ger Shebeth*" (prohibition to light a fire on the Sabbath), supported the most rigorous sabbatical observance. Aben Ezra says that the Rabbi Saaiah has composed an excellent treatise upon the same subject. Though the prohibition to light a fire on the Sabbath would appear to relate to some custom which the author had in view, and which is unknown to us, the supposition of Michaëlis is presented without proof, and appears to us difficult of admission. The prohibition to light a fire is absolute. The Caraïtes appear to have followed the law more closely than the Talmudists; the first do not allow the fire to be lighted by a non-Israelite; and certainly nothing will justify us in causing to be done by another what we are forbidden to do ourselves.* The Septuagint finishes this verse with these words, "I, the Eternal"—(*ego, Kyrios*).

Verse 28.—Aben Ezra, says Cahen, expresses his astonishment that the Rulers had still preserved oil to burn after several months absence from Egypt. There are many differences in this chapter between the text of the Septuagint and our version; in the Vatican copy of the Septuagint, verse 8 is entirely omitted. There are also many verbal differences of translation between the

* Exode, p. 162.

authorised version and the Douay; we select one verse as an illustration. Our version has in verse 26, "And all the women, whose heart stirred them up in wisdom, spun goats' hair." The Douay has, "And goats' hair giving all of their own accord."

Chap. xxxvi., v. 3.—"And they received of Moses all the offering which the children of Israel had brought for the work of the service of the sanctuary, to make it withal. And they brought yet unto him free-offerings every morning." The Douay reads, "He delivered all the offerings of the children of Israel unto them. And while they were earnest about the work, the people daily in the morning offered their vows."

Verse 4.—"Gramberg," says Cahen, "is astonished that so many skilled workmen were found in the desert amongst a people, who, in their greatest posterity under Solomon, were unable to find one good carpenter."

Verse 7.—From this verse to the end of the chapter xxxix., the difference between the Hebrew text and that of the Septuagint is so great, and the transposition of phrases so frequent, that the latter version is contained without being divided into verses—it being impossible to make them correspond.

Verses 20 to 30.—Colenso, who identifies the shittim wood with the acacia, quotes from Canon Stanley the statement that not a single tree of this description can now be seen in the region where the building of the tabernacle is supposed to have taken place. There are very many differences between the Douay version and our own; in this chapter, and in c. xxxvii. and c. xxxviii., in the description of the curtain hangings and fittings of the Tabernacle, words and phrases appearing in the one which are not found in the other. To repeat the whole of these variations here would be tiresome to the reader.

Chap. xxxviii., v. 8.—"The looking glasses of the women assembling." Kalisch says, "The looking glasses of the women who served." The Douay has, "The mirrors of the women that watched." Cahen regards this as probably borrowed from the Egyptians, whose women, he says, were accustomed to enter the tabernacle with a mirror in the left-hand.

Verse 25.—The words "after the shekel of the sanctuary," are not in the Samaritan version.

Verse 26.—In his note to this verse, Cahen raises the question since amplified by Colenso in his comment on chap. xxx., v. 11—viz., that the numbers given are the numbers of the census, although the census did not take place until a later period.*

Verse 29.—Cahen calculates the value of the metals used in the Tabernacle at about 3,000,000 francs.

Chap. xxxix., vv. 10 and 11.—Our version puts a carbuncle in the first row and an emerald in the second. The Douay says, the emerald was in the first and the carbuncle in the second row. Kalisch puts both the carbuncle and emerald in the second row, inserting a cornelian and a smaragd in the first. In the second row, the Douay has "a jasper" instead of a diamond. This "jasper" is put by our version in the fourth row, where the Douay and Kalisch have "a chrysolite."

Verses 15 to 21 are so different in the Douay from what they are in our version, that it is really difficult to imagine the two versions as translations from the same Hebrew original.

Verse 21.—In the Samaritan version, it is added that "they made the Urim and Thummim, as God had commanded Moses."

Chap. xl., v. 7 and 8 are altogether wanting in the Septuagint version.

Verse 17.—After the word "month," the Septuagint and Samaritan add "from their departure from Egypt."

Verse 38.—Cahen remarks that "the writer of Exodus has made use of five words to denote the tabernacle—1 residence; 2nd, tent; 3rd, the holy; 4th, tent of meeting or assembly; 5th, residence tent of assembly. We notice in the tabernacle—1st, the ark or chest with the cover and the cherubim; 2nd, the table with the show bread; 3rd, the golden candlestick; 4th, the court of the tabernacle, with an altar of incense, and an altar of sacrifice, and a basin of brass. Of all these objects, we find little mentioned in times posterior to Moses of any save

* Exode, p. 175.

the ark. We do not know what became of the tabernacle under the government of the Schophtime (Judges). The greatest likeness exists between the construction of the tabernacle and that of the temple of Solomon. According to the systematic ideas which Gramberg has formed upon the composition of the books of the Old Testament, he thinks that the conception of the tabernacle is posterior to the building of the temple. ('Critical History of the Religious Ideas of the Old Testament,' tome 1, p. 15, Berlin, 1829). This bold conjecture, which we do not pretend to adopt, we submit to the consideration and examination of archæologists and men of an independent mind."

De Wette, in a note on chap. xxxv. to c. xl., says,* "Chap. xxxv., vv. 1 to 3 seems misplaced, and so does xli. 36-38, which does not seem to be contemporary with the erection of the tabernacle. These accounts of the tabernacle present some important peculiarities. In Exodus xxv., Moses is commanded to make the tabernacle and its furniture after a certain pattern. A minute description is given of the furniture to be made for it, of the dresses of the priests and the form of consecration, and two men are said to be inspired to perform the work. Next (xxxiii. 7 and 9) it seems, the tabernacle is finished. It is named the 'tabernacle of assembly.' The people flock to it to seek Jehovah. Moses entered, and a cloud stood at the door of it. But *after this* (chap. xxxv., *sq.*), Moses requests contributions for building the tabernacle. They were brought; the tabernacle is made; it is called the 'tabernacle of the assembly;' and the cloud descends upon it. But Moses was not able to enter it." In concluding the commentary on Exodus, we cannot avoid asking what is the fair result of our labours, and it certainly seems undeniable that the volume fails in commanding respect either as a history of the Exodus of the Jews from Egypt or as a legislative code. Examined as historical narrative, the volume is found incoherent and contradicted by other portions of the Pentateuch. Tested as a code of laws, many of the enactments are cruel and brutal, some of them are puerile, and others are contradicted in other books of the Bible. Read

* On the Old Testament, Vol, II., p. 114.

as a revelation from a Deity, the picture given of God as vacillating, uncertain, and vindictive is, by no means, a portraiture to command our love. Exodus cannot be a revelation from God, taking the ordinary theistic definition of Deity; it pictures an all-wise God choosing a man, with an impediment in his speech, to be a preacher, and declares that when the man hesitated on account of his natural infirmity, God became angry at a difficulty, the existence of which he not only well knew that Moses could not help, but which must have been of his own creation. It represents a just God as seeking to kill (apparently without the slightest efficient cause) the very man whom he had just entrusted with the important mission of releasing his chosen people from bondage; it speaks of an invisible God as becoming visible; of an immutable God as changing his purposes; of a loving and merciful Creator and father declaring war against unborn generations of his own creatures and children; of a just God as punishing the people for following the advice of the priest whom he had sanctified and appointed, and yet allowing the criminal priest not only to escape unpunished, but actually rewarded for the very misconduct for which God plagued his people. It pictures a merciful and good God as tormenting and murdering the Egyptians, solely for the purpose of convincing the Jews that he is really the Lord God of Israel, and afterwards plagueing and slaughtering those very Israelites, because all the former cruelties practised on their neighbours had not produced sufficient convincing effect on them. It teaches monotheism in one verse, and yet leaves polytheism the only fair inference from another.

LEVITICUS:

ITS AUTHENTICITY AND CREDIBILITY.

The word, ויקרא, UIQRA, "and he called," which is the first word in the Hebrew of this third book of the Bible, forms its title amongst the Jews. The words "third book of Moses" do not exist either in the Hebrew, Greek, or Vulgate. Cahen says—"The Greeks and Latins have called it Leviticus, because it treats of all that relates to the service of the Levites or those holding priestly offices, of the sacrifices, of the perpetual fire, of the separation, of the leprous, of purification, of expiation, of the feasts, of the worship, &c. It is for this reason that the Rabbis call this book, TURe*T*h KENIM, תורת כהנים, doctrine of the priests, and תורת הקרבנות, doctrine of oblations. The partiality with which the matters relating to sacrifices are treated, shows evidently that the author of Leviticus belonged to the sacerdotal caste. We find in this third part of the Pentateuch more development, more method in its explanations than in the four other parts. It is almost totally consecrated to the services exercised by the tribe of Levi. Gramberg places the composition of this book in the fourth period, commencing at the Babylonian captivity." The sacrifices and priestly rites ordered in Leviticus, and the other books of the Pentateuch, are not peculiar to the Jews; most of them are derived from Egypt, and nearly all nations have made usage of sacrifice to their Gods as a means of propitiation. The sacrifices here ordered are divided by Etheridge* into two classes,

---

* Targums on Leviticus.

expiatory and eucharistic—that is, sin offerings and praise offerings. Dr. John Pye Smith* defines sacrifice as "a solemn act of religion in which the life of a living creature is taken away as an acknowledgment of sin on the part of the offerer, with the expectation of obtaining a remission of the penal suffering thus confessed to be merited from God to whom the sacrifice is presented." Admitting only for the sake of argument the sin committed by man against God and the punishment deserved, the doctrine of sacrifice is, that God must have somebody or something on whom or which he can inflict the punishment, which ought but for the sacrifice to fall on the sinner—mercy is left out, the appetite for vengeance must be appeased in some manner.

Etheridge, in speaking of the two classes into which he divides the sacrifices, says—"The first class (expiatory) includes the sacrifices proper. In them the life of the victim was offered for the life of the sinner, and its blood was shed as an atonement for guilt. These peculiar sacrifices were of three kinds:—1. The Olah, Kalil, or 'whole burnt offering,' because wholly consumed, and sent up, by the action of fire, in the flame and smoke of the altar. Olah comes from Alah, 'to ascend;' lxx. *olokautoma*, 'holocaust,' a term which refers to the entire consumption of the victim. 2. The Chataah, or 'sin offering,' the same word signifying 'sin' (Sept. *amartia—i.e., peri amartias*). 3. The Asham, or 'trespass offering' from Ashmah, 'to be guilty;' Sept. *Thusia soteriou*, 'the sacrifice of salvation;' Vulg., *hostia pro delicto;* Sept., *peri plemmeleias.* While the difference between sin and trespass offerings is textually marked in the Levitical law, the distinction between the offences for which they were offered is not so clearly given. Some think that 'sins,' in the technical phraseology of the ceremonial law, are violations of prohibitory statutes—*i.e.*, doing something which the law forbids to do. 'Trespasses,' on the other hand, are violations of imperative statutes—*i.e.*, neglecting to do those things which are commanded. These piacular sacrifices are sometimes called kippurim—lxx. *Katharismoi*, 'expiations or atonements.' On the

* First lines of Christian Theology, p. 528.

question about the manner in which they were expiatory, or on the real relation between their presentation and the forgiveness of sin, there are two opposite doctrines.

"1. There was that in the nature of the sacrifice itself which could efficaciously atone for sin. But the divines who take this view are not agreed as to the principle upon which the offerings became expiative. *a.* Some have thought that the virtue of the sacrifice consisted in this—that a certain material possession was given up by the offerer for the sake of gaining a spiritual blessing. *b.* Others consider the sacrifice in the light of a fine, by the payment of which the offender is set right with his judge; while (*c.*) others holding that evil rests in that which is material or sensual, and regarding blood as the representation of the sensual or evil principle, see in the shedding and presentation of blood at the altar a physical atonement for moral evil or sin. *d.* Yet in direct opposition to this theory, another opinion considers the vital blood to have been propitiatory because it was pure, and represented the acknowledgment of the offerer's obligation to have been himself pure, and his desire to become so.

"2. The second doctrine is, that the Mosaic sacrifices had not, nor could have, any intrinsic or atoning power in themselves; but derived their value from their having been divinely appointed as means to lead the mind of the offerer to a real expiation of which they were the symbols. They were types of the atoning sacrifice of the lamb of God who taketh away the sin of the world."

As to *a*, it may be replied (1) that the Jews did not look for spiritual blessings. Their pleasures and pains, punishments and rewards, were all for this life; the loss of life is the most severe punishment threatened. 2. That to imagine that a man, who has a cow or a sheep to roast, may procure a spiritual blessing which is withheld from the poorer sinner, who lacks the means of this propitiating Deity, is hardly consonant with the modern theistic doctrine of an all-good, all-just, and all-merciful God. The same argument applies to *b*. The doctrine of physical atonement by the offering of the life of any man or brute for man's sin, seems so monstrously cruel and cowardly,

that it would hardly require further notice were it not that it is this doctrine which forms the base of New Testament Christianity. We object to the whole theory of expiatory sacrifice, either as contained in the Pentateuch or as afterwards taught in the New Testament, as unreasonable, degrading, and debasing. It is scarcely curious that the Levites, who shared with God the sacrifice, should promulgate the law which directs that only first-class cattle, goats and birds, and the best fruits and flour, shall be offered. The writer of Cozri* says that, judging each sacrifice in itself, it would be difficult to imagine it agreeable to God: for the priest is quite as much an executioner as a minister of the altar. For example, in slaughtering a lamb, the priest is stained with blood, he skins the lamb, washes its entrails, washes it, he cuts the lamb in pieces, sprinkles the blood, arranges the wood, lights the fire, carries away the refuse, offal, &c. If it were not, says the Cozri, for the order of God, the priest would refuse entirely such disgusting and menial duties.

Colenso says†—"The Book of Leviticus is chiefly occupied in giving directions to the priests for the proper discharge of the different duties of their office, and further directions are given in the Book of Numbers.

"1. In the case of every burnt offering which any man shall offer, whether bullock, or sheep, or goat, or turtle dove, the priests, Aaron's sons, shall sprinkle the blood upon the altar, and put fire upon the altar, and lay the wood in order on the fire, and lay the parts, the head and the fat in order upon the wood; 'and the priest shall burn all on the altar to be a burnt sacrifice.'

"2. So in the case of a meat offering, peace offering, sin offering, or trespass offering, the priest has special duties assigned to him as before.

"3. Every woman, after child-birth, is to bring a lamb for a burnt offering, and a pigeon or turtle-dove for a sin offering, or two young pigeons for the two offerings, and the priest is to officiate as before (*L.* xii).

---

* Cahen, Levitique, p. 33.

† Pentateuch, Part I., p. 122.

"4. Every case of leprosy is to be brought again and again to the priest, and carefully inspected by him till it is cured (L. xiii).

"5. Any one cured of leprosy is to bring a burnt offering and a sin offering, and the priest is to officiate as before (L. xiv).

"6. For certain ceremonial pollutions which are specified, the priest is to offer sacrifice (L. xv. 15, 30).

"7. For a male or female Nazarite, when the days of separation are fulfilled, the priest is to offer a burnt offering, a sin offering, and a peace offering (N. vi).

"8. Every day, morning and evening, the priest is to offer a lamb for a continual burnt offering, besides additional sacrifices on the Sabbath, the New Moon, at the feast of unleavened bread, and at the feast of the first fruits (N. xxviii).

"9. In the seventh month for several days together, besides the daily sacrifice, there were to be extraordinary additional sacrifices, so that, on the fifteenth day of the month, the priest was to offer 13 bullocks, 2 rams, and 14 lambs; and in the seven days, from the fifteenth to the twenty-first, 70 bullocks, 14 rams, and 98 lambs (N. xxix).

"10. Lastly, if it should be thought that the above sacrificial system was not meant to be in full operation in the wilderness, we may call attention to the frequent references made in the enunciation of these laws to the camp (L. iv. 12, 21, vi. 11, xiii. 46, xiv. 3, 8), as well as to the words of the prophet Amos, v. 25—'Have ye offered unto me sacrifices and offerings in the wilderness forty years, O House of Israel?' which show that, in the Prophet's view, at all events, such sacrifices were required and expected of them.

"And now let us ask for all these multifarious duties during the forty years' sojourn in the wilderness, for all the burnt offerings, meat offerings, peace offerings, sin offerings, trespass offerings, thank offerings, &c., of a population like that of the City of London, besides the daily and extraordinary sacrifices, how many priests were there? The answer is very simple. There were only three—Aaron (till his death) and his two sons, Eleazar and Ithamar.

"And it is laid down very solemnly in N. iii. 10—'Thou shalt appoint Aaron and his sons, and they shall wait in the priest's office; and *the stranger that cometh nigh shall be put to death.*'

"Yet how was it possible that these two or three men should have discharged all these duties for such a vast multitude? The single work of offering the double sacrifice for women after child-birth must have utterly overpowered three priests, though engaged without cessation from morning to night. The births among two millions of people may be reckoned as, at least, 250 a-day, for which, consequently, 500 sacrifices (250 burnt offerings and 250 sin offerings) would have had to be offered daily. Looking at the directions in L. i., iv., we can scarcely allow less than *five minutes* for each sacrifice; so that these sacrifices alone, if offered separately, would have taken 2,500 minutes, or nearly 42 hours, and could not have been offered in a single day of twelve hours, though each of the three priests had been employed in the one sole incessant labour of offering them without a moment's rest or intermission.

"It may, perhaps, be said that *many* such sacrifices might have been offered at the same time. This is surely somewhat contrary to the notion of a sacrifice as derived from the Book of Leviticus; nor is there the slightest intimation, in the whole Pentateuch, of any such heaping together of sacrifices; and it must be borne in mind that there was but *one* altar, five cubits (about 9ft.) square (E. xxvii. 1), at which we have already supposed all the three priests to be officiating at the same moment, actually offering, therefore, upon the altar *three* sacrifices *at once*, of which the burnt offerings would, except in the case of poor women (L. xii. 8), be *lambs* and not pigeons. But then we must ask further where could they have obtained these 250 'turtle doves or young pigeons' daily, that is, 90,000 annually in *the wilderness?* There *might* be *two* offered for each birth; there *must*, according to the law, be *one* (L. xii. 6, 8). Did the people, then, carry with them *turtle doves* and *young pigeons* out of Egypt, when they fled in such haste and so heavily laden, and as yet knew nothing of any such law? Or how could they have had them at all under Sinai? It

cannot be said that the laws, which require the sacrifice of such birds, were intended only to suit the circumstances of a later time, when the people should be finally settled in the land of Canaan.

"In fact, we have one of these commands, manifestly referring to their life in the wilderness (L. xiv), where after it has been ordered that the priest shall go out of the camp to look at the leper (v. 3), and that the leper duly cleansed shall 'after that come into the camp and shall tarry abroad out of his *tent* seven days' (v. 8), and on the eighth day, shall offer 'two he lambs and one ewe lamb,' &c. (v. 10), it is added, v. 21, 'and if he be *poor* and cannot get so much, then he shall take one lamb, &c., and *two turtle-doves* or *two young pigeons*, such as he is able to get.'

"Here the 'turtle doves or young pigeons' are prescribed as a lighter and easier offering for the poor to bring; they are spoken of, therefore, as being *in abundance*, as being within the reach of every one in the wilderness under Sinai! It would seem to follow that such laws as these could not have been written by Moses, but must have been composed at a later age, when the people were already settled in Canaan, and the poor, who could not afford a lamb, could easily provide themselves with pigeons. In the desert, it would have been equally impossible for rich or poor to procure them."

Chap. i., v. 1.—"And the Lord called unto Moses, and spake unto him out of the tabernacle of the congregation, saying." The Douay, following the Vulgate, says, "Out of the tabernacle of the testimony." Cahen calls it, "*De la tente d'assignation.*" It is evident that the writer of Leviticus has in his mind located the God of the Jews in the tabernacle. Following Exodus, c. xxv., v. 22, it is the national Deity, the God of the Jews who gives these commands.

Verse 3.—The Douay reads—"If his offering be a holocaust" (the Septuagint, *olokautoma*, that which is burned entirely) "and of the herd, he shall offer a male without blemish at the door of the testimony *to make the Lord favourable to him.*" It will be perceived that the words italicised are not contained in our version at all. Cahen

has "to obtain grace before the Lord." The holocaust, or whole burnt offering, is so called because the whole victim was consumed with fire, and ascended, as we are told in verse 9, "with a sweet savour to the Lord." What elevated conceptions of the Deity are here conveyed; an infinite God, whose favour is granted to the man who offers the most sheep or oxen; a just and immutable God, to whom the sweet savour of roast mutton is an acceptable expiatory equivalent on behalf of a murderer, a robber, or other criminal.

Verse 7.—The Douay says the wood is to be put in *before* the fire; our version that the fire is to go *first*, and the wood to be laid upon it.

Verses 9, 13, and 17.—"A sweet savour unto the Lord" (see Genesis, pages 74 and 75). The author of these verses evidently regards the sweet savour of the sacrifice as a feature pleasant to the immutable Deity.

Verse 15.—"Wring off his head and burn it on the altar." The Douay has "twisting back the neck and breaking the place of the wound."

Chap. ii. v. 3.—"And the remnant of the meat-offering shall be Aaron's and his sons';* it is a thing most holy of the offerings of the Lord made by fire." And see also verse 10 in the same words. The priests are not neglected in this revelation. Care is taken that the flour shall be fine and the meat without blemish.

Verse 11.—"No meat-offering which ye shall bring unto the Lord shall be made with leaven; for ye shall burn no leaven, nor any honey, in any offering of the Lord made by fire." Leaven is that which will cause fermentation in the mass to which it is applied. Cahen says this prohibition of leaven in the sacrifice is common to all ancient nations. Aben Ezra regards honey as a leaven. In the foot-note to the Douay we are told that "No leaven nor honey was to be used to signify that we excluded all *double dealing and affection to carnal pleasures!*

Verse 12.—"As for the oblation of the first-fruits, ye

* After the word "sons" in each of the above verses the Douay has instead of the concluding words, "holy of holies of the offerings of the Lord."

shall offer them unto the Lord." And verse 14 (see Genesis, page 50). Cain's offering of first-fruits was rejected.

Verse 13.—"And every oblation of thy meat-offering shalt thou season with salt; neither shalt thou suffer the salt of the covenant of thy God to be lacking from thy meat-offering; with all thine offerings thou shalt offer salt." Without salt the sacrifice would be incomplete. Was not the salt rather required by the priests than by God? It is easy to understand why a man wishes for salt to season his meat if the meat be intended for food, but it is not so easy to comprehend the same requisition on the part of a God. The Douay says that salt is an emblem of wisdom, without which none of our performances are agreeable to God.

The words "meat offering" used throughout this chapter in our version are misleading. The Hebrew is מנחה MeNChE, and denotes "a bloodless offering."

Chap. iv. vv. 11 and 12.—"And the skin of the bullock, and all his flesh, with his head, and with his legs, and his inwards, and his dung, even the whole bullock shall he (the priest) carry forth without the camp unto a clean place, where the ashes are poured out, and burn him on the wood with fire: where the ashes are poured out there shall he be burnt." (See also chaps. vi., x., xi.) Colenso says,* "The whole population of Israel at the exodus may be reckoned at two millions." Now, we cannot well allow for a *living* man, with room for his cooking, sleeping, and other necessaries and conveniences of life, less than three or four times the space required for a *dead* one in his grave. And even then the different ages and sexes would be very disagreeably crowded together. Let us allow, however, for each person on the average three times six feet by two feet, the size of a coffin for a full-grown man—that is, let us allow for each person thirty-six square feet, or four square yards. Then it follows that for two millions of people, without making any allowance for the tabernacle itself and its court, and the 44,000 Levites, male and female (Numbers, iii. 39), who pitched round about it (Numbers,

* Pentateuch, part i. p. 38.

i. 53), the camp must have covered—the people being crowded as thickly as possible—an area of 8,000,000 square yards, or more than 1,652 acres of ground.

"Upon this very moderate estimate, then (which, in truth, is far within the mark), we must imagine a vast encampment of this extent, swarming with people, more than *a mile and a-half* across in each direction, with the tabernacle in the centre; and so says Josephus, Ant., iii. 12, 5: —It was like a well-appointed market; and everything was there ready for sale in due order; and all sorts of artificers were in the shops; and it resembled nothing so much as a city that sometimes was moveable and sometimes was fixed.

"Thus the refuse of these sacrifices would have had to be carried by the priest himself (Aaron, Eleazar, or Ishamar —there were no others) to a distance of three quarters of a mile. From the outside of this great camp wood and water would have had to be fetched for all purposes, if, indeed, such supplies of wood or water for the wants of such a multitude as this could have been found at all in the wilderness—under Sinai, for instance, where they are said to have encamped for nearly twelve months together. How much wood would remain in such a neighbourhood after a month's consumption of the city of London even at midsummer? And the "ashes" of the whole camp, with the rubbish and filth of every kind, for a population like that of London, would have had to be carried out in like manner through the midst of the crowded mass of people. They could not surely all have gone outside the camp for the necessities of nature as commanded in Deut. xxiii. 12-14. There were the aged and infirm women in childbirth, sick persons, and young children who could not have done this. And, indeed, the command itself supposes the person to have a "paddle" upon his "weapon," and, therefore, must be understood to apply only to the *males*, or rather only to the 600,000 *warriors*. But the very fact that this direction for ensuring cleanliness—"For Jehovah thy God walketh in the midst of thy camp; therefore shall thy camp be holy: that he see no unclean thing in thee, and turn away from thee"—would have been so limited in its application, is

itself a very convincing proof of the unhistorical character of the whole narrative.

"But how huge does this difficulty become, if, instead of taking the excessively cramped area of 1,652 acres, less than *three square miles*, for such a camp as this, we take the more reasonable allowance of Scott, who says, "This encampment is computed to have formed a moveable city of *twelve miles square*—that is, about the size of London itself, as it might well be, considering that the population was as large as that of London, and that in the Hebrew tents there were no first, second, third, and fourth stories, no crowded garrets and underground cellars. In that case the offal of these sacrifices would have had to be carried by Aaron himself or one of his sons a distance of six miles; and the same difficulty would have attended each of the other transactions above mentioned. In fact we have to imagine the priest having himself to carry on his back on foot from St. Paul's to the outskirts of the metropolis the 'skin and flesh, and head and legs, and inwards, and dung, even the whole bullock,' and the people having to carry out their rubbish in like manner, and bring in their daily supplies of water and fuel, after first cutting down the latter where they could find it! Further, we have to imagine half-a-million of men going out daily, the 22,000 Levites, for a distance of *six miles* to the suburbs, for the common necessities of nature! The supposition involves, of course, an absurdity. But it is our duty to look plain facts in the face."

Dr. M'Caul's reply to this is very feeble. He suggests that the priests were not personally to do the work, but the whole tenor of Leviticus is to the contrary,* and, as Colenso very fairly says, whoever had to do it, the difficulty would still remain.

Chap. v., v. 1.—"And if a soul sin, and hear the voice of swearing, and is a witness, whether he hath seen or known of it; if he do not utter it, then he shall bear his iniquity." Bellamy makes it—"Moreover, a soul shall surely sin if he hear the voice," &c. This verse is by no means clear; with Bellamy's improvement, it reads as if a person called

* Examination of Colenso, p. 33.

as a witness was culpable, if he refrained from stating the facts; but would this mean that the sin would be less if he stated the matter, or if he had not been called as witness? Cahen says that, amongst the Hebrews, the witness did not swear, but listened to the oath as in most cases of sworn testimony.

Verse 2.—"He also shall be unclean, and guilty." Bellamy says—"This translation strikes the reader with an impropriety. No guilt certainly can attach to a person who has not consented to the crime, the nature of which was hidden from him at the time."

Chap. v., vv. 4, 5, and 6 read somewhat differently, and are much shorter in the Douay; "make an atonement for" is rendered in the Douay, "pray for."

Verse 12.—"According to the offerings made by fire unto the Lord." Bellamy says—"In this short clause, containing only ten words, there are no less than six put into the text which have no authority in the original."

Verse 13.—"And the remnant shall be the priests," see chap. ii., v. 3. Bellamy urges that this translation is incorrect, and that the whole offering was to be for the priest. In the Hebrew, chap. v. has seven verses more, and chap. vi. seven verses less.

Chap. vi., v. 13.—This fire must have been out several times, especially since the last conquest of Jerusalem. Where is it burning at the present time? By reference to chap. ix., v. 24, and chap. x., vv. 1 and 2, it would seem either that this fire came from God himself, or that there was a special sort of fire alone approved.

"The fire shall constantly burn on the altar, and shall not be extinguished, even during the march; how? The Rabbi Jehouda says, they covered the fire with a kind of fire cover; the Rabbi Schimone says, they covered the fire with cinders." The precepts, adds the Sepher Hamivhar, commanded in the desert were for the most part only obligatory for Palestine. It was the same, it continues, with the show bread during the stay of the Israelites in the desert, where they were sustained with manna, and yet it is said: *it shall be for Aaron and his sons who shall eat it in a holy place.* The Sepher Hamivhar says also, if fire came

from heaven, what signifies "it shall not be extinguished?" Several of the ancient commentators, Jews and Christian, attributed to a miracle the continual presence of the fire upon the altar. But, says Rosenmuller, such a miracle is imaginary. The perpetual fire existed also in the temples of other peoples. The Persians not only adored fire as the image of the divinity, but they maintained it constantly on the altar. Says Quintius Curtius, liv. iii. c. 3—"They carried in front upon the altars of silver, the fire which they themselves called the sacred perpetual fire." The worship of fire, derived from that of the sun, is probably the most ancient of worships. Perhaps the fire was constantly maintained by the Hebrews upon the altar where were made the daily sacrifices, in order that the necessary fire should never fail from the negligence of the priests."*

Verse 23.—"For every meat-offering for the priest shall be wholly burnt: it shall not be eaten." Bellamy observes—"Surely there is not anything like infinite wisdom in thus wantonly destroying every day in all the tabernacles, a great portion of the best provisions in the land;" and he translates this—"Thus every bread offering of the priest shall be whole, none shall be consumed." We do not agree with Mr. Bellamy in his effort to escape from the dilemma, but it shows how reliable must be the Hebrew, if it be capable of conveying two directly opposite meanings.

Chap. vii., vv. 7 to 10.—"As the sin-offering is, so is the trespass-offering; there is one law for them; the priest that maketh atonement therewith shall have it. And the priest which offereth any man's burnt-offering, even the priest shall have to himself the skin of the burnt-offering which he hath offered. And all the meat-offering that is baked in the oven, and all that is dressed in the frying-pan and in the pan, shall be the priest's that offereth it. And every meat-offering, mingled with oil and dry, shall all the sons of Aaron have one as much as another."

Verse 34.—"For the wave breast and the heave shoulder have I taken of the children of Israel from off the sacrifices of their peace-offerings, and have given them unto

* Cahen, Levitique, p. 19.

Aaron the priest and unto his sons, by a statute for ever from among the children of Israel." Colenso says*—"These last directions are given in the story before Aaron and his sons were consecrated. Hence they must be considered as intended to apply to them, while the camp was in the Wilderness, as well as to the 'sons of Aaron' in future generations. But what an enormous provision was this for Aaron and his four, afterwards two, sons and their families! They were to have the skins of the burnt-offerings—and the shoulder and breast (that is, double breast) of the peace-offerings, of a congregation of two millions of people, for the general use of their three families! But besides these, they were to have the whole of the sin-offerings and trespass-offerings except the suet, which was to be burnt upon the altar (Leviticus iv., 31, 35; v., 6) and the whole of the meat-offerings, except a handful, to be burnt as a memorial (Leviticus ii., 2), and all this was to be eaten *only by the three males in the most holy place*" (Numbers xviii., 10)!

And it would seem that they were not at liberty to *burn* the sin-offerings, or consume them in some other way than by eating; they must be "eaten in the holy place." At all events, we find it recorded that Moses, on one occasion, "diligently sought the goat of the sin-offering, and behold, it was burnt! and he was angry with Eleazar and Ithamar, the sons of Aaron, saying, Wherefore have ye not eaten the sin-offering in the holy place, seeing it is most holy, and God hath given it you to bear the iniquity of the congregation to make atonement for them before Jehovah?" *Ye should indeed have eaten it in the holy place,* as I commanded (Leviticus x., 16—20). The very pigeons to be brought as sin-offerings for the birth of children, would have averaged, according to the story, 264 a day; and each priest would have had to eat daily 88 for his own portion "in the most holy place!" Cahen points out in a note to Numbers the utter impossibility of Aaron and his two sons alone fulfilling all the priestly duties.

Chap. vii., v. 13.—"He shall offer for his offering leavened bread." Rosenmuller says—"It may appear singular to

* Pentateuch, p. 127.

find leavened bread prescribed in this verse, while in chap. ii., v. 11, it is expressly stated that nothing shall be offered as sacrifice which has fermented.

Verses 23 to 27.—These are cruel and useless laws. The punishment of death is strangely disproportioned to the offence; and unless the law has become obsolete, we must wonder that God allows the manufacturers and consumers of articles of food, made from the blood and fat of animals, to escape unpunished in the present day. In point of fact, while Christians teach that the whole of the Bible is God's divine word, there is little of the legislation of the Pentateuch, saving the Decalogue, of which they know anything.

Chap. viii., vv. 1 to 4.—Bishop Colenso objects* that the whole of the congregation could not have been gathered to the door of the Tabernacle, but we are inclined rather to agree on this point with Dr. M'Caul's reply than with the Bishop's objection.† We think that the text does not mean that all the people were to be *within the court.* It is right to add that some of the Talmudic commentators, who ought to know the meaning of the Hebrew, take the same view as Dr. Colenso, and declare that a little space contained a great multitude. Cahen says that the passage is metaphoric, and Aben Ezra argues that it only applies to the chiefs and elders of the tribes, and Cahen refers to Numbers, chap. i., v. 16; chap. xvi., v. 2; and Joshua, chap. xxiv., v. 1. These texts, however, do not meet Colenso's argument.

Chap. viii.—The anointing of Aaron and his sons appears to have been recorded already (Exodus, chap. xl.), but this narrative is more full. To a civilised unbeliever the sprinkling blood on the tip of the right ear, the thumb of the right hand, and the great toe of the right foot, seems a farce.

Verse 35.—"Ye shall abide at the door." Bellamy observes that "it is said in the common version that during the seven days of the consecration they were to abide at the door of the tabernacle day and night. They were not to go forth (verse 33). But it must appear that this would

* Pentateuch, part i., p. 31. † M'Caul on Colenso, p. 17.

have been a very awkward place for them had they remained there for such a period, which they were not to leave day nor night. This was a thing altogether impossible, as on various occasions they must have necessarily quitted such a station."

Verse 32.—"And that which remaineth of the flesh and of the bread shall ye burn with fire." Bellamy says—"This would have been highly criminal so long as there were starving poor in every town to receive it."

Chap. ix., v. 2.—"Young calf." Bellamy remarks—"All calves are young. This is incorrect. The words בן בקר, BeN BeQeR, are omitted. They were to take a male calf, but no information of this kind is given in the common version."

Chap x., v. 1.—"Which he commanded them not." The Douay says—"Which was not commanded them." The latter translation is the most correct. There is no absolute prohibition. The story of the death of Nadab and Abihu, who had been previously admitted to God's actual presence, is a strange one. It looks as if there had been some revolt or jealousy amongst the Levites at the special selection of Aaron, Ithamar, and Eleazar. The case of Koran, Dathan, and Abiram is somewhat similar. The "fire from the Lord," which devoured the two sons of Aaron, seems to have spared their clothing (see verse 5), "in their coats," which reads in the Douay, "vested with linen tunicks." Josephus, after mentioning this death of Nadab and Abihu, says that to avoid abuse of the divine authority Moses "left it to God to be present at his sacrifices when he pleased and when he pleased to be absent."*

Verse 9.—"Do not drink wine nor strong drink, thou, nor thy sons with thee, when ye go into the tabernacle of the congregation, lest ye die; it shall be a statute for ever throughout your generations." Deut., chap. xiv., v. 26.—"And thou shalt bestow that money for whatsoever thy soul lusteth after; for oxen, or for sheep, or for wine, or for strong drink, or for whatsoever thy soul desireth; and thou shalt eat there before the Lord thy God, and thou shalt rejoice, thou, and thine household." Bellamy says—

* Antiquities, Book iii., chap. 8.

"The words 'strong drink' are altogether indefinite. Strong drink is applicable to many liquors which do not cause drunkenness. The word שכר, ShKeR, which is translated strong drink, is not a compound word; it means neither strong nor drink, but literally to satisfy, to satiate. It is applied to wine in its first state, or the juice of the grape. It means wine that is satiated—that is, the juice of the grape satiated—with fermentation, by which process the vinous spirit is produced.

Chap. xi.—It is difficult to conceive the reason why, in the list of articles fit for food, eels should be forbidden as having no scales, and classed as unclean with hares and swans, while locusts, grasshoppers, and beetles are permitted. The Douay gives entirely different names to some of the prohibited animals, from those contained in our version.

Cahen confesses that it is impossible in many cases to say what birds or animals were intended by the names given in the Hebrew. This chapter is with slight variations repeated in Deuteromy, xiv.

Verse 5.—"The coney." The Douay, following the Vulgate and the Septuagint, calls it the cherogrillus.

Verse 6.—The hare does not chew the cud; it has not the stomach of a ruminant animal.*

Verse 13.—"The eagle, the ossifrage, and the ospray;" the Breeches Bible has "goshawke" instead of "ossifrage;" the Douay has the "griffon," but adds in a foot-note, "not the monster which painters represent, which hath no being upon earth;" the Vulgate, "gryphem;" Cahen has "the eagle, the peresse, and the ozniah."

Verse 16.—"And the owl, and the night-hawk, and the cuckoo." The Douay has "the ostrich, and the owl, and the larus." The Breeches Bible, "the ostrich, the night-crow, and sea-mew." Sharpe has "the ostrich, the night-hawk, and the falcon."

Verse 18.—"And the swan, and the pelican, and the gier-eagle." The Douay has "the swan, the bittern, and the porphyrion." The Breeches Bible, "The redshanke, the pellicane, and the swanne."

* *Vide* Professor Owen in Letter of Bishop of Natal.

Verses 20 and 21.—"All fowls that creep, going upon all four, shall be an abomination unto you. Yet these may ye eat, of every flying creeping thing that goeth upon all four, which have legs above their feet, to leap withal upon the earth." Four-legged fowls and animals which have legs anywhere else than above their feet are rare. The Targum of Onkelos says "joints" instead of legs. Bellamy repudiates this translation altogether.

Verse 22.—"Even these of them ye may eat; the locust after his kind, and the bald locust after his kind, and the beetle after his kind, and the grasshopper after his kind." The Douay says, "That you shall eat as the bruchus in its kind, the attacus, and the ophiomachus, and the locust." The Breeches Bible, "The grasshopper after his kind, the solean after his kind, the hargol after his kind, and the hagab after his kind." The last three names are simply awkward attempts to anglicise the Hebrew without translating.

Chap. xii.—In translating this chapter, Cahen says that he is obliged sometimes to use Latin and to adopt periphrase, in order to avoid offending the delicacy of his readers.

Vater says that the difference of time of purification for male and female infants arose from the Jewish national prejudice, which regarded the woman as less perfect than the man.

Verse 5.—According to Dr. Jennings, the Talmudists dispute whether שבעים SheBOIM, in our version rendered two weeks, should not be 70 days.

Chap. xiii., vv. 47 and 48.—"The garment also that the plague of leprosy is in, whether it be a woollen garment or a linen garment. Whether it be in the warp or woof, of linen, or of woollen, whether in a skin, or any thing made of skin." "This," says Cahen, quoting also certain Rabbinical writers, "is not according to the order of nature any more than the plagues of the houses; it is a miracle from a special providence, for the Israelites, to turn them from evil doing, of which these evils are the chastisement. This kind of supernatural explanation amounts to declaring that one knows nothing about it. Rosenmuller says—'It is

difficult to form an idea of this kind of leprosy, even in attributing it to the wool taken from animals dead of some disease. In the skins the scurf and irruption are less extraordinary, above all when they have been badly prepared, if the hair has been left on, as is common in the East. It is extremely difficult to determine what this leprosy was, several consider it as similar to that of the body.' Moses would have thus prohibited the clothing containing the leprous poison proceeding from the living body. Nevertheless this opinion is contested. What is the necessity, asks Kebenstreit, for a special law when the leper himself was banished from all human society, and everything upon him was declared impure? Besides, more than this, the lawgiver declares equally impure the leprosy of the cloth and linen, as it may have attacked the weft and the cord, or both; he recognises also that it might happen that one part of the stuff might be attacked by the contagion, while the other remained intact. It would be difficult to say how a leprous cloth could become contagious. We cannot conceive how the same stuff could be made of different materials and more or less tainted, since it was forbidden to the Jews to have clothing of mixed linen and wool. (Leviticus xix., 19; Deuteronomy xxii., 11). The virulence of the leprosy might certainly have invaded all the clothing made of one simple texture, be it wool alone, or linen. We know at the present time in different diseases the clothing of the sick is so much corrupted that it presents a certain danger to the healthy persons who may clothe themselves with it. In these diseases, nevertheless, the virus does not affect the cloth entirely, and does not stop in the warp only or in the woof: there is no virus which extends itself after the clothing is taken from the sick person. Even the black matter of the mortified and dried-up parts in cancer, never goes farther than into that part of the stuff which has first touched it. If it is thus, I do not know that the word contagion can be applied to that blemish in the clothing which Moses calls leprosy. I believe rather that this word has passed metaphorically from a living body to an inanimate one; it is a license which we permit ourselves sometimes, as we say that the

trees and stones are eaten by the cancer, when some humidity or some putrid influence caused by the atmosphere has corrupted them. As to the leprosy of the cloth, Michaelis thinks that the wool might be infected with leprosy, when it proceeds from sheep wasted by diseases or only sick. Generally this species of wool is harsh and useless, and cloths made of such a material are easily worn out, and those who clothe themselves with it run great danger. It is the same with the leprosy of skins, of which Moses speaks. I think, adds the author whom we cite, that it was that which takes place, for the skins of other animals dead of disease or old age, above all the skins of oxen, where that is common in the contagions of herds. These skins are brittle, appearing often half-eaten up, and are not a little hurtful to health. Yet it appears to us more simple to regard the whole as preventive measures of hygiene, very exaggerated, and of which we find nowhere else any application in the Holy Scriptures."*

Chap. xiv., v. 34.—"When ye be come into the land of Canaan, which I give to you for a possession, and I put the plague of leprosy in a house of the land of your possession." The species of leprosy which we are about to describe is, according to Aben Ezra, the effect of a miracle. It is singular that laws should have been made for a supernatural thing, and which could not be foreseen. Gueddes remarks that it may well be a question here of an eruption of saltpetre, which in our countries is not hurtful to health. Some think that it concerns a leprosy which has passed from living bodies to the walls, which is improbable, since the leprous were submitted to the inspection of the priest on the appearance of the first spots which announced the leprosy. Others say that it refers to a nitrous efflorescence, but the description which the text presents seems rather to relate to the lichens with which the stones were covered, with which some simulate completely a leprosy. Jar'hi makes upon this verse a singular remark—it is an announcement, says he, that a malady will come which will make known to the Israelites the treasures which the Amorites have hidden in the walls during the forty years

* Cahen, Levitique, p. 53.

wandering of the Israelites in the desert. We see according to that that the leprosy of houses is unexplained and unexplainable; the leprosy of men relates to the nomad state—it is a question but of camps and tents; the leprosy of walls is traced to the sedentary state, for it is known that it is principally during this state that the sacerdotal ordinations were enacted, but feebly executed."*

Chap. xiv., v. 49.—"Two birds." The Douay says "two sparrows;" and, according to verse 4, it appears that it was "lawful to eat" sparrows, although, as sparrows fed upon the unclean creeping things forbidden in chap. xi., they ought, under that chapter, to have been unclean also.

Chap. xv.—Cahen says—"In this chapter we are again obliged to occasionally use the Latin," in order to avoid giving unnecessary offence whilst conserving the literal rendering. Cahen, after mentioning that many of the commandments that are given in Leviticus are such as could not have been carried out, refers to Ezekiel, chap. xx., v. 25—"Wherefore I gave them also statutes that were not good, and judgments whereby they should not live."

Chap. xvi., v. 8.—"And Aaron shall cast lots upon the two goats; one lot for the Lord, and the other lot for the scapegoat." In lieu of "scapegoat" the Douay has "emissary goat." The word in the Hebrew is עזאזל, OZAZeL, Azazel. Gesenius says—"By this name I suppose to be understood originally some idol, to be appeased by sacrifices, as Saturn and Mars; afterwards I suppose from the names of idols being often applied to demons, this name was used for that of an evil demon inhabiting the wilderness, who had to be appeased by sacrifices by this very ancient and Gentile rite."† According to‡ Aben Ezra, Azazel is the name of a demon, to appease whom an offering was sent; this view being supported by certain Rabbinical writers and by the Book of Enoch. It appears probable to us that Azazel is the name of one of these demons inhabiting devastated places, and named for that reason Shedim, from shud, to devastate; as there was another species of demon living in the woods, a species of

* Cahen, Levitique, p. 59. † Lexicon, p. 617.
‡ Bresslau's Lexicon, p. 429; but see Simonis, p. 1173.

Pan, satyrs. This name is not unknown to the cabalists. Azazel is, according to the Zohar, one of the fallen angels, and precipitated into hell. There are Aza and Azael. It is this that we read also in the Ethiopian book attributed to Henoch. The opinion of Hiskouni is that it concerns here the angel of death, Samael. (They pretend to derive this word from סר מאל, SeR MAL, "he turned himself from God.") Perhaps in admitting an easy translation made designedly, one might read עז אל, OZeZ AL, the god Azaz, a name which has a singular conformity to the Isis of the Egyptians. However that may be, it appears that we discover here the remains of two origins of worship so ancient, Maimonides avoids explaining himself. "Be it on account of the weakness of our understanding," says he, "be it because of the imperfection of our wisdom, it is impossible for us to know the reason of this sacrifice" (Moré Neb, part iii., chap. 26). Aben Ezra, in his usual manner when he experiences embarrassment, enounces in oracular style: "If thou art capable of understanding the mystery of Azazel, thou will learn also the mystery of his name; for he has similar associates in the Scriptures. I will tell thee by allusion a part of the mystery. When thou art thirty-three years old thou will understand us." He finishes abruptly, without speaking allegorically or otherwise.*

Chap. xvi., vv. 21 and 22.—"And Aaron shall lay both his hands upon the head of the live goat, and confess over him all the iniquities of the children of Israel, and all their transgressions in all their sins, putting them upon the head of the goat, and shall send him away, by the hand of a fit man, into the wilderness: and the goat shall bear upon him all their iniquities into a land not inherited, and he shall let go the goat into the wilderness." The absurdity of this injunction is heightened by the inutility, for I do not find that the Israelites were ever let off from any punishment by reason of the scapegoat.

The Egyptians had a similar custom, as we learn from Herodotus, Euterpe 2, chap. 39, who relates it in these words:—"After they have killed the victim, they cut off its head, but they flay the animal's body, after which, having

* Cahen, Levitique, p. 68.

pronounced many imprecations on the head, those who have a market and Grecian merchants dwelling among them, carry it thither and sell it to them; but those who have no Grecian residents to sell it to, throw the head into the fire, pronouncing over it the following imprecations:—'If any evil is about to befall either those that now sacrifice, or Egypt in general, may it be averted on this head!'" "The two customs, though not perfectly the same, are so far similar that the one appears to have been derived from the other. The import of both is certainly the same: for in both the animal sacrificed is made use of as a substitute to draw away calamity from the party sacrificing; in the one case being sent into the wilderness, and in the other consumed by fire."

Verse 21.—"Putting them upon the head," the Douay has, "Praying that they may light upon his head." Cahen, whose translation slightly differs, says—"There is here a very remarkable distinction, the sins of the sacerdotal class and those of the people towards their statutes and temples are redeemed explicitly and wholly, God accepts the sacrifice; but the other sins of the people are not expressly redeemed, God does not accept the sacrifice, they send the living goat to Azazel."

Chap. xvii., vv. 3, 4, 5, and 6.—"What man soever there be of the house of Israel that killeth an ox, or lamb, or goat, in the camp, or that killeth it out of the camp, and bringeth it not unto the door of the tabernacle of the congregation, to offer an offering unto the Lord before the tabernacle of the Lord, blood shall be imputed unto that man; he hath shed blood; and that man shall be cut off from among his people. To the end that the children of Israel may bring their sacrifices which they offer in the open field, even that they may bring them unto the Lord, unto the door of the tabernacle of the congregation, unto the priest, and offer them for peace-offerings unto the Lord. And the priest shall sprinkle the blood upon the altar of the Lord at the door of the tabernacle of the congregation, and burn the fat for a sweet savour unto the Lord." The absurdity of this command will be apparent upon the slightest examination. If the Jews were as

numerous as is represented when in Egypt, and continued to increase and multiply in the same ratio, they would have filled a very large portion of the earth's surface; but even allowing for Biblical exaggeration, it would have been impossible for a people, amounting to several hundreds of thousands, to have all slaughtered their cattle at one spot (the door of the Tabernacle); and if they had done so, judging from the appearance and odour of modern slaughter-houses, the "holiest of holies" would have hardly been at the same time "the sweetest of sweets." It would have been still more impossible for each individual to have brought (perhaps from a distance of several miles) each an ox, lamb, or goat killed. It is not at all probable, in a nation so ignorant as the Jews, that the people possessed carts and waggons for the purpose of transporting the dead cattle to and fro, and if they had, the waste of labour would have been enormous. The severe penalty of death is all that is required to make this essentially one of "God's laws." What would be said if all the slaughtered cattle in England were, by Act of Parliament, compelled, under penalty of death, to be brought to the door of St. Paul's Cathedral to have the fat and blood taken from them? Colenso, who has submitted these verses to an elaborate comment, applying them to the texts affecting the Passover lambs, asks how these commands could have been complied with, when 150,000 lambs would have had to be killed by 150,000 people in the short space of two hours.*

Verse 7.—"And they shall no more offer their sacrifices unto devils, after whom they have gone a whoring." Chap. xix., vv. 26 and 31; chap. xx., vv. 6 and 27; Deut. c. xxxii., v. 17.† What are devils? If God is the Creator of all things, did he create devils? If so, it is scarcely just to punish us for falling victims to devils, whom God must have made sufficiently powerful to tempt us to the commission of crime. If otherwise, are devils independent existences; because in that case the Deity is neither omnipotent nor infinite. Many Theists are now in-

* See Pentateuch, part i., p. 42; 2 Chronicles, c. xxix. and c. xxxv.

† See Exodus, p 256; J. P. Smith's "Christian Theology;" Farmer on the "Demoniacs."

clined to admit that they are neither; and that devils, angels, gods, familiar spirits and demons, all stand in the same mythological position. They belong to the past, not to the present. They belong to the age of ignorance, not of inquiry. We find in such verses as these the clue to the superstitious fear with which the inhabitants of some little villages still regard certain old men and women; and the clue to the persecutions for witchcraft. Strong objections have been urged against the doctrine of devils, demons, and familiar spirits. It is said by Theists that it is contrary to all natural conceptions of the benevolence and mercy of the Deity that he should have created, and should sustain in existence, beings of the highest intellectual order to be the subjects of eternal misery themselves, and causes of it to all humanity. It is further urged that the doctrine detracts from the power of God by holding forth an almost omnipotent chief of a legion of powerful and mischievous devils, all bent on the destruction of mankind. It is further, and very reasonably, urged that the Jews, especially after their connection with the Chaldean and Persian nations, had imbibed very extended, and, at the same time, very puerile ideas with regard to the operations of both good and bad spirits. The properties of plants, of mineral waters, of minerals, of certain climatic conditions, the existence of any remarkable phenomena, the insanity of men, or animals, were all, in ancient times, attributed to the presence and influence of good and bad spirits. Science has exploded these errors; and, in exploding them, has also impeached most severely the pretended divine revelation in which they were sustained. Bellamy translates the "to devils" as "before goats," and says that the word translated devils has no such meaning in any part of Scripture. He points out that the same word is rendered "satyrs," in Isaiah xiii., v. 21; and c. xxxiv., v. 14. The word translated "devils," Cahen does not translate at all; but writes Seirime, which is simply trying to give corresponding letters for the Hebrew word שעירם (ShOIReM.)*

Aquila says, "The shaggy ones;" others say, "the satyrs." It refers here doubtless to some foreign Deity; the phrase

* Levitique, p. 78.

which follows makes this supposition probable, and one is led to think of Pan, of fauns, especially if we reflect that goats were generally adored among the Egyptians, principally at Thebes—see Herod, Euterpe, p. 42. The different explanations which we have given agree as to the goat, and it appears that the Israelites had followed these irregularities with which Amos reproaches them in his day (c. v., v. 25). At any rate, it would be difficult to say any thing determinate, whether upon the nature of the sacrifice, or upon the manner of making it. The Targums give the word as "demons," and Mendelsohn says Waldteufeln, or wood demons. It seems always certain that the object of the institution of sacrifices was to deter the Israelites from sacrificing to the sylvan gods (see More Nebouch, part 3, chap. 46). It concerned also the maintenance of the power of the Levites.

Chap. xviii., v. 21.—"And thou shalt not let any of thy seed pass through the fire to Molech, neither shalt thou profane the name of thy God: I am the Lord." The texts in which references to Molech occur are chap. xx., v. 2; 1 Kings c. xi., v. 7; 2 Kings c. xxiii., v. 10; Jeremiah c. xxxii., v. 35.*

The Rabbins assure us† that this idol was of brass sitting upon a throne of the same metal, adorned with a royal crown, having the head of a calf and his arms extended as if to embrace any one. When they would offer any children to him, they heated the statue within by a great fire, and, when it was burning hot, they put within his arms the miserable victim, which was soon consumed by the violence of the heat; and that the cries of the children might not be heard, they made a great noise with drums and other instruments about the idol. Others relate that the idol was hollow, and within it were contrived seven partitions, one of which was appointed for meal, or flour, in the second there were turtles, in the third an ewe, in the fourth a ram, in the fifth a calf, in the sixth an ox, and in the seventh a *child.* All these were burned together by heating the statue in the inside. It appears from the sub-

* See Commentary on Exodus, p. 268.
Parkhurst Lexicon, p. 401.

stance of this idol, which was brass, or copper, from its having the head of a calf, the animal emblem of fire, from its being divided into seven partitions, answering to the seven planetary spheres or orbits (or according to others having seven chapels before it), and from the horrid rites performed to it, that it was intended as a representative of the solar fire. This is further confirmed by its name מלך (MeLeK), king; for as a king in his political capacity acteth where he is or not by means of others, so the solar fire in this system doth, in some sense, act where it is not, by means of the light which it is continually sending forth, and putting in motion. Add to this, that the apparent spring of material action is in the fire.

It has been doubted whether in that shocking rite of making their children pass through the fire, making them enter in or by the fire, to Molech, they were always burnt to death or not. Whoever will attentively consider the following passages in the Hebrew Bible, will be strongly inclined to the affirmative. (See Ezek. xvi., 20, 21; xx., 25, 26, 31; xxiii., 37; compare Jer. xxxii., 35, with chap. vii., 31.) Eusebius quotes from Diodorus Siculus, a passage so apposite to our present purpose, that the judicious reader cannot be displeased at seeing a translation of it in this place. It relates to the Carthagenians when besieged by Agathocles, Tyrant of Sicily. "They imputed this calamity," says Diodorus, "to Saturn's fighting against them; for whereas they used, in former times, to sacrifice the best of their own children to this God, they had lately offered such children as they had privately purchased and brought up; and on inquiry, some of those who have been sacrificed were found to be suppositious. Reflecting, therefore, on these things, and seeing the enemy encamped at their very walls, they were seized with a religious dread, as having profaned those honours, which their ancestors paid to the Gods. In haste, then, to rectify their errors, they chose out two hundred of the noblest children, and sacrificed them publicly. Other persons, who were accused of irreligion, gave up themselves willingly to the number of no less than three hundred. For they had a brazen statue of Saturn stretching out his hands towards the

ground in such a manner that the child placed within them tumbled down into a pit full of fire."

Thus Diodorus, whose description of the idol, and of the manner of these infernal sacrifices, it must be confessed, differs somewhat from the Rabbinical account above cited. And, indeed, what can be more probable than that, at different times and places, there should be some variations in both these respects?"

"I take* Molech and Baal to be," says Godwyn, "one and the same idol, they were both names of supremacy and rule. Baal signifieth a Lord or Master—and Molech, a King or Prince. They had both the same manner of sacrifice, they burnt their sons for burnt-offerings unto Baal likewise (Jer. xix., 5). Yea, they built the high places of Baal, which are in the valley of Benhinnom, to cause their sons and their daughters to pass through the fire unto Molech. Jerem. xxxii. 35. In which text the place of sacrifice is noted to be one and the same, common to both idols, and Molech put in the end of the verse, to explain Baal in the beginning thereof. Some think them to be different, because the Planet Jupiter was worshipped under the name of Baal; but the planet Saturn is probably thought to have been worshipped under the name of Molech. If we diligently observe histories, we shall find such a confusion of the planets, that the sun, as it was sometimes called Baal, sometimes Molech: so it was sometimes called Jupiter, sometimes Saturn; and concerning Baal, this is evident: hence Jupiter was called by the Phœnicians, Baal-samen, which name is derived from the Hebrew, and soundeth as much as Jupiter Olympicus, the Lord of Heaven; for Baal signifieth Lord, and Shamain, heaven. And what is this Lord of Heaven in the theology of the Heathens, other than the Sun? who may as well be styled the King of Heaven, as the Moon the Queen. Yea, Sanchoniatho, as Eusebius in the forequoted place relates him, taketh all these three for one—namely, the Sun, Jupiter, and Baal-samen."

Verse 4.—"Turn ye not unto idols, nor make to yourselves molten gods: I am the Lord your God." The

* Godwyn's Hebrew Rites, p. 143.

manufacture of "molten" gods must be comparatively modern. The Deity must have allowed idolatry a long existence if the Mosaic prohibition was the first. A writer in the *Westminster Review** says:—"The Egyptians, as we gather from Herodotus, were the first idolators, and their early temples, according to another authority, had no statue in them. Previous to this time, and long after, they appear to have worshipped the one God—a being without name, without figure, incorporeal, immutable, infinite, the origin and source of all things, and who was to be adored in silence. The ancient Persians worshipped fire as the symbol of the Deity (Hyde, de Veterum Persarum), and their sacrifices were made, not in temples or to images, but on the top of lofty mountains. In the temples of the Chaldeans, at Babylon, there was no statue even so late as the days of Herodotus; and for a hundred and seventy years after the foundation of Rome there was not a statue in any temple at Rome. In the early books of the Bible we find that the religion of Abraham was no new or astounding doctrine in that remote age. Melchizedek, King of Salem, in Canaan, was a 'priest of the most High God;' and Abimelech, King of Gerar, in Palestine, recognised the Almighty in a dream, and, with reference to his own subjects, exclaimed, 'Lord, wilt thou also slay a righteous nation?' The Arab Job, Jethro the Midianite, and Balaam the Syrian, were all acquainted with the true God.

"But with limits like ours, it is impossible to indulge in any speculations on that dark period which precedes the first faint dawning of history. The Jewish doctors, indeed, are kind enough to point out the very individual by whose means idolatry was introduced into the world, and a firm faith in their dictum would save much trouble. According to the Rabbi Moses Ben Maimon, Enos, discoursing on the splendour of the heavenly bodies, insisted that, since God had thus exalted them above the other parts of creation, it was but reasonable that we should praise, extol, and honour them. The consequence of this exhortation, says the Rabbi, was the building of temples to the stars, and the

* Vol. xii., p. 43.

establishment of idolatry throughout the world. By the Arabian divines, however, the imputation is laid upon the patriarch Abraham, who, they say, on coming out from the dark cave in which he had been brought up, was so astonished at the sight of the stars that he worshipped Hesperus, the moon, and the sun successively as they rose. These two stories are very good illustrations of the origin of myths by means of which even the most natural sentiment is traced to its cause in the circumstances of fabulous history. But the Arab Job, without thinking it necessary to inquire into the sources of his feelings, explains the philosophy of early idolatry in a few simple and beautiful words. 'If,' says he, 'I gazed upon Orus (the sun) when he was shining, or upon Tärêcha (the moon) when rising in her glory, and my heart went secretly after them, and my hand kissed my mouth, I should have denied the God that is above.'

"The pious Arab here points to what the Easterns tell us is the most ancient religion in the world. This, the Arab historian Haragi says, consisted in the belief of the eternity of the world, governed by a co-eternal mind whose symbol was fire. The apparent, or material source of fire, was the sun, to which, as well as to the moon and the stars, as partakers of the same celestial nature, a proportioned reverence was due. The chief seat of this religion was in Haram, on the Chaldean border, where the grand temple of the Sabeans was on the top of a hill. The words, Haranite and Sabean, came thus to be used as equivalent terms. We have now almost lost sight of the original tradition; and the revelations of the Deity are made to mankind through the stars "walking in brightness," and the various phenomena and influences of nature. The worship of the mysterious element of fire soon gives place to that of its material fountain, the sun; the whole host of heaven gradually became immortal powers; the entire world is a reflex of God, and God is adored in that world which thus reveals him to man. Thus primitive religion becomes a Pantheism. At first, the style of religious instruction would be plain, concise, even abrupt, to suit the simplicity of the dogmas; but afterwards, as Pausanias

relates of early Greece, the priests would begin to envelop their ideas in enigmatical forms. The same diversity of intellect, which at the present day causes the component parts of even civilised society to resemble different races of men, must have existed from the beginning; some magnificent minds, towering above the common boundaries of knowledge, would lift up the veil of nature; while the vulgar, grasping as it were only the outside of their thoughts, would materialise their most refined ideas, and multiply the number of gods till the Pantheism arrived at the axiom of the Greeks, "Everything is the image of the Deity." Hence the esoteric and exoteric doctrines; the priests would speak a different language to the wise and to the ignorant; his meaning would be addressed to the initiated, and its enigmatical form of communication to the multitude. The time was passed when God talked face to face with man, but the same need of such inter-communication remained; and in the flight of birds, the entrails of beasts, and the thousand other omens so dear to ignorant credulity, the will of heaven would be manifested to mankind. Symbols, or the images of ideas, must thus have been of very early invention; and the obscurity of the symbolical mode of teaching is the consequence of the difficulty of reducing idea to form. The myth speedily followed, and was at first, perhaps, intended to explain or illustrate the symbols; subsequently it was used in the biography of personages who were supposed to partake of the sanctity of the symbol; and finally was understood to mean ancient tradition as contradistinguished from history.

"The heroes of the myths were probably at first imaginary beings—personifications of the powers of nature; and as man can only reason from what he knows, their constitution and attributes must have been borrowed from his own. The earth, that fertile womb from which he saw new or renewed creation springing every day, became a female, the Mighty Mother, the Eternal Spouse; and the heavens, whose powers were concentrated in the sun, were the original male—the principal of life and fecundity. The grand distinction of sex was preserved throughout the

whole system. When Nature came to be personified, not as a whole, but in her attributes, every god had either a wife or a mistress; and in the heat, the thunder, the storm, and the volcano, the mythologist found materials for the discords, rapes, and adulteries of the immortals, but too closely analogous with the crimes and sufferings of mankind. In fine these distinctions were concentrated, as it were, in two emblems, called the Lingam and the Yoni by the Hindoos, and the Phallus and Cteis by the Greeks, and observable in a greater or less degree in every system of mythology.

"But the mere fact of conferring a name upon an abstract idea, and attaching an almost human history to it, was not sufficient. The vulgar, with something like the scepticism of St. Thomas, required to see and feel; and visible and tangible images were, therefore, presented to their brute senses. These, at first, were rude stones or columns, for religion had precedence in point of time of the arts; but as mythological story took hold of the imaginations of men, they were seized with the desire of fashioning their blocks in imitation of their gods: and hence, we presume, the beginning of sculpture. Unchiseled stones, according to Pausanias, were the first images of the gods of the Greeks; and the Phœnicians, the Megareans, the ancient Arabs, and the Jews, were once plunged in the same rude idolatry.

Verse 31.—"Regard not them that have familiar spirits, neither seek after wizards." See also chap. xx., v. 6. The Douay is, "Go not aside after wizards, neither ask after soothsayers." Bellamy, "Ye shall not turn to the serpents, moreover after the wizards ye shall not seek." Cahen, "Turn not towards the oboth and seek not the yidonime," —that is, he does not translate either of the words. The Septuagint has in lieu of "oboth," "ventriloquists;" and Gesenius observes that this is a correct rendering, because ventriloquists amongst the ancients commonly abused this art of inward speaking for magical purposes. Cahen says that the word אובות AUBUTh, signifies leathern bottles for holding water; and Parkhurst adds that they were so called from being remarkably capable of distension or swelling.*

* But see Bellamy, New Translation, p. 333.

In Chap. xx., v. 27, the word אוֹב, AUB, of which Aubeth is the plural, is in our version again rendered, "familiar spirit." Gesenius asks, "how could it be that the same Hebrew word should express a bottle and a ventriloquist? Apparently from the magician when possessed with the demon, being as it were a bottle or vessel, and sheath of this python."

Chap. xxi., vv. 17, 18.—"Speak unto Aaron, saying, Whosoever *he be* of thy seed in their generations that hath *any* blemish let him not approach to offer the bread of his God: For whatsoever man *he be* that hath a blemish, he shall not approach; a blind man, or a lame, or he that hath a flat nose, or any thing superfluous." The Douay says, "if he have a little, a great, or a crooked nose." Bellamy says the word translated "flat nose" has no such meaning in any part of Scripture, and that it is surprising how such a notion could enter into the minds of the translators; he makes the verse read, "blind, or lame, or defective, or unnatural."

Verses 19—21.—"Or a man that is broken-footed, or broken-handed. Or crook-backt, or a dwarf, or that hath a blemish in his eye, or be scurvy, or scabbed, or hath his stones broken: no man that hath a blemish of the seed of Aaron the priest shall come nigh to offer the offerings of the Lord made by fire; he hath a blemish, he shall not come nigh to offer the bread of his God." Here the disability is confined to the Levite, but in Deuteronomy, chap. xxiii., v. 1, it is more general.

Chap. xxii., vv. 12 and 13.—"If the priest's daughter also be *married* unto a stranger, she may not eat of the offering of the holy things. But if the priest's daughter be a widow, or divorced, and have no child, and is returned unto her father's house, as in her youth, she shall eat of her father's meat; but there shall be no stranger eat thereof."

So that if the priest's daughter were left a destitute widow, with a child or children, her father was not to permit her to eat of his meat.

Chap. xxiii., v. 43.—"That your generations may know that I made the children of Israel to dwell in booths, when I brought them out of the land of Egypt: I am the Lord your God."

The Douay renders "booths" as "tabernacles," but it ren-

ders the same Hebrew word in v. 42 as "bowers." Cahen gives "cabanes," huts, and says of "what huts do they speak here? When were they made?" One rabbinical writer suggests, that God caused the huts suddenly to come out of the earth for the Israelites. Mendelsohn rises against this idea, and quite puts it aside. He cannot conceive how any one can take upon himself to fabricate so strange a miracle of which no one else has ever thought. But what more would it be if one had thought of it? (See Gramberg, v. i. p. 290.)

Chap. xxiv., v. 7.—After the words "pure frankincense," the Septuagint adds, "and salt."

Verses 15 and 16.—This reads as if, first, a prohibition against cursing the God of any individual; and 2nd, a prohibition against blaspheming Jehovah.

Chap. xxv., v. 30.—"The house that is in the walled city." Spinoza draws attention to the marginal reading, which runs "the house that is not in the walled city."* Bellamy says, "In this clause the translators have omitted translating the negative לא L.A.; *i.e.* not; and have followed the bold example of those called the Keri Translators, or those who, when they could not otherwise make sense of the passage as written by the sacred writers, have rejected certain words."

Chap. xxv., vv. 30 to 43, are in contradiction to Exodus chap. xxi., verse 2. There the Hebrew slave was to be free the seventh year, but according to this he is held till the year of jubilee.

Verses 44 to 46—"Both thy bondmen and thy bondmaids, which thou shalt have, shall be of the heathen that are round about you; of them shall ye buy bondmen and bondmaids. Moreover, of the children of the strangers that do sojourn among you, of them shall ye buy, and of their families that are with you, which they begat in your land; and they shall be your possession. And ye shall take them as an inheritance for your children after you, to inherit them for a possession; they shall be your bondmen for ever; but over your brethren the children of Israel ye shall not rule one over another with rigour." The slave dealing† here legalised, appears to have become a regular trade. Ezekiel, chap,

* Tractatus Theologico Politicus, cap 9, § 38.

† See also Exodus, p. 251, and Jeremiah, c. xxxiv., v. 9.

xxvii., v. 13, speaks of the trade in "the persons of men." Bellamy, ashamed of this disgraceful passage, seeks most ineffectually to explain away the meaning of the text.

Chap. xxvi., verse 12.—"And I will walk among you, and will be your God, and ye shall be my people." Cahen says, "The ancients believed that each nation had its Deity. Jehovah is here announced as the national God of the Hebrews, the special God of Palestine."

Verse 42—"Then will I remember my covenant with Jacob, and also my covenant with Isaac, and also my covenant with Abraham will I remember; and I will remember the land." The covenant with Abraham in Genesis, chap. xvii., verse 8; with Isaac chap. xxvi., v. 3; and with Jacob, chap. xxviii., v. 13, is explicit and unconditional. The descendants of these three are to be as numerous as the dust of the earth, and are to inherit Canaan for ever.

"Jacob." God appears to have forgotten that by Genesis, chap. xxxvi., v. 10, he changed the name to Israel.

All the promises and denunciations of this chapter bear relation to this life, and Cahen says, that the belief in a future state was introduced long after the *confection* of the Pentateuch, wherein no trace is found of such a belief.*

Chap. xxvii.—De Wette says that "it is evident that the addition of this chapter is an after thought; for the book is brought to a regular epic conclusion, by the promises and denunciations in chap. xxvi., and still more by the formula, 'These are the statutes and judgments and laws which Jehovah made between him and the children of Israel in Mount Sinai, by the hand of Moses.' Or, what is, perhaps, as probable, the book originally ended with this formula appended to chap. xxv.; for chap. xxvi., 3—46, bears marks of a very recent origin—even later than the captivity. The threat, verse 34, 'Then shall the land enjoy her Sabbaths as long as it lieth desolate, and ye be in your enemies' land because it did not rest in your Sabbaths when ye dwelt in it;' and verse 43 must have been written after Jer. xxv. 11,—where the captivity of seventy years is threatened; and 2 Ch. xxxvi. 21, which says the captivity lasted 'until the land had enjoyed her Sabbaths; for as long as

* Preface to Numbers.

she lay desolate, she kept Sabbath, to fulfil three score and ten years." Perhaps the book ended originally with chap. xxv., to which the formula xxvi. 46, was appended."*

Chap. xxvii., v. 29.—"None devoted, which shall be devoted of men, shall be redeemed; but shall surely be put to death." The commentators give themselves much trouble to soften this terrible sentence. According to Jar'hi, it concerns a man condemned to death, when he may not be delivered from it for money; according to others, it is necessary that the person should be consigned to it by public authority and not by a private individual, and the Talmud treats Jepthah as mad to have thought that a human being could serve as a victim for a burnt offering; but there are too many facts which prove the existence and execution of this barbarous law; see besides the paraphrase of Ben Ouziel:—"All anathema which shall be anathematised of the human race cannot be redeemed neither by money, by vows, nor by sacrifices, neither by prayers for mercy before God, since he is condemned to death."†

Nicholas‡ has the following comments, which appear to us most pertinent. He says: "It will be vain to seek to deny that the legislator has appropriated a great number of the practices and civil and religious institutions of Egypt."

The holy ark is incontestably an imitation of the small chapels in painted or gilded wood which are seen so frequently represented in the Egyptian paintings. The breastplate of the High Priest recalls the image which the priests of Egypt wore upon their breasts. Among the Hebrews, as among the Egyptians, women did not hold any office in the priesthood; the priests were all clothed in a robe of linen of dazzling whiteness; they only had the privilege of entering into the Temple properly so-called, access to which was forbidden to the laity, who would have been smitten with sudden death did they transgress this prohibition. "It was from the examination of the precious stones which adorned the statue of Ammon," says Mr. Maury, "that the oracle was drawn." This manner of divination recalls the Urim

* De Wette's Introduction, § 152 b.
† Cahen Levitique, 141. See also commentary on Exodus, p. 200.
‡ Etudes sur la Bible, 95.

and Thummim among the Jews, which might indeed have been easily borrowed from the Egyptians. "Among the Hebrews as among the Egyptians, the sacrifices and the oblations furnished subsistence to the priests in like manner; the victims were to be without blemish, the priests were charged to assure themselves of this; finally, the animals offered in sacrifice were treated in nearly the same manner; certain parts were to be consumed with fire, while other parts were given back to the person who offered the sacrifice, and served for the family repast.

Analogous legal prescriptions, often identical, were imposed on the Hebrews as on the Egyptians. For both, a certain number of animals could not be used for food. It is true the prohibiting did not relate to the same animals in the two countries, and was not founded on the same reasons. It was a sin for the Egyptians, says Plutarch, to drink or eat what was forbidden, and we know that it was the same among the Hebrews. The two peoples agree in regarding swine as unclean. With the one, as the other, the leprous, considered as impure beings, were subject to similar regulations. Lustrations were commanded in certain identical circumstances; there were special commands for the sacerdotal order. Mourning had similar customs with the two nations; the women smote their breasts while uttering loud cries, and covered their heads with dust or ashes, and the men allowed the hair of the head and the beard to grow, while everywhere else, Herodotus remarks, the custom was to cut the hair in sign of mourning. The distribution of days into weeks is found in the two nations, and both designated them by analogous names. It is supposed from this that the period of weeks, invented by the Egyptians, was borrowed from them by the Hebrews. The antipathy to foreigners was as strong with the one nation as the other, an antipathy which did not fail to strike the first Greek writers who have spoken of the Israelites. In short, there is little even to the fringes which hung on the bottom of the garments of the children of Israel, and which have given rise to so many whimsical hypotheses, which is not found on the bottom of the linen tunics of the Egyptians.

Finally, to terminate this enumeration of customs and ceremonies common to the Hebrews and Egyptians, an enu-

meration which it would be easy to prolong, I will say some words on the sacrifices of substitution, unknown to the Hebrews before Moses, but forming an essential part of his legislation. These sacrifices were usual in Egypt. Herodotus has preserved to us the formula of imprecation employed by the Egyptians in this ceremony. "If any misfortune," said the priest in laying his hand upon the head of the victim, "menaces those who offer this sacrifice, or Egypt entire, may it fall upon this head." The formula employed by the Egyptians in the sacrifices of substitution is not mentioned in any passage of the Old Testament; but one may suppose that it could not differ essentially from that of the Egyptians; we know at least that whoever offered a sacrifice of this kind, placed the hand upon the head of the victim, in order to indicate that it was to bear the punishment of the transgression which he had himself committed. From these analogies, a great number of learned men have concluded that the Mosaic legislation was a copy more or less faithful of the Egyptian institutions. I do not dissimulate myself, that this hypothesis seems to find its confirmation in Jewish tradition, which represents Moses as reared at the Court of Pharaoh, and initiated in all the mysteries and knowledge of the Egyptians.

NUMBERS:

ITS AUTHENTICITY AND CREDIBILITY.

THE word במדבר, BeMeDeBeR, "in the desert," is the usual title of this book in the Hebrew, although it sometimes bears the title וידבר, UIDeBeR, its commencing words, "and he spake." The title in the Septuagint is "*Arithmoi*," from which the Vulgate "Numeri" and the English "Numbers" are derived. The words "fourth book of Moses" have no foundation or authority in either Greek or Hebrew. The book is evidently made up of several documents,* sometimes carelessly put together. Vater, and those who have followed him, contend for several and distinct authors for the different documents. The Massorites are supposed to have counted the verses and letters of the Book of Numbers, and to have stated that it contains, or contained in their day, 10 parscioth, or grand divisions, 33 sedarim or minor divisions, 1288 verses, 16,707 words, and 62,529 letters, and that the middle of the book is in chap. xvii. 4.†

Chap. i. 2.—"Take ye the sum." Bellamy, "Take ye the chief." Cahen, "Faites le denombrement" (make the numbering), and adds, "this is the second numbering." (See Exodus xxx. 11, and xxxviii. 25.) There is also a third (Numbers xxvi.) These three numberings, made at different dates, and giving the same result, are difficult to explain.‡ The words "tabernacle of the congregation" are in Sharpe's translation rendered "appointed tent" wherever they occur.

---

* Simon: Histoire Crit. du Vieux Test., p. 24. † Ibid, p. 140.
‡ See Bible: What it is, Exodus, p. 281.

Verse 14.—"Eliasaph the son of Deuel." Chap. ii. 14, "Eliasaph the son of Reuel." In chap. vi. 42 and 47, and in chap. x. 20, it is also Eliasaph the son of Deuel. Which is right? The word written Reuel is the same as the word written Raguel, Numbers x. 29. In lieu of Deuel in chap. i. 14, the Septuagint has *Ragouel*, which it repeats without variation in each of the above texts.

Verse 21.—"Those that were." Bellamy declares that these words in this verse, and in verses 23, 25, 27, 29, 31, 33, 35, 37, 39, 41, and 43, have no authority in the Hebrew text. He is right; but the words do not change the sense, although it is not unfair to inquire why translators should supplement God's revelation.

Verse 24.—"Children of Gad." Cahen says that the Septuagint puts here "Judah," and varies in stating the other names; but the copy to which reference has been made in this commentary, has "Gad," and agrees in the rest with the authorised version.

Verse 46.—By this verse we learn that the number of Jews above twenty years of age, warriors (not including the Levites) capable of bearing arms, was 603,550—Josephus* says 603,650; and taking old and young into consideration, as also men incapable of military service for various reasons, you can hardly compute these at more than four out of each ten, which would leave a total of about 1,500,000 males; the proportion of females would be 1,500,000 more. These, together with male and female slaves, and the tribe of Levi, must have made at least 3,000,000 people, an immense number to pass through a desert, where food and water were deficient. Cahen says that the numbers given are not historic, and that it is, therefore, idle to inquire why they are the same as those given seven months before.

Verse 49.—"Only thou shalt not number the tribe of Levi, neither take the sum of them among the children of Israel." Chap. iii. 15 says, "Number the children of Levi." The Lord must have changed his original intention.

Chap. iii. 7.—While this verse speaks of Moses and Aaron, the chapter only mentions the descendants of Aaron and of Levi.

---

* Antiquities, book 3, c. 12, sec. 4.

Verse 16.—"Moses numbered." The Septuagint says, "Moses and Aaron numbered."

Verse 39.—22,000 is incorrect; it should be 22,300*—viz., Gershonites, 7,500; Kohathites, 8,600; Meranites, 6,200. This may seem a trifling error, but in a revelation from God we are not prepared to expect errors at all; and in this case it is a grave error, and not a mere slip of the copyist or transcriber, for in verse 46, corroborated by verse 50, we are told that the first-born were 273 more in number than the male Levites, when, in fact, they were 27 less. It is very extraordinary that the Levites should be comparatively so few in number, especially when we consider them as the most favoured by God. The whole of the Levites, male and female, could not be much over 50,000, while the other tribes averaged, on the most limited calculation, at least four times that number. Cahen, who judges the numbers of the Levites to be unreliable, says that the proportion of first-born is evidently too weak.

"All the first-born males, from a month old and upwards, of those that were numbered were twenty and two thousand two hundred and threescore and thirteen." (Numbers iii. 43.) Let us see what this statement implies when treated as a matter of fact. For this purpose, I quote the words of Kurtz, iii., p. 209:—"If there were 600,000 males of twenty years and upwards, the whole number of males may be reckoned at 900,000 (he elsewhere reckons 1,000,000), in which case, there would be only *one* first-born to *forty-two* (forty-four) males. In other words, the number of boys in every family must have been, on the average, forty-two." This will be seen at once if we consider that the rest of the 900,000 males were *not* first-borns—and, therefore, each of these must have had one or other of the 22,273 as the first-born of his own family—except, of course, any cases where the first-born of any family was a *daughter*, or was *dead*, of which we shall speak presently. And these were not the first-born on the *father's* side, as Michaelis supposes, so that a man might have many wives and many children, but only one first-born, as was the case with Jacob himself. They are expressly stated to have been

* Simon: Hist. Crit. du Vieux Test, p. 40.

the first-born on the *mother's* side—"all the first-born that openeth the matrix." (Numbers iii. 12.) So that, according to the story in the Pentateuch, *every mother of Israel must have had, on the average, forty-two sons.**

Chap. iv. 3.—"From thirty." The Septuagint says, "from twenty-five," and the same in verses 23, 30, 35, and 47. In Chap. viii. 24, our own text makes the age of Levitical service from 25 to 30.

Verse 25.—"Badgers' skins." Bellamy urges that badgers as unclean animals were not allowed in the tabernacle. The Septuagint gives the word translated "badger" as a colour *azure*. The Vulgate and Douay, *violet*; but Gesenius and Bresslau are against this. Cahen says, *couverture de ta'hasch*. Newman and Parkhurst seem doubtful.

Chap. v. 8, 9, 10.—"But if the man have no kinsman to recompense the trespass unto, let the trespass be recompensed unto the Lord, even to the priest; beside the ram of the atonement, whereby an atonement shall be made for him. And every offering of all the holy things of the children of Israel, which they bring unto the priest, shall be his. And every man's hallowed things shall be his: whatsoever any man giveth the priest it shall be his." The rights of the priesthood are well looked after. God has in the Pentateuch well provided for the Levites whatever else may have been neglected. Here is a complete identification of the rights of the Lord with those of the priest, "Let the trespass be recompensed unto the Lord, even unto the priest." Whether or not this Book was at any time a revelation from God, it is quite clear that it has always been the interest of the priesthood to support it.

Verses 17 to 27.—We read of various ordeals amongst savage peoples, and it is customary to deplore the ignorance and barbarity of the nations amongst whom these customs are allowed to prevail. If we abide by this style of criticism, what must we say of the legislator who established or adopted the ordeal of the waters of jealousy?—"And the priest shall take holy water in an earthern vessel; and of the dust that is in the floor of the tabernacle the priest shall take, and put it into the water." "Holy water." What

* Colenso, Part I., p. 84.

was the nature of this water? Josephus says the priest took the dust "if any happened to be there." Cahen says that according to the Talmud, something was put into the water to render it bitter. Josephus adds, if the woman was unjustly accused she became with child, and was delivered in the tenth month Verse 28 gives some sort of colour to the same notion. Cahen observes that though full provision is made for punishment of the guilty woman, not the least word is said of any punishment for the calumniating husband in case of the woman's innocence; on the contrary, it appears by verse 31, that the man was to be held guiltless.

"Among the ancient nations means were sought for compelling—so to speak—God to declare clearly his will, to distinguish the just from the unjust, the innocent from the culpable; hence the judgments termed judgments of God, the ordeals of the Middle Ages, of which duelling remains a sad relic. Ideas more just as to the action of Providence have suppressed among civilised nations those blasphemous modes of interrogating the divine will; but they still exist in the Indies and among the tribes of Africa. Vater makes the following reflections on this subject :—Grotius has gathered together all the passages of the ancient Greek and Latin authors, wherein mention is made of certain waters to which was attributed the virtue of punishing perjury; but it is still more remarkable that a similar custom exists, and for a similar case, in the neighbourhood of Sierra Leone, among the Mandingus and the Berlamets. It is regarded as an act of religion, and as such is executed by a priest. They steep in water the bark of a tree named *Macon* (?); the effect is less dangerous for the rich than for the poor; death often follows before the end of the year. The law treated of in the text appears to be rather a means of terror, and cannot be considered as coming from God, nor even from a man judicious and humane, for all the infamy falls upon the woman. We must consider it at the best as a political law, invented to put bounds to the ill-founded suspicions of orientals, ever so jealous of the honour of their wives. (Geddes). See Vater, *Nomb.* pp. 28-9."*

* Cahen: Nombres, p. 29.

Bellamy says—"This statement of the trial for jealousy is—as it stands in the common versions—irreconcilable with the divine proceeding in every part of Scripture; it is undignified as it has respect to God who is the speaker; and we do not find that water being set apart for any particular purpose, when consecrated, was made more holy, or possessed any virtues more than the common river water of Jordan. It was not possible for a distinction to be made between the innocent and the guilty, by simple water and dust, which the woman was made to swallow, unless a perpetual miracle had been performed; which then might have been exhibited at the whim of any man, even of the worst of men, who might have chosen to suppose that his wife was incontinent. And thus the divine communication might have been made subservient to the licentious. It is undignified as it has respect to God, who is made to say, Such shall be the effect of this water; because this discriminating power rested with God only, which might have been determined by the suspected party being brought before God, and who could have pronounced the guilt or the innocence of the woman, without having recourse to a proceeding of this nature; as he did in other cases. It was a proceeding which would have been so easily and so deceptionally practised by the idolators; who would not have been at a loss how to have caused gripings and swellings among their followers, when it had suited their interests or convenience."*

Chap. vi.—Lessius argues that these Nazarites were a kind of monks existing amongst the Egyptians long prior to the Mosaic era. The burning of the hair, referred to in verse 18, appears to be the adoption of a custom prevalent amongst many Pagan nations who left the human hair to grow to a considerable length, and then offered it to some deity by way of sacrifice.

Chap. vii. 1.—Cahen observes that this chapter ought more properly to follow after Exodus, chap. xl., v. 16, as the completion of the tabernacle belongs to that date, the second month of the first year, and does not follow the date with which Numbers commences—viz., the first day of the second month of the second year of the Exodus.

---

* Bellamy: New Translation, p. 370.

Verse 2.—"Heads of the house." The Septuagint has "twelve chiefs of the house."

Verse 14.—"One spoon." In the Douay it is "a little mortar." Cahen "a cup." The Breeches Bible, "an incense cup;" and so in vv. 20, 26, 32, 38, 44 50, 56, 62, 68, 74, 80, 86, except Cahen, who has afterwards "spoon."

In verse 72, the Hebrew word "day,' יום IUM, is twice repeated, and the same surplusage exists in verse 78.

Verse 89.—"And when Moses was gone into the tabernacle of the congregation to speak with him, then he heard the voice of one speaking unto him from off the mercy-seat that was upon the ark of testimony, from between the two cherubims; and he spake unto him." This voice is uttered in the hearing of no one but Moses. The Douay reads, "And when Moses entered into the tabernacle of the covenant to consult the oracle, he heard the voice of one speaking to him from the propitiary that was over the ark between the two cherubims, and from this place he spake to him." Is not this similar to the oracle-consulting of other nations? It is admitted now, by all intelligent men, that the oracles of Delphos, of Ammon, and of Dodona, were only instances of jugglery and cunning, practised by the priests on the people. In what respects are the oracles of the Jews superior? In one of the temples uncovered at Pompei there is a god with a partially hollow body, in which there is enough room for the priest to have concealed himself when delivering the oracle. "The general characteristics of oracles," says a writer in Brande, "were ambiguity, obscurity, and convertibility; so that one answer would agree with several various, and sometimes directly opposite, events. Thus when Crœsus was on the point of invading the Medes he consulted the oracle of Delphi as to the success of the enterprise, and received for answer, "That by passing the River Halys, he would ruin a mighty empire." But whether it was his own empire, or that of his enemies, that was destined to be ruined was not intimated, and in either case the oracle could not fail to be right. The answer of the oracle to Pyrrhus is another well-known instance of this sort of ambiguity. '*Aio, te Æacida, Romanos, vincere posse*'—as it might either be interpreted in favour of or against Pyrrhus. This ambiguity and

equivocation were not, however, the worst feature that characterised the oracles of antiquity. They were at once ambiguous and venal. A rich or a powerful individual seldom found much difficulty in obtaining a response favourable to his projects, how unjust or objectionable soever. But such and so powerful is the influence of superstition, that this system of fraud and imposture maintained a lengthened ascendancy, and interested responses of the oracles frequently sufficed to excite bloody wars, and to spread desolation through extensive States." It is worthy of notice that while throughout this chapter we find bullocks, sheep. and goats, plenty for sacrifice, yet three chapters on we find the Israelites complaining of utter absence of flesh food.

Chap. viii. 4.—"According unto the pattern which the Lord had showed Moses." We have already referred to this in Exodus, p. 273. Can any sane person imagine that the infinite Creator presented on Sinai to the gaze of Moses heaven-made samples of golden candlesticks?

Verse 8.—"With his meat offering, even fine flour." The Douay, "And for the offering thereof fine flour." The meat of our version does not exist in the Hebrew.

Verse 11.—"Shall offer the Levites before the Lord for an offering." The margin puts "wave" in lieu of offer, and "wave offering" in lieu of offering. Cahen, "*Tournoiera les Levites un tournoiement devant l'Eternal.*" The verb "*tournoyer*" is "to whirl," to turn round, which would make Cahen's translation, "Shall turn round the Levites a turn roundabout before the Lord." The Breeches Bible says, "Shall offer the Levites before the Lord as a shake offering." In v. 13, where nearly the same words occur, Cahen uses the same terms as in v. 11. So also the Breeches Bible; but the Douay has, "Shall consecrate them being offered to the Lord."

Chap. ix. 1.—Having commenced the book, chap. i., v. 1, with the second month of the second year, we now go back to the first month, showing that the order of date is little cared for. To account for similar irregularities, Richard Simon * suggests that the Pentateuch was written on leaves rolled together, and that the order of some of these leaves has been changed.

* Vieux Testament, Histoire Critique du, p. 35

Verse 6.—"Defiled by the dead body of a man." The Douay has, "Unclean by occasion of the soul of a man."

Verse 16.—The words "by day," are not in the Hebrew, but they are in the Septuagint and Vulgate.

Verse 22.—"Or a year." Cahen says that these words are wanting in six Hebrew MSS., as they are also wanting in the Septuagint. The Douay has "a longer time."

Verse 23.—"At the commandment of the Lord they rested in the tents, and at the commandment of the Lord they journeyed; they kept the charge of the Lord, at the commandment of the Lord by the hand of Moses." And yet despite all this obedience to the commandments of the Lord so often given personally to the Jews, the whole history of their wanderings in the desert is made up of disobediences and offences.

Chap. x. 6.—In the Septuagint this verse is much longer, containing the directions for the third and fourth soundings for the western and northern divisions.

Verse 9.—"And if ye go to war in your land against the enemy that oppresseth you, then ye shall blow an alarm with the trumpets; and ye shall be remembered before the Lord your God, and ye shall be saved from your enemies." This conveys the notion that the trumpet sounding might recall the Israelites to God's memory.

Verse 12.—"And the cloud rested in the wilderness of Paran." "The general notion, I say, is, that this cloud was an atmospheric cloud; that it went before them to direct them in the way, and that when they saw it stationary they rested; that during the long period of forty years they were in a solitary wilderness, where there were no inhabitants but themselves. This is liable to objections. It has been said by objectors, "If a cloud had gone before them, and it had been a common atmospheric cloud, as has been, and is understood by the generality of people at this day, it must, when it rested, have been in the sight of the Hebrews always stationary on the top of the tabernacle, and consequently must never have removed till the time of their journeying. Why was this cloud called *the cloud of the Lord*, and not a cloud of the sky? say objectors, as in other parts of Scripture, when a cloud of the sky is meant. Where was the necessity to watch day and night for the resting of the

cloud, in order to know where they were to remain, when this information could with far greater propriety have been given before they departed? Concerning this cloud, see Exodus, chap. xl. Such are the objections which have been, and continue to be made by intelligent men, from the groundless notion that this cloud was a cloud of the sky, which went before them in all their journeys. That the place to which they were to go was made known to them before they departed cannot be doubted; and, therefore, there was no necessity for a cloud to go before them; a perpetual miracle to be done in this way."*

Verse 21.—"And the Kohathites set forward, bearing the sanctuary; and the other did set up the tabernacle against they came." There is no authority for the words "the other" in the Hebrew. It is difficult to comprehend what this verse means Some regard the second half of the verse as an interpolation.

Verse 33.—Cahen asks how the ark could go in front and before the Israelites, when its place was fixed between the first and second standards?

Verse 34.—"Of the Lord." These words are not in the Septuagint, and Cahen says they are wanting in at least one MS. Jarhi says that vv. 35 and 36 are not in their proper place here.†

CHAP. xi. 1.—"And when the people complained, it displeased the Lord; and the Lord heard it; and his anger was kindled; and the fire of the Lord burnt among them, and consumed them that were in the uttermost parts of the camp." "The Lord heard it." The Hebrew is "to the ears of the Lord." The Septuagint "to the eyes of the Lord;" and instead of "the uttermost parts," the Septuagint has "a part." The text does not say why the people complained.

Verse 4.—See commentary on Exodus, p. 210. Some of the early Jewish writers ask how it was that the Israelites could already be in want of flesh, while they had on leaving Egypt "flocks and herds, even very much cattle?"

Verse 8.—"And baked it in pans, and made cakes of it; and the taste of it was as the taste of fresh oil." The Douay

* Bellamy, New Translation, p. 379.

† Nombres, p. 54.

says, "and boiled it in a pot, and make cakes thereof of the taste of bread tempered with oil." According to Exodus xvi. 32, the taste was like that of honey. Cahen says that the oleaginous substance known as manna does not seem easy to grind in mills or in a mortar. Le Clerc and others have thought that the verses 7, 8, and 9 which here break awkwardly into the narrative are an interpolation.

Verses 11 to 15.—Moses talks to God in a very strange fashion; he is querulous and reproachful. The "nursing father," of verse 12 is incorrect. The Douay, Bellamy, and Cahen render it "nurse." God's replies to Moses are on a par with the style of the Jewish leader's address. God says, "I will come down and talk with thee;" "Is the Lord's hand waxed short?" Bellamy, in a note to verse 12, remarks that it does not appear that the translators or compilers of the Vulgate understood the grammar of the language; and the revisers of the translation in the time of James appear either not to have understood it, or to have given no attention to the Hebrew.

Verse 29.—In this verse the word רוח RU*a*Ch, is twice translated "spirit." In verse 31 the same word is translated "wind" (see commentary on Genesis, p. 11).

Verse 33.—"Ere it was chewed." The Douay, "and that kind of meat had not yet failed." If our version be true that the people were smitten with the plague before they had time to digest their gathering, then verse 20 is contradicted, where the Lord says that the people shall eat for one month.

Chap. xii. 1.—"The Ethiopian." In a foot-note to the Douay Bible, and by many commentators. it has been sought to identify this Ethiopian with Zipporah, the daughter of the priest of Midian. Cahen, however, points out that the Cushites (the word כשית KeShITh being the Hebrew which is rendered Ethiopian) were a distinct race from the Midianites. Dr. Giles says* that, admitting the identity of the Cushite woman with Jethro's daughter, the manner in which her name is mentioned is perfectly incompatible with her having been already described, and that so fully in Exodus ii., as the daughter to the priest of Midian, and married to Moses, possibly several years before the

* Hebrew Records, p. 222.

strife which Miriam and Aaron now stirred up on her account. This leads to the following conclusion, either that the two accounts of the wife of Moses were written by two distinct authors, or that the Ethiopian woman whom Moses married was not the same as the daughter of Jethro, priest of Midian. In the former case the whole Pentateuch, as it now is, cannot be considered as the work of Moses; in the latter case, the mixture of the Israelites with other tribes would appear to have begun very early after the Exodus, and to have been carried to a very great extreme. If the Cushite or Ethiopian woman be the same Zipporah of Exodus, you have the further difficulty, says Cahen,* that Moses had been married to Zipporah 42 years at the time of this incident.

Verse 3.—"Now the man Moses was very meek, above all the men which were upon the face of the earth." This is one of the many verses which have puzzled commentators,† and afforded grounds for the declaration that Moses cannot have thus written of himself. Many somewhat orthodox critics incline to the doctrine that this verse is an interpolation.

Father Simon reminds‡ us that we ought not to be too curious as to the particular authors of each book, it being sufficient, according to Pope Gregory, of saintly memory, to admit that all these books have been written under inspiration. The Douay says that "Moses being the meekest of men, would not contend for himself; therefore, God inspired him to write here his own defence; and the Holy Spirit, whose dictates he wrote, obliged him to declare the truth, though it was so much to his own praise."

Verse 8.—"With him will I speak mouth to mouth, even apparently, and not in dark speeches; and the similitude of the Lord shall he behold; wherefore then were ye not afraid to speak against my servant Moses?" In the Douay the whole of the portion of this verse here given in the future tense is rendered in the present tense. Cahen agrees with the Douay. He remarks that the anthropomorphic phraseology of this verse has given great trouble to the commen-

* Cahen, p. 62.
† Spinoza: Tractacus Theologico-Politicus, cap. 8, sec. 15.
‡ Histoire Critique Vieux Test, p. 2.

tators. The anger of God directed against Miriam and not against Aaron, though both appear to have offended, and the curious conversation between the Jewish Deity and Moses and Aaron, are deserving of close attention. The true believer may discover the hidden greatness; to an infidel the notion of the Lord "coming down," the picture of God as he "stood in the door of the tabernacle," Moses seeing *the form* or "similitude of the Lord," are so many evidences of the puerility of Judaistic theology.

Chap. xiii. 8.—"The son of Nun." The Septuagint has "the son of Naue."

Verse 16.—"And Moses called Oshea the son of Nun Jehoshua." Why our version alters the end of the name as well as the beginning is hard to say. In the Hebrew the only change is the letter י Yod, at the commencement. In Acts vii. 45, Joshua is called Jesus, and Dr. Wall argues that the Hebrew text has been corrupted in this word, which he says should be Yeshua, the Hebrew equivalent for Jesus.*

Verse 22.—"Hebron" (*vide* commentary on Genesis, p. 90).

Verses 23 and 24.—"Brook of Eshcol." It is suggested that this naming cannot fairly be supposed to have taken place until after the Israelites entered the land, and that consequently the book itself could not have been written by Moses.†

Chap. xiv.—It is not unworthy of notice that although the descendants of Abraham are supposed to have been surely maltreated by the Egyptians, even to the extent of slaughtering the male born Jews, yet the Israelites are ever anxious to return to the land of Egypt. God's displeasure at the murmuring of the Jews is in this instance scarcely reasonable. Under divine commands Moses had selected twelve prominent men to make a survey of the Promised Land and to report to the people. Ten of these make an evil report of the land, and draw a highly coloured picture of the dangers attending any attempt to conquer it. Two, Caleb and Joshua, gave a contrary version,

* Grounds for Revision of Hebrew Text, p. 136.
† Giles's Hebrew Records, p. 133.

but the Hebrews put their faith in the majority, and at least talked of stoning the two dissentient reporters. God was displeased that the Israelites believed the majority, and he, in somewhat the same language as may be found in Exodus xxxii., said that he would smite the Israelites with pestilence, and make Moses a greater and mightier nation. As on the former occasion, Moses sought to influence God by telling him that if he kills all this people as one man, the nations will say that he did it because he was not able to bring the people to the Promised Land. On this God, the immutable, ultimately changed his determination, and yet the orthodox of to-day refer to the Bible for elevated conceptions of Deity.

Verse 2.—The word "God," twice repeated in this verse, has no equivalent in the Hebrew, nor in the Septuagint or the Latin Vulgate.

Verse 10.—After the words "the glory of God appeared," the Septuagint adds, "in a cloud." Our version says the glory appeared "in" the tabernacle; the Douay says that it appeared "over" the tabernacle.

Verses 13 and 14.—The Douay renders these verses as though both the Egyptians and the inhabitants of this land would talk depreciatingly of the Lord, while our version makes it that the Egyptian would speak of the Lord's doings to the inhabitants of this land. Cahen says that the construction of these two verses is very complicated.

Verse 18 is nearly a repetition of Exodus xxxiv. 7. The Jews, Cahen says, have a tradition that when Moses ascended to the Lord he found him writing "The Lord is long suffering." "For the just only?" asked Moses. "For the sinners also," was the Lord's reply, and that it was for this reason that Moses on each of these occasions repeated this formula.

Verse 22.—"Ten times." These ten times are supposed to be—1st, Exodus, xiv., 12; 2nd, xv., 23 and 24; 3rd, xvi., 3, 4th, xvi., 20; 5th, xvi., 27; 6th, xvii., 2 and 3; 7th, xxxii.; 8th, Numbers, xi., 1; 9th, xi., 4; 10th, the murmuring here recorded.

Verse 23.—Cahen says, "If this were the judgment of an ordinary tribunal, the punishment would appear to be out of proportion to the fault. God had himself commanded

the exploration of the country, and twelve notable men worthy of confidence had been chosen; ten making an unfavourable report, it was natural the people should believe them, yet for this God punishes the Israelites more severely than when they joined in the worship of the golden calf.

Verse 25.—("Now the Amalekites and the Canaanites dwelt in the valley.") The words seem abruptly interpolated. There is a sudden break off in the narrative, and the words as they stand in our version, have no connection with the text preceding or following them.

Verse 34.—"And ye shall know my breach of promise." Bellamy says, "This passage has caused much controversy. . . . It has been asserted by many eminent and learned men, that God, because of his absolute sovereignty not being accountable, had a right to break his promise. . . . . Thus it represents the source of all good as capable of doing those things which would be disgraceful to man; he who is unchangeable as subject to change; subject to all the fallen passions of man; and what is worse (objectors say) it represents the being of all perfection as capable of violating his sacred promise." Bellamy avoids this hostile criticism by translating the words "know my breach of promise" as "experience my threatenings." Cahen says that the word on which so much depends, and which he translates "absence," making it "know my absence," is only found in one other place in the Bible, Job xxxiii. 10.* The Douay renders it "know my revenge." Sharpe writes it "know my estrangement."

Verse 35.—"I will surely do it unto all," Bellamy renders thus, "Surely I will not do this to any." He says our translators have omitted the negative, לֹא LA.

Verses 43 to 45.—In Exodus xvii. 14 and 16, God swore to utterly put out the remembrance of Amalek from under heaven, and to have war with them from generation to generation. From this chapter it is evident that God had not kept the first portion of his oath, and that he had suspended the second. Here he aids and assists the Amalekites to destroy the Israelites.

---

* In our version it is there translated "occasions." See also Etheridge on Targums, p. 282.

Verse 45.—"Hormah."* This verse could not have been so written in the life time of Moses, as the city of Zephath was not called Hormah until after the death of Joshua (*vide* Judges i. 17): in chap. xxi., 1 to 3, we find an account of the destruction of certain cities, and the naming the place Hormah, which is apparently inconsistent with the account in Judges. After the word Hormah, which the Septuagint writes Erman, that version adds, "and they returned to the camp." "This" (says Dr. Shuckford, as quoted in the Family Bible) "was effected in the days of Joshua (Joshua xii. 14) or a little after his death" (Judges i. 17) Yet Dr. Shuckford did not perceive that the relation of an event, which happened in or after the days of Joshua, could not have come from the pen of Moses.

Chap. xv.—This chapter seems out of place, having no connection with the one which precedes or the one which follows.

Chap. xv. 7, and chap. xxviii. 7.—We draw the attention of Dr. Lees and the United Kingdom Alliance to the special utility of the Bible as a book for total abstainers from wine and strong drink.

Verses 32 to 35.—You have here an application of the law of Exodus xxxi. 14 and 15. To-day these Bible enactments are obsolete, and if twenty Jews were now indicted for killing a man whom they had found gathering sticks on Sunday, the judges, notwithstanding that Christianity is parcel of the law of England, would rule that the Pentateuchal law was of no avail as a plea against the common law, and the Jews would be convicted, if not of murder, at any rate of manslaughter.

Chap xvi. contains the history of a rebellion on the part of Korah, Dathan, Abiram, and On, against the authority of Moses, connected with which there are several curious features; the rebels are swallowed up and consumed by a sort of earthquake, explosion, and fire, which of course is sent by the Lord; but as Moses took a whole day to make the necessary preparations, it is quite possible to account for the destruction of Korah and his party in a less miraculous manner. It is apparent that Moses had a direct interest in

* Giles's Hebrew Records, p. 135.

the destruction of these men, who wished to share the priestly power which Moses was limiting to the family of his brother Aaron.

By verses 29 and 30 it is clear that the manner of their destruction was pre-arranged by Moses; and it is also clear that the Israelites themselves took this view of the matter, for in verse 41 we find them charging Moses and Aaron with having killed the people of the Lord. There are one or two puzzling features in the story. It is difficult to understand how Korah's children escaped if verses 27, 32, and 33 be true; yet we are told in chap. xxvi. 11, "the children of Korah died not." It is clear from the murmurings of the people that they did not regard the death of Korah and his associates as an act of God's wrath. The only impression made seems to have been that it increased their discontent against Moses. In the Hebrew the last fifteen verses of this chapter become the first fifteen of chap. xvii.

Chap. xvii. 1 to 8.—This miracle of Aaron's rod budding amongst the other rods was easy of accomplishment, when we remember how carefully the tabernacle was guarded by Moses and his selected priests, who had every facility for changing one rod for a branch from a fruit-bearing tree. The rod, according to this account, budded, blossomed, and bore almonds all within twenty-four hours.

Verse 6 says there were "twelve rods, and the rod of Aaron was among their rods." The Douay says, "there were twelve rods beside the rod of Aaron."

Verses 12 and 13.—These verses are a sufficient evidence of the care taken by Moses to prevent the people inspecting too closely his thaumaturgic tabernacle. Cahen adds as comment to this and the foregoing chapter, "Behold an earthquake, a miraculous burning, a plague, a miraculous vegetation—four prodigious events thrown together to legitimise the exclusive sacerdotal supremacy of one family."

Chap. xviii. 10.—"In the most holy place shalt thou eat." Most holy place should be "holy of holies." Sharpe and Bellamy so translate it. Cahen renders it "*saint des saints*," and observes that the verse is embarrassing because there was a prohibition against any person entering except the high priest on the day of expiation.

Verse 15.—See chap. iii., 12 and 14. There is some con-

fusion in these texts, as by the earlier text it was only the surplus number of first born Israelites beyond the number of the Levites, who were to be redeemed with money—here all are to pay the five shekels.

Verse 18.—But see Deuteronomy xii., 17 and 18, and xv. 19 and 20. There is an inconsistency in these texts. One gives the whole flesh to the Levites, the other does not.

Verses 20 to 24.—It is much to be regretted that our priests never imagined that this part of the revelation had any personal relation to them; great attention has been paid to the tithe part of the Book, but our reverend pastors have most wonderfully overlooked the part which says, "Thou shalt have no inheritance in their land." This, they say, only applies to the Jews. On what principle, then, does the tithe injunction or any other part of the Book apply to the Gentiles? The extraordinary quantity of food provided in this and other chapters for the family is out of all reason.

Chap xix. contains a direction to the priest to burn a red heifer, the ashes of which heifer apparently become water, by a process not described, but consequent on the burning; or rather, if the translators of our version had condescended to be explicit, I suppose they only meant, as stated in verse 17, that the ashes are to be mixed with water. This water is a kind of holy water, with which every unclean person is to be sprinkled, under pain of death. Among a people so numerous as the Jews, some must have had great difficulty in getting access to this water, especially those residing at a great distance from the place where the ashes were kept. Cahen says that this commandment as to the red cow must be placed amongst the irrational enactments, and points out that it is almost an imitation of one of the Egyptian sacrifices in the worship of Osiris and Isis.

Verse 2.—The Douay and Bellamy make Eleazer himself kill the red heifer, while our version makes one slay her before Eleazer's face. In truth the whole of the Hebrew of this chapter is very obscure as to the persons who are to perform the particular acts.

Verse 13.—"The dead body of any man that is dead." Those who defend the style of the orthodox version will perhaps say if it is possible to have the dead body of any man that is alive.

Verse 20.—"The first month." But of what year? Cahen says that the end of the narrative would make you think it the 40th year, and he adds that it is curious that you only find records in the Pentateuch of the events of the first and second and the 40th years, the history of the intermediate 37 years being left entirely unknown.

In the Douay translation of verse 6, following the Latin Vulgate, we are told that Moses and Aaron cried to the Lord and said, "O Lord God, hear the cry of this people, and open to them thy treasure, a fountain of living water, that being satisfied, they may cease to murmur." These words are entirely omitted in our version, and it would seem that some other portion of the original account must be lost, as we find the Lord reproaching Moses and Aaron for their exhibition of unbelief, of which we have no account here. There is a strong similarity in the account here, and that in Exodus xi. In both cases the name Meribah follows the event.

Verses 23 to 29.—Aaron's death is rather curiously related; it was not only a sudden death, but one pre-arranged, and the account almost conveys the idea that Moses and Eleazer killed Aaron in the mount. Cahen says the account is a most singular one. Goethe says that "Aaron disappeared (*verschwunden*) shortly after he had proved refractory against Moses," and he afterwards quaintly adds—"Moses himself vanished as Aaron had vanished; and we err very much if Joshua and Caleb had not found it expedient to put an end to the rule, already born for years, of a narrow-minded man, and to despatch him after the so many unfortunates he had despatched before."

Chap. xxi., vv. 1 to 3.—This narration is perplexing; the Israelites certainly did not destroy all the Canaanites, and could scarcely have destroyed the cities of the Canaanites, until they had entered the land of Canaan, into which it is alleged they did not go in the lifetime of Moses.

The King of Arad is in Joshua, c. 12 v 14 one of the kings, destroyed after the death of Moses. Here the text calls him King Arad, and in Joshua King of Arad; the Hebrew is the same in both cases מלך ערד MeLeK OReD. Bellamy argues that there must be an error in the translation, for, he says, these cities were in being and were divided amongst the tribes on the division of the land.

V. 2.—"And Israel vowed a vow unto the Lord, and said, if thou wilt indeed deliver this people unto my hand, then I will utterly destroy their cities." This vow is in the nature of a bargain; God, according to v. 3, accepts the terms. Jacob made a similar sort of bargain, "if the Lord will do certain things, then the Lord shall be my God."

Verse 6.—Cahen says it is singular enough that when the people complained of the fatigues of the journey and bad food that they should be bitten by serpents to reduce them to silence.

V. 8.—In our version, verse 8, Moses is told to make a "fiery serpent;" in the Douay, he is told to make a "brazen serpent." In the Hebrew the word נחש NaChaSh rendered serpent in verses 6, 7 and 9, does not occur in v. 8 at all. The direction is, "make thee a שרף She RaPh." Cahen says, "It is known that amongst the Greeks and Egyptians the serpent was a symbol of medicine. The serpent is the emblem of Esculapius. Perhaps the words serap and serapis have some analogy. Parkhurst says * "It may perhaps be worth remarking that Esculapius, the Roman God of Health, was feigned to have been brought to Rome from Epidaurus, a city of Peloponesus, in the form of a large serpent, and that his image is usually represented holding in one hand a knotted stick with a serpent twisted round it."

The names of the encampments given here do not agree with those given in chap. 33. There are places omitted here which are mentioned in the other chapter, and places named here of which there is no record in cap. 33.

Verse 14.—"The Book of the wars of the Lord." What book is this? Who was the author of it? What has become of it? Was it inspired? If not, why is it cited as an authority in this book for which inspiration is claimed? In answer to all these questions, it is only possible to say that the book referred to is, although the first and only book specially quoted in the Pentateuch, one of several books quoted from in our Bible, and now lost; the authorship is unknown; it must have been a well-known book at the time Numbers was written, and, consequently, more ancient than Numbers.

---

* Lexicon 773.

It is evident the writers of Paul's Epistles, the Epistle of Jude, and the Acts of the Apostles, must have had writings to refer not now extant, as there are references made in those portions of the New Testament to facts not recorded in the Hebrew Scripture handed down to us.

Dr. Giles has collected* a list of the various books referred to in different parts of our version, and not now existing, and has also noted several references in the Old and New Testament to facts of which no records now survive.

In St. Paul's Epistle to the Hebrews, ix., 19, we read thus:—

"For when Moses had spoken every precept to all the people, according to the law, he took the blood of calves and of goats, with water and scarlet wool, and hyssop, and sprinkled both the book and all the people."

The writer of this epistle must also have had more sources of information than we now possess, for the account which he gives in the verse before us does not exactly tally with any of the various verses in the Levitical Law, where the subject is related. Nothing is said of the "book" being sprinkled with the blood, even if the other parts of the description are allowed to bear a sufficient resemblance.

Another remarkable instance bearing upon my present argument, is the account which St. Jude gives of a contest between Michael and the devil:—

"Yet Michael, the archangel, when contending with the devil he disputed about the body of Moses, durst not bring against him a railing accusation, but said, 'Lord rebuke thee?'"

It is not known to what St. Jude alludes in this verse; nothing is said in the Old Testament of any contest between the devil and the archangel Michael.

In St. Paul's Second Epistle to Timothy, chap. iii, v. 8, are found the names of two of the magicians who competed with Moses in magical arts in the presence of Pharaoh, King of Egypt

"Now, as Jannes and Jambres withstood Moses, so do these also resist the truth; men of corrupt minds, reprobate concerning the faith."

---

* Hebrew Records, pp. 39 to 42, and pp. 199 to 204.

It is presumed that the names, "Jannes" and "Jambres," not found in the Books of Moses, became known to St. Paul through the medium of other writings, in which many particulars of Jewish history were recorded, but now no longer in existence.

Several circumstances of the life and acts of Moses are known to us, only because they are noticed in the New Testament, no mention being made of them in the old Jewish Scriptures. For instance, in Acts vii., v. 22, etc., we are told that—

"Moses was learned in all the wisdom of the Egyptians, and was mighty in words and deeds. And when he was full forty years old, it came into his heart to visit his brethren of Israel," etc.

But in the Book of Exodus the account of these things is much shorter, and nothing is said of the age of Moses at the time referred to.

Neither is there any authority in the Pentateuch for the remark which occurs in Hebrews xi, 24:—

"By faith Moses, when he came to years, refused to be called the son of Pharaoh's daughter."

These circumstances make it probable that there were other original records in the time of St. Paul, which have since perished.

This conclusion is supported by the admitted fact that many books which have perished are quoted in the Old Testament itself. Such are the books of Jasher, Enoch, the Wars of the Lord, and many others.

A perplexing train of argument opens to us from a consideration of these facts. If the books which have perished were of value, why have they perished? If they were of no value, why have valuable writers, like St. Paul, quoted them? It is supposed that they were of inferior authority, but this point has not been proved. If the existing books are genuine relics of a high antiquity, yet some of the lost books were more ancient still. The same Providence which has preserved the one has suffered the others to sink, even though those which have floated down the stream of time are imperfect on many points, which the others would have supplied.

Cahen following Mendelssohn, regards the quotation from

the lost book of the wars of the Lord, as commencing verse 14 and ending verse 21.

Verse 27.—Wherefore they that speak in proverbs say—The Douay has "Therefore it is said in the proverbs." Cahen "*C'est pour quoidisent les poetes.*" "Wherefore the poets say." He remarks, "The author wished to prove that Heshbon was a city of Sihon, and cites the stanza of a poem." Is this another unknown writing more ancient than the Pentateuch. Bellamy to avoid the difficulty translates the verse in the future "Therefore they shall say in proverbs." A convenient language the Hebrew for theological disputation.

In chap. xxiv. 3 and 15, our version reads, "The man whose eyes are open;" the Douay has it in each verse following the Vulgate, "The man whose eye is stopped up;" the Breeches Bible renders it, "The man whose eyes were shut up." Cahen translates the concluding sentence of each "discours de l'homme à l'æil percant," and observes that according to tradition Balaam was blind. The Septuagint gives it—"The man seeing truly," or "seeing truth;" Bellamy, "The man whose eye was shut."

Verse 7.—Agag is a difficulty. The Bible Agag is many generations later than Balaam. Some seek to bring this writing to the period of Saul or David.

Verse 16.—"Which saw the vision of the Almighty, falling into a trance, but having his eyes open."

Verses 4 and 16.—The words "into a trance" have no authority in the Hebrew. Bellamy* objects very strongly to this translation, as in some measure justifying the tendency to believe in witchcraft and necromancy, but his own version is hardly an improvement.

Verse 24.—"And ships shall come from the coast of Chittim." Bellamy has, "For beasts from the power of Shittim;" the Douay, "They shall come in galleys from Italy."

Chap. xxv. 1.—If the "Shittim" here mentioned is the same as in chap. xxxiii. 49, it is the last station of the Israelites in the desert.

Verse 4.—According to our text all the heads of the

* New Translation, p. 420.

people were to be themselves hung. According to the Samaritan version and the Targums of Palestine, Onkelos, and Jerusalem, the heads of the people were to judge the Israelites and order the guilty to be hung. This "fierce anger of the Lord" to be abated by a glut of vengeance is inconsistent with Deuteronomy iv. 31, "The Lord thy God is a merciful God."

Verse 6.—"Brought unto his brethren a Midianitish woman." The Septuagint says he "conducted his brother to the Midianite." Josephus says that the Israelite married the Midianite.

Verses 7 and 8.—"And when Phinehas, the son of Eleazar, the son of Aaron the priest, saw it, he rose up from among the congregation, and took a javelin in his hand. And he went after the man of Israel into the tent, and thrust both of them through, the man of Israel and the woman through her belly. So the plague was stayed from the children of Israel." The Palestine Targum contains a record of twelve miracles wrought on this occasion *inter alia*. Phinehas carried the two bodies on the lance six miles throughout the whole camp without fatigue. It also states that the man who was killed by Phineas because he brought the Midianitish woman into the camp had reminded Moses that he himself had married the daughter of Jethro, a Midianite.

Verse 9.—"24,000." In 1. Corinthians, x. 8, the number is given as "23,000." Josephus says "14,000."

Chap. xxxvi. 4.—"Take the sum of the people" are added in our version without authority in the Hebrew. Cahen says that verses 3 and 4 have evidently been altered or are very defective. Our translators have striven here to make the text readable.

Verses 10 and 11.—The Douay says, "And there was a great miracle wrought; that when Core (Korah) perished, his sons did not perish." Our version* omits the miracle, but says that those destroyed "became a sign," and that "the children of Korah died not:" yet in chap. xvi. 32 and 33, we are told that "the earth opened her mouth, and swallowed them up, and their houses, and all the men that

* Cahen here agrees with our version.

appertained unto Korah, and all their goods, they and all that appertained unto them, went down alive into the pit, and the earth closed upon them, and they perished from among the congregation."

Verse 12.—Nemuel is called "Jemuel" in Genesis, xlvi. 10, and in Exodus vi. 15, but is Nemuel in 1 Chronicles iv. 24. The commencing N נ here and in Chronicles is I in Genesis. Jachin is in 1 Chronicles iv. 24 called Jarib the יכין IKIN, being changed to יריב IRIB, the second and fourth letters being altered.

Verse 13.—"Zerah" is called "Zohar" in Genesis, xlvi. 10, but the spelling is very different. Here the word is זרח ZeReCh, in Genesis צדר TzeCheR. The family of Ohad mentioned in Genesis is missing here, and also in 1 Chronicles iv. 1. The very numerous differences between this chapter and Genesis xlvi., and between the two books and the first book of Chronicles, should be sufficient to demolish the doctrine of plenary inspiration without a single word to give additional force to the facts.

Verse 15.—Zephon צפון TsePhUN is in Genesis xlvi.16., written Ziphion צפיון TsePhIUN.

Verse 16.—"Ozni" is called "Ezbon" in Genesis xliv. 16. Eri is in the Septuagint written *Addi*.

Verse 20.—Shelah is in the Septuagint written *Selom*.

Verse 21.—"Hamul." The Septuagint has "*Jamoun*." The Samaritan, according to Cahen, has a word sounding similarly to the Hebrew, but with different letters.

Verse 23.—"Pua" is called "Phuvah" in our version, Genesis, xlvi. 13, but in the Hebrew they are spelt alike פוה P.U.E.

Verse 24.—"Jashub" ישוב IShUB is called "Job" יוב IUB in Genesis, xlvi, 13.

Verse 30.—Jeezer איעזר AIOZeR. In the Septuagint this is *Achiezer* in this verse. In Joshua xvii. 2, our version gives us Abiezer, the letter ב being introduced after the first letter. Judges vi. 11 follows Joshua. The error here and in verse 24 apparently occurs by the omission in Numbers of the 2nd letter in each case. The Septuagint has probably had a version in this verse where the ב had been changed to כ or they have blundered and mistaken one for the other.

Verse 32.—Shemida is in the Septuagint *Sumaer.*

Verse 35.—"Becher of the family of the Bacharites" is omitted in the Septuagint. In 1 Chronicles vii, 20, in lieu of "Becher" you have "Bered," and in lieu of "Tahan" you have "Tahath;" the Septuagint has this "*Tanach.*'

Verse 38.—There is a difference in the number and names of the sons of Benjamin when compared with Genesis xlvi. and 1 Chronicles viii. In Genesis 10 sons are named, here 5 sons and 2 grandsons, sons of Bela. In Chronicles 5 sons differently named and 9 grandsons, sons of Bela. Ahiram אחירם AChIReM is in 1 Genesis xlvi. 21 Ehi אחי AChI, and in 1 Chronicles viii. 1, Aharah אחרח AChReCh. In the Septuagint all the names differ: Bela is *Bale,* Ashbel is *Asuber,* and Ahiram is *Jachiran.*

Verse 39.—Shupham in the Hebrew is שפופם ShePUPeM in Genesis xlvi. 21, it is Muppim. In 1 Chronicles viii. 1-2 Shupham does not occur at all amongst the five sons of Benjamin, but a similar name, Shephuphan, is put in verse 5 as a son of Bela; the only difference in the Hebrew being that the final ם is transformed into a final ן. Instead of Shupham the Septuagint has *Sophan,* and omits "of Hupham the family of the Huphamites" altogether.

Verse 40.—"Ard" ארד ARD, in the Septuagint *Adar* Addar אדר. This is only a transposition of the two last letters, but it is curious that the Septuagint of Numbers, and Hebraic of Chronicles should make the same blunder. Here Ard and Maaman are sons of Bela; so in Chronicles, in Genesis they are sons of Ephraim. Which is the correct account?

Verse 42.—Shuam is in the Septuagint. *Same* in Genesis xlvi. 23, it is Hushim חשים CheShIM, in lieu of שוחם ShUCheM Shuam.

Verse 45.—The words "of the sons of Beriah," which mean nothing here, are wanting in the Septuagint, and Cahen says are also wanting in the Samaritan.

Verses 54 to 56.—"To many thou shalt give the more inheritance, and to few thou shalt give the less inheritance: to every one shall his inheritance be given according to those that were numbered of him. Notwithstanding the land shall be divided by lot: according to the names of the tribes of their fathers they shall inherit. According

anger was kindled because he went." Cahen remarks that God, after having given permission to Balaam to go, is irritated because he has availed himself of the permission. The Jewish commentators have taken great trouble to explain away the text. Bellamy says: "In the 20th verse it is said, that God told Balaam he should go, but here we find it said—*and God's anger were kindled because he went.* Much has been written respecting this matter, by many commentators, and they have concluded their researches by saying that 'Moses, as became an historian, hath only stated the case, and left the reader to infer Balaam's crime. *If the men come and call thee, go.* But he rose up early, got himself ready, and went, without waiting to be called.' If the reader were 'to infer' the crime of Balaam, we might attribute a variety of crimes to the son of Beor; for every reader would form his own conclusion as to the crime; but to suppose that his crime consisted in his readiness to go with the princes of Balak, without their first calling on him, is too trifling for remark. They came for the express purpose, and Balaam had told them to wait till the morning, till he had received further information, and God permitted him to accompany them. Therefore, to the present day, we remain in profound ignorance respecting the crime of Balaam; and the holy character of God, by whose permission he went, is charged with inconsistency and injustice, in being angry at his going, and in opposing him on the way."

Verse 22.—"Angel of the Lord" מלאך יהוה MeLAK JEUE* The angel of the Lord stands in the way as שטן SheTeN, which is here called "adversary." The same word is in Job i., 6, 7, &c., written Satan. This angel of the Lord is represented with a "drawn sword," as though there were in reality an angelic armoury and harness of war for the angels.

Verse 28.—"And the Lord opened the mouth of the ass and she said." The pious Bellamy here repudiates our version. He says objectors say, "This statement, as it stands in the common version, exceeds everything in impos-

* See Pye Smith's "Christian Theology," p. 248, McCaul's, Kimchi on Zechariah, p. 9. Parkhurst's Lexicon, p. 368, "Bible what it is," p. 125, Genesis, and 168 Exodus.

see the land which I have given unto the children of Israel." The Septuagint reads, "Here ascend the mountain which is near the passage of the Jordan, the mount Nebo, and see the land of Canaan."

Chap. xxx.—Cahen gives the following *resumé* of the solemn sacrifices, "Daily, 2 lambs; Sabbath, 2 lambs; first of each month, 2 bulls, a ram, 7 lambs and a goat, total 11; Passover, 2 bulls, a ram, 7 lambs and a goat, total 11; Pentecost, the same, total 11; Trumpet Day, the same, total 11; Day of Atonement, the same, total 11; and of the tabernacles, 69 bulls, 105 lambs, 15 rams, 8 goats, total 197." Thus in 52 weeks they sacrifice 400 victims in addition to the individual sacrifices. This continual effusion of blood would necessarily give the Levites a hard and cruel character.*

Chap. xxx. 1.—In the Septuagint this verse is verse 40 of chap. xxxix.

Chap. xxii. 1.—"On this side Jordan, by Jericho:" the Douay has it over against where Jericho is situate "beyond the Jordan:" Bellamy, who says that the translation in our version is not accurate, gives it "on the passage by Jordan of Jericho," which reads very obscurely; the Hebrew is עבר (beyond, across, over, or on the other side). In Numbers, xxi. 13, our own translators make the same word "other side," which they here make "this side."† It is evident in this case either that the translators must have falsified the text to support their theory that Moses was the writer of the book, or that there is a very extraordinary coincidence of error.

Verse 9—"And God came unto Balaam, and said, what men are these with thee?" Many object that such a question from the All-wise is an absurdity; it is as reasonable as "Adam, where art thou?" More than one pious writer has been tempted to regard the story of Balaam as a legend. In verse 8, the word translated "Lord" is יהוה JEUE, in verse 9, "God" is אלהים ALEIM; verse 22, "And God's

* Nombres, p 143.

† This subject has been rather fully examined in Dr. Giles's "Hebrew Records," pp. 284 to 289. But see Horne's Introduction, *contra.*

to the lot shall the possession thereof be divided between many and few." Bellamy* remarks that it has been objected that if the determination were to be by lot it was most improbable, nay, nearly impossible, that the chance of the lottery should always be the larger portion to the largest number. Cahen adds† that according to the maps Simeon, the least numerous tribe, had an allotment as large in superficial extent as Dan, nearly the strongest.

Verse 58.—The Septuagint omits the Mahlites, and reverses the order of the Korathites and Mushites.

Cahen, after giving the result of the two numberings—

	1st numbering Numbers, chap. 1.	2nd numbering Chap 26.	Variation.
Reuben	46,500	43,730	2770
Simeon	59,300	22,200	37,100
Gad	45,650	40,500	5150
Judah	74,600	76,500	1900
Issachar	54,400	64,300	9900
Zebulun	57,400	60,500	3100
Ephraim	40,500	32,500	8000
Manasseh	32,200	52,700	20,500
Benjamin	35,400	45,600	10,200
Dan	62,700	64,400	1700
Asher	41,500	53,400	11,900
Napthali	53,400	45,400	8000
	603,550	601,730	1820
Levites	22,000	23,000	1000

adds—"Thus, despite the forty years, and notwithstanding the miserable life that the Israelites had led in the desert, in the face of plagues, diseases, pestilence, and wars, there was only a reduction of 1,820 Israelites, and an augmentation of 1,000 priests. Such results are not in the domain of natural things, and as a consequence are not in any way historic."‡ It is specially noteworthy that all the Israelites now numbered were men not included in the former census.

Chap. xxvii. 12.—"Get thee up into this mount Abarim, and

* New Translation, p. 427.
† Nombres, p. 133.
‡ Nombres, p. 132.

sibility that we meet with in the tales of the Talmud, the legends of the Koran, or the Veda of Brahma. It is true that a miracle is held forth by the translators, for which there is not any authority in the original; a miracle for which there was no necessity. Had such a miracle been done, some wise end must have been intended, but Balaam was not convicted by the speaking of the ass. He remained in the same state of mind, and would have killed the creature had he not been convicted by the unexpected visit and reproof of the messenger. Thus was the necessity of any miracle superseded by the presence of the messenger, or principal man in the ministry, under whose government Balaam officiated, who on seeing him beat the ass, accosted him by saying—*Wherefore hast thou smitten thine ass?* and thus *reproved the madness of Balaam.* Beside, a circumstance of so very extraordinary a nature would, no doubt, have alarmed Balaam; but we find, as it is stated in the common version, that he was neither alarmed nor surprised, as if he had been accustomed to converse with the animal and with angelic beings. This, as observed, has been the opinion from the earliest ages among Christians; an opinion founded on an erroneous translation of the passage, propagated from the time of Jerome, continued in the Vulgate, and finally copied into all the European translations; where it has been kept by bigotry and superstition to the present day, without appealing to the Hebrew verity."*

It is scarcely wonderful that the Midianites and Moabites should have looked upon Balaam as a prophet, whose curse or blessing would affect the success of the Jews. In the early ages we have many instances of persons revered by the people of their countries, and believed to possess supernatural powers of benefiting by blessing, or injuring by cursing. Amongst savage people such a superstition is common even to-day, and indeed has only died out amongst ourselves with the decay of the belief in witchcraft. The blessing or curse of the Pope still has its power for Roman Catholics; but is an inexplicable matter when we find the superstitions of the ignorant people shared by God himself. God communicated with Balaam, saying, "Thou shalt not curse this people." God at first forbade Balaam to go to Balak, afterwards gave him permission, and then God's anger

is kindled because Balaam, using the permission, went with Balak's messengers, and the angel of the Lord is sent to stand in Balaam's way. This angel is at first invisible to the wise man, Balaam, but is at once perceived by his ass. This angel has "his sword drawn in his hand"—this sword (being also at first only visible to the ass), must have been different material from the swords commonly in use. The ass obstinately refusing to go forward, is thrice beaten by Balaam. The ass indignantly remonstrates, inquiring why he is beaten, and Balaam manifests no surprise that his ass should speak. In any other book than the Bible none would regard this as other than fable.

Chap. xxiii.—"God is not a man that he should lie; neither the son of man, that he should repent: hath he said, and shall he not do it? or hath he spoken, and shall he not make it good?" Genesis, vi. 6.—"And it repented the Lord that he had made man on the earth, and it grieved him at his heart." 1 Samuel xv. 11.—"It repenteth me that I have set up Saul to be king." Verse 35.—"And the Lord repented that he had made Saul king over Israel." 2 Samuel xxiv. 11.—"And the Lord repented him of the evil." Exodus xxxii. 14.—"And the Lord repented of the evil which he thought to do unto his people." Verse 21.—"He hath not beheld iniquity in Jacob, neither hath he seen perverseness in Israel." What does the text mean then in Numbers xiv. 11 and 22, and Exodus xxxii. 9? &c.

Chap. xxxi. gives an account of the slaughter of the Midianites, and the destruction of their "cities" and "goodly castles" by 12,000 Jews, and the capture of 32,000 virgins, 675,000 sheep, 72,000 oxen, and 61,000 asses.* The number of slain is not given, but it is easy to ascertain a minimum, if we reckon to each virgin for father, mother, brother, married sisters and their husbands, and other married females and their husbands, an average of four persons—which I conceive will be an estimate much under the true amount—we shall find 128,000 to have been slaughtered by 12,000 Jews, who on their side did not lose a single soldier. The Hebrew list of killed and wounded is a blank page. This is a statement which would be rather difficult for an old soldier

* Pentateuch, part 1, p. 144.

to believe. This difficulty is increased when we remember that the Midianites dwelt in "cities" and "goodly castles," under shelter of which they could have contended against the attacks of the Jews. After all this fighting, the tired warriors must have had considerable trouble (especially if the captives merely opposed passive resistance) in bringing back the spoil, which averaged to each man (supposing that all the Jewish soldiers had escaped unhurt) nearly three virgins, fifty-six sheep, six oxen, and five asses, besides gold, silver, lead, iron, tin, brass, jewels, and other spoil. The Jews, however, were mighty warriors; and it has been previously noticed how two men slaughtered the whole of the inhabitants of a city. Verse 7, which says that the Jews slew "all the males," must be positively untrue, because if all were killed except the 32,000 virgins taken captive, there would be an end to the Midianitish nation; while in Judges, chap. vi., we actually find the Midianites more powerful than the Israelites. Bishop Colenso, who deals with this subject in almost the exact words of my former commentary, published some years prior to the Bishop's book, says, "How is it possible to quote the Bible as in any way condemning slavery, when we read here of Jehovah's tribute of slaves 'thirty-two persons?'" Dr. Colenso raises the further objection that taking the various other events crowded together after the death of Joshua, there was not time for the war on Midian. Cahen adds that the Midianitish slaughter is unmentioned in Deuteronomy, and declares that the numbers given in this chapter cannot be regarded as historical.

Verse 2.—The words אחר תאסף AChaR TASaPh, translated, "afterwards shalt thou be gathered" in our version, are given by Jacob Ben Chajim* as one of the five instances in which the Itur Sopherim is shown.

Verse 8.—"Reba." The Septuagint reads this *Robok.*

Verse 15.—"And Moses said unto them, have ye saved all the women alive?"

Verse 16.—"Behold, these caused the children of Israel, through the counsel of Balaam, to commit trespass against the Lord in the matter of Peor, and there was a plague

* Introduction to Rabinical Bible, p. 12.

among the congregation of the Lord." This counsel of Balaam is mentioned at length by Josephus.* but not in the Pentateuch. Have we lost the account from out of our sacred Scriptures? The Talmudic writings contain some similar statement.

Verse 17.—"Now therefore kill every male among the little ones, and kill every woman that hath known man by lying with him." Cahen observes: "We have here presented to us a terrible bath of blood. Even amongst the most cruel and most savage nations they had always spared the women and infants of both sexes. The legislator of the Hebrews was in no respect warlike, but, as the Bible presents him, was harsh and inflexible, and, like Samuel, without pity in his vengeance. In his adolescence he killed the Egyptian, in the case of the golden calf, where his brother was so much compromised, he ordered one portion of the people to slaughter the other, and now he ordains a massacre of women and children whom the warriors in their humanity had spared.† Le Clerc suggests that God would recompense the infants in the next world, but such an apology trenches on the ironical."

Verse 18.—This command appears likely to produce a repetition of the conduct condemned as an offence in c. xxv., and for which the Israelites were then so heavily punished.

Verse 22.—From the manner in which את and ואת are written in this verse, the Massorah say that "the gold belongs to the king," and the meaning is that this passage ought to be so. They demonstrate this from some fancied similarity in the construction of Joshua ix. 1. We lament our inability to comprehend the Massoretic explanation, and refer the more erudite to Jacob ben Chajim.‡

Verse 40.—"And the persons were sixteen thousand, of which the Lord's tribute was thirty and two persons." What became of the persons who fell to the Lord's share—were they offered as human sacrifice?§ The beasts were so offered; what became of the human beings? Human sacri-

* Antiquities, Book 4, c. 6, § 6.

† Cahen, Nombres, 148.

‡ Introduction, p. 31.

§ See commentary on Exodus, p. 200, and Leviticus, p. 334.

fices prevailed amongst the ancient and barbarous peoples of the world, the Hebrew race were certainly no exceptions of mildness and kindliness.

Hartwell Horne takes notice of the objection raised to the cruelty involved in this chapter; his explanation is, however, very weak. He says that God, having determined the extirpation of the Midianitish nation, it was necessary to destroy all the males; but he forgets conveniently that although all the Midianitish men were destroyed, the Midianites were nevertheless not extirpated.* This forgetfulness is the more remarkable as in another part† of his work he does recollect that the Midianites so far recovered their *total extermination* as to conquer the Israelities and make them tributaries.

In another place Horne tries to meet the contradiction between this chapter and Judges by saying‡ "it is not said that all the males were extirpated." Surely verse 7 is conclusive; it absolutely says, "and they slew all the males." Kalisch reminds us that the Levites, though exempt from military service, had a share in the booty of the war. Bishop Watson§ says that he sees nothing in this account "but good policy combined with mercy."

Chap. xxxii. 40.—Machir must mean the tribe of Manasseh, or descendants of Machir—Machir himself must have been long since dead (see Genesis l. 23.)

Verse. 41.—Jair is here reckoned without explanation, as of the tribe of Manasseh, although, according to 1 Chron. ii. 21, he was by the paternal side of the tribe of Judah.

Chap. xxxiii.—Goëthe, in his 'Westostlicher Divan,' criticising the wilderness wanderings, urges that about thirty-eight out of the forty years are left unaccounted for, and that the stations given in this chapter are greatly in excess of those named in the narrative as given by Exodus, Leviticus, Numbers, and Deuteronomy. Goëthe has tabulated most of the following details.‖

---

* Hartwell Horne, vol. i., app. 3, sec. 5, par. 7.
† Vol. 3, part 1, cap. 1, § 3.
‡ Vol. 1, appendix 3, sec. 6, par. 33.
§ Letter 3 to Thomas Paine.
‖ But see Hartwell Horne, vol. 1, p. 544.

Verse 8.—"Wilderness of Etham" is in Exodus xv. 22, "Wilderness of Shur."

Verse 10.—"And they removed from Elim, and encamped by the Red Sea."

Verse 11.—"And they removed from the Red Sea, and encamped in the wilderness of sin." The encampment by the Red Sea is not mentioned in Exodus, which in xvi. 1 takes the Israelites from Elim to the wilderness of sin without intervening station.

Verse 12.—"Dopkah." The Septuagint has "Raphakah." In this and the following verse neither Dophkah nor Alush are mentioned in Exodus, which c. xvii. 1 takes the Jews from the wilderness of sin to Rephidim.

Verse 16.—"Taberah." Numbers xix. 3 is not mentioned here, but it is not clear that it was a separate station.

Verse 18.—According to Goëthe, neither Rithmah nor any of the seventeen following places are in any way alluded to in the narrative of the Israelitish wanderings; but although Goëthe was accurate in stating that none of the stations from Rithmah to Hashmonah appear to be mentioned, yet a reference in Deut. x. 6 must have escaped the German poet.

Verse 22.—"Kehelathah." Here and in the next verse the Septuagint substitutes *Makellath*.

Verse 26.—"Tahath." In this and the following verse the Septuagint reads "*Kataath*."

Verse 27.—"Tarah." Here and in verse 28, the Septuagint has "*Tarath*," the ת being mistaken for ת, or *vice versa*.

Verse 29.—"Hashmonah." Here and in verse 30 the Septuagint has *Selmona*.

Verse 31.—"And they departed from Moseroth, and pitched in Bene-jaakan." In the Septuagint, Bene-jaakan is written *Banaia*. In Deuteronomy x. 6, Bene-jaakan comes before Moseroth (there written Mosera), and from Mosera, according to Deuteronomy, the Israelites go to Gudgodah, which I suppose is identical with Horadgidgad, which in verse 32 of this chapter they reach from Bene-jaakan.

Verse 35.—"Ezion-gaber" occurs in quite a different order before Bene-jaakan and Moseroth. (See Deuteronomy ii. 8.)

Verse 38.—There is a clear contradiction between this verse and chap. xx. 23—29, on the one hand, and Deuteronomy x. 6. Horne explains this transaction in two modes. First, he says that the same place might have different names, and next, he says that both our version and the Hebrew text omit "several things" which are preserved in the Samaritan version, and which would remove the difficulty.

Verse 42.—"Zalmonah and Punon." Neither of these are mentioned between Hor and Oboth in chap. xxi., after Izeabarim; several stations are mentioned in Numbers xxi. 12, 19, 20, 25, and 33, which are left here without notice.

Verse 46.—Neither of the stations here named are otherwise mentioned in the Pentateuch as encampments; but we are told, chap. xxxii. 34, that the children of Gad built Dibon, so that Dibon-Gad, or Dibon of the children of Gad, would almost be a post-Mosaic name.

Chap. xxxiv.—Cahen regards this chapter as evidently written after the conquest.

Verse 4.—"Addar" in the Septuagint is *Arad.*

Verse 7.—Horne says* that "Mount Hor" of our version is incorrect, as confusing the north and southern boundaries. The Douay has, "most high mountain." Cahen says that it is evidently not the mountain upon which Aaron died.

Verse 8.—"Zedad" in the Septuagint is *Saradak.*

Verse 9.—"Zephron" in the Septuagint is *Dephrona.* "Hazarenan" in the same is *Arsenain.*

Verse 10.—"Shepham" is *Sephamar* in the Septuagint.

Verse 11.—"Riblah" is *Belah* in the Septuagint.

Chap. xxxv. 4.—"A thousand cubits." The Septuagint says "two thousand," and Cahen remarks that it is evident that there is here a fault in the Hebrew text, as two thousand appears from the following verse to be the correct number. The Rabbis, discovering the contradiction between verses 4 and 5 as to the one thousand and two thousand cubits, resort to a variety of hypotheses for the purpose of explaining it away.†

---

* Introduction, vol. iii., part 1, cap. 1.

† Cahen sur la Zone des Villes Levitiques.

Verse 14.—"On this side Jordan." The Douay reads, "beyond the Jordan." The remarks on page 364 apply equally to this text.

At the end of the book of Numbers, Cahen has given a translation from the 5th book of the laws of Menu. A great antiquity has been claimed for these laws which exhibit many points of similarity with Hebrew enactments. The Jewish legislation has trodden in the same path as the Indian and Egyptian, probably the Egyptian.

In the most recent volume of Dr. Kalisch we see that this painstaking and learned commentator does not hesitate to declare his opinion that parts of Leviticus and Numbers have been written since the Babylonish Captivity.

The following extract from his volume* will not be out of place here—"Though the question whether the Levitical income, as fixed in the middle Books of the Pentateuch, was excessive or not, is of little practical moment; it is yet of considerable historical interest, as it is calculated to illustrate the character of an important part of the legislation. It is utterly inappropriate to found the claims of the Levites upon the plea that they had a legal right to the twelfth or thirteenth part of the territory of Canaan, which they ceded to the other tribes, and for which they could demand ample sustenance. It is true that the Book of Numbers represents the matter in this light; for it ordains that the towns should be given to the Levites, "from the inheritance of their possession." But it requires, after the preceding observations, no further arguments to prove that this is nothing but a Levitical view or rather pretence. The tribe of Levi had, by its own daring and recklessness, forfeited the territorial possessions which it might have owned; and, scattered through the land, it was compelled to seek subsistence by whatever means it could devise. In reality the priests and Levites could fairly demand compensation for their ministerial and other services; and so their income is indeed regarded in some passages. But if tithes, first fruits, and first-born animals, their shares in holocausts and thank-offerings, in expiatory and bloodless oblations, the devoted property, the booty of war, the forty-eight towns with their

* Leviticus, p. 624.

surrounding districts, and the manifold minor privileges, are surveyed and computed, it will be found that the Levites received infinitely more than their due proportion.

According to the double census, recorded in the Book of Numbers, the Israelites over twenty years of age amounted, in round figures, to 600,000, the Levites over one month to 22,000, which, at a very moderate calculation, would be about 17,000 over twenty years; the proportion of Levites to Israelites was, therefore, as 17,000 to 600,000; that is, the Levites formed about the *thirty-fifth* part of the Israelites. But by the tithes alone they received the *tenth* part of the whole agricultural produce of the soil, and of the annual increase of cattle. One Levite had, therefore, from this source only, an income equivalent to that of three or four Israelites. If the other revenues are added, they must indeed be regarded as exorbitant; and it has been observed that if all the enactments of the Pentateuch had been carried out, the priests would soon, without working, have acquired all the property of the land. Though the Levites increased their income grew proportionately; for industry and agriculture, and therefore the Levitical revenues, kept pace with the growth of the population, and in some periods, the territory or arable land of the Hebrews was considerably enlarged. It is irrelevant to enquire whether all the prescribed imposts were burdensome to the Israelites or not in a land of remarkable fertility; the question is, whether they were fairly required for the sustenance of the Levites. If wealth was obtained through the fruitfulness of the soil, it belonged more justly to those who produced it by their exertions.*

The same author, a few pages earlier, gives us several instances in which there is a disagreement between Numbers and the other Pentateuchal books, and in which that disagreement is in favour of the Levites; as, for example, between Numbers xviii. 17, 18, where the whole of a firstling is devoted to the priest and the Lord, while by Deuteronomy xii. 17, 18, xiv. 23, xv. 19, 20, it appears that the Israelites had nearly the whole of the animal for their own eating.

As with the firstlings, so the gift of the first fruits to the

* Leviticus, p. 624.

priests is in Numbers wide and sweeping, while in Deuteronomy it is very limited.

Numbers is presented to us as a history of the wanderings of the Israelites during nearly forty years, about thirty-eight of which are a perfect blank; it also contains an account of some of the wars in which they were engaged. According to its English title, it professes to be the work of the same writer as the Book of Genesis; but in this respect its pretensions at once fail, for it is not at all probable that one man would make such strange variations in writing the names of the persons and places referred to in the course of this commentary. It cannot be revelation from God, because it contains a variety of errors, some evidently copyist's blunders, others arising from the imperfect blending of several documents; because it pictures a God of great mercy and long suffering, ordering indiscriminate and merciless slaughter, as in the case of the Midianites; because it assumes that the curse or blessing of Balaam would affect the welfare of the Israelites, and represents an omniscient and immutable Deity as forgiving or punishing sinners according as they sprinkled or neglected to sprinkle themselves with water in which had been mixed the ashes of a burnt red cow; because it is evidently wholly, or in some part, compiled from other and earlier writings, and therefore never was an original. As a narration of events, it must be regarded with extreme suspicion. The numberings of the Jews in chapter i. must be considered as suppositious; and the account of the wholesale slaughter of the Midianites is evidently untrue. As an educational book, it is entirely without merit, and affords neither instruction nor amusement to its reader, unless, indeed, he be of a sufficiently depraved character to enable him to find amusement in adding together the thousands of Israelites slaughtered by God, or in calculating the probable number of the Midianites slain by the children of Israel.

DEUTERONOMY:

ITS AUTHENTICITY AND CREDIBILITY.

אלה הדברים ALE EDeBeRIM "These the words" is the Hebrew title of this book, but that title is generally shortened to the word DeBeRIM. The Septuagint gives this volume the name *Deuteronomion*, which, although signifying a second law, is, as Cahen says, used here rather to denote a repetition of the laws already given in the preceding books. The word Mishna also applied to this book has the same sense of "repetition." The words "the fifth book of Moses" given in our version are neither in the Greek nor in the Hebrew. The Massora count in Deuteronomy 10 parscioth, 21 sedarim, 9055 verses, 16394 words, 54892 letters.* Colenso contends that the great difference in style between this and the other four books of the Pentateuch at once mark for it another author and probably a later age.† Several examples of differences of expression are given by the Bishop of Natal;‡ of ideas and words found in Deuteronomy alone, or found in the other four books and not in this. He concludes that it is impossible that any writer could in a brief period have so changed his whole tone of thought and expresssion as he must have done to account for the differences between Deuteronomy and the four preceding books if they are all supposed to be the work of one pen, and urges it as a fact proved, "that whoever may have composed the book of Deuteronomy, he was undoubtedly a different person from those who were concerned in writing the main portions of the rest of the Pentateuch." Kalisch notices that the book of Deuteronomy is not quite so favourable to the priests as are some other portions of the Pentateuch, and considering

* Simon, Histoire Critique du vieux text, p. 141.
† Colenso, part 3, pp. 391—393.
‡ Ibid, p. 396 to 404.

Deuteronomy as composed when the priests had not yet gained full power over the Israelitish mind, he assigns to Leviticus a later date than to the fifth book. Dr. Colenso regards the book of Deuteronomy as mainly the work of one writer, and puts the date of its composition some 800 years after the Mosaic era.* De Wette† says, "In addition to the Jehovistic style, this book has some peculiarities of its own, not only in forms of speech and words. There is a diffuse fulness of words which can scarcely be explained from the rehetorical design of the author." M. Nicolas says,‡ "It is beyond doubt to-day that Deuteronomy bears the marks of a writing of the later period of the Jewish Monarchy, and that out of the five books of the Pentateuch, it contains the least of truly ancient documents."

Chap. i. 1 and 5, and chap. iv. 41 and 46.—"On this side Jordan;" the Douay has "beyond the Jordan" in each instance.§ This is one of the twelve difficult passages to which Aben Ezra¶ refers as not written by Moses, but the translators in our orthodox version have avoided the difficulty. The Septuagint, the Latin, and many other versions agree with the Douay. Bellamy writes it "at the passage of the Jordan," "the Red Sea." This must be a mistake; any place between those mentioned would, according to the orthodox maps, be quite away from the Red Sea** The word is סוּף SUPh; the Red Sea is usually written with יַם IM; IM SUPh. Tophel and Dizahab are unknown places, and are not mentioned in the list of stations in Numbers. Instead of writing Dizahab as a separate place, the Douay says after Haseroth, "where there is very much gold," giving this as a literal translation of the word, as though it were a description of Haseroth and not a distinct place. The Septuagint, in lieu of Hazeroth, has *Aulon*, and translates afterwards Dizahab in the same manner as the Douay. Dr. Colenso†† says, "The account of the appointment of officers

* Ibid, pp. 430. † Introduction, vol. 2, sec. 156.
‡ Etudes sur la Bible, p. 9.
§ See Numbers, Bible: what it is, Book 4.
¶ Spinoza Tractatus, Thelogico-Politicus, cap. 8; but see Horne's Introduction, vol. 1, c. 2, p. 64.
** Hartwell Horne, vol. 4, p. 21. Jones, Biblical Cyclopædia.
†† Part 3, p. 433.

as here given involves more than one inconsistency. First, the Deuteronomist loses sight of the fact that, according to the story (N. xxvi. 64), the whole generation was *dead* which received the law at Horeb; and so he makes Moses say, v. 6, 'Jehovah our God spoke unto *us* in Horeb,' and still more distinctly, v. 9, 'I spake unto *you* at that time, saying, I am not able to bear you myself alone;' and v. 14, '*Ye* answered me and said.' But a more remarkable discrepancy exists in v. 15, where the statement is wholly at variance with that in E. xviii. 25, 26. In this latter passage the appointment of the officers take place *before* the giving of the law at Sinai; here it takes place nearly twelve months afterwards, when they are *just about to leave* Horeb, v. 6. If it be said that we must extend the meaning of the phrase 'at that time' (in v. 9—18) to include the whole twelve months, and must suppose that the fact stated in v. 6—8 occurred in point of time subsequently to that in v. 9—18; yet both these accounts are contradictory to that in N. xi. 14—17, where, *after they have left Horeb*, Moses complains of the burden of the people (though according to either of the other two statements, he had a multitude of officers to help him), and he is commanded then to appoint seventy elders, 'and they shall bear the burden of the people with thee, that thou bear it not thyself alone.'" One portion of Dr. Colenso's criticism requires the qualification that a large number of the Jewish children not numbered in the census might have been alive. The words of Numbers and *Deuteronomy* are very misleading. Another difficulty is that here the judges and rulers are appointed on the suggestion of Moses with the assent of the people, while in Exodus xviii. Moses does all this at the instance of Jethro, his father-in-law, here unmentioned.*

Verse 10.—"Ye are this day as the stars of heaven for multitude." We are told in chap. vii. 7, that when God chose the Jews, they were the "fewest of all people." This verse 10 is purely an oriental figure of speech, but we allude to it here for the purpose of showing how miserable are some of the attempts at explanation. Horne, in defiance of the precise words of the text, argues that "if the

* But see Hartwell Horne, vol. 1, App. 3, sec. 6.

aggregate number of the Israelites* who have ever lived could be ascertained, it would be found far to exceed the number of all the fixed stars." Thus Bible contradictions are reconciled by devout commentators.

Verse 15.—"Captains over thousands." The Douay has, "rulers, tribunes," and instead of "officers amongst your tribes," has, "who might teach you all things."

Verse 22.—"And ye came near unto me every one of you, and said." This is simply impossible. The bulk of those who came to him must have been dead, according† to Numbers xiii. 1 and 2, the sending the searchers was by the direction of God; here it is made as if at the instance of the Israelites.

Verses 37 to 39.—"Also Jehovah was angry with me for your sakes, saying Thou also shalt not go in thither. But Joshua, the son of Nun, which standeth before thee, he shall go in thither; encourage him, for he shall cause Israel to inherit it. Moreover, your little ones, which ye said should be a prey, and your children which in that day had no knowledge between good and evil, they shall go in thither, and unto them will I give it, and they shall possess it. But as for you, turn you, and take your journey into the wilderness by the way of the Red Sea." "Here again," says Colenso, "the Deuteronomist, though thoroughly imbued with a *general* notion of the story, seems to have lost sight of the particular fact that Moses was sentenced to die, and Joshua appointed to succeed him, not at the time which is here referred to—in the days of the former generation, but after an interval of thirty-seven years, at the *end* of the wanderings, N. xxvii. 15—23, only a few months before this address is supposed to be delivered. The fact may be that, knowing that Caleb and Joshua were excepted in the story from the general doom, he names Caleb as so excepted in v. 36, and then goes on to mention Joshua as also excepted, but inadvertently anticipating his appointment to succeed Moses, and so falling also into the anachronism of ante-dating the doom of Moses."‡

---

* Introduction, vol. 1, App. 3, sec. 8.

† Cahen, Deuteronome, p. 5; Colenso, part 3, p. 434.

‡ Colenso, part 3, p. 435; see also De Wette on the Books of Moses, sec. 156.

Chap. ii. 11.—"Accounted giants." Bellamy* makes giants into apostates throughout this chapter, urging that it was utterly impossible for a whole nation to be giants.

Verse 12.—"The Horims also dwelt in Seir beforetime; but the children of Esau succeeded them, when they had destroyed them from before them, and dwelt in their stead, as Israel did unto the land of his possession, which the Lord gave unto them." This verse is evidently from the pen of a writer living after the Israelites had possession of the land. Colenso† says, "These words are a mere parenthetical interruption of the narrative. But in the time of Moses, Israel had not done this unto the land of Canaan, which, surely and not the country on the other side of the Jordan is meant by the 'land of his possession.'" Some critics regard the whole of the 10th, 11th, and 12th verses as an interpolation, partly because they interrupt the words of the Lord which recommence in verse 13, and because of the post-Mosaic language of verse 12.

Verse 20.—"Zamzummims." The Septuagint has *Sochommim*.

Verse 23.—"Hazerim." The Septuagint has *Asedod* and *Gazes* instead of Azzah. In lieu of "Caphtorim" the Douay has "Cappadocians," following the Septuagint, which agrees with the Targum of Onkelos. Bellamy says that verses 20 to 23 should be read as in a parenthesis, other critics speak of them as an interpolation interrupting again the Lord's speech, and evidently from some later hand.

Verse 29.—The statement of the text that the Edomites sold meat and water to the Israelites is utterly at variance with Numbers xx., 18 to 21, and Deuteronomy xxiii., 3 and 4.

Verse 30.—"The Lord thy God hardened his spirit, and made his heart obstinate." The "hardening of heart" has been already remarked upon‡ in the case of Pharaoh. Such texts as this clearly demonstrate, to even the most obtuse mind, that the Book cannot be a revelation from an immutable Deity. That a merciful and loving God should harden any man's heart is unreasonable in the extreme; and that he should do it to a monarch for the purpose of affording

* New Translation, p. 453. † Part 2, p. 214.
‡ Exodus, p. 196.

an excuse for slaughter of that monarch's subjects is a blasphemous proposition, which every Theist ought to deny. Can men wonder that Atheists grow in number, when the character of the Deity is delineated by the Pentateuchal writers in such a contradictory and absurd manner? A just God grossly unjust, a merciful God cruel in the extreme, an immutable God constantly changing; in fact, a God consistent only in the attribute of incomprehensibility! Bellamy, denying the accuracy of our version, says:—"In such case the King of Heshbon was not to blame, he was only doing that which God impelled him to do, and if the translation were accurate, Sihon must have been doing the will of God."

Verse 31.—After "Sihon" the Septuagint adds, King of Esebon the Amorite;" and in verse 32 "King of Esebon."

Chap. iii. 9.—"Sirion" is by the Septuagint written *Sanior*, and in chap. iv. 48, the same mountain is called Sion, "which," says Horne,* "seems to be a contraction or a faulty reading."

Chap. iii. 11.—"For only Og, King of Bashan, remained of the remnant of giants; behold, his bedstead was a bedstead of iron: is it not in Rabbath of the children of Ammon? nine cubits was the length thereof, and five cubits the breadth of it, after the cubit of a man." Dr. Pyle (in the Family Bible) remarks† on this passage:—"It is probable that either Og conveyed his iron bedstead, with other furniture of his palace, into the country of the Ammonites, to prevent their falling into the hands of the Israelites; or else the Ammonites had taken it from him in some former conquest, and kept it as a monument of their victory. Either of these cases would be probable, if it could be first proved that Moses wrote this verse, and that he knew of Og's bed being kept in Rabbath. But as Rabbath was not taken by the Israelities until the time of David, as we read in 2 Samuel, xii. 26, "And Joab fought against Rabbah, of the children of Amman, and took the royal city," it is very unlikely that the Israelites knew anything about the bedstead of King Og until then. In the reign of David, five hundred years

* Introduction, vol. 3, part 1, chap 2.

† See Dr. Giles's Hebrew Records, p. 147.

had passed since Og lived, and his bedstead had consequently become an object of curiosity; like the great bed of Ware, which is still shown in that town, though only three hundred years old. It is hardly possible that Moses knew anything about this bedstead of King Og, afterwards so famous.

This verse 11 is another of the famous twelve passages referred to by Aben Ezra as against the Mosaic authorship.* Vater says† that it is scarcely probable that Moses could have written verse 11. Dead soon after the combat, where could he have learned these particulars only known after the capture of Rabbath? Bellamy,‡ to escape the difficulty, conjectures that Og flying from the Israelites took his iron bedstead with him to Rabbath, and that Moses learned this from the people of Bashan. Colenso examines several of the arguments *pro* and *con.*,§ and leaves the passage as one of those fatal to the Mosaic authorship.

Verse 14.—"Jair, the son of Manasseh, took all the country of Argob unto the coasts of Geshuri and Maachathi, and called them after his own name, Bashan-havoth-jair, unto this day." Hartwell Horne admits that the last clause in this verse could not have been written by Moses, for it implies a writer who lived at least some ages after the settlement of the Jews in Palestine. But he says that if the clause was inserted by some transcriber in a later age, it does not affect the authenticity of the work.‖

Verse 14.—"Geshuri." The Septuagint has *Gargasi.*

Verse 18.—"All that are meet for the war," Bellamy says, "four words out of the seven in this clause are not sanctioned by the original, and the word meet has here no meaning." Cohen makes it "all valiant men."

Verse 24.—"What God is there in heaven, or in earth, that can do according to thy work?" This is a strange phrase from the lips of a man who only believed in one God; and it appears that it has been repeatedly used as an argument against monotheism. Bellamy says that "the translation

* Tractatus Theologico-Politicus, chap. 8, Père Simon Critique, p. 45.

† Cahen: Deuteronome, p 17. ‡ New Translation, p. 457.

§ Part 2, p. 215.

‖ Introduction, vol. 1, chap. 2, sec. 1.

of this verse cannot be admitted, for it leads the mind to suppose that there are numbers of gods in heaven and gods on earth."*

Chap. iv. 12.—"And the Lord spake unto you out of the midst of the fire; ye heard the voice of the words, but saw no similitude; only ye heard a voice;" and v. 15. According to Exodus, chaps. xx. and xxi., this would hardly be the case—chap. xix. 18, affords no corroboration for this statement that the Lord spake "out of the midst of the fire," nor does it appear that the people heard "the voice of the words," for the Lord says to Moses (Exodus, chap. xix. 21), "Go down, charge the people," and in chap. xx., 22, "Thus shalt thou say unto the Children of Israel." —Exodus, chap. xxiv. 3, and Deut., chap. v. 5, make it clear that the words were announced by Moses. Bellamy adds—"The erroneous opinion of God speaking from the midst of the fire is also unintelligible. It was not possible for the people to know that the voice came from the midst of a fire, such a notion stamps neither sanctity, dignity, nor rationality upon the original text."† In using the words "ye heard" and "ye saw," Moses must have forgotten, or rather the writer who puts these words in the mouth of Moses must have forgotten that "all the generation" who were at Sinai had been "consumed" in the wilderness. Those who heard and saw could have been in any case but a minority of the audience now addressed.

Verse 40.—"That thou mayest prolong thy days upon earth, which the Lord thy God giveth thee, for ever." The Douay omits the "for ever." Bellamy translates it "prolong time upon the land . . all the days." The earth, I suppose, means Judea only, and this has not been held by the Jews to the present day, much less for ever.

Verses 41 to 43.—These three verses are held by many critics to be an interpolation, they have not the slightest connection with the preceding or following verses.

Chap. v. 2.—"Jehovah our God made a covenant with *us* at Horeb. Jehovah made not thiscovenant with our fathers, but *with us, even us, who are all of us here alive this day.*

* New Translation, p. 457. † New Translation, p. 459.

Jehovah talked with *you* face to face in the mount out of the midst of the fire. I stood between Jehovah and you at that time, to show *you* the word of Jehovah; for *ye* were afraid by reason of the fire, and went not up unto the mount."

Here we have the strongest instances of the oversight before referred to. It may, of course be said, in all these cases that Moses is addressing the people collectively, and that the fathers with whom the covenant was made at Horeb, included the children to whom he was now speaking at the end of the wanderings. But, if every one of those fathers were dead, as the narrative tells us, and only a small proportion of those now listening to Moses were present on the former occasion as children under age, the above words could scarcely have been used by one taking note of this circumstance. So do we read in xi. 2—7: "I speak not with *your children*, which have not known His miracles and His acts, which he did in the midst of Egypt, unto Pharaoh the King of Egypt, and unto all his land, &c., but *your eyes have seen* all the great acts of Jehovah which he did."*

Chap. v. 6 to 21, have been already commented on at some length, save some variations, which, as Cahen says, are most remarkable in a fundamental document (see Commentary on Exodus, page 239).

Verse 7.—"Before me." Bellamy, Cahen, and Hebrew, "before my face." Cahen says that the Chaldean interpreters, to avoid the anthropomorphism, never translate the word "face" in speaking of God.†

Verse 12.—"As the Lord thy God hath commanded thee" are wanting in Exodus.

Rabbi Ben David says, that the law upon the Sabbath is frequently repeated in Exodus and Leviticus, and that whenever a reason is given for the law, which is not always the case, the Lord's rest after creation is mentioned (see Exodus xxxi. 17), and not the departure from Egypt.

Verse 22.—"These words the Lord spake . . . with a great voice, and *he added no more.*" Yet in Exodus xx. 22 to 26, and in the following chapters, he adds a great deal more.

Chap. vi. 2.—"And that thy days may be prolonged."

* Colenso, part 3, page 448. † Deuteronome, p. 29.

Those who are in favour of the doctrine of a future state of rewards and punishments, would do well to notice how all the penalties and all the bliss are confined to this life in the various Hebrew enactments. (See also verse 24 of this chapter.)

Verses 4 to 9 inclusive are regarded as most important by the Israelite, being the prayer which the Talmud obliges him to repeat morning and evening. The first and last letters of the 4th verse are written larger than the rest, and the Cabalistic Rabbis trace strange meanings in the numerical value of these letters.* This chapter elevates the God Jehovah above the gods of the neighbouring nations, but writes as if Jehovah might be envious of adoration offered to the other deities.

Verse 5.—"Thou shalt love the Lord thy God with all thine heart, and with all thy soul, and with all thy might." Is it possible that the Jews could love a Deity, whom they had only seen as smoke and fire, as a pillar of cloud by day, and as a pillar of fire by night; who had led them from the flesh-pots of Egypt into the sterile sandy desert of sin? If love instead of fear were a necessary consequence of punishment, the Israelites would, of course, love very strongly; but it is surely utterly impossible they could love a God who told them that he was a jealous God, whose anger might be kindled against them, and who might destroy them from off the face of the earth; who had tormented them with various plagues, for uttering complaints which they could scarce avoid. Hunger and thirst would tempt the most contented men to murmur; and yet for these murmurings they had been terribly dealt with. All the full grown men who had left Egypt had died by the way, either by foreign or civil strife and war, by pestilence, fiery serpent, earthquake, or fire from heaven, yet "Thou shalt love the Lord." A Lord of bloody sacrifice, a God who smelled a sweet savour when his altar was as an *abattoir*, and when the fumes of burning flesh, hide, fat, and wool, ascended to heaven, This injunction, "Thou shalt love," is more than governed by the "Thou shalt fear" of verse 13.

---

* Cahen, Deuteronome, p. 33.

Verse 16.—"Ye shall not tempt the Lord your God, as ye tempted him in Massah." The Septuagint, instead of "in Massah," reads "in temptation," the Douay "in the place of temptation." From the language put into the mouth of Jesus in Matt. iv. 7, it would appear as if he understood the word tempt to mean here "corrupt enticement."

Chap. vii. 2.—"And when the Lord thy God shall deliver them before thee, thou shall smite them, and utterly destroy them; thou shalt make no covenant with them, nor show mercy unto them." See Exodus xxxiv. 6, Deuteronomy iv. 31, Psalms xxxiii. 5, li. 1, cxvi. 5, cxlv. 8 and 9; 2 Chron. xxx. 9, Nehemiah ix. 31, Micah vii. 18, 1 Corinthians xiv. 33. Is it possible a God of mercy, long-suffering, gracious kindness, and goodness, could have given such a command as this to his people: "Thou shalt smite them and utterly destroy them; thou shalt make no covenant with them, nor show mercy unto them?" Cahen has the following note upon this verse*—"It is very clear, says Gueddes, 'that the total destruction of these peoples is intended in the order of Moses. It is equally clear that this order is here represented as a divine order. But, he adds, I can scarcely believe that God, supremely good and just, could have given to Moses and the Israelites an order so sanguinary as that which is here in question. In order to justify such a destruction, one refers to earthquakes and other natural catastrophes which cause the loss of millions of innocent lives; that similar calamities rest also upon the divine will; and, finally, that the nations whose destruction is here commanded had merited such a chastisement. But these reasons are very weak. In the first place, we do not know the first causes of these natural events, and we cannot certainly draw any conclusion from them against the principle of moral equity. We cannot represent to ourselves the divine will except in connection with his wisdom, his justice, and his benevolence towards his creatures. Nay more, the Israelites were, according to the Pentateuch itself, a sinful people, and were not of much greater worth than the other peoples. But suppose that they were more worthy, what was the crime of these massacred innocents, of the

* Deuteronome, p. 38.

children of the Canaanites? Certainly the Israelites had no more right to attack these people and to expel them from their country than these again would have had a right to expel the Israelites. He only can make us consider such an order as emanating from God, who, being under the necessity of covering these atrocities under the mantle of religion, desires to give them a sacred sanction. The Inquisitors have acted in this manner, executioners of the Moors, the Jews, the Vaudois. For the rest there is no other testimony in favour of the divine origin of such an order than the assertion of a Hebrew historian. The Canaanites must have regarded as very unjust a God who was the author of this order, or else supposed it a pure pretext. It is more likely then that God never gave it; it is opposed to all moral equity, and we know nothing of it except from the party interested in its execution.' To this energetic outburst of Gueddes, founded upon a holy and legitimate indignation, we will add that the extermination of populations is an Asiatic policy, and that we need not take for fact the view of a priestly writer. A fanatic, religious or political, may fail of pity, but an entire people will never fail of it; the Canaanites were not exterminated."* Bellamy, who agrees that a command such as is contained in this verse is utterly inconsistent with the book being a revelation from God, puts the blame on the incorrectness of the translation, and says:† "Sorry am I to say that the present erroneous translations have, to the disgrace even of Christian nations, countenanced such black crimes against humanity." Bellamy quotes Dr. Sykes, Dean of Winchester, as endorsing his opinion.

Verse 3.—"Neither shalt thou make marriages with them." According to the natural sense, marriage with the people of these nations is permitted as soon as they have abandoned idolatry. It is the opinion of the Rabbi Moses Mekoutsi, and it follows that marriage with other nations is permitted, without the necessity of the individuals abjuring their mode of worship. And in fact these kinds of marriages do not appear to have been rare. David and Solomon took wives from the neighbouring races, and these women

* Cahen, Nombres, p. 38. † New Translation, pp. 465—470.

remained attached to the worship of idols. And yet Solomon is only blamed for having married women belonging to races with whom it was forbidden to make an alliance before their abjuration of idolatry, but not at all because these women were not of the Israelitish faith. Besides, Deuteronomy permits the Israelites to marry the women taken in war; it prescribes certain formalities, but it is not a question of a change of religion. The Talmudist, St. Paul, even finds that these sorts of unions are useful to religion (1 Corinth. vii. 14). It is in this manner, says M. Creuzenach (Thariag, p. 45), that the Grand Sanhedrim convoked at Paris by Napoleon in 1807, gives its opinion upon the marriage of Jews with Christians. Without doubt, continues M. Creuzenach, the celebration of marriage, as it is celebrated in our time among the Israelites, has need of modification if it is to be practised in mixed marriages. Nevertheless, he adds, that it is not according to some rigorists, the principal difficulty that the Talmud opposes; now the Talmud does not only invalidate the celebration of these kinds of marriages, but it regards them as criminal, and it invokes on this subject a synodal decision from the time of the Hasmonians. The Sanhedrim has always supposed, with reason, that in that decision it was only a question of marriages between Jews and Pagans, since it was taken before the establishment of Christianity. We will add to the excellent observations of M. Creuzenach that the marriages between Israelites and Pagans were not unknown things. The Bible relates, without adding any reprobation of it, as a very simple thing, that the sons of Elimelech married Moabites (Ruth i. 4). We know that from one of them is descended the dynasty of David. It is also well to call to mind that the intervention of a rabbi in marriage is a measure simply of police and not a religious obligation.*

Verse 9.—There is a curious jumbling here between our version, the Douay, and the Hebrew. The Douay omits "he is God." The Douay and Cahen add "strong" before faithful.

Verse 20.—"The hornet." Bellamy says "the leprosy."

---

* Cahen, Nombres, p. 39.

Chap. viii. 2.—"To prove thee, to know what was in thine heart, whether thou wouldest keep his commandments, or no." Cahen says that theologians have great trouble to reconcile this verse with the divine attribute of foreknowledge.

Verse 4.—"Thy raiment waxed not old upon thee, neither did thy foot swell, these forty years." The Septuagint introduces "thy shoes are not broken under thee," see also xxix. 5. If this were true, a curiously continuing miracle must have been worked. Bellamy* says that it is "preposterously absurd" to accept such a miracle—he objects to the translation. "No mention is made of this miraculous provision of clothing in the older narrative. Kurtz observes, iii. 312—313: The history of the exposition of these verses furnishes one of the most striking examples of the extent to which a merely literal exegesis of the Scriptures may go astray. A whole series of both Jewish and Christian commentators interpret these passages without the least hesitation, as meaning that the clothes and shoes of the Israelitish children grew with their growth, and remained for the whole of the forty years not in the least the worse for wear.† Thus Justin says (Dial. c. Tryph c. 131) 'The strings of whose sandals never broke; nor did the sandals themselves get old, nor their clothes wear out, but those of the children grew with their growth.' So Pfeiffer, 'By a remarkable miracle, not only did the clothes of the Israelites in the desert never get old, but they grew with the growth of the Israelites themselves, so as to fit both men and boys in succession.' Pfeiffer also quotes a Rabbinical saying with approbation: 'Go, and learn from the snail whose shell grows with its body.' Other Rabbins suppose the angels of God to have acted as tailors to the Israelites while they were in the desert, and interpret Ez. xvi. 10—13, as containing a literal allusion to the fact. Without going to such an absurd length as this, Augustine, Chrysostom, Theodoret, Grotius, and even Leeyling, abide by the literal explanation, that, through the blessing of God the clothes and shoes never wore out; so that those who grew to manhood were able to hand them

* New Translation, p. 472.
† See Note in Cahen, Deuteronome, p. 43.

over as good as new to the rising generation. But thus assuming a succession of wearers, these commentators at all events, escaped the fatal notion that the clothes and shoes grew with the bodies of the wearers. When first Peyrerius denied that the clothes and shoes of the Israelites were miraculously preserved for forty years, and maintained that 'the meaning of the Mosaic account was nothing more than this, that the Jews were never in want of anything, during the whole of the forty years that they were in the desert, but had so abundant a supply of everything, especially of wool from their flocks of cloth, of skins and of cloth, of skins and of leather, that they were never without materials from which to make their clothes.' Leeyling, who is usually so very temperate, protested most vehemently against such '*petulantia et impietas.*' Nevertheless the opinion expressed by Peyrerius became gradually the prevailing one. We find it advocated, for example, by Clericus, Buddeus, and Lilienthal. The last of the three, however, thinks it necessary to point, not only to the flocks possessed by the Israelites from which they could obtain both wool and leather in great abundance, but also to the fact that every Israelite must certainly have brought some clothes and shoes with him out of Egypt —that they asked the Egyptians for clothes and obtained them (E. iii. 22. xii. 35)—that they would, no doubt, take off the clothes of the Egyptians who were drowned in the Red Sea, and afterwards washed on shore (E. xiv. 30), and lastly, that they took the booty of the conquered Amalekites, including, according to Josephus, a quantity of clothes. But surely the literal interpretation of the texts in question is the true one, and plainly implies a miracle of some kind, which prevented their clothes and shoes from wearing out, whatever may be the difficulty of conceiving what kind of miracle it could possibly have been."*

Verse 9.—It is not true that Judea was "a land wherein thou shalt eat bread without scarceness," as various famines are mentioned. See Ruth, i. 1, 2 Samuel, xxi. 1, 1 Kings, xviii. 2, 2 Kings, vi. 25, 2 Kings, viii. 1, and 2 Kings, xxv. 3.

Verse 15.—"Fiery serpents, and scorpions, and drought." The Douay has "the serpent burning with his breath, and

* Colenso, part iii., p. 450.

the scorpion and the dipsas," and explains that by dipsas it means a serpent whose bite caused violent thirst.

Verse 19.—"If thou do at all forget the Lord thy God, and walk after other Gods . . ye shall surely perish." The Jews were often as a nation and by their Kings guilty of idolatrous practices, and yet have not perished.

Chap. ix. 9.—The statement that Moses fasted on the first visit to the Mount, is not contained in Exodus xxiv. 18; the number forty is like the number seven, a favourite and mystical number. The rain descended forty days and forty nights (Genesis vii. 4); Isaac and Esau married at forty (Gen. xxv. 20: xxvi. 34); forty days were fulfilled for the dead Joseph (Gen. l. 3); the spies searched the land forty days (Numbers xiii. 25); and the Israelites were therefore condemned to wander forty years (xiv. 33); Goliath challenged the Israelites forty days; David reigned forty years (2 Samuel, v. 4, &c.) Very numerous instances might be given of the recurrence of the word "forty." It can scarcely be taken as historic. This chapter is very broken and incoherent. Cahen thinks that several documents have been used in its composition. De Wette speaks of its obscurity.

Chap. x., 1 to 5.—"At that time the Lord said unto me, hew thee two tables of stone like unto the first, and come up unto me into the mount, and make thee an ark of wood. And I will write on the tables the words that were in the first tables which thou brakest, and thou shalt put them in the ark. And I made an ark of shittim wood, and hewed two tables of stone like unto the first, and went up into the mount, having the two tables in mine hand. And he wrote on the tables, according to the first writing, the ten commandments, which the Lord spake unto you in the mount out of the midst of the fire in the day of the assembly: and the Lord gave them unto me. And I turned myself and came down from the mount, and put the tables in the ark which I had made: and there they be, as the Lord commanded me." Great contradiction exists between the narrative here and that in the Book of Exodus. In the words of Knobel, "the writer here treats the older records with great freedom." It will be observed that in E. xxxiv., 29, the two stone tables with the ten commandments are in the hands of Moses, before any receptacle has been made in

which to place them. *Here*, however, the ark is commanded to be made, v. 1, and is actually made, v. 3, *at the same time* with the second set of tables, *before* Moses goes up into the mount to receive them. But the account in Exodus makes this impossible. Not only is there nothing said about the ark in E. xxxiv., 1, where he is commanded to make the tables; but it is only after coming down with the second set of tables that Moses, E. xxxv., 10—12, summons the 'wise hearted' to come and make all that Jehovah hath commanded, the Tabernacle, and his tent, and his covering, &c., the *Ark* and the staves thereof, with the mercy seat, &c., and afterwards in E. xxxvii., 1—9, we have the full account of Bezaleel making it. And yet the ark of the Deuteronomist was not, as might be suggested, a mere temporary Ark; for he makes Moses say, x. 5, 'I turned myself, and came down from the mount, and *put the tables into the ark which I had made, and there they be*, as Jehovah commanded me."* Cahen says that to escape the difficulty, some of the Rabbis have suggested that there were two arks.

Verse 6.—"And the children of Israel took their journey from Beeroth, of the children of Jaakan to Mosera." But according to Numbers, xxxiii., 31, it was just the reverse.

Verse 6.—"Mosera. There Aaron died, and there he was buried." According to Numbers, xx., 28, Aaron died and was buried on Mount Hor. Colenso says—"This passage is evidently quite out of its place, and as here introduced, it involves a complete contradiction. For the death of Aaron is here described as happening *before* the separation of the Levites." (See Numbers iii., 5, 6, and 9.)

Verses 6 to 9.—These verses seemed to have been inserted without regard to the context; they have no connection with the rest of the chapter, which would read more coherently if read from v. 5 to v. 10, omitting the four intermediate verses. Dr. Kennicot says that these verses belong to another chapter.† In v. 8, the words, "unto this day," would denote a considerable lapse of time from the death of Aaron. Cahen, after a very long note showing how the Samaritan version avoids part of the difficulty,

* Colenso, part 3, p. 454.
† Horne's Introduction, vol. 1, p. 584.

says that the original documents, of which the book is composed, have not been here put together with sufficient care.

Verse 22.—"Three score and ten." In Genesis xlvi. 26, this is "Three score and six." In Acts vii. 14, "Three score and fifteen."*

Chap. xii. 6.—Cahen points out that the direction here and in other verses to sacrifice in one fixed place, is opposed in Exodus xx. 24.

Verse 15.—"Notwithstanding thou mayest kill and eat flesh in all thy gates, whatsoever thy soul lusteth after, according to the blessing of the Lord thy God which he hath given thee: the unclean and the clean may eat thereof, as of the roebuck, and as of the hart." This is a direct contradiction of Leviticus xvii. 3 and 4: "What man soever there be of the house of Israel, that killeth an ox, or lamb, or goat, in the camp, or that killeth it out of the camp, and bringeth it not unto the door of the tabernacle of the congregation, to offer an offering unto the Lord before the tabernacle of the Lord; blood shall be imputed unto that man; he hath shed blood; and that man shall be cut off from among his people." Horne admitting the contradiction, tries to explain it that the law in Deuteronomy is in repeal of that in Leviticus.

Verses 17 to 19.—"Thou mayest not eat within thy gates the tithe of thy corn, or of thy wine, or of thy oil, or the firstlings of thy herds or of thy flocks, nor any of thy vows which thou vowest, nor thy freewill offerings, or heave offering of thy hand. But thou must eat them before Jehovah thy God, in the place which Jehovah thy God shall choose, thou, and thy son, and thy daughter, and thy manservant, and thy maidservant, and the Levite that is within thy gates; and thou shalt rejoice before Jehovah thy God in all that thou puttest thine hands unto. Take heed to thyself that thou forsake not the Levite as long as thou livest upon the earth." But the *tithes* above mentioned belonged *wholly* to the Levites according to the law in N. xviii., 21, 24, 26, supposed to have been laid down only just before, in the

* See Commentary on Genesis, p. 137, and Horne's Introduction, vol. 1, p. 584.

very same year in which this "last address" of Moses was delivered; and the *firstlings* belonged wholly to the Priests, N. xviii. 15—18. And here the *people* are to feast upon them, and not to "forsake" the Levite within their gates, but admit him to a share in their enjoyment! The most complete contradiction obviously exists between the two sets of laws, supposed to be uttered, the first directly by Jehovah Himself, the second by Moses, within a few months of each other.*

Verse 23.—"The blood is the life, and thou mayest not eat the life." The Douay has, "the blood is for the soul, and therefore thou must not eat the soul." Bellamy has, "the blood is the soul, therefore thou shalt not eat the soul." Cahen agrees with Bellamy and the Douay, and adds, "this passage is very explicit for those who wish to understand it." We have previously treated the question of נפש NePeSh as "soul" in the previous part of this Commentary on Genesis, Book 1, p. 42 and p. 76. The word which our orthodox translators render "life" here, they actually render soul in the next chapter, v. 6. In the Hebrew, v. 32 of cap. xii., is v. 1 of cap. xiii.

Chap. xiii. 1 to 5.—Here Moses says, "if a prophet" of a different faith arise, and his sign or wonder come to pass, "that prophet shall be put to death." Can we, therefore, wonder that the Jews put Jesus to death, the more especially as according to the Bible he endeavoured to introduce a new form of worship, and new doctrines amongst them? The word נביא NeBIA, prophet, is used here as if the meaning were well known; it occurs once previously (Genesis, xx. 7), but does not seem to have been in general use until much later in the Jewish history.

Verses 6 to 10.—"If thy brother, the son of thy mother, or thy son, or thy daughter, or the wife of thy bosom, or thy friend, which is as thine own soul, entice thee secretly, saying, let us go and serve other gods, which thou hast not known, thou, nor thy fathers; namely, of the gods of the people which are round about you, nigh unto thee, or far off from thee, from the one end of the earth even unto the other end of the earth; thou shalt not consent unto him, nor

* Colenso, part 3, p. 475.

hearken unto him; neither shall thine eye pity him, neither shalt thou spare, neither shalt thou conceal him: but thou shalt surely kill him; thine hand shall be first upon him to put him to death, and afterwards the hand of all the people. And thou shalt stone him with stones, that he die; because he hath sought to thrust thee away from the Lord thy God, which brought thee out of the land of Egypt, from the house of bondage." Cahen points out how this would leave an opportunity for personal vengeance; any person might make a false accusation of this kind. The command is evidence of how poor a conception of a loving God existed in the mind of the writer. In the Old Testament the persecuting spirit kills the heterodox, in the New it preserves him for eternal torment.

Verses 12 to 16.—"If thou shalt hear say in one of thy cities, which the Lord thy God hath given thee to dwell there, saying, certain men, the children of Belial, are gone out from among you, and have withdrawn the inhabitants of their city, saying, let us go and serve other gods, which ye have not known: then shalt thou enquire, and make search, and ask diligently; and, behold, if it be truth, and the thing certain, that such abomination is wrought among you; thou shalt surely smite the inhabitants of that city with the edge of the sword, destroying it utterly, and all that is therein, and the cattle thereof, with the edge of the sword. And thou shalt gather all the spoil of it into the midst of the street thereof, and shalt burn with fire the city, and all the spoil thereof every whit, for the Lord thy God: and it shall be an heap for ever; it shall not be built again." Colenso says* that this law it is plain could never have been carried out in legal form. How were they to put a city on its trial for the offence in question, so as to give it an opportunity of clearing itself of the charge? And was every city to be destroyed and utterly exterminated in this way, where perhaps an unruly mob, the majority, might have become for a time too strong for the better souls among them—and were these, too, to be involved in the general ruin? The text gives no countenance to any abatement of the severe rigour of the law.

* Colenso, part 3, p. 478.

Chap. xiv. 5.—"The fallow deer." The Douay has "the buffle." Cahen, who says that the signification of most of the names is doubtful, does not translate this word at all, but simply puts in our alphabet the Hebrew word יחמור IChMOR, as to which translators differ.* Some of the names here, and in the Douay, are transposed, and the translations in Bellamy and Cahen vary. The "Pygarg" is simply the anglicising the Greek letters of the Septuagint. Our margin gives the word "bison" as a translation, but as some of the Greek lexicons translate "pygargos" as "weak, impotent, timid," the marginal guess seems very far from the Septuagint view.

Verse 7.—There is here a repetition of the same error as that contained in Leviticus, xi. 5 and 6, as to the hare chewing the cud.†

Verse 12.—"The ossifrage," in the Douay is "the grype."

Verse 13.—"The glede," Douay, "ringtail."

Verse 15.—"And the owl, and the night hawk, and the cuckow." The Douay has "the ostrich, the owl, and the larus."

Verse 16.—"The little owl, and the great owl, and the swan." The Douay, "the heron, the swan, and the stork." In fact, in nearly every verse the birds are differently named in the two versions.

Verse 19.—"And every creeping thing that flieth is unclean unto you; they shall not be eaten." This is contradicted in Leviticus, xi. 21 to 23, where certain creeping things are permitted.

Verse 21.—"Ye shall not eat of anything that dieth of itself: thou shalt give it unto the stranger that is in thy gates, that he may eat it; or thou mayest sell it unto an alien." Bellamy says that this appears to be inconsistent with every principle of goodness and just dealing, as it is stated in the common version. The animal dies, and it is to be given or sold to one unaware of the fact. "Such a

* See Parkhurst, p. 221, Breslau 235, Newman 186, Gesenius 346, Buxtorf 141, Eichorn's Simonis 579.

† See Commentary on Leviticus, p. 315, and Colenso, part 3, p. 481.

proceeding," says Bellamy,* "would be reprobated in every civilised nation." Bellamy contends that the true translation is exactly the reverse of that given in our version. What a glorious revelation, where such questions can arise as to the true meaning of the Hebrew text.

Chap. xiv. 22 to 27.—"Thou shalt truly tithe all the increase of thy seed, that the field bringeth forth year by year. And thou shalt eat before the Lord thy God, in the place which he shall choose to place his name there, the tithe of thy corn, *of thy wine*, and of thine oil, and the firstlings of thy herds and of thy flocks; that thou mayest learn to fear the Lord thy God always. And if the way be too long for thee, so that thou art not able to carry it; or if the place be too far from thee, which the Lord thy God shall choose to set his name there, when the Lord thy God hath blessed thee: then shalt thou turn it into money, and bind up the money in thine hand, and shalt go unto the place which the Lord thy God shall choose; and thou shalt bestow that money for whatsoever thy soul lusteth after, for oxen, or for sheep, *or for wine, or for strong*† *drink*, or for whatsoever thy soul desireth; and thou shalt eat there before the Lord thy God, and thou shalt rejoice, thou, and thine household, and the Levite that is within thy gates; thou shalt not forsake him; for he hath no part nor inheritance with thee." Bellamy objects to the translation, urging that, if accurate, its effect would be to give an enormously large share in Etheridge's translation, to the Levite. In verses 23 and 24, the Targum of Onkelos reads Shekinah in lieu of "name," and so wherever the word thus occurs in this book. Colenso says: "In this passage, the permission is given that, if the way was too long, the whole of the *tithes* and *firstlings* might be turned into money; and the person must go up with this money in his hand, 'to the place which Jehovah shall choose,' and there buy with the money 'what his soul lusteth after, oxen, sheep, wine, strong drink, whatsoever his soul desireth;' and the good things thus provided were to be 'eaten

* Bellamy, p. 484.

† We commend the words we have italicised to the notice of our teetotal friends. See also Psalm civ. 15; Judges ix. 13; Proverbs xxxi. 6, 7; Isaiah xxv. 6.

before Jehovah' by the man and his household, and 'the Levite that is within thy gates—thou shalt not forsake him.' But no such provision is made for the conversion of the *firstlings* into money, in Numbers xviii. 17, a law supposed to be given by Jehovah himself only a few months previously, which says:—'The firstling of a cow, or the firstling of a sheep, or the firstling of a goat, thou shalt not redeem; they are holy; thou shalt *sprinkle their blood upon the altar*, and shalt *burn their fat for an offering made by fire*, for a sweet savour unto Jehovah.' And, as before observed, all the meat of the firstlings was expressly given to the *priests* by the law, in Numbers xviii. 18, where we read, 'And the flesh of them shall be thine, as the wave-breast, and as the right shoulder are thine.' So, too, the *tithes* were expressly to be consumed by the Levites, except a tenth of them, which they were to give to the *priests* by the law in Numbers xviii. 25—32, where it is said, verse 31, 'Ye (the *Levites*) shall eat it *in every place*, ye and your households; for it is your reward for your service in the tabernacle of the congregation.' Here, however, in Deuteronomy xiv. 22—27, it is ordered, in direct contradiction to the above laws, issued, according to the story, *from the mouth of Jehovah himself*, Numbers xviii. 8, 20, 25, a few months previously, that the man who offers, and his family, and 'the Levite that is within his gates,' shall make a feast upon the produce of both the priests' firstlings and the Levites' tithes, at *Jerusalem*, xii. 6, 17—19, xiv. 22—27, xv. 19—23, whereas the Levites were to have eaten them at their homes 'in every place.'"*

Chap. xv. 4 contradicts verse 11.—The former, although softened down by our translators, stating that there shall be a time when "there shall be no poor amongst you;" while the latter declares that "the poor shall never cease out of the land."

Verses 12 to 17.—See Exodus xxi.; there are several differences between the two laws. Here the servant is not to be sent away empty; in Exodus the contrary is implied. Here the same law applies to man-servant and maid-servant; not so, however, in Exodus. There the servant, whose ears

* Colenso, part iii. p. 482; but see Horne, vol. iii. p. 288.

are to be bored, is to be brought before the judges; here nothing is said as to any judicial formula, and the reason—*i.e.*, the leaving in captivity the wife and children—is omitted.*

It is clear from Jeremiah xxxiv. 8—17, that the Jews themselves paid no attention to this law until about the time of Jeremiah, when it was temporarily observed, and soon again neglected. A grave question arises whether, until the supposed finding the book of the law in the days of Josiah, the Jews knew anything whatever of these commands.†

Chap. xvi. 1.—The month Abib appears to have been the only month named in the early books, the others go by numerals. אביב ABIB, or, as the Douay calls it, the month of new corn, corresponds in great part to April, as the month, says Cahen, in which the corn commenced to ripen in Palestine, and is afterwards called ניסן NISeN. The names‡ of months held by the Jews are, like those of the angels, all of Chaldean origin.

The following is the table of the Jewish months, as observed after the Babylonian captivity:—

1.—ניסן NISeN or Abib, corresponding to March and April, and commenced the religious year it had thirty days.

2.—זיו ZIU or אייר AIIR, corresponding to April and May, had twenty-nine days.

3.—סיון SIUN, corresponding to May and June, had thirty days.

4.—תמוז TheMUZ, corresponds to June and July, had twenty-nine days.

5.—אב AB, corresponds to July and August, had thirty days.

6.—אלול ALUL, corresponds to August and September, had twenty-nine days.

7.—תשרי TheShRI, corresponds to September and October and commenced the civil year, had thirty days.

8.—בול BUL, also called מרחשון MeRCheShUN, corresponds to October and November, had twenty-nine days.

---

* See "The Bible: What it is." Commentary on Exodus, pp. 250-62, and Colenso, part iii. p. 497.

† See Colenso, part iii. p. 499.

‡ See Cahen, Deuteronome, p. 72, and Horne, vol. 3. p. 166.

9.—כסלו KeSLU, corresponds to November and December, had thirty days.

10.—טבת TeBeTh, corresponds to December and January, had twenty-nine days.

11.—שבט SheBeT, corresponds to January and February, had thirty days.

12.—אדר ADeR corresponds to February and March, had twenty-nine days.

These months being nearly lunar months, in order that they might always fall about the same season, the Jews added every second or third year, an intercalary month called UADeR or second ADeR.

"It appears," says Dr. Inman, "the ancient Greek year, like the Jewish, commenced at the autumnal equinox. The division of the year into months, does not appear to have been general among the Hebrews for some considerable time after the Grecian captivity, and having adopted the ancient Greek calendar, they never materially improved upon it, until their second expulsion from Jerusalem. This drove them once again amongst people more intelligent and less obstinate than themselves, and who, as it were, compelled them to adopt new ideas."*

Verses 16 & 17.—As the Israelites are forbidden to present themselves empty-handed, whatever else the Pentateuch may fail in, it is clear that it makes admirable provision for the priest. The sacrificial regulations are not peculiar to Hebrew worship. "Some regarded the offerings," says Kalisch,† "simply as *presents* given to the gods in order to secure their good graces: just as in many primitive politics, subjects are not allowed to approach their king without a gift, that they may constantly be reminded that all their possessions properly belong to him. It was an old aphorism, 'Presents win gods as well as kings.' The ancient Hebrews were not strangers to a similar notion; they were commanded 'not to appear before God empty;' the Hebrew names for sacrifice in general mean properly *gift* or *present*; and writers in the latest periods warned the people not to offer faulty or valueless animals, such as, if presented to a prince or a governor,

* Ancient Faiths, vol. 2, p. 860.

† Leviticus 4.

would fail to secure his gracious reception; though of course enlightened men proclaimed that God, the Lord of the Universe, does not *require* man's poor offerings. Hence arose the idea that the richer the gift, the greater the favour which it secured.

"The Athenians could never understand why the gods so often allowed them to be defeated by the Lacedæmonians, since they always offered the fairest and most numerous, their enemies scanty and paltry sacrifices. In every invocation to the gods, an allusion to generous offerings previously presented, was deemed most efficacious, and to determine the final issue. Roman authors attributed the security and growth of the empire to the scrupulous observance of sacrificial and other rites; while, on the other hand, it is reported that the Thoes, a tribe at the confines of Thrace, who entirely neglected sacrifices, vanished utterly from the earth, with their towns and property. It was made a matter of calculation or barter, how much was required to attain a certain end, for the gods do nothing gratuitously, they sell their goods to men; health might be purchased by a calf, wealth by four oxen; a royal crown cost a hecatomb; while more trifling bounties might be acquired by a cock, a wreath of flowers, or even a handful of frankincense. On ordinary occasions, and when no great boon was demanded, no efforts were made to offer valuable gifts. The Greeks often appropriated to the gods insignificant, if not absolutely worthless parts of the victims; they were therefore taunted and ridiculed by the comic poets for the folly and selfishness which expected benefits for nothing. But when important objects were to be gained, or great events to be signalised, the *number* of sacrifices was deemed most essential. It became a matter of ambition and self-interest to slaughter hecatombs. Marius vowed one in the Cimbric war, Æmilius Paulus in the Macedonian. After the discomfiture at Lake Thrasymene, three hundred bulls were sacrificed to Jupiter; white cattle to many other gods of the first rank; and to the rest, victims of less value. On one occasion the Syracusans offered 450 oxen to Jupiter. The Athenians killed annually, in commemoration of the battle of Marathon, 500 goats in honour of Artemis Agrotera. Olympias, the mother of Alexander the Great, offered a thousand animals

of every domestic kind. At the death of Tiberius and the accession of Caligula, it is computed that about 160,000 victims, principally oxen and calves, were slaughtered in Rome. In fact, the opulent, however wicked, believed that they possessed the power of obtaining from the gods whatever they desired, and of thus triumphing over the poor or the thrifty. From this conception there is but one step to the idea that the gods can be *forced* into compliance with the petitions of the worshippers, and this idea frequently occurs in the Hindoo mythology of later periods. The Hebrews also occasionally carried the number of sacrifices to an excess. It is reported that David, when conveying the ark of the covenant from the house of Obed-Edom to Jerusalem, killed an ox and a fatling after every sixth step; that Solomon, when his succession was secured, offered 1,000 animals; when he was anointed, 1,000 bullocks, 1,000 rams, and 1,000 lambs; and when he consecrated the temple, 22,000 oxen and 120,000 sheep. It is indeed more than probable that most of these numbers are largely exaggerated, as, in fact, Solomon is finally related to have killed animals 'that could not be told nor numbered for multitude.' But they prove at least that the Hebrew historians not only regarded them as possible, but wished them to be considered as historical, for the greater gratification of their heroes and of the events which they recorded. In other cases, the sacrifices were conceived as real *food* presented to the gods, who were supposed actually to consume the offering, either by eating it bodily or by inhaling the smoke when burnt. 'The gods,' says Lucian, 'feed on ambrosia and nectar; but they delight most in the steam of the fat that rises with the smoke of the sacrifices, and in the blood of the victims poured by the offerer round the altar.' This notion has by many antiquarians been considered the first origin of sacrifices. The *lectisternia* of various ancient nations require but a passing allusion. They generally consisted of tables covered with the most delicious viands, and of sumptuous couches on which the images of the gods were placed reposing, as if actually partaking of the dainties. They were customary among the Persians. They occur in the apocryphal narrative of Bel and the Dragon in Babylon. They have been noticed among some Tartar tribes. They were familiar to

the Greeks and Romans. In Homer, Neptune is described as 'sitting down to sacrificial meal and enjoying it.' The gods were even considered to eat the flesh of human sacrifices; and Dionysos bore distinctive names descriptive of that attribute. The early Romans offered to Jupiter Dapalis a piece of *roast* pork with wine. We have a detailed description of the first grand *lectisternia* prepared at Rome, in honour of Apollo, Mercury, Neptune, Latona, Diana, and Hercules. On the capitol, the Romans gave annually to Jupiter a banquet or *epulum*, to which Juno and Minerva were invited, and at which the gods reclined on a couch, while the goddesses, in accordance with Roman views of propriety, sat in chairs. Some ordinances and expressions of the Old Testament compel us to suppose that similar notions were, in early times, entertained by the Hebrews also. The shew-bread table, with the constant and regularly renewed loaves, the type of the ordinary and daily sustenance in the East, points unmistakeably to the cereal food primitively placed before the Deity, though, of course, in the Pentateuch, that origin is effaced as much as was at all possible. Animal sacrifices were to be accompanied by vegetable and drink-offerings, and all oblations whatever were to be presented with salt; evidently because human repasts consist not of meat alone, but of bread and wine, and salt is indispensable in the preparation of food. The term, 'an offering made by fire to the Lord,' used in reference to every class of sacrifice, is in some passages explained by the phrase, 'food of the offering made by the fire to the Lord,' or 'food of the offering made by fire for a sweet odour;' and the offering itself is repeatedly called *food of God*. These phrases undeniably betray the rude conceptions held by the people in its earliest stages, and, even while in exile at Babylon, the Jews, imitating the custom of the land, 'prepared tables to God, and filled the goblet to Meni.' But it is equally indisputable that the terms in question were gradually understood in a more spiritual or refined sense, and that they were so taken in the Pentateuch. For it is evident that the expression, an offering 'for sweet odour,' must have originated when the chief sacrifices consisted of incense and other fragrant substances; yet in the Pentateuch it is retained for the most offensive smell of burnt meat and

fat, hides, feathers, and flour; while, on the other hand, it is never employed with reference to the burning of frankincense. It took, indeed, such deep root in the language that even Josephus spoke of sacrifices as the 'daily food' of God; and the apostle Paul described the voluntary gifts sent to him by the congregations as 'an odour of sweet smell, a sacrifice acceptable, well pleasing to God.'"

Verse 18.—"Judges and officers shalt thou make thee in all thy gates."

"So far from there having been a code of written law," says Dr. Inman,* "we notice that David himself administered judgment in person, for we find Absolom saying, when any man that had a controversy came to the king for judgment, 'See thy matters are good and right, but there is no man deputed of the king to hear thee: oh, that I were made a judge in the land, that every man which hath any suit or cause, might come unto me, and I would do him justice.' (2 Sam. xv. 2—4, see also 2 Sam. viii. 15). It is perfectly clear that David could never have known the law as laid down in Deut. xvi. 18, 'Judges and officers shalt thou make thee in all thy gates;' nor the command in Deut. xvii. 18, which enjoins upon the king the necessity of making a copy of the law, and to read therein all the days of his life. Nor could he have known that of Deut. xix. 17, where it is laid down that the proper tribunal for controversy is one composed of the priests and judges; nor that of Deut. xxi. 5, where it is enjoined that it is to be by 'the priests, the sons of Levi,' that every controversy shall be tried; nor that of Deut xxv. 2, where a judge, and not a king, is spoken of. It is doubtful indeed if Levites existed in the days of David. Throughout the whole of the career of the first king of Jerusalem, whose piety has almost passed into a bye-word, we find no reference to Abraham, nor to any of his immediate successors; there was no attention paid to Sabbath or Passover, nor to the assembling of all the males three times in a year before the Lord (Exod. xxiii. 17). We hear nothing of the feast of Pentecost, of the feast of Trumpets, of the great day of Atonement, nor the feast of Tabernacles. There is, however, a reference made to them in 2 Chron. viii. 13,

* Ancient Faiths, vol. 2, p. 40.

which is manifestly a modern fiction, written at a very late date. Again, we find that this monarch, whose anxiety to keep the law of the Lord, is conspicuous through those psalms which are traced to his pen, seems to have been utterly ignorant of the law enunciated in Deut. vii. 3, and Josh. xxiii. 12, 13, in which marriage with strangers, the remnant of the ancient inhabitants, is strictly forbidden, for he made no scruple in marrying a daughter of Salmai, King of Geshur, from whom, indeed, sprang his rebellious son Absolom. Of the country of Haggith, Eglah, and Abital, we are not informed. Equally ignorant with the father was the son, since Solomon did not fear to marry women from Egypt, Moab, Ammon, Edom, Zidon, and elsewhere. (1 Kings xi. 1)."

Verse 21.—"Thou shalt not plant thee a grove of any trees near unto the altar of the Lord." The word translated "Grove" is אשרה ASh*e*RE, and this Kalisch says,* "Is the image of the Astarte or Venus, worshipped by the Phœnicians and Aramæans, not 'groves,' which signification is perfectly unsupported." So far as we are aware, the word occurs before in Exodus xxxiv. 13, Deut. vii. 5, and xii. 3. Cahen says, "Selden explains the Hebrew word Asherun, by the images representing Astarte."† Gesenius, who regards the proper and primary signification of the word ASh*e*RE as afterwards neglected and obliterated, speaks of it as used to denote the companion and consort of Baal and *her image*, and perhaps, generally, images of idols, at least those of a particular kind.‡

The kind of images referred to, is made very clear by Dr. Inman, and will need but little explanation to those familiar with the works of Dulaure.§

Dr. Inman,‖ says Asherah is "Translated *grove* in the English Bible. There is some difficulty about the meaning of this word, inasmuch as it is associated with 'image pillars.' These being emblems of the male organ, would lead to the belief that the Deity was masculine; but the ה at the end of the word indicates a feminine idea, and sug-

---

* Exodus, p. 588. † Deuteronome, p. 39.

§ Des Divinitès Generatrices, p. 194, and p. 88.
‖ Ancient Faiths, vol. 1, p. 307.

gests that Asherah—*i.e.*, the female organ, was the counterpart of Asher; if so, the emblems would be offerings to the goddess. That they were so, we may judge by the inscription which Lucian records as existent on the two enormous phalli in the vestibule of the temple of the Syrian goddess—*i.e.*, that they were erected by Bacchus to his mother Juno. Amongst the Phœnicians, Asherah was a goddess. We may fairly conclude, then, that the word in question typified the female creator under her mundane form. Asherah and Ashtoreth are equivalent to each other. The idea embodied in our word *grove* has nothing to do with a clump of trees, for we find (1 Kings xiv. 23) that groves were erected 'under every green tree,' and that they were objects of worship (Judges iii. 7). When worshipped, they were associated with Baalim, as husband and wife. It has been abundantly proved, that the image of Baal, or Asshur, was characteristic of his sex; we presume, then, that the emblem of Asherah would be equally so. That it was so in many instances, the learned author of 'The Remains of the Worship of Priapus in the Middle Ages' has demonstrated, for he has figured four stone images of women (which existed till within very recently over the porches of certain churches in Ireland, and may still be seen in museums), in which the 'Asherah' is exposed in so flagrant a manner, that we cannot exhibit it pictorially. The same author depicts other images which have existed, or which may still be seen in ecclesiastical buildings elsewhere, wherein attention is drawn by a female to that part which characterises her sex. The same writer remarks that, amongst the Irish, the figures in question were considered as charms to bring good fortune; and we have already mentioned that the feminine emblem for a very long period, and over a vast extent of country, has been considered as a talisman to bring good luck. Now, amongst the Phœnicians, *Asherah*, or 'the grove,' was the goddess of good fortune, and we thus obtain evidence confirmatory of our views. But it is probable that the naked truth was generally veiled under certain emblems, and it behoves us to ascertain what these were. The most simple form which was adopted was the closed, or slightly opened mouth, placed uprightly."

Dr. Inman refers to an Egyptian seal given by Layard in

his "Nineveh and Babylon," p. 156, where Harpocrates, seated on the mystic lotus, is depicted adoring the Yoni.

Kalisch says:* "Asherah, or Ashtaroth, the Phœnician Goddess Ashtarte, was in almost every respect the counterpart of Baal, with whom she was generally worshipped in conjunction, and hence bore also the appellation *Beeltis*, the supreme female divinity in the Assyrian Pantheon, 'the mother of the gods,' or 'the great goddess,' or 'queen of the lands,' sometimes called the wife of Asshur, but more safely to be taken as the wife of Bel-Nimrud, the second member of the governing triad of Assyrian gods; for she was the goddess of the moon, and appears in inscriptions under the name *Tanais*, or the Persian Artemis, and as the goddess of war and the chase. She was therefore called 'the queen of heaven,' or Urania, and represented either with a woman's head, or the head of a bull, the emblem of royalty, and with horns, generally three, in the form of the crescent, and later a star between them; for she was Venus as planet, or in the Babylonian mythology *Ishtar*, 'queen of the land,' the 'queen of all the gods,' 'the beginning or mistress of heaven and earth,' and especially 'goddess of war, battle, and of the chase,' the 'queen of victory,' the 'fortunate or happy;' she was the passive or female principle of conception and birth, or the element of water, and therefore the goddess of fruitfulness termed *Mylitta*, and worshipped, especially by women, with cakes, libations, and incense. So universal was her service that her name was employed to express foreign deities in general; it flourished in Judah, especially under Manasseh, in Israel, under Ahab, and it was coupled with rites involving the grossest and most sensual forms of natural religion, and probably representing the remains of even ruder notions and more revolting practices. Hence in the Assyrian period, the Hebrews adopted easily the trans-Euphratic service of the 'tents of the maidens,' kindred to that of Ashtarte, because also requiring the chastity of virgins as an offering to the Deity."

Verse 22.—"Neither shalt thou set thee up any image; which the Lord they God hateth." The word translated "image" is in the margin, and by Bellamy, called "pillar"

* Leviticus, p. 358.

or "statue." Cahen makes it "stèle." In Genesis xxviii. 18 and 22, the same word is written "pillar." Some Jewish commentators point out that Jacob's action was apparently agreeable to God, although directly against this commandment. The "hate" here spoken of, manifested itself in "love" for Jacob.

Chap. xvii. 2 to 7.—These manifest the existence of Tsabaistic forms of worship, and read with chap. xiii. 6 to 10, show the stringent courses resorted to, to sustain the Hebrew theocracy.

Verse 5.—There are several words of this verse wanting in the Septuagint version. The Douay apparently follows the Septuagint here.

Verse 9.—"Thou shalt come unto the priests the Levites." Kalisch points out that while by the Book of Numbers the Levites were kept clear and distinct from the priests who were the descendants of Aaron only, yet throughout the Book of Deuteronomy the writer speaks as if the priests and Levites were identical, that is, as if the priests were the whole tribe of Levi, and observes further that in Deuteronomy the Levites are represented as performing offices "from which they were in the other books rigidly debarred, and which were reserved for the priests exclusively."*

Verse 14.—"A king." Septuagint has "a chief." Cahen says, "Doubts have been raised as to the authenticity of this command."† The opinion of many critics is that it is an interpolation after the era of Solomon, and it is certainly contrary to the general tenor of the Pentateuchal constitution.

Verse 14 to end of chapter.—Cahen‡ remarks that doubts have been thrown upon these verses as being out of harmony with the general theocratic spirit of the Pentateuch, and inconsistent with the conduct and language of Samuel when the people demanded a king. The law§ against the increase of wives is regarded as posterior to the excesses of Solomon and Rehoboam.

Chap. xviii. 1.—"The priests the Levites, and all the tribe

---

* Kalisch, Leviticus, pp. 584 to 599.

† Cahen, Deuteronome, p. 79. See Colenso, part 3, p. 509.

‡ Deuteronome, p. 78.

§ But see Hornbeck contra Judæos, lib. 7, cap. 6, p. 518.

of Levi, shall have no part nor inheritance with Israel: they shall eat the offerings of the Lord made by fire, and his inheritance." Kalisch* makes this "The priests the Levites, the whole tribe of Levi," and urges that this part of the text is in direct contradiction to the book of Leviticus, where the portions of the sacrifices were strictly limited to the children of Aaron. Colenso points out how the translators, by adding the word "and" before "all the tribe," have modified greatly the meaning of the original.

On verses 6 to 8, Colenso comes to the conclusion that at the time this was written, the Levites as a body were not very desirous of being employed at the sanctuary, and thinks this corresponds to the state existing at the close of Manasseh's, or beginning of Josiah's reign.

Verse 8.—"They shall have like portions to eat, *besides that which cometh of the sale of his patrimony.*" What patrimony† did this mean? In Numbers xviii. 20, it is apparently distinctly put that Aaron and the Levites are to have no part or inheritance in the land. Cahen says that the passage italicised is difficult, and has the appearance of a marginal gloss which has slipped into the text.

Verses 10 and 11.—"There shall not be found among you anyone that maketh his son or his daughter to pass through the fire, or that useth divination, or an observer of times, or an enchanter, or a witch, or a charmer, or a consulter with familiar spirits, or a wizard, or a necromancer." Verse 10, "or an enchanter," Cahen renders as one consulting serpents. The Douay, as one that "observeth dreams or omens." Bellamy says that "an observer of times," "is neither a translation nor even a true comment on the original," and puts it "revealing discovers by a cloud." Verse 11, "a consulter with familiar spirits or a wizard," Cahen translates "one interrogating Ob or Idoni."‡ Bellamy renders it "consulteth a basilisk," and says "This word אוב AUB was the Egyptian name for the basilisk. It was a saying amongst the ancients, 'In the most virulent poison is con-

* Leviticus, pp. 209, 599; and see Colenso, part 3, cap. 11.

† See note to Etheridge's Translation of the Targums, p. 515.

‡ See on this Bryant, Ancient Mythology, vol. i. p. 473, and Rev. J. B Deane on Serpent Worship.

tained the greatest medicine,' and as the basilisk was supposed to be the most poisonous of all the serpent genus, which creature was reverenced by all the Eastern nations at that period, they concluded also that by it they might obtain the greatest knowledge concerning hidden things."

Verse 14.—"Hearkened unto observers of times." Bellamy has "will report by clouds," and in a note says: "I am here led to take some notice of the ancient mysteries of the Greeks, called the *Eleusinian Mysteries*, or the mysteries of *Eli-Sini, my God of Sini.* The *Eleusinian Mysteries* were mysteries, or sacred rites, appertaining to the worship of God, were divided into two parts—viz., the greater and the lesser mysteries. The lesser mysteries were open to all, but the great mysteries were only known to those, a small number of the initiated, who had the privilege of communicating a knowledge of future things. This is the same as is said by Eusebius. The unlearned were confined to the literal observation of the laws of Moses; but the learned were admitted to the contemplation of a more refined philosophy, who explained the figurative sense." We also learn from Herodotus, Diodorus Siculus, and the Christian fathers, that the Asiatic Colonists who peopled Greece, brought with them their religious doctrines and professions. Greece appears to have been peopled from Egypt and Babylon; for Herodotus says, that most of the Gods came from the Egyptian colonies of Cecrops, Inachus, and Danaus, and some also from the Pelasgians. The same historian also says that the Grecian Bacchus was from Egypt, was called Dionysos, by Melampus—Herod. lib. ii. c. 47, which is *Dionisius;* who was Moses. See Exod. xvii. 15, *Jehovah Nissi*, which without the Latin termination is Dio-nissi. Hence it does appear that when the Hebrews on their conquest of the land of Canaan, had established the worship of God, and when the certainty of divine communication at Mount Sinai had reached Greece, the Greeks adopted the theology of the Hebrews, and called their mysteries the mysteries of *Eli-Sini* or of *my God of Sini.* Which afterwards were called *Eleu-Sini—his God of Sini, or the mysteries of the God of Sini.* And hence the term *Eleusinian Mysteries,* or the mysteries celebrated in the rites and ceremonies by the ancient true worshippers of God from Adam

to Moses. This appears to have given the name to the city Eleusis, where these mysteries were celebrated; like the words Ελλελευ Ιη Ελιουν which are only the Hebrew הללו יה *Hallelujah, praise ye Jehovah,* and עליון *most high,* in Greek letters. In my 'History of all Religions,' I have shown that the ancient Bacchus was born in Egypt, and that he was Moses. Diodorus Siculus records three Bacchuses —and Nonnus in his Dionysiacs, or mysteries of *Dio-nissi, i.e.,* Jehovah-Nissi, mentions the three Bacchuses. Bacchus, which signifies *great,* was successively applied to the three, who stood at the head of the dispensations—viz., Adam, Noah, and Moses. The remembrance of the first Bacchus was celebrated on the sixth day of the mysteries at Eleusis, in perfect conformity with the creation of man on the sixth day. A passage in Nonnus, who had studied the Mythology of Bacchus, will show that the third Bacchus was Moses. 'And the goddess delivered the child to the priestess of Eleusis. The nymphs of Marathon, crowned with ivy, danced around the young Bacchus to celebrate his birth; they shook the Attic torch at night. They instituted sacrifices in honour of the old, and of the new Bacchus,'—viz., the morning and evening sacrifices which had been handed down from Adam and Noah. It must also appear to the reader, that the goddess who delivered the child to the priestess, was the daughter of Pharaoh, for at that period the sons and daughters of kings were priests and priestesses; and that the *nymphs* were the maidens of the daughter of Pharaoh, Exod. ii. 5. Thus the Greeks, who originally made up a mythology or system of fables, by perverting the rites of Bacchus, or Moses, gave this name to various supposed divinities in the theogony of Greece, to find the origin of theogonies of other nations, and established this heathen worship at one place, Eleusis, after the manner of the Hebrews at Shiloh."*

Chap. xix. 1 to 13, in fact, is a repetition, with slight variation, of the legislation as to cities of refuge in Numbers xxxv. 11, &c.; but, says Cahen, while there is here an order for three cities of refuge, and a provision for adding three others, if the Lord shall enlarge thy coast, in Numbers, which passes for a book written prior to Deuteronomy, six

* Bellamy, p. 494.

cities are mentioned without any such conditional clause, "which has made some commentators think, and not without reason, that the command in Numbers is later than the one here given, and that the compilers have by error inserted one before the other."*

Chap. xx. 10 to 18.—"When thou comest nigh unto a city to fight against it, then proclaim peace unto it. And it shall be, if it make thee answer of peace, and open unto thee, then it shall be, that all the people that is found therein shall be tributaries unto thee, and they shall serve thee. And if it will make no peace with thee, but will make war against thee, then thou shalt besiege it; and when the Lord thy God hath delivered it into thine hands, thou shalt smite every male thereof with the edge of the sword; but the women, and the little ones, and the cattle, and all that is in the city, even all the spoil thereof, shalt thou take unto thyself: and thou shalt eat the spoil of thine enemies, which the Lord thy God hath given thee. Thus shalt thou do unto all the cities which are very far off from thee, which are not of the cities of these nations. But of the cities of these people which the Lord thy God doth give thee for an inheritance, thou shalt save alive nothing that breatheth. But thou shalt utterly destroy them; namely, the Hittites, and the Amorites, the Canaanites, and the Perizzites, the Hivites, and the Jebusites, as the Lord thy God hath commanded thee: that they teach you not to do after all their abominations, which they have done unto their gods; so should ye sin against the Lord your God."

This is most certainly a noteworthy specimen of a revelation from God. The city approached must have been one against which the Jews made voluntary war; a city out of the land of Canaan. The Jews are to offer it peace, and if the city accept the peace, the people are to be slaves, for the word at the end of verse 11 is עבדך† OBeDUK, and is the same servitude as that of the bought bondsman. If the city prefers its freedom, then there is to be no mercy: "thou shalt smite every male thereof with the edge of the sword." These comparatively merciful commands were in relation to

* Deuteronome, p. 84.

† See "Bible: What it is," Exodus, p. 250.

the inhabitants of the cities afar off, for the six peoples mentioned in verse 17, there was not to be even the faintest glimpse of mercy. Bellamy regards verse 16 as inhuman and contradictory to other texts. He says:* "It is said 'every one shall be put to death for his own sin.' But infants and sucklings could not offend, therefore these words cannot be applied to the merciless precept of saving alive nothing that breatheth." Bishop Colenso says: "It is well that we are no longer obliged to believe that the above frightful command emanated from the mouth of the most Holy and Blessed One. This does not apply to the cities of Canaan only. But *any* city which the Israelites might decide for any cause 'to fight against' if it did not surrender on the very first summons, 'make an answer of peace,' and open to the foe, on the condition of becoming tributaries and servants, was, according to this injunction, to be besieged and captured, and to this end the express aid of the Almighty is promised, and then all the males, except young children, are to be put ruthlessly to death."

Verse 19.—"For the tree of the field is man's life." The Douay translates these words "For it is a tree and not a man." The marginal note to our authorised version makes the text say that the tree is to be employed in the siege; the text itself saying that the tree is not to be cut down to be employed in the siege. Bellamy says that there are three errors in the common version of this verse, and translates the words "the tree of the field is for man." Cahen gives the same translation, but says the passage is difficult to translate.

Chap. xxi. 10 to 14.—"When thou goest forth to war against thine enemies, and the Lord thy God hath delivered them into thine hands, and thou hast taken them captive, and seest among the captives a beautiful woman, and hast a desire unto her, that thou wouldest have her to thy wife; then thou shalt bring her home to thine house; and she shall shave her head, and pare her nails: and she shall put the raiment of her captivity from off her, and shall remain in thine house, and bewail her father and her mother a full month; and after that thou shalt go in unto her, and be her

---

* Page 498.

husband, and she shall be thy wife. And it shall be, if thou have no delight in her, then thou shalt let her go whither she will, but thou shalt not sell her at all for money, thou shalt not make merchandise of her, because thou hast humbled her."

In verse 14, instead of "then thou shalt let her go whither she will," the Targum of Onkelos reads, "then thou mayest send her away by herself." It is not quite clear to what captives this applied, for in verse 16 of the previous chapter total extermination was decreed against the Canaanites: "thou shalt save alive nothing that breatheth." Supposing it to apply to the tributaries of c. xx. 11, or the "women" of verse 13, then it amounts to the provision that if a Jewish soldier saw a beautiful woman amongst the captives, he could take her home, use her as a wife until he grew weary of his prize, and then he might desert her. He was only prohibited from selling her, but there is nothing in the text to prohibit him from turning her out penniless and destitute. The text does not imply that he ought to provide the ruined woman the means of existence. Clearly the writer of the Targum of Onkelos assumed the right of the sated captor to get rid of the burden of the woman of whom he had become tired. Colenso adds, "Here also we have the manners and customs of the writer's age exhibited." "The Persian Cyrus, or the Roman Scipio, though heathens, taught by their lives a higher morality than this, which, besides the inhumanity involved in it, practically sanctions concubinage and polygamy." Bellamy, who puts the blame on bad translation, admits that, according to the authorised version, the text involves "a total departure from the principles of justice and of humanity," and that by it "a man was authorised to take a woman, and after having made her his wife, he was at liberty to send this helpless stranger from his house, without making any provision for her future support."

Verse 15.—"If a man have two wives." Cahen says "this is the only place [in the law] where polygamy is treated of. The Patriarchs had concubines but only one legitimate wife." "Nor can the verse be taken as limiting polygamy to two wives." (See Genesis, iv. 19, as to the two wives of Lamech, and xxix. 23 and 30, as to Jacob.) Later we find polygamy commonly practised amongst the Hebrews.

Verses 18 to 21.—"This law," says Horne, "has been stigmatised as being both inhuman and brutal." Horne first defends the law, and then says, "We do not read in the whole Jewish history of this law having been carried into execution."* Cahen observes, "Jarhi said that they killed the son to prevent the continuance of his bad conduct, but this is not very likely; nations do not kill a man for that which he will do later." Rosenmuller admits the harsh character of the law, but pleads for it as necessary amongst the people and in the climate where it was given.

Chap. xxiii. 1.—"He that is wounded in the stones, or hath his privy member cut off, shall not enter into the congregation of the Lord." Cahen translates this, "Qu'un homme mutilé ayant les testicles ecrasés ou coupés ne vienne pas dans l'assemblée de l'Eternel," and says, "c'est une espece de castration encore en usage dans l'Orient, et qui consist a amollir aux enfans tres jeunes les testicules dans l'eau chaude et a les comprimer ensuite." The Vulgate, which is followed by the Douay, writes it "eunuchus attritis testiculus." Matthew xix. 12, seems to shadow out a different doctrine. According to Demetrius,† Bishop of Alexandria, if the Pentateuch remained in force in the third century, the famous Origen would have been excluded from heaven in consequence of a too literal observance of the text in Matthew.

"The exclusion,"‡ says Colenso, "of a bastard to the tenth generation from the privileges of the sanctuary, while the father, the guilty cause of his child's illegitimate birth, was not excluded, seems, to our modern sense of right and equity, most unjust." It is also directly opposed to the spirit of chap. xxiv. 16, and Ezekel xviii. 20.

Dr. Inman says,§ "The opening of this particular chapter of Deuteronomy, is one which is very disgusting to the thoughtful mind. It thrusts upon us the belief that the Almighty thought more of the representative triad, the emblem under which He was worshipped on earth, than He did of the feelings of the heart. To our ideas, it is repugnant

* Horne's Introduction, &c., vol. i. p. 569.
† See Mosheim, 3rd cent. part 2, chap. 3, sec. 14.
‡ Part 3, p. 531. § Ancient Faiths, vol. 2, p. 245.

that one, who from the greed of parents, or from the misfortunes of war and slavery, has become an eunuch, should by that very fact be deprived of all spiritual comfort. The notion is itself contradicted by other portions of the Bible, and we shall not greatly err if we attribute the law thus enunciated to human, rather than to divine, agency. We are fortified in the view thus taken by the consideration of the second and third verses, wherein it is enacted, that a Mamzer, an Ammonite, and a Moabite, shall be excluded for ten whole generations from the congregation of the Lord. Modern Christians believe that the Almighty rejoices to receive into His fold all or any who were outside; not so, however, the Jews. They had been told so constantly by their teachers that they were a chosen people, specially beloved of God, as to believe thoroughly that they stood in the position of His earthly spouse. They were, therefore, as jealous of admitting any one into their number, as a wife would be if she saw another woman trying to steal her husband's love. We shall see still farther reason to believe in the human origin of the law, when we have ascertained the real signification of Mamzer. In our Bible, the word is translated 'a bastard,' but this, as Spencer very justly remarks,* is evidently incorrect; for bastards, such as were Pharez, the son of Judah by Tamar, Jephthah, the son of a strange woman, and Amasa, the son of a strange father (2 Sam. xvii. 25), who seems not to have been married to Abigail, were not excluded from the congregation. Still farther, we are distinctly told that there was a portion of the Mosaic law which prevented children from suffering from the sins of the fathers, and to exclude nine generations from participation in religious worship, because a parent had been adulterous, was contrary to the spirit of the Jewish institutions. To obviate the difficulties involved by the ordinary interpretation, Spencer inquires closely into the real significations of the word, and concludes that it really signifies 'a stranger,' 'a gentile,' 'an alien,' or 'a foreigner.' With this meaning, every difficulty vanishes. We see, as it were, the ancient Jews reproduced in the modern Arabic Mahometans, who consider their temples defiled if entered by a Christian."

* "De Legibus Hebræorum," pp. 105, *et seq.*

Verses 4 and 5.—There is a direct contradiction between these verses and chap. ii. 29, where, as Cahen points out, the Moabites are said to have provided food and water for the Jews; nor is it anywhere pretended that the Ammonites had anything to do with hiring Balaam. David was within the ten generations from Ruth the Moabitess, and to avoid this difficulty, the Jewish writers have pretended that the text does not include Ammonite or Moabite women.*

Verses 12 to 14.—Colenso points out† that these verses are evidently unhistoric, as it would have been impossible for the aged and infirm, sick persons, and young children to have complied, and he draws special attention to the extraordinary wording of verse 14. What we cannot understand is, how the Bishop of Natal could afterwards write that "in the Book of Deuteronomy itself," read in a proper spirit, "we shall find the living bread which our souls may feed on—we shall find in it the word of God."‡

Verses 17 and 18.—On these verses see Colenso, part 3, p. 534. Cahen, Notes Supplementaires Deuteronome, p. 170. Dr. Inman's Ancient Faiths, p. 168, vol. 2. Dulaure's Differens Cultes, vol. 2. Voltaire's Defense de Mon Oncle. It is noteworthy that the same word קדש QeDeSh, which is in other parts of the Bible translated righteousness, is here rendered as the equivalent of a most abominable offence.

Chap. xxiv. 1.—Any one reading this verse must be struck with the strange facility with which one of God's chosen people might get rid of his wife, if "she found no favour in his eyes." Cahen says that the Talmudists have much discussed what it was intended to mean by "some uncleanness." The same word occurs, xxiii. 14. Ouziel translates the word "uncleanness," as if it were "transgression." The pious Bellamy is so struck with the text that he objects to the translation, admitting that as it stands, "we are led to suppose that if a man took a woman, and made her his wife, it was in his power by pointing out some imperfection in her, to divorce her and turn her out of his house."

Verse 2.—It would appear here as if a divorced woman might in any case re-marry, but by Leviticus xxi. 7 the priests

* Deuteronome, p. 99. † Part 1, p. 39. ‡ Part 3, p. 629.

are forbidden to marry a divorced woman, who is placed in that verse on a level with a woman who is a prostitute.

Verse 7.—"If a man be found stealing any of his brethren of the children of Israel, and make merchandise of him, or selleth him; then that thief shall die; and thou shalt put evil away from among you." This limits the punishment for man stealing to the case where the one stolen happens to be an Israelite. We have already referred to this in dealing with Exodus xxi. 16.*

Verse 16.—This verse has already been dealt with in treating Exodus xx. 5,† to which it is in direct contradiction, as it is also to Exodus xvii. 14 and 16, and other texts; but see also Jeremiah xxxi. 30, and Galatians vi. 5 and 7.

Chap. xxv. 5 to 10.—Colenso, who declares that a similar practice obtains amongst the Zulus, says: "This law that a brother must take to wife his dead brother's widow, must in all cases, where the surviving brother was already married, not only have permitted and encouraged, but even enjoined, polygamy under the penalty of a lasting disgrace."‡ In fact, according to Cahen§, the practice ceased amongst the Jews in the 11th century in consequence of the interdiction pronounced by Rabbi Guerschone against polygamy.

Verses 17 to 19.—On this|| see Exodus xvii., where, however, there is nothing recorded inconsistent with fair battle on the part of the Amalekites.

Chap. xxvii., 2 to 8.—"And it shall be, on the day when ye shall pass over Jordan unto the land which the Lord thy God giveth thee, that thou shalt set thee up great stones, and plaster them with plaster. And thou shalt write upon them all the words of this law, when thou art passed over; that thou mayest go in unto the land which the Lord thy God giveth thee, a land that floweth with milk and honey; as the Lord God of thy fathers hath promised thee. Therefore it shall be, when ye be gone over Jordan, that ye shall set up these stones, which I command you this day, in mount Ebal, and thou shalt plaster them with plaster. And there shalt thou build an altar unto the Lord thy God, an altar of

* "Bible: What it is," Exodus, p. 253.
† See Book 2, Exodus, p. 221.
‡ Part 3, p. 536. § Deuteronome, page 106.
|| Bible: What it is, p. 214.

stones: thou shalt not lift up any iron tool upon them. Thou shalt build the altar of the Lord thy God of whole stones: and thou shalt offer burnt-offerings thereon unto the Lord thy God. And thou shalt offer peace-offerings, and shalt eat there, and rejoice before the Lord thy God. And thou shalt write upon the stones all the words of this law very plainly."

Colenso* points out that in the Samaritan Pentateuch, the above passage is, with trifling variation, also inserted after v. 17 of Exodus xx. In v. 4, instead of mount Ebal, the Samaritan reads mount Gerizim.

Upon this point, Kennicott writes as follows, Diss. i. p. 96: "It must have appeared strange, surprisingly strange, that it is not more clearly expressed what this law, thus to be engraved, was—that a point of so much importance should not have been, somewhere or other, very accurately noted, and very particularly circumscribed by Moses, partly for the more secure direction of Joshua, and partly to render this awful transaction more intelligible through future ages. But all this surprise ceases, all this puzzle is unravelled, all this uncertainty is at once removed, if we allow the authority of the Samaritan Pentateuch, if we will but grant that there may have been in the Hebrew text a certain passage, which is found in all the copies of the Samaritan text and version, and which is also found, exactly as in the Samaritan Pentateuch, in that Arabic version of it in the Arabic character, which has been before mentioned, and which is a very valuable, because a very literal, version. According to this truly venerable copy of the Book of Moses, all is clear. The whole is perfectly regular, and in harmonious proportion, several circumstances concurring to render it highly probable that the Ten Commandments constituted the Law which was to be engraved. And as it can scarcely be conceived that such a point could have been omitted by Moses, it makes greatly for the honour of the Samaritan Pentateuch, to have preserved so considerable a passage. Why the ancient Jews should omit this passage can be a matter of no doubt at all with those who mark the honour it does to mount Gerizim. And, therefore, the same

* Part 3, p. 540.

men who corrupted Deut. xxvii. 4, have but acted with uniformity, if they have also corrupted E. xx., *omitting* Gerizim in the latter instance just as honestly as they *altered* it in the former. But that some verses *did* formerly follow after the Tenth Commandment in E. xx. 17, and before v. 18, we have not only the authority of the Samaritan Pentateuch (which, together with the several foregoing confirmations, may be thought satisfactory) but we have also the authority of an ancient Syrian MS., which contains a version of the Old Testament, and is catalogued in the Bodleian Library, 3,130. Between v. 17 and v. 18, at the very place where the passage is now found in the Samaritan Pentateuch, in this Syriac MS., though translated from a *Hebrew* copy, there is left, in the middle of the page, a vacant space, just equal to five verses expressed in the Samaritan. And no such vacant space is left anywhere else through the whole MS., excepting a space somewhat larger in Ecclus. xxvii. and one somewhat lesser, 2 Macc. viii. The inference from this very remarkable circumstance I leave to the learned reader."

"That the Samaritan text should be condemned as corrupted *merely* for having more in it than the Hebrew, no man of learning will maintain. Certainly the Jews *might omit*, as easily as the Samaritans *might insert*. And I presume that it has been, and will be hereafter more fully proved, that several whole passages, now in the Samaritan, but not in the Hebrew Pentateuch, are not interpolations in the former, but omissions in the latter."

Richard Simon.* who fully examines this text, and who regards the law here ordered to be written, as consisting of the twelve curses set out in the end of the chapter, says, "Those amongst the Jews who have preferred the literal sense of the Scriptures to the dreams of the Talmud, and to the play upon words of the Cabalistic Doctors, agree with us that they ought not to apply to the whole of the law that which is written in this xxvii. chapter. In effect, can any one imagine that Moses ordered the Israelites to engrave all the contents of the Pentateuch upon twelve stones?"

The fulfilment of the command is supposed to be narrated in Joshua viii. 30 to 35, but it is evident to any careful

* Histoire Critique du Vieux Testament, Liv. i. cap. 6, p. 42.

reader, that what Joshua is recorded to have said, was most certainly not the writing upon the stones of the whole of the Pentateuch, but of some brief laws which are represented as being written in the presence of the Israelites, who stood while the writing was being done, and had the whole read over to them when it was finished.*

So much turns upon the variations between our Bible and the Samaritan Pentateuch, that it may not be out of place here to say a few words upon the three divisions of the Hebrew race—the Samaritans,† and the Caraites, as distinguished from the Jews ordinarily so-called, all of whom profess to trace their descent from Abraham, The Caraites may be passed in a few words; they adhered to the strict letter of the text, they accepted all the books of the Bible, and in this were opposed to the Samaritans, but they rejected the Talmud, and considered the Jews as heretics for their user of the Talmudical writings.

The Samaritans call themselves שומרים ShUMRIM —viz., guardians or observers of the law. They accept the Pentateuch only as inspired, and their ancient version of it differs in many important respects from the ordinary Hebrew versions. There is a sort of translation of this old Samaritan Pentateuch in use amongst the Samaritans, this last-named version being in a kind of *patois* compounded of Syriac, Hebrew, and Arabic. The letters of the old Samaritan and modern Hebrew alphabets differ. The Samaritan text is considered, by Dr. Wall, as much nearer pure Hebrew, and as much more ancient than the ordinary Hebrew text. Le Clerc describes the Samaritan as more correct than the Hebrew in several places. The Samaritan version is regarded by Dr. Wall as less ancient than the Septuagint, the Samaritan text as probably of much greater antiquity. An essay penned, I presume, by Munk,‡ states the interminable contest between the Rabbis as to the original character in which the Decalogue was written, and finishes by saying, "the complication of the Samaritan writing, and

* See Dr. Giles's Hebrew Records.

† But see Horne's Introduction, vol. ii. p. 10, p. 327, and Nicolas: Etudes sur la Bible, p. 93; Wall's Grounds for Revision of Hebrew Text, p. 607.

‡ Sur les Samaritains. § 8 Cahen, Deuteronome.

the relative simplicity of the Assyrian appears to us an indication that the first is more ancient than the second, which dates probably from the sojourn in Babylon, from whence came the names of the angels and of the months."

Chap. xxvii. 15.—Nicolas observes: "It is usual to confound, without the least reason, Polytheism with idolatry. There is nevertheless nothing in common between these two religious forms. Polytheism, the adoration of many gods, might exist without being idolatrous. Although, in fact, it has always been found connected with idolatry, and idolatry is certainly not inseparable from Polytheism; it is in reality a worship rendered to the symbolic representation (*εἰδωλον*, image figure) of one god or of many gods. There is monotheistic idolatry as well as Polytheistic idolatry. There were a great number of idolators amongst the Hebrews, some may be found to-day amongst the Christians. It is no less true that the Hebrews were generally as monotheistic as the Christians are now."*

Chap. xxvii., 15—26.—Horne says, "Of all those tremendous imprecations which appear in our common English version, there is not one authorised by the original."† The Douay, Bellamy, Cahen, and, to our mind, the context directly contradict Horne's view.

Verse 21.—Dr. Inman points out that in Exodus xxii. 19, Leviticus xviii. 23, and xx. 15 and 16, we have three distinct repetitions of the law on this point, "a sufficient proof of the necessity for making it, inasmuch as no legislator denounces a crime which is to him unknown."‡

Chap. xxviii.—In reference to this chapter, Dr. Inman compares the worship of the Jewish Deity with that of Baal Berith. "Both through their priests, equally promise sensual gratification; and both through the same medium, would doubtless be able to attribute any misfortune which happened to a votary, to a breach of covenant, or breaking of the bargain."§ The bargain here being obedience and worship on the one side, paid for by special temporal advantages, or *vice versa*.

Verse 10.—"And all people of the earth shall see that

* Etudes sur la Bible, p. 125.

† Introduction, vol. i., page 575.

‡ Ancient Faiths, vol. i., p. 568. § Ibid, p. 323.

thou art called by the name of the Lord; and they shall be afraid of thee." While we are not quite sure as to the accuracy of the translation, it is really very curious that the word Jew is much nearer the sound of IEUE יהוה in this verse translated Lord, than it is to any other Hebrew word from which the sound Jew can be supposed to be derived. If the Jews had been called Jeue or Jewe, their name would have been very much what it is. Bellamy says, "The passage does not mean that they should be called by the name of the Lord, a thing most preposterously absurd," and he translates it "the name of Jehovah will be declared by thee." This is hardly maintainable as fact, even if better as translation, for the Jews never did declare the name Jehovah, but —regarding it as too awful (or too difficult) to pronounce— substituted for it the word Adonai. Instead of "called by the name of the Lord," the Douay has "the name of the Lord is invocated upon thee." Cahen corroborates this translation, despite its unwieldy reading.

Verse 15.—"To do all." These words are not in the Samaritan version. There are several verbal differences between the Hebrew and Samaritan in this chapter.

Verse 18.—The curse threatened on the "fruit of the body" for disobedience by the parent, is worthy notice as emanating from the Deity, who was at the same time the lawgiver, the Creator of the offender, the compeller of the offence, and the creator of the "fruit of the body," in order that it might be punished for an offence it had no share in.

Verse 36.—Cahen thinks that the reference to Gods of wood and stone, shows that this portion of the text was written at, or after, the Babylonian captivity.

Verse 49.—"As the eagle flieth," in lieu of יִדְאֶה IDAE from DAE, to fly; the Samaritan has יִרְאֶה IRAE from RAE, to see.

Verse 53.—"And thou shalt eat the fruit of thine own body, the flesh of thy sons and of thy daughters, which the Lord thy God hath given thee." Bellamy* says: "This is a thing so wicked, . . . that it is surprising how a supposition so truly disgusting could ever enter into the mind;" but even this is exceeded in the same chapter.

---

* New Translation, p. 514.

Verse 57.—The horrible imagination in this verse, though slightly modified in our translation, may be seen more clearly by reference to the Douay. Our translators somewhat cloaked the terrible filthiness of the Hebrew text, which the Vulgate renders with disgusting accuracy.

One writer, with a strong reverence for the character of Jesus,* speaks of the curses contained in this chapter as "forming altogether a curse so dreadfully horrible, so cold-bloodedly minute and malignant, that one would think some demon must have conceived it, and not a man; and yet it is Moses who promulgates it in the name of God!"

This chapter is considered by Colenso to have been written "by one who had already the ruin of the ten tribes before him," and is probably one of the many passages which induced Jerome writing against Helvidius to say that it was to him a matter of indifference whether or not the Pentateuch was to be regarded as re-edited by Esdras, or as the authorship of Moses.†

The learned Jesuit Bonfrerius, dealing with similar phrases, said, "I prefer saying that another writer has added something to the books of Moses, than to be continually representing him as a prophet."

Chap. xxix. 4.—Cahen, quoting Gueddes, says that this verse cannot be taken literally, as the Israelites had bread and wine for their sacrifices.

Verse 19.—"And it come to pass, when he heareth the words of this curse, that he bless himself in his heart, saying, I shall have peace, though I walk in the imagination of mine heart, to add drunkenness to thirst." The Douay translates the last clause, "I shall have peace, and will walk on in the naughtiness of my heart, and the drunken may consume the thirsty." Cahen renders it, "There shall be peace for me if I walk according to the good pleasure of my heart, so that fulness (plenitude) may put an end to thirst," and in his note he says that the exact sense of the phrase is even yet at the mercy of the conjectures of commentators.

Verse 23.—"Admah and Zeboim, which the Lord overthrew in his anger and in his wrath." In Genesis xix. 24,

---

* Three lectures by E. N. Dennys, p. 7.

† Simon: Histoire Critique du V. T., book 1, caps. iv. and v.

there is no mention of the destruction of any cities, save those of Sodom and Gomorrah.

Verse 29.—Cahen says that this verse is neither connected with those which precede it, nor with those which follow, and appears to have been inserted to give hope to the exiles. The manner of the verse is suddenly changed from the third person to the first.

Chap. xxx. 4.—"Unto the outmost parts of heaven." Cahen, in his note, says, "Même dispersés aux extremités de la terre. Ben Ouziel paraphrase sur Elie et le Messie." Dr. Henry More* says that "קצה השמים or *αχρον ου ουρανου* implies that the earth is bounded at certain places, as if there were truly a Hercules Pillar or *non plus ultra*. As it is manifest to them that understand the natural signification of קצה and *αχρον*—for these words plainly import the earth bounded by the blue heavens, and heavens bounded by the horizon of the earth, they touching one another mutually, which is true only in appearance, as any man that is not a mere idiot will admit."

Chap. xxxi. 15.—"The tabernacle." Dr. Inman argues† at great length against the possibility of the existence of the tabernacle in the wilderness, on the ground that if the other statements in the Pentateuch be true, the Jews could neither have had the raw material nor the tools to make such a tabernacle as is represented to have existed.

Dr. Inman asks, "Can any one read the thirty-second chapter of Deuteronomy without feeling that it has been written towards the close of the Jewish monarchy? And with that thought, will he not associate the language of the Pentateuch with that so constantly used by Jeremiah?"‡

De Wette thinks that the contents of this chapter are enough to cause it to be taken as the production of an age when the nation were already dispersed, and the ten tribes found themselves in exile.§

Verses 4, 15, 18, 30, and 31.—For the word "rock" in these verses, the Septuagint, the Vulgate, Douay, and Breeches Bible each have the word "God." The Hebrew

† Ancient Faiths, vol. ii., p. 794. ‡ Ibid, p. 115.

§ Israelite History, part i., p. 393, and Introduction to Old Testament. vol. ii., sec. 160

word is צור TsUR, or צורם TsURéM, which latter Parkhurst puts as a plural noun, and "a name of certain idols, representative of the heavens, under the attributes of compressors, givers of strength or firmness," conveying an impression that the Jewish religion was strongly permeated with Tsabaism. Dr. Inman identifies Tsur, the Rock, with "Phallus," and in verse 18 Cahen translates the Hebrew, "Ton roc générateur."

Chap. xxxii. 8.—"When the Most High divided to the nations their inheritance, when he separated the sons of Adam, he set the bounds of the people according to the number of the children of Israel." This verse is not very explicit; but if it means that God had apportioned the promised land to the Israelites, it then becomes a curious question as to how the Canaanites ever became possessed thereof. A marginal note to the Breeches Bible says that:—"When God, by his providence, divided the world, he lent for a time that portion to the Canaanites which should after be an inheritance for all his people Israel." If this be true, then, when God reclaimed his loan, he surpassed Shylock, and took a great quantity of blood as interest for his "pound of flesh." It does not appear anywhere that the Canaanites ever were informed of this strange tenure. Instead of holding the land as a loan, they looked upon it as their country, but suddenly found, if the Bible be correct, that God had "sent them a strong delusion, that they might believe a lie." (*Vide* 2 Thess. ii. 11.) Lord Monboddo,* who appears to have only had the Septuagint version to refer to, says, in a very curious argument in favour of the existence of genii and demons, that "this is one of the most blundering translations of the Bible;" and he makes the last clause of the verse read: "He set bounds to the nations according to the number of the angels of God." The Septuagint has "αγγελων Θεου," but the Hebrew agrees with our version.

Verse 12.—"There was no strange god with him." Bellamy translates this: "A strange God was with him," but this translation seems strained against the text. It is a consolation for persons ignorant of Hebrew when great scholars can give two precisely opposite versions.

* Ancient Metaphysics, vol. iv. book 2, chap. 7.

Verses 15 and 17.—These verses are remarkable as containing the singular of the plural word אלהים ALEIM, and have given rise to much controversy amongst the learned divines, because it is apparent to even the most prejudiced, that if the singular word אלוה or אלה (ALUE or ALE) signifies "God," the plural must mean more Gods than one. In verse 17 you have both the singular, ALE, translated "God," and the plural, ALEIM, translated "Gods." Cahen translates, "à des demons, à des non dieux, à des dieux qu'ils ne connaissent point." "Unto devils, not to God; to gods whom they knew not, to new gods that came newly up, whom your fathers feared not." The word translated "devils," or "demons," is שדים ShᵉDIM, which also occurs in Psalm cvi. 37. Bellamy, who in this follows Parkhurst,* says of Shedim: "As a noun masculine plural, it was the name given by the Hebrews to the idols worshipped by the inhabitants of Canaan. . . . The idol was the ancient *multimamia*, or *many-breasted idol* (as Isis), worshipped . . . by the heathens." This is deriving the word from שד ShᵉD, the breast or teat; but Dr. Inman, who examines this view at considerable length,† does not think it tenable. Instead of "to gods that came newly up," Bellamy reads, "at the approach of the new moons they came."

Verses 20 to 43.—It is useless to comment at length on the language attributed in these verses to the "infinite, immutable, and merciful Father of us all;" it is quite sufficient to repeat the terrible threat from a God of love, "to devour flesh with his sword, and to make his arrows drunk with blood;" and that "the sword without and the terror within shall destroy the young man, and the virgin, the suckling, and the old man with grey hairs."

Verse 22.—"For a fire is kindled in my anger." Cahen renders this, "Car la colere s'est enflammée dans mes narines." (For the rage burns in my nostrils.)

Verse 27.—"Were it not that I feared the wrath of the enemy," is strange language to be used by an omnipotent Deity.

---

* Lexicon, p. 721.

† Ancient Faiths, vol. ii. pp. 716–19.

Verses 48 to 52.—It is impossible to ascertain what offence was committed by Moses. In Numbers xx., we find that the Lord threatened to punish Moses and Aaron on account of their unbelief; but it is evident some portion of the Book must be lost, as the particular instance of unbelief is not mentioned.

Chap. xxxiv. 1.—"Unto Dan." This is one of the many passages showing compilation after Moses (see Joshua xix. 47, and Judges xviii.), and that Dan was so called after the destruction of Laish or Leshem.* "As to Deuteronomy,' Michel Nicolas says, "there is no doubt that it is posterior to the four preceding Books of the Pentateuch. By the manner in which the tribe of Levi is honourably distinguished from the others (as in Deut. xxxiii. 8 to 11), by the importance given to the laws concerning royalty (Deut. xvii. 14 to 20), the prophets (Deut. xiii. 1 to 5) and the sacerdotal classes (Deut. xvii. 8 to 13; xix. 17; xxv. 5; xxxi. 9); as also to everything which is said of the religion of which the unity is incontestably established (Deut. xii. 2 to 7; xvi. 1 to 7), an author may be recognised who lived after the reign of Solomon. No date seems to accord better with the composition of this book than the period in which the religious reform of King Josiah was accomplished."† Some passages, however, relate to a more recent period (Deut. iv. 27; xxviii. 25, 36, 49, 64; xxix. 27; xxxii. 5 to 22.)

"Deuteronomy," says Ewald, as translated by Nicolas,‡ "is in the Old Testament that which the Gospel of John is in the New. In the one book as in the other, the history is only the frame in which the teaching is placed; and Deuteronomy is a new form, a prophetic renewal of the law, as the Gospel of St. John is a spiritual view of Christianity. The author of the work knew the Books of Genesis, Exodus, Leviticus, Numbers, and Joshua. This is proved by the parts he has borrowed from them. None can doubt that he had also before him documents, either historic or legislative, of which preceding writers had not made use when they find him appealing to ancient prescriptions which are

* See on this, Genesis book i., p. 91; Giles's Hebrew Records, p. 131; and Colenso, part i., p. 201.

† Nicolas: Etudes sur la Bible, p. 29. ‡ Etudes, p. 41.

not found in the other books of the Pentateuch." Ewald thinks the book of Deuteronomy to have been written by a Jewish refugee in Egypt during the latter part of the reign of Manasseh, and to have excited the religious reform of the time of Joshua. Nicolas, while not regarding the question as settled, inclines to the view maintained by Ewald. "One other fact,"* remarks Nicolas, "still induces us to place the formation of the actual Pentateuch after the return from the Babylonish captivity. It is that Deuteronomy, the composition of which cannot go beyond the reign of Josiah, or at most belongs to the reign of Hezekiah, would not, in the later times of the monarchy, have been associated without difficulty to Books comparatively much more ancient, and then universally accepted as a sacred Mosaic document. It required, so to say, that time should give its sanction to this book before it could be judged worthy to take its place with the writings of Moses and the prophets. But after the return from the Babylonish captivity, everything which belonged to the period anterior to this national misfortune became uniformly tinged with antiquity and sanctity. It is not necessary to endeavour to prove this, it is in the nature of things. It was then, but only then, that Deuteronomy could form the fifth Book of the Mosaic code. In fact, the hypothesis which I propose upon the date of the actual formation of the Pentateuch is confirmed by Jewish tradition. There was during these ages a general opinion amongst the descendants of Jacob that Esdras had been the restorer of the Pentateuch (Instaurator Pentateuchi, according to Jerome, who represents the general sentiment of the Rabbis.) This tradition certainly had more in view than the mere restoration of Mosaism by the celebrated Doctor of the Law. It related clearly to the books of Moses. This cannot be doubted when one considers the clearly marked form which the tradition takes in 4 Esdras xiv. 41 to 48, and which it had still kept up to the period of the Hegira amongst the Jews of Medina. If it reposed on any historic basis, and this it is difficult to doubt, it ought to show, not as is sometimes maintained, that Esdras himself composed the Pentateuch, but only that he put it in order, or, in other words,

* Etudes, p. 87.

that he gave to the anterior writings which were, or which passed for, the works of Moses, the form in which they have come down to us." Father Simon in "Histoire Critique du Vieux Testament," goes a little farther than Nicolas, and would attribute to Esdras the entire composition of the Pentateuch. Dr. Kalish* regards the book of Deuteronomy as penned about B.C. 620 : parts of Leviticus and Numbers he considers as clearly written after the Babylonian captivity.

Professor Wheatstone† says: "Similar are the words of Leontius (de Sectis, Act. 2) : 'Ezra, coming to Jerusalem, and finding that all the books had been burnt when the people were taken captive, is said to have written down from memory those two-and-twenty books of which we have given a list in the foregoing place.' Isidorus (de officiis) and Rabanus Maurus (de Inst. Cleric. c. 54) write to the same effect. They affirm, therefore, two things: one, that the whole sacred and canonical Scripture perished in the Babylonian captivity; the other, that it was restored to its integrity by Ezra, instructed and inspired in a wonderful manner by the direct agency of God. It is very possible that the books, which may have been previously in some disorder, were corrected by Ezra, restored to their proper places, and disposed according to some fixed plan, as Hilary in his prologue affirms particularly of the Psalms. Perhaps, too, Ezra either changed or reformed the shapes and figures of the letters. Jerome, indeed, in his epistle to Paulinus, maintains that 'Ezra invented new forms for the letters after the return from the captivity; for that previously the Jews had used the same characters as the Samaritans.' Hence, if we credit Jerome, Ezra introduced new forms of the letters, more elegant and easy than those which were before in use, copied out the law in these new characters, and left the old ones to the Samaritans. In conformity with this statement, Jerome further tells us, upon Ezekiel ix., that the last letter of the alphabet was formerly similar to the Greek *Tau*, and that it still, in his time, retained that figure in the Samaritan character ; while the last letter of the Hebrew alphabet has now quite another and different shape."

---

* Leviticus, pp. 645 and 649.

† "Disputation on Scripture," p. 115. See "Bible: what it is," Genesis, p. 56.

The examination as to the alleged Elohistic and Jehovistic documents is more readably complete for an English reader in Part iii. of Bishop Colenso, than in any other work of which we are aware. The student who has greater time may turn to Nicolas's comments on Vainhinger, Bleek, Knobel, Ewald, Astruc, Eichorn, and Vater, on the document theory. De Wette, commenting on Deuteronomy,* says, "Moses cannot have been the author of chapters xxxi. to xxxiv., as it appears in special from xxxi., 24—26, xxxiii. 1, and xxxiv. The anachronisms in ii. 12, iii. 14, xix. 14, and xxxiv. 1, and the general manner in which the Mosaic history is treated, as in chapters i. to iii., carry us to a period after Moses. The references to Jerusalem and its temple, transfer us to the time when the Jehovistic documents of the other books were written. The references to the earlier books bring us to a time considerably later than that in which those books originated. The laws respecting the Kings, Prophets, and Levites, and that respecting the unity of worship, bring us to the period after Solomon, and to the times of Josiah, when the unity of worship was first carried out. In chapter xxxi. 26, is a command to place the law books in the ark; but as it was not there when the temple was consecrated (1 Kings, viii. 9), this must have been written long after that event."

It is impossible to conclude this Commentary on the Pentateuch without a parting word to the reader as to the English, Latin, Greek, and Hebrew versions of the Old Testament. To-day it is practically admitted by Convocation that the authorised English Protestant version, so long accepted as God's message to the world, is unreliable. It is hardly worth staying to consider the good done by the British and Foreign Bible Society, in widely circulating translations of this admittedly inaccurate version. The Rev. Dr. Whittaker, an erudite Church of England divine, in his arguments against the Papists, makes it doubtful how far the errors of the authorised English text are susceptible of correction. He says:† "Unless the Hebrew and Greek originals be most foully corrupt, it follows that the Latin

* "Introduction to Canonical Scriptures," vol. ii., sec. 160.
† Whittaker Against Bellarmine and Others, p. 163.

edition is most foully corrupt, inasmuch as it differs widely in all the books from those originals. Who does not see from this that either the originals are corrupted, or the Latin Vulgate edition is full of innumerable errors? For where the difference and opposition of the readings is so great as is actually found between the originals and the Latin edition, it cannot be said, or conceived, that everything is sound and uncorrupted. For, whoever will compare the Latin with the originals, shall find almost everywhere a remarkable discordance." If the Latin Vulgate be rejected, then naturally the English Douay version, translated from it, must fall with it. That is, both the Catholic and Protestant versions stand condemned. Where then shall our reader turn? If he goes to the Septuagint, which St. Augustin says was done by seventy-two translators in separate cells, whose translation was found to agree in every letter; supposing even he escapes the shock of hearing that "this doth St. Jerome utterly deny" and "derideth as a fable and a lie:"* yet again on the authority of the Master of St. Jonh's, Cambridge, he may be told that "The sounder opinion seems to be that of those who determine that the true Septuagint is wholly lost, and that the Greek text, as we have it, is a mixed and miserably corrupted document."† "Nay, the faults of the Greek translation are so manifest that it is impossible to find any way of excusing them." Josephus distinctly says, if his evidence may be taken as of any value, that the version made for the second Ptolemy was not a complete translation of the whole of the Hebrew writings, but "only the books of the law,"‡ whatever this may mean; while the Septuagint as we have it goes from Genesis to Malachi. If we feel disposed to reject the Septuagint, we are placed in the dilemma raised by the Rev. Dr. Irons, that Jesus used§ the Septuagint very frequently, and at times employed a version differing both from the Hebrew and the Septuagint. Are we to suppose that Jesus did not know Hebrew, or that he knew the Greek version to be the most reliable? Dr. Irons says further, that we are

* Dr. Fulke's Defence of the English Scriptures, p. 53.
† Whittaker's Disputation, p. 121.
‡ Antiquities, preface, sec. 3.
§ The Bible and its Interpreters, p. 20.

confronted by the striking fact that the Septuagint, or some Greek version, was more in use amongst the Jews 1800 years ago than the Hebrew, and that not only had this possibly been the case for some generations, but that it was thought by many that this Greek version fixed the meaning of some parts of the Hebrew text. And he asks, "What is this Greek version or Septuagint, as it is called? Who made it; from what originals was it made? And when? And why? And what is its present state?" And this dignitary of the Church of England answers so potently that we repeat his own words: "Strictly speaking, no one knows who made the Septuagint. No one knows from what copy of the originals any parts of that version were made. It appears to be a growth of at least two generations: and as it might be expected, the style is not the same throughout." But if on the authority of Church of England teachers we reject alike the King James version and the Douay, the Vulgate and the Septuagint, what remains? Will the orthodox refer our reader to the Hebrew? Then indeed confusion becomes worse confounded. There are but few scholars capable of testing Biblical Hebrew by their criticism. The Hebrew of the Bible is not now, nor has it been for centuries, a spoken language. It has literally no classic literature to guide us to its meanings in cases of doubt; and if we may put any faith in the Rev. Dr. Wall, another clergyman of the Established Church, the Hebrew text itself is corrupt throughout. Dr. Irons, admitting that the Masoretic points at present found in nearly all Hebrew B bles cannot be traced back "to a higher antiquity than the seventh century of our era," affirms that "previous to the sixth century then the Hebrew Bible (we must face the fact) was read traditionally. The Jews believed that, together with the written word divinely imparted to Moses, there were unwritten instructions, directing both the continuance and the interpretation of the sacred writings." Where shall the reader turn with the most important versions of "God's message to man" thus in turn condemned as untrustworthy?

Printed by Austin & Co., 17, Johnson's Court, Fleet St., London, E.C.

List of Works by Mr. Charles Bradlaugh.

POLEMICAL ESSAYS.

Two volumes at One Shilling each.

Vol. I. contains: The Real Representation of the People. Poverty: its effect on the Political condition of the People. The Irish Question. Reform or Revolution. Labour's Prayer. Who was Jesus Christ? What did Jesus Teach? Is there a God? A Few Words about the Devil.

Vol. II. contains: Plea for Atheism. The Atonement. Has Man a Soul? New Life of Jacob. New Life of David. New Life of Moses. Why do Men Starve? Were Adam and Eve our First Parents?

THE ESSAYS IN THE ABOVE VOLUMES CAN BE HAD SEPARATELY AS FOLLOWS:

A Plea for Atheism. Sixth edition	0	3
A reply to William Gillespie's Argument for the Necessary Existence of Deity, and which Mr. Gillespie undertook to refute.		
Has Man a Soul? Sixth edition	0	2
The Irish Question: what it has been, what it is, and how to deal with it. Third edition	0	2
Mr. Gladstone writes that he has read this pamphlet with considerable interest, and with many important parts entirely agrees.		
Real Representation of the People. A comment on Mr. Hare's scheme. Third edition	0	2
Poverty, and its effect on the Political condition of the People. Fifth edition	0	1
Labour's Prayer. Fourth edition	0	1
This is the pamphlet noticed by Dr. Vaughan, Lady Chatterton, the *Dublin Review*, and the *Morning Advertiser*.		
Reform or Revolution, an address to the Lords and Commons. Second edition	0	1
Why do Men Starve? Fourth edition	0	1
Is there a God? Twelfth edition	0	1
The Atonement. Fifth edition	0	1
Who was Jesus Christ? Seventh edition	0	1
What did Jesus Christ Teach? Sixth edition	0	1
A few words about the Devil. Fifth edition	0	1
Were Adam and Eve our First Parents? Third edition	0	1
New Life of David. Tenth edition	0	1
New Life of Jacob. Tenth edition	0	1
New Life of Moses. Fourth edition	0	1
